• ***Summary:*** Phytoestrogens include the isoflavones, lignans, and other nonsteroidal chemicals found in plants. These compounds can bind to the estrogen receptor. The estrogenic effects of genistein in the uterus are well known. However few experiments have been conducted to determine estrogenic effects in other tissues, such as the mammary gland (breast) and the hypothalamic/pituitary axis. This research was conducted to investigate the estrogenic and antiestrogenic effects of dietary genistein. Plasma levels of isoflavones in infants fed soy-based infant formulas are comparable to levels that exert significant estrogenic effects in experimental animals. Address: 1&4. Dep. of Food Science and Human Nutrition; 2-3. Dep. of Horticulture. All: Michigan State Univ., East Lansing, Michigan.

7226. **Product Name:** Rice Silk (Rice Milk Sold in Quart Pure-Pak / Gable Top Cartons).
Manufacturer's Name: White Wave, Inc. (Product Developer-Distributor). Made in Canada and California.
Manufacturer's Address: 6123 E. Arapahoe Rd., Boulder, CO 80303. Phone: 303-443-3470.
Date of Introduction: 1997. February.
Ingredients: From leaflet: Filtered well water, rice syrup solids (from partially milled brown rice), rice starch, canola oil, calcium carbonate, natural flavors, sea salt, carrageenan, guar gum, xanthan gum, vitamin A palmitate, vitamin D2, riboflavin (B2), vitamin B-12.
Wt/Vol., Packaging, Price: Quart Pure-Pak Carton. Suggested retail price: $1.99 to $2.49.
How Stored: Refrigerated.
New Product–Documentation: News release from Holden McClure in Boulder, Colorado. 1997. Jan. 30. "Rice not against the grain for White Wave. Vegetarian Cuisine company adds rice beverage to Silk line... Beginning in February 1997, Rice Silk will be available in natural food stores across the country, with the introduction to supermarkets to follow. Rice Silk will be sold in the dairy case in a traditional milk carton at a suggested retail price of $1.99–$2.49 per quart size." White Wave claims it is the largest producer of tempeh in North America. White Wave, Inc. was founded in 1977. A line at the bottom of the letterhead reads: "White Wave. We've bean around the block for 20 years."

Leaflet (20.5 x 13.5 cm, glossy color) sent by White Wave. 1997. June. "A fresh face in your dairy case."

7227. Witt, Barbara. 1997. Pan-Asian express: Quick fixes for Asian food fans. New York, NY: Bantam Books. xiii + 194 p. Index. 24 x 14 cm.

• ***Summary:*** The author, who grew up in Connecticut, loved Chinese food and Mott Street in New York City. An excellent writer, she won the James Beard award in 1993. The section on "Seasonings" (p. 8-13) gives descriptions of: Hoisin sauce, sesame seeds, soy sauce (Kikkoman is a good brand; tamari is darker and stronger), soy sauce–dark (sometimes called "black soy"; Koon Chun is a good brand), soy sauce–mushroom (flavored with straw mushrooms; Pearl River Bridge is a good brand). Soy sauce–shrimp (The Chinese equivalent of Thai and Vietnamese fish sauce. Pearl River Bridge is a good brand), soy sauce–Indonesian (*Ketjap manis;* not to be confused with the less subtle Chinese sweet soy sauce).

The section on "General packaged goods" (p. 15-18) gives descriptions of: Black beans–Chinese salted (Chinese salted black beans: "The ancient and original soyfood that produced miso and soy sauce looks kind of pitiful..." Good brands are Mee Chun and Pearl River Bridge. Avoid those flavored with five-spice powder), coconut milk (canned is excellent), coconut cream, tofu ("innocuous").

Soy-related recipes include: Seared corn, tomato, and black bean relish (with "chopped Chinese black beans," p. 40-41). Silky tofu walnut dip (p. 50-51). Bean paste soup (*miso shiru,* with red bean paste, p. 91). Romaine salad with lemon soy dressing (with soy sauce, p. 95-96). Tropical fruit, avocado, and tofu salad (p. 110-11). Scallops with pork and black beans (with "Chinese fermented black beans," p. 146-47). Curried mushrooms, peas, and potatoes (p. 171-72). Address: Washington, DC.

7228. Ubiera, Leonidas Radhames. 1997. Re: Work with soyfoods and gluten in the Dominican Republic. Letter to William Shurtleff at Soyfoods Center, March 10–in reply to inquiry. 2 p. Typed, with signature.
• ***Summary:*** Gives the date that each of the company's products were introduced, and the main ingredients in each. Tofu and soymilk were both introduced in Sept. 1995. All other products were introduced in 1996.

Leonidas is aware of only one company that made soy products in the Dominican Republic before his company–that is a company named Salubi, which made salami from texturized soya and sold other imported products.

UFIESA is an abbreviation/acronym for Ubiera & Fortunato Import-Export, S.A. It is a division of Productos Nutrisoya.

The address on this letter is his home and office. His factory is located at Av. de los Restauradores No. 149.

He thanks William Shurtleff for sending him a database search of all known work with soya in the Dominican Republic from earliest times to the present. "I will use this to teach about soya in our country." Address: Calle 33 #9-A, Villa Carmen Este, Santo Domingo, Dominican Republic. Phone: 809 590 3418.

7229. *SoyaScan Notes.* 1997. A new challenge for soyfoods manufacturers in America (Overview). March 14. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** During the last year or two, Soyfoods Center has been receiving a growing number of calls from people who ask "How can I get more soy into my diet?" Never before have we heard people ask a question like this. These people have heard about the many health benefits of consuming soyfoods regularly but they don't know what foods would suit their tastes and diet. Some are willing to try tofu, but others are not. Those who have tried soymilk often say that they don't like the taste and it is too expensive.

We think there is a need for a new type of soy product with the following specifications, listed here in order of importance: (1) It must be delicious, something that most Americans would like immediately. (2) It must be ready to eat, ideally without even heating. (3) It should be low in fat and low in calories. (4) It should contain enough soy isoflavones/phytoestrogens (i.e. soy protein) to have significant health benefits if consumed daily. (5) It should not be too expensive. (6) It should contain only natural ingredients and no animal products.

Examples: (1) A pudding or parfait–either the type made from soymilk and sold so widely in Europe in Tetra Brik cartons, or one resembling the Imagine Foods 4-pak puddings (which have no nutritional benefits except low fat and low calories). (2) A protein-rich soy yogurt with added sweetener plus fruits or flavoring. (3) A dry mix to which one adds water or soymilk for use as a breakfast shake.

How to market it: Any slogan that works, with the subheading "Contains 30 mg natural soy isoflavones/phytoestrogens per serving." Or "Contains 30 mg natural genistein per serving."

7230. Wenley, Sally. 1997. Caution over soy products. *G.P. Weekly.* March 17. [1 ref]
• ***Summary:*** "'I believe that feeding soy formula is risky.' This is from David Woodhams, a food consultant in Auckland, who is adamant that many soya products have potential dangers.

"'Feeding soy infant formula and follow-on foods to a normal baby is such that the Ministry of Health ought to make those accessible by prescription only,' he says." Dr. Woodhams is concerned because phytoestrogens in soy products are physiologically in humans.

"The soya issue is being dragged into the spotlight after Professor Bob Elliot's claims that protein from cows' milk can trigger diabetes in up to five percent of the population."

7231. Kashama, Johnny. 1997. Re: Update on Tofu-Rwanda s.a.r.l. Letter to William Shurtleff at Soyfoods Center, March 31. 3 p. Handwritten, with signature. [Eng]
• ***Summary:*** Johnny was recently with the director of Tofu-Rwanda who is Miss Mado Niyontese. She told him the

following. Before the civil war in Rwanda [April to July 1994] the address was 1906, Kigali, Rwanda. But now it was given to another person. The current address is: Tofu-Rwanda, c/o Swiss Embassy, P.O. Box 1297, Kigali, Rwanda.

The name "Tofu-Rwanda" will disappear in a few days because all the associates are no longer together; they were ruined. The enterprise was been under the direction of the Switzerland Cooperation for two years, but that ended in 1996. The director will create a kind of cooperative which they plan to name Soja Val. Its main goal will be social service, but it will also attempt to be profitable. The director is planning many workshops on tofu and other soybean foods in all the prefectures of Rwanda. The phone number is +250 75812. They recommenced making tofu on 28 Nov. 1994. They are still producing soymilk, tofu, croquettes, and fritters. They added two other products–soy flour, and Misola made of a mixture of millet, soja, and peanuts. Address: Rwanda.

7232. Cheng, Guoqiang. 1997. Market prospects for upland crops in China. *Palawija News* (*Bogor, Indonesia*) 14(1):1-12. March.

• ***Summary:*** In China, the soybean is considered a major upland crop, along with maize, sweet potatoes, potatoes, and rice. Economic reforms in China have led to major changes in the eating habits of Chinese consumers. "Grain consumption of urban consumers dropped from 145.4 kg in 1981 to 97.8 kg in 1993. However, the consumption of pork, beef and mutton grew from 18.6 kg to 20.8 kg and poultry meat from 1.9 kg to 3.7 kg. The grain consumption of rural consumers increased from 248 kg in 1978 to 266.0 kg in 1993, pork, beef and mutton consumption grew from 6.1 kg to 13.3 kg, and poultry consumption from 0.3 kg to 1.6 kg."

Table 4 shows income elasticity of food consumption for various commodities in China (mean, rural, and urban). A negative elasticity (as for maize, sweet potatoes, or potatoes) means that as income rises, consumption of these commodities decreases. A high positive elasticity means that a small increase in income leads to a large increase in consumption of that food. Foods with the highest mean elasticity are poultry (0.86), eggs (0.57), pork (0.49), and vegetable oils (0.35). As as income increases, consumption of foods with the highest elasticity will increase most rapidly. Beans have a mean elasticity of 0.38; soybeans are not specifically mentioned.

Table 5 shows projected growth (%) in demand for food. Demand for soybean (which has an expenditure elasticity of 0.38) is expected to grow at 3.56% a year. Other projected annual growths in demand: Poultry 6.44%. Eggs 4.70%. Pork 2.22%. Edible oils 3.39%.

A long section (p. 5-9) discusses supply or and demand for feed. In China, feed is conventionally divided into three types: feedgrains (71.4% of total), oilcakes (8.4%) and bran (20.2%). Feedgrains include maize (by far the largest), rice, tubers, and roots (mainly potato and sweet potato). Table 8 shows total grain and feedgrain in China from 1980 to 1994 (in million tons). Total grain grew at 2.37% annually from 320.56 in 1980 to 445.10 in 1994. Feedgrain grew at 6% annually from 59.39 in 1980 to 134.24 in 1994. Feedgrain comprised 18.53% of total grain in 1980, but 30.16% in 1994.

Table 9 shows the availability of feed by source in 1993. 15.00 million tons (MT) of oilcakes were available, including cottonseed meal 5.23MT, groundnut meal 4.88MT, soybean meal 4.70MT, and others 0.19MT. Note the relative unimportance of soybean meal.

Table 10 shows that the output of formulated feed (in million tons) in China grew from 0.60 in 1978 to 42.32 in 1994. Table 12 shows the demand for commodities as animal feed in China in the year 2,000. The total feed demand is projected to be 231.74 million tons, including 103.82MT of maize, 25.95MT of rice, and 6.03MT of soybean meal.

A subsection titled "Soybean" (p. 7-8) states that the soybean has received increasing attention by producers and consumers with the change of consumers' views and adjustment of the food structure of households. In 1994, soybean was grown on 9.22 million hectares, accounting for 8.4% of total grain acreage and the output was 16 million tons, accounting for 3.6% of total grain production.

"Soybean in China is mainly used as food (49%) and for oil extraction (43%). Most of the soybean meal is utilized domestically (89%), with a small proportion used for export (10%). It is projected that by the year 2000, the demand of soybean in China will be 15.32 million tons, of which 6.57 million tons will be used as food and 7.54 million tons for oil extraction. Direct consumption of soybean (such as processed into bean curd, soybean sprouts, soybean milk, etc.) will still be the major form of soybean utilization in China. Due to an ever increasing domestic demand, the export of soybean in the future will not increase."

7233. DuPont Quality Grains. 1997. Optimum quality grains (Leaflets). Des Moines, Iowa. 2 p. Each leaflet is single sided. 28 cm.

• ***Summary:*** One leaflet describes A231QT Optimum yellow hilum soybean varieties "designed specifically for the soyfood market. It is large seeded, high protein, yellow hilum, and lipoxygenase 2, null" [i.e. lacking the undesirable L2 lipoxygenase enzyme which causes beany flavor]. Soyfood evaluations conducted by the Illinois Crop Improvement Association show that soymilk yields, tofu yields, tofu strength, and protein content meet and exceed Soyfood standards. Quality specifications on a dry matter basis: Seeds/lb: 2100. Protein: 46.3%. Oil: 20.6%. Tofu yield 332.6. White index of tofu: 51.6%. Tofu strength: 22.7 gm/sq. cm. Soymilk yield: 4.8 ml/gDS. Solids content of soymilk 11.7%. Protein content of soymilk: 50.3%. Sold in

50 lb bags and bulk.

The second leaflet describes A232QT Optimum high sucrose soybean varieties which "have been specifically selected and developed for their unique characteristics for use in the soyfoods industry and traditional food industries. High sucrose varieties have significantly increased sucrose content, reduced stachyose content [Note: Stachyose is an oligosaccharide that causes flatulence], and are lipoxygenase 2, null. Flours and powders from high sucrose varieties have a unique flavor profile offering opportunities for making improved beverages, bakery, pasta products, and other processed foods. Quality specifications Seeds/lb: 2900. Protein: 42.4%. Oil: 19.7%. Carbohydrate profile (dry weight basis): Sucrose: 8.4%. Raffinose: 0.03%. Stachyose: 0.40%. A color photo shows the soybeans with sliced white bread.

A cover letter from Kent Savage states that "These soybeans were developed through traditional plant breeding methods, and were produced in Iowa and Minnesota."

Note: 1997 July 11–There is no good source of bland soymilk base in the United States. Use of these lipoxygenase-null soybeans could be the answer to that problem. Address: 10700 Justin Dr., Des Moines, Iowa 50322. Phone: (515) 251-3056.

7234. FARM [Farm Animal Reform Movement]. 1997. Kicking the habit: The great American meatout (Leaflet). Bethesda, Maryland. 4 panels each side. Each panel: 9 x 7 cm. [3 ref]

• ***Summary:*** This year's meatout will be held on March 20. National co-chairs: Casey Kasem and Cassandra 'Elvira' Peterson. "What is a meatout? Every March thousands of caring Americans welcome spring with a joyous celebration of meatless eating." Each participant pledges to "kick the meat habit (at least for a day) and explore a more wholesome diet."

"Since 1985 Meatout has grown explosively to become America's largest annual grass-roots dietary education campaign." Address: FARM, Box 30654, Bethesda, Maryland 20824. Phone: 1-800-Meatout.

7235. **Product Name:** [VivaSoya Soy Mousse (Apricot)].
Foreign Name: VivaSoya Mousse di Soya (Albicocca).
Manufacturer's Name: Fonte della Vita S.r.L. (La).
Manufacturer's Address: Via Monviso 18, 12049 Trinita (Cuneo), Italy. Phone: (0172) 66 231.
Date of Introduction: 1997. March.
Ingredients: Soymilk*, apricot, cane sugar, natural aromas, living lactic bacteria (Streptococcus thermophilus and Lactobacillus bulgaricus). * = Organically grown.

Wt/Vol., Packaging, Price: 250 gm; 2 x 125 gm plastic tubs.
How Stored: Refrigerated.
New Product–Documentation: Label from Biofach, March 1997. Orange, white, green and blue. "Rich in living lactic acid bacteria. No preservatives."

7236. Havala, Suzanne. 1997. Nutrition hotline: Soy to be added to WIC? *Vegetarian Journal* (*Baltimore, Maryland*) 16(2):2. March/April.

• ***Summary:*** WIC is the Special Supplemental Nutrition Program for Women, Infants and Children. It is administered by the USDA's Food and Consumer Services (FCS).

A writer asks if any work is being done to include soyfoods in WIC, and notes that while working for WIC over the summer she felt her main job was "to convince women to drink more cow's milk." Answer: "If current plans to revise the WIC food packages proceed as planned, a proposed rule would address the addition of soy-based milks and possibly other soy foods, a move that will benefit women who are lactose intolerant or for whom soyfoods are traditional diet components." For additional information contact Stanley Garnett, director of WIC, Alexandria, Virginia. Phone: 703-305-2746. Address: M.S., R.D.

7237. International ProSoya Corp. 1997. ProSoya SoNice: Manufacturer of superior soy food products (Portfolio / Presentation folder). Surrey (Vancouver), BC, Canada. Seven inserts. 30 cm.

• ***Summary:*** The full-color cover of this "presentation folder" shows a large white plate with a black rim on a natural beige tablecloth. In the center of the plate, in green

and black letters, is written "ProSoya SoNice." Around the bottom and right side in smaller white letters is written "Manufacturer of superior soy food products." Four sprigs of parsley are scattered around the edge of the plate. In the upper right corner is a stem glass of soymilk, seen from the top.

Contains the following inserts: (1) Two ProSoya SoNice color brochures. One is for fresh soymilk products packaged in gable-top cartons, the other for shelf-stable products in aseptic packages. The front of each is similar, showing many different soymilk products in color packages. On the back of each are details about the products. The fresh soymilk is sold on four different flavors (natural, original, vanilla and chocolate), each quart or half-gallon gable-top cartons. The shelf-stable is sold in six different flavors (natural, original, vanilla, chocolate, strawberry, and cappuccino) in 1 litre aseptic cartons. (2) Sample recipes from five different color tear-off recipe pads: Banana pancakes. Potato soup with peppers. Lemon tahini dressing. So Nice fruit shakes. Dijon scalloped potatoes. (3) Color shelf dangler; on a 4-inch plastic square, SoNice is featured in a fresh gable-top carton. It is connected to a peel-off self-adhesive strip with a thin plastic strip. A "fridge sticker" with similar graphics, but larger, has a peel-off self-adhesive back and sticks onto a refrigerated case. (4) Two identical coupons: Save 35 cents on the purchase of any flavour of 1 liter So Nice soymilk. (4) Color leaflet from ProSoya Foods Incorporated titled "ProSoya SoNice: A natural choice!. Three panels, one side only. One panel contains product information, another recipes. Toll free number: (888) 2-SO-NICE. (5) George Conquergood's business from Pacific ProSoya Foods Inc. The oval SoyaCow logo appears in the upper right hand corner. (6) Letter to William Shurtleff at Soyfoods Center.

Talk with George Conquergood. 1999. May 29. This "presentation folder" was created either in late 1996 or early 1997; His best guess is March 1997. It was part of the SoNice presentations to potential buyers or investors. All agents and brokers had a supply of presentation folders and inserts. There was also one main insert on the health benefits of soy, and many more specific health-related inserts–to help salesmen explain "how good soy was for you." IPC had a huge library of information on the health benefits of soy that was printed on So-Nice letterheads, including excerpts from the writings of Mark Messina, Earl Mindell, etc. Dusty compiled much of this information together. Some of the inserts were developed in 1996 (the shelf-dangler was developed first), some in 1997, and some in 1998 (the recipe cards, in about 1998). ProSoya Foods Inc. was the company under which the various products were marketed. It had formerly been named Pacific ProSoya Foods Incorporated. Address: 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: (604) 532-8030.

7238. New Zealand Nutrition Foundation. 1997. Soy foods in human nutrition: A position paper of the New Zealand Nutrition Foundation. New Zealand. March. *
• ***Summary:*** There is no scientific evidence that isoflavones can cause harmful effects in children.

7239. **Product Name:** Multi Grain: Healthy Non Dairy Beverage [Original].
Manufacturer's Name: Pacific Foods of Oregon, Inc.
Manufacturer's Address: 19480 S.W. 97th Ave., Tualatin, OR 97062. Phone: 503-692-9666.
Date of Introduction: 1997. March.
Ingredients: Filtered water, oat groats, triticale, barley, organic soybeans*, brown rice, amaranth, sea salt. * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 1 quart Tetra Brik Aseptic carton with reclosable spout. Retails for $1.89 (1997/05, Berkeley, California).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per cup (8 fl. oz or 240 ml): Calories 150, calories from fat 20, total fat 2 gm (3% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 50 mg (3%), total carbohydrate 31 gm (dietary fiber 0 gm, sugars 12 gm), protein 3 gm. Calcium 15%, iron 0%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Talk with Pat Carey of Pacific Foods of Oregon. 1997. May 5. This product shown at Anaheim in March 1997 and introduced commercially at about the same time. Each cup contains 3 gm of protein and 15% of the RDA for calcium. Product description and specifications faxed by Pat Carey. May 5. "An innovative new product containing all 8 essential amino acids." On the front panel of the label is a large glass of the white beverage, surrounded by grains. Written in large letters on the white background: "A great tasting nutritious balance of essential amino acids. Simply the best."

Product with Label brought by Bob Gerner of the Natural Grocery Company, Berkeley, California. 1997. May 13. Price: $1.89. Label. Yellow, green, tan and red on white. Reclosable spout. Soyfoods Center taste test: Flavor: Excellent, with nice balance of grains and soy. Consistency: Nice and thick. Label design: Excellent. One of the best all-around non-dairy beverages we have ever tasted. A taste panel liked it better (10) than Pacific Almond (8) or Pacific Oat (6).

Product (Original flavor) with Label purchased at Trader Joe's in Concord, California. 1998. Feb. 22. Price: $1.49. Price at Trader Joe's in Lafayette, California. 2001. Feb. 27. $1.69. The package design is new but the ingredients are the same except that the oats are organic. The top one-fourth of the front panel is orange with the word "Pacific" in white script letters. The beverage is being poured from a yellow pitcher into a glass. "Non GMO. Low fat. Original." Talk with Pam in customer service at Pacific Foods. 2001.

Oct. 24. This product contains no added sweetener. The sweetness comes from the grains themselves. After all the grains are ground and mixed together, an enzyme is added which converts the starches to sugars, primarily glucose with some maltose. No new sucrose is created. The enzyme does not have to be listed with the ingredients because it is a "processing aid" and does not itself appear in the finished product. Pacific Foods uses the same process make its oat beverage and rice beverage. The company also makes its own brown rice sweetener. Pat Carey left the company earlier this year.

7240. **Product Name:** Naturally Almond: Healthy Non Dairy Beverage [Original, Vanilla].
Manufacturer's Name: Pacific Foods of Oregon, Inc.
Manufacturer's Address: 19480 S.W. 97th Ave., Tualatin, OR 97062. Phone: 503-692-9666.
Date of Introduction: 1997. March.
Ingredients: Vanilla: Almond base (filtered water, almonds), brown rice sweetener (filtered water, brown rice), natural flavors, sea salt, ginger, guar gum, xanthan gum, carrageenan.
Wt/Vol., Packaging, Price: 1 quart Tetra Brik Aseptic carton with reclosable spout. Retails for $1.89 (1997/05, Berkeley, California).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Talk with Pat Carey of Pacific Foods of Oregon. 1997. May 5. This product shown at Anaheim in March 1997 and introduced commercially at about the same time. Each cup contains 2 gm of protein and 2% of the RDA for calcium. Product description and specifications faxed by Pat Carey. May 5. "In response to consumer demand, our new and improved Naturally Almond is made with real almonds." On the front panel of the label is a large glass of the white beverage, surrounded by grains. Written in large letters on the white background: "Great tasting. Lactose free. Low fat. No cholesterol. Simply the best."

Product with Label brought by Bob Gerner of the Natural Grocery Company, Berkeley, California. 1997. May 13. Price: $1.89. Label. Yellow, green, tan and red on white. Reclosable spout. Soyfoods Center taste test. Flavor: Quite good, but a strong aftertaste of almond flavor. Texture: Quite good, but a little gritty at the end. Suggest it be run through a finer colloid mill.

Product with Label purchased at Trader Joe's in Lafayette, California. 2001. Nov. 4. New package design. "Pacific Almond: Low Fat Original. Non GMO. All natural non-dairy drink." Orange, yellow, light green, red, and white. A photo shows almond milk being poured from a blue pitcher in the upper left into a glass in the lower right. Contains 70 calories and 2 gm of protein per cup. 1 quart retails for $1.69. Soyfoods Center taste test: Pretty good flavor but too watery.

7241. **Product Name:** Naturally Oat: Healthy Non Dairy Beverage [Original, Vanilla].
Manufacturer's Name: Pacific Foods of Oregon, Inc.
Manufacturer's Address: 19480 S.W. 97th Ave., Tualatin, OR 97062. Phone: 503-692-9666.
Date of Introduction: 1997. March.
Ingredients: Vanilla: Filtered water, natural oat groats, natural flavors, sea salt.
Wt/Vol., Packaging, Price: 1 quart Tetra Brik Aseptic carton. Retails for $1.69 (1997/05, Berkeley, California).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Talk with Pat Carey of Pacific Foods of Oregon. 1997. May 5. This product shown at Anaheim in March 1997 and introduced commercially at about the same time. Each cup contains 4 gm of protein and 2% of the RDA for calcium. Product description and specifications faxed by Pat Carey. May 5. "Preferred over 2:1 to other Oat Drinks in blind taste tests. Great tasting. Lactose free. Soy free. No added oils. Low fat. No saturated fat. No cholesterol. Low sodium. Made from whole oats. No added sweeteners." On the front panel of the label is a large glass of the white beverage, surrounded by oats. Written in large letters on the white background: "A great tasting low fat beverage from whole oats. Simply the best."

Product with Label brought by Bob Gerner of the Natural Grocery Company, Berkeley, California. 1997. May 13. Price: $1.69. Label. Dark blue, tan, green, and beige on white. Reclosable spout. Soyfoods Center taste test. Flavor: Fair.

7242. Parks, Thomas R.; Lampi, R.A.; Marquardt, R.F. 1997. Development of technology base needs for processing in an advanced life support (ALS) system. Moffett Field, California: National Aeronautics and Space Administration, Ames Research Center. 62 + 63 p. March 24. Illust. No index. 28 cm. Final report. NASA CR-6816SN. [16 ref]
• ***Summary:*** This final report covers five crops: Soybeans, rice, wheat, peanuts, and white potatoes. The section titled "Process investigations–Soybeans" (p. 1-25) discusses five products made from soybeans: Soy flour, tempeh, soymilk (plus okara), soy yogurt (fermented), and tofu. Descriptions are given of each food and the process used.

Figures show: (1) General flow schematic–Soybean products. (2) Flour from dehulled soybeans. (3) Concept sketch–Soybean dehuller. (4) Water elutriation column to classify/separate particles by settling rate differences (Input: Dehulled beans and hulls). (5) Flow chart of tempeh from dehulled soybeans. (6) Flow chart of tempeh from beans with hulls. (7) Flow chart of soymilk from dehulled beans. (8) Flow chart of soymilk without prolonged soaking. (9) Flow chart of soymilk (Shurtleff & Aoyagi procedure). (10) Flow chart of tofu from beans with hulls. (11) Flow chart of tofu from dehulled beans. (12) Flow chart of yogurt from

dehulled beans. (13) Label of Redi-Set Culture from Chr. Hansen Laboratory, Milwaukee, Wisconsin.

Color photos show: (1) Vertical plastic tube described in Fig. 4. (2) Soybean hulls and cotyledons following flotation separation using the prototype device shown above. (3) The K-Tec mill used in preparing the various flour products for this project. (4) Plastic bag filled with full fat soy flour prepared from dehulled beans. (5) Tempeh in perforated plastic bags, made according to "The Tempeh Lab" procedure. (6) A glass of soymilk produced by modified Shurtleff & Aoyagi procedure. (7) Freshly made okara on a blue dish. (8) Freshly prepared tofu; one sample was made from dehulled soybeans, the other from beans with hulls.

Table 1 shows yield data for different food products: Soymilk 11:1. Tofu 1.77:1. Soy yogurt 10.2:1. Tempeh (dehulled beans) 1.59:1. Tempeh (beans with hulls) 2.32:1. Okara (dehulled beans) 1.64:1. Okara (beans with hulls) 2.19:1. Soy flour (dehulled beans) 0.62:1. Address: Food and AgroSystems, Inc., 1289 Mandarin Dr., Sunnyvale, California 94087. Phone: 408-245-8450.

7243. **Product Name:** Tran's Soymilk (Canned) [Plain Sweetened].
Manufacturer's Name: Quang Thai Co.
Manufacturer's Address: 6645 Stockton Blvd. #300, Sacramento, CA 95823. Phone: 916-393-2825.
Date of Introduction: 1997. March.
Ingredients: Incl. soybeans, sugar.
Wt/Vol., Packaging, Price: 11 oz can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Talk with (call from) Thai Tran, owner. 1997. May 5. He launched this product on 20 March 1997. He is Vietnamese by birth and he is mainly in the canned soup business, selling beef broth and seafood broth soups to Asian-Americans. He also exports some of his canned soymilk and other products–as to Australia and Canada. The soymilk has, up to now, been purchased from White Wave. He recently placed an order for 20,000 gallons of soymilk from White Wave but today they called him to say they will not be able to deliver it due to production problems. Hence he is looking for a new supplier. His soymilk is canned by Pokka Beverage Co. in American Canyon (a city located in the 707 area code region near the Napa Valley, California).

7244. **Product Name:** Rice Moo (Non Dairy Beverage Mix) [Original, Vanilla].
Manufacturer's Name: Sovex Foods, Inc. (Marketer-Distributor).
Manufacturer's Address: Box 2178, Collegedale, TN 37315.
Date of Introduction: 1997. March.
Ingredients: Brown rice syrup solids (partially milled), tapioca, maltodextrin, natural flavor, sea salt, carrageenan, titanium dioxide (a mineral for color), guar gum, xanthan gum.
Wt/Vol., Packaging, Price: 19 gm foil packet.
How Stored: Shelf stable.
New Product–Documentation: Products with Label sent by Patricia Smith from Natural Products Expo West, Anaheim, California. 1997. March. Label: 4 by 5 inch foil packet. Blue and pink on white. "Cholesterol free. Tastes great. Just add water. Fat free. Makes one 8 oz glass."

7245. Zimmerli, Bernard; Schlatter, Josef. 1997. Vorkommen und Bedeutung der Isoflavone Daidzein und Genistein in der Saeuglingsanfangsnahrung [Occurrence and significance of the isoflavones daidzein and genistein in infant formulas]. *Mitteilungen aus dem Gebiete der Lebensmitteluntersuchung und Hygiene* 88:219-32. March. [47 ref. Ger; fre; eng]
• ***Summary:*** During 1995, the isoflavones in three soy-based infant formulas sold on the market in Switzerland were analyzed. A range of 280 to 980 micrograms of total isoflavones per gram of dry matter was found. If newborns were fed exclusively with such formulas, the mean daily intake of isoflavones would be up to 30 mg/kg of body mass. "This dose is up to 25 times higher than the does which was shown to prolong slightly the menstrual cycle in women. Taking into account the very limited knowledge on the possible adverse health effects of an isoflavone exposure in newborns and infants it is demanded that soy-based infant formulas containing isoflavones should be used only under strict medical indications and a lack of alternative products." Address: Bundesamt fuer Gesundheit [Federal Office of Health], Food Research Section, Bern, Switzerland.

7246. Hizer, Cynthia. 1997. The versatile vegetarian: Bean mixes going, going... *Atlanta Journal-Constitution.* April 10. p. H.07.

7247. Nash, J. Madeleine. 1997. Early flash points: Beset by symptoms caused by ebbing hormones, women in midlife turn to herbs and health foods to smooth out the rocky road to menopause. *Time.* April 21.
• ***Summary:*** "The ingredients she weaves into each and every recipe–flaxseed, soy milk, tofu–contain chemical compounds known as phytoestrogens, which are estrogens produced by plants."

7248. *Bluebook Update* (*Bar Harbor, Maine*). 1997. Bar N.A. installs soymilk plant. 4(2):3. April/June.
• ***Summary:*** Bar N.A., Inc, sold a soymilk plant to Lavery Panama, S.A., where it will be used in the [dairy] cheese manufacturing process. The plant has a capacity of 4,000 liters per hour.

7249. Elliott, Julia. 1997. With a little help from the soybean. New York, NY: SCB–Published by the author. 62 p. No

index. 28 cm. Lay-flat comb bound. April.
• ***Summary:*** Contents: Facts and information (p. 1-8): Why the soybean? Areas of health that soy may affect: Heart disease and cholesterol, cancer, osteoporosis, kidneys, Alzheimer's disease, menopausal symptoms. Soyfoods (p. 9-13): Soy milk, tofu, soybeans, soy flour, miso, tempeh, texturized soy protein, soy protein isolates. Isoflavone contents. Recipes (p. 14-61): Appetizers, main dishes, desserts, tofu.

Note 1. There are no references to back up the many medical statements and claims on pages 1-8 of this book. Note 2. This is not a vegetarian cookbook; ingredients include 1 lb. ground beef (p. 14), 6½ oz. minced clams (p. 15), 1 lb. sweet or hot sausage (p. 16). Address: 10 Guyton St., Kingston, New York 12401. Phone: 914-338-6368.

7250. *Healthy & Natural Journal* (*Sarasota, Florida*). 1997. Creative cooking with soy: Flash! Even kids like soy foods! 4(2):58-59. April.
• ***Summary:*** These six recipes and three color photos are courtesy of the Indiana Soybean Development Council. For a brochure featuring these and other soy recipes, contact them at 1-800-735-0195. Recipes call for: Silken tofu (3). Soy milk. Roasted soy nuts. TVP textured vegetable protein. Cooked whole soybeans.

A sidebar titled "Flash! Even kids like soy foods!" is compiled from the American Dietetic Association and other sources.

7251. Hyde, Tom. 1997. Health: Bean there, done what? Soy foods have long been favoured by vegetarians and other careful-what-you eat types as the healthy alternative to animal proteins but critics of the seemingly innocuous bean suggest its anything but. Tom Hyde looks at both sides of a long-running debate. *Metro* (*Auckland, New Zealand*). April. p. 68-76.
• ***Summary:*** This is one of the most detailed and balanced articles on the "soy debate" seen to date. Dick James attended Canterbury University law school in Christchurch, New Zealand. There he met his wife Valerie. They ended up living and raising two kids in the San Francisco Bay Area [actually Walnut Creek]. He worked as a contracts manager for Bechtel, the multinational construction firm, while completing an MBA at Golden Gate University in his spare time. Valerie worked as a schoolteacher, and they also sold real estate. By the mid-1980s they had more than $2 million in savings; they decided to pursue their favorite hobby, raising exotic birds. They moved back to New Zealand and settled in Big Monroe Bay near the Whangarei Heads. In 1990, on 2½ acres of waterfront land, they established their own aviary and began raising colorful parrots, parakeets, and finches on seeds and berries. All went well for about a year until they began hand-feeding the birds a powdered mix containing more protein (about 20%) made by a California company named Roudybush. For the first six months, the Jameses' flock of about 600 birds seemed to thrive on the new diet. They produced offspring during the first breeding season and their plumage was good. "Then, over the next 12 months, the Jameses lost 542 chicks and 289 adult birds. Many of them haemorrhaged violently before death. Some simply faded away. The remaining birds produced 1,272 infertile eggs. Valerie says: 'I felt like the wrath of God had come down on us.'"

They began to do research and "identified soy protein in the bird feed as a possible explanation not only for the mysterious death of their birds, but for the hyperactivity and aggression of their own children who had been raised on soy formula."

Additional information reinforced their suspicions and they concluded, rightly or wrongly, that soy protein was a dangerous substance to feed both birds and babies.

They contacted their scientist brother-in-law, Dave Woodhams, and together they formed the "Soy Toxin Team" and began what became a huge worldwide debate (more like a war of words) over the safety of soy protein in animal feeds and infant formulas. The team admits that traditional Asian methods, some of which involve long fermentation processes, produce foods that are safe to eat, but that modern mass production methods do not.

Trevor Johnston of Bean Supreme, makes tofu, soymilk, and related products which he knows are safe–as do his many customers. But his business has been hurt by the Jameses' campaign. The more the Jameses talked with other animal breeders, the more their suspicions grew.

Mike Fitzpatrick, a young PhD in chemistry from Otago University, suggested to the Jameses that they pay him to go to the library to learn everything he could about toxins in soybeans. He quickly found many books and articles about natural toxins in soybeans–and other legumes too. Among these toxins were proteins and phytoestrogens, yet many of them were inactivated by heat or had such a low concentration that they were not generally a problem for humans–unless the dosage was too high and the exposure too long. Since he was looking only for negative information, his literature search was one-sided, unbalanced, and out of context. / Note: The above summary covers only the first few pages of this excellent article.

Photos show: (1) Dick and Valerie James. (2) Dave Woodhams. (3) Trevor Johnston of Bean Supreme. (4) Pat Carr of Roudybush; she was forced to close her business after much negative publicity. (5) Mike Fitzpatrick. (6) Dr. Ian Robertson, PhD in zoology and researcher of anti-cancer compounds at Auckland medical school. Address: Metro's Deputy editor.

7252. Mansfield, Linda. 1997. Soyfoods association petitions FDA to accept "Soymilk". *Bluebook Update* (*Bar Harbor, Maine*) 4(2):1. April/June.

• ***Summary:*** "A citizen petition filed with the United States Food and Drug Administration (FHA) on February 28 by the Standards Committee of the Soyfoods Association of America (SAA) requests that the FHA 'issue a common or usual name regulation' recognizing the term "soymilk" as the 'established common or usual name to be used in labeling or identifying a beverage of this nature.' The petition requests that the FDA also include a regulation which will establish standard terminology and composition guidelines for soymilk products sold in the U.S. today.

"The petition is based solidly on voluntary soymilk standards which were accepted by SAA directors in March of 1996.

"The FDA is required by its own regulations to furnish a response of some type within 180 days of the filing date of the petition."

"For a copy of the soymilk standards, submit a written request to Peter Golbitz, SAA Standards Committee, c/o Soyatech, Inc., P.O. Box 84, Bar Harbor, ME 04609 of fax: 207-288-5264.

Note: The FDA never responded to this petition, thereby signaling its acceptance.

7253. *Nutrition News* (*Riverside, California*). 1997. Soy tsunami: The wave of the future. 21(4):1-4. April. [1 ref]
• ***Summary:*** Contents: A wave is coming (introduction). East soy and save your life. Soy vs. cancer. Top ten benefits of soy–According to Earl Mindell's Soy Miracle. Genistein is unique to soy. Soy vs. heart disease. The pause that refreshes: a soy shake. And, by the way, save your planet too. Get on the soy train! If you are a first timer, jump in there with tofu and/or isolated soy protein.

Where the good stuff is–table showing nutritional composition, including isoflavones of 1 serving of: miso, cooked soybeans, soy flour, soymilk, soy nuts (dry roasted), soy protein isolate, tempeh, firm tofu, low fat tofu (aseptic pack), extra firm tofu (aseptic pack), textured soy protein. Note: Good sources of isoflavones provide 30-50 mg per serving.

"This issue of *Nutrition News* is dedicated to partners William Shurtleff and Akiko Aoyagi and to Frances Moore Lappe, pioneers in the promotion of soyfoods and of the concept of kindness of eating."

7254. Raymond, Jennifer. 1997. Fat free & easy: Great meals in minutes! No added fat. No cholesterol. No animal ingredients. Calistoga, California: Heart & Soul Publications. 152 p. Recipe index. 26 cm.
• ***Summary:*** A very useful vegan cookbook. Contents: Introduction. Health consequences of high-fat diets. How much fat should you eat? Calculating your fat intake. Sources of fat in food. Fats are not created equal. Tips for cutting the fat. Meeting your protein needs. Problems with excess protein. Protein myths and facts. Salt. Menu planning and menu ideas. Stocking your pantry. Ingredients that may be new to you. Recipes: Breakfast foods, breads & muffins, sandwiches, sauces & spreads, salads & dressings, soups & stews, vegetables, grains & side dishes, main dishes, sweets.

In this book, all recipes that would typically call for milk (such as smoothies or pancakes), call for "soy milk or rice milk." Many recipes are seasoned with soy sauce. Other soy-related recipes include: Scrambled tofu (p. 33). Missing egg salad (with tofu, p. 47). Creamy cucumber dip (with tofu, p. 49). Cucumbers with creamy dill dressing (with tofu, p. 61, 66). Holiday tofu roast (p. 113). Truly terrific tacos (with Boca Burgers, p. 119). Tofu cheesecake (p. 133). Chocolate tofu pudding (p. 136). Creamy prune pudding (with tofu, p. 139). A photo (p. 151) shows Jennifer Raymond, her husband Stephen Avis, and their five dogs. Address: 1418 Cedar St., Calistoga, California 94515. Phone: 707-942-2180.

7255. Carey, Pat. 1997. Sales of rice beverages pass soymilk sales in America: Some history and current statistics (Interview). *SoyaScan Notes.* May 5. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Growth in the U.S. non-dairy beverage market in recent years has been in rice beverages Pat has solid nationwide statistics for all of calendar year 1996 which show that soy beverages and rice beverages now each have about equal shares of the U.S. non-dairy beverage market. In terms of dollar value of wholesale prices, rice beverages have 49.3%, soy beverages have 48.8%, and other nondairy beverages (oat, almond, etc) have 1.8%. Since the wholesale price of rice beverages runs 10% to 30% less than that of soy beverages, that means that an even higher percentage of the liquid volume sold is rice beverages.

Pacific Foods formulated and aseptically packaged the Rice Dream beverage made by Imagine Foods from the day it was introduced in June 1990 until about 18 months ago when Imagine Foods installed its own packaging line. Pacific Foods deserves credit for developing the formulation and packaging techniques. At the beginning, Robert Nissenbaum had a small amount of the product packaged at Real Fresh (Visalia, California) but not for very long. Pacific Foods had problems packaging the product initially because it was too thick, but soon Robert reformulated it until it could be packaged without difficulty. The rice base has always been made by a joint venture between California Natural Products (CNP–Cheryl and Pat Mitchell; Manteca, California) and Imagine Foods. Most of the credit for the making the base using commercial enzymes goes to the Mitchells; Cheryl has a PhD in that area. For years, tankers of rice base arrived at Pacific Foods in Oregon from Manteca, California, almost every working day. When Imagine Foods started packaging its own rice beverage, Pacific Foods lost the entire Imagine Foods account, so it introduced its own line of rice beverages. Pacific Foods made the rice base without infringing on the CNP/Imagine Foods patent. They

have considerable expertise in that area. Pacific Foods sent samples of rice beverage to Imagine Foods long before Imagine Foods left, because Pacific Foods was making rice syrup sweetener. Pacific Foods sweetens its products with rice syrup which it the company makes itself; it has been making rice syrup for 2-3 years. Pacific Foods is a highly integrated company, and also has a full-line spice company in Seattle, Washington. All of the soybeans Pacific Foods buys are organic.

The big decrease in the price of soymilk during the past few years has been due to the lower price of non-fat or fat-free products. The first fat-free product was Health Valley's Soy Moo, introduced about 5 years ago. The second such product was WestSoy Nonfat, launched in early 1996. Address: Marketing Manager, Pacific Foods of Oregon, 19480 S.W. 97th Ave., Tualatin, Oregon 97062. Phone: 503-692-9666.

7256. Johnston, Trevor. 1997. Recent nightmares at Bean Supreme Ltd. in New Zealand (Interview). *SoyaScan Notes.* May 7. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The last 18 months have been a marketing nightmare for Trevor. The problems started when a toxicologist, who works for the government in New Zealand, fed his parrots a soy-based formula and they died. He blamed the soy. He and others formed "The Soy Toxin Team" and have been working ceaselessly to (1) get soy-based infant formula banned from the market in New Zealand, and (2) alert the public to what they feel are the dangers of the phytoestrogens in soybeans. Trevor has a huge file of anti-soy and anti-phytoestrogen articles published in New Zealand. Note that in the USA almost all of the many articles about the phytoestrogens in soybeans consider them to be one of the main benefits of soybeans.

The second major problem has been Roundup Ready soybeans–which are genetically engineered by Monsanto. Greenpeace in Australia has made these soybeans their major project; they are working to alert the public to the fact that most food products that contain soybeans–unless specifically labeled otherwise–probably contain at least a small percentage of Roundup Ready soybeans–which are not labeled as being genetically modified (GM). These soybeans offer no benefits to consumers and Greenpeace argues that they main contain some real dangers. They have conducted a number of media actions, such as taking soy products off supermarket shelves to point out that they contain soy–as the cameras roll. The result has been to give soy a negative image in Australia. A group called the Natural Food Commission (an offshoot of Maharishi's Transcendental Meditation or TM) has been formed and is now circulating a draft proposal on genetically modified organisms in foods–urging that they be labeled.

Trevor's sales have decreased by 25% over the past 18 months. His biggest specific problem is trying to find a source of soy protein isolates that are guaranteed to be free of GM soybeans. Protein Technologies International is refusing to deal with this issue by saying that their isolates are safe. There are other big users of soy protein isolates in Australia: A large sausage company and Sanitarium Foods. Of his various products, Trevor's isolate-based soymilk has suffered the greatest drop in sales. Sales of his tofu products have not decreased, and sales of his soy ice creams are down only a little. Address: Managing Director, Bean Supreme Ltd., P.O. Box 12082, 140 Hugo Johnson Dr., Penrose, Auckland, New Zealand. Phone: (09) 590 592.

7257. Mack, Heidi. 1997. Tofu doesn't have to be yucky: Disguise it, change its texture, and you might even fool Godzilla. *Christian Science Monitor.* May 8. p. 14.
• ***Summary:*** During the past few years, the number of soy products available to consumers "has grown phenomenally." They include soy yogurt, soy ice cream, soy milk, tofu turkey and pastrami, tofu salad dressing and mayonnaise, soy flour, vegetarian philly steak and Sloppy Joes, tofu dogs tofu burgers, and soy cheese.

The author, a vegetarian for 15 years, admits a genuine dislike of tofu. However she discovered that freezing it for at least a week, to transform its soggy texture, squeezing the water out of the tofu by hand, and then marinating it, made all the difference. Now she makes Tofu Taco Meat using frozen tofu instead of meat, and her family likes it in tacos, burritos, chili, spaghetti, and taco salad. Friends and family no longer stop at McDonalds on the way to her house.

Contains recipes for Barbecued tofu, Barbecue sauce, Spicy peanut tofu, and Tofu taco meat.

7258. Seemo (H. Shapira). 1997. Re: History of Dakini Health Foods Pvt. Ltd., in Pune/Puna, India. Letter (fax) to William Shurtleff at Soyfoods Center, May 13–in reply to inquiry. 7 p. Handwritten.
• ***Summary:*** Seemo is Mr. H. Shapira from Israel and Kairava is Mrs. J. Spaelstra from the Netherlands. Seemo is in charge of tempeh, Kairava in charge of tofu & soymilk. They are making the earliest known commercial soybean tempeh in India. For their first letter see Dakini (1997).

Both Seemo and Kairava are devout disciples of Osho (formerly called "Sri Rajneesh"), he since 1984 and she since 1986. They arrived in Pune to stay in about 1988/89. Initially to support themselves, they had a gem and crystal shop, a wholesale new-age jewelry operation, and a motor bike repair shop. Now they have finally found what they want to do for work. "It's love and Zen." Osho died in Pune on 19 Jan. 1990; they returned to India the next day; the fire was still burning at the burning ghat. In the year before his death, his discourses were mostly about Zen. He died in Pune due to heavy metal poisoning and radiation damages done to him by U.S. marshalls in an Oklahoma jail cell, where he was kept unlawfully in 1985.

Their company started with the idea of making white tahini and possibly Turkish halva [halvah] (in which white tahini is a main ingredient). It was extremely difficult to get started. As foreigners doing business in India, they had to register a "Pvt. Ltd." company. Then they could not find a space for the company, since Pune is a rapidly growing city. So Seemo pulled down the back garden in his rented house, constructed a shed with a floor area of 25 square meters, and moved his bedroom up to the second floor. This gave him an additional 24 square meters where the bedroom used to be. They also have a 25 square meter storeroom where they make the tempeh. He got electrical connections then waited for 8 months while a colloid mill (copy of a 1940 model), hot air oven, and filling machine were delivered. The mill proved to be a technical nightmare; he had to totally rebuild it. Finally their small factory started operation. Then they added peanut butter and brown tahini to their product line–with no additives or preservatives. They had to set aside their plan to make halva.

Spicer College, run by Seventh-day Adventists, is located in Pune. They have a health food store and they make peanut butter–nearly edible, with too much sugar and salt, plus other ingredients. Their sesame butter (brown tahini) is gritty, rancid, and inedible. They also produce grape juices (very, very sweet), pastries (Mmmm good). And they make and bottle soy milk in plain and chocolate flavors, but it is loaded with white sugar and Class II permitted preservatives! They also make pretty good tofu; Seemo used to eat it now and then for the last 8 years. "Besides being actually able to taste the Bible in it, I had no reason to complain." This tofu is now served at the Osho commune. "Pune old timers told me that once–20 years ago–the place was managed by an enthusiastic old American woman and the quality of their products was very good.

At Dakini, they now also make hummus in their kitchen, 15 kg/week in summer and 60 kg/week in winter. They pack it in 200 or 400 gm cups and sell it at various shops in town to foreigners and Indians. They like it.

Seemo started developing the tempeh about 8 months ago. Last year a friend of his found a book titled *Handbook of Indigenous Fermented Foods,* edited by Dr. Keith H. Steinkraus, in a pavement stall for 400 rupees (US$13.00). Since he had been to Bali, Indonesia, many times, he tried making some of the foods but rarely got any edible products. So before leaving Pune, he gave the book to Seemo as a gift. As he read it, Seemo got really excited. He had grown up in a meat-eating family. Even while traveling and living in Europe, he continued to eat meat and junk foods. "Then I understood it was not good for me on all levels, and went vegetarian." Living in Holland later on, he started to learn about tofu, and then tempe, tamari, etc. "So now I was a healthy, well-fed vegetarian." Then he moved to India, but after some years of eating fried foods, lentils and lots of dairy products, he started to eat meat again, 2-3 times a month. "It did not feel too good, but I had no idea how to manage my diet, and living on mostly dairy products did not suit my body. So when Dr. Steinkraus' book fell into my hands, I got excited and realized that it might be possible to make tempe here in India at a small, affordable investment.

"So I first got a small incubator built; its actually like a cool box ½ meter wide and 1½ meters high, made of galvanized sheet metal with insulation and 8 shelves (of which I now use only 3)." At the bottom are heaters, which give 250-540 watts of heat. Two old computer cooling fans distribute the heat, and a thermostat regulates it. "It's not a perfect machine but I can do 5-12 kg/day when I want and, most important, I can produce in it excellent spore powder–since it is difficult to import anything here. Actually, I nearly gave up the project, because I was making sporulated tempeh, then sun-drying it and running in through my spice grinder. The powder looked great. The tempe cakes used to get hot, then very hot, then smelly with funny colors (no white mold). I double-checked everything. In the end, only the grinding was left, so I bought a small hand-turned grain mill (500 rupees = US$15.00). Since then, perfect tempeh has been happening.

"For starter, I first got a packet of spores from Holland. Later I got 1 gram of white tempe starter from an American friend in Goa (she used to make her own supply down there), and playing with it I found it a bit more suitable for my use. So most of my spore stock now is from this starter, and some is mixed. I still have to study how to make tempe and starter during the different seasons here. Now it is very hot and dry. Next month is monsoon (wet), followed by a month that is hot and humid, and then the 3-month 'cold' season."

About half of all tempe produced is sold frozen; the other half is sold fresh. Seemo also plans to try making dry tempeh. He gives away lots of tempe as samples; most people love it. Starting this July, it will appear on the menu of one restaurant, possibly two–first as Tempeh Stroganoff and Tempeh Shashlik (steamed, then spiced, then barbecued). "When I get *The Book of Tempeh* I will introduce it to more places. Meanwhile, I have totally forgotten about eating meat. I feel strong and light. I find my vision benefits too; I haven't noticed that with tofu. Now that I am a bit more confident working with the mold, I hope to raise some capital, move to a suitable place (possibly well out of town), and then start to make tamari shoyu, and definitely some miso too. So that's a little of our story. Thank you." Address: Dakini Health Foods Pvt. Ltd., Vidyut Nagar, Plot A2, Kawdewadi, Pune / Puna 411 001, India. Phone: 0091-212-63-1990 (phone and fax).

7259. Burros, Marian. 1997. Trying to get labels on genetically altered food: Eating well. *New York Times.* May 21. p. B8.

• ***Summary:*** In December 1996, Whole Foods Market (WFM), the largest natural foods supermarket chain in

America, sent a letter to more than 400 of its suppliers asking if their products contained genetically engineered ingredients. About 75% of the suppliers have not yet responded–According to Margaret Wittenburg, quality assurance director of WFM; she wrote the letter. More soybeans are genetically engineered than any other food crop. "They [most Americans] have no idea what foods on their supermarket shelves contain genetically engineered ingredients because the Government does not require those products to be labeled. A small but growing movement of people is pushing for that to change."

"Europeans have been quicker than American to react to transgenic food... In Austria and Luxembourg genetically engineered food is banned. Most observers suggest that Europe's response is so much more intense because of the European experience with mad cow disease."

"There are signs that the consumer movement is gaining momentum. Nebraska and Maine are considering legislation for labeling. Mothers for Natural Law, a nonprofit consumer advocacy group, has begun a public awareness campaign. The group, which is affiliated with the Natural Law Party, which promotes transcendental mediation, wants to collect a million signatures on a petition asking the Food and Drug Administration to require testing and labeling of transgenic foods."

The article then asks how widespread transgenic foods are in U.S. supermarkets. "[The *Times*] asked Genetic ID, a company in Fairfield, Iowa, that tests foods for genetically engineered ingredients, to test four soy-based baby formulas and eight other products made with soy or corn. The infant formulas–Carnation Alsoy, Similac Neocare, Isomil and Enfamil Prosobee–all tested positive. Eden Soy milk tested negative. Morningstar Farms Breakfast Links and Morningstar Farms Better 'n Burgers, Betty Crocker Bac-os Bacon Bits, all soy-based products, also tested positive. And so did three corn-based chips–Fritos, Tostitos Crispy Rounds and Doritos Nacho Cheesier."

7260. Buchheim, Steve. 1997. New developments at ADM. Thoughts on the use of genetically engineered soybeans in foods (Interview). *SoyaScan Notes.* May 22. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** About 3 weeks ago ADM announced that G. Allen Andreas (a nephew of Dwayne Andreas) is the new CEO of ADM. Dwayne Andreas, who had been CEO for many years, will continue to be chairman of the board. As a result of this change, Dwayne Andreas' activities and involvement with ADM are not likely to decrease at all. A good article appeared in the *Wall Street Journal.* The main contribution of G. Allen "Allen" Andreas is that he understands "Wall Street," and he understands that investors are not attracted by ADM's perennially small dividend. Dividends may go up, as ADM pays more attention to Wall Street. ADM has never liked to borrow money–perhaps because of Dwayne's Mennonite background. That may change. ADM has authorized a big "buyback" of ADM stock to raise the price. The family wants stock prices to go higher. Allen was in Europe for 15 years and he grew that part of ADM's business at an impressive rate. He is soft spoken, intelligent, and a "people person."

Concerning the price-fixing charges, lysine was $1.40 a pound when ADM got into the business and $1.08, when the government went after ADM for price fixing. Michael "Mick" Andreas, Dwayne's son, no longer works at ADM. He is apparently on "administrative leave," but still on the ADM payroll. He has an office in downtown Decatur; Steve has no idea what he is doing.

Steve does not agree with the criticism that ADM is a company that is run for the ownership, rather than for the shareholders. It is rather a question of management having free reign to make the decisions that are best for the company. Dwayne Andreas does not want others trying to force him and the board to do something to the company that he does not want to do. ADM uses its profits to build the company and expand assets. A buyer recently came from China and told top ADM management that he could give them orders for soybean meal and soy protein isolates that are ten times their corporate crushing capacity. ADM is just now finishing their fifth plant [its in Europe] to manufacture isolates; all of the production is sold out for two years. It is well known that Dwayne is one of the wealthiest Americans. What is less well known that his ADM holdings (shares) account for only about one-fifth of what he is worth. He was the largest single individual shareholder in Nabisco and they have been bought out twice. Dwayne doesn't operate for money; he now cares very much about his legacy.

Concerning genetically engineered soybeans: Almost all companies in the soybean industry are sitting on the fence and waiting to see what happens. By making non-GMO products available, you encourage and abet the whole process of diving the soy protein business into GMO and non-GMO, and you negatively affect all the other businesses that are contemplating going into genetic engineering.

Shurtleff argues: But the alternate position is not to do anything until there is a crisis and/or the voices demanding labeling of GMO ingredients get louder and louder. If you start soon to offer non-GMO soybean meal, isolates, and TVP, there are many huge benefits. You become the first company worldwide to do so. You diffuse criticism of genetic engineering in general and gain large amounts of goodwill (which ADM now needs) and free publicity as the leader in this area. As you offer these non-GMO products (responding to consumer demand) you make it very clear that you agree with consumers' right to know what is in their food, but that you also believe that GMO products are completely safe. Note: Soyfoods Center has recently received a number of calls from companies which use large amounts of soy protein isolates in soymilk, tofu, and other

food products, and which are in urgent need of an isolate that is guaranteed by the manufacturer to contain no genetically engineered soybeans.

Steve agrees with many of these ideas. ADM's position has always been that they are consumer driven and market driven; they respond quickly to demand. All smart businesses know they are consumer driven. If it is soy, ADM should be making it available in both GMO and non-GMO forms. One way to do this would be to create a new corporation (named, for example, New World Proteins), which is a subsidiary of ADM. They lease existing excess capacity from ADM, using facilities that crush soybeans and make soy protein products such as isolates and TVP. The new corporation says to ADM: "You will agree under contract to clean these facilities thoroughly and certify that they will be used only for non-GMO soy products. We will separately contract for the purchase of soybeans. You will crush and process them for me to my specifications, and we will market them. Nothing moves. Its very simple. The new corporation could be run by people who wouldn't even have to move their desks. It makes a lot of sense from a pure commercial/profit standpoint. It is the right and the smart and the responsible thing to do. Then we can follow the market whichever way the wind blows. We can take a position where we win either way. ADM could become the first in the world to take an enlightened, consumer-driven position on this issue. I personally believe deeply that consumers have the right to know what is in their food. It is a fundamental right. ADM has always been on the side of the consumer's right to know. Now we're putting our money where our mouth is.

There is a major problem out there, and this would be a solution that makes sense for ADM at this time. Steve is going to start talking with his superiors at ADM (such as Larry Cunningham, who has assumed Michael Andreas' responsibilities) about this, and he will keep in touch on new developments.

Much of ADM's current activity is in China, where the company has many joint ventures, and is building factories, teaching the Chinese new ways of using soybeans, etc. Address: Marketing Manager, Soy Protein Applications, Archer Daniels Midland Co., P.O. Box 1470, Decatur, Illinois 62525. Phone: 1-800-637-5824 X-5394.

7261. Walker, Ian. 1997. Soymilk and soybean crushing in Canada (Interview). *SoyaScan Notes.* May 26. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** It is quite the fashion now for big dairy companies (such as Neilson) to be selling soymilk under their own private labels. It is widely available in Canadian supermarkets–much more so than in U.S. supermarkets.

There are only two major soybean crushers left in Canada: ADM Agri-Industries Ltd. (Windsor, Ontario) and CanAmera Foods. But there are also about 4 "micro-crushers" who make "cold pressed" [mechanically pressed] soybean oil, and low-fat meal (which they sell to ADM). Address: College d'Alfred–Formation/soya, C.P. 580, 31 St. Paul, Alfred, ON K0B 1A0, Canada. Phone: 613-679-2218 X-309.

7262. Liu, KeShun. 1997. Nonfermented Oriental soyfoods. In: KeShun Liu. 1997. Soybeans: Chemistry, Technology, and Utilization. Florence, Kentucky: Chapman & Hall. xxvi + 532 p. See p. 137-217. Chap. 4. Index. [125 ref]

• ***Summary:*** Contents: Introduction. Soymilk: Traditional soymilk preparation methods, chemistry of beany flavors, modern soymilk preparation methods (Cornell method, Illinois method, rapid hydration hydrothermal cooking, methods using defatted soy material, deodorization techniques, commercial methods, novel approaches), basic steps and principles of soymilk preparation (starting material, water incorporation, grinding, soymilk extraction, heat treatment, formulation and fortification, final processing and packaging, additional processing), other constraints (objectionable aftertaste, chalkiness, yields), standardization of soymilk.

Tofu: Tofu preparation methods (traditional methods, variations in tofu preparation methods), tofu varieties, quality and quantity attributes of tofu, factors affecting tofu making (soybean varieties and compositions, temperature of grinding soybeans, concentration of soymilk, heat processing of soymilk and tofu gelation mechanism, types of coagulants, concentration of coagulants, coagulation temperature, mode of adding coagulants, coagulation time, molding conditions, other factors, tofu made from full-fat soy flakes, novel treatments), microbiological safety.

Yuba: Preparation, chemical composition, varieties, utilization, mechanism of film formation, conditions for film formation and their optimization.

Other nonfermented soyfoods: Soybean sprouts, okara, roasted soybeans, soynuts, and soy flour (roasted soy flour, known in China as *dou fen* and in Japan as *kinako.* "In China, roasted soy flour may be mixed with lard and sugar and used as a filling or coating material for pastry... In Indonesia, the flour is mixed with spices, such as garlic and chili powders, and served with *longtong,* which is boiled rice wrapped in banana leaf"), cooked whole soybeans, immature soybeans [green vegetable soybeans]. Address: PhD, Soyfood Lab., Hartz Seed, a Unit of Monsanto, P.O. Box 946, Stuttgart, Arkansas 72160-0946. Phone: 870-673-8565.

7263. Messina, Mark; Messina, Virginia. 1997. Soy: Good food for good health. *Veggie Life* (*Concord, California*). April/May. p. 48-50, 55.

• ***Summary:*** Contents: Introduction. Heart disease. Osteoporosis. Menopause. The many faces of soyfoods: Soybeans, soy flour, soymilk, textured vegetable protein, tempeh, soynuts, miso, tofu.

7264. Patterson, Anne G. 1997. Concerned about calcium? Soyfoods can help. *Soy Connection* (*The*) (*Chesterfield, Missouri–United Soybean Board*) 5(2):3. Spring.
• ***Summary:*** "Food labels are valuable tools in helping us meet our requirements for calcium. Nutrition Facts found on food labels are required by law to list the percent 'Daily Value' of calcium. The daily value for calcium is 1 gram for adults and children age 4 or older. This is equal to 1,000 milligrams. If the Nutrition Facts on a soymilk container states, 'Calcium 20 percent,' then you know the amount of calcium for one sewing of soymilk is 200 milligrams, or 20 percent of the recommended daily value for adults and older children.

"If you've been reading the labels on containers of soymilk and tofu you may have noticed a big difference between the amounts of calcium provided brand to brand. Both tofu and soymilk contain calcium since there is naturally occurring calcium in soybeans.

"The amount of calcium varies in tofu because of the type of calcium-rich coagulant used to thicken the soymilk. Taste and the type of tofu desired determines what type of coagulant or combination of coagulants are used in tofu processing. If you want more calcium, then look for a tofu which lists the coagulants, calcium chloride or calcium sulfate, in the food ingredient list.

"Soymilk that has been fortified with calcium is your best choice for getting significant amounts of calcium. Since all soymilk is not fortified, one needs to review Nutrition Facts on labels carefully. Use the following chart to help you get a jump start on the right soymilk for you. Remember it's still wise to check out that food label since food companies may reformulate their product."

A large table shows only fortified soymilks which may be found in retail stores. The 5 columns are: (1) Brand and flavor. (2) Milligrams of calcium per cup. The range is about 200-400 mg. (3) Calories per cup. (4) Grams of protein. The range is about 4-6 gm. per cup. (5) Grams of fat per cup. Address: R.D., L.D.

7265. Tofutti Brands Inc. 1997. Tofutti. 1996 annual report. 50 Jackson Dr., Cranford, NJ 07016. 13 p. 28 cm. Plus 7-page proxy statement insert.
• ***Summary:*** Net sales for the 52-weeks ended Dec. 30, 1996 were $5,842,000, up 16% from the previous year. The net income was $135,000, up 2.9-fold from the previous year ($47,000).

"The Company made several new product introductions in 1996. During the year, the Company extended its non-dairy cheese line by introducing six new flavors of Better Than Cream Cheese and three new flavors of Sour Supreme. During the summer of 1996, the Company introduced several new frozen novelty items, including cakes and other chocolate enrobed novelties. The Company at this time also introduced its first non-frozen, non-refrigerated product line, TOFUTTI COOKIES. In December, the Company introduced a chocolate coated CANNOLI filled with a non-dairy cheese filling.

"In 1996, The Company also made a change in its distribution arrangements for the metropolitan New York area. Effective March 31, 1996, the Company terminated the services of The Haagen-Dazs Company and appointed the Mattus Ice Cream Company to be its New York area master distributor."

"During 1997, the Company will be introducing a number of new frozen dessert products. Among these items will be honey-sweetened pints, sugar-free, fat-free half gallons, new novelties and a soy beverage. The Company will also be introducing some new food products, such as Tofutti Lavasch flatbreads."

David Mintz, age 65, is still Chairman of the Board of Directors and CEO. He has been a director since August 1981. He owns 49.9% of the company's common stock. His salary in 1996 was $155,000, including a bonus of $30,000 paid in April 1997. Rick W. Malloy, Executive Vice President last year, appears to have left the company and not been replaced. Steven Kass, chief financial officer, was paid a salary of $100,000 in 1996, including a bonus of $15,000. Other directors are Bernard Koster (counsel), Reuben Rapoport (Director of product development), and Franklyn Snitow (general counsel). Address: Cranford, New Jersey. Phone: 201-272-2400.

7266. **Product Name:** Café Westbrae (Coffee-Flavored Soy Beverage) [Coffee, Mocha, or French Vanilla].
Manufacturer's Name: Westbrae Natural Foods (Product Developer-Distributor).
Manufacturer's Address: 1065 East Walnut St., Carson, CA 90746. Phone: 310-886-8200.
Date of Introduction: 1997. May.
Ingredients: Filtered water, organic soy beverage* (filtered water, whole organic soybeans*), Florida Crystals (dehydrated cane juice), natural flavors, expeller pressed canola oil, organic spray dried coffee*, tricalcium phosphate, potassium bicarbonate, sea salt, carrageenan. * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 8 fl oz (240 ml) Tetra Brik Aseptic carton. A 3-pak retails at Trader Joes for $2.29 (1998/02 Concord, California).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per box (8 fl. oz.: Calories 130, calories from fat 25, total fat 2.5 gm (4% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 85 mg (3%), total carbohydrate 25 gm (dietary fiber 0 gm [0%], sugars 23 gm), protein 2 gm. Calcium 25%, iron 2%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Ad (1/3 page, color) in Vegetarian Times. 1997. May. p. 88. "The first non dairy

blended coffee beverage." A color photo shows the label. A coupon offers $0.30 off on any 3 flavors of Café Westbrae.

Product with Label purchased at Trader Joe's in Concord, California. 1998. Feb. 15. Front Panel: Colors: Blue, white, tan, red, yellow, and green. A modernistic, stylized illustration shows a man and woman seated at a coffee table in a café. "Creamy, Low Fat, Non Dairy." Back panel: "Bring the coffee house to your house–bring home Café Westbrae!... Café Westbrae is a unique blend of organic coffee and organic soy beverage. No cholesterol, no lactose, no grinding, measuring or brewing... just perfect ready-to-drink coffee blends!" Free offer for a compact disc containing ten Pop Rock hits from the 1960s. Just send 6 proofs of purchase +$3.50 for shipping and handling. A message from Andrew H. Jacobson, president, titled "Westbrae... Naturally" begins: "Back in 1970, when we grew our own organic fruits and vegetables, people knew that the Westbrae stamp on our products meant that only the finest ingredients were used. Today we continue to continue that tradition..." Questions or comments? Call (800) 769-6455. http://www.westbrae.com.

Talk with Connie at Customer Support for Westbrae. 1998. March 30. This line of products was introduced in about May 1997. The Kosher symbol is called "square box K."

7267. Ngo, Nga. 1997. Two Vietnamese-American manufacturers of tofu and soymilk in Little Saigon, Orange County, California (Interview). *SoyaScan Notes.* June 12. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Nga works for a dairy plant in Southern California. Her employer is thinking about introducing its own brand of soymilk which has a beany flavor–since that is what Vietnamese like. There are already two companies in the area, each run by Vietnamese-American families, that make tofu and soymilk, but they hot-pack their soymilk and it spoils quickly. The older and larger of the two companies is Tan-Tan Tofu, located in Westminster or Santa Ana, Orange County, which was in business by the late 1980s. Its younger competitor is Buong Son, which started in about 1992 and is located in the same area. Address: Orange County, California. Phone: 818-961-3399.

7268. Tibbott, Seth. 1997. Estimates of the retail markets for tofu, soymilk, and tempeh market in the United States (Interview). *SoyaScan Notes.* June 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Tofu: Steve Demos, founder and president of White Wave, thinks that the retail value of tofu sold as tofu in the USA in 1996 was about $110 to $130 million. Peter Golbitz estimated that in 1990 the U.S. retail tofu market was $89.6 million, rising to $116 million in 1996. He also estimated that in 1990 the U.S. retail soymilk market was about $54 million, rising to $125 million in 1996.

Tempeh: A total of about 55,000 lb/week of tempeh is now made in the USA, compared with 34,700 lb/week in Jan. 1984 (based on a Soyfoods Center survey, published in Soyfoods Industry and Market, 5th ed.). The average retail price of an 8-oz package of tempeh in the USA is $1.81. Thus the retail value is 55,000 x $1.81 x 52 = $5.18 million.

Note: A detailed survey conducted by Soyfoods Center in Feb. 1984 and published in Soyfoods Industry and Market (5th ed., 1985, p. 41) found the U.S. retail value of tofu and tofu products to be $46.08 million, of soymilk and soymilk products (including soy-based infant formulas) to be $221.97 million; about 6.7% of that value or $14.9 million was "adult soymilk." And of tempeh to be $4.96 million. Address: Turtle Island Foods, Inc., P.O. Box 176, Hood River, Oregon 97031. Phone: (503) 386-7766.

7269. Bean Supreme Ltd. 1997. Price list with sale. Auckland, New Zealand. 1 p. Single sided. 30 cm.
• ***Summary:*** Effective 20 June 1997. Black on yellow. The products are listed in categories except for the first, which is soyfoods. For each is given the product name, weight, price, barcode, outer, and price. Tofu bulk organic. Tofu firm vacuum pack. Tofu firm vacuum pack organic. Tofu soft Asian. Tempeh vacuum pack. Tempeh fr. frozen. Soysage. Luncheon [Traditional, Cajun, Smoke]. Tempeh patty frozen. Meatfree sausage.

Soymilks: Soyplus 1 liter. LiteLicks [soy ice cream] (Honey Vanilla, Wildberry, Maple Walnut, Chocolate, Fruit Fiesta, Almond Fudge, Bulk packs) (9 or 16 liters).

Biofarm yoghurts (5 flavors). Malabar goat yoghurt. Olive Grove: Falafel mix, hoummus, Souvlaki sauce, tahini.

Koromiko cheese (11 types, of which the first 4 are vegetarian). Koromiko wax selection (private bin). Pacific Harvest: Agar, kelp and karengo granules, fronds, or flakes. Address: Box 12082, 140 Hugo Johnson Dr., Penrose, Auckland, New Zealand. Phone: 64 09 579 0592.

7270. Haumann, Barbara Fitch. 1997. Soy protein foods gain store space. *INFORM* (*AOCS*) 8(6):588-596. June.
• ***Summary:*** Contents: Introduction. Nutritional drive. Meat alternatives. Soymilk and tofu markets. Soybeans as vegetables. Emerging products. Products consumers want. Hurdles. Possible health claim? School lunch opportunities (federal school lunch program). Product promotion. Nutraceuticals.

Soy protein foods sold in supermarkets are no longer targeted at only vegetarians; they're becoming mainstream products. Many U.S. consumers are decreasing their consumption of meat. USDA food intake surveys show that from 1977 to 1994 per capita beef consumption decreased 54% and pork consumption dropped 45%.

The leader in meat alternatives is Worthington Foods, which has seen sales rise approximately 20% in each of the past 3 years. Its Morningstar Farms brand, sold in frozen

food sections in supermarkets and geared for mainstream consumers, represents 75% of the company's offerings.

PMS Foods, Inc. in Hutchinson, Kansas, is among the companies that make meat alternatives, including soy-based beef, chicken, ham, pepperoni, bacon, sausage-flavored crumble, sloppy joe mix, soy-based taco mix, and soy-based chili mix–which it sells wholesale, primarily to foodservice operations. Some of its products are used as ingredients in supermarket products–such as bacon bits and salad dressing mixes.

Steve Demos, founder and president of White Wave, jokes: "We're primarily a dairy without a cow. We 'milk' soybeans. Founded in 1977, the company now sells 54 retail products and produces about 125 tons a week of soy proteins via aqueous extraction. White Wave has up to 30 linear feet in the refrigerated sections in some natural food stores. White Wave has experienced 25-30% sales increases per year over the past decade.

The Soy Protein Council in Washington, DC, now has 3 members: ADM, Cargill Inc., and Central Soya; all produce soy protein concentrates, isolates, and soy flours. The council promotes the growth of the soy protein industry and works to broaden the acceptance of soy products in foods. The council's Web site is http://www.spcouncil.org.

Fourteen state soybean boards, the United Soybean Board, and the Soy Protein Council gave joined together to form the "Soy Protein Partnership," whose goal is to promote domestic soy protein use in human foods. Seven members of the partnership–the state soybean boards from Indiana, Iowa, Kansas, Michigan, Nebraska, Ohio, and South Dakota–are providing $270,000 to fund the partnership's first project, a "Food Manufacturer's Initiative." The group in using the slogan "New Food, New Uses: How soy protein can expand your business, to reach food marketing executives and food technologists and to increase their awareness of the demand for soy products and their use in food products.

Surveys by Wiese Research Associates have shown that consumer awareness concerning soy protein increased from 55% of consumers polled in 1991 to 79% in 1996. Likewise, those saying they wee likely to purchase a product if they knew it contained soy protein increased from 20% in 1988 to 32% in 1996.

In addition, a national Gallup survey conducted in 1996 for the Nebraska Soybean Board showed that 56% of the 600 school foodservice directors polled currently use soy products. And studies by the National Restaurant Association indicate that 97% if colleges and universities and 80% of restaurants have incorporated meatless entrees into their daily menus.

Schouten USA Inc. of Minnesota, whose parent company is the Schouten Group in the Netherlands, manufactures SoyLife, a soybean [sprout] extract containing 25-30 mg of isoflavones per gram. According to Laurent Leduc, Schouten USA's international marketing manager, it is presently used as an ingredient by more than 40 different vitamin and supplement companies as a source of isoflavones in their products, and is being incorporated into "functional foods" around the world. Leduc notes that research has indicated that consuming 60-80 mg of isoflavones a day may provide health benefits. He adds: "The only other way to get that much is by eating 8-9 ounces of tofu or drinking two-thirds of a liter of soymilk a day. The average American is not going to do that."

William Shurtleff of Soyfoods Center "said it currently is no longer usual to field questions from consumers in Midwestern states who would like to know how to incorporate soy as part of their diets to lower cholesterol.

"'I credit much of this to the state soybean checkoff boards that are promoting interest in soyfoods, particularly in the heartland. This is changing the demographics for the market throughout the United States. Within the past two years, these boards have collectively become the single biggest force promoting soyfoods in America.'" Address: Senior editor/writer for INFORM.

7271. Jabbar, Muhammad A.; Larrea, J.; Shaw, R.A. 1997. Abnormal thyroid function tests in infants with congenital hypothyroidism: The influence of soy-based formula. *J. of the American College of Nutrition* 16(3):280-82. June. [9 ref]
• ***Summary:*** Conclusion: "When initiating soy-formula feeding in infants with congenital hypothyroidism, the L-thyroxine dose should be increased because of significant reduction in intestinal absorption: conversely, when soy feeding is discontinued, the L-thyroxine dose should be decreased."

Note: TSH stands for "thyroid stimulating hormone" or thyrotropin. It is a "peptide hormone synthesized and secreted by thyrotrope cells in the anterior pituitary gland which regulates the endocrine function of the thyroid gland... TSH stimulates the thyroid gland to secrete the hormones thyroxine (T4) and triiodothyronine (T3)" (Source: Wikipedia). Address: 1-2. Dep. of Pediatrics; 3. Dep. of Research. All: Hurley Medical Center, Flint, Michigan.

7272. Kumar, Praduman. 1997. Market prospects for upland crops in India. *Palawija News* (*Bogor, Indonesia*) 14(2):10-16. June.
• ***Summary:*** Two thirds of India's population are still engaged in agriculture, and many are subsistence farmers who eat most of what they produce. Most of India's upland crops have traditionally been grown by subsistence farmers. India's main upland crops are rice, soybean, maize, and cassava. The latter three crops in India comprise 12.4% of total animal feed ingredients; soy meal 10.3%, cassava 1.1%, and maize 1.0%. This is quite low compared to the rest of the world. Most of the soy meal produced in India is exported.

"Soybean: Although soybean came to be commercially exploited [in India] in the mid-sixties, the lack of processing

facilities severely constrained its production growth by depressing soybean prices which in turn adversely affected its area and production. Processing facilities were developed only in the eighties consequent to the introduction of various incentive schemes. While large scale processing results in economies of scale on account of higher oil recovery and lower per unit processing costs, processing of black soybean is still a problem. In this variety, the soy meal recovery is low and it also fetches a low price in the international market because of poor product acceptance with the consequential adverse effect on profitability of the industry. However, farmers still grow this variety because of its lower working capital requirement. Small quantities of soybean are retained by the producers as seed, food and feed and part of it is used as soy food (soya milk, nutrella, etc.). Some is lost in the process of handling. The remaining part is processed for oil and meal. While soy oil is chiefly used domestically, soy meal is largely exported with a mere 10% of it consumed domestically, as the price of soy meal is the world market is high and exports have grown at an annual rate of around 26%.

"About 77% of the production is demanded by the crushing industry to produce soy meal and oil, while seed, feed and soya food together account for 19%. By the year 2000 AD, the total demand for soy meal will be around 2.5 million tons which in turn will require about 3 million tons of soybean. Since only 77% of the production is available for crushing, the demand for soybean will be on the order of about 3.9 million tons by 2000 AD... Since India enjoys a comparative advantage in Asian Markets compared to European and Latin American markets on account of lower freight charges, much of our exports have been confined to these markets."

Table 1 shows estimates of the various demands for Indian soybeans in 1992 and in the year 2000. In 1992 some 2.747 million tons of soybeans were produced. 76.56% was used for crushing, and 23.44% for seed, food, and wastage. Of the crushed soybeans, 83.97% became soybean meal and 17.02% became soybean oil. Of the soybean meal, 86.99% was exported and 13.01% was used in India. Address: Indian Agricultural Research Inst., New Delhi, India.

7273. *Ontario Soybean Growers' Marketing Board Newsletter.* 1997. Project S.O.Y. winners announced. June. p. 5.

• ***Summary:*** "The winners of the first Project S.O.Y. contest were announced on April 17th. Jennifer Lo and Nicole Lepkowski, food science students at the University of Guelph won first prize ($2,500) for their fruit-based soy custard dessert, *Fantasia.* Second place was captured by engineering students, Cori Cowan, Jody Lewis, Jennifer Kinoshita, and Karen Conrad, with their puffed soy-based product, *Soy Good Snax.* Yaling Fan and Lawrence Wang, students in agricultural business and economics, won third place with their strategy to market Ontario soymilk products to young Canadians.

"Project S.O.Y. (Soybean Opportunities for Youth) is sponsored by First Line Seeds and the University of Guelph." A photo shows Peter Hannan tasting a sample of "Fantasia" soy custard, while Lennifer Lo and Nicole Lepkowski look on. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

7274. **Product Name:** So Good (Soymilk Based on Soy Protein Isolates) [Fresh, or Aseptic].
Manufacturer's Name: SoyaWorld Inc.
Manufacturer's Address: 4074 Lozells Ave., Burnaby (suburb of Vancouver), BC, Canada. Phone: 604-420-3240.
Date of Introduction: 1997. June.
New Product–Documentation: Talk with Peter Joe of Sunrise. 1999. May 26. So Good is created under a licensing agreement with Sanitarium Foods in Australia. It was first test marketed in mid-1997 (with the name SoyaWorld Inc. on the package), then in Jan. 1998 the product was officially launched with a big TV advertising campaign. It is sold in both fresh and UHT packaging, but 90% of the sales come from the fresh product. It is targeted at mainstream Canadian consumers and sold mostly in supermarkets.

Note: This is the earliest record seen (Aug. 2013) concerning SoyaWorld, Inc.

7275. Setchell, Kenneth D.R.; Zimmer-Nechemias, L.; Cai, J.; Heubi, J.E. 1997. Exposure of infants to phyto-oestrogens from soy-based infant formula. *Lancet* 350(9070 Suppl. II):23-27. July 5. [34 ref]

• ***Summary:*** The isoflavone content of five major brands of soy infant formula was analyzed in detail. The brands were Nursoy, Isomil, Prosobee, Isomil liquid, and Alsoy. After each product was prepared and ready to serve, the isoflavone content ranged from 32 to 46 micrograms/milliliter of total isoflavones. On the basis of a typical daily intake of 900 to 1,000 milliliters of soy formula at 4 months of age, the total isoflavone exposure for an infant this age is 28-47 mg per day, or 6-9 mg/kg of bodyweight per day. This dose represents a 6-11 fold higher level of intake of isoflavones than the bodyweight adjusted intake (0.7 mg/kg per day) found to cause significant modifications to the hormonal regulation of the menstrual cycle of western women.

The isoflavones in the soy-based infant formulas were mostly glycosidic conjugates of genistein and daidzein; unconjugated isoflavones accounted for only 3-6% of the total. Isoflavones are readily absorbed by infants.

Note: Isoflavones (plant estrogens) exert a very weak effect and even block the actions of human hormones.

Setchell himself states in this study that "exposure to these phytoestrogens early in life may have long-term health benefits for hormone-dependent diseases." Address: 1-3. Clinical Mass Spectrometry Center; 4. Div.

of Gastroenterology and Nutrition. All: Children's Hospital Medical Center, 3333 Burnet Avenue, Cincinnati, Ohio 45229.

7276. Gordon, Jonathan. 1997. Volunteer work with soy yogurt and other soyfoods at Sesco in Egypt (Interview). *SoyaScan Notes.* July 9. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jonathan just got back from working for 2 weeks as a volunteer with Sesco, also called the Swiss Egyptian Soy Co. They have a nice little plant and make a good quality soy yogurt product, sold in 3 flavors–Mango, peach, and strawberry. For details, see the 1997 interview. The soy yogurts were very good, except for a slight beany taste, however they had a shelf life of only 10 days and very limited distribution. They make only soy yogurt–no soymilk. They are also making several products based on dairy milks (yogurts, puddings, cheeses) to increase their manufacturing base. The 4 oz cups have a raised bottom to give the appearance of more product. During the 2 weeks Jonathan was there, he worked with them to improve the quality of their base soymilk to virtually remove the beany flavor; this led to a marked improvement in the yogurt quality. He introduced a new yogurt process to give them an extended shelf life; if they follow his recommendations, that could increase to 50 days. They also invented new processes for the production of soy-based ice creams, puddings, and a spreadable soy cream cheese. Jonathan found that equipment and the process used to make the soymilk for the yogurt to be very unsatisfactory. It is designed to grind dry soybeans. There is a water feed at a temperature from ambient temperature to not above 70ºC–so you get a beany flavor. More than that, the ground soybeans go immediately to two extractors, a coarse and a fine spin extractor. There is about 1 second between grinding the hydrated beans and extracting the okara. Therefore the yield of soymilk solids and protein is very low. The soymilk is then run through a heat exchanger to pasteurize–with a 2½ to 3 minute residence. He made various suggestions to Sesco as to how they could re-plumb this machine to make it much more efficient, including running the product thru the heat exchanger before the extractors–to give more time to extract soy solids. Address: Director of Operations, White Wave Inc., Boulder, Colorado. Phone: 303-443-3917.

7277. Buzzell, R.I.; Poysa, V. 1997. Two food quality soybean cultivars released by GPCRC. *Canadian Soybean Technical Bulletin* (*OSGMB, Chatham, Ontario, Canada*) 3(2):1. July.
• ***Summary:*** GPCRC is the Greenhouse and Processing Crops Research Centre (formerly Harrow Research Station). "These two cultivars, AC Onrei and OX756, have been introduced to complement Harovinton expand the export of Ontario soybeans into the premium Asian soyfood market. Harovinton, a tofu-type soybean cultivar developed at Harrow, has established Canadian soyfood soybeans as a premium quality product in Asia, where it is called 'Orient Pearl.'

"AC Onrei is a selection from the cross Vinton X Enrei. Enrei is a premium quality Japanese tofu cultivar which lacks the a4 protein sub-unit of the 11S glycinin (gy4/gy4). Enrei's superior tofu quality, especially the ability to make premium tofu using the 'nigari' (magnesium chloride) coagulant, is due to the lack of this a4 protein sub-unit. Vinton is Gy4/Gy4 and has the a4 protein sub-unit."

"OX756 was developed from the backcross of L2 X Harovinton. L2 is a backcross derived lx2/lx2 line of Century which lacks the L2 lipoxygenase isoenzyme... Harovinton is Lx2/Lx2 and has the L2 lipoxygenase isoenzyme."

"OX756 is a low lipoxygenase (lx2/lx2), yellow hilum cultivar similar in yield but earlier maturing than Harovinton, the recurrent parent. The lack of the lx2 lipoxygenase enzyme should reduce the 'beany' flavours in tofu, soymilk, and other soyfood products made with OX756, thus promoting wider acceptance of soybeans as food ingredients. It was released to W.G. Thompson and Sons, Ltd."

A table shows agronomic performance and seed quality for these two new food varieties compared with Harovinton during 8-9 years. For each variety are given: Yield, plant height, lodging score, days to maturity, weight of 100 seeds, protein %, and oil %. Address: AAFC, GPCRC, Harrow, Ontario, Canada.

7278. Jessop, D.B. 1997. The food processing lab at GPCRC at Harrow. *Canadian Soybean Technical Bulletin* (*OSGMB, Chatham, Ontario, Canada*) 3(2):1. July.
• ***Summary:*** "The food processing lab at the GPCRC [Greenhouse and Processing Crops Research Centre] has, for the past several years, evaluated soybean varieties for their soymilk, tofu and miso making properties. The Grainspec whole grain infrared analyser is capable of evaluating raw soybeans for moisture, oil, protein, total sugar, colour and more recently sucrose and stachyose [an oligosaccharide that causes flatulence]. The raw beans are also analysed for water uptake in both the tofu and miso process." Address: AAFC, GPCRC, Harrow, Ontario, Canada.

7279. *Progressive Grocer.* 1997. Databank: Complete statistical information on all 36 product categories and hundreds of subcategories follows. 76(7):55. July.
• ***Summary:*** The statistics are for the year 1996. The "Sales manual" is an annual publication of this magazine. All categories are arranged in three broad sections: grocery edibles, grocery non-edibles, and perishables. Categories are listed in alphabetical order within each section.

Under "Grocery edibles" in the category of "Baby foods" (which comprise 0.84% of supermarket sales) we read that U.S. supermarket sales of infant formula (not including

drug store and discount store sales) total $1.923 billion, which was a decrease of 2.1% from the previous year, and which comprises 70.6% of the "baby food" category sales.

7280. *Soyafoods* (*ASA, Europe*). 1997. New equipment from ProSoya. 8(2):6. Summer.
• ***Summary:*** Two large black-and white photos show the new equipment: (1) Continuous hydration tank (ST2000; consists of three tanks, one atop the other). (2) Low-cost desludging centrifuges (EC2000; the twin stage self-desludging centrifuges are located side-by-side). For details contact: ProSoya, Inc., 2-5310 Canotek Road, Ottawa, Ontario, Canada K1J 9N5. Phone: +1 (0)613 745-9115.

7281. Vitasoy International Holdings Ltd. 1997. Annual report 1996/97. New Territories, Hong Kong. 100 p. July. 30 cm. [Eng; Chi]
• ***Summary:*** For the fiscal year ended 31 March 1996, group turnover (sales) was HK$1,524 million, up 17.1% over the previous year. Of these sales, 70.3% came from Hong Kong, 19.3% from North America, and 10.5% from the rest of the world. Operating profit was HK$120 million, up 12% from the previous year. Earnings per share were 22.3 cents, up 272%. Dividends for the year were 10.2 cents, up 6% from the previous year.

"North America: Sales continued to be healthy, with good increases over the previous year. The U.S. Group achieved a total gross revenue of HK$294 million, an increase of 15% over the previous year. Again, tofu products made up the largest share, commanding more than 40% of gross sales, a rise of over 18%.

"Soyamilk contributed the second largest revenue stream, and the Natural Vitasoy product range realized a significant increase of nearly 30%. Vita tea and juices made a modest increase over last year, while pasta, with just over 10% of gross sales, rose nearly 7%."

"Nasoya Foods, Inc. has purchased a new building in Massachusetts to relocate its tofu plant and greatly increase production capacity. It is also adding a new soyamilk processing line. To better serve our American customers, Natural Vitasoy soyamilk will be produced in North America from October, 1997."

Two Americans are on the board of directors: Mr. Jerry Maynard (age 47, Chief Operating Officer of Vitasoy USA, joined the Group in 1988) and Mr. Alfred H. Eaton (age 41, President of Nasoya Foods, joined the Group in 1990).

China: "With both the Shenzhen and the Hong Kong plants running at almost full capacity, and the new Shanghai plant planned to commence production in the third calendar quarter of this year, the Group is well positioned for growth."

The Group was awarded one of the "Top 20 Leading Companies in Hong Kong" in an election organized by the *Hong Kong Economic Times.*

The company now has two websites: www.vitasoy.com and www.nasoya.com. Photos show: Vitasoy chilled soymilk in gable-top cartons (p. 6). The Shenzhen plant (p. 9). The Nasoya plant in Massachusetts (p. 10). Address: No. 1, Kin Wong Street, Tuen Mun, New Territories, Hong Kong. Phone: 466 0333.

7282. Woodrow, L.; Buzzell, R.I. 1997. Sugars in food processing soybeans. *Canadian Soybean Technical Bulletin* (*OSGMB, Chatham, Ontario, Canada*) 3(2):2. July.
• ***Summary:*** "The soybean program at the Greenhouse and Processing Crops Research Centre [formerly Harrow Research Station] focuses on the development of lines with characteristics suited to the domestic and export food processing markets. Seed characteristics such as hilum and seed coat colour; storage protein content and profile; enzyme profile; oil content and fatty acid composition; total carbohydrate content; and free sugar composition are important determinants of the food processing performance of soybeans into products such as soymilk, tofu, and miso."

"As soybeans mature, free sugars are synthesized and form part of the storage reserves of the seed. When the seed germinates, these sugars represent the first energy available to the young seedling... Glucose and sucrose are present in most fruits and vegetables, raffinose and stachyose are found in some plant families including legumes. These sugars are synthesized in a pathway that leads from the monosaccharide glucose to sucrose (disaccharide), raffinose (trisaccharide) and finally the tetrasaccharide, stachyose. In the mature soybean sucrose and stachyose are present at levels ranging from 3.0-8.0% by weight dry matter depending on the variety or line. Raffinose and glucose are intermediates in the synthesis and are present at much lower levels in the mature seed."

A graph shows the glucose, sucrose, raffinose, and stachyose contents of 40 soybean varieties and lines, plotted to show their relationships with the total free sugar content. The data illustrates that among lines increasing total free sugar content is correlated with an increase in sucrose. Sucrose is the most abundant sugar in mature soybeans, followed by stachyose, then raffinose. Glucose and fructose are present in only trace amounts. Address: AAFC, GPCRC, Harrow, Ontario, Canada.

7283. Nordquist, Ted. 1997. Re: Establishing TAN Industries, Inc. in California and update on work with soyfoods. Letter to William Shurtleff at Soyfoods Center, Aug. 4. 2 p. Preceded by an interview on July 14.
• ***Summary:*** "I incorporated TAN Industries, Inc. in California [in about mid-1991, shortly after Ted's mother died in Feb. 1991. Ted had also incorporated a TAN AB is Sweden]. I commuted from Örsundsbro, Sweden, to California (lots of frequent flyer miles) from 1992 until August of 1994, when my family joined me in Sonoma, California.

"I received money from the sale of Aros Sojaprodukter AB (to Blekinge Invest) and invested in TAN, plus received 6% commission on sales for three years. This contract was up the same month that Henry and I began selling soymilk to White Wave (Silk).

"In January of 1995, TAN Industries started packaging and selling soy beverage in extended shelf-life refrigerated packaging. We believe we are now the largest packager and seller of a formulated refrigerated extended shelf-life (12 weeks) soy beverage in the United States.

"TAN Industries, Inc. specializes in vegetable-based dairy-like products such as beverages, yogurts, ice creams and, as you may know, puddings as required. TAN has its own process, comprised of specially designed equipment to process whole soybeans into high quality, good tasting and nutritious vegetable-based dairy-like products at competitive prices. Usually economy of scale dictates a minimum production order of approximately 12,000 gallons on each processing occasion. TAN seeks to enter into contractual agreements to provide product to companies where distribution and marketing are already in place.

"TAN will develop specific products for customers or TAN will develop a product and present the product wholesale, FOB factory, to a prospective company capable of taking the product to market.

"In 1996, TAN has entered a contractual agreement with a producer of rice-based beverage. This enables TAN to offer both Rice beverages and related products, as well as Soy."

"After many years, I have learned some ways to keep out of debt, realizing that being low on money will not help the cause and that I must move slowly enough to keep the money flowing in at least as fast as it flows out. So there is some dampened enthusiasm for moving ahead too quickly in exchange for what looks to me to be a solid, sensible path to long term business and growth.

"Much of this success I owe to Henry Glasser, my partner and long time friend of my father's best friend. I sit in this office and consult with his wisdom, content to see TAN Industries, Inc. continue in the black toward goals we both share."

Note: TAN Industries is listed in the *1997 Soya Bluebook Plus* (published Sept. 1996) on pages 185 (manufacturer of soymilk) and 285 (equipment supplier and consulting).

Ted Nordquist now lives in California. His company, TAN Industries, Inc., operates out of the office of Henry Glasser, an attorney in San Francisco. He was involved in the development and formulation of Silk, a fresh soymilk product launched by White Wave in Jan. 1996. He was having this product made by ProSoya in British Columbia, Canada, but now it is apparently being made somewhere else–perhaps in Los Angeles. His main goal now is to develop a soymilk product that will compete with Lactaid. Address: TAN Industries, Inc., 351 California St., Suite 1330, San Francisco, California 94104; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-398-8007.

7284. Skiff, James. 1997. Lipoxygenase (L1) null soybeans do not yet make better-tasting soymilk than regular soybeans (Interview). *SoyaScan Notes.* Aug. 7. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Last week Jim (together with Paul Lang and Paul's production manager) visited with Dr. Lester Wilson at Iowa State University. Lester had just finished conducting a taste panel test to judge the quality of soymilk and other products made from L1-null soybeans. One batch of soymilk was made from the L1-null soybeans and the other batch was made from a mixture of any other types of soybeans–and not from the best varieties used to make soymilk, such as Vinton. Jim and his two coworkers took the same taste test of the two types of soymilk independently. They concluded that there was no significant difference between the taste of the soymilk made from the L1-null soybeans and that made from regular soybeans. If the soymilk had been made from Vinton soybeans, the L1-null soymilk would probably not have tasted as good.

The results of the official taste panel, which Jim received later, were about the same–showing no significant difference.

Lester Wilson was noticeably upset by these results. He has tried to get rid of the beany flavor of soymilk solely by changing the soybeans–without changing the soymilk manufacturing process. So far apparently, Lester's work has not been successful. His one defense is that perhaps the L2-null or the L3-null soybeans will give better results. Les Wilson has published the results of two studies on the use of lipoxygenase-null soybeans to make soymilk. Address: Cornbelt Foods, Inc., P.O. Box 218, Marshall, Minnesota 56258. Phone: 507-537-1406.

7285. Kilman, Scott; Warren, Susan. 1997. DuPont to buy Ralston-Purina unit in building 'dirt-to-dinner' biotech line. *Wall Street Journal.* Aug. 25. p. A4, C2 (p. A8 East).

• ***Summary:*** DuPont signed a letter of intent to buy Ralston Purina's soybean processing unit, Protein Technologies International (PTI), for $1.5 billion in DuPont stock. PTI makes high-protein powder from soybeans, "a hot-selling ingredient for everything from infant formula to supplemental nutritional drinks for senior citizens. Recent medical studies suggesting that soybean compounds inhibit growth of some cancer cells and reduce the risk of osteoporosis are fanning strong interest in them for use in 'nutraceuticals.'" DuPont, a giant chemical company, wants PTI to process the soybeans genetically engineered by the biotech joint venture it recently formed with Pioneer Hi-Bred International Inc. of Des Moines, Iowa, the nation's largest seed company; DuPont purchased a 20% stake in Pioneer for $1.7 billion.

"Officials of the joint venture hope to design a soybean

from which it is easier to extract isoflavones, a chemical with estrogen-like properties some researchers believe eases menopause symptoms." Industry observers were surprised at the high price (announced Friday) that DuPont offered to pay for PTI; it is more than 3 times the annual revenue of PTI, which last year had $421 million in sales and $85 million in operating profit. High offer fueled speculation that DuPont had to outbid its biggest biotech rival, Monsanto Co., which is spinning off its flagship chemicals business as it gobbles up seed and biotech companies. Some Wall Street analysts think Friday's developments put pressure on Monsanto to form some sort of alliance with ADM to process its genetically engineered crops into food ingredients.

Although the soy protein market that PTI helped to create is growing at about 10% a year, Ralston says it is selling the unit because it doesn't have the biotechnology resources to take it to the next level. DuPont said it expects to reach a final agreement with Ralston this fall, subject to corporate and regulatory approval.

Ralston's stock advanced $3.44 to $91.68 with the sale. ADM stock rose $0.94 to $21.875.

Note: As of 16 Oct. 1998, PTI has decided to remain at its former offices at the Ralston Purina building in St. Louis. Missouri. It still uses the Ralston Purina library, etc.

7286. Galaxy Foods Company. 1997. Annual report 1997. Orlando, Florida. 29 p. 22 x 28 cm.

• ***Summary:*** Sales in 1997 were $17,171,496, up 334% from $3,950,455 in 1996. Net loss was $2,736,660–not as bad as the $3,282,58 loss in 1996. In the first quarter of 1998, sales were $5.8 million–up 75% over the same quarter one year ago, and the company made a profit.

Accompanying the report is a "Notice of annual meeting of shareholders to be held Wednesday, October 15, 1997" (15 p.). The principal shareholders (p. 3) are Angelo S. Morini (age 54, 38.8%) and Cede & Co. (New York, 48.9%). Mr. Morini's salary is an astonishing $250,000 plus $16,262 in other annual compensation.

"Between 1974 and 1980, Mr. Morini was the general manager of Galaxy Cheese Company, which operated as a sole proprietorship until its incorporation in May 1980. Prior to 1974, he was associated with the Food Service Division of Pillsbury Company and the Post Division of General Foods Company. In addition, he worked in Morini Markets, his family-owned and operated chain of retail grocery stores in the New Castle, Pennsylvania, area. Mr. Morini received a B.S. degree in Business Administration from Youngstown State University in 1968" (Notice, p. 7). Address: 2441 Viscount Row, Orlando, Florida 32809. Phone: 800-441-9419 or 407-855-5500.

7287. Newshour with Jim Lehrer. 1997. Osteoporosis, calcium, and the U.S. diet. Television broadcast. PBS. Aug. 14.

• ***Summary:*** Americans and Canadians need more calcium in their diets to guard against the bone disease osteoporosis, according to a report released yesterday by the Institute of Medicine (an affiliate of the National Academy of Sciences) in Washington, DC. The study recommended increasing the daily dose of calcium for adults to 1,000–1,300 mg, depending on age. That is an increase from the current 800–1,200 mg which had been recommended by the National Academy of Sciences. Many women and teens still get less than 600 mg/day.

"Calcium can be consumed in dairy products and foods such as broccoli and tofu." Note: Experts agree that getting enough calcium is essential to building strong bones. Other good sources are calcium-fortified soymilk and calcium-fortified orange juice. Another key to keeping calcium levels high is retention–smoking, coffee, and intense physical exercise all deplete calcium stores–as does excess protein consumption.

7288. *GMF–Genetically Modified Foods Market Intelligence* (*Genetic ID, Fairfield, Iowa*). 1997. rBGH labeling suit settled. No. 12. Sept. 1. p. 1-2.

• ***Summary:*** "The State of Illinois and the City of Chicago have settled a lawsuit brought by a group of natural food companies who sought the right to label their dairy products as free of recombinant bovine growth hormone (rBGH). The companies, Ben & Jerry's Homemade Inc., Stonyfield Farms Inc., Whole Foods Market Inc., and Organic Valley, won the right to place the following statement on their labels: 'We oppose recombinant bovine growth hormone. The family farmers who supply or milk and cream pledge not to treat their cows with rBGH. The FDA (Food and Drug Administration) has said no significant difference has been shown and no test can now distinguish between milk with rBGH treated and untreated cows.'

"Also known as recombinant bovine somatotropin (rBST [recombinant bovine somatotropin]) and first marketed by Monsanto under the brand name Posilac, rBGH was first introduced to the dairy industry in February, 1994. Bovine somatotropin is a hormone produced naturally in the pituitary gland of cattle, and is a regulator of milk production... When injected into lactating dairy cows, the hormone stimulates milk production."

Approximately 15% of all U.S. milk producers have purchased this Monsanto product. According to Monsanto figures, sales volume for the first ten months of 1996 was up 40% over the same period in 1995.

Also discusses: State legislatures debate rBGH; some laws have been passed. Mid-1995 consumer survey of 1,901 primary food purchasers on rBGH, funded by USDA (Milk from rBGH cows should be labeled as such–94%. Poor overall opinion of rBGH–54%. Concerned about possible discovery of negative long-term effects on human health–74%). Scientific concerns. Concerns of animal

rights groups (rBGH increases dairy cows' susceptibility to mastitis, cystic ovaries, and uterine disorders). Limited international acceptance of rBGH: "At present, the 15 countries of the European Union (EU), Canada, Australia, and New Zealand do not permit the importation of rBGH."

7289. *GMF–Genetically Modified Foods Market Intelligence* (*Genetic ID, Fairfield, Iowa*). 1997. DuPont next big player in ag biotech. No. 12. Sept. 1. p. 1.
• ***Summary:*** "In a bid to join Monsanto and Novartis in the top tier of developers of new genetically engineered crops, Wilmington, Delaware-based DuPont Co. is building a biotech food empire through acquisitions.

"DuPont has acquired a 20% stake in seed producer Pioneer Hi-Bred International of Des Moines, Iowa, which will give it a marketing outlet for its new seeds that are genetically engineered for special nutritional attributes. Pioneer had previously turned down purchase offers from Monsanto.

"As part of a strategy to create a vertically integrated structure to deliver its products, DuPont is also acquiring the Protein Technologies International (PTI) unit of Ralston Purina Co. PTI is a leading producer of soy protein powders that are ingredients in a wide range of nutritional products from infant formula to soy burgers. PTI will be the vehicle for processing and selling DuPont's soybeans engineered to contain altered nutritional components such as proteins and fats.

"The *Wall Street Journal* of August 25 reported that some Wall Street analysts are now expecting an alliance between Monsanto and Archer Daniels Midland Co. to process Monsanto's genetically modified crops into food products."

7290. *GMF–Genetically Modified Foods Market Intelligence* (*Genetic ID, Fairfield, Iowa*). 1997. New soy product goes non-GMO. No. 12. Sept. 1. p. 3.
• ***Summary:*** A new soy milk ice cream made from non-GMO soy powder was introduced at the recent Institute of Food Technologists Expo 97 by O.S.F. Corp., a flavor company in Hartford, Connecticut. The low-fat product contains special flavorings to mask the soy aftertaste. The soy powder base is supplied by Devansoy Farms of Carroll, Iowa. Olivier de Botton of O.S.F. says that his company chose a non-GMO soy powder because they have European customers for their products. "Mr. Botton also points out that as awareness of the issue of GM foods grows among American natural foods consumers, the ice cream could also be marketed as a non-GMO product."

7291. Jha, Krishna. 1997. Soya bean: Do we know enough about it? *Indian Express–Pune Newsline* (*India*). Sept. 6.
• ***Summary:*** Subtitle: "Very few people might be really aware of the uses and benefits of soya beans. Most of us simply know that it is used for extraction of edible oil. Soya bean apart from containing about 20-22 per cent oil also contains about 44 per cent high quality edible protein which is approximately two times higher than what is present in common pulses popular such as *arhar, urad, moong,* gram, lentil, etc."

This article focuses on the therapeutic benefits of soya bean in reducing cancer risk, improving glycemic control in diabetics, and lower cholesterol.

"Soya milk, soya paneer (tofu), breads, cakes, yoghurts, biscuits, nuggets, etc. and many other food products will shortly be available to the common man.

"For the first time, in Pune this useful product will be made available for mass consumption by Amrit Foods, Pune.

"The various products including Soya Milk and Soya Paneer (Tofu) will be launched in a fortnight and Breads, Cakes, Yogurts, Biscuits, Nuggets along with a host of other soya products are in the pipeline for the future." Address: PhD, Senior Scientist, Microbiology.

7292. Sandler, Matthew. 1997. New developments Luppy and with soymilk in the USA (Interview). *SoyaScan Notes.* Sept. 15. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** At the Natural Products Expo in Baltimore, Matt introduced Luppy, a pudding based on organic milk. For years he had wanted to make a soy-based pudding but he was unable to realize his dream, largely for two reasons. He was unable to buy soymilk at a reasonable price, and when the soymilk was heated to aseptic temperatures, it developed off-flavors that he was unable to get rid of.

Matt buys organic nonfat dried milk for $2.30/lb. One pound makes 10 gallons with 10% solids. So the cost of a gallon of liquid is $0.23.

Matt heard that American Soy Products (makers of Edensoy) has recently doubled the capacity of their soymilk plant.

Matt also heard that Elmer Schettler, president of Devansoy, Inc. (Carroll, Iowa), recently sold his company to Sovex. Devansoy started making Solait (powdered soy beverage) as its own brand in Jan. 1993; Solait had previously been made by Miller Farms. Devansoy also made "Better Than Milk" (powdered soy beverage) for Sovex. Note: Talk with Elmer Schettler, owner of Devansoy, Inc. This is not true. Devansoy is not for sale and has not been sold. Address: Co-owner, Luppy Natural Foods, Inc., P.O. Box 5997, Snowmass Village, Colorado 81615. Phone: 970-923-0333.

7293. Schettler, Elmer. 1997. History of Devansoy, Inc. including current developments (Interview). *SoyaScan Notes.* Sept. 16. Conducted by William Shurtleff of Soyfoods Center.
Address: President, Devansoy, Inc., P.O. Box 885, Carroll,

Iowa. Phone: 712-792-9665.

7294. *New Zealand Herald.* 1997. Call for research on soy milk hormones: An American researcher wants to find out more about the long-term impact of plant hormones on babies fed soymilk as an alternative to dairy formula. Sept. 17.
• ***Summary:*** Babies being fed infant soy milk formula are receiving large doses of plant hormones at biologically active levels, says an American researcher.

"Dr. Kenneth Setchell said babies on soy formula received the hormones at six to 11 times the level shown to affect the menstrual cycle of adult women.

"He said the hormones, known as isoflavones, 'must have some biological activity in the infant' but there was not enough evidence to know if this was beneficial or harmful.

"About one in 60 babies born in New Zealand each year is fed on soy formula, usually because they are allergic to dairy foods."

7295. *SoyaScan Notes.* 1997. Update on ProSoya (Overview). Sept. 23. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** The following is based on a talk with a person who just returned from the Natural Products Expo in Baltimore, Maryland, and wishes to remain anonymous. ProSoya now has an office in the United States, run by Fred Webster. It is: International ProSoya Corp., 106 Sunset Dr., New Hope, Pennsylvania 18938. Phone: 215-862-5715.

ProSoya from British Columbia, Canada, has a booth at the show. A fellow named Jerry Duncan at that booth was unusually rude and nasty to two potential customers who tried to approach him. First he said that ProSoya sold only a soymilk system (equipment), not the soymilk itself. When this American businessman said he was interested in buying soymilk, not a system, Mr. Duncan said that he would sell soymilk only if the final product was sold under the ProSoya brand, and the co-packing was taken care of by the American person.

7296. Chua, G.P. 1997. Re: Plans to establish over 1,000 franchise outlets to make and sell instant soya milk and tofu. Letter to William Shurtleff at Soyfoods Center, Sept. 25. 1 p. Typed, with signature on letterhead.
• ***Summary:*** Mr. Chua is looking for sources of information, soybeans, tofu coagulants, and equipment. He plans to establish over 1,000 franchise outlets to make and sell instant soya milk and soft tofu.

Note: A record in the SoyaScan database dated 1 Nov. 1985 showed: Mr. G.P. Chua, Cai Consultants, Industrial Pk 3 #03-18, 6024 Ang Mo Kio, Singapore 2056. At the bottom of his letterhead the following address is crossed out: Cai Technologies, 20, Bideford Road, #05-02 Wellington Building, Singapore 0922. Phone: 732-1991. The top of his letterhead states that Cai Technologies has offices in Los Angeles [California], Chicago [Illinois], Hong Kong, Melbourne and Perth [Australia], London [UK], and Tokyo [Japan]. Address: President, Cai Technologies, 153A Rochor Road, Singapore 188428, Singapore. Phone: +65 339-3733. Fax: +65 339-1733.

7297. *SoyaScan Notes.* 1997. How different types of bacteria reproduce and the amount of heat required to kill them (Overview). Sept. 28. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** What are bacteria? They are tiny, one-celled organisms that can usually be seen only with the aid of a microscope. Millions of them would fit on the head of a pin. Bacteria (and blue-green algae) are distinguished from other living things because of their cell structure: they have no distinct nucleus–that is, their nuclear matter is not enclosed by a cell membrane or wall, and they lack most of the internal cell structures found in the cells of higher organisms. All bacteria have a cell wall surrounding a cell membrane, inside of which lies the unbound nuclear matter and other material. There are three types of bacterial cells, based on shape: spherical (coccus), rodlike (bacillus), and spiral (spirillum). In terms of evolution, bacteria are the most successful of all creatures.

Are all bacteria bad? No! Some bacteria (popularly called germs) cause disease and sickness. Others are responsible for the spoilage of food. Yet many types of bacteria are essential in making foods–called fermented (or cultured) foods–such as yogurt, sour cream, buttermilk, many fermented cheeses, vinegar, sauerkraut, dill pickles, natto, etc. Other bacteria are decomposers of the biosphere; in nature they cause the decay of stumps, logs, leaves, and other vegetation, which eventually would literally choke our forests and fields. Indeed, without bacteria, there would be no plant or animal life on earth.

How do bacteria multiply? Most bacteria reproduce by dividing in the middle to form two cells. After these cells reach maturity, they divide again to make four. In some species of bacteria, such divisions may occur as often as every 15 minutes. Thus billions of bacteria may be formed from a single bacterium in 24 hours. Others divide only once every 16 hours.

What are bacterial spores? Bacteria of the genera *Bacillus, Clostridium, Desulfotomaculum, Sporolactobaciullus* (rods), and *Sporosarcina* (rods) share the ability to form a type of spores, called endospores. Of primary interest to food microbiologists are the spore-forming species of the genera *Bacillus* (aerobic) and *Clostridium* (anaerobic). Endospores, which are formed within the bacterial cells, are very resistant to heat. They are a survival mechanism for the bacteria, because when they germinate, new bacteria are formed–even if the bacteria (vegetative cells) have been killed by heat.

How much heat is required to kill bacteria and their endospores? The heat resistance of microorganisms is usually expressed in terms of their *thermal death time,* which is defined as the time it takes a certain temperature to kill a stated number of organisms (or spores) under specified conditions. The heat resistance of vegetative cells of bacteria varies widely with the species, but even the most difficult to kill (the thermophiles) are killed in several minutes at 80 to 90ºC. Generally, the higher the optimal and maximal temperatures for growth, the greater the resistance to heat. Bacteria which clump considerably or form capsules are more difficult to kill than those which do not. Thermal death times of some common bacterial cells: *Gonococcus:* 2-3 minutes at 50ºC. *Staphylococcus aureus:* 18.8 minutes at 60ºC. *Escherichia coli:* 20-30 minutes at 57.3ºC. *Staphylococcus thermophilus:* 15 minutes at 70-75ºC. *Lactobacillus bulgaricus:* 30 minutes at 71ºC.

Thermal death times of some common bacterial spores: Time (in minutes) to kill all at 100ºC: *Bacillus anthracis:* 1.7 minutes. *Bacillus subtilis* (the natto bacterium): 15-20 minutes. *Clostridium botulinum* (causes botulism): 100-330 minutes. *Clostridium calidotolerans:* 520 minutes. Flat sour bacteria: Over 1,030 minutes (17.1 hours). These hard-to-kill bacterial spores are usually killed by heating in a retort (pressure cooker) which raises the temperature.

Heat resistance of enzymes: Although most food and microbial enzymes are destroyed at 79.4ºC, some may withstand higher temperatures, especially if high-temperature short-time heating is employed.

Bacterial growth in different foods: Very few bacteria grow in acid foods, dry foods, salted foods, or very sweet foods. Thus, it is relatively easy to can tomatoes because they are an acid food. Jams and jellies are protected by their high content of sugar, and often acid. But the amount of heat required to successfully can nonacid foods is very high because of the need to destroy thermophilic bacteria and the very heat-resistant bacterial spores.

Letter from Dr. Keith H. Steinkraus, Prof. of Microbiology, Cornell University, Ithaca, New York. 1997. Nov. 15. "One of the most interesting areas of microbiology today is the 'extremophiles' isolated from volcanoes, and deep pockets in the oceans. Some extremophiles will grow at temperatures above boiling water, for example 220ºF. They are proving to be a good source of enzymes operating at high temperatures.

"Regarding the thermal death times of spores: Using a spore concentration of 60 billion spores/ml of *Clostridium botulinum* (suspended in buffer at pH 7.0) the minutes required to kill them are as follows: 100ºC–360 minutes, 110ºC–36 minutes, or 120ºC–5 minutes."

"D-value-decimal reduction time or the time required to destroy 90% of the organisms (their spores) at 120ºC (250ºF): *Bacillus stearothermophilus*–4.0-5.0 minutes, *Clostridium thermosaccharolyticum*–3.0-4.0 minutes, *Clostridium nigrificans*–2.0-3.0 minutes, and *Clostridium botulinum*–0.1-0.2 minute.

"Source of the above figures–*Modern Food Microbiology,* James M. Jay (D. Van Nostrand, 1978). There are later editions but it is unlikely that the basic figures have changed much.

"Bacteria suspended in water are more easily destroyed. Suspended in oil or fats or in dried smears are much more resistant to destruction.

"Regarding your inquiry concerning heat treatment of brown rice at 15 psi for 35 minutes, it is very unlikely that any microorganisms in your environment or on the brown rice will survive that treatment. Will it taste 'freshly made' after two weeks in the pot at summer temperatures? Unlikely but only a taste test will answer your question."

One of Dr. Steinkraus' MSc students did her research on "tea fungus–kombucha," and another did his on tempeh bongkrek toxin. He found that bongkrek toxin is formed only in the presence of rather high levels of fat as you would find in coconut residue (left after the extraction of fresh coconut milk with water).

7298. Webster, Fred. 1997. International ProSoya Corp. launches SoNice soymilk and yogurt in the USA (Interview). *SoyaScan Notes.* Sept. 30. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Fred is the first U.S. employee of International ProSoya Corp., which is in the process of launching three products: (1) SoNice soymilk, in aseptic cartons (1 liter, and 250 ml x 3), in 6 flavors (vanilla, chocolate, natural {soybeans and water}, original {with added sweetener}, strawberry, and cappuccino); expected retail price is $1.99/liter. (2) SoNice fresh soy beverage in gable-top cartons, in 2 sizes (quart and half gallon); expected retail is $1.99 and $2.99 respectively. (3) SoNice soy yogurt, in 5 flavors (vanilla, strawberry, raspberry, black cherry, and fieldberry), refrigerated (45 day shelf life) in a 6 oz cup; expected retail price is $0.99/cup.

These products were first introduced to the U.S. market in late September 1997 at the Natural Products Expo in Baltimore, Maryland–where they were preferred to all competing products for their good flavor. They are all made in British Columbia, Canada, but packaged in New Jersey. He will start shipping to U.S. distributors next week. The two types of soymilk should be available in food stores in mid-October and the soy yogurt in mid-November. In March 1997, International ProSoya Corp. opened a sales office in Toronto, Ontario, Canada. Address: International ProSoya Corp., 106 Sunset Drive., New Hope, Pennsylvania 18938. Phone: 212-862-5715.

7299. Bean Supreme Ltd. 1997. Soy kids: Easy family recipes with children in mind (Brochure). Auckland, New Zealand. 6 panels each side. Each panel: 10 x 14 cm.

Undated.
• ***Summary:*** On the cover, red on pink, is an illustration of 7 happy kinds before a large rayed sun. The first 2 panels are about the health benefits of soyfoods. Then come 6 pages of recipes and tips for using Bean Supreme's Soyplus soymilk, tofu, and Lite Licks frozen dessert (soy ice cream). The company also makes tempeh and Tofu Luncheon. The back panel lists the company's soy products, has a statement about the goodness of soybeans, and states: "Bean Supreme brings happiness." Address: Box 12082, Penrose, Auckland, New Zealand.

7300. Bean Supreme Ltd. 1997. Soybeans–why the fuss! Soyplus [soymilk]. Hot health tips. Smart Meatfree Sausages (Leaflet). Auckland, New Zealand. 1 p. Back to pack. 30 cm.
• ***Summary:*** This brochure introduces all the soyfood products in the Bean Supreme line / range: Small photos show: Tofu (chub pack). Soyplus soymilk (in Tetra Pack cartons). Tofu Luncheon. Lite Licks nondairy frozen dessert. Meatless Sausages. Address: New Zealand.

7301. Lightlife Foods, Inc. 1997. Eating healthy can be soy easy (Brochure). Greenfield, Massachusetts. 12 p. 22 cm.
• ***Summary:*** On the cover of this full-color, glossy brochure is a color photo of a meatless burger (between buns, with onion, tomato, and lettuce), a hot dog (in a bun, with a bead of mustard on top), and a plate of stir-fried tempeh with veggies. In the background are rolling soybean fields. In the foreground are three pods of green vegetable soybeans, and 15 whole dry soybeans.

Contents: Ten reasons to include soyfoods and soy protein in your diet (p. 2-3): 1. You will be in good company. 2. Lower your cholesterol. 3. Lower your risk of cancer. 4. Menopausal symptoms. 5. Soyfoods are nutritious. 6. A quality protein source. 7. Save our precious resources. 8. A variety of alternatives and greater availability. 9. Better quality. 10. Soyfoods are "in."

Glossary of common vegetable protein foods (p. 4-5): Tofu, tempeh, meat analogs, soymilk, soy cheese, soy flour, soy protein, textured vegetable protein (TVP), seitan, miso. A table shows each Lightlife product, serving size, and grams of soy protein (soy tempeh has the most at 24 gm per 4 oz serving, followed by Gimme Lean at 18 gm per 4 oz).

Products (with a brief definition of each) and mission statement (p. 6-7): Smart dogs. Tofu pups. Wonderdogs (The first low-fat vegetarian hot dog just for kids). Smart deli slices (fat free). Foney baloney (Kids love it). Lean links sausages. Gimme lean (fat free). Marinated smoky tempeh strips ("Fakin' Bacon"). Fakin' bacon bits. Marinated tempeh "grilles" (soy tempeh patties in Tamari, Lemon, and Barbecue flavors). Lightburgers (fat free). Lightsausages (fat free). Tempeh (in 5 varieties–Soy, Three Grain {millet, brown rice, barley}, Garden Vegetable, Quinoa-Sesame, and Wild Rice), Savory seitan, Vegetarian request (100% vegetarian, all-natural entrees). A color photo shows many products in their packages.

Getting started (p. 8-10; how to use key products). About Lightlife (since 1979). Address: P.O. Box 870, Greenfield, Massachusetts 01302. Phone: 1-800-274-6001 Ext. 129.

7302. Ontario Soybean Growers' Marketing Board (OSGMB). 1997. Overview of the Canadian soyfoods market. Chatham, Ontario, Canada: OSGMB. 44 p. 28 cm.
• ***Summary:*** This excellent, complete, and accurate market study was compiled by the Collège d'Alfred of the University of Guelph, under contract with the Ontario Soybean Growers' Marketing Board (OSGMB). The project leaders were Suzanne Lavoie, Charles Goubau, and Ian Walker. The field research was conducted between Jan. 15 and Aug. 31, 1997. The first study of the Canadian soyfoods market was published in March 1990 (vi + 40 pages).

Contents: Acknowledgments. Summary. Introduction. Research procedures: Methodology, limitations (of the 100 companies in this study, over 75% were visited, interviews were conducted in person, and product samples were collected). The Canadian soyfoods market: History, structure of the Canadian soyfood industry, market highlights by region (The Maritimes, Quebec, Ontario, the Prairies {Manitoba, Saskatchewan, and Alberta}, British Columbia), factors influencing the soyfoods market (A closer look at Canadian demographic trends, a closer look at Canadian immigration trends, a closer look at vegetarianism and family food expenditure trends, research on soyfoods and their health benefits, the American influence). Supply and demand of soybeans for use in soyfoods: Soybean production in Ontario, imports and exports of soybeans, imports and exports of soy products, the soybean crushing industry in Ontario, consumption of whole soybeans by soyfood processors. Opportunities in the Canadian soyfoods market. Soyfood processors and their needs. Market opportunities for food-grade soybeans. Summary comments. Bibliography.

Tables show: (1) Major soyfood companies established in the province of Quebec (p. 13). (2) Major soyfood companies established in the province of Ontario (p. 16). (3) Major soyfood companies established in the province of British Columbia (p. 19).

(4) Percentage of change in units and sales (p. 21). (5) Percentage distribution of population–Canada (p. 22). (6) Percentage distribution of age groups–Canada (p. 22; In the 15-24 age group, 19% did not eat meat in 1992, down from 23% in 1986).

(7) Percentage of population who do not eat meat & share of budget spent on meat, Canada 1986 and 1992 (p. 28). (8) Canadian soybean: Supply and disposition (September–August crop year)–in metric tons (p. 31). (9) Canadian soybean exports by country of destination (p. 32. In 1997-98 some 325,000 tonnes went to the European

Union, 145,000 to the USA, 85,000 to Japan, 40,000 to Hong Kong, 75,000 to other Asia, and 15,000 to other places).

(10) Imports and exports–All countries, dollar values (p. 33. The leading imports are soybean meal $202.7 million, crude soybean oil $16.75 million, and whole soybeans for oil extraction $12.59 million. The leading exports are protein concentrates and textured protein substances $9.1 million, soybean meal 6.5 million, and brans, sharps and other residues $4.3 million).

(11) Soybean crushing facilities in Canada (p. 34. All are located in Ontario province; ADM Agri-Industries Ltd., Windsor. Capacity: 3,600 tonnes/day of raw soybeans. CanAmera Foods, Hamilton, 3,000. Helin Oil Packers, Whitby, 250. Started crushing in 1997. Cold Springs Farm Ltd., Thamesford, 100. Started 1995. Sunfield Oil Seeds, Wingham, 100. Started 1994. Dennis Jackson Seeds Services Ltd., Dresden, 40. Started 1994. Tri County Protein Corporation, Iroquois, 100. Not in operation yet).

(12) Estimated quantities of soybean utilized by soyfood processors–1996–metric tons (p. 35. Total volume of whole soybeans consumed: 9,650 tonnes, of which 4,780 are for soymilk, 4,775 are for tofu, and 95 are for other soyfood products). Total volume of whole soybeans consumed by province (by soyfood processors): British Columbia 3,825 tonnes, Ontario 3,050 (excluding crushing plants), the Maritimes and Quebec 2,535, and the Prairies 240.

(13) Major foreign companies in the Canadian soyfood market (p. 37. Soy cheese: Soyco Foods, Sharon's Finest, Cemac Foods Corp. {Nu-Tofu}. Frozen desserts: Tofutti Brand, Inc. Tempeh: Turtle Island Foods Inc. Tetra Pak packaged soymilk: Westbrae Natural Foods, Cenat, Pacific Select, Vitasoy USA Inc., Eden Food Inc. Tofu: Mori-Nu, Vitasoy USA Inc. Prepared dishes: Amy's, Sharon's Finest. Meat analogs: Fantastic Food Inc. MGM Brands, Northern Soy, Soy Boy, Turtle Island Foods Inc. Salad dressing: Nasoya Foods. Soy sauce: Eden Foods Inc., Kikkoman Foods Inc.).

The Prairie Provinces (Manitoba, Saskatchewan, and Alberta) contained about 16.6% of Canada's population (4.5 million persons) in 1995. "The province of Alberta [Capital = Edmonton] is different from the other two Prairie provinces, due mainly to its larger population base, its growing Oriental population and its proximity to Vancouver. Calgary [a large city in Alberta province] and Edmonton have their own Chinatowns, including small Oriental-owned tofu and soymilk production facilities." Note: According to the Canadian Soyfoods Directory (1997, p. 14), there are 7 soyfoods companies in Alberta province, 2 in Manitoba, and none in Saskatchewan. Address: OSGMB, 180 Riverview Dr., P.O. Box 1199, Chatham, ON N7M 5L8, Canada. Phone: 519-352-7730.

7303. **Product Name:** WestSoy VigorAid [Vanilla, or Chocolate].
Manufacturer's Name: Westbrae Natural Foods (Product Developer-Distributor).
Manufacturer's Address: 1065 East Walnut St., Carson, CA 90746. Phone: 310-886-8200.
Date of Introduction: 1997. September.
Ingredients: Creamy Chocolate (March 1999): Organic soy beverage (Organic soybeans*, filtered water), filtered water, dehydrated cane juice, natural flavors, natural cocoa powder, brown rice syrup, vitamin mineral blend (magnesium phosphate dibasic, potassium chloride, dicalcium phosphate, sodium ascorbate, ferric orthophosphate, vitamin E, niacinamide, zinc oxide, copper gluconate, D-calcium pantothenate, manganese sulfate, pyridoxine hydrochloride,...).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Talk with Myron Cooper, President of Westbrae Natural Foods. 1997. Oct. 10. In Sept. 1997, at the Natural Products Expo in Baltimore, Maryland, Westbrae launched VigorAid, a nutritional soymilk in the same category as Ensure.

Ad (1/3 page, color) in Vegetarian Times. 1998. Jan. p. 53. April. Special advertising section after p. 58. "Don't hate me because I'm good for you." "Let me be your power source through a balance of 25 vitamins, minerals and fiber. Seek me when you desire the support of beneficial phytonutrients and essential fatty acids. Enjoy all the superior nutrition I provide when you drink a rich and delicious VigorAid! Each satisfying serving is a non dairy, low sodium, natural beverage made from organic soy... a perfect choice for a snack or occasional meal! Just don't hate me because I'm good for you!

For energy and your good health drink VigorAid!

"WestSoy VigorAid nutritional drink. To learn more about the benefits of VigorAid call us for a free brochure at 800-769-6455 www.westbrae.com."

Sell sheet sent by Patricia Smith from Natural Products Expo. 1999 March. The two flavors are now Creamy Chocolate and French Vanilla. Ingredients and nutritional facts are given.

7304. Nissenbaum, Robert. 1997. The U.S. market for rice milk and soymilk (Interview). *SoyaScan Notes*. Oct. 1. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Robert's information is that the amount of rice beverage sold in America is about the same as the amount of soy beverage. Some statistics indicate that the soymilk market may be slightly bigger–say 5-7% bigger. Rice milk has experience much more rapid growth than soymilk over the last few years. Both have a great place in the American diet. Soymilk probably has have a few more applications in cooking.

All Trader Joe's stores have stopped carrying the Rice Dream puddings–at least for now. In some stores, the product fell short of their weekly minimum sales quotas. They are

quite strict about dropping a product when it fails to meet their quotas in most stores. Trader Joe's wants Imagine Foods to "re-present" the product next year, together with some other new products from Imagine Foods that they will be carrying. Address: President, Imagine Foods Inc., 350 Cambridge Ave., Suite 350 Palo Alto, California 94306. Phone: 415-327-1444.

7305. Cooper, Myron. 1997. New developments at Westbrae. Sale to Hain Food Group is imminent (Interview). *SoyaScan Notes.* Oct. 10. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** About 6 months ago the Vestro board of directors changed the company name to Westbrae Natural, Inc. Westbrae is scheduled to be sold to the Hain Food Group on Oct. 14. Myron is quite certain the deal will go through. He and Andy Jacobsen will stay on the run the Westbrae part of the business. The price of Hain's stock has been skyrocketing recently, even though their earnings are less than those of Westbrae. Hain had made several weak offers for Westbrae, then (by coincidence) Chiquita Banana came along and made a strong offer–that almost led to the sale. After that, Hain came back with a serious offer.

Vestro purchased Westbrae in 1988. At that time, Westbrae had only one soymilk SKU (not including Malteds), in a yellow box, made by Vitasoy–so there was not much room for growth. Since then, Westbrae's non-dairy beverage category (soymilk and rice milks) has grown extremely rapidly–roughly eight-fold in sales, so that today Westbrae's sales in this category are about $16 million/year; of that roughly 80% is soy and 20% rice. Myron believes that Westbrae is now the leader in this category (soy + rice beverages) among all natural foods companies, ahead of both Eden Foods and Vitasoy. Westbrae's distributors tell Myron that the latter two companies now appear to be having problems; they may be having difficulties keeping up with demand. Imagine Foods (maker of Rice Dream) is a very strong competitor, and Rice Dream (rice beverage) has been a bonanza. But Westbrae has just introduced a competitor–Oat Plus, which tastes good and contains soluble fiber (beta-galactones), about which FDA allows a health claim.

Westbrae's single best-selling SKU in terms of units sold my be Malteds. Myron has had a hard time finding a manufacturer for this product. They are made by John Yamauchi in Los Angeles. He is having trouble keeping up with demand.

Westbrae has no plans to introduce soymilk in a gable-top carton, primarily because the company now has only one refrigerated product–tub miso.

Myron is very concerned about the possibility of *E. coli* turning up in some company's soymilk and damaging the whole industry. Les Wilson at Iowa State Univ., who is on the Soyfoods Association board, will be looking into this problem in the larger context of soymilk bacteriology.

Since 1988, Westbrae has continued to be a leader in soymilk innovation. They introduced the first "Lite" soymilk, were the first to structure the soymilk category to make it similar to dairy milk (full-fat, low fat, etc.), introduced the first fortified soymilk, the first small kid's size "Lunchbox" soymilk, the first coffee soy [Café Westbrae–Coffee-Flavored Soy Beverage], and (in Sept. 1997 at Baltimore, Maryland) VigorAid,–nutritional soymilk in the same category as Ensure.

After the Hain sale is finalized, Westbrae will take over management of two very interesting Hain soy products: Pizsoy (a natural pizza with soy cheese), and Ice Bean (a soy ice cream originally made by Farm Foods). Myron feels that these products have considerable unrealized potential.

Update: Talk with Hain Food Group–Westbrae. 1998. Feb. 18. Westbrae was, in fact, sold to Hain on 14 Oct. 1997. The new company name is that shown just above. Myron Cooper and other top executives will continue to work at their former location in Carson, California. Address: President, Westbrae Natural Foods, Inc., 1065 East Walnut St., Carson, California 90746. Phone: 310-886-8200.

7306. Gerner, Bob. 1997. Vestro Foods, Westbrae, and the Hain Food Group (Interview). *SoyaScan Notes.* Oct. 11. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Bob is aware that the Hain Food Group plans to purchase Vestro Foods and Westbrae. As far as Bob knows, the people who started Vestro did not come mostly from the old Hain Company. For example, Andy Jacobsen, president of Vestro Foods, came from Tree of Life. However after Vestro bought Westbrae in early 1988, most of Westbrae's management did not stay with the company, so Vestro hired a number of people from the old Hain Company, spun off by Pet Inc., to run Westbrae. After a while, many of those former Hain people left Vestro.

One of the early major health food distributors in California was Kahan & Lessin. Alan Kahan, son of one founder of the company [Ben Kahan], is now a top salesman for Westbrae.

Rice Dream beverage is now the single best-selling label among all the beverages at Bob's natural foods store. It outsells all the soymilk brands. Two interesting and fairly new soymilk products sold in gable-top cartons are Healthy Harvest (6 SKUs) and Silk (3 SKUs–chocolate and regular in quarts, and regular in a half gallon). Address: Owner, Berkeley Natural Grocery Co., 1336 Gilman St., Berkeley, California 94706. Phone: 415-526-2456.

7307. Broten, Lorne H.A. 1997. New developments at International ProSoya Corp. (Interview). *SoyaScan Notes.* Oct. 29. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The company name has been changed. A new company, International ProSoya Corporation (IPC), was incorporated in the fall of 1996. An agreement was reached

for IPC to purchase all the shares of ProSoya, Inc. (PSI), which will become a wholly owned subsidiary of IPC; the deal has not yet been finalized. Pacific ProSoya Foods, Inc. (the food manufacturing company in British Columbia) has been merged into IPC. Sales of small-scale soymilk equipment and equipment sales to the former Soviet Union countries will generally be handled by PSI, but those who wish to buy large systems must talk directly with Lorne and buy the system from IPC. A company or person in the USA can buy a small soymilk system (200 liters/hour or less) from PSI, but they cannot buy a large soymilk system because IPC is developing their own company in the USA based on their patented soymilk technology–and they do not want competition form their own soymilk systems.

International ProSoya Europe (a subsidiary of IPC, created in Jan. 1997 and began operation in June 1997) is now constructing a soymilk plant in the United Kingdom (in Livingston, Scotland) as part of a joint venture. Dusty Cunningham, who is a director of IPC, is there helping to get the project started–but she is not the person in charge. The factory is expected to begin making soy products in early 1998–an aseptic soymilk, a soy yogurt, soy ice creams, and other food products based on the company's soymilk. There are a number of shareholders in the new joint venture, one of whom is named McCorkle; the joint venture is not with an existing European soy company.

In the future, IPC plans to focus on joint ventures internationally (using IPC soymilk technology), and to place much more emphasis on making and selling foods based on soymilk than on selling equipment. Lorne thinks that two more joint ventures will be finalized in 1998; the details are confidential at present. Part of the capital for all this expansion comes from joint venture partners and PIC raises part of it themselves; they are planning to do an initial public offering (IPO) in 1998 as well–open to the public.

IPC has been so busy lately that Lorne is not sure whether they will continue the newsletter or not; they will discuss it at a board meeting soon.

Ted Nordquist is currently involved with a soymilk plant in Los Angeles, California. He has been buying soymilk from IPC. Lorne has heard that Ted is coming out with his own brand of soymilk. In France, Sojinal has been bought out; Lorne thinks that Sojinal makes a better soymilk product than Alpro. Address: President and CEO, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC V3S 8E5, Canada. Phone: 604-532-8030.

7308. Liener, Irvin E. 1997. Goitrogens are not a concern in soyfoods (Interview). *SoyaScan Notes.* Oct. 30. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Question: Are goitrogens a concern in soyfoods? Answer: People consuming soyfoods or soy protein products need not be concerned with goitrogens, assuming they are consuming a typical diet that is not deficient in iodine. Almost all of the goitrogens found in raw soybeans are destroyed during the normal heat processing or cooking used in making soyfoods.

There are only two situations when goitrogens in soy may be of concern, and lead to enlargement of the thyroid gland or goiter: (1) When infants with a severe iodine deficiency consume soy-based infant formula; for this reason, such infant formulas are fortified with iodine as required by law; (2) When laboratory animals (such as rats) are maintained on diet with a severe iodine deficiency and fed soyfoods or soy protein products. Address: Dep. of Biochemistry, Univ. of Minnesota, St. Paul, MN 55108. Phone: 612-624-4214.

7309. Golbitz, Peter. 1997. Soyfoods Expo '97 in Mexico City, 21-23 Oct. 1997 (Interview). *SoyaScan Notes.* Oct. 31. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The American Soybean Association (ASA) sponsored this expo and hired Peter and Soyatech to recruit American companies to participate. 824 people attended (many more than the last soyfoods expo in Mexico in 1994) and 28 companies exhibited at the U.S. Trade Center in Mexico City. The event started Tuesday, October 21, with a briefing by the Trade Center on how to import products into Mexico. Tuesday evening there was an opening VIP cocktail, attended by about 300 people. The booths were all set up; it and ended Thursday Oct. 23. One Wednesday and Thursday the Expo hall was open from 12:00 noon until 8:00 p.m. each day. The U.S. Trade Center arranged appointments for people, from 9-12 o'clock each morning, linking potential buyers and sellers. A great deal of business was conducted. In addition there were five seminars each day, from 12:30 to 6:00 p.m., with the speakers being mostly Americans, talking about new technologies, marketing, soymilk standards, products, etc. There was one seminar about current developments with soy in Guatemala. ASA put together a beautiful little color catalog as part of a big packet on the Expo, with all the seminars, speakers, attendees, etc. Peter will send a 5-page faxed recruitment packet announcing the event.

Cuba has exported an excellent soymilk plant to Mexico; the company, Biotek, owned by Dr. Javier Sandoval Pierres, is now in operation at: Km. 9 Carreterra Celaya, San Miquel Allende, Guanajuato state (GTO, south of Mexico City), Mexico. Phone: +91 415 5-0347 or 0348. Fax: 4-0349. The soymilk is delicious. The company is beginning to work with the Mexican government to get this soymilk into schools.

Mexico is now the third largest importer of U.S. soybeans after the Netherlands (#1) and Japan (#2; see *Soya Bluebook,* p. 348). This is largely attributed to NAFTA, the proximity of Mexico to the USA, and the fact that as imports from the USA have increased, Mexican soybean production has decreased. In addition, China is now exporting good quality food soybeans to importing nations in Asia.

ASA Mexico now produces a quarterly Spanish-language magazine titled *Soya.* For more information contact Adela Perez and Viki Braverman at ASA Mexico.

Note: A photo in *Bluebook Update* (March 1998, p. 6) shows U.S. participants in the Expo: Matt Renkoski of Optimum Quality Grains; Deb Wycoff of Devansoy; Rick Eluk of Clofine Food & Dairy; Teresa Isakson of SunRich; Lorne Broten of International ProSoya; Alberto Pico of ADM; and Peter Golbitz of Soyatech, Inc. Also shown are Adela Perez of ASA (Mexico) and some of her staff. Address: Soyatech, P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207-288-4969.

7310. American Natural Snacks. 1997. Balance the facts if you *really* want to ensure you're getting more nutrition. Balanced–The total nutritional drink (Ad). *Vegetarian Times.* Oct.

• ***Summary:*** This ad compares two nutritional drinks, Balanced (recently launched by American Natural Snacks) and Ensure Plus (a registered trademark of Ross Products Div., Abbott Laboratories). Each is sold as a dry mix in a can. Some of the differences are (respectively) Natural flavors vs. artificial flavors. 3 grams of fat vs. 13 gm. Diary free vs. contains dairy. No lactose vs. contains lactose. No cholesterol vs. contains cholesterol. 11 oz can vs. 8 oz can. The "Balanced" product contains soy as the basic ingredient. It comes in three flavors: Chocolate, vanilla, and strawberry. Address: P.O. Box 1067, St. Augustine, Florida 32085-0410. Phone: 904-825-2057.

7311. Archer Daniels Midland Co. 1997. Annual report. P.O. Box 1470, Decatur, IL 62525. 44 p. Oct.

• ***Summary:*** Net sales and other operating income for 1997 (year ended June 30) were $13,853 million, up 1.05% from 1996. Net earnings for 1997 were $337.3 million, down 45.8% from 1996. Shareholders' equity (net worth) is $6,050 million, down 1.5% from 1996. Net earnings per common share: $0.66, down 45% from 1996. Number of shareholders: 33,834. ADM spent $1,127 million on additions to plant in 1997, compared with 801 million in 1996 and 658 million in 1995.

On the cover of the report is color illustration of a purple planetary globe. James R. Randall, who has been President of ADM for the past 22 years, has retired but continues advise the company. At ADM's website (admworld.com) a counter displays the world's population, now at 5.859 billion. "Every second of every day, the world gains 3 new mouths to feed." "The earth's population is projected to double in the next 50 years, hitting ten billion by the year 2050. Yet there will be no increase in the land available for growing food" (p. 5).

In the section titled "Discover the benefits of ADM's health products" (p. 6-7) are subsections on natural vitamin E, lecithin granules, soy protein, and isoflavones. The latter section states: "Isoflavones are special compounds called phytochemicals that occur naturally in soybeans. (Phytochemicals are different from vitamins or nutrients, but are thought to have and impact on health.) The two main types of isoflavones are genistein and daidzein. ADM is currently constructing the world's largest plant to make isoflavones in concentrated form.

"Initial research indicates that isoflavones may work in several ways to fight a range of diseases, including heart disease and cancer. They may also help relieve menopause symptoms, promote bone health and protect against osteoporosis.

In addition to the concentrated products, ADM makes a number of soy products that are naturally rich in isoflavones, such as soy milk, soy flour and Harvest Burgers products."

More than 100 million Green Giant Harvest Burgers have been sold (p. 19). The section on Haldane Foods (p. 20), a large producer of vegetarian foods in England, shows a half-page color photo of their products. It states: "A recent survey shows that 5.4% of the U.K. population is vegetarian and almost half are now actively eating less meat." ADM has just completed a fourfold increase in the capacity of its plant in Newport Pagnell–which produces many of these products.

Sales of oilseed products in 1997 increased 10% to 8.9 billion (p. 24). ADM sold its British Arkady bakery ingredient business (p. 25). Among the corporate officers, G. Allen Andreas is President and CEO. Address: Decatur, Illinois.

7312. **Product Name:** Soy Milk [Chocolate, Cardamom, Vanilla, or Plain].
Manufacturer's Name: Bean Me Up, Soya Station, Salad Bar, div. of Ooh-La-La Ling [Lingerie].
Manufacturer's Address: 1684 Ouneachem Baht, Anjuna Bardez, Goa, Goa, India 403-507. Phone: 0091-0832-2273648.
Date of Introduction: 1997. October.
Ingredients: Chocolate: Soya beans, sugar, cocoa powder.
Wt/Vol., Packaging, Price: 500 ml. milk-quality biodegradable plastic bags. 25 rupees.
How Stored: Refrigerated.
New Product–Documentation: Letter (e-mail) from Lisa Camps of Goa. 2005. May 15-16. This product was introduced in about Oct. 1997.

7313. Evans, D.E.; Tsukamoto, C.; Nielsen, N.C. 1997. A small scale method for production of tofu and silken tofu. *Crop Science* 37(5):1463-71. Sept/Oct. *

• ***Summary:*** 80 gm of ground soybean is used to make silken tofu. Glucono-delta-lactone is used as the coagulant. To evaluate the method, soymilk and tofu were made from 182 experimental, public, and private soybean cultivars grown in Indiana in 1990. Address: 1. Dep. of Plant Science, Univ. of

Adelaide, Waite Campus, Glen Osmond, SA 5064, Australia; ; 2. Taishi Food Co., 68 Okinaka, Sannohe-Machi, Sonnohe-gun, Aomori, Japan 039-01; 3. USDA-ARS, Dep. of Agronomy, Purdue Univ., W. Lafayette, Indiana 47907-1150.

7314. Madison, Deborah. 1997. Vegetarian cooking for everyone. New York, NY: Broadway Books. x + 742 p. Oct. Illust. Plus 24 full-page color plates. Index. 26 x 21 cm. A tenth anniversary edition was published by Broadway Books in 2007, featuring a new introduction by the author.
• ***Summary:*** One of the most comprehensive vegetarian cookbooks ever published; Contains 1,400 recipes. One chapter, titled "The Soy Pantry" (p. 593-609) has the following contents (with many recipes): Introduction (The soybean is the cow of the Orient). Soy milk. Tofu. Tempeh. A sidebar (p. 594) lists more recipes that include soyfoods, by chapter.

Soy-related recipes (not including those on p. 593-609) include: Soy oil (p. 43). Bechamel sauce (p. 53; dairy-free variation uses soy milk). Tofu "mayonnaise" (p. 60). Tofu garlic "mayonnaise" (p. 60). Sesame sauce with tofu (p. 67). Peanut-tofu sauce (p. 69). Spring rolls with napa cabbage and tofu (p. 107). Tofu salad spread (p. 129). Marinated tofu sandwich (p. 130). Tempeh on rye sandwich (p. 130). TLT–Tempeh, lettuce, and tomato sandwich (p. 130). Buckwheat noodle salad with grilled tofu and roasted peppers (p. 178). Green goddess dressing (p. 190; dairy-free variation with silken tofu). Miso soups (about, plus 5 recipes; p. 231-33). Mushrooms with paprika and sour cream–variation with tofu (p. 255). Thai tofu and winter squash stew (p. 257). Winter vegetable pot pie (p. 259; dairy-free variation can use soymilk).

In the section on "Stir-fries" and stir-frying is a subsection titled "Some essential Chinese ingredients." The last entry (p. 262) is: "Salted and fermented black beans: Black soybeans partially fermented and preserved with salt add a rich flavor to vegetables, especially asparagus, green beans, and broccoli. Crush them with the flat of a knife before adding them to release their flavor. The best come in a plastic bag with ginger and orange peel."

Vegetable stir-fry with fermented black beans (with "2 tablespoons fermented black beans, chopped," p. 263). Mushrooms and tofu in Hoisin sauce (p. 269). Stir-fried broccoli, mushrooms, and peppers with caramelized tofu (p. 270). Dried mushroom, leek, and tofu stir-fry with Chinese barbecue sauce (p. 270). Goat cheese enchiladas with corn and red mole (p. 292; silken tofu can replace a portion of the goat cheese to give a less rich version). Soybeans (about; p. 314). Somen in broth with silken tofu and spinach (p. 482-83). Soba in broth with spinach, purple dulse, and silken tofu (p. 483). Udon with stir-fry and five-spice tofu (p. 484). Smoothies (p. 594). Protein drink for breakfast (p. 617, with soy milk). Breakfast burritos with tofu (p. 625). Scrambled tofu (p. 627). Scrambled tofu with herbs and cheese (p. 627). Scrambled tofu with tomatoes and salsa (p. 627). Multigrain waffles (with soy flour, p. 633).

Also used in the recipes are: Quinoa. Sea vegetables. A color photo on the cover shows Deborah Madison.

The dust jacket (and *Jessica's Biscuit Cookbook Catalog,* spring 1998) says: "What Julia Child is to French cooking and Marcella Hazan is to Italian cooking, Deborah Madison is to contemporary vegetarian cooking. At the Greens restaurant in San Francisco [California], where she was the founding chef, and in her two acclaimed vegetarian cookbooks, Madison elevated vegetarian cooking to new heights of sophistication... Madison received the M.F.K. Fisher Mid-Career Award in 1994... She has been a board member of the Santa Fe Area Farmers' Market for the past six years in Santa Fe, where she lives with her husband, Patrick McFarlin."

Marion Cunningham, author of Beard Award winners *The Fannie Farmer Cookbook* and *The Fannie Farmer Baking Book*–"If I could have only one book on the subject of vegetables, *Vegetarian Cooking for Everyone* would be it."

Letter (fax) from Dana Jacobi. 1998. April 26. This cookbook just won the IACP/Julia Child award as the "cookbook of the year" for 1998–the highest honor given, out of 432 books nominated–and a tremendous honor for vegetarianism as well as for Deborah Madison. Note: IACP is the International Association of Culinary Professionals. This book also won the IACP/Julia Child award as the best general cookbook of the year (out of 54 cookbooks nominated, and beating out the new 1997 edition of *The Joy of Cooking*). Two major sets of cookbook awards are given each year: The IACP/Julia Child awards (given in April at a different location each year) and the James Beard awards (given in May in New York City). Each set offers awards in something like 10 different categories. There is surprisingly little overlap among the nominations for both in each category. Address: Santa Fe, New Mexico.

7315. Mangels, Reed. 1997. Nutrition hotline: Food labeling [casein in nondairy products]. *Vegetarian Journal* (*Baltimore, Maryland*). Sept/Oct. p. 2.
• ***Summary:*** "Question: What are the government regulations on labeling a product that contains casein as 'nondairy?' M.W., MD.

"Answer: If a product is labeled as 'nondairy' but contains casein (protein from cow's milk), the ingredient list must state that the casein is milk-derived. If the product does not claim to be 'nondairy,' it is not required to give the casein's source." A portrait photo shows Reed Mangels. Address: Ph.D., R.D.

7316. Sanitarium Health Food Co. 1997. So Good now: The fresh taste of today (Booklet). 146 Fox Valley Rd., Wahroonga, NSW 2076, Australia. 8 p. April. 15 cm.

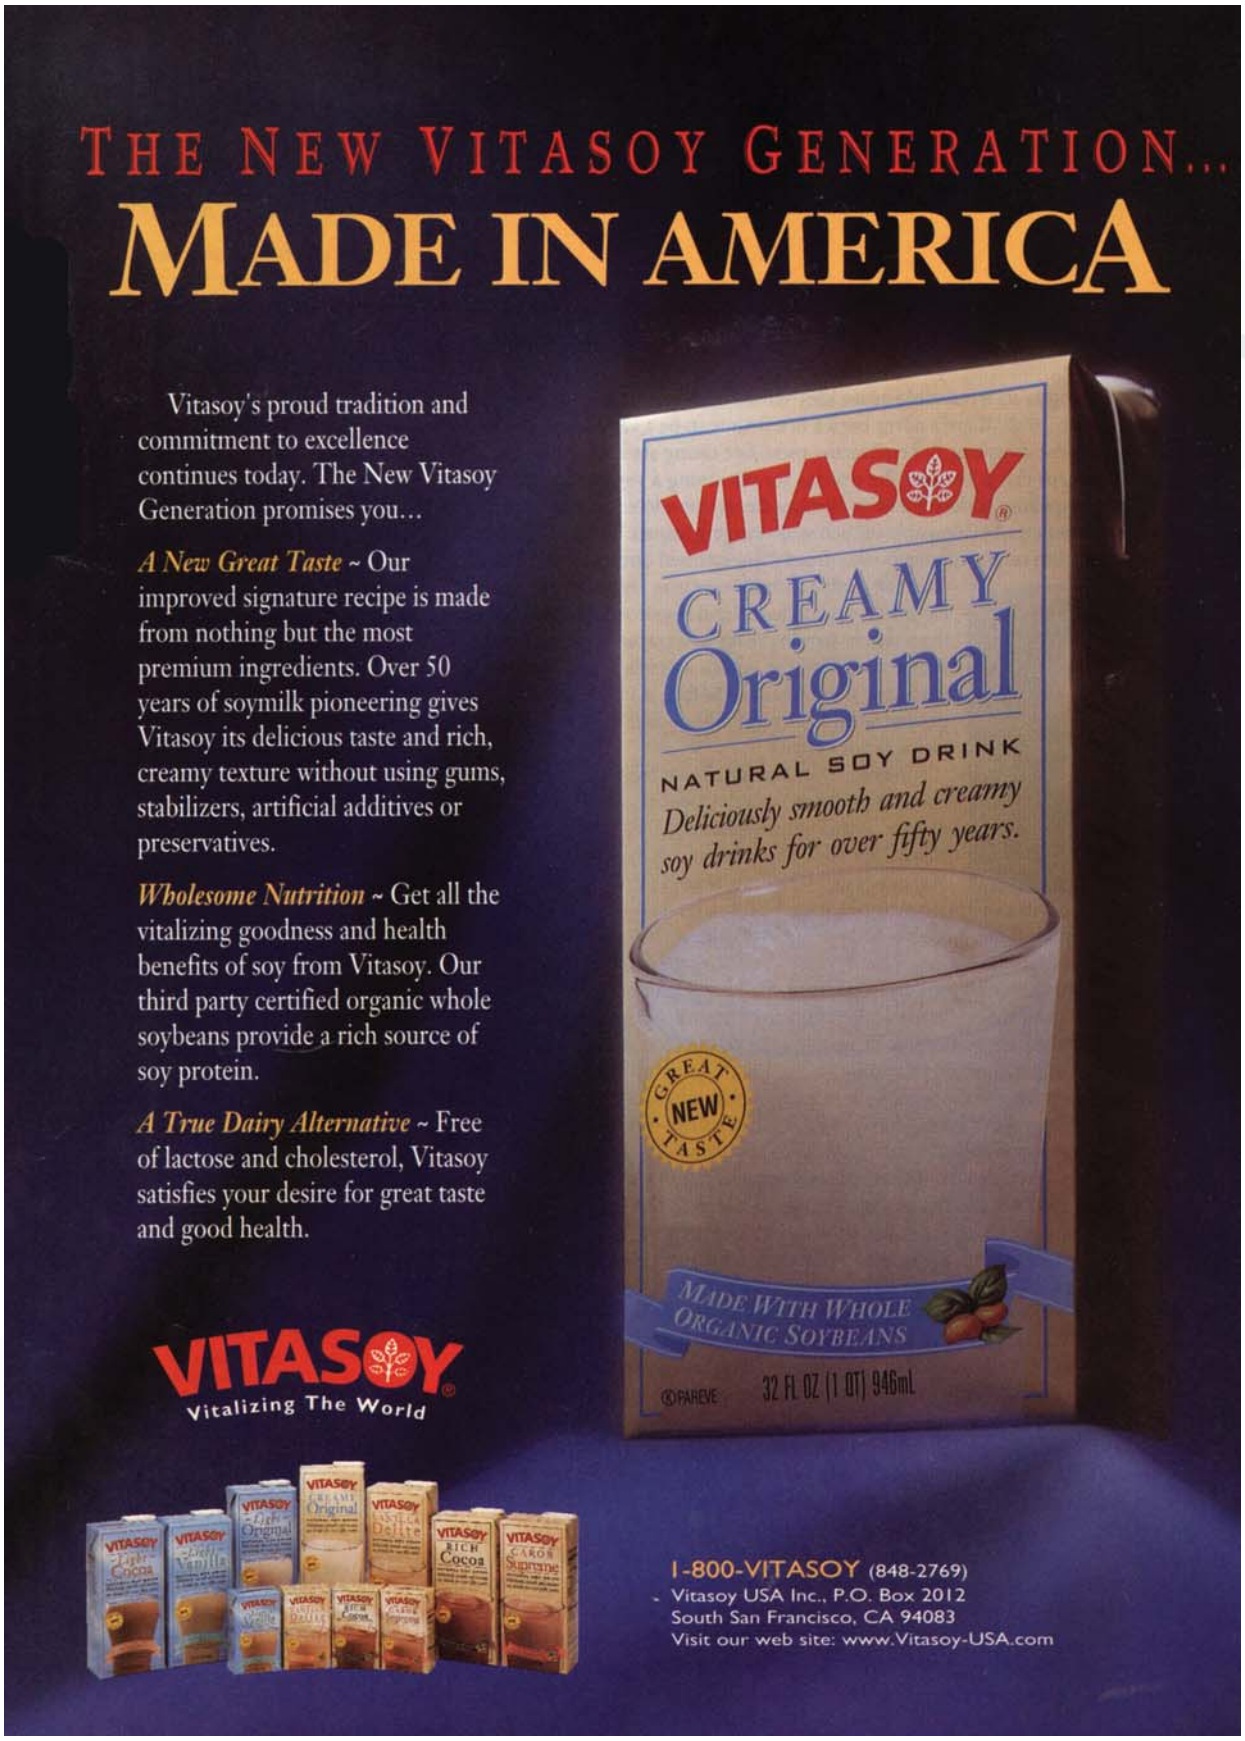
• ***Summary:*** The first 2 pages of this attractive full-color booklet contain information about these soymilk products: Soy & linseed–a recipe for good health. What's so good about So Good. Rich in phytoestrogens. The Omega 3 benefit. Calcium. Vitamin B-12. Low fat. There follow 7 pages of recipes. Address: Wahroonga, NSW, Australia.

7317. *Soya Bluebook Plus.* 1997. Oilseed glossary: Definitions and terms commonly associated with oilseed products or processing. 1998. p. 354-60.
• ***Summary:*** Acidulated soapstock, activated, amino acids, antioxidant, biodiesel, biotechnology, bleaching, bleaching earth, bolls, Bowman-Birk trypsin inhibitor, bran, break material, cake, canola, canola meal, catalyst, coconut, coconut–desiccated, coconut milk, coconut meal, cold pressed soy oil, cold test, confection sunflower, cooking oil, copra, copra meal, corn bran, corn feed meal, corn flour, corn germ meal (wet milled), corn gluten feed, corn gluten meal, corn grits, cotton linters, cotton plant by-product, cottonseed–glandless, cottonseed cake (or cottonseed flakes)–mechanical extracted, cottonseed meal–solvent extracted, cottonseed screenings, cotyledon, cracked corn, cracking, crude cottonseed oil, crude soy oil, defatted soy flour, degermed, dehulled–dehulling, degummed soy oil, degumming, deodorized, desolventizer-toaster, diglyceride, drying oil, edamame, edible crude soy oil, edible refined soy oil, emulsifier, endosperm, esterification, expanded–expanding, expeller, extracted–mechanical, extracted–solvent, extruded, extruder, extrusion, fat, fatty acid, feed (feedingstuff), feed grade, fermented–fermenting, flaking, flour, free fatty acid (F.F.A.), full-fat soy flour (enzyme active or heated/toasted), fully refined soy oil, genetic engineering, germ, ghee, gossypol, grain, green vegetable soybeans, grits, groundnut, gumming, high-fat flour, hilum, hulls, hydrogenated vegetable oil, hydrogenization [sic, hydrogenation], hydrolyzed corn protein, hydrolyzed soy protein, isolated soy protein, kibbled soybean meal, Kunitz trypsin inhibitor, lecithin, lecithinated soy flour, linseed meal, linters, lipoxygenase, low gossypol cottonseed meal, low-fat soy flour, malto dextrins [maltodextrins], margarine, maturity groups, meat analogs [meat alternatives], meat extenders, melting point, methyl esters, miso, monoglyceride, natto, nutraceuticals, oil, okara, once refined soy oil, oxidation, palm kernel oil, palm olein, palm stearin, peanut hulls, peanut meal, peanut skins, pellets, polymerization, processing or extraction of oilseeds (also called "crushers" or oil mill operations–solvent extraction, continuous pressing, batch pressing), protein, pulses, raffinose, rancidity, rapeseed meal–mechanical extracted, refining, refractive index (R.I.), rolled or rolling, salad oil, shortening, soapstock, solvent extracted, solvent extracted soybean flakes, soy flour, soy grits, soy protein concentrate, soy protein isolate, soy sauce (incl. that hydrolyzed with hydrochloric acid), soy sprouts, soya, soya lecithin, soybean(s), soybean ground, soybean cake, soybean curd, soybean fatty acids, soybean feed–solvent extracted, soybean flakes and 44% protein soybean meal, soybean flakes and high protein or solvent extracted soybean meal, soybean hay sun-cured ground, soybean hulls (or seed coats), soybean meal, soybean meal–dehulled–solvent extracted, soybean meal–dehulled–mechanical extracted, soybean mill feed, soybean mill run, soybean processor, soybean protein product–chemically modified, soybean seeds–extruded ground, soybean seeds–heat processed, soybean solubles–condensed, soybean solubles–dried, soyfoods, soymilk, soynuts, spinning (to texturize soy protein isolate for food or industrial use), stachyose, steepwater, sterols, sunflower hulls, sunflower meal–dehulled–mechanical extraction, sunflower meal–dehulled–solvent extracted, sunflower meal–mechanical extracted, sunflower meal–solvent extracted, sunflower seed–oil varieties, technical grade refined soy oil, tempeh, textured soy concentrate, textured soy flour, textured soy protein, toasting, tofu, transgenic, triglyceride, trypsin inhibitors, unsaponifiable matter, unsaturation, vanaspati–vegetable ghee, wet-milled, whole-pressed cottonseed–mechanical extracted, winterized oil, yuba. Address: 318 Main St., P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207-288-4969.

7318. Vitasoy USA Inc. 1997. The new Vitasoy generation–Made in America (Ad). *Vegetarian Times.* Oct. p. 17.
• ***Summary:*** This full-page color ad shows a large carton of "Vitasoy Creamy Original natural soy drink" (made with whole organic soybeans) against a black and dark blue background. In the lower left is a color photo of all eleven of Vitasoy's soymilk products. "The New Vitasoy Generation promises you... A new great taste–Our improved signature recipe is made from nothing but the most premium ingredients. Over 50 years of soymilk pioneering gives Vitasoy its delicious taste and rich, creamy texture..." The new logo reads: "Vitasoy–Vitalizing the world." Visit our web site: www.Vitasoy-USA.com.

This ad also appeared in the Dec. 1997 issue (p. 6) of this magazine. And in *Natural Foods Merchandiser* (Dec. 1997, p. 49; Feb. 1998, p. 79). Address: P.O. Box 2012, South San Francisco, California 94083. Phone: 1-800-VITASOY (848-2769).

7319. Banner, Bob. 1997. Food forum report. *Hope Dance* (*San Luis Obispo, California*). Nov/Dec. p. 29-30. No. 7.
• ***Summary:*** On Sept. 19 a very successful and festive Food Forum took place at the Community Room of the San Luis Obispo Library. It was billed as "Simplifying our food: Keeping it healthy, local, and sustainable." The various speakers included Professor Bud Evans and "Ed Bruehl, co-ordinator of Natural Flavors, one of the healthiest restaurants in the County [now out of business as we go to press]... Ed not only spoke passionately about his food concerns but about the local contribution in this county from local organic



growers, persons making tempeh, soy milk..."

Note 1. Marcus Tribelhorn, a local tempeh maker from Upfull and Right, was there to promote tempeh. Note 2. This magazine is subtitled "Making a Difference in San Luis Obispo County." Three is a full-page ad for "Buy Nothing Day: A 24 hour moratorium on consumer spending" and an editorial on voluntary simplicity.

7320. Dumke, Nicolette M. 1997. Five years without food: The food allergy survival guide. How to overcome your food allergies and recover good health. Louisville, Kentucky: Adapt Books–Allergy Adapt Inc. vi + 314 p. Index. 25 cm. [200+* ref]

• ***Summary:*** A very interesting and useful book about allergies and their causes, but with a very poor index (the terms soy, soymilk, tempeh, and tofu do not appear), and little information on soy (see p. 49, 104-05).

Key concepts: Traditional allergies and the many allergic reactions involving the antibody called "Reagin" or "IgE." The more than 70 medical conditions associated with food allergies. The "leaky gut" or increased intestinal permeability caused by alcohol, anti-inflammatory drugs, cytotoxic drugs used to treat cancer, antibiotics, radiation therapy to the abdomen, etc. Unfriendly organisms. Small openings can occur in the lining of the intestine, allowing large molecules of undigested or incompletely food to enter the bloodstream. Rotation diets: Soy has the Rotation Group Number 45 (see p. 270).

Contains extensive information on amaranth and quinoa.

7321. Farrell-Kingsley, Kathy. 1997. Recipe redux. Easy as pie: Our pumpkin pie without milk and eggs is sumptuous and fuss-free. *Vegetarian Times.* Nov. p. 30.

• ***Summary:*** Contains a recipe for Vegan Pumpkin Pie (8 servings), made with 3 tablespoons soymilk in the crust and 1 cup low-fat soymilk in the pie itself. This recipe contains 50% less fat and 25% fewer calories than a typical pumpkin pie made with dairy products. A color photo shows a slice of the pumpkin pie. Address: VT Food Editor.

7322. Hain Food Group, Inc. 1997. Annual report 1997. Uniondale, New York. 5 + 30 p. Nov. 28 cm.

• ***Summary:*** This unusual annual report is composed of 6 unnumbered pages of annual report on glossy paper and 30 pages of Form 10-K, which is bound in. A color photo (p. 1) shows Mr. Irwin D. Simon, President and CEO. In October 1997 Hain completed the acquisition of Westbrae Natural, Inc. "Westbrae sells over 300 high quality natural and organic food and snack products. Westbrae is the market leader in non-dairy beverages, the largest single natural food category. Westbrae and Hain combine to lead six of the fifteen top selling natural food categories." A color photo shows four of Westbrae's soy and rice beverages.

Page 1 of Form 10-K states that On Sept. 11, 1997, Hain executed a definitive merger agreement with Westbrae Natural. The next day Hain offered $3.625 cash per share for all outstanding common shares of Westbrae. The aggregate purchase price will be approximately $23.5 million. "For the fiscal year ended DEcember 31, 1996, Westbrae reported net sales of $32,583,000 and net income of $1,203,000. For the six months ended June 30, 1997, Westbrae reported net sales of $17,502,000 (unaudited) and net income of $708,000 (unaudited)."

"The company was formed in 1993. Net sales for the year ended June 30: 1994–$14,963,000. 1995–$58,076,000. 1996–$68,606,000. 1997–$65,353,000 (down 4.9%). Net income for these years: 1994–($502,000 loss). 1995–$2,365,000. 1996–$2,134,000. 1997–$1,069,000 (down 50%).

Enclosed with the annual report is a "Notice of annual meeting of stockholders and proxy statement." The single largest shareholder is Irwin D. Simon, who own 1,573,000 shares, which is 16.7% of the common stock. Mr. Simon, age 38, is the company president, CEO, and a director. In 1997 has salary was $200,000, with a bonus of $60,000 and other annual compensation of $5,400 = $265,400. He is the company founder and has been the president and CEO since its inception. Former positions: 1986-1990 with Haagen-Dazs is sales and marketing. Dec. 1990 to Dec. 1992 with Slim-Fast Foods Company in various marketing capacities. Address: 50 Charles Lindbergh Blvd., Uniondale, New York 11553. Phone: 516-237-6200.

7323. Lowenstein, Melissa. 1997. Natural alternatives for menopausal women: A panel discussion with the experts. *Vegetarian Times.* Nov. p. 86-90, 92.

• ***Summary:*** Several of these experts recommend the use of soyfoods. Tori Hudson, N.D., director of A Woman's Time Clinic in Portland, Oregon, was asked: "What foods do you suggest for women with menopausal symptoms?" Answer: "The best foods are those that contain high amounts of phytoestrogens, or plant estrogens. The very best sources of phytoestrogens are soy products and flaxseeds Ä not flax oil but the whole seed. A handful of roasted soy nuts, a cup of soymilk or a half-cup of tofu will give you 35 to 50 milligrams (mg.) of isoflavones, the phytoestrogen found in soy. I recommend at least 45 mg. a day, but the more, the better. Soy foods also decrease the 'bad' kind of cholesterol and increase the 'good' kind and can dramatically reduce breast cancer risk. Japanese women, who eat enough soy to get 100 mg. of isoflavones a day, are four to six times less likely to have breast cancer." Address: Santa Barbara, California.

7324. Messina, Virginia K.; Burke, Kenneth I. 1997. Position of the American Dietetic Association: Vegetarian diets. *J. of the American Dietetic Association* 97(11):1317-21. Nov. [44 ref]

• ***Summary:*** Contents: Introduction. Position statement. Vegetarianism in perspective. Health implications of vegetarianism. Nutrition considerations for vegetarians. Vegetarianism throughout the life cycle. Meal planning for vegetarian diets. Food guide pyramid for vegetarian meal planning.

Introduction: "Scientific data suggests positive relationships between a vegetarian diet and reduced risk for several chronic degenerative diseases and conditions, including obesity, coronary artery disease, hypertension, diabetes mellitus, and some types of cancer."

"Position statement: It is the position of the American Dietetic Association (ADA) that appropriately planned vegetarian diets are healthful, are nutritionally adequate, and provide health benefits in the prevention and treatment of certain diseases."

Other features of the paper include: (1) A paragraph on why people choose vegetarian diets, including ethical reasons. (2) A food guide pyramid for vegetarian meal planning, including "zero to three servings of milk, yogurt, and cheese." (3) A list of food sources for certain nutrients, including iron, zinc, calcium, vitamin D, B-12, and linoleic acid. (4) Nutritional considerations for vegetarians and vegans. For example, vegans may have lower calcium requirements than the general population because their diets contain less protein and are more alkaline; high acid diets cause more calcium to be lost in the urine as the body tries to neutralize that acid with calcium from the bones. (5) The position paper once again restates that combining proteins is not necessary and that protein intake in both lacto-ovo-vegetarians and vegans appears to be adequate.

A full-page table (p. 1319) shows food sources of important nutrients. Soyfoods are shown as sources of the following, with the number of milligrams per serving shown in parentheses: (1) Iron: Tofu, ½ cup (6.6), soybeans, ½ cup cooked (4.4), tempeh, ½ cup cooked (1.8), soymilk, 1 cup (1.8). (2) Zinc: ½ cup of the following cooked: Tempeh (1.5), textured soy flour (1.4), tofu (1.0), soybeans 1.0.

(3) Calcium: soymilk, fortified, 1 cup (250-300), tofu, ½ cup (120-350), soynuts, ½ cup (252), soybeans, 1 cup cooked (175), soymilk, 1 cup (84), textured soy flour, ½ cup (85), tempeh, ½ cup (77). (4) Vitamin D: Fortified soymilk or other nondairy milk, 1 cup (1.0 to 2.5 micrograms). (5) Vitamin B-12: Fortified soymilk or other nondairy milks, 8 oz = 1 cup (0.2 to 5.0 micrograms).

(6) Linolenic acid: Soybean oil, 1 tablespoon (0.9 gm), soybeans, ½ cup cooked (0.5 gm), tofu, ½ cup (0.4 gm).

7325. Ontario Soybean Growers' Marketing Board (OSGMB). ed. and comp. 1997. Canadian soyfoods directory. Chatham, Ontario, Canada: OSGMB. 27 p. 28 cm.
• ***Summary:*** This excellent, complete, and accurate directory was compiled by the Collège d'Alfred of the University of Guelph, under contract with the Ontario Soybean Growers' Marketing Board (OSGMB). The project leaders were Suzanne Lavoie, Charles Goubau, and Ian Walker. The first Canadian soyfoods directory was published in April 1994 (22 pages).

Contents: Foreword–Ontario Soybean Growers' Marketing Board (OSGMB). Acknowledgements from researchers. Table of contents. Soyfood product descriptions: Green vegetable soybeans–Edamamé, meat analogs, miso, natto, okara, soy cheese, soy flour, soy frozen desserts, soy grits, soy isolate fibre, soy lecithin, soy oil, soy protein concentrate, soy protein isolate, soy pudding, soy sauce, soy sprouts, soy yogurt, soymilk (soy drink and soy beverage), soynuts, tempeh, textured soy flour–TSF, texturized soy protein, tofu, whole dry soybeans, yuba. Soyfoods for your health: Heart disease, cancer, osteoporosis, other conditions. Composition and nutrient value of soyfoods. Soyfood companies by product. Soyfoods companies by province: Alberta (7), British Columbia (21), Manitoba (2), Nova Scotia (2), Ontario (54), Quebec (20). Soyfood companies (105 companies that make or market wholesale soyfoods)–complete listings (address, phone and fax numbers, contact person, products). Soyfoods distributors–complete listings (13). Soybean distributors–complete listings (28). Research information sources–complete listings (24). Soyfoods information sources (23). Canadian soyfoods directory questionnaire.

Spot in *Ontario Soybean Growers' Marketing Board Newsletter.* 1997. Dec. p. 5. The Canadian Soyfoods Directory was launched in November after a two-month delay. "The project was undertaken following numerous information requests from consumers, processors and health professionals." Funded by the Board of OSGMB, it has been mailed to all Registered Dietitians across Canada, and it will soon be available on the Board's website. Address: OSGMB, 180 Riverview Dr., P.O. Box 1199, Chatham, ON N7M 5L8, Canada. Phone: 519-352-7730.

7326. **Product Name:** SoNice Yule Nog (Eggless Soymilk EggNog–Refrigerated).
Manufacturer's Name: ProSoya Foods Incorporated.
Manufacturer's Address: 312–19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: (604) 532-8030.
Date of Introduction: 1997. November.
Ingredients: Soymilk (fairly rich), cane sugar, carrageenan, nutmeg, artificial flavor.
Wt/Vol., Packaging, Price: 1 liter refrigerated gable-top carton.
How Stored: Refrigerated.
New Product–Documentation: Color sell sheet (leaflet) sent by George Conquergood of IPC. 1999. April 21. At the top is written "So Nice" in large green letters. Below that in nutmeg-colored script: "Yule Nog–Just in time for the holidays." At the bottom is a "wood block" style bowl and ladle. In the background is a wreath of holly on a beige

background.

Talk with George Conquergood of IPC. 1999. May 28. This product was introduced in Nov. 1997 for the holiday season. It was sold refrigerated, packed in a gable-top carton at Farmland Dairies in New Jersey. It was on the market until January 1998; only two production runs were ever done. Most customers loved the product and wanted IPC to continue making it all year long. George invented this product and first made it in March 1993 at his Sweet Carrot Café–Health Bar & Deli is Saskatoon, Saskatchewan, Canada. Note: The ingredients in typical eggnog are: eggs beaten with sugar, milk or cream, and often alcoholic liquor. SoNice Yule Nog contained no eggs or alcohol, but it did contain sugar.

7327. **Product Name:** ProSoya SoNice: Soy Beverage (Fresh in 1 Quart ESL Gable-Top Cartons for USA) [Natural, Chocolate, Vanilla Lite].
Manufacturer's Name: SoNice Soy Corporation. Subsidiary of International ProSoya Corp.
Manufacturer's Address: P.O. Box 93009, Langley (Vancouver), BC, V3A 8H2 Canada. Phone: (604) 532-8030.
Date of Introduction: 1997. November.
Ingredients: Natural: Filtered water, certified organic soybeans. Chocolate: Filtered water, certified organic soybeans, cane sugar, cocoa, modified corn starch, tricalcium phosphate, sea salt, carrageenan, vitamin A palmitate, vitamin D-3, vitamin B-12, riboflavin, zinc gluconate.
Wt/Vol., Packaging, Price: 1 quart ESL gable-top carton. Retails for $1.99.
How Stored: Refrigerated, 85 day shelf life.
Nutrition: Chocolate: Per 1 cup (240 ml): Calories 130, calories from fat 30, total fat 3.5 gm (5% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 150 mg (6%), total carbohydrate 18 gm (dietary fiber 0 gm [0%], sugars 15 gm), protein 6 gm (12%). Vitamin A 10%, calcium 25%, vitamin D 20%, vitamin B-12 20%, vitamin C 0%, iron 8%, riboflavin 20%, zinc 10%. Percent daily values are based on a 2,000 calorie diet.

Natural: Per 1 cup (240 ml): Calories 70, calories from fat 30, total fat 3.5 gm (5% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 5 mg (0%), total carbohydrate 3 gm (dietary fiber 0 gm [0%], sugars 1 gm), protein 7 gm (14%). Vitamin A 0%, calcium 6%, vitamin C 0%, iron 4%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Talk with Fred Webster, head of International ProSoya Corp. office in New Hope, Pennsylvania. 1997. Sept. 31. This product, made in British Columbia, Canada, and packaged in New Jersey, will be introduced to the U.S. market in mid-October, 1997, in quarts and half gallons. Refrigerated (45 day shelf life); expected retail price is $0.99/cup.

Talk with Lorne Broten, President and CEO, International ProSoya Corp. 1997. Oct. 29. This product was launched in Canada in Jan. 1997. It is available in 1 liter and 2 liter gable-top ESL cartons.

Talk with Steve Demos, president of White Wave. 1998. Aug. 10. He heard about 10-14 days ago that the SoNice brand, both aseptic and gable top, is no longer being shipped to market. The company's first comment was "Packaging problems," and then it was "money problems." Quart cartons for Natural and Chocolate sent by George Conquergood of IPC. 1999. April. The Chocolate front panel reads: "Fortified with vitamins A, B2, B12 & D and calcium. Cholesterol and lactose free... Made with certified whole organic soybeans. 1.4% fat."

Talk with George Conquergood. 1999. June 2. The quarts for the U.S. market were introduced in Oct. 1997 at the Natural Products Expo in Baltimore, Maryland, and shipped in November. They were targeted at the mainstream consumer, and so were sweetened with liquid white sugar; the aseptic products, targeted at the natural foods consumer, were sweetened with agave. Fortification terminology was allowed on the U.S. products but not on many Canadian products. U.S. and Canadian packages had different nutritional labeling because: (1) U.S. products must bear the heading "Nutrition Facts." (2) The rules for rounding off nutrient values are different in the two countries. (3) The serving size is 1 cup (240 ml) in the U.S. vs. 250 ml in Canada. (4) The U.S. prefers quarts while Canada uses the metric system–like almost all other countries worldwide. These differences created a packaging nightmare for IPC. Fred Webster was and employee of IPC and the company's master broker for the USA, with focus on the East Coast. IPC set up the West Coast complete separately from Fred.

7328. Soy Information Services. 1997. Adverse reaction to soy (Ad). *Daily Post* (*Rotorua, New Zealand*)**.** Nov.
• ***Summary:*** This notice appears in the "Public Notice" section of the Classified Ads section. "The Swedish National Food Administration Livamedals Verket, has advised that life threatening reactions have been caused by soya, especially for children with asthma and peanut allergy. They have, in the last few years, recorded fatal allergic reactions to soy protein (3), peanut protein (1), hazelnut (1), milk (1). They advise that those with a severe allergy to peanuts should avoid soy protein intake and advise that reports from literature recommend that those infants who experience milk allergy from substituted breast milk formulas, should be given casein or whey hydrolysed products instead of soy formulas."

Note: Rotorua is a city near the center of New Zealand's North Island. Address: P.O. Box 3285, Onerahi, Whangarei [New Zealand]. Phone: Fax: (09) 434-0567.

7329. Susanto, Tri; Sawitri, Meita; Widaryanti, Eni. 1997. Research on the utilization of tempe as raw material in the

production of milk and tempe sausage. In: Sudarmadji, Suparmo and Raharjo, eds. 1997. Reinventing the Hidden Miracle of Tempe: Proceedings, International Tempe Symposium, July 13-15, 1997, Bali, Indonesia. Jakarta, Indonesia: Indonesian Tempe Foundation. xi + 280 p. See p. 125-132. [7 ref]

• ***Summary:*** To produce good quality tempeh sausage: Cut and grind fresh tempeh to yield 100 gm. Add 3.5% egg white, 2.5% wheat flour, 10 ml water, 1 gm garlic, and spices. Mix well, then mix in 40 gm vegetable oil, fill into a casing, and steam at 100ºC. Cool and serve. Contains 17.3% protein.

To make tempeh milk: Dice fresh tempeh, steam for 3 minutes, add 2 parts boiling water, grind, and extract the soymilk. Filter the milk and mix in a 0.08% agar (to reduce sedimentation) plus 4% skim milk and 7% sugar. Heat to 90ºC for 5 minutes, filter, bottle, pasteurize at 90ºC for 15 minutes, and cool. This soymilk contains 3.25% protein. Address: Research Centre on Traditional Foods, Brawijaya Univ., Malang, Indonesia.

7330. Tibbott, Seth. 1997. Current state of the North American tempeh [and tofu] market. In: Sudarmadji, Suparmo and Raharjo, eds. 1997. Reinventing the Hidden Miracle of Tempe: Proceedings, International Tempe Symposium, July 13-15, 1997, Bali, Indonesia. Jakarta, Indonesia: Indonesian Tempe Foundation. xi + 280 p. See p. 28-35. [7 ref]

• ***Summary:*** This paper is particularly valuable for its update of tempeh history and the tempeh market in North America from 1985 to May 1997.

Contents: Abstract. History of the North American tempeh market. Current US tempeh market–May 1997: Basic statistics, who is the typical tempeh consumer?, where is tempeh sold?, how is tempeh packaged?, how is tempeh used by the consumer in North America?, what is the future of tempeh in North America?, factors that affect future growth of tempeh (health benefits of soy and label claims, consumer education, development of the food service and industrial market, development of Indonesian cuisine and restaurants in America).

In 1984 some 53 companies in the US made approximately 34,000 pounds/week of tempeh. At that time tempeh was the fastest growing soy product in the US, growing by about 28% a year.

As of May 1997 there are ten tempeh manufacturers in the USA; seven of these produce more than 1,000 lb/week of tempeh, and only one produces less than 200 lb/week. All ten US companies make an estimated 55,580 lb/week of tempeh, and these 7 largest companies make about 95% of the total. Canada has only 3 tempeh makers and they produce a total of about 1,100 lb/week. In Mexico, there are only a few tempeh makers, mostly in tourist areas. All of the 7 largest US and the 3 largest Canadian tempeh manufacturers are owned and operated by Caucasians. Caucasians also consume an estimated 95% of the tempeh made in the USA. In North America, tempeh is marketed in a variety of forms and flavors, of which soy tempeh is the most popular, followed by tempeh burgers and soy & grain tempehs. All of the existing tempeh shops in the USA and Canada trace their roots to The Farm, a spiritual community in Summertown, Tennessee.

By contrast, tofu is much more popular in North America than tempeh. More than 70 manufacturers produce over 1.5 million lb/week. Three of the four largest manufacturers are owned and operated by Asian Americans. Whereas 75% of all Americans know what tofu is, only 14% know what tempeh is.

Although tempeh sales grew very rapidly during the 5-year period from 1980 to 1984, they were stagnant during the next five years, from 1985 to 1989. This was caused in large part by competition from more sophisticated meatless burgers, such as the Gardenburger, launched in March 1985 by Wholesome & Hearty Foods of Portland, Oregon. Also microwavable and ready-to-eat foods became more popular. The period of stagnant sales led to a great consolidation within the industry. By 1990 there was renewed interest in tempeh, which paralleled the new interest in the health benefits of soy, and the rise new "meat alternatives" category. Today, tempeh sales are growing at 10-20% a year. And most Americans still like tempeh very much when they taste it. All US tempeh makers agree that education is the crucial need.

In 1984 about 20% of US tempeh was sold vacuum packed, compared with 70% today. Main advantage of vacuum packing: Longer shelf life. Main disadvantage: Imparts a somewhat bitter taste to the tempeh. A 1992 survey of 400 tempeh users by Turtle Island showed that the number one use was in stir-fried recipes, usually with rice and vegetables.

Tables show: (1) Tempeh market statistics (USA): Average retail price per 8 oz cake of soy tempeh: $1.81. Percentage of tempeh sold refrigerated: 80% (the rest is sold frozen). Total retail dollars spent on tempeh: In 1983 = $4.96 million. In 1996 = $13.15 million. Spent (retail) on tofu in 1996 = $116 million. Spent (retail) on soymilk 1996 = $100 million. Market share of the four largest tempeh makers in 1983: 63%, In 1997: 84%. (2) Number of brands of different types of tempeh on the US market in May 1997: Tempeh burgers 14, soy tempeh 9, multi-grain (mostly 3 or 5 grains) 6, bulk soy tempeh 5, soy & brown rice tempeh 4, sea veggie tempeh 3, wild rice tempeh 2, soy millet tempeh 2, sloppy Joe tempeh 2, other 8.

Talk with Seth Tibbott of Turtle Island. 1999. Dec. 6. The existing tempeh companies with the strongest ties to The Farm in Tennessee are (1) Lightlife Foods (Michael Cohen; see Sept. 1991 interview) and (2) Turtle Island (Seth; in 1977 he learned how to make tempeh at The Farm in Tennessee). Those with weaker ties are (3) Wildwood Natural Foods

(Jeremiah Ridenour; he lived at The Farm for a while, has a lot of Farm history, and one of his kids was born on The Farm), (4) White Wave (In about 1980 Alexander Lyon was hitchhiking through Boulder, Colorado, and had no money. He taught Steve Demos how to make starter culture for something like $20 and a good meal), and (5) Surata Soyfoods (Benjamin Hills learned how to make tempeh from his former wife, who learned it from The Farm in Tennessee).

Turtle Island now makes tempeh for: Lean Green Foods (Hawaii; Benjamin Hills), Wildwood Natural Foods, and Quong Hop. It starts out when you're at a trade show and "people saddle up to you" and say "Uh, we're not sure exactly which way we're going with our tempeh, but do you have any extra plant capacity? It's just a thought." Then "If you give any kind of encouragement to them, the next week they're begging you on their hands and knees, they'll pay anything to have you make it for them. It's such a hassle and they have to devote plant space to it. Tofu is now growing so much faster than tempeh, they just keep tempeh to fill out their product line." Seth expects that White Wave and Surata will come to him next, begging him to make tempeh for them. Address: Turtle Island Foods, Inc., P.O. Box 176, Hood River, Oregon 97031.

7331. Woolf, Marie. 1997. What your baby's drinking now: genetically altered soya beans and squeezed fish-heads. *Observer* (*The*) (*London*). Dec. 21. p. 4.
• ***Summary:*** SMA Nutrition is Britain's leading manufacturer of soya-based baby milk. Their products may now contain genetically modified soya beans. "But other baby formula manufacturers, such as Cow & Gate and Farley, have banned the use of engineered beans because of consumer fears. Sainsbury has decided not to include soya at all in its own-brand milk." Address: Consumer Affairs Correspondent.

7332. Gupta, Rajendra P. 1997. Continuous soaking system. *U.S. Patent* 5,699,726. Dec. 23. 4 p. Application filed 17 June 1996. 2 drawings. [1 ref]

7333. *SoyaScan Notes.* 1997. Chronology of major soy-related events and trends during 1997 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jan. 1–Novartis Seeds (headquartered in Golden Valley, Minnesota) is formed through the blockbuster merger of Ciba Seeds and Northrup King Co. That merger was possible because of the mid-1996 merger of pharmaceutical giants Sandoz and Ciba-Geigy. Novartis Seeds is now America's second largest seed company after Pioneer Hi-Bred International.

Feb. 3–Monsanto completes its acquisition of Asgrow Seed Co. of Kalamazoo, Michigan, for $240 million. From May 1968 to 1994 Asgrow had been owned by The Upjohn Co., which built the company into one of America's largest soybean seed companies. When Monsanto bought Asgrow it was called the Asgrow Agronomics business of Seminis Inc., a subsidiary of Empresas La Moderna, S.A. (ELM), a multi-national agricultural company based out of Monterey, Mexico. of Mexico.

March 4–Morinaga Nutritional Foods' new tofu plant in Tualatin, Oregon holds its official grand opening. Mori-Nu Tofu, previously made in Japan, starts to be made in America for the first time. The plant, 65,000 square feet worth about $15 million, is on the same property as Pacific Foods of Oregon, but in a separate building.

March 12–House Foods America Corporation holds the opening ceremony for America's largest tofu factory, in Garden Grove, California; the company closes its tofu plant in central Los Angeles. The new fully automated, state-of-the-art, 130,000 square foot plant cost $21 million, and will more than double the company's tofu production capacity to 150,000 pounds/day, from 70,000 in the old plant. The old factory has been operating a full capacity for years. The new plant will have three tofu production lines, and is located on 5 acres of land–which gives plenty of room for expansion.

Sept. Nasoya Foods (owned by Vitasoy) finishes moving into a much larger, state-of-the-art $13.5 million plant (125,00 square feet) in Ayer, Massachusetts, from its former location in Leominster. The first Vitasoy brand soymilk ever made in America starts to be shipped from the plant in mid-September. Nasoya's offices have now been moved to Ayer from Leominster, but tofu is still being made at the plant in Leominster.

Oct. 14–The Hain Food Group acquires Westbrae Natural, Inc. Westbrae's new name becomes Hain Food Group–Westbrae. Westbrae will continue to be headquartered in Carson, California. Dec. 1–Phytoestrogens / isoflavones extracted from soybeans by ADM start to be sold commercially in the USA in pill form by supplement companies. ADM's name for the product is Mega Soy.

Dec. 3–DuPont purchases Protein Technologies International (PTI–the world's leading manufacturer of soy protein isolates), a wholly-owned subsidiary of the Ralston Purina Co. DuPont signed a letter of intent to acquire PTI on Aug. 24. PTI, which has offices worldwide, will continue to be headquartered in St. Louis, Missouri.

"How can I get more soy into my diet?" is the question most frequently asked by callers to Soyfoods Center. Soy appears to have a bright future.

7334. *Bluebook Update* (*Bar Harbor, Maine*). 1997. International ProSoya expands. 4(4):3. Oct/Dec.
• ***Summary:*** "International ProSoya Corporation has co-founded International ProSoya Europe plc for the purpose of manufacturing and marketing the ProSoya So Nice line of soymilk products in the UK and Europe. The company

is preparing to commence production in February 1998 in their new 50,000 square foot plant in the UK. Shipped from Canada, this will be the largest plant built using ProSoya technology. For more information, contact International ProSoya by phone: 604-532-8030, by fax: 604-534-2060 or by e-mail: ipc@ direct.ca."

7335. *Canadian Export Soybeans* (*OSGMB, Chatham, Ontario, Canada*). 1997. Canadian Soyfoods Directory released. 11(3):2. Dec.
• ***Summary:*** "Following numerous requests from consumers, processors and health professionals, the Ontario Soybean Growers' undertook this extensive project." For more information visit www.soybean.on.ca, or fax the OSG at 519352-8983.

7336. **Product Name:** Soymilk [Sweetened, Chocolate, Vanilla, Plain].
Manufacturer's Name: Cidis, Ltd.
Manufacturer's Address: No. 32 Awolowo Ave., Bodija. G.P.O. Box 38719, Dugbe, Ibadan, Oyo State, Nigeria. Phone: 234-0281-00301.
Date of Introduction: 1997. December.
Ingredients: Vanilla: Soybeans, water, sweetener, salt, vanilla.
Wt/Vol., Packaging, Price: 120 ml recyclable plastic bottle. Retails for 10 Naira (1999/08, Oyo State).
How Stored: Refrigerated.
New Product–Documentation: Talk with Sidi Osho, PhD, founder and owner of Cidis, Ltd. 1999. Aug. 23-24. The company's first two products, sweetened soymilk and vegetable oil (soy oil) were introduced in Dec. 1997. Sidi made the soymilk at her home in Ibadan. They moved into their building in Ibadan in January 1998. Today the company's best-selling product is soymilk, of which there are four flavors: sweetened (the best-seller), chocolate, vanilla, and plain (mostly for diabetics). Immediately after the soymilk is made, it is filled while hot into 120 ml sterilized plastic bottles, which are then capped, and immediately submerged in iced or chilled water. The water can be chilled by putting it next to the exposed pipes of a freezer. Cidis buys its ice from a local source; Sidi is now looking to buy an ice-making machine. When the soymilk in the plastic bottles is well chilled, 100 bottles are placed in a small insulated retail cooler, which is packed with ice, placed in a delivery vehicle (Sidi's personal car–an old Mazda like a station wagon); a driver then takes them to the kiosks in the markets. Some of the soymilk bottles are placed in a refrigerator in Cidis Soymart. The company does not rely on large refrigerators because the supply of electricity in Ibadan is unreliable, and refrigerators are very hard and expensive to maintain. Most of the bottles are recycled; then they sterilized at the factor and reused. The plain soymilk is sold, once a week, in a 4 liter plastic container to a nursing home that takes care of diabetics.

7337. Holin, Fae. 1997. Cooking cardiologist prescribes soyfoods: They cut heart disease risks, Dr. Richard Collins advises. *Soybean Digest.* Dec. p. 50, 52.
• ***Summary:*** Richard Collins, M.D., is a gourmet chef who uses soy in a high-protein, low-fat menu. Called the "cooking cardiologist," he is also director of The Heart Institute in Omaha, Nebraska. "He's convinced that soyfoods have helped his patients live longer." When Collins first tried this diet on himself (before trying it on his patients) he recalls "I lost 20 pounds, had more energy and felt better." He has made a video titled "Soy Healthy Cooking," which comes with a brochure of 45 recipes. Collins recommends replacing some high-fat foods with products such as tofu, soy beverage and soy flour. Consuming 30-40 grams of soy a day makes a difference in ones health. This amount of soy can be achieved with a chocolate tofu "smoothie", adding tofu in place of meat or cheese and using soy beverage or part soy flour when baking. Collins has a video which gives research and nutritional information. Also on the video, can be seen the preparation of various dishes from his recipe booklet. To order the video ($17.95 + $4.95 s/h), call 800-869-4956.

Color photos show: (1) Richard L. Collins, M.D. (2) Stuffed manicotti with tofu in a skillet–one of the recipes on Collins' video.

7338. Honda, Kyoko. 1997. Tofu & soybean cooking: The Japanese healthy way. Translated by Kazuhiko Nagai. Tokyo: Graph-sha Ltd. 64 p. Dec. Illust. 26 cm. [Eng]
• ***Summary:*** This full-color Japanese-style cookbook is loaded with color photos showing both steps in the process of preparing recipes and the finished dishes. Contents: Basic preparations: Parboiling soybeans, draining tofu, reconstituting Koori-dofu ([Kôri-dofu], freeze-dried tofu), removing oil from abura-age (thin deep-fried tofu), toasting okara. 1. Soybean cooking (daizu = soybeans, aodaizu = green soybeans, edamame = young soybeans in pods, kuromame = black soybeans), abura-age, soybean sprouts. 2. Tofu & natto dishes (Koori-doofu, kouya-dofu, shimi-dofu, okara, yu-dofu = simmered tofu). Let's make momen-dofu (homemade tofu). Tofu dishes from Okinawa (Goya champuru, Ukarairichi, Ujira-tofu).

3. Other dishes from soybeans (Atsu-age, Chinese cheese–Furu [Fermented tofu], miso, soy milk, yuba, daizu moyashi = soybean sprouts, kinako). Articles (summary of four articles).

Note. This is the earliest English-language document seen (April 2013) that uses the term *Koori-dofu* or the term *kouya-dofu* to refer to dried-frozen tofu. Address: Sc.D. (Doctor of Science), nutritionist, and lecturer at Women's Junior College of Nippon College of Physical Education.

7339. Murphy, Patricia A.; Song, Tongtong; Buseman, G.;

Barua, K. 1997. Isoflavones in soy-based infant formulas. *J. of Agricultural and Food Chemistry* 45(12):4635-38. Dec. [25 ref]

• ***Summary:*** Six of the major soy-based infant formulas sold in the USA were tested for their isoflavone content. Total isoflavone content ranged from 214 to 285 micrograms per gram of dry formula or about 25 to 30 micrograms per milliliter (µg/mL).

The six products obtained were: Mead Johnson's Prosobee, Gerber's, Ross Laboratories' Isomil, Wyeth's Nursoy, Mead Johnson's Enfamil, and Carnation's Alsoy. All were obtained as dry infant formula, except Wyeth's Nursoy. An illustration shows an HPLC chromatogram of Enfamil soy-based formula with isoflavone and internal standard peaks resolved.

Discusses: Daidzein, genistein, glycitein. Address: 2312 Food Sciences Building, Food Sciences and Human Nutrition Dep., Iowa State Univ., Ames, IA 50011.

7340. *Newsweek.* 1997. Decade by decade: A rich century of better mousetraps. Special Issue–Winter 1997-98. Keep on sale until Feb. 9.

• ***Summary:*** This Special Issue is one of a series under the general heading "2000–A New Millennium." This article (p. 12-15) is a 4-page chronology of the most important inventions of the 20th century (1900 to 1997). For the year 1987, one of the key inventions is "soy milk." Other inventions listed for 1987 are: gene gun, implanting cells to cure or alleviate Parkinson's, Prozac approved in U.S., 3-D videogame.

7341. Sommer Hansen, Asger. 1997. APV soymilk processes and applications: Technology update. Aarhus C, Denmark: APV Soya Sector. 20 p. March. 30 cm.

• ***Summary:*** This is a glossy, black-and-white brochure. Contents: Introduction. The soybean–a few facts. History of the soybean. History of soymilk. Varieties of soymilk. Nutritional aspects of soymilk. Basic soymilk production methods. Soybean trypsin inhibitors. Oligosaccharides. Soymilk production. Plant capacities. Soymilk applications. Conclusion. Glossary of soymilk terms.

7342. **Product Name:** [Rice Milk].
Foreign Name: Risolight–Alimento Derivato dal Riso.
Manufacturer's Name: Biolab.
Manufacturer's Address: Via dei Grabizio 11, 34170 Gorizia, Italy. Phone: +39 481 533522.
Date of Introduction: 1997.
Ingredients: Water, rice, sunflowerseed oil (cold pressed), whole sea salt, natural vanilla flavor.
Wt/Vol., Packaging, Price: 700 ml e bottle.
How Stored: Refrigerated.
New Product–Documentation: Talk with Maura Ghiraldini of Biolab. 1998. Nov. 9. Biolab, which started in June 1992, is now the third largest tofu maker in Italy. The founder and owner is Massimo Santinelli, now age 34; they also make soymilk and various types of tofu.

Label and letter sent by Maura Ghiraldini and Massimo Santinelli. 1998. Dec. 5. This new (Dec. 1998) label (3½ by 6 inches) has many pink spirals on a light pink background. The border is many little boxes, each with a symbol inside. At the upper left and right corners are cartoons of bears. At the bottom center is a cartoon bear holding a spoon and bowl of rice milk and saying: "The rice beverage (*La Bevanda di Riso*). Free of added sugar (saccharose)! (*Senza Zucchero* (*saccarosio*) *Aggiunto!*)" "Organically grown (*prodotti dalla agricoltura biologica*)." Refrigerate at 4ºC. A small symbol shows a person recycling the container.

Letter from Massimo and Maura. 1999. Jan. 5. They produce the rice milk themselves, using enzymes rather than koji.

7343. Cai, Tiande; Chang, K.C.; Hou, H.J.; Shih, M.C.; Ji, M. 1997. Comparison of bench and production scale methods for making soymilk and tofu from 13 soybean varieties. *Food Research International* 30:659-68. * Address: Dep. of Food and Nutrition and Dep. of Cereal Science, North Dakota State Univ., Fargo, ND 58105.

7344. **Product Name:** Future Shake [Vanilla Al'mondo, or Mocha Motion].
Manufacturer's Name: Odwalla, Inc.
Manufacturer's Address: Dinuba, CA 93618. Phone: 1-800-Odwalla.
Date of Introduction: 1997.
Ingredients: Vanilla Al'mondo: Soy beverage (Soybeans, water), water, mango puree, banana puree, agave nectar, almonds, Madagascar vanilla, whole oats, vitamins and minerals (calcium, magnesium, vitamin C, iron, vitamin E, niacin, zinc, copper, pantothenic acid, manganese, folic acid, viatmin A, vitamin B-6, riboflavin, thiamine, biotin, iodine, chromium, selenium, vitamin B-12, vitamin D).

Mocha Motion: Soy beverage (Soybeans, water), water, mango puree, banana puree, agave nectar, almonds, coffee extract, Madagascar vanilla, cocoa, organic whole wheat flour, vitamins & minerals.
Wt/Vol., Packaging, Price: 16 fl oz (480 ml = 1 pint) HDPE plastic bottle. Retails for $3.39 at Safeway supermarket (1999/01 Lafayette, California).
How Stored: Refrigerated.
New Product–Documentation: Product (Vanilla Al'mondo, 1 pint) with Label purchased for $3.39 at Safeway supermarket in Lafayette, California. 1999. Jan. 17. Self adhesive label in many colors: blue, reddish pink, orange, purple, green and white on beige. Illustration of colorful,

stylized man with an zany design for a head, 3 ears of wheat in his right hand, a glass in his left hand, a long-billed bird on his shirt design, and planets whirling around him. Text on front panel: "A drinkable feast. All natural meal in a bottle." One side panel states: "Future Shake is a dairy-free shake-up of almonds, soy and organic oats, flavored with Madagascar vanilla. One bottle gives you a meal's worth protein, vitamins and minerals, plus 100% of the RDI for calcium and vitamin C. The future is in your hands... shake it up!" "Odwalla (Oh-DWA-la) was founded in 1980 by three musicians with the dream of a healthy world. Their mission: To make great juice and bring a heart to business." www.odwalla. com. Soyfoods Center taste test: Delicious, with plenty of almonds, but very expensive.

Product (Mocha Motion, 1 pint) with Label purchased for $3.39 at Safeway supermarket in Lafayette, California. 1999. Jan. 24. Self adhesive label. Soyfoods Center taste test: Outrageously delicious, but very expensive. Talk with Odwalla representative. 2001. April 30. Mocha Motion was introduced in 1997.

7345. **Product Name:** Pressed Tofu, Fried Tofu, Soymilk.
Manufacturer's Name: Top Grade Foods.
Manufacturer's Address: 3990 Pleasantdale Rd., Doraville, GA 30340. Phone: 770-263-1880.
Date of Introduction: 1997.
How Stored: Refrigerated.
New Product–Documentation: Talk with Russell Chan of Top Grade Foods. 2002. June 26. He started making these products in 1997.

7346. Garcia Uriarte, Alvaro. 1997. Novedosa tecnologia Cubana para la produccion de leche y pasta de soya: Ficha promocional [New Cuban technology for the production of soymilk and soy paste: Promotional brochure]. Havana, Cuba: IIIA. 10 p. Undated. 28 cm. [Spa]
• ***Summary:*** The Cubans are starting to sell the excellent plants they have developed for making soymilk and soy paste (for use in sausages). Contents: Objective. Soya is the protein source of the future. Marketing. Table listing products (soymilk, soy yogurt, concentrated soymilk, natural soy paste, modified soy paste, natural powdered soymilk, modified powdered soymilk, soy cheese), potential clients, and probable uses. Advantages of our products: Nutritional quality, availability, economy. Table showing product costs. Technical description of Cuban soymilk plant. Interest in negotiations. Address: Ing., Director General, Food Research Inst. (*Instituto de Investigaciones para la Industria Alimenticia*), Carretera Guatao Km 3½, La Lis 19200, Havana City, Cuba. Phone: 21-6986 or 21-6742.

7347. Grogan, Bryanna Clark. 1997. Twenty minutes to dinner: Quick, low-fat, low-calorie vegetarian meals. Summertown, Tennessee: The Book Publishing Co. 192 p. Illust. Index. 21 cm.
• ***Summary:*** This vegan cookbook contains a wealth of soy-related recipes. The glossary mentions tofu, soymilk, soymilk powder, tempeh, miso, soy sauce (shoyu, tamari) textured vegetable protein, Chinese condiments (hoisin sauce, Chinese black bean sauce, Chinese brown bean sauce, Szechuan hot bean paste), seitan, soy bacon bits or chips.

In the section titled "Ingredient substitutions," under "Yeasted products" we read (p. 15): "I can think of no practical substitutes for light miso or certain fermented Chinese products like doufu-ru (Chinese fermented bean curd, which has a strong 'blue cheese' type of flavor)."

The recipe for "Buffalo potato wedgies" (an alternative to "Hot wings") advises: "Dip the crusty wedges into Vegetable Dip (p. 48)–you can add a bit of crumbled, white Chinese fermented tofu (doufu-ru) to make it more like traditional blue cheese dressing or dip."

Also includes soy-free options for recipes with tofu and soymilk. Address: Denman Island, east of Vancouver, British Columbia, Canada.

7348. Katzen, Mollie. 1997. Vegetable heaven. New York, NY: Hyperion. xv + 223 p. Illust. (Color by Mollie Katzen). Index. 27 cm.
• ***Summary:*** A handsome vegetarian cookbook. Soy-related recipes include: Vietnamese salad rolls (with firm tofu, p. 11). Kung pao lettuce cups (with firm tofu, Northern Chinese, p. 13). Eggflower soup with pasta shells (with firm tofu, p. 32). Potato soup with rosemary and roasted garlic (with silken tofu, p. 33). Coconut-lemon grass soup (with firm tofu, p. 43). Baked coated nuts sweet or savory (with soy sauce, p. 57). Basic soyburgers (with cooked soybeans and tofu, p. 76). Green beans and tofu in crunchy Thai peanut sauce (with firm tofu, p. 103). Magic carrot flans (with milk or soymilk, p. 122). Scalloped potatoes three variations (with milk or soymilk, p. 130). Sandwiches to write home about (with firm tofu, p. 136). Buckwheat soba with squash, smoked tofu, and basil (with smoked tofu and miso, p. 144). Tiny pasta stew (with firm tofu, p. 151). Horseradish aioli (with silken tofu, p. 168). Peanut-chile [chili] dressing (with soy sauce, p. 174). Homemade butterscotch pudding (with milk or soymilk, p. 194). Pumpkin mousse with gingersnap crumbs (with silken tofu, p. 196). Bittersweet chocolate-banana mouse (with silken tofu, p. 197).

A color photo on the rear cover shows Molly Katzen. Address: California.

7349. Keussink, Ruth. 1997. Soja und Sojaprodukte [Soybeans and soy products]. Bonn, Germany: Auswertungs- und Informationsdienst fuer Ernaehrung, Landwirtschaft und Forsten (aid) e.V. 28 p. Illust. (Color photos). 21 cm. [14 ref. Ger]
• ***Summary:*** Contents: Introduction. Market and utilization. Soya in the diet: Protein, fat, carbohydrates, minerals

and trace minerals, vitamins. Overview–Soy products: Whole soybeans, soy sprouts, soy oil, soy beverage, tofu, natto, sufu, tempeh, soy sauces, miso, soy lecithin, soy sausages, TVP. Processing soybeans. Soy ingredients and additives: Soy protein isolate, concentrate, soy bulk / fiber (*sojaballastoffe*), fatty acids, lecithin, vitamin E (tocopherol). Product safety. Genetically engineered soybeans. Tips for buying and storing. Recipes. Address: Konstantinstr. 124, 53179, Bonn, Germany.

7350. Kitamura, Keisuke. 1997. Genetic improvement of nutritional and food processing quality in soybean. In: Napompeth, Banpot, ed. 1997. World Soybean Research Conference V: Proceedings. Soybean Feeds the World. Bangkok, Thailand: Kasetsart University Press. xxiv + 581 p. See p. 441-46. Held at Chiang Mai, Thailand, 21-27 Feb. 1994. [17 ref]

• ***Summary:*** Discusses manipulation of the 7S globulin (Beta-conglycinin) and 11S globulin (glycinin), the two major soy protein components, accounting for about 70% of the total seed protein. Newly developed Japanese varieties lacking lipoxygenase are: Suzuyutaka, Yumeyutaka (1992, lacks L-2 and L-3), and Kyushu 111 (lacks all 3 lipoxygenase isozymes). Address: National Agriculture Research Center, Tsukuba, Japan.

7351. Kittler, Pamela Goyan; Sucher, Kathryn P. 1997. Food and culture in America: a nutrition handbook. Belmont, California: West/Wadsworth. xiv + 535 p. Illust. (photos). Index. 26 cm. [100+* ref]

• ***Summary:*** What is American food anyway? Does it include sushi, soy sauce, miso soup, or tofu? How about Peking duck or pot stickers? How about enchiladas, chile rellenos, or tacos?

This excellent and original work is arranged in chapters by cultural groups or subcultures living in the USA.

The chapter on "Latinos" states under "Foreign influence" (p. 286) that the "demand for Asian ingredients by later immigrants resulted in the introduction of soybean products,..." Under "Regional variations" (p. 290) that Cubans like a chicken dish marinated in lime juice and soy sauce. Under "Meal composition and cycle" (p. 290) that West-African fritters are made from the meal of soybeans..."

The chapter on "Asians," under "Chinese," notes (p. 328-30) that "Soybeans are transformed into an amazing array of food products that are indispensible to Chinese cooking," including soy sauce, soy milk, bean curd or tofu, black beans ("made with cooked fermented soybeans preserved with salt and ginger. Black beans are usually added as a flavoring in dishes"), hoisin sauce, and oyster sauce. Soy oil is also used in Chinese cooking. The Hakkas enjoy tofu stuffed with meat (p. 332). Every Chinese meal aims for a good balance of *fan* (grain foods, such as rice or wheat) and *tsai* (side dishes). "The Chinese believe that a good diet is critical for physical and emotional harmony and necessary to strengthen the body against disease" (p. 334). During pregnancy, soy sauce may be avoided to prevent dark skin (p. 335). Chinese who avoid fresh dairy products because of lactose intolerance, may consume soybean curd and soy milk (if fortified with calcium) as alternatives.

Under "Japanese," soy sauce is a traditional food of Japan (photo, p. 341). Soybean products (p. 350) are an important part of the Japanese diet; they include tofu, shoyu (soy sauce), miso, and teriyaki sauce–to name just a few. Second-generation Japanese use more soy sauce than non-Asians (p. 354) but as their diet becomes Americanized, they fall prey to more diseases of affluence. The response to dairy products and lactose intolerance is similar to that of Chinese, with the use of tofu and soy milk.

Under "Koreans" (p. 363, 366) Soybean products are in important part of the diet; they include soy sauce, soy paste, and soybean curd or tobu [sic, *tubu*] (tofu).

Under "Southeast Asians and Pacific islanders." Adobo is a popular Filipino stew, seasoned with soy sauce (p. 389). Soy products include soy milk and tempeh (p. 399, 402, 404, 421-22).

The "Glossary of ethnic ingredients" mentions many soy products including (p. 490): "Black beans, fermented: Black soybeans salted and fermented to produce a piquant condiment. Used in Chinese cooking as a seasoning or combined with garlic, ginger, rice wine, and other ingredients to make black bean sauce." Address: 1. M.S., Food and nutrition education consultant; 2. Dep. of Food and Nutrition, San Jose State Univ., California.

7352. Klingel, Brigitta. 1997. Soja und Tofu: 100 koestliche und gesunde Rezepte–Mit den Wirkstoffen der Sojabohne; Erkrankungen natuerlich vorbeugen; mit einfachen, schmackhaften Rezepten [Soya and tofu: 100 tasty and healthful recipes. With soybean phytoestrogens. Prevent illnesses naturally. With simple, delicious recipes]. Munich, Germany: München Südwest Verlag GmbH & Co. 95 p. Illust. (color photos). Recipe index. Subject index. 20 x 18 cm. [Ger]

• ***Summary:*** A small but attractive book, containing many color photos on glossy paper. Soya, the food of the future? Favorable use of land using soya. New industrial uses of soybeans. History of the soybean: East and West. World soybean production, yesterday and today. Soy in modern times: Henry Ford, two basic ways of using soybeans (as food or as livestock feed and oil), the sad story of genetically engineered (*genmanipuliertes*) soybeans. Soya: The power packet: Nutritional composition, a source of B-vitamins, magnesium, calcium and fiber, the world's best source of protein. Soya in medicine: Preventing cancer, plant estrogens, isoflavones, prostate cancer, fiber and stomach cancer, effect on female hormones, men, medicine and soya, lowering cholesterol, help with diabetes, healthy nutrition.

Food products and buying tips: Yellow soybeans, black soybeans, green mungbeans (dehulled and not), azuki beans, glossary of soyfoods (miso, okara, soy flakes, dry soymilk powder, soy lecithin, Sojamark {TVP}, soy flour, soymilk, soy oil, soy protein, soy sauce, soy sprouts, tempeh, tofu, dry tofu, yuba).

Cooking with tofu–for a healthy kitchen, cooking with soy is easy. Infant and child nutrition. Recipe ideas: Basic recipes. Cooking whole soybeans. Homemade soymilk. Homemade soy cream. Soy mayonnaise. Homemade soy sprouts. Soya butter. Classical meat alternative with soya. Okara specialties. International tofu cuisine. Quick and easy recipes with soy and tofu. Healthy recipes for two. Desserts. Baked recipes. Address: Germany.

7353. Main, Jan. 1997. Bone vivant!: calcium-enhanced recipes and bone-building exercises. Toronto, Canada: Macmillan Canada. 192 p. + 8 unnumbered pages of color plates. Illust. Recipe index. Subject index. 25 cm.
• ***Summary:*** This is a book about how to build strong bones (starting in childhood) and to keep them into old age. The 100+ high-calcium recipes include soy recipes to help prevent osteoporosis. The author wrote this in co-operation with The Osteoporosis Society of Canada. A full page near the front contains "A message from the Ontario Soybean Growers' Marketing Board" which is the pround sponsor of the book. The calcium content of tofu, soybeans, soy flour and soy pasta are mentioned on page 6. Praise for tofu and other soy ingredients is found on page 121.

The recipe index contains 12 entries for soy flour, 7 for tofu, 6 for soybeans, 3 for soy beverage [soymilk], and 1 for soy spaghetti. Address: Professional home economist, Scarborough, Ontario, Canada.

7354. Messina, Virginia Kisch; Messina, Mark. 1997. Soy to the world. In: 1997 Medical and Health Annual. Published by Encyclopedia Britannica, Inc. See p. 197-202.
• ***Summary:*** In the section titled "Diet and Nutrition" is a long subsection on "Soy to the world." Contents: Introduction. Sacred crop (history). Varied and versatile: Whole soybeans (incl. green vegetable soybeans), traditional soyfoods (soymilk, tofu, okara, yuba, tempeh, miso, soy sauce or shoyu), modern soy products (textured soy flour or TVP), "second-generation" soyfoods. One of nature's most nutritious foods. Health benefits: the evidence so far: Cancer, heart disease, osteoporosis, kidney disease, menopause. Tofu on your table (how to incorporate soy into American diets; incl. TVP, soymilk, soy flour, soy nuts). Address: 1. M.P.H., R.D.; 2. Ph.D. Both: PhD, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

7355. Nabben, Alexander. 1997. Kochen und Backen mit Tofu: Vegetarische Rezepte ohne tierisches Eiweiss [Cooking and baking with tofu: Vegetarian recipes without animal protein]. Darmstadt, Germany: Pala-Verlag. 139 p. Illust. Recipe index. 21 cm. [Ger]
• ***Summary:*** Contents: Tofu–versatile and healthful. The soybean: Cultural history, production, the world and the soybean, nutritional value of soybeans, soyfood products (soy sauce, miso, tempeh, okara, soy coffee, soynuts, soy sprouts, modern western soy protein products–soybean flour, flakes, textured soy flour, soy protein isolates, defatted soybean meal, industrial soy products), genetically engineered soybeans. Tofu. Tips, tricks, and useful information. How to make soymilk at home. How to make tofu at home. Tofu recipes and marinades. Raw foods and salads. Dressings. Sauces. Soups. Main dishes. Soufflés. Pasta. Patties / burgers. Spreads. Party snacks. Cooking and baking. Desserts and sweet delicacies (*süsse Leckereien*). Ice cream. Address: Weigandufer 38, 12059 Berlin, Germany. Phone: 30 / 6808 0686.

7356. Nutrition Education Service, Sanitarium Health Food Company. 1997. Sensational soy cookbook. Sydney, London, Vancouver, New York: Murdock Books. 64 p. Illust. Index. 20 cm. [32 ref]
• ***Summary:*** A saddle-stitched vegetarian cookbook on glossy paper loaded with color photos and lightweight text. The author and nutritionist is Cathy McDonald of Sanitarium. Recipes developed by Wendy van der Veer of Sanitarium. Contents: The story of soy. The soy family: Miso, soy beans, soy breads & cereals, soy cheese, soy drink, soy flour, soy grits & soy flakes, soy 'meats,' soy pasta, soy sauce, soy snacks, tempeh, TVP, tofu, tofu desserts (ice cream and yoghurt). Breakfasts. Soy for health (isoflavones, menopause, breast cancer, osteoporosis, prostate cancer, heart disease). Light meals. The secrets of soy. Main meals. Soy in perspective. Desserts. Sensational soy (sample menus). Snacks. Know your nutrients. Bibliography. Estimated isoflavones in soy foods (table). Address: 1 Sanitarium Drive, Berkeley Vale, NSW 2261, Australia.

7357. Osho, S.M.; Obatolu, V.A.; Uwaegbute, A.C.; Ndaeji, C.F.; Olowoniyan, F. 1997. Food uses of soybean in Nigeria: Opportunities and constraints. In: Napompeth, Banpot, ed. 1997. World Soybean Research Conference V: Proceedings. Soybean Feeds the World. Bangkok, Thailand: Kasetsart University Press. xxiv + 581 p. See p. 422-30. Held at Chiang Mai, Thailand, 21-27 Feb. 1994. [6 ref]
• ***Summary:*** Contents: Introduction. Past uses of soybeans in Nigeria. The present uses of soybeans. Results and discussion: Composition of some Nigerian traditional foods with and without soybean fortification. Inactivation of the trypsin inhibitor at household level. Development of a soybean-cassava product (soy gari). Soybean tofu processing (soywara or soycheese). The processing of a soy beverage (kunu). Soybean oil. Extrusion cooking (IITA concept). Achievements. Impact.

Tables: (1) Nutritional composition of selected home-made soy-based products compared with products from traditional preparation method (Soy ogi, soy milk, soy moinmoin, soy akara). (2) Phytic acid, tannin, and trypsin inhibitor levels of raw and processed soybean products (the 4 products shown in table 1). (3) Time, temperature, and treatment necessary for complete inactivation of soybean trypsin inhibitor at the household level: Boiling under pressure (with or without soaking), boiling with soda or kaun, boiling whole without pressure (with or without soaking), boiling with prior processing (grits, dehulled soybeans, flour), roasting whole (in sand, in pan). (4) Composition of local gari and fortified soybean gari (fortified with okara, or with whole soybean paste). (5) Sensory evaluation of these three types of gari. (6) Nutritional composition of local cheese (*warankasi*) and tofu. (7) Sensory evaluation of local cheese (*warankasi*) and tofu. (8) Nutritional composition of *kunuzaki* and soy *kunuzaki.* (9) Nutrient composition of selected soy flours from the extruder and screw press (defatted, extruded full fat, defatted extruded, extruded defatted). (10) The percentage of farmers/households producing and utilizing soybean in IDRC project sites (1987, 1991, 1992; Oyo State, Niger State, Kaduna State, Enugu State). (11) 33 soybean products that are being made and marketed by companies in Nigeria (Feb. 1992). For each is given: Name of manufacturer. City or state of manufacture. Product name or description. Percentage of soybean used in the product. (12) Summary of number of markets and retail sale outlets for soybean in Ibadan, Nigeria (each January from 1987 to 1993): Increased from 2 markets and 4 retailers in Jan. 1987 to 42 markets and 824 retailers in Jan. 1997.

Flowcharts show the processing of: (1) Soybean gari. (2) Tofu. (3) Soybean kunuzaki. (4) Soybeans by extrusion or expelling. (6) Soybeans and cereals by extrusion. Address: 1. Soybean Utilization Project, International Inst. of Tropical Agriculture, PMB 5320, Ibadan; 2. IAR&T, PMB 5029, Ibadan; 3. Univ. of Nigeria, Nsukka; 4. NCRI, PMB 8, Badeggi; 5. NAERLS, PMB 1067, Zaria. All: Nigeria.

7358. Rombauer, Irma S.; Becker, Marion Rombauer; Becker, Ethan. 1997. The joy of cooking. New York, NY: Simon & Schuster / Scribner. xiv + 1136 p. Illust. Index. 24 cm.

• ***Summary:*** Soy-related subjects include (* = recipe): Soy sauce butter* (p. 77). Asian black bean sauce* (with "3 tablespoons preserved black beans" [fermented black soybeans], p. 83). Japanese wasabi soy sauce* (p. 83-84). Ginger soy sauce* (p. 84). Soy and sherry marinade* (p. 85). Description of miso soups and their role in the Japanese diet (p. 107-08). Light-colored miso soup with simmered vegetables and dark-colored miso soup with sautéed vegetables and Mongolian Hot Pot–a miso soup based dish* (p. 108). Ginger soy vinaigrette* (p. 238).

One long chapter is titled "Beans and Tofu" (p. 270-294). Lentils with spinach and soy sauce* (p. 280). The section titled "soybeans" (p. 287) discusses their nutritional value, health benefits ("They contain substances thought to help prevent breast and other cancers, as well as Omega-3 fatty acids, which reduce the risks of heart disease"), how to cook yellow and black soybeans, how to dry-roast [to make soynuts], many ways of processing, soy milk, okara, fermented black beans, soy sauce, tamari, miso, soy cream cheese, soy sour cream, and soy cheese. There are also substantial subsections describing the following soyfoods: (1) Soy milk, including a recipe for making it at home (p. 287-88). (2) Tofu, including silken tofu, cottage tofu, frozen tofu, sauteed or fried tofu, and smoked tofu (p. 288-89). Recipes containing tofu include: Szechuan spiced tofu, Southeast Asian curried vegetable stew, Smoked tofu burgers, and Brown rice tofu salad with orange sesame dressing (p. 289-90; the latter recipe calls for toasted sesame oil and adzuki beans, with smoked tofu being optional). (3) Tempeh, including recipes for Moo shu tempeh and Szechuan-style "hacked" tempeh. (4) About soy protein, describing textured vegetable protein and textured soy concentrate, with recipes for Dinner loaf Tex-Mex style and Lion's head (p. 292). This is followed by a subsection describing seitan and with recipes for Root vegetable and seitan stew, and Seitan kibbe (p. 293-94).

Asparagus with mustard miso* (p. 343-44). Baby bok choi with soy ginger sauce* (p. 349). Steamed scallops or shrimp with soy sauce* (p. 513). Grilled or broiled whole red snapper with ginger soy vinaigrette* (p. 548-49). Small fish, fillets, or steaks poached in soy sauce* (p. 555-56). Chinese soy-braised chicken* (p. 601-02). The chapter titled "Know your ingredients" (1059-87) includes short descriptions of bean sauce, Hoisin sauce, miso, nori, salted and fermented black beans, sesame oil, sesame paste, soy sauce, tamari, tonkatsu sosu (dark spicy sauce based on soy), wakame, wasabi, vinegars from fruit and grains, margarines (mentions trans fatty acids, but not soy), and shortenings (p. 1065-69).

Subjects related to vegetarianism include: Discussion of vegetarian diets (positive and accurate, in Chapter 1, p. 3). List of vegetarian side-dishes and main courses in this edition (27 recipes, p. 20). Vegetarian chili* (p. 283). Dairy-free chocolate cake* (vegan, p. 932). Ultra-orange cake* (vegan, p. 932-33).

Irma Rombauer (the grandmother of Ethan Becker) first wrote the *Joy of Cooking* in 1931, "when domestic help was fast becoming a thing of the past and women all over the country were once again heading to the kitchen."

Note: This cookbook was written by a committee of experts, put together by Maria Guarnaschelli. Many controversies and clashes of opinion arose out of this arrangement. Address: 3. Cockaign, Cincinnati, Ohio.

7359. Sullivan, Cheryl; Rhodes, Kathy. 1997. Soyfoods: A

healthy profile. Revised ed. Sioux Falls, South Dakota: South Dakota Soybean Board. 118 p. Illust. Index. 22 cm.
• ***Summary:*** Contents: Introducing soyfoods to your diet. The healthful soybean. Exploring soyfoods: Dried soybeans, fresh green soybeans, soy milk, tofu, textured soy protein, soy flour, soy grits, tempeh, miso, soy meat analogs. Where to find soy products. Nutrient information. Recipes: Breakfast, beverages, breads, appetizers & snacks, salads, soups, sandwiches, side dishes, main dishes, desserts. Guide to modifying recipes: A one-for-one substitution.

Talk with Betty Hansen at South Dakota Soybean Board. 2000. May 15. This cookbook (which is undated) was first published in 1996, and revised in 1997. It was reprinted by the Nebraska Soybean Board with their name and phone number on the rear cover.

Talk with Cheryl Sullivan. 2002. Aug. 12. This booklet is basically *Simply soy: A variety of choices,* with a new cover and title, plus a few pages of additional information added by the South Dakota Soybean Board in Sioux Falls. Address: 1. M.A., R.D.; Ph.D., R.D.

7360. Tanteeratarm, K.; Nelson, A.I.; Wei, L.S. 1997. Processing of soymilk free from beany and other off-flavors. In: Napompeth, Banpot, ed. 1997. World Soybean Research Conference V: Proceedings. Soybean Feeds the World. Bangkok, Thailand: Kasetsart University Press. xxiv + 581 p. See p. 412-14. Held at Chiang Mai, Thailand, 21-27 Feb. 1994. [8 ref]
• ***Summary:*** "An innovative processing technology for preparation of soymilk free from beany and other off-flavors has been developed and evaluated at the University of Illinois. Soybeans were blanched in sodium bicarbonate water to inactive lipoxygenase enzyme and other compounds responsible for the development of off-flavors. The blanched soybeans were then ground into slurry, filtered, pasteurized, homogenized, cooled, and packaged. The major chemical compositions of this soymilk were evaluated. Solids and protein recoveries were essentially high and could be controlled to contain 9.2% and 4.5% respectively. According to the sensory evaluation, this soymilk was very bland, and was considered as much superior to traditional soymilks."

Note: One serious disadvantage to this Illinois method is the creation of "throat drying effect." Address: International Soybean Program (INTSOY) and Dep. of Food Science, Univ. of Illinois, Champaign-Urbana, IL 61801.

7361. Tanteeratarm, K.; Wijeratne, W.B.; Nelson, A.I.; Wei, L.S. 1997. Problems, remedies, and prospects of soymilk processing. In: Napompeth, Banpot, ed. 1997. World Soybean Research Conference V: Proceedings. Soybean Feeds the World. Bangkok, Thailand: Kasetsart University Press. xxiv + 581 p. See p. 461-67. Held at Chiang Mai, Thailand, 21-27 Feb. 1994. [36 ref]
• ***Summary:*** "Soybean quality is affected by seed quality and characteristics, soybean constituents, and processing. Good intact soybeans with high protein content have the most desirable seed characteristics. Controlling lipoxygenases and inactivating trypsin inhibitors are important for improving flavor and protein digestibility. Flatulence factors, raffinose and stachyose, and astringency must be reduced during processing. Soymilk quality varies from one processing method to another. Quality soymilk may be prepared from whole soybean, soy flour, or soy protein isolate. The soymilk from soy flour is generally yellow in color and contains essentially all of the oligosaccharides present in the flour. Research directed towards reducing flatulence factors and astringency is important for improving soymilk quality and eventually increasing consumption. Processing method and raw material used should be economically selected to produce the kind of soymilk for specific markets and type of consumers." Address: International Soybean Program (INTSOY) and Dep. of Food Science, 169 Environmental and Agricultural Science Building, Univ. of Illinois at Champaign-Urbana, IL 61801.

• ***Summary:*** On the front panel of this full-color Dutch-language leaflet, a photo shows a silver spoon lifting up a spoonful of lemon-yellow desert from a small, round glass bowl.

The leaflet shows photos and gives descriptions of the company's many Provamel soya dessert products. Address: Vlamingstraat 28, B-8610 Wevelgem, Belgium.

7364. Mukherjee, Anjali; Singh, Kanaka. 1998. Add years to your life–starting 1998. *Times of India* (*The*) (*Bombay*). Jan. 8. p. A4.
• ***Summary:*** Studies show that vegetarians are healthier and

live longer than meat eaters; they have lower blood pressure and cholesterol levels, plus lower rates of heart attacks and cancer.

Eat more foods made from soybeans. That may be why the Japanese outlive the Americans. The soybean contains an arsenal of antidisease agents such as antioxidants, lecithin, phenols, genistein and phytates. Genistein has anti-cancer activity. "Soya foods boost the 'good' cholesterol and improve the HDL / LDL ratio." Soya foods and soya milk are also good sources of calcium. To derive the full benefit of soyabeans, it is best to eat "soya foods" every day. To incorporate them into your daily diet: (1) When making chappatis [chapatis], mix wheat flour with soya flour in a 2:1 proportion. This will ensure a steady intake of soya. (2) Use tofu in place of paneer whenever possible. Tofu has more antioxidant punch than casein, the protein in milk. Animal studies have shown that those fed soyabeans had a life span 10-15% longer than those fed casein. (3) Used roasted soyabeans [soynuts] as a tasty snack food. (4) Use textured soya protein products like Nutrinuggets or Nutrella, which come in granule or chunk form, together with mushrooms or green peas to vegetarian chilies or vegetable pulao

pilaf. (5) Whole dry soybeans can be cooked like other pulses to make rajhma / rajma [a north Indian vegetarian dish consisting of red kidney beans in a thick curry and lots of Indian whole spices] or channa / chana masala; serve with rice or chappatis [chapatis].

7365. *SoyaScan Notes.* 1998. Did George Washington Carver play an important role in introducing the soybean to America? (Overview). Jan. 11. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Over the years Soyfoods Center has made great efforts to collect everything we can about the work of George Washington Carver with soybeans and peanuts. As of 11 Jan. 1998, our SoyaScan database and library contain 111 documents by or about George Washington Carver and his work with or interest in soybeans. Of these, 35 were written by Dr. Carver and the rest were written about him by others. Only two of the 35 documents written by him were published, and soy was not mentioned in the title of either. Neither of Carver's two publications was primarily about soybeans, and, in fact, soy was mentioned only briefly in each. The first was a *Tuskegee Experiment Station Bulletin* No. 4 (1901) about a certain type of insect in Macon County, Alabama; Carver reported simply: *"Cercospora canescens,* E. & M. found on the Soja bean (Glycene hispida) [sic, Glycine]."

The second publication was a paper that Carver presented in 1937 titled "What chemurgy means to my people." The paper was published in the *Proceedings of the Third Dearborn Conference of Agriculture, Industry, and Science, Dearborn, Michigan;* the title of the conference did not mention soy. The rest of the 35 documents written by Carver consist of 31 letters (many handwritten to individuals who had written to him), 1 lecture, and 1 unpublished manuscript.

While Dr. Carver was certainly a great man, a fine scientist, and a fan of the soybean, and he encouraged many people in his letters to drink soybean milk, it would be hard to conclude from the above that Dr. Carver played an important role in introducing the soybean to America.

7366. Messina, Mark J. 1998. Soy phytoestrogen pills–The biggest soy-related story of the year (Interview). *SoyaScan Notes.* Jan. 22. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Phytoestrogens extracted from soybeans, made by ADM and sold in pill form, went on the market in the USA in about November 1997. The first company to sell them was the Life Extension Institute in Wilton Manors, Florida. They call the product Mega Soy Extract; in their catalog it is listed under the category Soy Supplements. They sell the capsules in two sizes: 135 mg and 700 mg. ADM is not mentioned in the catalog, but they have their own ADM brand name for the product: Novasoy. Two research scientists to talk to at ADM are Eric Gugger (phone 1-800-637-5850 X-4380) and Rasik Daftary. Mark has the highest regard for these two men as scientists. They are dedicated to the facts as shown by scientific research.

Central Soya is now also making and selling the same kind of soy phytoestrogen pills, but ADM's were on the market first. What would happen if a person (such as a teenage girl wanting larger breasts) took 60 of these 135 mg pills at once? Mark has no idea; you'd have to know more about the absorption and blood levels. Many studies now suggest that a person needs to consume 70 to 100 mg/day of these soy isoflavones (equivalent to about 2 servings of tofu or 2 cups of soymilk) to derive the benefits. This is clearly much more than most Americans would be willing to consume day after day. So the supplements make it much easier for people to get their isoflavones. The average intake of these isoflavones among people in Asia is actually quite low, probably about 15-25 mg/day; this is much lower than was formerly thought to be the case, yet epidemiologic studies suggest that even these low levels confer benefits.

Solid studies increasingly show that these isoflavones give benefits in the areas of bone health (osteoporosis), reduced risk of heart disease, and reduction of menopausal symptoms. The benefits appear to be dose related–though there may be a threshold. There seem to be more benefits to women than to men, and little or no danger of any harm if taken at the recommended doses. Though the results are not yet definitive, there may be reduced prostate cancer risk for men. Some studies have also looked at the individual isoflavones. So Mark believes that many Americans will want to try these pills. They may take their place on the dining room table next to vitamins, minerals, and other

supplements.

The area of greatest controversy concerns the effect of these isoflavones on breast cancer. Mark thinks it is very unlikely that they would increase the risk of breast cancer–even though some studies do seem to indicate that, and therefore further research is needed. Many difficult ethical questions are raised by how information in this area is presented to consumers.

Concerning soy and bone health, a 2-year study of monkeys without ovaries found that soy did not favorably affect bone health, even though estrogen did. That was one of the best studies conducted to date, yet it is never mentioned at any of the soy meetings. Mark is very concerned that there is a real bias in the way this information is being presented. This is such a "hot" area right now. There are so many fortunes to be made, so many researchers with patents, and so many trying to establish their careers on the basis of soy right now. Clinics all over the USA are now doing studies with isoflavones and with soy. Discussion groups on soy and breast cancer are taking place. "This is as hot as it gets."

A big-name researcher in this field, with a reputation in nutrition research going back 20 years, recently proposed the "soy protein hypothesis" in a scientific paper. It had to do with the possibly favorable effects of protein on kidney function, with no acknowledgment of previous research in this area. But this idea/hypothesis was out 4-6 years ago, and a summary in *The Simple Soybean and Your Health* (published April 1994) concluded that soy protein favorably affected kidney function. This appears to be but one of many examples where researchers are trying to establish their niche in soy and ride it to fame–and sometimes fortune. Now in nearly every major university in America, there is at least one researcher who is seriously interested in soy. That is really good for the field, and will help its progress.

The biggest event of 1997 is ADM starting to make soy isoflavone pills and thus taking soy isoflavones to the next level. These isoflavone pills are even sold on TV, in home shopping clubs–an amazing development. Many new books are being written on this subject by well-known authors, and soy plays a leading role. "There is a soy bandwagon here and everyone is jumping on it. The pills will take soy to the next level because there is more money to be made, and they are accessible to everyone. Now anyone can get the benefits (whatever they may turn out to be) without having to eat tofu or drink soymilk. Even with a bland soy powder, it was difficult for most people to consume enough of it (60 gm/day) to get benefits. Now that the soy isoflavones are available as pills, many researchers will now do clinical studies with them. Even now, there are studies underway all over the country. Three years ago, few people were aware of soy isoflavones. Now the research is almost one step removed from mainstream medicine. Virtually all researches involved with progressive health and nutrition, or with women's health, known about soy and phytoestrogens. It's just incredible. Being able to give out two placebo pills and two 'soy pills' a day makes it much easier to conduct controlled studies." People used to think of soy as strongly connected with tofu. Then they began to think of the isoflavones separately and independently. Isoflavones are a type of phytoestrogens, but when the word "phytoestrogens" began to replace the word "isoflavones" a quantum leap took place. Every physician knows what estrogens are, and the word has a power that resonates. For example, Mark recently gave a talk last year at a meeting of the American Dietetic Association (ADA). He titled it: "Soybean phytoestrogens: Possible alternatives to hormone replacement therapy."

So, in the field of soy, ADM and their soy pills is the big story of late 1997 and early 1998. ADM is a huge, respected company, and they plan strong promotion for these soy pills. Granted there were soy isoflavone pills available last year, but because they were made from the ground sprouts (hypocotyls) of soybeans, they had very low levels of genistein and they weren't nearly as potent as ADM's pills. Moreover, ADM is learning ways of processing soybeans to further concentrate the isoflavones, which will make the pills even more potent. Mark believes that the "halo effect" of these soy pills will soon benefit the whole category of soyfoods as well.

Mark has no plans to take these pills; he gets plenty of isoflavones from his natural diet, which contains lots of soymilk, plus some tofu, and other soyfoods.

An Australian newspaper reported that Protein Technologies International (PTI) recently paid $15-20 million to Novagen, an Australian pharmaceutical company that will be marketing Promensil (made of isoflavones from red clover). Note: As of 3 Feb. 1998 Novagen is not listed in the text of any article in the *Wall Street Journal* since March 1984. It is not clear to Mark exactly what PTI got for this large amount of money (perhaps patent right to claims about a product containing isoflavones). This last weekend, PTI helped to sponsor a symposium at UCLA, attended by only about 45 people, but with good press coverage that made the wire services. The point is, a lot of money is being spent on this subject. Whereas ADM does not live or die by its new isoflavone business, some smaller companies do.

The proceedings of the Brussels symposium have been in the hands of editors at the *American Journal of Clinical Nutrition* since Sept. 1997; they have been reviewed, the comments have gone out, but they will not be published before Sept. 1998. Address: PhD, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

7367. Early soyfoods in Japan–Chronological (SoyaScan database search report). 1998. 36 p. incl. index. Jan. 23. Unpublished manuscript. [20 ref]

• ***Summary:*** This carefully customized database search was conducted for Mark Messina to document the fact that soyfoods have been widely consumed for a long time

in Japan. Among the 47 records are the earliest Japanese-language and English-language documents that mention or discuss soyfoods in Japan, with emphasis on tofu (27 records), soy sauce (26 records), miso (20 records), and soymilk (8 records). Also includes the earliest English-language records that give significant industry or market statistics on tofu, miso, or soy sauce in Japan.

7368. Weber, Thomas E. 1998. Takeout food: NASA is seeking recipes that travel really well. *Wall Street Journal.* Jan. 27. p. B1.
• ***Summary:*** The article begins: "That's one small step for man. One gigantic leap for tofu." A group at Cornell University (Ithaca, New York) is working under a NASA grant to develop meals that can be prepared almost exclusively from vegetables that grow well in space. For long space missions, like a flight to Mars, spacefarers may not be able to carry enough food to last the trip, so they will need to grow and cook their own. Trying to produce meat during the mission is too inefficient. "That has set off a space race to develop vegetarian meals that astronauts can stomach. The researchers believe they have found the right stuff" including tempeh, "a sort of super-tofu made from soybeans, and seitan, a gluten extract from wheat." Jean Hunter, a Cornell professor heading the project, says that Creamed tempeh, cooked in soy-milk sauce, "takes a little getting used to." Includes a recipe for Sloppy Joe Tempeh. Address: Staff reporter.

7369. Ota, Eileen. 1998. Update on Ota Family Tofu in Portland, Oregon (Interview). *SoyaScan Notes.* Jan. 28. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ota Family Tofu has tofu making equipment that Eileen would like to sell; it has hardly been used. In about 1981 the company moved to a new location, 812 S.E. Stark St.; it had more than twice as many square feet as their previous location. When they moved Ko went to a soy conference and met Eddie Okita, who was selling tofu manufacturing equipment. Ko decided to buy new equipment. Eileen objected at the time, suggesting that he try it before he buys it–to be sure you get the product that you want. Ko said "No." He just wanted to buy it. Coincidentally, at the same time, a competitor (Dae Han Tofu) began making tofu in Portland. Before that, there was a small tofu maker in Salem that didn't last very long. Dae Han was planning to deliver their tofu, which Ota had never had to do before. So Ota lost a large portion of the Portland tofu market to Dae Han.

Ko used the new equipment for a while, but then it became apparent that the tofu and the agé were not coming out the same. He had less control over the more automated equipment. Their customers noticed the difference and did not like the change. Moreover, Ota no longer had the volume to support the new equipment. So they went back to their old machines.

One of the early tofu-makers was Saizo Ohta (not Seizo), but he was not one of the founders. Two brothers apparently started the company. At the time of the "Spanish flu" epidemic in 1918-19, one or both of them became ill and the business went to Saizo Ota, Matsuno Ota's father. Matsuno was an only child, and in those days there was the tradition of sending Japanese children in America back to Japan for education. So when she was 4-5 years old she went to Japan. She did not return to America until after World War II. During the war her father, Saizo, had died. Matsuno returned to the USA in the early 1950s. The Grandmother, Shina, had a stroke after they arrived in Portland. At that point, in about 1956-57, Ko's father (Matsuno's husband) took over the tofu business. Ko's father was trained as a medical technician in Japan, but he couldn't get a job in the USA because his certification didn't transfer. So he worked for a while as a janitor and then spent a lot of time helping the grandmother, Shina.

After Ota Tofu moved to its present location, there was a huge influx of Vietnamese people who wanted soymilk, so the company started making it.

Shurtleff tells Eileen of an early listing for Ota Tofu in Portland in a 1922 Japanese-language directory of Japanese in the United States.

7370. American Academy of Pediatrics, Committee on Nutrition. 1998. Soy protein-based formulas: Recommendations for use in infant feeding. *Pediatrics* 101(1, Part 1):148-53. Jan. [96 ref]
• ***Summary:*** Abstract: "The American Academy of Pediatrics is committed to the use of maternal breast milk as the ideal source of nutrition for infant feeding. Even so, by 2 months of age, most infants in North America are formula-fed. Despite limited indications, the use of soy protein-based formula has nearly doubled during the past decade to achieve 25% of the market in the United States. Because an infant formula provides the largest, if not sole, source of nutrition for an extended interval, the nutritional adequacy of the formula must be confirmed and the indications for its use well understood. This statement updates the 1983 Committee on Nutrition review and contains some important recommendations on the appropriate use of soy protein-based formulas."

"Conclusions and recommendations: 1. In term infants whose nutritional needs are not being met from maternal breast milk or cow milk-based formulas, isolated soy protein-based formulas are safe and effective alternatives to provide appropriate nutrition for normal growth and development.

"2. Because soy protein-based formulas are lactose-free, they are appropriate for use in infants with galactosemia and hereditary lactase deficiency.

"3. Parents seeking a vegetarian-based diet for a term infant can be advised to use isolated soy protein-based

formula." There are 6 other conclusions.

7371. Becker, Diane. 1998. Easy-to-digest soyfoods are her salvation. *Soybean Digest.* Jan. p. S-22.
• ***Summary:*** Soyfoods are helping people eat without a feeding tube. Some 100,000 people in the USA suffer from a disease that prevents them from properly utilizing the foods they eat. At one center using soyfoods, 40% of the intravenously fed patients admitted to the center each year are taken off feeding tubes a month into the program. They eat six small meals a day, including soy beverage and tofu. Says dietitian Linda Veglia, "We use tofu a lot."

7372. Golbitz, Peter. 1998. Tofu & soyfoods cookery: Delicious foods for a healthy life. Summertown, Tennessee: Book Publishing Co. 176 p. Illust. (3 photos). Recipe index. General index. 21 cm.
• ***Summary:*** Contents: Preface and acknowledgments. The history of soyfoods. A closer look at soybeans. Soybeans and health: Introduction, malnutrition, cardiovascular disease, cancer, osteoporosis, menopause, more to come. Using soyfoods: Whole dry soybeans, tofu, soymilk, soy flour, textured soy protein, green vegetable soybeans, tempeh, miso, soy sauce, soy protein concentrate, soy protein isolates, natto, soybean oil, second generation soyfoods, meat alternatives, cheese alternatives, soy yogurt, nondairy frozen desserts, mayonnaise and dressings, instant soups and other dry mixes, margarine, lecithin, soynuts and soynut butter, soy sprouts, okara or soy pulp. Basic recipes. Breakfast. Bread. Salads & dressings. Soups & sandwiches. Main & side dishes. Desserts & drinks. Glossary. U.S. & Canadian soyfoods companies. Sources of information on soyfoods. Nutrients in soyfoods.

Contains 125 of Peter Golbitz's favorite recipes, selected from the works of some of "the world's leading soyfoods chefs." A list of these "leading vegetarian and soyfoods pioneers" (all of whose books have been published by The Book Publishing Co.) appears on the rear cover. Peter (born in 1952) lives with his wife, Sharyn Kingma, and son on a beautiful island off the coast of northern Maine. A color photo of the family appears on the rear cover. Twenty years ago (in 1978) Peter was "first introduced to tofu and the wonders of soyfoods." A photo of Peter with his book appears in the Book Publishing Catalog of Jan. 1999. Address: President and Founder, Soyatech, Inc., Bar Harbor, Maine. Phone: 207-288-4969.

7373. Greenberg, Patricia; Hartung, Helen Newton. 1998. The whole soy cookbook: 175 delicious, nutritious, easy-to-prepare recipes featuring tofu, tempeh, and various forms of nature's healthiest bean. New York, NY: Three Rivers Press (Crown Publishers / Random House). ix + 221 p. Illust. Index. 24 cm.
• ***Summary:*** Contents: Acknowledgments. Introduction. All about soy: Health benefits of soy (reduces the risk of heart disease, lowers the risk of breast cancer, eases the symptoms of menopause, protects against prostate cancer, prevents digestive disorders {when using whole soybeans or soy products containing high levels of fiber}, eliminates the problem of lactose intolerance, prevents the problems of milk allergy, beneficial in diabetic diets), cooking with soy products (meat analogs or meat substitutes {soy sausage, soy bacon, hamburgers and hot dogs}, miso, okara, soy cheese, soy milk, soy sour cream, soy yogurt, soy flour, whole soybeans, soybeans–green, soybeans–roasted, tempeh, textured vegetable protein (TVP), tofu & silken tofu; Soy-based foods (containing little or no protein): Egg replacers, soy margarine, soy mayonnaise, soybean oil, soy sauce) how to get optimum nutrition from soy (protein, carbohydrates, fat, cholesterol, fiber, sodium), nutrition information. Sample menus (for 3 meals a day, 7 days a week). Recipes: 1. Appetizers, dips, and spreads. 2. Salads and vegetables. 3. Brunch and breads. 4. Pizza and sandwiches. 5. Soups and stews. 6. Main dishes. 7. Pastas and grains. 8. Desserts.

This books contains almost 200 delicious and easy ways to add that essential 25 grams of soy protein to your diet. These recipes (each of which includes a nutritional analysis) are based on more than ten years of experience and experimenting (p. 2). Address: P.O. Box 10853, Beverly Hills, California 90213. Phone: (310) 474-4539.

7374. Jacobi, Dana. 1998. Over-the-top desserts: Cooking with soy. *Veggie Life* (*Concord, California*). Jan. p. 18, 20, 86.
• ***Summary:*** Includes recipes for: Tiramisu (with pureed silken tofu). Cran apple crumble (with soy milk). A luscious chocolate bread pudding (with soy milk).

7375. Messina, Mark. 1998. History favors soy formula use in Western World. *Soy Connection* (*The*) (*Jefferson City, Missouri*) 6(1):1, 5. Winter. [4 ref]
• ***Summary:*** The writer is aware of no reports published in the medical literature, whether it be an article or a letter to the editor, describing adverse effects in infants fed soy infant formula that were attributed to isoflavones. Address: PhD.

7376. Messina, Virginia. 1998. Soymilk in diets of children. *Soy Connection* (*The*) (*Jefferson City, Missouri*) 6(1):2. Winter.
Address: MPH, RD.

7377. Mitchell, Paulette. 1998. The complete soy cookbook: More than 150 simple recipes for good health and great taste. New York, NY: Macmillan Publishing (A Simon & Schuster Macmillan Co.). xlix + 270 p. Illust. Index. 24 cm.
• ***Summary:*** A very attractive vegetarian cookbook. Each recipe is marked with one of three symbols: V = vegan, lo = lacto-ovo vegetarian, and l = lacto vegetarian. Contents:

Preface: An ancient Asian secret isn't a secret anymore. Introduction: The whys (cancer, heart disease, osteoporosis, menopause, diabetes), the hows, soy food ingredients (soybeans, sweet beans {edamame}, tofu, tempeh, texturized vegetable protein {TVP}, soy milk, soy flour, soy oil, soy sauce), other soybean products (soybean sprouts, okara, miso, roasted soynuts, isolated soy protein {ISP}, dairy and meat analogs), a note on food allergies. Soy success: Stocking your refrigerator and pantry, using the recipes, kitchen equipment. 1. Appetizers. 2. Soups. 3. Salads. 4. Entrees. 5. Desserts. Appendix: Recipes listed by soy food categories (and within each category by recipe type–such as salads, soups, desserts): Whole soybeans (32 recipes), sweet beans (green vegetable soybeans, 7 recipes), tofu (96), frozen and thawed tofu (14, all entrées), pressed tofu (12), tempeh (14), textured vegetable protein (TVP, 4), soy milk (14). Note that tofu was used in by far the most recipes (96), followed by whole soybeans (32).

Paulette, who lives in Minneapolis, Minnesota, is a cooking instructor, restaurant consultant, and lecturer. Paulette is the author of many Macmillan books, including *The 15-Minute Vegetarian Gourmet, The 15-Minute Single Gourmet,* and *The Complete Book of Dressings.* This book is dedicated to her 14-year-old son, Brett. Address: Minneapolis, Minnesota. Phone: 612-941-7576.

7378. **Product Name:** Health Source (Soy Protein Health Drink) [Chocolate, Mocha, or Orange Dream], Health Source Plus [Chocolate, or Orange Dream].
Manufacturer's Name: Nutritious Foods, Inc. Wholly owned subsidiary of Protein Technologies International, Inc.
Manufacturer's Address: 1034 Danforth Drive, St. Louis, Missouri 63102. Phone: 1-888-769-9136.
Date of Introduction: 1998. January.
Ingredients: Health Source Plus [Orange Dream]: Water, Purasoy isolated soy protein, sugar, fructose, natural and artificial flavors, potassium citrate, cellulose gel, Yellow 5, Yellow 6, dipotassium phosphate, Red 3. Vitamins & Minerals: Calcium phosphate, magnesium phosphate, sodium ascorbate (vitamin C), vitamin E acetate, ferric orthophosphate, niacinamide, zinc oxide, calcium pantothenate, pyridoxine hydrochloride (vitamin B-6), riboflavin, vitamin A palmitate, thiamin mononitrate, folic acid, biotin, potassium iodide, vitamin B-12, vitamin D-3.
Wt/Vol., Packaging, Price: 1 quart (32 fl oz). Recommended retail price: Health Source ($1.89-1.99, Los Angeles, California), Health Source Plus ($2.39-2.49).
How Stored: Refrigerated, 60 day shelf life from date of manufacture.
Nutrition: Per 8 fl oz.
New Product–Documentation: Talk with Art Mio. 1998. March 3. These products are now being test marketed in the Los Angeles area. Health Source contains 10 gm of Supro soy protein per 8-oz serving and Health Source Plus contains 25 gm per serving.

Ad (full page, color) in *People* magazine. Feb. 23. p. 126. "If you discovered the fountain of youth, wouldn't you want to dive in?"

Talk with Barry Dunn of PTI in Fullerton, California. 1998. March 4. These products first arrived on the shelves of stores in Los Angeles in late January of this year. The first ads broke in late February. Michael Derrington at the Nutritious Foods division of PTI is in charge of the whole program.

Talk with Michael Derrington, product manager, at Nutritious Foods Inc. 1998. March 6. These products are now being made by Ryan Foods (a subsidiary of Dean Foods, a major dairy company) in Murray, Kentucky.

7379. Orstrom, Karin M.; Janas, Lynn M. 1998. Normal growth of infants fed isolated soy protein formulas. *Soy Connection* (*The*) (*Jefferson City, Missouri*) 6(1):1-2, 5. Winter. [17 ref]
Address: 1. PhD, Sr. Group Leader, Pediatric Nutrition R&D, Ross Products, a divisionof Abbott Laboratories.

7380. Vitasoy USA Inc. 1998. A healthy start (Ad). *Vegetarian Times.* Jan. p. 88.
• ***Summary:*** This one-third page color ad begins: "Vitasoy Natural Soy Drinks are the perfect addition to any light and healthy breakfast." A logo says: "Organic soybeans–Great new taste." Color photos show: A young girl giving her pretty mother a bouquet of flowers. She is seated at the breakfast table behind a plate of Strawberry Belgium Waffles (made with Vitasoy soymilk) and a glass of soymilk (top of ad). Packages of many Vitasoy soymilk products (bottom of ad). Address: P.O. Box 2012, South San Francisco, California 94083. Phone: 1-800-VITASOY (848-2769).

7381. *SoyaScan Notes.* 1998. Companies that manufacture soymilk equipment, install soymilk plants, or formulate soymilk from soy base (Overview). Feb. 6. Compiled by William Shurtleff of Soyfoods Center.

7382. Rose, Richard. 1998. New developments at Rella Good Cheese Co. (Interview). *SoyaScan Notes.* Feb. 16. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Richard renamed his company to Rella Good Cheese Co. in about Oct. 1997. Starting in Feb. of 1997, his company began enriching all of its cheese alternatives (except VeganRella) with a vitamin-mineral mix to make them nutritionally equal to dairy cheese. Consumers prefer enriched alternatives; it is not required.

To date, Richard's company has used its self-imposed "Green Tax" to give about $40,000 to environmental groups (EarthSave, Rainforest Action Network, etc.)–in addition to the more than $84,000 donated to the Second Harvest Food Bank. The largest single recipient group was

EarthSave, but they are no longer a recipient. Right now the Hemp Industries Association is the major recipient among environmental groups. Remember that half the pesticides in the USA are used on cotton crops.

It is not very difficult to buy hemp seeds in the USA, but all of it is imported. Last year 1 million pounds was imported into the USA. You can order by phone from 1-800-buy-hemp. You can also buy it from bird stores, where it is used as bird feed. In addition, about 500,000 acres of feral / wild hemp (called "ditchweed") grow in the USA each year–mostly in the Midwest, but almost nobody harvests the seeds, since that is illegal. Since 1957 it has been illegal to cultivate hemp in the USA without a license. One group, the Research Inst. of Pharmaceutical Sciences, Univ. of Mississippi, has a license to grow hemp for the DEA (Drug Enforcement Administration) for the 7 patients the government gives 300 joints per month to.

The whole issue of decriminalizing drugs (including marijuana) is now being supported by a number of prominent public figures such as George Schultz (former Republican secretary of State), Milton Friedman (conservative Republican economist), a superior judge in Orange County, and the mayor of Baltimore, Maryland. They want to medicalize addiction. The Netherlands has decriminalized drugs and the results have been good.

So Richard's company imports its hemp seed from Germany; it is certified organic and dehulled. His is the first company to import dehulled seeds. Their flavor is delicious–like sunflower seeds. It is a complete protein and 65% of the protein is edestin–which is very high quality.

Trader Joe's now has its own brand of soy cheese, named Trader Joe's Soy Cheese in Jalapeño Jack flavor. For a while, Trader Joe's kicked TofuRella off their shelves. Then they had a big problem with a shipment of soy cheese from Soya Kaas, so they brought Richard's products back in–sheepishly.

The main ingredient in Richard's soy cheeses is actually spray-dried tofu. In Canada it must be shown as such on the label, but not in the United States. Richard has never been in the factory where his spray-dried tofu is made, but he has asked the owner point blank if they are coagulating it and they say they are. Nor does he have any statement in writing. They probably coagulate a large tank of soymilk with calcium sulfate (not GDL) to make it into thin silken tofu, then they slurry it and run it through a spray drier. At least three companies make tofu powder: Clofine Dairy & Food Products, Inc. (Linwood, New Jersey), SunRich Inc. (Hope, Minnesota), and Prosource, Inc. (Alexandria, Minnesota). Devansoy Farms, Inc. (Carroll, Iowa; Elmer Schettler, president) makes soymilk powder, but not tofu powder.

In May 1997 Richard incorporated a new company named The Hemp Corporation (THC). There is some fall-out from anti-help people in the industry.

In the near future, he plans to transfer all existing hemp products (HempRella, Hempeh Burger) to THC, which does not yet have any products on the market. Three new hemp products for 1998 will be the HempNut (dehulled hemp seeds), a chocolate, and an aseptic hemp milk (a world's first; tests show there will be no problems with trans fatty acids, which sometimes form at high temperatures). He was on the Jay Leno show 3 times, where they did skits with his foods–the cheese and the chocolate. This was related to the name change to Rella Good Cheese Co. which will license the "Rella" trademark.

Richard also plans to change his environmental policy pretty soon to "All profits go to charity."

Richard is now exporting some of his cheese alternatives to Italy. VeganRella has been made under license in England for several years.

Concerning the cheese alternatives market, in 1996 (according to data from SPINS, which covers most major natural foods distributors except for Tree of Life), Richard's company was the leader in units sold, Soya Kaas No. 1 in dollar sales, and Galaxy was a distant third in the natural foods market (but Galaxy's main market is supermarkets). There are only three major players in this market. Richard does not have the statistics for 1997. Richard expects White Wave to be dropping their soy cheese soon. Originally Richard made White Wave's soy cheese. Then there were problems, it went to litigation; arbitration awarded Richard $45,000 several years ago. Now Soya Kaas makes White Wave's soy cheese.

"The soul of the natural foods industry is being co-opted quickly." One example is Whole Foods Market (WFM). Richard is getting fed-up with the lack of integrity in the industry. WFM recently yanked all the Rellas from all their stores nationwide because sorbic acid (a completely harmless mold retardant/inhibitor) appears on the label. Richard's competitors use sorbic acid (or calcium propionate) as a mold retardant but do not list it on the label. Moreover, WFM carries other products that contain sorbic acid–which they say are "exempted." So WFM punishes the people who are being honest, and at the same time promotes itself as being socially responsible, ethical, members of Social Venture Network, the honest retailer of foods in America. Address: President, Rella Good Cheese Co., P.O. Box 5020 (616 Davis St.), Santa Rosa, California 95402-5020. Phone: 707-576-7050.

7383. Tanaka, Wendy. 1998. The joy of soy: Consumer awareness of health benefits boosts Bay company [Vitasoy]. *San Francisco Examiner.* Feb. 17. p. C-1, C-2.
• ***Summary:*** Vitasoy USA Inc. "has become a powerhouse in the fast-growing soy foods industry." Yvonne Lo, president and CEO, worked as a city planner in Toronto (Ontario, Canada) before investing $10,000 to start the U.S. arm of her father's business in 1979. Company sales have grown at double-digit rates for the past 5 years, reaching an estimated

$43 million for fiscal 1997. Today, the company's soy milk is the No. 2 brand in the USA, controlling 25% of the $150 million market (which has been growing at 10% a year since 1990), according to Soyatech Inc. Edensoy is first with 38% of the market.

Soyatech statistics show that U.S. tofu market sales have grown 5% a year for the last 5 years to $125 million a year last year.

The acquisition several years ago of Azumaya and Nasoya, two of America's largest tofu manufacturers, has made Vitasoy America's largest producer of tofu. Now Vitasoy is hoping to further increase its sales of tofu and soymilk with its $13.5 million state-of-the-art plant in Ayer, Massachusetts. Vitasoy can now deliver soymilk to retailers in 7-10 days, compared with 45-60 days during the years prior to fall 1997 when all of its soymilk was imported from Hong Kong. Moreover, the new plant will eventually have be able to produce 50% more soymilk than the company had been able to import. The plant at Ayer will also produce Nasoya brand tofu. "Vitasoy USA already has a tofu factory in China Basin [actually 1575 Burke Ave., San Francisco] to produce the Azumaya brand." Vitasoy now sells its products in mainstream retail markets such as Safeway, Lucky, Andronico's and Walmart. The vice president for produce merchandising at Walmart Superstores says they have had very good success with Vitasoy's tofu.

A color photo shows Yvonne Lo holding packages of Azumaya tofu and Vitasoy Light vanilla soymilk in front of pallets of product stacked 10 feet high at the company's Brisbane warehouse. Address: Examiner staff.

7384. Imagine Foods, Inc. 1998. Got dreams? (Ad). *Supermarket News.* Feb. 23. p. 45.
• ***Summary:*** The ad title is a take-off on the famous line from cow's milk ads, "Got milk?" In the center of this full-page color trade ad is a large package of Rice Dream–Organic, Original Enriched. Lines point to the package from various brief messages that surround the package: "#1 SKU in the #1 Natural Category. Shelf stable & resealable. #4 shelf-stable non-fruit drink in supermarkets. Contains the same amounts of calcium, vitamins A and D as milk. Maximize profit per square foot of shelf space. Made with certified organic ingredients. Lactose free."

"With supermarket sales flat in '97 and natural food sales accelerating at over 20% annually for the past three years, shouldn't you stock the best-selling product in the natural foods marketplace?

"Call 1-800-333-6339 Ext. #55 and start dreaming up more sales and profits." Address: Palo Alto, California.

7385. Nutritious Foods, Inc. 1998. If you discovered the fountain of youth, wouldn't you want to dive in? (Ad). *People.* Feb. 23. p. 126.
• ***Summary:*** This full-page color consumer ad (copyright 1997 by Nutritious Foods, Inc.) is for new, "soy protein-rich Health Source drinks and yogurt-style snacks. Years of Asian history and numerous studies suggest the same conclusion: substituting soy-protein foods for significant amounts of animal-protein foods can have a real nutritional impact on your health. Some researchers are already pointing to soy protein's power to reduce high cholesterol levels. Several universities are now also investigating soy protein's role in reducing the risk of osteoporosis and some forms of cancer.

As if that weren't enough, Health Source is an excellent low-fat source of calcium, high in vitamin C, and a good source of fiber." Flavors include strawberry, raspberry, and black cherry. "If you'd like more information about the benefits of soy protein, call toll free 1-888-769-9136." The slogan at the bottom of the ad reads: Healthy today. Healthy tomorrow."

A large color photo in the middle third of the ad shows a spoon dipping into a cup of yogurt, which is surrounded by fruits. In the lower right corner is a small photo showing two cups of the soy yogurt, a gable-top carton of the beverage, and the beverage in a glass, with a straw in it. Address: St. Louis, Missouri.

7386. Cuthbert, Lauren. 1998. Soyfood sales surge with more products and new customers: Research sparks soy craze. Soy popularity rising with boomers and their kids. *Natural Foods Merchandiser* 19(2):1, 63-64, 66. Feb.
• ***Summary:*** Second-hand statistics about the soyfoods industry and market. "Why the sudden increase craze? In a word, isoflavones." Address: Mill Valley, California.

7387. Indiana Soybean Board. 1998. Indiana soyfoods locator guide: A guide to finding soyfoods in the supermarket and health food store. Lebanon, Indiana: Indiana Soybean Development Council. 48 p. 28 cm.
• ***Summary:*** This is the first edition of this Guide. On the cover is a paper grocery bag resting on a bed of soybeans and chock full of foods: Veggie Slices (soy cheese), soynut butter, veggie burger, tofu, soymilk, soy flour, plus carrots, celery, and cooking oil. Contents: Food pyramid. Soyfoods descriptions–Meat the Bean: Introduction, green vegetable soybeans (edamame), hydrolyzed vegetable protein (HVP), infant formulas–soy based, lecithin, meat alternatives (meat analogs), miso, natto, nondairy soy frozen desserts, soy cheese, soy fiber (okara, soy bran, soy isolate fiber), soy flour, soy grits, soy protein concentrate, soy protein isolate (isolated soy protein), soy protein–textured (textured soy protein, textured soy flour), soy sauce (tamari, shoyu, teriyaki), soy yogurt, soybeans, soymilk–soy beverages, soynut butter, soynuts, soybean oil & products, sprouts–soy, tempeh, tofu & tofu products, whipped toppings–soy-based, yuba. A taste for health–Scientists are learning about soy's health benefits: Heart disease, osteoporosis, menopause, cancer, isoflavones. Soyfood icon chart. Soyfood facts &

recipes: Meat alternatives, soybean oil, textured soy protein, whole soybeans, soy flour, soymilk, tofu. Composition and nutrient content of soyfoods. Soyfood conversion charts: description of one serving of soyfoods, guide to modifying recipes, soyfoods substitution chart. Mail order soyfood companies. Soyfoods Web site packed with information. Soy cookbooks. Soy resource books. 1-800-talksoy. Soyfoods market search map; where to find soyfoods in the supermarket (a two page color layout of a supermarket displaying where soyfoods are located). Soybeans... they're in almost everything. Finding soyfoods at the supermarket (store listings by county). Address: Indianapolis, Indiana 46205-1744. Phone: 1-800-275-7679.

7388. INTSOY. 1998. INTSOY course: Soybean processing and utilization. May 26 to June 19, 1998 (Brochure). Urbana, Illinois. 8 panels. 2 p. 22 x 10 cm each.
• ***Summary:*** Contents: Topics to be presented in the 1998 course: Basic processing concepts, nutrition and functionality, extrusion technology, oil extraction, soymilk and dairy analogs (soymilk, soy yogurt, soy ice cream), Oriental soybean foods (tofu, tempeh, etc.), animal feed applications, quality control, animal feed applications, overview of the soybean industry, economics and marketing of soy products. Cost and travel information (the course costs $4,300 plus about $1,600 for room, board, and other local living expenses. INTSOY is unable to offer scholarships).

The course time consists of 35% lectures, 45% hands-on exercises, and 20% industry visits. This is the 18th offering of the training program. Some 200 persons from 41 countries have attended the course. Danny Erickson is the training officer in charge. E-mail intsoy@uiuc.edu. Address: International Soybean Program, Univ. of Illinois, 35 Environmental and Agricultural Sciences Building, 1101 West Peabody Drive, Urbana, Illinois 61801. Phone: (217) 333-6422.

7389. Lindsay, Shirley H.; Claywell, Lora G. 1998. Considering soy: Its estrogenic effects may protect women. *Lifelines* (*Association of Women's Health, Obstetrics and Neonatal Nurses*) (*Hagerstown, Maryland*) 2(1):41-44. Feb. [14 ref]
• ***Summary:*** Contents: Introduction. Understanding soy. Soy and menopause. Effects on osteoporosis. Soy & breast cancer. Effects of cholesterol. One sidebar, titled "A look at popular soy foods," gives a brief definition of miso, soy cheese, soy fiber (okara, soy bran, soy isolate fiber), roasted soy flour, tempeh, tofu.

A second sidebar, titled "One woman's experience," states that author Shirley Lindsay has been a near vegetarian for two years, using soy protein as her main protein source, but also an occasional serving of fish. She consumes one 14-oz. glass of soymilk and 5-8 oz. of low-fat silken tofu daily. Her diet contains approximately 70 mg/day of isoflavones. She also eats a very low-fat diet that includes low-fat diary products, egg whites, fruits, vegetables, and olive oils. Lindsay also bakes with soy products and flax seed; the latter is rich in lignans.

"Lindsay has successfully eliminated 90 percent of her menopausal symptoms, as well as decreased her serum lipids. When she began the diet, she eliminated animal proteins except skim milk and egg whites, and within 10 days she noted a 90 percent decrease in hot flashes and night sweats. At one point, Lindsay only ate isolated soy protein powder supplements, but her menopausal symptoms returned because a significant amount of phytoestrogen is lost in the processing of powders." Address: 1. Asst. Prof. of Maternal-Newborn Nursing; 2. Director, Associate of Science in Nursing program. Both: Deaconess College of Nursing, St. Louis, Missouri.

7390. Mangels, Reed. 1998. Guide to non-dairy "milks." *Vegetarian Journal* (*Baltimore, Maryland*). Jan/Feb. p. 19-21.
Address: PhD, R.D., Baltimore, Maryland.

7391. Nutrition Dynamics International. 1998. Business plan for Yankton Sioux tribe and Nutrition Dynamics International joint venture: Infant formula manufacturing plant. Swainsboro, Georgia. 31 p. (mostly unnumbered). Feb. 28 cm.
• ***Summary:*** Contents: Executive summary. Yankton tribe. Nutrition dynamics international of South Dakota. Infant formula industry: Size. Infant formula industry: Structure. The Yankton project's planned market. Financial summary: Development costs, net income. Manufacturing process. Facilities. Staffing. Exhibit 1: Mamalak package design. Table 1: Pro Forma projected income statement. Table 2: Projected cash flow (12 months). Appendices: A. NDI board and advisors. B. Infant formula ingredients. C. Factory equipment price list. D. FDA regulations.

On page 15 is a resume for Erwin David Rabhan; it is cited as a separate record. Address: 135 Ehrlich Farm Road, Swainsboro, Georgia 30401. Phone: 912-237-6313.

7392. Nutrition Dynamics International. 1998. Marketing plan: Yankton Sioux project. Swainsboro, Georgia. 19 p. Undated. 28 cm.
• ***Summary:*** Contents: Executive summary: Market analysis, competitive analysis, the basis selling idea, major strategy, branding and product positioning (for NDI's lactose-free, soy-based infant formula named Mamalak), packaging and pricing (3 types of infant formula, each in 13-oz liquid cans), distribution methods (WIC program, hospitals/physicians, retail stores), promotion, advertising and public relations.

Major thrust (WIC program): A planned communication strategy, contract administrator, direct mail campaign to WIC administrators, Website development, Website

administration, electronic newsletter (director to WIC administrators), special receptions, retailer communication, trade advertising, editorial for trades, PR support for WIC's breast feeding program, press release program. Advertising: Trade publications, radio, television. Secondary thrust (hospitals/physicians): Physician visit program, direct mail campaign, web site development, web site administration, trade advertising, editorial for trades, press release program. Third thrust (retail trades): Web site marketing, web site administration, trade advertising, editorial for trades, press release program, in-outlet promotion and publicity. Tracking and measurement.

This marketing plan was prepared by Horton Lind Marketing and Communication. Note: WIC is the Special Supplemental Nutrition Program for Women, Infants and Children. It is administered by the USDA's Food and Consumer Services (FCS). Address: 135 Ehrlich Farm Road, Swainsboro, Georgia 30401. Phone: 912-237-6313.

7393. **Product Name:** Pacific Enriched Soy Drink [Plain, Vanilla, Cocoa].
Manufacturer's Name: Pacific Foods of Oregon, Inc.
Manufacturer's Address: 19480 S.W. 97th Ave., Tualatin, OR 97062. Phone: 503-692-9666.
Date of Introduction: 1998. February.
Ingredients: Organic soymilk* (filtered water, whole organic soybeans*), brown rice sweetener (filtered water, brown rice), natural vanilla flavor with other natural flavors [for Vanilla and Cocoa flavored], cocoa [for Cocoa], tricalcium phosphate, sea salt, carrageenan, vitamin A palmitate, riboflavin (B2), vitamin D2.
Wt/Vol., Packaging, Price: 1 quart Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Leaflet (glossy color, 4 panels, each panel 28 cm) sent by Patricia Smith from Natural Products Expo West at Anaheim. 1999. March. (but leaflet is dated "2/98"). "There's only one way to improve on Pacific's great tasting soymilk drinks–New packaging." A wide color photo (2-page spread) shows the following ten products (from left to right): Pacific Original Soymilk (53.5 mg isoflavones per 8 oz. serving), Pacific Select Soy Drink (in Plain or Vanilla) (26.8 mg isoflavones per 8 oz. serving), Pacific Fat Free Soy Drink (in Plain or Vanilla) (2 mg isoflavones per 8 oz. serving), Pacific Enriched Soy Drink (in Plain or Vanilla) (22.5 mg isoflavones per 8 oz. serving), Pacific Ultra Soy Drink (in Plain or Vanilla) (34.8 mg isoflavones per 8 oz. serving).

All these non-dairy drinks are made with organic soybeans–although the soy protein isolate is not organic. A laree pull-quote states: "'soy contains several naturally-occurring compounds–phytochemicals like isoflavones, protease inhibitors and saponins which seem to protect against breast cancer'–American Institute for Cancer Research."

On the last panel are given the nutrition facts, ingredients, UPC numbers, and case/pallet information.

7394. Rabhan, Erwin David. 1998. Resumé, plus portfolio. Swainsboro, Georgia. 1 p. Unpublished manuscript. 28 cm.
• ***Summary:*** Erwin was born on 9 Sept. 1926 in Savannah, Georgia. He grew up in Savannah and in 1943 he graduated from Benedictine Military Academy, Savannah. In 1949 he graduated from the University of Georgia, Athens, with a Bachelor of Science degree in Agriculture. He did post-graduate work in nutrition at the University of California, and the University of Alabama, Dothan. He served in the U.S. Army Air Corps and the U.S. Army Reserve, retiring in 1975 with the rank of major after serving with U.S. Special forces.

Prior to 1969 he was involved in many successful business ventures. He developed, owned, and operated a poultry farm, a construction company building residential units, including a 250-unit project that is still operating a chain of thirteen 120-bed nursing homes, and day-care centers located across the United States.

In 1969 he established Nutrition Dynamics International to develop and operate factories to produce infant formula, baby food, and fish protein supplement. In 1979 two successful infant formula and baby food factories started operating in Damkan (also spelled Damghan) and Semnon, Iran, producing 10,000 tons of product per year. These assets were confiscated by the Iranian government.

In 1980 he was arrested by the Iranian government chiefly due to knowledge that he had a long-standing friendship with President Jimmy Carter. Although tried for allegedly conducting business contrary to the laws of Islam and for being a spy for the U.S. Central Intelligence Agency (CIA), he was declared innocent of all charges and released in 1990 with apologies.

In 1990 he returned to Georgia and reorganized Ehrlich Farms, Inc. The 2,300-acre farm in Emanuel County, Georgia, is a successful cattle, goat, and pecan operation. Erwin is now the owner/operator and president.

A Portfolio, sent to Soyfoods Center in June 1998 contains the following seven documents: (1) Savannah Morning News. 1990. Sept. "A nine-year waste–Opinion" David Rabhan, now 64, was a political prisoner for nine years in Iran where he was running a successful company that used fish protein to make fortified baby foods. He was finally cleared of wrong-doing.

(2) Photo in *Philadelphia Enquirer* 1990. Sept. 15. "From Iran, to a warm welcome home." It shows former president Jimmy Carter as he embraces an old friend, American businessman E. David Rabhan, back in Atlanta after 11 years in prison [sic] in Iran. Rabhan made a quiet arrival yesterday. (2) Letter from Lindsay Thomas, House of Representatives, Georgia, to Mr. Fred M. Zeder, Overseas

Private Investment Corp. 1992. Sept. 1. David Rabhan of Swainsboro, Georgia is a highly innovative entrepreneur who has a proven record in building international companies. He built up a successful baby formula and infant food company in Tehran, where he was imprisoned for nine years.

(3) Article by Bill Shipp. 1992. *Georgia Trend* Sept. 28. p. 29-31. "Georgia's forgotten hostage." When David Rabhan left Iran, he left behind $15 million in assets and 11 years of his life. Jimmy Carter finally succeeded in gaining his release. Now, age 65, he is trying to borrow $6 million to set up a plant in Georgia that grinds up menhaden, a trash fish, and uses other protein products to make a high quality infant formula. The baby food would save millions of lives in Third World countries and create thousands of jobs in the USA. Rabhan wants to get back into business in Iran. He is forming a partnership with a Muslim fundamentalist group, The Brotherhood of Martyrs, to restart his closed baby-food and sewing plants in Iran. A talented artist, Rabhan draws and paints almost daily. He earned a pilot's license at age 16 and enlisted in the Air Force as soon as he graduated from high school. At the end of World War II, he enrolled in the University of Georgia. In 1971, when Rabhan was a volunteer pilot in Jimmy Carter's successful campaign for governor, Rabhan had his head shaved, wore a black satin jump suit, and looked like Yul Brynner [lived 1915-1985, movie actor who had a shaved head]. At 5-foot-10, 170 pounds, he still looks like the late Yul Brynner. Since he was released from prison in Iran, he has visited Turkey, Israel, Pakistan and Nigeria, trying to interest governments in those countries in his baby-formula operations. In 1975 he went to Iran, learned to speak Farsi and Arabic, and built his baby-formula factories, By all accounts, he became a millionaire overnight.

(4) Letter from former President Jimmy Carter to Meles Zenawim, President of Ethiopia. 1999. Jan. 9. Introduces his longtime friend, Erwin David Rabhan, whose business, Nutrition Dynamics International Inc., being conducted in several countries, makes baby food products. He would like to lease a small property in Addis Ababa to construct a factory.

(5) Article by Douglas Brinkley. 1996. The New Yorker. Oct. 21. p. 78 "What it takes." In 1970 Georgia Gubernatorial candidate Jimmy Carter had enlisted David Rabhan, a rich Jewish businessman from Savannah, with impeccable civil-rights credentials, for use of his airplane and to help him win black votes. Carter was running a populist campaign as a conservative peanut farmer on the long but racist coattails of Lester Maddux, the incumbent. Rabhan, an entrepreneur, had a shaved head and wore a tattered blue jumpsuit–so he looked like Yul Brynner. And he had more black friends than white. Rabhan never asked Carter for anything. One day Carter asked him: "If I become governor, what can I do for you?" Rabhan replied: "I want you to say in your inaugural address that the time to end racial segregation in the South is upon us." Carter easily won the election and on 12 Jan. 1971 he delivered a 12-minute inaugural address that became known as "the Speech" for its bold declaration: "I say to you frankly that the time for racial discrimination is over." The Speech brought Carter national attention and a place on the cover of *Time* magazine (May 31). David Rockefeller placed the Cater, age 48, on the prestigious Trilateral Commission. From it was on to the presidency.

(6) Letter from C. Mack Griffin of the First National Bank and Trust Company (Swainsboro, Georgia). 1998. Sept. 1. Erwin David Rabhan is a good and valued customer. He is one of the largest cattle producers in the area and also raises catfish. One of his many companies is Nutrition Dynamics International (NDI). (7) Resume: This one is longer and, in some points, different from the one cited above. For example, it states that Nutrition Dynamics International, Inc. was established in 1975 (not 1969) in Iran. "1993–Parent company Nutrition Dynamics International, Inc. established overseas joint venture companies to manufacture infant formula, baby food and snack foods in Swaziland, South Africa, Ethiopia, Nigeria, Romania, and Egypt." Address: 135 Ehrlich Farm Road, Swainsboro, Georgia 30401. Phone: 912-237-6313.

7395. Stevens & Associates, Inc. ed. and comp. 1998. U.S. 1998 soyfoods directory. Lebanon, Indiana: Indiana Soybean Development Council. 47 p. 28 cm. [33 ref]

• ***Summary:*** This third edition of the U.S. Soyfoods Directory was produced for the Indiana Soybean Board by Stevens & Associates. The color cover has a wide green and white checkered border.

Contents: Soybean facts. Welcome. How to use the soyfoods directory. Daily soyfood guide pyramid. One bean: a multitude of products.

Soyfood descriptions [alphabetical]: green vegetable soybeans (edamame), hydrolyzed vegetable protein (HVP), infant formulas–soy based, lecithin, meat alternatives (meat analogs), miso, natto, nondairy soy frozen desserts, soy cheese, soy fiber (okara, soy bran, soy isolate fiber), soy flour, soy grits, soy protein concentrate, soy protein isolate (isolated soy protein), soy protein–textured (textured soy protein, textured soy flour), soy sauce (tamari, shoyu, teriyaki), soy yogurt, soybeans, soymilk (soy beverages), soynut butter, soynuts, soybean oil and products, sprouts–soy, tamari (see soy sauce), tempeh, teriyaki sauce (see soy sauce), tofu & tofu products, whipped toppings–soy based, yuba.

A taste for health: Scientists are learning about soy's health benefits (heart disease, osteoporosis, menopause, cancer, isoflavones). Soybeans: health insurance in a pod. Approximate isoflavone content of selected soyfoods.

Fact sheet and recipes (1 or 2 pages each): Meat alternatives. Soybean oil. Textured soy protein. Whole

soybeans. Soy flour. Soymilk. Tofu.

Composition and nutrient content of soyfoods (full-page table, p. 20). 1 serving of each soyfood. Guide to modifying recipes (substitutions). Soyfood substitution chart (½-page table). Soyfoods website packed with information (http://www.soyfoods.com). Soy cookbooks. Soy resource books. 1-800-Talksoy (for answers to your questions).

Soyfood companies by product (e.g., names of all companies that make meat alternatives; products listed alphabetically).

Soyfood companies (directory; p. 27-40. Alphabetical by company name; Each listing contains address, contact person, phone number, fax, e-mail, soy products, product names, distribution, how to locate product, classification). Soyfood mail order companies (p. 41-42). Soyfood companies by state (California has by far the Most). Soyfood promotion and research organizations (incl. state soybean boards / councils). Professional association and industry information resources.

Note: Nasoya Foods has its own listing but Azumaya does not. Azumaya is listed under Vitasoy USA Inc. as a brand. Address: Stevens & Associates, 4816 North Pennsylvania Street, Indianapolis, Indiana 46205. Phone: 317-926-6272.

7396. Fischer, Bruno. 1998. Update on soymilk in Europe: Sojinal, Alpro and Nutrition et Soja (Interview). *SoyaScan Notes.* March 3. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In mid-1993 Sojinal (of Issenheim, France) was purchased by a Swiss group named B&K Industry Holdings. The heirs got much of their money from disinvesting in weapons and ammunitions. Then in December 1996 Alpro (in Belgium) bought Sojinal from B&K. They now make mostly sterilized pre-pack tofu patties and other related meat alternatives. In Bruno's opinion these products are not very good–they don't fit anywhere.

Alpro dominates the European market for soymilk and soymilk products. They do a lot of private label packaging in their factory, and they now make a little pudding in a cup with a peel-off lid. Bruno heard that in 1995 they had sales of 50 million German marks. Note: In March 1998 one German mark was worth about $0.55. So, very roughly, 50 million would be worth about $27 million.

Alpro now also makes rice drink, and in 1995 launched a rice beverage made by Alpro and packaged in glass bottles.

In about Feb. 1998 Vandemoortele, Alpro's parent company, sold all of its margarine manufacturing operations to Cargill. Now Vandemoortele has only Alpro and its oilseed crushing operations.

Nutrition et Soja (in Revel, near Toulouse, France) no longer sells their soymilk in Tetra Pak cartons–so they must be using it as an ingredient in their own products.

DE-VAU-GE (which made the Grano Vita line) no longer makes soymilk. Address: Im Auel 88, 53783 Aetorf, Germany. Phone: 49-2243-4021.

7397. Fischer, Bruno. 1998. Update on Triballat, maker of soymilk and soy yogurt in France (Interview). *SoyaScan Notes.* March 3. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Triballat makes the best soymilk that Bruno has ever tasted. "It's incredible." Their soy yogurt, which is fermented, is also quite good; it is bland, but expensive and not organic. Triballat is a well-managed family-run business, now in its fourth generation; the company is growing steadily. Their soymilk is sold in multi-weight glass bottles, which are UHT packaged. Bruno sells a soymilk made by Triballat, which he launched about 5 years ago. He buys the finished soymilk from them for US$0.40/liter, and the total cost packaged and labeled is near $0.70/liter. Presently 1.80 German marks = 1 U.S. dollar. He is their biggest customer. He has an agreement with Triballat that they sell the soymilk for bottling into glass exclusively to Bruno Fischer. And they have an unwritten gentleman's agreement that they don't sell to other German companies.

Triballat wants to sell its soymilk technology outside of Europe. About one year ago they sold a complete soymilk and soy yogurt system to some company in China–Bruno thinks it was probably in Shanghai. This is the only system they have sold, but they are now negotiating for the sale of a second system somewhere.

1998. April 7. He has located and contacted the plant Triballat sold to China, but they are not interested in selling. Address: Im Auel 88, 53783 Aetorf, Germany. Phone: 49-2243-4021.

7398. Mio, Art. 1998. Health Source: A new line of soy protein products from Protein Technologies International being test-marketed in the Los Angeles area (Interview). *SoyaScan Notes.* March 3. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Michael Derrington and Barry Dunn visited Morinaga in mid-February and presented their new line of Health Source consumer products and the ad campaign and media schedule (local radio, newspapers, and magazines for 60 days) that will be used to launch them. Some of the ads have been paid for by the Iowa Soybean Board. They are first test marketing the whole concept in Los Angeles. The two basic products in the line are a soy protein drink sold in a 1 quart gable-top cartons and a yogurt sold in a 6-ounce yogurt-style cup. Each of these products comes in two types: Regular (which provides 10 of soy protein per serving) and Health Source Plus (which provides 20 gm of soy protein per serving). They will be sold only in supermarkets and grocery store chains–not in natural- or health food stores. The milk is sold next to the Lactaid and Mocha Mix in the non-dairy part of the dairy case, and the yogurt is sold next to the regular

dairy yogurts. Michael Derrington, who is managing director of consumer product sales, is the main person in charge of these products (Phone: 314-982-5414; Fax 314-982-3627).

Talk with Barry Dunn of PTI in Fullerton, California. 1998. March 4. These products first arrived on the shelves of stores in Los Angeles in late January of this year. The first ads broke in late February. Michael Derrington at the Nutritious Foods division of PTI is in charge of the whole program. Address: National Sales Manager, Morinaga Nutritional Foods, Inc., 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-669-8638.

7399. Derrington, Michael. 1998. Health Source–A new line of soy protein products from Nutritious Foods, Inc., a wholly owned subsidiary of Protein Technologies International, Inc. (Interview). *SoyaScan Notes.* March 6. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The plans of Health Source, so far as we can tell, never got past the planning stage.

7400. Amster, Linda. 1998. Food chain: Shelf life of soy milk. *New York Times.* March 11. p. F2.
• ***Summary:*** "Q. Soymilk seems to spoil quickly even if refrigerated. Is it unwise to drink soy milk even if it is slightly turned?"

A. "According to the Soyfoods Association of America, the shelf life of an open container of soy milk is similar to that of dairy milk. If kept refrigerated in the resealed, original container, soy milk should remain drinkable for about 7 days." As it spoils, it will give off an undesirable odor and it may begin to clot or thicken. It is not advisable to drink slightly turned soy milk or cow's milk.

Cartons of aseptically packaged soy milk can be stored at room temperature for several months. But once opened, they should be refrigerated.

7401. Liener, Irvin E. 1998. Re: Soy infant formulas. Letter to Valerie A. James, RD4, Whangarei, New Zealand, March 11. 1 p. Typed, with signature on letterhead. [4 ref]
• ***Summary:*** "As editor of the journal in which this article appeared, I would be pleased to publish your letter because I think, as you do, that it is high time that someone presented both sides of the story about soy infant milk formulas." Address: Editor, Journal of Agricultural and Food Chemistry, Dep. of Biochemistry, Univ. of Minnesota, 1479 Gortner Ave., St. Paul, Minnesota 55108.

7402. Liu, KeShun. 1998. Re: Profile. Letter to William Shurtleff at Soyfoods Center, March 18. 2 p.
• ***Summary:*** This profile is an autobiography of Dr. Liu. Soyfoods Center has divided the story into two parts. Most of it is told in our "About the author" section at Dr. Liu's excellent 1997 book titled *Soybeans: Chemistry, Technology, and Utilization.* The rest, which follows, is a description of his major responsibilities as Project Leader of the Soyfoods Laboratory at Hartz Seed in Stuttgart, Arkansas, where he works on breedings soybeans for food use. He oversees the laboratory and "collaborates with several plant breeders within Hartz Seed and scientists at Monsanto's Life Sciences Research Center, St. Louis [Missouri], to improve soybean quality for making both Oriental soyfoods and Western soy products (including soy oil and soy protein ingredients). His major responsibilities include: (1) conducting research on the factors that affect the quality of soyfoods (such as soymilk, tofu, natto & soy sprouts) and soy protein ingredients, (2) identifying relationships between raw soybean components and the quality and yields of soyfoods, (3) developing reliable laboratory methods for making soyfoods and evaluating their quality attributes, (4) developing rapid methods for screening chemical components of breeding lines (e.g. assay for fatty acid composition), (5) researching the nutritional and functional properties of soybean oil and exploring applications of modified soybean oil obtained through plant breeding, (6) and identifying new product concepts and areas for further improvements of soybeans as food." Address: Project Leader, Soyfoods Lab., Hartz Seed–A Unit of Monsanto Co., Inc., 901 N. Park Ave., Stuttgart, Arkansas 72160. Phone: (870) 673-8565.

7403. Kelly, Julia. 1998. Fond remembrances of Robert Brooks, co-founder of Swan Foods Corp. in Miami, Florida (Interview). *SoyaScan Notes.* March 29. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Julia first met Robert Brooks in late 1973 or early 1974 at a Premmie house out in the country near New Paltz, New York. "I met Robert because I wanted to receive knowledge. I found out about Maraji and I started going satsang in New Paltz, New York–where I was going to the state university. Robert was one of the first people who told me about Guru Maraji. The first time I saw him he was dressed in a tattered Divine Line Mission t-shirt with his head stuck inside of an old funky oven, cleaning it. He had been a devotee of Guru Maraji and a Premmie for about 1 year before I met him." Then Julia moved into the Premmie house, where she lived with Robert and two other guys. Robert was the "house father"; he rented the old 3-story house (there was a wood stove on each floor and an outdoor toilet), cooked all the food, collected the money, and inspired many of the young people who came there. Julia received "knowledge" in November 1974. Robert told her "Don't eat anything outside this house; just eat what I cook for you. So I went from eating roast beef, sugar, Coca-Cola, and chocolate, to hand-grinding my own toasted brown rice in the morning for cereal. Robert had a remarkable ability to talk about food and macrobiotics, tie it into the order of the universe, and make it all make sense. He was very clear–like a genius. At the time, Robert knew a great deal about tofu and soyfoods, and he talked about them a lot. Robert grew

up in Poughkeepsie (pronounced puh-KIP-see), New York. His father owned a liquor store there." Robert had 2 or 3 brothers. One brother was an attorney. His younger brother, David, was also a "super-inspired, genius, spiritual very creative guy, who also liked to teach, and he did shiatsu, rapped about tofu, and other energy stuff." David is kind of nutty now. Robert believed that a vegetarian diet plus soyfoods could help keep a person healthy and filled with good energy. Julia's mother had died of cancer 5 years earlier and one of her brothers was schizophrenic, so she listened to what Robert said. He said that cancer and schizophrenia were caused by the same type of foods that Julia's family ate–so she quickly and completely changed her diet to a pure vegetarian [vegan] diet–free of eggs and dairy products–which he followed for the next 15 years. He taught that "soy was a clean source of protein." Robert was a natural-born teacher. He taught shiatsu, macrobiotics, tai-ch'i, and the Science of Mind. He was high and charismatic, though he was not out to become famous. He had a big circle of friends. Julia lived with Robert in the Premmie House in New York during 1974 and 1975. In late 1975 or early 1976, Robert went to Miami, Florida, to attend a massage school.

Robert met Mary Pung in Miami, Florida. After they founded Swan Foods, he loved to "turn people on to soy." In early November of 1977 and 1978 Guru Maraji held a huge 3-day festival in Kissimmee (located about 15 miles south of Orlando), the capital of Osceola County, Florida. This festival was named Hans Jiyanti, in honor of the birthday of Sri Hans, who was Maraji's father. More than 10,000 Premmies and other people came and camped out on this land by a nice little lake to see and hear Maraji. Julia was there, "hanging out with the musicians." Vegetarian foods from many different cultures were sold at booths at the festival. "Robert supplied the whole festival and Maraji with his soy products–he wanted to turn on the all these people from all over the world to soy–and he did. In 1977 he brought mostly tofu and soymilk, but in 1978 he brought all of these delicious soy desserts, pies, etc. that he and Mary and Debbie Curran had developed at Swan Foods. He did all this as an offering for Guru Maraji. That was the vision behind all his creativity and production. Robert was definitely high and he deserves recognition."

"One reason that Swan was able to grow by leaps and bounds was that Robert has all these selfless Premmies doing service for Maraji by working for Robert. He had some of the best and the brightest minds in the country working together for a common cause–the highest good of all human beings. It was hard for any other business to compete with this. It was a very special time, with much remarkable talent–including many fine musicians."

Julia first met Mary in about 1978 in Miami. She knows a number of people who knew Robert well: (1) Mark and Pat Lewis (who are still married and have 2 kids) worked at Swan Foods making tofu; they did most of the hard work. Mark said the Premmies would come into the plant during the daytime (as part of their service to Maraji they worked for a pittance or for free), but none of them knew what to do and they'd all be spaced out, then Mark and Pat would go in every night and make 1,000 pounds of tofu. Mark was very close to Robert and he may know where Mary Pung or Robert's father or brother are now. (2) Debbie Curran (an extremely beautiful and creative girl–Phone: 305-667-7692) is now living with rock musician Fleet Starbuck, who has a blues band. Debbie was a good cook; she worked with Mary Pung to develop many tofu dessert recipes. For years after Swan Foods went out of business, on her own and to make a little money, Debbie would make recipes like tofu lasagna and sell them at places like Oak Feed store and 5-6 natural food stores in Coconut Grove. (3) Jerry Wiener–JD. He worked at Swan Foods for a couple of weeks when Danny Paolucci was there. He recalls big refrigerated trucks from Eastern Airlines pulling up in front of Swan Foods to load up on their soy products. (4) Michael Bo knew about tofu and taught Julia how to make her own. Julia does not know Jim Wilks.

Robert was not involved with hard drugs for most of his life, but he was a hippie who smoked (and later bought and sold) large amounts of pot (marijuana).

What caused Swan Foods to go out of business? Julia thinks it was more Robert's greed than his lack of business management skills. "He had both a high side and a greedy side. He switched from making tofu to dealing pot because he could make so much more money from the pot, and he was losing money making tofu. It was strictly a business decision. He told me that in 1978 in Miami as the company was going under. He didn't start selling pot in an attempt to save Swan Foods. He did it to make more money. He was a very good businessman. If he had been humble and gone more slowly in building Swan Foods, not tried to get so big so fast, just stuck with it without getting distracted by all the flashy Miami stuffing going on all around him, Swan Foods might be prospering today." Eventually Mary Pung gave her son, Aslan (who was about age 6-8), to one of Robert's brothers who was an attorney. Julia knew Aslan, who must be about 20 by now. Note: Aslan was named after one of the heroes in *The Chronicles of Narnia,* by C.S. Lewis–series of wonderful allegorical books that were very popular at the time. In the book, Aslan (a name coined by C.S. Lewis) was the great lion in the land of Narnia. Like the Lord, he was the epitome of goodness. He gave up his life to save children and was later resurrected.

Julia has heard from reliable sources that, after Swan Foods went out of business, Robert started hanging out with one really bad guy, who had a strong negative influence on him. He started smoking cigarettes and eating meat, and eventually involved with hard drugs (such as cocaine) for the last 1-2 years of his life–but Julia had lost touch with him by then.

Tatiana, his wife when he died, was a very big spender. "She'd spend thousands of dollars getting her body waxed and her hair done. She was going to testify against him before a grand jury. He became the key guy in a big investigation. She was part of the reason he died the way he did. If he hadn't committed suicide, he might have gotten murdered. He was in a really bad place.

Julia thinks Mary may have lived in Hawaii for a while after Swan Foods went under. Julia presently lives in her van outside a friend's house in Miami, under a sapodilla tree. She used to live in Hawaii. Address: Miami, Florida. Phone: 305-791-2370 or 305-663-0082.

7404. Demos, Steve. 1998. New developments with soymilk at White Wave. Part I (Interview). *SoyaScan Notes.* March 30. Conducted by William Shurtleff of Soyfoods Center. • ***Summary:*** The Morningstar Group is owned by a Texas-based company named Suiza (pronounced SUI-zuh) which is bigger than Morningstar. Suiza Foods Corp. is one of the very big, modern consolidators of the dairy industry. Dean Foods (which owns Vitamite) and Suiza are head-on competitors in the dairy product area. White Wave's Silk brand soymilk is packaged in an ESL (extended shelf life) gable top carton at the plant of Morningstar Foods Inc. (formerly Avoset, now owned by Suiza), 299 Fifth Avenue, Gustine, California 95322. Phone: 209-854-6461. Contact: Gary Veuve (pronounced Vev, rhymes with rev), the plant manager. Gustine is located just off Highway 5 between San Jose and Merced in Northern California. This plant focuses on dairy products, packaged in both aseptic and ESL cartons, but it also packages Lactaid, Dole juice, a goat milk, etc. In addition, it packages Trader Joe's soymilk, indirectly via TAN Industries and San Diego Soy Dairy–which Steve believes breaches the contract between White Wave and TAN. Actually Gary Stein at San Diego Soy Dairy apparently has no hand in making the product–he just does the invoicing. The soy base mix is made at Soyfoods of America (owned by Ken Lee, in Duarte, Southern California) using equipment installed by TAN Industries (Ted Nordquist and Wally Rogers). When some other company moved out of Ken Lee's plant, Ted moved his company in. The installation began about a year ago [March 1997] and it became operational about 6 months ago [Sept. 1997]. This mix is then shipped by tanker-truck up to the Avoset-Morningstar plant, where it is processed. Avoset Food Co. is probably the predecessor which sold itself somehow to Morningstar which sold itself to Suiza. Steve is not aware of any relationship between Morningstar and the former nondairy pioneer Presto Food Products, which introduced Mocha-Mix Coffee Creamer in 1950 (Note: This product was later renamed Mocha Mix Non-Dairy Creamer).

Ted Nordquist has not been buying soymilk from International ProSoya Corp. (IPC) in British Columbia, Canada, for the last six months–to the best of Steve's knowledge. The soy base mix currently used to make Steve's Silk is made using TAN's plant at Soyfoods of America. There were numerous problems with the Silk product during the 6 months that TAN was making the transition from IPC to Soyfoods of America. Because of the nature of Steve's contractual relationship with TAN, Steve had no information about what was happening so he was unable to help smooth the transition. He inherited the problems and had to deal with them in a hindsight fashion.

Steve has an exclusive supply contract with TAN for all nondairy beverage in the USA as long as he meets specified minimums of purchase from TAN; he has always exceeded these minimums. Steve now believes it is no longer exclusive because of the new Trader Joe's soymilk. This will probably be grounds for a lawsuit. Steve feels that TAN has used White Wave and Silk as his springboard–while the contract is still in effect. Ted has a good product and he is going to be a competitor, and he has made plenty of money from the sale of Silk.

TAN decided (about 6 months ago) to stop buying soymilk from IPC and not the other way around. TAN made the switch for two reasons–both economic. First, TAN realized it would be more profitable the make the soymilk closer to Gustine, where it was packaged. The transportation cost of shipping soymilk from Vancouver to central California was about $2,000 per tanker-truck, compared with only about $1,500 for shipping from Duarte to Gustine. At least one truck is shipped per week–sometimes two. Second, since TAN now owns the equipment on which the soymilk is made, the profit margin associated with making the concentrate is now TAN's.

Steve has tasted several of the SoNice soymilk products made by IPC. He thought one of them was good tasting and competitively priced. The others he thought were typical soymilk formulations that were relatively weak. They had some off flavors and problems with balance, color, thickness. Steve thinks "there are a couple of fracturings of focus with the way they are approaching the market." They have both an aseptic line and a refrigerated line (in five flavors and two different sizes). The essence of refrigerated soymilk production is the ability to turn it fast enough so that you never have spoilage on the shelf. White Wave has never suffered returns on its refrigerated soymilk (Silk) but it took a lot of hard work to get their minimums up to that critical mass point where the product was turning fast. With soymilk in an ESL carton, the carton, not the soymilk, is the limiting factor. Silk has a use-by 84 days from the date of manufacture, but it will usually last for 100 days.

Steve has found it very difficult to work with the contract set up by Ted Nordquist, so much so that he plans to terminate the relationship. Steve feels this is unfortunate–"its like working with a black box." Steve has no idea how Silk is processed at the Soyfoods Unlimited or at the Avoset plant–or what the costs are. Steve flew with his people to San

Francisco, and Ted and his people flew to Boulder–but they were unable to resolve the problems to Steve's satisfaction. "We have a great name, a great package, and a great product–but we have no control over costs." That means that if White Wave proves to the market that refrigerated soymilk is a big category, they will be "beat up" by competitors because of their inability to control costs. Ted basically says: "I will deliver the product to you at the following cost per gallon." Steve would like to continually lower the price of Silk–and he plans to do so soon. It will go under $3.00 per half gallon. Steve suggested that Ted take a royalty for the rest of his life and let White Wave deal with all manufacturing and cost reduction issues. But Ted wants control. Steve thinks he was "burned" in Sweden; he is a very good product developer but not such a skillful businessman. IPC tried to introduce SoNice into the U.S. market with a low price strategy, but White Wave and beat them to it. White Wave has contracts with all of the major chains that they exist in so that their pricing plus their support programs will pretty much negate IPC's attempt to come in at a lower price. If IPC really wanted to do so, they would have to cut their prices again–which is a hard way to go with a new product.

Which soymilk does Steve like the best, simply in terms of organoleptics (flavor, color, consistency, etc.)? One SKU from Vitasoy is very good, the Silk made by TAN is a little bit better, but Steve feels that the new version of Silk developed by Jonathan Gordon (completely independently from TAN and not yet on the market) is better than either of those two products.

During the last year, White Wave has worked on new formulations with Tetra Pak at their research facility in Chicago, Illinois. The first major tanker-truck production run was last Friday. White Wave is now in full production with this new formulation of Silk. It will be processed at one plant in Utah and one on the East Coast. Many taste tests have shown that this new Silk is superior to the former Silk made and formulated by TAN. Silk will remain a refrigerated product; it will never be sold in aseptic cartons in the USA–that will be a fracture of focus that sends a mixed message. On the new carton will be two quotations: One from Suzuki roshi about "Beginner's Mind," and the other from Yogi Berra ("You can't hit and think at the same time")! Also at the top front of the carton is written: "32 mg isoflavones per serving." Plus, there is an offer for more free information on isoflavones. White Wave is working to start the educational process on isoflavones–and is also using its Web site and toll-free 1-800 number.

The big ad campaign in Los Angeles from Protein Technologies is teaching about isoflavones but the products (Health Source) are not doing well. So the publicity is helping White Wave. "Like a guy on a bicycle, we're drafting. We're going to try to stay in the draft of the ADMs and PTIs and see where it takes us. We don't have that much pride." Continued. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

7405. Demos, Steve. 1998. New developments with soymilk and other soyfoods at White Wave. Part II (Interview). *SoyaScan Notes.* March 30. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Sales of White Wave's baked tofu are growing at 38% a year, while plain tofu is growing at 18-21% a year. White Wave is the leader nationally in the baked tofu category, with more than 60% of the market share. Plain dairy yogurt in America still outsells dairy yogurt with fruits and flavors, but it was the fruit yogurts that introduced consumers to the plain product. Baked tofu seems to be playing the same role with respect to plain tofu. White Wave is about to invest very heavily in the automation of baked tofu. If a company's plant capacity is 250,000 units per week, it makes much more sense to produce baked tofu at $1.80/unit instead of block tofu at $0.70/unit. White Wave is trying to turn the tofu market from block to flavored, in order to gain market share and position–in exactly the same way the company has been trying to turn the soymilk market from aseptic to refrigerated.

One key question concerning baked tofu remains unanswered? How do consumers eat it? Steve thinks they are eating it in the car on the way home from the store as a salted snack food–or perhaps on sandwiches. Until White Wave can be sure of how it is used, they don't want to commit to positioning it against some other product–such as cheese or meat.

White Wave's first goal was to establish its products in the refrigerated dairy section. Whereas many companies still sell tofu to the produce section, White Wave never sells to the produce section any longer. Everything is refrigerated, controlled temperature during distribution and sale. Only rarely does a White Wave product end up being sold in any produce section; they are usually sold in the juice cooler or in the dairy section. 80% of White Wave's revenues come from the natural foods sector, and in natural foods stores all White Wave products are in the dairy section–as part of their shelf-set program, which has been very effective in establishing a beachhead in the refrigerated section. Around that now Lightlife and Yves each have their own sections. So the vegetarian category is emerging, usually located in the store around dairy cheeses, milk, yogurt, and eggs.

The most interesting insight Steve has gained in the last few years is the one that says consumers are picking four product categories that they want to see in supermarkets. So White Wave has been reducing the number of products it offers; it has dropped hot dogs, sausages, all burgers except tempeh burgers and lemon broil. The company is actively evaluating what consumers want and where they want to find it in the store. One new program will be to give consumers a free half-pint carton of Silk asking them to "Try this–It's the new milk."

Steve is very happy with Silk's sales performance over the past two years. "It's been exceptional, but it cost $400,000 just to launch the product." According to data from SPINS, during the May-June 1997 period, the market shares for soymilk brands in the U.S. natural foods market were as follows: Westbrae 34%, Edensoy 32%, Vitasoy 16%, and Silk 7%. Silk's share is now 10%. Sales of Silk grew by 170% during the past year. The soymilk market grew by 21% during the same period, Edensoy grew at 30%, Rice Dream dropped 0.4%, and the rice beverage market contracted by 0.2%.

Tree of Life (which does not share its sales figures with SPINS) is no longer the biggest natural foods distributor in the USA. United Naturals is now the biggest (after they bought Stow Mills) with sales last year of $650 million vs. $520 million for Tree. United Naturals also owns Mountain People's Warehouse, Mountain People's Northwest (which was NutriSource), Rainbow–Chicago (Illinois), Rainbow–Denver (Colorado), Cornucopia, and Cornucopia–Atlanta (Georgia).

ConAgra is trying again to get into the natural foods industry. They recently tried to buy one big privately owned natural foods manufacturer, and were turned down! ConAgra launched a new "Advantage 10" line of frozen entrees (many of which contain gluten products) that is backed by Dr. Dean Ornish. White Wave is supplying them with some of these gluten products. ConAgra had a huge presence at the Anaheim show–yet they don't understand how natural foods shoppers think and see the world. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

7406. Nordquist, Ted. 1998. Update on TAN Industries, Inc. in California (Interview). *SoyaScan Notes.* March 30. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** A printed card announces that effective March 28, 1998, TAN Industries moved its offices to 49 Stevenson St., Suite 1075, San Francisco, California 94105-2957. Phone: (415) 495-2870. Henry Glasser moved his law office into a larger space and Ted moved with him.

Today big news arrived: Henry Schwartz called to say he wants to buy a TAN 2000 soy-base plant. "He's ready to go." Ted recently went to visit Henry at his plant in New York and took him many samples. Ted's company used to be pursuing lots of leads and opportunities overseas, but they have not panned out. So now he is focusing on North America, selling equipment and know-how. Ted now has two partners in the business: Wally Rogers of Bean Machines (which manufactures equipment) and Henry Glasser, an attorney, who is the company's financial officer. (Note: Ted initially gave Glasser 20% ownership of the company in exchange for services; as of Aug. 1999 Glasser owns 30%). The company now has only one soy customer, White Wave, which has an exclusive as long as they continue to meet their expanding minimum quotas. Ted also makes a rice beverage. When Ted sold his company in Sweden, his contract contained a three-year non-compete agreement. The very day that agreement expired, Ted sold his first shipment of soymilk to White Wave.

If a company wants to buy a soymilk system from Ted, all the equipment from dry soybeans to cooking (including a stainless steel disintegrator / grinder, and a continuous process cooker) is made by Bean Machines. He would put together the rest of the system using components (such as 2 decanting centrifuges and deodorizing equipment) made by other equipment manufacturers.

Ted processes his soybeans at the Morningstar Group; who and where they are is confidential. He has never made any of his soy products at Cathay Industrial (John Yamauchi) in Los Angeles.

Note: The Morningstar Group is owned by a Texas-based company named Suiza Foods Corp. (pronounced SUI-zuh) that is bigger than Morningstar. Suiza is one of the very big, modern consolidators of the dairy industry. Address: TAN Industries, Inc., 49 Stevenson St., Suite 1075, San Francisco, California 94105-2975; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-495-2870.

7407. Skiff, James. 1998. Impressions from the Natural Products Expo West at Anaheim this month (Interview). *SoyaScan Notes.* March 30. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jim finds that the soymilk made by Ted Nordquist (White Wave's Silk) is by far the best tasting–much better than SoNice from Canada. Both companies had booths at Anaheim. Jim has always liked Ted's soymilk the best. In fact, he and Howard Weiner were ready to set Ted up in business with a soymilk processing plant, but they could never come to terms. Ted wanted to control everything. Ted did not have a booth at Anaheim.

Dusty Cunningham of International ProSoya Corp. (IPC) was at the show, having come from England. She said that GMO-free soybeans are very big in the UK (where new labeling laws have been passed), and to a somewhat lesser extent throughout the rest of Europe. There was some interest in GMO-free soybeans at Anaheim, but it was still a bit reserved. This may be in part because Monsanto and ADM are working so hard to push things in the other direction.

In the past, most of the soy-related companies have been in the same general area at Anaheim. This year they were spread out over many buildings and on various floors so they were hard to find. Address: Cornbelt Foods, Inc., P.O. Box 218, Marshall, Minnesota 56258. Phone: 507-537-1406.

7408. **Product Name:** Harmony Farms Non-Dairy Light Soy Drink (Aseptic Pack) [Original, Vanilla, Enriched Original, or Enriched Vanilla].
Manufacturer's Name: American Natural Snacks

(Marketer-Distributor).
Manufacturer's Address: P.O. Box 1067, St. Augustine, FL 32085.
Date of Introduction: 1998. March.
Wt/Vol., Packaging, Price: 1 quart (32 oz) Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Leaflet (8½ by 11 inch, color) sent by Patricia Smith from Natural Products Expo West. 2002. March. "Soy it isn't soy." A full-height photo shows a black and white cow. A color photo across the bottom of the cow photo shows the four soymilk products. On the rear is packaging information but no ingredients and no nutritional facts.

Ad (full page, color) in *Natural Foods Merchandiser.* 1998. Sept. p. 105. "The girls have just about had it." A large photo shows the face of a black and white cow. "Take Harmony Farms Soy Drinks. They're the only soy drinks in the world made from The Better Bean–a patented, hybrid soybean that contains 90% less stachyose and raffinose than other soybeans. These are the two sugars found in soybeans that make other soy drinks difficult to digest. Our original and vanilla flavor Soy Drinks are perfect for drinking icy-cold, pouring over a bowl of fruit and cereal, or whipping up in a refreshing fruit smoothie."

7409. Franke, Adrian A.; Custer, L.J.; Wang, W.; Shi, C.Y. 1998. HPLC analysis of isoflavonoids and other phenolic agents from foods and from human fluids. *Proceedings of the Society for Experimental Biology and Medicine* [*PSEBM*] 217(3):263-73. March. [58 ref]
• ***Summary:*** Discusses: Soybeans (raw, dry, Singapore), soybeans (roasted), soybeans (toasted), green soybean pods, soy protein, soybean sprouts, tofu (raw), tofu (fermented, Singapore), curd (fermented), soy milk, soy cheese, Foo Jook (skimmed, dry supernatant [dried yuba sticks], raw, Singapore), Foo Jook (cooked), Tau Kwa, raw (pressed tofu, raw, Singapore), Tau Pok, raw (fried Tau Kwa, Singapore), bean curd (fried). Daidzein, genistein, glycitein. Address: 1-2. Cancer Research Center of Hawaii, 1236 Lauhala St., Honolulu, Hawaii 96813; 3-4. Dep. of Community, Occupational, and Family Medicine, National Univ. of Singapore, Singapore 0511, Republic of Singapore.

7410. **Product Name:** Soymilk [Banana, Chocolate, Strawberry, Plain].
Foreign Name: Leche de Soya.
Manufacturer's Name: Ideal Ltda.
Manufacturer's Address: Industrial Park PI-29-B, P.O. Box 629, Santa Cruz, Bolivia. Phone: +591 708-15100 or +591 3-533-546 or.
Date of Introduction: 1998. March.
Ingredients: Soybeans, water, sugar, flavorings.
Wt/Vol., Packaging, Price: 1 liter and 200 ml plastic bags.
New Product–Documentation: Talk with Ted Nordquist. 2002. Nov. 21. This company was founded by Mario Bonino, with help from his friend Rene Mouton-Bluys in Cochabamba, Bolivia. Talk with Mario Bonino. He started making soymilk in March 1998 in the three flavors plus Plain shown above. He packages his soymilk in 1 liter and 200 ml polyethylene plastic pouches using a completely automated form-fill-seal machine (for liquids) made in the USA ($33,000), Argentina, and China ($5,000).

At the beginning his business did well, but it is not doing well now because of fierce competition from two main local sources: (1) A two women's cooperatives to which the government gave a free building plus operating capital. One sells cow's milk flavored with chocolate and sugar at low prices; the other sells soymilk. (2) A dairy company, owned by a giant international dairy company, which sells a soft drink that contains 10% yogurt. They have advertised this heavily and consumers don't realize that it contains only 10% yogurt. Mario makes about 2,000 kg of soymilk per batch, but he only makes it several times a week. He also makes a dairy yogurt-based drink. He has no plans to make soy yogurt since there is too much competition from dairy yogurt. His plan is to try to educate institutions and consumers about the health benefits of soy. His main source of information is the website revival.com. He believes Revival is the biggest soy company in the USA.

7411. SunRich Inc. 1998. SunRich: Products for the 21st century (Leaflet). Hope, Minnesota. 3 panels each side. Each panel: 22 x 9 cm.
• ***Summary:*** The color photo on the front panel shows a field of mature soybeans with a farm and tall silo in the background. "SunRich Inc. was founded in 1978 as Minnesota Waxy Corn Growers for the purpose of marketing waxy corn. Business diversification and expansion of core markets prompted a name change to SunRich Inc. The major focus of SunRich's business remains bringing together growers and suppliers of specialty grains and ingredients for mutually beneficial business relationships."

"SunRich products include: Soymilk, soymilk powder, spray dried tofu, corn grits, corn cones, corn flower, corn masa, maltodextrins, corn syrup solids, sweet beans (green vegetable soybeans), vegetable powders."

"Our goal is to provide the best natural and organically grown and processed food ingredients. SunRich: the ultimate in value-added commodities." Color photos show: (1) The sun setting behind a combine. (2) A low aerial view of the company's facilities, mainly silos. Address: P.O. Box 128, Hope, Minnesota 56046. Phone: 1-800-342-6976.

7412. Wildwood Natural Foods. 1998. Trusted quality since 1980 (Leaflet). Santa Cruz, California. 3 panels each side. Each panel: 22 x 9 cm.

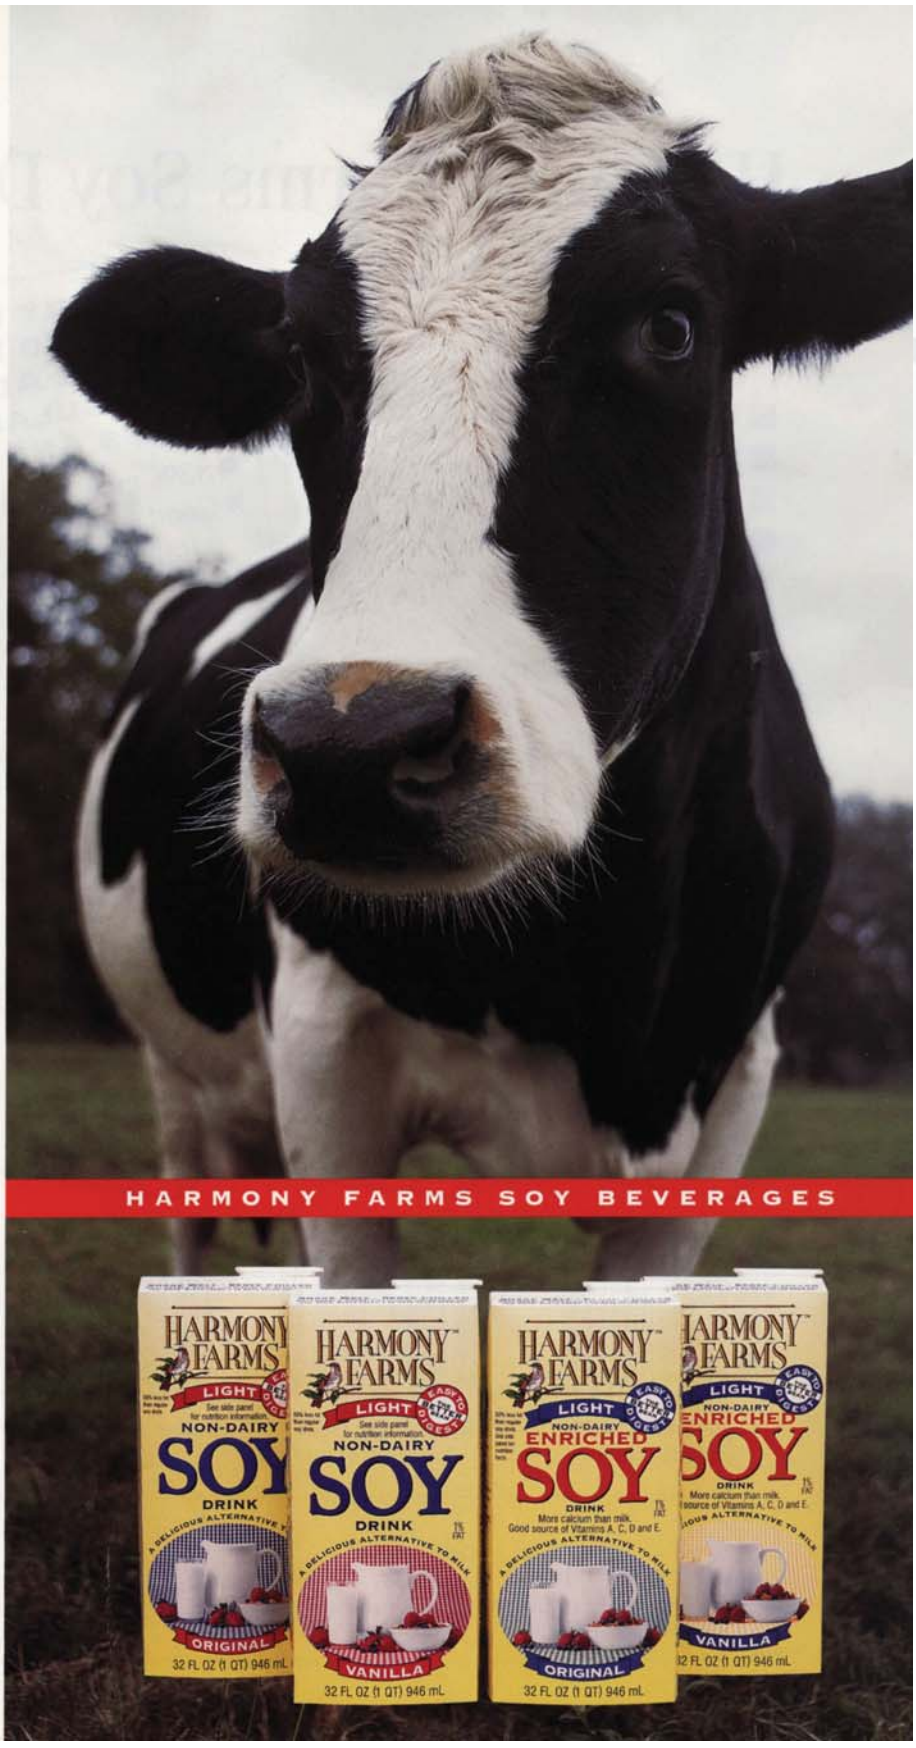
Say it isn't soy!

The girls are in a sour mood again. And it's all because the folks at Harmony Farms have discovered a Better Bean.

The Better Bean is what makes new Harmony Farms Soy Drink a better choice. Not only does the Better Bean lend Harmony Farms Soy Drink its fresh, delicious flavor—it also makes it easier to digest.

Harmony Farms' Better Bean contains 90% less stachyose and raffinose than ordinary soybeans. Those are the two sugars found in soybeans that some people find difficult to digest. With Harmony Farms Soy Drink, you can enjoy all the health benefits of nutritious soy—without the discomfort.

Order new Harmony Farms Soy Drink today—regular and enriched, in both original and vanilla flavors. Lactose-free, cholesterol-free, and easy to digest, it's the cream of the soy beverage crop. And that's no bull.



• ***Summary:*** Leaflet (green, yellow and red on beige) sent by Patricia Smith from Natural Products Expo West. 1998. March. On the front panel is a square illustration of green trees growing beside a lake and reflected in its placid water. "Responding to the community's need for fresh, organic, vegetable-based protein."

The inside 3 pages: Across the bottom half is the green silhouette of trees. "Wildwood roots (founded in 1980). California's soy dairy. Tofu: What is that stuff?, get your money's worth, know your tofu, Great, but what do I do with it? Fat from soy oil: Isn't tofu high in fat? Nutritional info for Nigari firm style tofu vs. Calcium fortified tofu, medium style.

Panel 5: Two recipes. Rear panel: Partial list of Wildwood products: Organic firm tofu. Organic medium low-fat tofu. Organic soymilk (plain or honey vanilla). [Tofu] Fillets and cutlets: Baked, smoked, or agé style, Teriyaki, Thai, Szechwan or Hawaiian flavors. Vegie burgers: Original, Mexican, or Wild West (Southwestern style). Tofu salads: Dill, Mediterranean, Antipasto, or Firenze. Mid-East Hummus. Address: 1560 Mansfield Ave., Santa Cruz, California 95062; 135 Bolinas Rd., Fairfax, CA 94930. Phone: 800-499-TOFU.

7413. Murphy, Patricia A. 1998. Re: Isoflavones in soy-based infant formulas. Letter to Dr. Irvin E. Liener, Editor, Journal of Agricultural and Food Chemistry, Univ. of Minnesota, Dep. of Biochemistry. 1479 Gortner Ave., St. Paul, MN 55108, April 3. 2 p. Typed, with signature on letterhead. [3 ref]

• ***Summary:*** In May 1997 a meeting was held at the National Institutes of Health (NIH) titled "Significance of phytoestrogens in infant soy formulas." It was called by Dr. Ephraim Levin (National Institute of Child Health and Development) and chaired by Dr. Frederick Naftolin (Yale Univ. [New Haven, Connecticut]). Dr. Patricia Murphy was invited to present a summary of what is known about the levels of isoflavones in soy-based infant formula. Dr. Samuel Fomon, internationally recognized infant specialist, presented data showing that about 25% of the U.S. infant formula is soy based, in contrast to only 8% in Europe. Address: Prof., Food Science & Human Nutrition, Iowa State Univ., Ames, IA 50011.

7414. Iderabdullah, Bisi. 1998. History of work with soybeans and soyfoods in Liberia. Part II (Interview). *SoyaScan Notes.* April 6. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In December 1989 a bloody civil war began in Liberia in the countryside. By July 1990 it had reached Monrovia. Many orphaned and abandoned children were brought to the Mission, so an orphanage and clinic sprang into existence at a house next to their house, on an adjacent compound, and was soon caring for about 30 kids. Bisi and Mahmoud paid all expenses of the orphanage, clinic, and Mission from their personal funds.

Bisi and her family returned to the USA after a cease-fire in late November 1990 and tried to solicit support to help feed the many starving people in Liberia. She called CARE and many other organizations, but with little results. One day someone asked her: "What is the name of your organization?" She had previously lost their fifth child, named Imani, so she said spontaneously "Imani House." The name stuck. Then she called The Farm–getting the address from Ina Mae's book. She was told that they had a philanthropic arm named Plenty, but they no longer supplied relief foods. Then she called Peter Schweitzer's office in California to ask him what they could do to help–the situation was very urgent and the world wasn't paying much attention. They got to know one another over the phone and Peter said that Plenty would choose Imani House as a group that they would work with. When they talked about growing soybeans, Bisi thought it was "a little bit way out for Liberia."

Bisi and Chuck Haren (who had been sent by Plenty) went together to the International Institute of Tropical Agriculture (IITA) in Ibadan, Nigeria. Chuck had already taken their training program, but he wanted to introduce Bisi to it. IITA people showed them how to grow soybeans, gave them soybean varieties especially adapted to West Africa, demonstrated simple machinery for pressing oil from the soybeans, introduced them to the *bumbum* leaves they use with lemon as a coagulant in the lab to make tofu, prepared many different dishes from soybeans, and demonstrated different quick and simple ways of making soymilk for use as a beverage. They spent a lot of time with Dr. Sidi Osho, an expert in soybean utilization. Bisi and Chuck were given a tour of local businesses producing soyfoods, including one that made Soyvita soymilk in Lagos. One chemist had turned his distillery into a soymilk factory. In the market, they saw soybeans being fermented to make dawa-dawa, a seasoning. After seeing all these things at IITA, Bisi's skepticism about the potential of soyfoods in Liberia was largely overcome. She and Chuck returned to Liberia.

Returning to Liberia, Bisi and Mahmoud changed the name of their African Islamic Mission to "Imani House;" they didn't want to be killed because they were Muslims–which happened a lot in Liberia during the war. Their original mission, to teach agriculture and education, remained unchanged.

Originally Bisi had assumed that the agricultural work of Imani House would have to be done in the countryside, outside of Monrovia. But by 1990 she realized that urban agriculture was a real possibility.

Bisi and Chuck first planted soybeans in Liberia in about 1991. The seed came from two sources: They brought back about 6 kg of specially adapted seed from IITA, and the rest they bought in a local market in Liberia; the latter soybeans

had come in to Liberia as a relief food and the people were rejecting them (they took too long to cook; the local people thought they were split peas), so they were selling at a very low price. They supervised the planting of these soybeans at 8 different sites, in small plots totaling about 1 acre, in and around Monrovia–no further than 25 miles away. The United Nations provided an agronomist (Mr. Sha of UNDP), who planted some of the seeds incorrectly; they were viable and they germinated. Imani House had 5 acres of land on which they planted one small plot. None of the 8 plots grew well. The war was going on and people grew the soybeans on poor soil that they would not ordinarily use. The plots did not yield enough soybeans to eat, but they did yield enough seeds to replant. The seeds from IITA did the best, but they never gave good yields. The bean beetle became the biggest plague, eating through the leaves. Bisi used compost and many organic methods. The farmers wanted to spray a lot and use chemical fertilizers. In about 1994 they had a very good yield one year at one site in a back-yard garden on virgin soil. The soybean plants were lush and the beans were large. There were big problems with seed storage, since there were heavy rains 6 months of the year.

Throughout this time, Bisi was doing trials with utilization. They would take a few pounds of soybeans to an orphanage and teach them how to make and use soymilk and okara fritters (seasoned patties of okara mixed with flour then, fried). "They loved these foods." They had a big demonstration for home economists from the Ministry of Agriculture, who work with the school feeding program. They developed a sheet of nutritional information on soybeans and soymilk (comparing soymilk with cow's milk) which they passed out to these nutritionists.

From September to December 1995, with help from the Trull Foundation of Texas, Plenty was able to send a soy/agricultural technician from Belize to Liberia to help Imani House with its soybean project. His name was Ignatius ("Gomier") Longville. A Caribbean native and a Rastafarian (Rasta = "Roots") farmer, he was skilled in ways of growing food under adverse conditions using the natural rhythms and resources. He had worked with Plenty on the island of St. Lucia from 1984 to 1990. Now he volunteered his services, providing hands-on assistance to help Imani House and the farming groups with which they were working in Liberia to grow soybeans and other crops in nutrient-deficient soils. He introduced organic methods of pest management and demonstrated composting techniques. They used a Rototiller to open the soil and control the bean beetle, and added small amounts of chemical fertilizers. The result was the most successful crop of soybeans ever. The Liberian farmers were impressed.

In October 1995 Imani House won first prize for food processing at a World Food Day Exposition in Monrovia. Gomier and the Imani House staff conducted soyfood demonstrations for 10,000 people. "We couldn't make food fast enough. We made pies, soymilk (mixed with cocoa), soy fritters, soynuts, and tofu on site. We just didn't have enough. It was amazing." They had plenty of soybeans (300-400 lb), which they bought from Ghana, with help from the Ghanaian Ministry of Agriculture.

Building on these successes, Bisi got FAO to agree to bring in a container of soybeans for planting and to provide a consultant (Delvin Walker) to help Imani House. Walker was an agronomist; before the war he had been a teacher of agriculture at Cuttington University, the Christian university in Liberia. Walker was already a member of the Imani House board of directors; he went with Bisi to talk with FAO and WFP (the World Food Program). They also got the World Food Program to agree to bring in soybeans for utilization. The Liberian government had agreed to give Imani House a memorandum of understanding that they would be the soybean growers and demonstrators in Liberia. The head of the Ministry of Agriculture believed that this agreement would help Imani House to get the funding that they needed so much. Work was underway using soybeans and cassavas to make an enriched *gari.*

Then in April 1996 factional fighting flared up again, devastating Monrovia. The civil war was on again. Bisi, too was devastated–just as her soybean program was finally about to take off. "Armed robbers took our Rototiller, all of our farming equipment. We lost everything. We left Liberia and stayed in Senegal for four months, waiting to go back. But it never got better." Then they went to Gambia. In English-speaking Gambia they were invited by a leading citizen to stay and work to introduce soybeans.

The civil war is now officially over, and Bisi is working to raise funds in the USA which are used to support her Liberian program. She is also trying to raise funds for the soybean, agricultural, and literacy programs. The clinic has been rebuilt and literacy programs have been re-started in English and Bassa. Benjamin Grant is administering the programs. The war has cooled down but anyone who buys equipment is at risk of visits from armed robbers. Because she is now in New York, Bisi is also developing Imani House's local program. She hopes eventually to return to Liberia. "The problem now is not to import soybean to Liberia but to grow it. We see it as a way of solving major problems of malnutrition in Liberia." Address: Director, Imani House, 76A Fifth Ave., Brooklyn, New York 11217. Phone: (718) 638-2059.

7415. Fischer, Bruno. 1998. Trip to Cuba. Impressions of their soy products and their fees to sell equipment and a license (Interview). *SoyaScan Notes.* April 7. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Bruno recently returned from a trip to Cuba. He wanted to sample their various soy-based dairy alternatives and (if he liked them) to enquire about buying a soymilk system from them. His discussions were with Alvaro Garcia.

He found the products (soymilk and soy yogurt) were not up to his expectations and the prices were much too high. The taste of the flavored products was rated excellent but the taste of the unflavored and unsweetened product was rated poor. Thus, the quality appears to come from the flavoring. The biggest problem was the grainy mouthfeel. Bruno thinks they do not remove the okara from their soymilk.

The Cubans are charging the following rates for a soymilk system that makes 4,000 liters/hour and is not automated (i.e. has fairly high labor requirements). $250,000 for the machinery. Roughly $125,000 to install it in the host country and get it up and running. US$0.10 per liter of finished product as a licensing fee. Address: Im Auel 88, 53783 Aetorf, Germany. Phone: 49-2243-4021.

7416. Seemo (H. Shapira); Kairava (J. Spaelstra). 1998. Re: Exciting new developments at Dakini Health Foods Pvt. Ltd. in Pune/Puna, India. Letter (fax) to William Shurtleff at Soyfoods Center, April 10. 1 p. Typed, without signature on letterhead.

• ***Summary:*** "Hello Bill. Greetings from hot, hot India, and some gossips too. 3 months ago we managed to close a deal on a 17,000 square foot plot about 7-8 km from our present place.

"We dug a bore well and found a good spring!!! And yesterday we got our electricity connection–a Big story in India.

"We are trying now for building permits and planning to have 5,000 square feet ready by next year some time. About half of the space will be for our soy project–tofu, soy milk, soyogurt drink, tempeh–and hopefully more. We can get nearly all the equipment built locally–steam boiler, cooking pots, refrigeration, etc. We also want to fabricate a pressure cooker, an okara press, etc.

"For grinders some hammermills are available but I think we prefer to get a sanitary stone grinder so please if you have the address of some manufacturer / stocklist of these. Models sold without motors are best. We will be happy to know as this type of equipment has never evolved in India and importing is the only solution. Taiwan, Japan, or the U.S. are all OK. We may possibly buy a small one for hummus production as well.

"All the best, with love. Seemo & Kairava.

P.S. Tempeh production is running smoothly, 60-80 kg per month, 7-10 per batch for now. Address: Dakini Health Foods Pvt. Ltd., S.N. 33, Bhoiwasti, Keshavnagar, Mundhwa, Pune / Puna 411 036, India. Phone: +91 20-613985.

7417. James, Richard F. 1998. Work to expose the dangers of toxic substances in soybeans. Part II (Interview). *SoyaScan Notes.* April 18. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued. Originally the scientists looked at this soy matter; Richard was not a scientist, he was a check writer, because he and his wife saw something wrong that demanded a scientific explanation. Richard didn't even hire the scientists; they were commissioned originally by the health food company. Rob Shaw, the technical manager who had experience in the pharmaceutical industry, talked to everybody he knew to find out who was the best analytical chemist in New Zealand. They picked Allan Aspell, who owned his own consulting firm. First, Rob Shaw commissioned them to analyze the literature. When that was done, Rob told Richard that he was already convinced there was a problem with soy. Richard replied that he needed a toxicity report on the quantities toxins found in soy. So from the literature they had discovered, they analyzed for genistein, daidzein, etc. including from infant formulas. The soy industry has tried to make it appear–all over the Internet, etc.–that this was just one crazy bird breeder who fed raw soy flour to his birds. It wasn't! It was a crazy bird breeder who had fed soy infant formula to his children in 1969 and 1970. It was Isomil and the James' family was living in Walnut Creek at the time. Looking back, they saw some of the same effects in the early infancy of their children that they saw in the birds 20 years later. One of the really characteristic ones is a high level of hyperactivity. The estrogens wind the brain cells and central nervous system up. We had to move out of the 20th floor of the Golden Gateway Apartments in San Francisco, California, break the lease, which cost a pretty penny, because our son was so hyperactive we were afraid he was going to get out of the apartment and parachute 200 feet to the ground without a parachute. You notice it at about age 6-7 when they look like they are autistic or have attention deficit disorder. Those are subtle things; yet Richard could make a list of about nine things that he saw in the birds that he had seen in the kids. In early 1995 he made such a list and gave it to Dan Shehan and Kevin Medlock. After the short term problems you begin to see the serious deficiencies that reproductive systems and immune systems as they are supposed to be developing properly in later childhood. They have some "awful" anecdotal evidence of kids that were on soy formula for 20-21 months.

Richard will send Shurtleff the first page of about 20 of the most important documents.

In April 1994 the first major report, titled *The Toxicity of Soybeans and Their Related Products. Vol. 1. Scientific Reports, Laboratory Analyses, Field Observations,* was compiled and published by Valerie and Richard James. To get it reviewed around the world cost the two about $100,000 of their own money–just to get started. They thought that if they handed this peer-reviewed report to their own [New Zealand] government, they would act. Since, they have spent an additional $250,000 protecting and educating themselves. For example, soy infant formula contains about 150 times more carcinogens than is permitted under U.S. law–and

most of the soy milks on the market contain about 50 times more. It has been general knowledge for about 50 years that these phytoestrogens are carcinogens–put nobody had ever gone and proved it. Even the toxicologist at the local medical school, who did an independent peer review of the 1994 report, wrote an essay for one of the local newspapers about the carcinogenic effects. Unfortunately it was never published die to pressure from the soy industry. Address: 1868 Whangarei Heads Road, Rural Delivery 4, Whangarei. Phone: +64 9 434 0564.

7418. **Product Name:** Veggie Spread: Nature's Alternative to Butter or Margarine. Renamed "Veggie Margarine: Nature's Alternative to Butter" by 31 May 1998.
Manufacturer's Name: Galaxy Foods.
Manufacturer's Address: 2441 Viscount Row, Orlando, FL 32809. Phone: 800-441-9419.
Date of Introduction: 1998. April.
Ingredients: Soy beverage (filtered water, organic tofu*, isolated soy protein), hydrogenated canola vegetable oil, casein (a dried skim milk protein), maltodextrins, organic food acidulants (lactic and citric acids), tricalcium and potassium phosphates, sea salt, carrageenan (sea weed gum), natural vegetetable locust bean gum, natural flavors, annatto and turmeric colors, vitamin E (antioxidant), vitamin A palmitate. *Tofu is made with organically grown and processed soybeans in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 8 oz. white plastic tub. Retails for $2.19 at Safeway supermarket (1997/05, Lafayette, California).
How Stored: Refrigerated.
New Product–Documentation: Product with Label purchased at Safeway supermarket in Lafayette, California. 1998. April 12. Sold refrigerated from a large display next to the produce section. Tub is 3.75 inches in diameter and 2.375 inches high. Label on top of tub: 3 inches diameter. Yellow, white, red, and black on green. "New! Made with organic tofu." Label on side: Fat per serving: This product: 3 gm. Margarine or butter: 11 gm. Website: www.galaxyfoods.com. Soyfoods Center product evaluation: What is it? This nondescript product/spread somewhat resembles a soft tub margarine, but it doesn't taste very good when used in place of butter or margarine–as on toast. The flavor is unusual and somewhat rancid. The package design is excellent. If it contains any tofu, that must be so-called "spray-dried tofu," but it is not labeled as such. Price: $2.19–Very expensive.

Product with Label purchased at Safeway supermarket in Lafayette, California. 1998. May 31. The product is now named "Veggie Margarine: Nature's Alternative to Butter," however it appears to be the same product described above. The price is still $2.19. One ingredient has changed: Hydrogenated canola vegetable oil has been changed to "unhydrogenated canola vegetable oil."

7419. Haedrich, Ken. 1998. Feeding the healthy vegetarian family. New York, Toronto, London, Sydney, and Auckland: Bantam Books. 305 p. Index. 24 cm.
• ***Summary:*** A lovely vegetarian cookbook. Soy-related recipes include: Mom's hot soy milk (p. 13). Tempeh barbecue, avocado, and Monterey Jack burritos (p. 79). Oriental tofu Reuben (p. 80-81). Tempeh barbecued sandwich topped with coleslaw (p. 82). Baked or grilled vegetable packets (with tempeh, p. 129-30). Spaghetti with tempeh tomato sauce (p. 148-49). Tempeh, onion, and cheese enchiladas (p. 181-82).

We especially like p. 292, titled "Mindful eating, smiling grace." Ken Haedrich is a winner of the Julia Child Cookbook Award. Address: Rural New Hampshire.

7420. **Product Name:** Better than Milk–Soy, and Better than Milk–Rice.
Manufacturer's Name: Hearty Life. Div. of Sovex Natural Foods, Inc.
Manufacturer's Address: 9104 Apison Pike, Box 310, Collegedale, TN 37315. Phone: 800-227-2320.
Date of Introduction: 1998. April.
New Product–Documentation: Ad (3-page color) in Vegetarian Times. 1998. May. p. 11-13. "The comparison of milk substitutes requires a sharpened number two pencil." "For a free sample, call 1-800-227-2320, ext. 302.

Talk with Jay Jones of Hearty Life Sales Dept. 1998. May 11. Hearty Life is a new division of Sovex Natural Foods; it was created in March 1998 at Anaheim as the natural foods line of Sovex. The old name of the soy product used to be "Better than Milk?" In April 1998 it was changed to "Better than Milk–Soy." The Rice product was introduced at the same time. Ad in Vegetarian Times. 1999. July. p. 77. "Better Than Milk."

7421. Ryan, Nancy Ross. 1998. Oh, boy! soy! Top chefs celebrate the diversity of soyfoods with 8 show-stopping dishes. *Vegetarian Times* No. 248. April. p. 36-43.
• ***Summary:*** Chefs from stylish restaurants sing the praises of tofu and offer their favorite recipes: Jump start smoothie (with soymilk). Veggie Peking 'Duck' (with frozen, dried sheets of yuba). Miso risotto. Curried tofu and sweet potato wakaya. Barbecued tofu. Sweet-and-sour tempeh with cucumber and cauliflower. Golden-fried bean curd with tomatoes. Sauteed eggplant with miso sauce. Note: The word "soyfoods" is misspelled as "soy foods" (two words) throughout this article. Address: Chicago.

7422. Sass, Lorna J. 1998. The new soy cookbook: Tempting recipes for tofu, tempeh, soybeans & soymilk. San Francisco, California: Chronicle Books. 120 p. Illust. (25 color photos by Jonelle Weaver). Index. 21 x 23 cm.
• ***Summary:*** Contents: Introduction–The soy of cooking

(descriptions of soybeans, black soybeans, soymilk, tofu, tempeh, miso, soy sauce). Appetizers and soups. Entrées. Soy on the side: Vegetables and grains; Salads, slaws and dressings; Scones and a few desserts. Mail order sources. Table of equivalents. A black-and-white photo shows the author. Note: This is not a vegetarian cookbook. Ingredients include swordfish, shrimps, mussels, codfish, clam chowder, etc.

Letter (fax) from then talk with Lorna Sass. 1996. Sept. 8. This trade paperback book, with many full-page color photos, is scheduled to be published in the spring of 1998. Chronicle Books is now publishing a series of books titled *The Vegetarian Table,* with each book featuring the vegetarian cookery of a different country. Address: 46 West 83rd St., New York City, NY 10024. Phone: 212-799-1085.

7423. Sass, Lorna J. 1998. Sensational soyfoods. *Delicious!* (*Boulder, Colorado*) 14(4):50-52, 54-55. April.
• ***Summary:*** Contains recipes using tempeh, silken tofu, black soybeans, and soymilk–excerpted with permission from her latest book, *The New Soy Cookbook.*

Note: The Delicious! website address is written at the bottom of every other page. Readers are invited to visit this website at 7 p.m. Mountain Standard Time for an online chat with soyfoods expert Lorna Sass. Address: Culinary historian, New York.

7424. Soyfoods Association of America. 1998. Soyfoods once a day for life! (Special advertising section). *Vegetarian Times.* April. 12-page color insert after p. 58.
• ***Summary:*** Contains large color ads by Nasoya (tofu and TofuMate), Morningstar Farms (Chik Nuggets), Eden Foods (organic black soy beans) Vitasoy (creamy original natural soy drink), Westbrae (Westsoy soymilks), Westbrae (Vigoraid nutritional drink), Sno Pac (frozen Sweet Beans–organic green vegetable soybeans), and GeniSoy (soy protein bars). On the rear cover are additional small ads (each with a logo) for Lightlife Foods, Lisanatti, Monsanto, Soyco Foods–Div. of Galaxy Foods Co., Soyfoods Association of North America, and United Soybean Board.

Interspersed with the ads is advertorial text and "Soy facts." The text on page 1 begins: "Miracle food. Health insurance in a pod. Nutritional powerhouse. The bean supreme. Nutritionists, physicians, researchers, chefs, and food experts of all kinds are raving about the healthfulness and great taste of soyfoods, and it's no wonder; soy truly is a nutritional and culinary gift from nature.

"Soyfoods are delicious, convenient, and versatile. At breakfast, soy can make an appearance in the form of soymilk, scrambled tofu 'eggs,' or soy 'sausages.' A soy shake or veggie burger makes a great lunch. Try a tempeh stir-fry, or perhaps a creamy tofu dessert.

"So dig in... with the huge variety of soyfoods available at your local natural foods store, it's easy to get your daily intake of soy, and reap the many benefits of the bean supreme."

The inner contents: Food as medicine. Heart health. Fighting cancer. Menopause? What menopause? Strawberry smoothie. Protein punch.

Soy cooking tips (p. 4): Easy ways to incorporate soy into your baking: Use soy flour in your baking. Be aware that soy flour contains no gluten, and therefore yeast breads will not rise without the addition of some gluten-containing flour. About ¼ cup of soy flour per cup of unbleached white flour is recommended for breads, pastas, and pastries. In place of olive oil, try adding a few ounces of Nasoya Silken Tofu and a dash of lemon juice to mashed potatoes. Try mashing miso into your root vegetables in place of butter. When adding miso to dishes, add roughly 1 tablespoon per four servings. Add GeniSoy Natural Vanilla Soy Powder to your baked goods such as muffins or pancakes. Buy Eden Organic Soybeans in a can and use them the same way you would any other canned bean: over rice, with pasta, in stir-frys, etc.

It's not only what you eat; its also what you don't eat. Making healthy eating taste great. Soy fact: soybeans were traditionally considered one of five sacred crops in China.

No time to cook? Try these quick ways of getting soy in your diet.

Strong bones... a matter of calcium retention. Miso.

Soy fact: there is no word for "hot flash" in Japan. Soy beverage.

Miraculous tofu. So soy convenient. Soy fact: Western culture discovered tempeh through the Dutch colonization of Indonesia. Soy fact: tofu was unknown to most people in the United States until Chinese immigrants came to this country in the 1800's. Tofu.

Tempeh. By the handful. Soy fact: miso was developed in China about 2,500 years ago. Where to find it. Address: Washington, DC.

7425. **Product Name:** Silk (Soymilk Sold Refrigerated in Half-Gallon Pure-Pak / Gable Top Cartons) [Chocolate].
Manufacturer's Name: White Wave, Inc. (Product Developer-Distributor).
Manufacturer's Address: 6123 E. Arapahoe Rd., Boulder, CO 80303. Phone: 303-443-3470.
Date of Introduction: 1998. April.
Ingredients: May 2000: Filtered water, organic whole soybeans*, organic raw cane crystals*, cocoa (Dutch process), calcium carbonate, natural vanilla flavor, sea salt, carrageenan, vitamin A palmitate, vitamin D-2, vitamin D-3, riboflavin (vitamin B-2), vitamin B-12. * = Grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: Quart Pure-Pak Carton.
How Stored: Refrigerated.
Nutrition: Per 1 cup (240 ml): Calories 120, calories from fat 20, total fat 2.5 gm (4% daily value; saturated fat 0 gm),

New Product–Documentation: Carton with Label sent by James Terman of White Wave. 2000. May 11. 2.75 by 2.75 by 8¼ inches. Tetra Rex package. "Organic–Third party certified. Calcium enriched. Low 1% fat & vitamin enriched." Talk with James Terman of White Wave. 2001. May 29. Silk chocolate in half gallons was introduced in April 1998.

Product with Label purchased in the dairy case at Safeway supermarket in Lafayette, California. 2010. Dec. 18. One half gallon retails for $3.49. White Wave is now a brand owned by Dean Foods. Soyinfo Center product evaluation. Taste, texture and package design: All excellent. One of the best soy products ever made in the USA.

7426. Gonzalez-Watanabe, Yvonne. 1998. Introducing tofu and soymilk to Costa Rica. Update on soyfoods work in the Los Angeles area (Interview). *SoyaScan Notes.* May 4. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Yvonne just returned from a month (March 29 to April 24) in her native country of Costa Rica, where she was teaching about and studying tofu and soymilk. She gave 8 classes in people's homes, where she taught them how to make and use soymilk and tofu; about 30-40 people attended, and about half the people attended more than one class. During these classes she developed a recipe for tofu seviché (pronounced say-VEE-chay), which is traditionally made with marinated raw fish but occasionally with green plantain or avocadoes substituted for the fish. Yvonne used tofu in place of the fish, and it was a big hit.

Vegetarianism is now quite popular in San Jose, the capital of Costa Rica, but it goes under the name of macrobiotics. There are a number of "macrobiotic" restaurants in the capital; all serve only vegetarian food.

When Yvonne tried to interview the one existing Chinese-run tofu company, they were very uncooperative. It seemed like they might be going out of business because tofu is now being made on a small scale in many other places. Yohan, the big chain of Japanese-run food stores, now makes fresh tofu each day in the store. Many small Chinese food markets and restaurants also make their own tofu. Kikkoman Tofu, sold in aseptic packages, is fairly widely available.

Yvonne's booth and tofu recipe brochure for the LA Tofu Festival are progressing nicely. Margaret Endo has found advertisers for the booklet, which will enable Yvonne to expand its size. She has also found a Costa Rican celebrity to be the host at her booth–Lily Melgar, a well-known actress and friend of her cousin. Yvonne went to Lily's home and prepared her favorite tofu recipes, which Lily liked very much.

Update: Talk with Yvonne. 1998. July 8. The Southern California Gas Co. will be sponsoring Yvonne's booth at the LA Tofu Fair–which is now set for Saturday and Sunday, August 15-16. They will pay for all the bands, the music, and a Spanish-language flyer–largely because they are interested in reaching the Hispanic population in the Los Angeles area. Yvonne has been meeting a large number of people who are interested in tofu–some of them local celebrities. One Puerto Rican lady who is a musician, goes by the name "La India." Ricky Martin from Mexico is a pop music star. Yvonne has cooked Hispanic vegan tofu recipes for both of them.

Update: Talk with Yvonne. 1998 Dec. 10. She is now the guest chef on a TV show in Los Angeles (KCET–Channel 52) twice a month teaching cooking–vegetarian and soyfoods. She receives no pay for this, but it is very interesting and good exposure. Address: 6029 LaPrada St., Los Angeles, California 90042. Phone: 213-254-1712.

7427. Demos, Steve. 1998. Thoughts on making good-tasting soymilk (Interview). *SoyaScan Notes.* May 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The process of making soymilk can be divided into two parts: Making the base, then formulating it before packaging. Many years of experience have taught Steve that the second part of the process is more important than the first in making top-quality soymilk. Ted Nordquist's expertise is in formulating the product more than in making the base. Most of the literature is focused on the first part, making the soymilk or base. Steve has also found that making soymilk is easier and takes much less space than making tofu.

The equipment traditionally used by Ted Nordquist traces its origins to Alfa-Laval. It was "an Alfa-Laval knockoff." Steve does not yet manufacture his own base concentrate; he buys it from several suppliers, formulates it himself, then uses dairies to pack it into ESL cartons. He is now planning to buy a standard soymilk system from one of the major equipment sellers–probably from the Tetra-Laval Group. A soymilk system–without the building, refrigeration, steam system, or packaging equipment–will cost him about $1.2 million. Steve no longer feels a need to economize. His main goal is to get a strong, reliable system from a dependable supplier, and to have it running in less than 1 year inside one of Steve's existing buildings in Boulder. It will take up very little space–something like 500-600 square feet of floor space. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

7428. Fischer, Bruno. 1998. The natural foods market vs. the Reform House market for soymilk in Germany (Interview). *SoyaScan Notes.* May 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Each year about 3 million liters of soymilk are sold at Reform House stores in Germany compared with about 1.2 million liters at natural food stores. Bruno Fischer's soymilk, sold in 1 liter glass bottles, has about 80% of the natural food market. Alpro controls most of the Reform House market with three different brands that it makes and packages in aseptic Tetra Brik cartons. Natural foods stores, like their American counterparts, focus on selling foods, and especially organic foods. Reform Houses, like U.S. health food stores, focus more on pills and supplements.

German dairy milk is mostly (about 80%) sold in gable-top cartons; only about 20% is sold in aseptic cartons. Address: Im Auel 88, 53783 Aetorf, Germany. Phone: 49-2243-4021.

7429. Louie, Elaine. 1998. Vegetarian that's filling. *New York Times.* May 13. p. F8.
• ***Summary:*** Julie Sahni, cookbook author and teacher, says that vegetarianism has been an inextricable part of Indian culture since about 500 B.C., when Mahavira, a Hindu philosopher, developed the concept of ahimsa, or non killing. Although meat is scarce in Indian cookery, protein is not. A recipe for Indian chickpea ragout shows this.

A recipe for Bean curd sauté, adapted from Youngin Hyun, calls for "2 pounds extra-firm or firm bean curd" [tofu]. Hyun, a Manhattan [New York City] photographer and talented home cook, says that Koreans, which also have a long and rich tradition of vegetarian cookery, have used beans as a protein source since 107 B.C. In Korea, all beans, including soybeans, are called "the meat of the soil." Koreans began making bean curd (called *du bu*) during the late Koryo Dynasty (918-1392), according to Mrs. Hyun. Today bean curd comes in two consistencies, firm or silken. The silken type can be sliced then drizzled with a mixture of soy sauce, sesame oil, vinegar, sugar, and chopped scallions. The firm kind is used in stews and sautéed dishes. In the decade after the Korean war (which ended in 1953), Koreans ate lots of bean curd as the poor country rebuilt itself.

7430. Brody, Jane. 1998. What to serve for dinner, when dinner is on Mars: Menu is vegetarian only–if you can get a table. *New York Times.* May 19. p. F1.
• ***Summary:*** At Cornell Univ., Dr. Jean Hunter and other food scientists are working to develop "tasty, appealing, nutritious dishes for consumption on the Moon, Mars, Jupiter–anywhere the astronauts might set up long-term housekeeping." The foods are made from crops that can be grown hydroponically in space. The possible foods include amazake (from rice), seitan (from wheat), soymilk and soy nog, etc.

7431. Roblin, Lynn. 1998. Asian staple soy good for you. *Toronto Star* (*Ontario, Canada*). May 20.
• ***Summary:*** Discusses the health benefits of soyfoods, which may be caused by their rich content of isoflavones, soy sterols, and soy protein. Various soyfoods are discussed: Tofu, soy beverages (brands include So Good and ProSoya So Nice), soy cheese, texturized soy protein (TSP, such as So Soya made by Bay Hill Impex Ltd. and TVP Meatfree made by Health Haven: A Vegetarian Place), tempeh, and most soy flours.

7432. Nordquist, Ted. 1998. Sanitarium Foods' So-Good soymilk now being made in Canada by Dairy World (Interview). *SoyaScan Notes.* May 28. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Sanitarium Foods is Australia's leading soymilk

manufacturer. Their flagship soymilk product, based on isolated soy protein, is named So-Good. In a joint venture between Sanitarium Foods and the Canadian company Dairy World, So-Good is now being made in Canada.

So-Good, with sales in Australia of about $70 million a year, has roughly 85% of the Australian soymilk market. Sanitarium Foods' total sales are said to be about $130 million a year. The company is also Australia's leading manufacturer of breakfast cereals, and they been very successfully in using their cereal advertisements and packaging to promote their soymilk. Address: TAN Industries, Inc., 49 Stevenson St., Suite 1075, San Francisco, California 94105-2975; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-495-2870.

7433. Bingham, S.A.; Atkinson, C.; Liggins, J.; Bluck, L.; Coward, A. 1998. Phyto-oestrogens: where are we now? *British J. of Nutrition* 79(5):293-406. May. [138 ref]
• ***Summary:*** A wide-ranging review of the literature which contains numerous, positive references to soybeans and soyfoods. "Of the two main classes of these weak oestrogens, the isoflavones are under intensive investigation due to their high levels in soyabean." The other class is lignans. "Like the 'anti-oestrogen' Tamoxifen, these seem to have oestrogenic effects in human subjects, in the cardiovascular system and bone." "In infants, the effects of high levels in soya milk formulas are uncertain."

"These phytochemicals are of great interest because they could explain why diets containing large amounts of plant foods are associated with lower mortality and morbidity in adult life. Vegetarians, for example, have strikingly lower overall mortality rates than omnivores (Thorogood et al. 1994)." Address: MRC [Medical Research Council] Dunn Clinical Nutrition Centre, Hills Road, Cambridge CB2 2DH, UK.

7434. Central Soya Co. 1998. The protein book: A guide to soy proteins from Central Soya. P.O. Box 1400, Fort Wayne, IN 46801-1400. 12 p. May. 30 cm.
• ***Summary:*** This full-color guide to the development and use of soy proteins is a revised and condensed edition of a booklet with the same title first published in Dec. 1989. Contents: Introduction. Soy history [filled with errors]. Soybean composition & processing. Types of soy protein: Soy flours, soy isolates, concentrates. Function in the food system: Emulsification, fat absorption, hydration, texture enhancement. Protein and human nutrition: typical analysis table, usable protein, minerals, fiber, isoflavones, cholesterol reduction. Choosing a protein for your system. Applications: Central Soya functional and textured concentrates, meat systems, seafood, dairy systems, cereal and bakery systems, protein drinks and beverage mixes, vegetarian and nutritional products. Chart of applications and products. Research and development.

The products shown in the applications chart are: Response–textured concentrate. Promine–functional concentrate. Soyarich B–enhanced functional concentrate. Soyarich I–water wash concentrate. Soyarich T–textured water wash concentrate. Promax–functional concentrate. Procin–powdered concentrate. Procon 2060–granular concentrate. Centex–textured flour. Note: Central Soya Co., Inc. is a company of Eridania Béghin-Say.

Inserts in the book from the Natural Products Expo. 1999. March. Prevastein (Natural soy isoflavones; 1 page, single sided). Technical Bulletin–Soyarich: Soy isoflavones, by George Rakes (1998 June. 1 p. front and back). Technical Bulletin–Soyarich: Soy protein concentrates (1998 May. 4 p.). Response structured soy protein (1996 Sept. 4 p.). Address: Fort Wayne, Indiana.

7435. Dorrell, Kathryn. 1998. Tastes like success–Top ten: Innovative airless cold grind technology enables IPC to produce soy beverages that consumers are drinking up. *Food in Canada.* May. p. 33. [1 ref]
• ***Summary:*** International ProSoya Corp. (IPC), based in Surrey, British Columbia, was founded in 1994 by three business partners from Saskatchewan: Dorothy Cunningham (who is currently helping to run a sister plant in Scotland), Lorne Broten (chairman and CEO), and George Conquergood (vice-president of operations). It was Conquergood who actually spearheaded the idea of commercializing the airless cold grind process developed by Raj Gupta, an Indian PhD, to feed children in Third World countries.

Conquergood first tried out the patented technology in his restaurant in Saskatoon. Noting the enthusiastic response, he decided to develop it into a separate business.

Initially, the company did not intend to make retail products. Rather, they wanted to use their patented process to produce bulk soymilk, that would be sold to food processors. This strategy changed when Jerry Duncan joined the company in 1996; today he is president and Chief Operating Officer (COO).

This year Duncan expects the company to reach sales of $18 million, up four-fold over 1997. In addition to its five flavors soy beverages, in January IPC launched a line of SoNice soy yogurts and on Feb. 1 the company's U.K. joint venture began producing soymilk. A.C. Neilsen upped its North American growth projections for this competitive sector to 60% from about 25% when IPC entered the market.

7436. Hearty Life. Div. of Sovex Natural Foods, Inc. 1998. The comparison of milk substitutes requires a sharpened number two pencil (Ad). *Vegetarian Times.* May. p. 11-13.
• ***Summary:*** The first page of this 3-page color ad is mostly white paper. Above the title are three dotted circles the diameter of a pencil. Next to each is written: "Insert point here."

When the reader turns the page, a 2-page color spread appears. On the left page, two cartons of liquid soymilk are leaking on the table from the holes supposed punched in them. To their left is a cylindrical container of "Hearty Life Better than Milk–Soy." In front of it is a conical heap of fine white flakes. The right page is filled with text, and topped with this headline: "We're easier to afford, carry, cook with, mix to your taste, and, yes, even clean up." The text explains that Better than Milk Soy and Rice beverage mixes enable consumers to save up to 40% per quart over liquid soymilk. The products are sold at natural and health food stores, not via mail order. "For a free sample, call 1-800-227-2320, ext. 302." Address: Collegedale, Tennessee. Phone: 800-227-2320.

7437. **Product Name:** SoNice (Soymilk–GMO Free) [Natural Sweetened, Natural Unsweetened, Vanilla, Chocolate, Original].
Manufacturer's Name: ProSoya UK Ltd.
Manufacturer's Address: No. 2 Kingsthorne Park, Houstoun Industrial Estate, Livingston, Westlothian EH54 5DL, Scotland. Phone: +44 1-506-433-777.
Date of Introduction: 1998. May.
Ingredients: Water, whole soybeans.
Wt/Vol., Packaging, Price: 1 liter Combibloc aseptic cartons.
New Product–Documentation: Talk with Lorne H.A. Broten, President and CEO, International ProSoya Corp., Surrey (Vancouver), BC, Canada. 1997. Oct. 29. International ProSoya Europe (a subsidiary of IPC, created in Jan. 1997 and began operation in June 1997) is now constructing a soymilk plant in the United Kingdom (in Livingston, Scotland) as part of a joint venture. Dusty Cunningham, who is a director of IPC, is there helping to get the project started–but she is not the person in charge. The factory is expected to begin making soy products in early 1998–an aseptic soymilk, a soy yogurt, soy ice creams, and other food products based on the company's soymilk. There are a number of shareholders in the new joint venture, one of whom is named McCorkle; the joint venture is not with an existing European soy company.

Talk with George Conquergood of International ProSoya Corporation (IPC). 1999. April 21. This company started out as a joint venture between IPC in British Columbia, Canada, and various private investors in Scotland. The product, SoNice, made using only certified organic soybeans, was introduced about a year ago. Packaged in Ireland, it is going well. Two of the products are labeled organic and bear the roundel (also spelled rondel or roundelle; a round figure) or certification symbol of the Soil Association of the UK; the three that were fortified could not be labeled "organic" under European organic labeling laws. It just got listed in the multiples (supermarkets). The company still has a license with IPC but during 1998 IPC sold its shares in the Scottish company. There are now 40 shareholders. Dusty Cunningham went to Scotland to help set up the company.

7438. Spangler, Tina. 1998. Rating the dairy alternatives: Our blind test of 14 nondairy milks revealed which are best coffee, which are best in cereal, and which are best left alone. *Natural Health.* May/June. p. 58-59.
• ***Summary:*** White Wave's Silk is considered the best soymilk product. Vitasoy Light Original was the 2nd highest rated soymilk. Westbrae Natural Rice Beverage (Enriched) received the highest overall rating. The 14 products are: Edensoy Original. Edensoy Extra Original. Harmony Farms Fat Free Rice Drink. Health Valley Fat Free Soy Moo. Mill Milk Organic Oat Milk. Pacific Foods Multigrain Nondairy Beverage. Pacific Foods Nondairy Soy Beverage (Unsweetened). Pacific Select Nondairy Soy Beverage. Rice Dream Organic Original. Vitasoy Creamy Original. Vitasoy Light Original. Westbrae Natural Rice Beverage (Enriched). West Soy Low-Fat Soy Drink. White Wave Silk Dairyless (Soy) Beverage. Address: Associate editor.

7439. Strayer, Dennis. 1998. Independent feasibility study of infant formula manufacturing plant. Hudson, Iowa. iii + 36 p. No index. 28 cm.
• ***Summary:*** Contents: Introduction. Critique of NDI (Nutrition Dynamics International) business plan (dated Feb. 1998; page by page critique). The infant formula industry (in the USA): The FDA description of industry, women, infant, and children (WIC) program, competitive nature of market, competition (Abbott Laboratories/Ross Laboratories-Sturgis, Bristol-Myers Squibb Co. / Mead Johnson Nutritionals, Nestle Carnation Food Service Co.), changes in the industry (Wyeth-Ayerst/Wyeth Nutritionals, Inc.), industry regulation, industry problems (price fixing, fake labels), new technologies. The infant formula market: Market share, demographic studies. Financial studies: Projections. Concerns. Recommendations. Reference list. Contacts made. Appendix: Outline of proposed marketing plan.

The main alternative to cow's milk formula is soy formula, which accounts for about 20% of the total infant formula sold in the USA. Lactose intolerance is probably the main reason for choosing soy formula.

The WIC program: In 1972 the WIC program (Special Supplemental Food Program for Women, Infants, and Children) was established to improve the health of at-risk low income pregnant women, new mothers, infants and children under age five by providing them with supplemental foods, nutrition and health education, and health screening. Infant formula is the single most expensive item in the WIC food package. Infant formula manufacturers are required to compete for selection as the single source of infant formula products used by each state WIC program; all WIC participants from that state are required to purchase only the selected brand. Contracts are awarded to the manufacturer

offering the highest rebate to the state. The WIC program is administered by the Food and Nutrition Service (FNS) of the U.S. Department of Agriculture (USDA). The program awards grants to state health departments or state health and welfare agencies. The WIC program is considered successful and cost-effective. A 1992 study by the General Accounting Office (GAO) estimated that the savings that accrue over 18 years from providing prenatal WIC services to infants born in 1990 would yield a return of $3.50 for each federal dollar invested. This success has led to strong bipartisan support for the WIC program. Funding has increased from $900 million in fiscal year 1981 to $2.86 billion in fiscal 1993. Participation has increased from 2.1 million to an expected monthly average of 5.8 million during the same period. But in 1991 a Congressional Budget Office (CBO) study estimated that only about 56% of those who are eligible for the program are being served.

Infant formula is considered a food product and is regulated by the FDA (U.S. Food and Drug Administration). The Infant Formula Act gives guidance for this regulation, and requires manufacturers to disclose the formulation of each product.

Note: This study was commissioned by Jim Abourezk (an attorney of Sioux Falls, South Dakota), and his client Steve Canoyer (Yankton Sioux Reservation, South Dakota). However it was paid for ($15,000) by David Rabhan, who proposed building an infant formula factory on the Yankton Sioux Indian reservation. Address: Dennis Strayer & Associates, 302 Beverly Blvd., Hudson, Iowa 50643. Phone: 319-988-4187.

7440. Tofutti Brands Inc. 1998. Tofutti. 1997 annual report. 50 Jackson Dr., Cranford, NJ 07016. 13 p. 28 cm. Plus 13-page proxy statement insert.

• ***Summary:*** Net sales for the 52-weeks ended Dec. 27, 1997 were $7,440,000, up 27% from the previous year. The net income rose to $535,000, up almost 4-fold from the previous year ($135,000 in 1996). 1997 was the sixth consecutive year that the company has been profitable.

During 1997 the company introduced the following new products: Peanut Butter flavored Tofutti Cutie, Tofutti Soy Lavasch flatbread crackers, and Tofutti Soy-Rite frozen soy beverage. Sales to distributors in foreign countries (especially Europe) increased by 39% to $865,000 in 1997. David Mintz's salary increased to $180,000 in 1997, including a bonus of $30,000–up from $155,000 in 1996 and $125,000 in 1995. Mintz, age 66, owns 50.4% of the company's common stock. Address: Cranford, New Jersey. Phone: 201-272-2400.

7441. Fitzpatrick, Mike G. 1998. Re: Soya-based infant formulas. Letter to S. Kimberley Belshé, California Dep. of Health Services, 714/774 P Street, P.O. Box 942732, Sacramento, CA 94323-7320, June 3. 6 p. Typed, with initials on letterhead. [41 ref]

• ***Summary:*** This carefully considered and well documented letter begins: "Further to our letter date 18 May 1998, please find enclosed material relevant to Mrs. Valerie James' request that your agency consider the potential health issues associated with feeding soy-based formulas and the safety of soy products in general.

"Soy-based infant formulas and the majority of soy products contain a class of compounds known as isoflavones. Mrs. James is of the opinion that the soy isoflavones have significant potential for reproductive and developmental toxicity in infants fed soy-based formulas and from infant foods in general. With respect to evidence to evidence that the soy isoflavones cause reproductive or developmental toxicity, the following should be noted:

The author then lists ten problems or potential problems from soy isoflavones in infant diets, each backed by one or more references to scientific studies. He continues: "Given this weight of evidence, Mrs. James holds the opinion that soy-based infant formulas are adulterated citing Section 110545 of the California Health and Safety Code, 'Any food is adulterated if it bears or contains any poisonous or deleterious substance that may render it injurious to health of man or any other animal that may consume it. The food is not considered adulterated if the substance is a naturally occurring substance and if the quantity of the substance in the food does not render it products to herbal medicines stating that the 'confidence that soy products are safe is clearly based more on belief than hard data'."

Note: Copies this letter were sent to Senator Barbara Boxer, Senator Frank Lautenberg, and Mrs. Valerie James. Address: PhD, MNZIC, Senior Consultant, Kingett Mitchell & Associates Ltd., Environmental Consultants, ASDA Plaza, Fred Thomas Dr., P.O. Box 33-849, Takapua, Auckland, New Zealand. Phone: (09) 486-8068. Fax: 486-8072.

7442. Vitasoy USA Inc. 1998. Vitasoy (Website printout–part). www.vitasoy-usa.com Printed June 21.

• ***Summary:*** Contents: Home page. 1. Company history (Different holdings; 2 p.). 2. Product Information (Links to each brand; 2 p.). 3. Recipes (Five recipes including one from Martin Yan's "Yan Can Cook"; p. 6). 4. Health information (Diabetes, kidney disorders, cholesterol, cancer, menopause, and how to get more information; 3 p.). 5. What's new (Company news, new faces, new customer service department; 2 p.). 6. Gifts & games (Under construction). 7. Azumaya (Info on products: Tofu, wraps; 5 p.). 8. Vitasoy (Soy drink suited for Western tastes; 2 p.). 9. Vitasoy & Vita (English and Chinese, Describes ethnic line: Vitasoy Tofu and Vita; 5 p.). 10. Vitasoy / Vita Beverages (Soy drinks, tea drinks, juice drinks; 4 p.). 11. New Menu (VegiBurger, VegiDog, TofuMate seasonings; 3 p.).

The section on company history begins as follows: "Vitasoy International Holdings was founded in 1937 by

Mr. Kwee-Song Lo when he made his first batch of soymilk to feed Chinese refugees who were plagued and diseases like beri beri and pellagra."

Note: All accounts of Vitasoy's history, including many written by Mr. Lo himself, state that his company (originally named Hong Kong Soya Bean Products Co. Ltd.) was founded in March 1940 and first made commercial soymilk at that time. In 1939 he and a small group of volunteers made soymilk at a refugee camp set up in Argyle Street on Kowloon. They gave it away free of charge to Chinese refugees fleeing the Japanese invasion of China. The results of this volunteer effort gave him the full confidence to start a company. Address: 400 Oyster Point Blvd., Suite 201, S. San Francisco, California 94080. Phone: 1-800-VITASOY.

7443. White Wave, Inc. 1998. White Wave (Website printout–part). www.whitewave.com Printed June 21. • ***Summary:*** Contents: Home page. 1. About White Wave (Mission statement, brief history; 1 p.). 2. About soy (Nutritional benefits; 1 p.). 3. Related sites/ links (Vegetarian / soy / natural foods, sites about Boulder, Colorado; 1 p.). 4. What's new. 5. Product info, questions and answers (Name of all products with nutritional, ingredient, and package view information; Frequently asked questions; Questions about allergies; How do I cook with this stuff; 6 p. total). 6. Where to find our products (Directory of retail stores). 7. Special offers (Books and bumper stickers which can be ordered from White Wave; 1 p.). 8. Recipes (8 pages of recipes for tofu, tempeh, and Silk soymilk on 3 x 5-inch cards).

"White Wave's mission is to creatively lead the full integration of healthy, natural, vegetarian foods into the average American diet. 'Our interest is in promoting the use of foods we consider the world better off *with,* rather than without.' Steve Demos, president of White Wave.

"Founded 20 years ago in 1977 as a small tofu company, White Wave, Inc. has grown to become one of the largest soyfoods manufacturers in the United States and a leader in the vegetarian foods industry. White Wave's reputation for quality, consistency and innovation has led its sales to grow 20% annually over the last 6 years." Address: 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

7444. Osho, Sidi M. 1998. Re: CIDIS Ltd. and work with soyfoods in Nigeria. Letter to William Shurtleff at Soyfoods Center, June 25. 3 p. Typed, with signature on letterhead. • ***Summary:*** "After I returned to Nigeria [from a trip last year to Atlanta, Georgia]. it was difficult in deciding whether to continue looking for a job or follow my dream.

"I then decided to follow my dream. I registered a company called CIDIS Ltd in 1997 [RC 311981]. We undertake consultancy services on Agriculture and Food Processing. Our focus however is soybean processing and utilization. We conduct training at rural and urban levels, i.e., State government levels in order to promote the use of soybean and improve the nutrition of our people in Nigeria. For paid training, i.e. train the trainers, we collect a fee and award certificates to the trainees. The trainees are either community development officers; or Agriculturists at government parastatals.

"In order to generate income, we introduced into the market some processed soybean products, e.g. Soy Gari, Soy Fufu, Soy Lafun, Soy Ogi, Soy Milk, Soy Elubo, Soy Vita, Soybean, Vegetable oil, Roasted Soybean Flour, and High Grade Soybean Flour. There is high demand for the products when we create awareness. We also have started a market outreach program where we do training in the local language free at a market four times a week. At the end of the awareness program, we retail some of our products. Attached are the labels from the processed products. These products are made in a building which I rented, and also retailed in the CIDIS Soymart Stores. Some of the equipment used for processing is locally fabricated."

"It has been very difficult for me to get the funds to start my business. I wrote proposals to the Nigerian Government, National and International NGOs, funding bodies, but I did not get any positive response. Then I decided to take a bank loan... I took a risk in a cause I believe in and I am very sure."

(2) A color photo of Sidi, surrounded by four men in company uniforms, two holding her soy products, standing in front of a building with "CIDIS SoyMart" written in large blue letters over the front door.

Enclosed are: (1) Large labels (printed in dark blue on white, with the nutritional composition, directions for

use, and the name address of the manufacturer–but no ingredients). Address: No. 32, Awolowo Ave., Bodija; G.P.O. Box 38619, Dugbe, Ibadan, Nigeria. Phone: 810-0301.

7445. Chajuss, Daniel. 1998. Soy protein concentrate: Current status. *Oils & Fats International* 14(3):35-36. June.
• ***Summary:*** The three main commercial soy products are (1) Full fat and defatted soya flours and textured soya flour–current world production and sales about 80,000 tonnes (metric tons). (2) Soya protein isolates–current world production and sales about 130,000 tonnes. (3) Soya protein concentrates–current world production and sales about 284,000 tonnes, and growing at about 15% a year. More than 75% of all concentrates are now used for human consumption, the rest being used in pet and animal feeds. In human foods, concentrates are used mainly in meat alternatives or extenders. In animal feed they are used in formulations for calves and piglets as a milk replacer, in pet foods and in special feedstuffs such as 'fish-flavour-free' bland fish seeds, and for mink and other animal feeds. Concentrates are devoid of the antigenic protein components present in most other soya products.

Production of soy protein concentrates worldwide is presently concentrated in the hands of two companies: ADM and Eridania Béghin-Say (Central Soya). About 95% of all soy protein concentrates worldwide are now made by the counter-current aqueous alcohol was system, originally developed in the late 1950s by the Hayes Company of Israel. A table shows estimates of world production (in metric tons) by company and country in 1998:

ADM, Netherlands 70,000 AAW (Aqueous alcohol wash).

ADM, USA 60,000 AAW.

Central Soya, USA (several factories) 60,000 AAW.

Central Soya, Aarhus, Denmark 50,000 AAW.

Sogip (Central Soya group), France 15,000 AAW.

Solbar Hatzor (formerly named Hayes Ashdod) (with Soya Mainz, an ADM subsidiary), Israel 15,000 AAW.

Sopropech, France 6,000 AWL (Acid/water leach).

Sanbra (Bunge), Brazil 5,000 Acid wash.

ADM, USA 3,000 Acid wash.

Lucas Ingredients, UK 2,000 (unconfirmed, Acid wash).

Total worldwide 284,000 metric tons.

The margins on soy protein concentrates are much more attractive than those from crushing soybeans into oil and meal–which in recent years have been either small or negative. The cost of making a tonne of concentrates ranges from US$459 to $600. For food applications, the sales price obtained by manufacturers for powder and small grits forms ranges from $1,200 to $1,600 per tonne, but for textured or functional forms this increases to $1,500 to $3,000 per tonne. The sales price for the pet food, milk replacer, and special feed industries ranges from $1,000 to $1,200.

Another high-value product, a potential source of additional income, is soya molasses, a by-product of making soy protein concentrates. It is a rich source of soya phytochemicals and soya oligosaccharides.

A second table shows estimates of world production (in metric tons) of soy protein isolates, with estimates for 1997 and forecasts for 1998.

Protein Technologies International (PTI, USA) 60,000 in 1997, 70,000 in 1998.

ADM, USA 15,000, 25,000.

PTI Belgium 15,000, 15,000.

Fuji-PTI Japan 10,000, 10,000.

Sanbra (Bunge) Brazil 5,000, 10,000.

Others worldwide 6,000, 8,000. Total worldwide 110,000, 138,000. Address: Managing Director, Hayes General Technology Co. Ltd., Misgav Dov 19, Mobile Post, Emek Sorek, 76867 Israel. Phone: +972-8-8592925.

7446. **Product Name:** [Tofu, Soymilk, Tofu Cheesecake, Tofu Cheesecake with Apples, Tofu Pie with Bananas, Tofu Mayonnaise, Mushroom Quiche with Tofu, Soymilk with Oats & Natural Sugar, and Tofu Burgers].
Foreign Name: Tofu, Leche de Soya, Cheesecake, Cheesecake de Manzana, Mayonesa de Soya, Torta de Championes con Tofu, Avena Helada con Leche de Soya, Hamburguesa de Tofu.
Manufacturer's Name: DeliSoya–Delikatessen.
Manufacturer's Address: Calle 78 No. 12-03, Santafe de Bogotá, Colombia. Phone: 346-2178 (OF) or 610-1210 (HM).
Date of Introduction: 1998. June.
How Stored: Refrigerated.
New Product–Documentation: Letter from Nestor and Cecilia Santacruz. 1998. Sept. 8. "We started on June 26 in Bogotá (Colombia) a small scale manufacture of soyfoods products, tofu and soymilk, that we distribute personally and sell in a place called 'Delisoya' (see address above). Your books are a permanent source of inspiration. We also prepare 'cheesecake,' *mayonesa de soya,* and *hamburguesa de soya.* Our shop is not located in a place of much public influence but the response to it has been very stimulating and we are very encouraged."

Letter and forms filled out by Nestor and Cecilia Santacruz. 1998. Oct. 14. They started and own Delisoya, which is located in northern Bogota. They do not have labels for their products. Each week they make, on average, 96 cakes of tofu (500 gm each) and 25 liters of soymilk. They used to deliver tofu to a store named *El integral* and to a restaurant named Caliz, but not they reserve all of their small production for their soya deli. Some Japanese housewives are starting to come to Delisoya to purchase tofu. Nestor and Ceci reserve one day each week to deliver tofu to others at their homes. The foods served each day at Delisoya are shown on a menu board. They occasionally make other foods besides those shown above, so that people can try them

and see what can be done with tofu–for example *Torta de champioñ con tofu* (Mushroom quiche with tofu). Turnovers–Tofu, vegetables and spices wrapped in a crust. Sandwiches–Whole wheat bread, tofu, and vegetables. Soymilk with oat and natural sugar (*panela*).

Ingredients–Tofu burgers: Tofu, onion, carrot, parsley, oregano, salt & pepper. Whole wheat bread, lettuce, fresh vegetables. Price: $2.500 each. Source: Mrs. Bernadette Kikuchi (wife of Tomio Kikuchi). Cheesecake (plain or with fruits): Tofu, tahini, lemon, oil, raisins, brown sugar, vanilla, salt, okara granola. Price: $15.000 pesos each. Refrigerated. Source: *The Book of Tofu* (p. 150; Ten Speed Press ed.). Tofu mayonnaise: Soymilk, tofu, lemon, oil, salt. Price: $1500 pesos for 125 gm glass jar. Soymilk, tofu, lemon, oil, salt.

Letter from Cecilia and Nestor Santacruz. 2000. Sept. 12. "As for questions (Bill's letter of 16 Nov. 1999) about our products: 1. *Torta de Champiñoes con Tofu:* It is more like a quiche and can be named 'Mushroom quiche with tofu.' 2. In hot places in Colombia we like to drink *avena helada* which is a drink made of milk (dairy) with powdered (instant or cooked) oat, sugar and cinnamon in a blender and cooled for freshness. We make it with soy milk and it tastes as well. 3. It is Hamburguesa de Tofu. I was wrong saying Hamburguesa de Soya. 4. In 1998 we had plain Cheesecake and Cheesecake de manzana (Tofu cheesecake with apples) and Tofu pie with bananas. We still use apples a lot in pies, drinks with soymilk but have introduced other fruits that are easily available such as mulberry, agraz, guayaba, curuba etc. We make pumpkin pie with Tofu too. We like to vary the repertoire because the same people come to see us often. 5. Yes, we use okara granola in all the different types of pies. We love it instead of bread crumbs and crusts made of wheat, etc. We plan to increase using it in the near future. 6. It is $15,000.00 pesos (or 7.00 U.S. dollars approx.). One dollar is $2,200.00 approx. Our money is so devalued that the least coin is of 20 pesos but no one wants it because it doesn't have any commercial value. 7. It is 'Tofu mayonnaise'. In 1998 we referred a lot to soy because it is a much better known word than Tofu. A 125 gm [of Tofu Mayonnaise] used to cost 1,500 pesos but now it is 2,500 pesos."

7447. **Product Name:** Veggie SourCream: Nature's Alternative to Sour Cream.
Manufacturer's Name: Galaxy Foods.
Manufacturer's Address: 2441 Viscount Row, Orlando, FL 32809. Phone: 800-441-9419.
Date of Introduction: 1998. June.
Ingredients: Soy beverage (filtered water, organic tofu powder*), unhydrogenated canola, calcium caseinate (a dried skim milk protein with calcium), maltodextrins, corn starch, calcium and sodium phosphates, sea salt, carrageenan (sea weed gum), natural vegetetable guar and locust bean gums, organic food acidulants (lactic & citric acids), sea salt, natural flavor, potassium sorbate (to preserve freshness), vitamin E (antioxidant), vitamin A palmitate. *Tofu is made with organically grown and processed soybeans in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 8 oz. white plastic tub. Retails for $1.89 at Safeway supermarket (1998/06, Lafayette, California).
How Stored: Refrigerated.
New Product–Documentation: Product with Label purchased at Safeway supermarket in Lafayette, California. 1998. June 28. Sold refrigerated from a large display next to the produce section. Tub is 3.75 inches in diameter and 2.375 inches high. Label on top of tub: 3 inches diameter. Yellow, white, red, and black on green. "New! Low fat. Made with organic tofu."

7448. *Ontario Soybean Growers' Marketing Board Newsletter.* 1998. Project S.O.Y. winners. June. p. 1.
• ***Summary:*** "In 1997, First Line Seeds, in partnership with the University of Guelph, created a competition called Project S.O.Y. In this case, S.O.Y. is an acronym for Soybean Opportunities for Youth. Project S.O.Y. challenged entrants to develop new products using soybeans and was open to graduate and undergraduate students at the University of Guelph. This year the contest was expanded to include the Ridgetown, Alfred and Kemptville Campuses of the University."

"For the second year, the first prize winners in the undergraduate category were Jennifer Lo and Nicole Lepowski, Food Science students at the University of Guelph. The paid won $2,500 for their product *Expressoy,* a coffee-like beverage made from 100% roasted soybeans. Second place honors went to *The Joy of Soy,* a decadent non-dairy dessert shake. Madley Soy, a fresh soy pasta, and Soyburst, a soy beverage, tied for third place." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

7449. **Product Name:** Pacific Naturally Complete: Complete Liquid Nutrition (Fortified Soy & Grain Drink) [Vanilla, Chocolate].
Manufacturer's Name: Pacific Foods of Oregon, Inc.
Manufacturer's Address: 19480 S.W. 97th Ave., Tualatin, OR 97062. Phone: 503-692-9666.
Date of Introduction: 1998. June.
Ingredients: Multi Grain base (Filtered water, whole oat groats, triticale, barley, brown rice, amaranth), organic soymilk* (filtered water, whole organic soybeans), soy protein isolate, cane juice sweetener, vegetable fiber, natural vanilla flavor with other natural flavors [or natural cocoa powder, expeller pressed canola oil, tricalcium phosphate, natural flavors, sea salt, carrageenan, magnesium phosphate, potassium chloride, vitamin C, etc.
Wt/Vol., Packaging, Price: 1 quart Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: Leaflet (glossy color, front and back, 28 cm) sent by Patricia Smith from Natural Products Expo West at Anaheim. 1999. March. (but leaflet is dated "6/98"). Phytonutrients. Essential amino acids. "Each serving of this rich, satisfying drink provides 26 vitamins and minerals and 9 grams of high-quality protein." Two sets of color photos on the front show cartons of the two flavors plus the product in a tall glass.

On the rear is given the nutrition facts, ingredients, UPC numbers, and case/pallet information.

7450. **Product Name:** Soyganic.
Manufacturer's Name: Sunrise Markets Inc.
Manufacturer's Address: 729 Powell St., Vancouver, BC, V6A 1H5, Canada.
Date of Introduction: 1998. June.
Wt/Vol., Packaging, Price: Paperboard tub.
How Stored: Frozen.
New Product–Documentation: Talk with George Conquergood, Vice-president of Operations, International ProSoya Corp., Surrey (Vancouver), BC, Canada. 1999. SoyaWorld presently markets three soymilk products: Sunrise soymilk (a beany-flavored product made and packaged by Sunrise in plastic bottles), Soyganic (a traditional beany-flavored product made by Sunrise with organic soybeans, packaged at Dairyworld in a gable-top carton and sold refrigerated), and So-Good (licensed from Sanitarium Health Food Co. in Australia, formulated and packaged in gable-top by Dairyworld, and based on soy protein isolates). Soyganic and So-Good appeared on the shelves at about the same time in 1997 under the SoyaWorld brand. They distribute those three products extensively across western Canada, and sell them in the dairy case.

ProSoya News release. 1999. May 17. *Soyganic* is an organic soy beverage fortified with calcium and other essential nutrients.

Talk with Peter Joe, owner of Sunrise Markets. 1999. May 26. In late 1997 the Canadian government first allowed soymilk to be fortified with calcium and vitamins. This showed a weakening of their many laws designed to protect dairy products. Use of the word "milk" is still not allowed. Soyganic was launched in mid-1998.

7451. Westbrae Natural Foods. 1998. Only Westbrae... Makes soy delicious (Ad). *Vegetarian Times.* June. p. 30.
• ***Summary:*** This one-third page color ad shows three of Westbrae's main categories of soy beverages: Nonfat (vanilla and plain), lite (vanilla, plain, and cocoa), and plus (vanilla, plain, and cocoa, fortified with calcium and vitamins A&D). Other Westbrae non dairy products include Malteds, Lite Malteds, Lite Creamer, and Rice Drink. Address: P.O. Box 48006, Gardena, California 90248.

7452. **Product Name:** Certified Organic Soymilk (Sold in Quart Pure-Pak / Gable Top Cartons) [Regular, and Chocolate].
Manufacturer's Name: Wildwood Natural Foods (Marketer-Distributor).
Manufacturer's Address: 1560 Mansfield Ave., Suite D, Santa Cruz, CA 95062. Phone: 408-476-4448.
Date of Introduction: 1998. June.
Ingredients: Filtered water, whole non-genetically modified, certified organic soybeans*, certified organic brown rice syrup*, naturally occurring calcium carbonate, sea salt, carrageenan, xanthan gum, vitamin A palmitate, vitamin D-2, vitamin B-2 (riboflavin), vitamin B-12. * = Grown and processed without synthetically compounded herbicides or pesticides in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 32 fl. oz (1 quart). Pure Pak carton. Retails for $2.29 (1998/07 California).
How Stored: Refrigerated.
New Product–Documentation: Talk with Billy Bramblett of Wildwood Natural Foods. 1998. June 24. Wildwood recently introduced a new fresh soymilk, sold in gable-top quart cartons. The flavor is excellent. Two packages with Labels sent by Billy Bramblett. Green, red, blue, and orange on white. The front panel states: "1% of sales donated to the Breast Cancer Fund. Low fat. Non-dairy drink. Calcium and vitamin enriched. Naturally lactose free." One side panel states: "A diet rich in soy contains a variety of beneficial phytonutrients including*: Isoflavones. Genistein. Phytoestrogens. * = Consult your physician concerning the role soy may play in effecting specific chronic diseases. Trusted purity since 1980: Naturally antibiotic and hormone free. Vegan–No animal products. Enjoy other Wildwood soy foods: Organic tofu. Wild Dogs. Vegie Burgers. Meltables. Talk to us at 1-800-499-Tofu." A second side panel, titled "The fresh approach to healthy eating," states that "1% of sales of this product goes to researching environmental causes of breast cancer."

Talk with Bill Bramblett. 1998. June 9. The original Wildwood soymilk was named Yo Soy! Ted Nordquist and his company TAN Industries, Inc. have played a major role in developing and making this soymilk. Jeremiah and Ted have been friends for many years, and recently they have been working together very closely on this soymilk. They used to call it the "Ted and Wally Show." Jeremiah went to Ted 4-5 years ago; Ted had a new technology for making non-beany soy base. Jeremiah and Ted came up with a formulation for the final product made from Ted's soy base. They had dreams of building a plant together, where Wildwood would do the tofu side and Ted would do the milk side. But in the end, Wildwood didn't have the funds or energy to go that direction, so Ted went to White Wave and told them about his great soymilk. Then White Wave came up with their own formulation (which was different from Wildwood's formulation), resulting in Silk. Ted makes

his soymilk at a plant in southern California [Soyfoods of America], then another California company [Morningstar, formerly called Avoset] finishes and packages the product for Wildwood. Ted is in the process of developing a new yogurt, which is not yet on the market. He would like to make it for Wildwood, but Billy doesn't think it is ready. Also Ted wants the yogurt package to bear the words "Made with TAN soy base."

Talk with Jeremiah Ridenour of Wildwood. 1998. Oct. 20. This product was first sold in June 1998. It may be the first soymilk in America to have the word "Soymilk" in the product name–to test the FDA. Wildwood has nothing to do with the manufacture of packaging of the product; It is made at one place and packaged in another. White Wave's Silk is this product's main competitor. Jeremiah believes that Wildwood's formula is better. See also Oct. 1998 interview with Jeremiah on the early history of this product. This product states in the ingredient listing that it is GMO free, but Jeremiah thinks that the term "organic" is still more important to consumers than "GMO free."

Leaflet (single sided, 8½ by 11 inch, color) sent by Patricia Smith from Natural Products Expo West. 1999. March. "Introducing Wildwood Natural Foods Organic Soymilk. Low fat. Delicious non-dairy drink. Calcium & vitamin enriched. Naturally lactose free. 1% of sales donated to the Breast Cancer Fund. Available in Regular and Chocolate flavors."

Product (chocolate, quart) with Label purchased at Safeway supermarket in Lafayette, California. 2001. April 1. Both real vanilla and chocolate quarts are sold refrigerated in the Odwalla cooler in gable-top cartons for $1.99/quart. One side panel reads: "Wildwood has been making soymilk for over 20 years. As a pioneer in American soyfoods Wildwood has learned to make great tasting nutritious soymilks." The certified organic chocolate is produced from beans grown in a bio-diversity preserve in Costa Rica and Panama.

The back panel states: "Wildwood Natural Foods. Affecting dietary and agricultural change. Wildwood owners Jeremiah Ridenour and Billy Bramblett both grew up in Michigan, then migrated to California and became evangelists for soy. Jeremiah comes from a soybean farming family. While he was studying tofu production in Japan, his future partner Billy was concocting tofu delectables at the legendary Sleeping Lady Cafe in Fairfax, California. Wildwood Natural Foods started producing organic Soymilk and Tofu in 1980. Today these two lead their company's production of thirty-five delicious, premium, organic soy products. More organic choice means less chemicals in your environment..."

7453. Skiff, James. 1998. Jim now has a company name (US Soy) and a GMO-free soybean cleaning plant at Mattoon, Illinois (Interview). *SoyaScan Notes.* July 6. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Jim closed the deal on the soybean cleaning plant 2½ weeks ago; it was held up by the need for a new environmental impact report. The plant is located 43 miles directly south of Champaign, Illinois at 2808 Thomason Dr., Mattoon, Illinois 61938. Phone: 217-235-1020. He has decided to call the company US Soy, LLC (Limited Liability Corporation). Jim is president, Howard Weiner is a director and secretary of the corporation. They have already chosen a board of directors. Jim's home in Minnesota is 650 miles from the plant, so he flies down to the plant once every other week. By August 1, he plans to be at the plant almost all the time. Last Thursday he ordered the spiral separator–which he needs to add to the plant. As soon as that is in, he could begin cleaning. Whether he does that before his contracted beans start to arrive in about the third week in September is an open question.

Jim expected to run into plenty of "roadblocks" and obstacles in setting up this plant, "but they just all evaporated." He was told it was too late in the year to find growers, but that worked out smoothly–though he probably overpaid them on premiums this first year. Farmers in this area have not done much in the way of contract growing or food soybeans. Jim now has 8,200 acres of soybeans (high-protein, large size, and clear hilum) under contract with soybean growers in the area. This should amount to about 400,000 bushels. These growers seem very receptive and are delighted to be able to earn a premium of about $1.50 per bushel over what they could get from their local elevator. These farmers are now growing value-added soybeans. Jim has no buyers for his cleaned GMO-free soybeans yet. He is now choosing a logo and designing a letterhead so he can do a mailing to soyfoods manufacturers.

This plant was built by Golden Valley Microwave (based in Minnesota) for seed-grade popcorn at the huge cost of $4.6 million. They spared no expense to get a state-of-the-art cleaning plant. It was ready to operate in 1992. The Ken Bradney Co., of Des Moines, Iowa, designed the plant; they have a reputation for being one of the top grain plant design companies. It was operated for approximately 2 years, then ConAgra bought out Golden Valley Microwave and transferred the popcorn operations to some of their own plants and closed this one down (since it was the "cadillac" with the highest asset value) for tax purposes.

The complex consists of 6 buildings on about 27 acres. The largest building is a 6-story tower plus a processing room, which is about 18,000 square feet.

Jim is looking at new areas for soybean processing; he wants to buy two new pieces of equipment: A spray-drying plant to make spray-dried soymilk, and an extrusion milling operation that would make very fine particle soy flour for one particular customer.

Looking at the big picture, Shurtleff makes the following suggestions: Develop a strategic alliance with the Illinois state soybean board that will dramatically leverage your

ability to spread your message. Suppose the state of Illinois was willing to hedge its bet on the future of genetically engineered soybeans, and they decided to position Illinois as the world's leading source of both food-grade soybeans and GMO-free soybeans. This program would run parallel to their present programs to sell all types of soybeans and would not conflict with those. The key point is that no U.S. state has yet positioned itself as a leader in these two areas.

Note: Jim's first non-GMO soybeans were available for sale in August 1998. Address: Cornbelt Foods, Inc., P.O. Box 218, Marshall, Minnesota 56258. Phone: 507-537-1406.

7454. Elliott, Barbara. 1998. Re: New developments at FarmSoy Company in Summertown, Tennessee. Letter (fax) to William Shurtleff at Soyfoods Center, July 8. 1 p.
• ***Summary:*** "Correct me if I'm wrong but no one has challenged the claim that FarmSoy Company is the oldest non-Asian soy dairy in the U.S. [Note: Soyfoods Center believes that claim is correct for companies started after 1970. But a number of Seventh-day Adventist soy dairies, including one in Madison, Tennessee–near Summertown, started in the 1920s and 1930s]. We presently are using only certified organic soybeans that are not genetically modified and all of our products are certified organic by Florida Growers & Consumers, Inc."

"Our soymilk is now a principal ingredient in a new drink just out in the market, called Fruit Quest by Del Valle Food Products, Inc. It is the first drink in the U.S. to combine soymilk and fruit juice. Fruit Quest is very tasty and is available through Whole Foods, Wild Oats, and Tree of Life." Address: 96C The Farm, Summertown, Tennessee 38483. Phone: 615-964-2411.

7455. *Globe & Mail* (*Toronto, ONT, Canada*). 1998. Milking healthy sales from the lactose-intolerant. July 15. p. A26. Facts & Arguments. [1 ref]
• ***Summary:*** In Canada, the nationwide retail value of soy and rice beverages (all flavors) at supermarkets and grocery stores has grown from $3.4 million in 1995 to $5.9 million in 1996, up to 9.8 million in 1997–according to a report from A.C. Nielsen. Note: These figures do not include sales in natural- and health foods stores.

New brands of soya drinks come in many flavors; they are free of cholesterol and lactose, and have added calcium. "Studies also suggest that the drinks can also relieve menopausal symptoms, help stave off osteoporosis and breast cancer, and reduce 'bad' cholesterol." A color photo shows the top half of packages of Natural soy beverage (aseptic) and So Nice (fresh, gable-top).

7456. Doerge, Daniel R. 1998. Antithyroid factors in soybeans that can cause thyroid problems or goiter (Interview). *SoyaScan Notes.* July 21. Conducted by William Shurtleff of Soyfoods Center. [1 ref]
• ***Summary:*** Dan (whose surname is pronounced DOR-gee; rhymes with Porgy) and coworkers have done research showing that the isoflavones genistein and daidzein are the antithyroid principles in soybeans. They fractionated the soybean extract and showed that the genistein and daidzein peaks had essentially all of the antithyroid activity that was present in the extract. Then they did mass spectrometry to characterize substances. This is very interesting because isoflavones are not inactivated or destroyed by heat; they are not heat labile. Yet most of the literature shows that heating soy products destroys their anti-thyroid principles. Dan does not know how to explain this. He believes he is starting to understand the mechanisms and becoming able to make predictions in terms of thyroid status, iodine status, and potential for hazards in humans.

People are now promoting soy because of its health benefits and chemotherapeutic properties (which may be based on genistein and daidzein), and it may have some of these excellent properties, but it could also cause problems for people who are "thyroid compromised." A surprisingly large number of Americans have hypothyroidism or a thyroid problem, or are on the borderline of having a thyroid problem (clinically euthyroid), and they should not be consuming large amounts of genistein or daidzein–especially in the form of supplements. About 10% of American women over the age of 60 are hypothyroid (have low thyroid levels); this happens with a gradual reduction of autoimmune function.

Some data from soy-based infant formula makers show that 20-25% of American babies, infants and children are raised on soy formula. Research by Ken Setchell has shown that these kids have higher blood levels of genistein and daidzein than women who take soy/estrogen supplements. There is no direct evidence that there is a problem in kids–but this is the most important potential risk that should be addressed with further research.

In addition, there is evidence in the literature that kids on soy formula are more likely to go on autoimmune thyroiditis in their later lives. (See Fort, P., et all. 1990. "Breast and soy formula feeding in early infancy and the prevalence of autoimmune thyroid disease in children." *Journal of the American College of Nutrition* 9:164-67). "But let's be clear about this. I think there is a big difference between people eating soybeans or soybean products, and people taking genistein or isoflavone supplements. The level of estrogen of intake is much higher with the supplements, and that makes a great deal of difference."

Ishikawa and coworkers in Japan have done some good work on soy and thyroid function in about the 1970s or 1980s. Address: PhD., Dep. of Health and Human Services, Food and Drug Administration, National Center for Toxicological Research, Div. of Reproductive and Developmental Toxicology, Jefferson, Arkansas 72079-9502, and Dep. of Biochemistry, Univ. of Arkansas for Medical

Sciences, Little Rock, AR 72205. Phone: 870-543-7000.

7457. Mueller, Ed. 1998. Update on Takoma Soy Inc. and Potomac Whole Foods (Interview). *SoyaScan Notes.* July 22. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Takoma Soy has not yet started making tofu; they hope to be in production in a couple of years. They are short on capital and using what they have to work on the building, and to build a bakery and community kitchen. Jon Kessler is still at Twin Oaks; he works in the field of soy, but he no longer works at their tofu shop. Potomac Whole Foods (PWF), their wholesale and distribution business, brings in the money. Ed Talked with Yaron the other day. Yaron is at Olive Tree Works; they are the people who use Oak Tree's tofu to make other products, such as savory tofu. "If we started a tofu business, we'd go into partnership with Olive Tree Works."

Ed is quite sure that Bean Mountain Natural Foods (of Weaverville, North Carolina) is out of business. He thinks that some of their equipment ended up at Twin Oaks.

Ed now buys and distributes tofu from Spring Creek, which makes a firm nigari tofu and is located in a relatively depressed part of West Virginia. So this is an ethical and social issue; Ed does not want to put them out of business, or even really compete with them. If Ed started making tofu then, of course, PWF wouldn't distribute their tofu–and that would hurt them because PWF is their biggest distributor. So Ed is thinking of making a softer tofu curded with calcium tofu, then using that as a base for other tofu products such as tofu mayonnaise, tofu puddings, etc. He would also like to make a good soymilk. In that way, Ed would not compete with Spring Creek.

Ed is still interested in starting a tofu school as part of his tofu factory.

Update: Talk with Jon Kessler of Sunergia. 1999. March 21. Ed is still working on his soy business. He hopes to be making commercial products by the end of 1999. Jon heard from Ed Mueller of Potomac Whole Foods and Bread of Life that Bud, Inc. of Baltimore has lost its lease and perhaps has ceased operations. Ed is hoping to move the Bud equipment up to Hancock, Maryland, and start a new tofu shop there. Address: 11 South Pennsylvania Ave., Hancock, Maryland 21750. Phone: 301-678-5283.

7458. Bartkus, Tony. 1998. The importance of DHA, EPA, and omega-3 fatty acids in human diets (Interview). *SoyaScan Notes.* July 30. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** DHA stands for decosahexaenoic (pronounced deh-KO-suh hex-uh-NO-ic) acid. It is one of various omega-3 fatty acids, and the most highly unsaturated among these. EPA (eicosapentaenoic) is another omega-3 fatty acid. Small amounts of DHA are found naturally in soymilk, but they are oxidized.

DHA is considered a required nutrient in Europe, and scientific studies have shown it to have a cardio-protective effect. The World Health Organization (WHO) has a recommended daily allowance (RDA) for both DHA and EPA. In Europe, DHA must be included in infant formulas; this is not the case in the USA. The only natural sources are fish oil and breast milk. However the fish do not manufacture DHA in their bodies; they obtain it from plankton or shrimp that they eat. His company, which started as a research firm in 1987, makes pure DHA in California from vegetable sources using a carefully controlled fermentation system. OmegaTech has been most active in Europe for the past 3-4 years. Now they want to start educating Americans about the importance of DHA, and adding it to basic foods–such as soymilk. It does not affect the flavor of foods to which it is added. They are awaiting FDA approval. Address: OmegaTech, Inc., 4909 Nautilus Ct. North #208, Boulder, Colorado 80301. Phone: 303-381-8131.

7459. American Soy products. 1998. Official celebration guide: Invitation. Saline, Michigan. 12 p. 13 cm.
• ***Summary:*** This attractive passport-sized booklet states: "American Soy Products presents the opening of the largest soymilk processing facility in North America. Official opening ceremony: Wednesday, Sept. 9, 1998. Your invitation–VIP guest No. 01325024. Registration time: 11:15 to 11:30. Official ceremony: 12:00 noon to 12:45 p.m. Followed by light refreshments and hors d'oeuvres. Lunch: 2:00 to 3:00. Tours and demonstrations: 1:00 p.m., 2:00 p.m., 3:00 p.m., 4:00 p.m. RSVP by August 12.

"The event will honor the achievements of a unique joint venture partnership formed to produce Edensoy for the North American marketplace."

"Factory facts: Square footage by Aug. 1998–65,000 square feet. Expected annual output–4,000,000 + cases. Number of quality control checks–245 (4000 per day). Soymilk lines–(2) 8800 pounds per hour and 13,200 pounds per hour.

"Celebrate with us 'History in the making' as four international corporations send you their personal invitation to salute cooperation and unity at work."

The CEO of American Soy Products is Mr. Hiroyasu Iwatsuki. "Joint venture partners: Eden Foods, Inc., Clinton, Michigan, USA. Mr. Michael Potter, Chairman/ President. Kawasho International (USA) Inc., San Francisco, California, USA, Mr. Akio Ono, President. Marusan-Ai Company Ltd., Okazaki-City, Aichi-Prefecture, Japan, Mr. Hatsuji Shimomura, President. Muso Company Ltd., Osaka, Japan, Mr. Yuko Okada, President." Address: 1474 North Woodland Dr., Saline, Michigan 48176. Phone: 734-429-2310.

7460. Bramblett, Billy. 1998. Company history: Wildwood Natural Foods (Continued–Document part II). Fairfax,

California. 10 p. Unpublished typescript.

• ***Summary:*** "The evolution: On January 2, 1982, there was a major flood in Marin County." The company was hit hard. By February Bramblett and Rosenmayr had attended a computer seminar and were convinced the company had better get computerized. "By March the new structure was set. Mr. Orbuch was in charge of production and distribution; Mr. Bramblett was in charge of tofu production, accounting, and administration."

Meanwhile Orbuch and Bramblett continued toward their goal of building sales to $10,000 per week "and started looking into other small manufacturers that made similar products. Our first 'other distributed' product was the Solar Taco made by Rademacher/Worley Farms in Cotati. This product had been on the market for a year or two, but they did not have their distribution together. We also found some sub-distributors to take our products to West Marin and Sonoma County."

Bramblett "arranged for the purchase of an Apple computer along with accounting, spread sheet, and word processing software. The bookkeeping was transferred to the computer and soon Wildwood had timely financial reports that were used to analyze the operations. One of the main sources of financial loss were the returns. Wildwood had a policy from the get-go to guarantee sales. That meant that any product not sold by its 'pull-date' was credited to the store to which it had been sold. It was the job of the distribution department (Mr. Orbuch & the route drivers) to keep this return rate low by correctly estimating how many sandwiches (and other products) would sell before their respective pull dates and deliver that amount to each store on each delivery day. Unfortunately, this was a difficult task and the return rate was about 15%, which was way too high for WNF to make a profit. Mr. Bramblett tried using the spread sheet program to analyze old sales data in order to make accurate predictions for the future. The computer did not have enough memory to accomplish this task. Fortunately, we had a sandwich maker who was a computer programming school grad and who agreed to write a program for the computer which would do all our invoicing and sales tracking as well as predict future sales and help us lower the return rate. He did so and, although the prediction part was way too cumbersome to deal with, Wildwood soon had a billing and sales analysis tool that we still use today.

"Meanwhile, we increased our product line to include baked and vacuum packed tofu, broadened the sandwich line to include avocado and cheese sandwiches as well as bean and rice burritos, and varied flavors of the BRT. We also refined the salad line and expanded the routes into the peninsula and Santa Cruz areas. By 1984 we were profitable enough to have bought out Mr. Duchesne, return the extra $2500.000 that Mr. Bramblett, Mr. Orbuch, and Mr. Rosenmayr had kicked in, as well as pay a dividend of $12,000 to each remaining partner, effectively returning the entire investment in five years, which is equal to a 20% per year return on investment. The partners decided to form a new partnership to buy a piece of property in Fairfax, on which they could expand WNF. And so they did, right down the street, at 31 Bolinas Road.

"The property was a three lot parcel, which housed a funky car repair facility and which was a major eyesore. The actual purchase and all the trials and tribulations we went through with the town is a-whole-'nother story. Suffice it to say that, it was a major pain in the ass which is well documented in the local paper of the day *The Fax*. We also endured major problems from Sherman Chickering, who lived in a neighboring house, but I won't bore you with that story either.

"Also during 1984 we met Jeremiah Ridenour, who owned a major piece of Santa Cruz Tempeh and who aspired to make 'local tofu' in Santa Cruz. He had seen our products and wanted to join up with us in creating a mid-size tofu operation in Santa Cruz to replace one that was about to fail. He had space for such a project in the building that housed the tempeh factory. The concept was also to be able to bolster tofu production output, which was nearing the limit in Fairfax.

"So a new corporation was formed which included Mr. Orbuch, Mr. Bramblett, Mr. Rosenmayer, and Mr. Ridenour. This was called Wildwood Natural Foods, Santa Cruz, Inc. So, while Frank was renovating 31 Bolinas in Fairfax, Jeremiah was renovating the Mansfield Ave., Santa Cruz, location to house a new, steam cooking, pump-moving, ass-kicking modern hi-tech, but still hand-made, tofu factory.

"We soon realized that the Santa Cruz location would also serve as a distribution point and so it did, and still does. WNF (or 'north') maintains an office and several employees in Santa Cruz and operates four routes from that location. The downside of this whole Santa Cruz trip was that it took twice as along and cost twice as much to get underway as originally planned. Wildwood Natural Foods, Santa Cruz, Inc. did not produce a profit until 1991. Since it was a 'Subchapter S' corporation, the partners were able to take a tax loss on this project, but the grim reality was that north supported south and gave away many things to help it along (e.g. the very profitable soymilk production). This became a bone of contention between the partners.

"Meanwhile, north flourished, saleswise. Taking on new product lines for its distribution line, willy-nilly, sales grew incredibly. Mrs. Wiggles Rocket Juice led the way. Solar Tacos extended their product line and several different salsa lines were tired, with varying success. We also started distributing Brightsong Tofu products, most notably various salads to Diet Centers and a new soy cheese product called Tofurella. We also picked up Grainaisannce's mochi and amazake products. These 'distributed' products or 'manu prods,' as we called them, yielded low margins, 15% to 20% and it became increasingly difficult to manage the inventory.

Additional walk-in space was built and purchased. The philosophy was to fill up the trucks that were going to the stores already to maximize the delivery efficiency. The short sighted part of this was that it began to take the drivers much more additional time to drive the route. The upside was that we began to have more clout in the stores and could get more and better shelf space.

"Growth takes a toll on cash flow and, in fact, the lack of that foresight nearly wiped Wildwood out during this incredible growth period. Time and again short term, no interest loans were made by the partners to bolster cash flow while we grew sales to $100,000.00 per week. The administrative burden became much heavier during this period and the office space became cramped and unworkable. Mr. Bramblett left the company in early 1990 and Mr. Orbuch ran the north for the next two years. In 1990, the north suffered losses of nearly $100,000.00 and nearly failed. Mr. Orbuch tried to make the company appear profitable in 1991, by eliminating key positions and programs, e.g. product development and product control. This did effectively save money but the infrastructure was severely damaged." Address: Wildwood Natural Foods, 135 Bolinas Rd., Fairfax California 94930. Phone: 415-485-3940 X-47.

7461. Bramblett, Billy. 1998. Company history: Wildwood Natural Foods (Continued–Document part III). Fairfax, California. 10 p. Unpublished typescript.

• ***Summary:*** "Meanwhile, Mr. Ridenour had brought the Santa Cruz operation into the sunlight of profitability. He had developed systems and teams that worked together toward enlightened profitability. His workers worshipped him, called him 'Dad,' and became a family of which he was the head and patriarch. Wildwood Santa Cruz was profitable in 1991, and on a firm footing.

"After a Stanford MBA analysis indicated that both companies should be headed by the enlightened leadership of Mr. Ridenour, the BOD [board of directors] north elected Mr. Ridenour as president and Mr. Orbuch retired. Mr. Ridenour has set about cleaning up the north and installing those systems and procedures which have been proven effective and profitable in Santa Cruz."

"So as of February 1992, Mr. Ridenour was in charge of both companies... In August, 1992 Mr. Bramblett returned at Mr. Ridenour's request to help with product development and financial analysis (Mr. Bramblett had been the CFO of China Books and Periodicals in San Francisco for the past two years). The analysis determined that the company was losing money primarily due to distribution costs and the imbalance between the sales of Wildwood products and the sales of products made by other manufacturers, which at that time was 33% Wildwood and 67% other."

In 1993 Mr. Bramblett took over the accounting department; Wildwood returned to profitability and the owners decided to merge the two companies so they could sell off a small part of it to raise capital. In Nov. 1993 John Breen was hired as controller.

The corporate merger was accomplished in 1994 with each of the four shareholders owning 25% of the surviving corporation. "We then wrote a business plan in which we proposed to build a new tofu factory, bring all production under one roof (likely in Watsonville) and leave a cross dock in Marin County near the Hwy. 101/580 intersection."

"We finally lined up financing for the new factory, but the senior debt underwriters wanted to see more equity on the balance sheet... We have not yet been successful in this plan but have had much interest and several buy-out offers. We have joined the Social Venture Network and have made presentations to the Investor Circle (SVN spinoff) and have a few investment suitors at this time.

"Meanwhile the combined corporations became profitable in 1995, 1996 and 1997 and so far in 1998. We have strung together 13 consecutive profitable quarters and added to our equity thereby. While only growing total sales by about 10% over the past three plus years, we have flip flopped the products profile and are now at 69% Wildwood and only 31% other products, a much more profitable balance. We have also developed many new products and have several products private labeled for us.

"Most recently we have introduced a new private labeled [by Ted Nordquist and TAN Industries] organic soymilk in gable topped cartons which comes in two flavors, Plain and Chocolate. We expect to have this product in distribution in the western U.S. by September 1998.

"Wildwood is currently producing approximately 30,000 lbs, of tofu per week and bottling 2,000 quarts of Yo Soy traditional soymilk (in plastic quarts) in two flavors, Plain and Honey-Vanilla. We reprocess about 40% of the tofu and sell the rest as either 10 oz. vac pack, or 20 oz. vac pac, 16 oz. firm water pack, 16 oz. medium (low fat, calcium sulfate) water pack, or institutional vac pac in 8 lb. blocks or 7 lb. pre-cut. We also produce 20 oz. vac pac for Whole Foods with their label.

"In addition Wildwood produces Hummus in four styles, traditional Mid East, Low Fat, Spicy Low Fat, and Pesto. To complete our middle eastern line, we also produce Tabouli Salad and Baba Ganooj.

"Secondary tofu products include Baked Tofu in four flavors, Smoked Tofu in two flavors, Tofu Vegie Burgers in three flavors, and Tofu Cutlets (traditional Nama Age). We also make Braised Tofu Salad (cubes of tofu lightly grilled with fresh vegetable in exotic sauces) in five flavors and fresh tofu salads in two flavors as well as two tofu spreads. We have abandoned the sandwich market altogether.

"The retail side of the natural foods market has consolidated. Very rarely will you find the small neighborhood health food store or the little mom and pop place that would sell ready to eat products such as ours. Now its all big corporate up-scale super stores with coffee

bars, juice bars, cookie bars, salad bars, sushi bars in 65,000 square feet of fancy, wide aisles, highly decorated and high prices.

"These stores also demand more margin, squeezing distributors and manufacturers and exhibit 'serve all our stores or serve none' ultimatums. We have countered by refining our DSD (direct store delivery) system. Wildwood is now Macintosh networked from orders through production, packing and delivery. The driver/sales reps now deliver to the stores with completed invoice in hand. We educate the store clerks and managers to understand that our full service distribution saves them over 5% in stocking and inventory management expense and have kept the stores margins below 30% in most cases. Also, since we have concentrated on developing products with longer shelf lives and have refined production methods to extend the shelf lives of existing products, the return rates have dropped dramatically to under 3% for the entire Wildwood product line."

"Quality is still our number one goal, but profitability is a close second."

"We have expanded our distribution to include several sub distributors. Rock Island Foods carries our longer shelf life products into stores in the SF Bay area which we opt not to serve, as well as into eighty Lucky Markets and any account which is outside of Wildwood's distribution area. In Los Angeles our products are distributed by California Day Fresh as well as Tree of Life and Nature's Best."

In Portland, we are carried into natural foods accounts by Zanya Trading, and we are preparing to open the Seattle market by the fall of 1998. Our new soymilk will be carried by Texas Health into Texas, Colorado and New Mexico and will pave the way for the rest of our product line into those markets.

"Wildwood will continue to seek financing in order to build a new production facility before the new millennium and we plan to be nationwide by 2005. Our products continue to gain critical acclaim and have won first place or best of show at three separate San Francisco Chronicle and American Tasting Institute events in 1998 alone.

"In case you missed the ownership / management lineup, here's a recap:

"Jeremiah Ridenour, President & CEO, Board of Directors, 25% shareholder.

"Billy Bramblett, Treasurer, BOD, 25%, GM in Fairfax, product development, demonstrations.

"Frank Rosenmayr, VP & Secretary, BOD, 25%.

"Paul Orbuch, 25%.

"Other key personnel include:

"John Breen, controller.

"Erik Todd, distribution manager.

"Dolly Gianni, human resources (and so much more).

"Doug Porter, purchasing manager, graphic design (and so much more).

"Maria Gonzales, production manager, Fairfax.

"Chris Spalaris, plant manager, tofu manager, Santa Cruz.

"Juan Macias, secondary production manager, Santa Cruz.

"Currently we run thirteen delivery routes which visit our accounts three times a week. We have 95 employees. 1998 sales are estimated to exceed $6.5 million of which about 70% will be Wildwood branded products." Address: Wildwood Natural Foods, 135 Bolinas Rd., Fairfax California 94930. Phone: 415-485-3940 X-47.

7462. *CaliforniaCare News* (*Blue Cross of California*). 1998. I'm soy excited: It's not just tofu anymore. Summer.

• ***Summary:*** "Soy foods come from the soybean." They are turning up everywhere in many forms: Vegetable oil, soy flour, "tofu (soybean curd), soynut butter–a peanut butter alternative that's lower in fat, soy milk, yogurt, cheese, and frozen desserts (good dairy substitutes for the lactose intolerant), meat substitutes, such as soy burgers and soy hot dogs (especially good for those trying to cut down on red meat).

"A healthy choice: Many soy foods are high in protein. Two exceptions are soybean oil, which is high in fat, and soy sauce, which is high in sodium.

"Soybeans also contain a chemical that is similar to the female hormone estrogen. Researchers say this chemical may help prevent and treat some cancers, heart disease, and osteoporosis. It can also relieve the hot flashes associated with menopause."

To learn more, call the United Soybean Board at 1-800-Talk-Soy (825-5769).

A color illustration (cartoon) shows a group of singing soy products: green vegetable soybeans in the pod, soy cheese, soy flour, and a soy hot dog in a bun. Address: 21555 Oxnard St., Woodland Hills, California 91367.

7463. Leading Edge Group. 1998. The U.S. health and natural food market: Past performance, current trends, and strategies for the future. 2171 Jericho Turnpike, Suite 200, Commack, NY 11725. 330 p. July. Price $1,995.00. Illust. 29 cm. *

• ***Summary:*** Three past editions of this report have been published by Business Trends Analysts, Inc. (BTA), which is located at the same address as The Leading Edge Group. BTA is the parent company. Since it was founded 20 years ago, it had published reports under two brand names, each of which has a different style. Business Trends Analysts Reports tend to contain mostly secondary research, with an abundance of charts and graphs, and less text and analysis. Leading Edge Reports are conducted by a person with a specialty in that area. The report contains much more primary research and in-depth analysis, and is roughly twice as expensive. This report was conducted by Melina Laverty.

Chapter 5 of this report is titled "Soyfoods and

alternative meat products: Market dynamics.

Overall report–Contents: 1. Executive summary. 2. Overall market dynamics (including Soyfoods). 3. The market for soy foods. 4. The market for herbal teas. 5. The market for dairy foods. 6. The market for grains and cereals. 7. The market for frozen foods. 8. The market for snack foods. 9. The market for groceries. 10. The health food consumer. 11. The health/natural food store industry. 12. Competitor profiles. 13. Industry directory. Address: Commack, New York. Phone: 516-462-2410.

7464. Robertson, Robin. 1998. The soy gourmet: Improve your health the natural way with 75 delicious recipes. New York, NY: Penguin/Putnam/Dutton. xv + 191 p. July. Introduction by James W. Anderson, M.D. Index. 21 cm. A Plume book.

• ***Summary:*** Contents: Foreword. Introduction: Health benefits of soy protein, by James W. Anderson, M.D. 1. The soy solution. 2. Soy what? (soybeans, tofu, tempeh, textured soy protein or TVP, soy milk, miso, soy sauce, soy flour, dry-roasted soybeans or soy nuts, soy convenience foods, egg replacers). 3. Making soy protein work for you. 4. Breakfasts. 5. Let's do lunch. 6. What's for dinner? 7. Desserts. 8. Shakes and more. 9. Sample menus. Glossary (In addition to the soy foods described at Chapter 2: Gomasio, soy cheese, soy protein powder, and tamari soy sauce).

The author, who is a woman, worked as a professional chef during the 1980s, when she used large quantities of meat, eggs, and dairy products to prepare dishes in classic cuisines, such as French and Italian. In 1987 she made a dramatic change in her life, when she decided to stop working in professional kitchens, and start to pursue a healthier lifestyle, becoming a vegetarian, eliminating all meat and dairy products from her diet. Having lost both parents to heart disease and stroke, she had a personal interest in helping people learn how to cook and eat properly. Using soy products such as tofu, tempeh, and soy milk, she was able to recreate her favorite old recipes–sautéed dishes with cream sauces, rich pasta dishes, and even delicious cheesecakes–all without cholesterol. But these soy foods actually offered a double benefit, for recent scientific studies show that they actually reduce cholesterol levels.

7465. **Product Name:** Silk (Soymilk Sold Refrigerated in Quart Pure-Pak / Gable Top Cartons) [Plain {Dairylike}].
Manufacturer's Name: White Wave, Inc. (Product Developer-Distributor).
Manufacturer's Address: 6123 E. Arapahoe Rd., Boulder, CO 80303. Phone: 303-443-3470.
Date of Introduction: 1998. July.
Ingredients: May 2000: Filtered water, whole organic soybeans*, organic raw cane crystals*, calcium carbonate, sea salt, natural flavors, carrageenan, vitamin A palmitate, vitamin D-2, riboflavin (vitamin B-2), vitamin B-12. * = Grown and processed in accordance with the California Organic Foods Act of 1990. Silk soybeans are third-party certified organic by QAI. Silk is certified to containno GMO soybeans.
Wt/Vol., Packaging, Price: Quart Pure-Pak carton.
How Stored: Refrigerated.
Nutrition: Per 1 cup (240 ml): Calories 80, calories from fat 20, total fat 2.5 gm (4% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 75 mg (3%), total carbohydrate 8 gm (dietary fiber 0 gm, sugars 4 gm), protein 7 gm. Vitamin A 10%, calcium 30%, vitamin D 30%, vitamin B-12 50%, vitamin C 0%, iron 2%, riboflavin 30%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Carton with Label sent by James Terman of White Wave. 2000. May 11. 2.75 by 2.75 by 8¼ inches. Tetra Rex package. "Organic–Third party certified. Calcium enriched. Low 1% fat & vitamin enriched." Talk with James Terman of White Wave. 2001. May 29. Silk plain in quarts was introduced in July 1998. This soymilk was formulated to taste and look as much like dairy milk as possible.

7466. Zind, Tom. 1998. Making the case for soy: Soy protein merges into the fast lane as a functional food ingredient. *Food Processing* (*Chicago*) 59(7):31-32. July. Foods of Tomorrow section.

• ***Summary:*** Soy protein is getting more attention in the budding functional foods/nutraceuticals arena in large part because of the isoflavones in soy which have many health benefits. A number of companies have developed isoflavone-rich extracts–such as Novasoy from ADM. Big companies like General Foods and Nabisco are now working with soy and see a bright future ahead. ConAgra Frozen Foods is promoting soy in its Advantage\10 line, recommended by Dean Ornish, M.D. A color photo shows the front of one package. ADM markets a powdered soy drink named Nutribev and is test marketing a soy-based frozen dessert, named Dairylike, in Southern California. Protein Technologies International says it has found new scientific evidence that soy isoflavones can control cholesterol.

7467. Roller, Ron. 1998. American Soy Products' new soymilk plant and the U.S. soymilk market (Interview). *SoyaScan Notes.* Aug. 6. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** American Soy Products has expanded its former building, added a second soymilk processing line and a packaging machine. Then the company moved its original processing line so that it is now located next to and parallel to the new line. They started running both lines at the same time 1-2 weeks ago. This has enabled ASP to more than double its soymilk production capacity.

Starting about 2 years ago, ASP began experiencing occasional shortages. Even though they were running

their plant 24 hours a day, six days a week, demand was occasionally greater than they could supply. Starting about one year ago, they had constant shortages, and in some cases the demand was up to 50% more than they could supply.

The grand opening in September has several purposes. One is to celebrate the new line and expanded plant. A second is to get some good PR and good-will for ASP, since many consumers and retailers were inconvenienced and upset during the year of shortages and rationing. Even today, Eden Foods is still having to ration soymilk, but that will soon disappear.

Ron finds that soymilk has now really tapped the mainstream; most of the growth is in supermarkets. Unfortunately, during the past year, ASP and Eden Foods have been unable to take advantage of this growth; they have not wanted to take on new customers when they could not fully supply their former customers.

Dairy publications that Ron reads are encouraging local cow's milk dairies to get on the soy bandwagon by buying powdered soymilk, reconstituting it, and selling it gable-top cartons along with their dairy milk. Some manufacturers of powdered soymilk are now advertising in these dairy publications. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

7468. Duchesne, Paul. 1998. Reflections on the early history of Wildwood Natural Foods, and how Richard Rose got involved with tofu (Interview). *SoyaScan Notes.* Aug. 12. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Paul's company is now named "Mama Paul's." Paul Watson was a mutual friend of Paul Duchesne and Billy Bramblett who happened to work in the Good Earth Natural Foods store as a stock clerk. He started to study acupuncture with a person in Bolinas. He is a carpenter and licensed contractor now in Mill Valley. He had nothing to do with tofu. Chris Smith was last seen in or near St. Louis, Missouri, teaching macrobiotics.

Wildwood started making and bottling soymilk about 1-3 months after it began to make tofu in 8 Aug. 1980 in Fairfax.

The Tofumobile got Wildwood a lot of early publicity.

Paul has heard: When the people in Ukiah sold the tofu shop to Dik Rose, he agreed (it was written into the contract) not to move it out of Redwood Valley. But he did. He moved the whole thing to Petaluma. They were very upset. They broke in and stole all the equipment, then put it in a locker. They then threatened him that he was not going to get it back; this went on for a long time. Dik finally showed up with the sheriff and guns, and forced them to open the locker and give him back his equipment. Redwood Valley is 5 miles north of Ukiah. David Patton (who was in a partnership with something like 3 people) was one of the people whole sold the shop to Rose. David was the main tofumaker and they wanted fresh tofu in Ukiah. David wrote Paul a letter last year from Edinburgh, Scotland, studying. David has long been involved with interesting ecological things such as yurts, planting trees, and tofu. "They were very, very upset that Rose moved the shop out of Redwood Valley down to Petaluma. They felt he totally betrayed them." Address: Fairfax, California. Phone: 415-453-2360.

7469. Liu, Jeff. 1998. Third Annual Tofu Festival dazzles: Thousands of tofu enthusiasts attend Nisei Week tribute to soy bean cake product at JACCC. *Rafu Shimpo* (*Los Angeles, California*). Aug. 18. p. 1, 5. [Eng]
• ***Summary:*** This is the best overview seen of the 1998 L.A. Tofu Festival. An "estimated crowd of between 40,000-50,000 hungry people streamed into Little Tokyo this past weekend for a tribute to all things tofu." Over 40 restaurants and food providers offered tofu dishes. This year's festival was the biggest ever, spilling from the Japanese American Cultural and Community Center (JACCC) Plaza into South San Pedro Street. Popular recipes included: Fried tofu with garlic (by Empress Pavilion). Tofu cheese mousse. Tofu cheesecake (Inn of the Seventh Ray), Iced mocha cappuccino with soy milk. Halo-halo and soy snowcones. Tofu coffee dessert (Jello-like). Tofutti Cuties. Hawaiian orange passion mango banana tofu smoothie (from King's Hawaiian; "a remarkable and refreshing fruit-soy shake that is a wonderment to the sense..."). Tofu curry. Smoked eel with tofu and soba. Tofu tuna poke salad. Mabo tofu. Tofu avocado seviche (by Coma Tofu, an outreach to the Latino community organized by Yvonne Gonzalez; "a potent blend of minced onions, chopped cilantro and lime in an all-vegetarian version that substitutes crumbled tofu for fish"). A photo shows an aerial view of one street, lined with tent-like booths and jammed with people. Address: Rafu staff writer.

7470. Endo, Margaret. 1998. The LA Tofu Festival of August 1998 (Interview). *SoyaScan Notes.* Aug. 27. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** This year's Tofu Festival was the biggest and most successful yet. Since there is no admission fee to the Tofu Festival, the Little Tokyo Service Center raises its money by selling food scrip tickets. Each ticket costs $1.00 and can be used at any of the booths, for food, drinks, or novelty items. This year sales of those tickets was $69,000, almost double the $37,000 dollar figure last year. Saturday they sold $33,000 in tickets compared with $16,000 last year. Sunday they sold $36,00 in tickets compared with $20,000 last year. There were 40 food booths and 3 drink booths, including one selling soymilk snow cones. Most of the food booths were run by restaurants that served tofu dishes. One restaurant sold chilled edamamé. There was one tofu boutique selling t-shirts, polo shirts, shorts, etc. and on each was written LA Tofu Festival. This year there was a children's pavilion with really cute tofu-related games, soy

coloring books sent by the United Soybean Board, and 300 soy-based crayons sent by Dixon-Ticonderoga. They also raise money by having corporate sponsors, and selling their tofu cookbook (which was only slightly changed from last year). There was also a program booklet, that contained a history of tofu.

Rafu Shimpo did lots of good English-language articles this year, including highlights of each restaurant that participated. The LA Times did nothing. The crowd was more racially diverse than last year, with a larger percentage of non-Japanese Americans and non-Asian-Americans, including a lot more Chinese-Americans, and Hispanics.

They did a lot of work with Yvonne Dreyfus of the Latino Outreach. She was on KBEA–the Latino station. It worked out pretty well but it was a little bit difficult for Yvonne. Because she wasn't a restaurant, she had much fewer resources as an individual, so LTSC had to help a lot with things like ordering the food products. A little more maintenance was required–but it was well worth it because of the outreach and exposure to the Latino community. Margaret is hoping she will stay involved next year. People liked her Tofu Seviche.

In Los Angeles there is a program on PBS (KCET-TV–channel 28) titled "Visiting... with Huell Howser." This coming Saturday at 6:00 p.m. and Sunday at 7:00 p.m. in Los Angeles (channel 28) a 1-hour documentary he filmed on Saturday about the Tofu Festival–All You Wanted to Know about Tofu will air on this channel. He first visited a tofu factory (American Foods) to show how tofu is made, then shot footage at the festival. The program will not be aired outside the Los Angeles area. The phone number of Huell Howser Productions is 213-953-5380. Note: They sent Soyfoods Center a free copy of the 1-hour video. A PR company volunteers their time each year and puts together a media packet of all the articles etc. about the Festival. Margaret will ask them to send one packet to Soyfoods Center. Address: Little Tokyo Service Center (Resource Development Center), 231 East 3rd St., Los Angeles, California 90013. Phone: 213-473-1613.

7471. Galeaz, Kim. 1998. Build on better health with soyfood guide pyramid. *Soy Connection* (*The*) (*Jefferson City, Missouri*) 6(3):4-5. Summer. [4 ref]
• ***Summary:*** Page 4 shows the full-page "Daily Soyfood Guide Pyramid" containing six different food groups. Page 5 describes how soyfoods can be used in each group, including soy flour, green soybeans, soymilk, soy cheese, soy yogurt, tofu, meat alternatives (incl. soy burgers), roasted soynuts, soynut butter, and soy oil. Address: RD.

7472. Ndungi Khoto, Aubry. 1998. Contribution a l'avant-projet d'une usine de production de *lait de soja* en poudre a Lubumbashi [Contribution to the rough draft for a factory for the production of soymilk at Lubumbashi, Congo]. Civil Engineer thesis, University of Lubumbashi, Polytechnic Faculty, Dep. of Industrial Chemistry. v + 154 + 16 p. Illust. 30 cm. [73 ref. Fre]
• ***Summary:*** Preface and dedication. Introduction. Part I: Review of the literature. 1. General information about soya and proteins: 1.1. The soybean (Botanical, origin and history, soybean production and commerce worldwide, soya in the Democratic Republic Republic of the Congo {Congo, formerly Zaire}, structure and composition of soybean seeds, utilization of soybeans {with diagram}, food uses of soybeans {oil and meal, soy flour (4 types), soy concentrates and isolates, textured soy proteins {TVP, thermoplastic extrusion, spun fibers}, soymilk, tofu, other uses (shoyu, miso, tempeh, yuba)}, industrial uses of soybeans {linoleum, plastics, paints, varnishes, etc.}). 1.2. Proteins (in the human body, in foods), the structure of proteins (amino acids, ionization and acid-base properties of amino acids), protein bonds, denaturation. 1.3. Soya proteins (glycinin or globulin 11S, globulin 7S, hemagglutinins or lectins, protein inhibitors and other antinutritional factors, amino acid composition of soy protein). 1.4 Factors affecting the food value of soya: Acceptability problem (food value of raw soybeans), intolerance to soy proteins, off-flavors in soya and their source, inactivation of lipoxygenase, other treatments affecting the food value of soya: Alkalis.

2. Preparation and properties of soymilk. 2.1. Properties. 2.2. Advantages and disadvantages of soymilk compared with cow's milk. 2.3. Preparation. 2.4. Commercial / industrial production using the Alfa-Laval process.

3. Reminder of certain operations required for the preparation of soymilk powder: 3.1. Homogenization. 3.2. pasteurization and sterilization. 3.3. Concentration by evaporation. 3.4. Drying by atomization. 3.5. economies of energy in dewatering operations.

4. Some ideas on the methods of sensory evaluation: 4.1. The different methods. 4.2. Results and interpretations.

5. Important ideas in the study of the market, in determining the capacity of production, and in the economic evaluation of a project: 5.1. Study of the market. 5.2. Determining the capacity of production. 5.3. Economic evaluation of a project, incl. estimating fixed capital by adding capital costs.

Part II: Experimental, industrial calculations, economic calculations. Introduction. 6. Origin and characterization of the raw materials, trials for inactivation of lipoxygenase. 7. Determination of the optimal conditions for the preparation of soymilk. 8. Results of pilot plant trials. 9. Market study and determination of the capacity of production. 10. Description and calculations for the installation. 11. Economic evaluation of the project. General conclusion.

Tables show: (1) Number of people that can be supported for 1 year by the production from one acre devoted to certain crops and animals. Fewest: Beef 190. Pork 319. Poultry 457. Most: Potatoes 5,329. Split peas 6,901.

Soybeans 9,075. Algae 43,200–154,000. Yeast 3,275,000. (1.1) Leading soya producing countries in 1985 (worldwide, with area, production, and yield; USA, Brazil, China, Argentina, India). (1.2) Leading soya producing continents in 1985 (North and Central America, South America, Asia, USSR, Europe, Africa, Oceania). (1.3) Leading soya trading countries in 1985. Importers: Japan, Netherlands, R.F.A. (Republique Federal Allemagne = Germany), Spain, Italy. Exporters: USA, Brazil, Argentina, China, Paraguay. (1.4) Production of soya in the Congo, by province 1970-1978 (the leading producer by far in 1978 was Western Kasai). (1.5) Production of soya in Katanga [formerly Shaba, before that Elisabethville] (1990-1994; by far the leading producer is Tanganyka). 1.6 Total production of soya in the Congo (1,000 metric tons) from 1970-1995 (increased from 1.7 in 1970-74 to 18 in 1995). (1.7) Average composition of different parts of the soybean seed. (1.8) Physico-chemical composition of soybean seed (ranges and average). (1.9). Mineral content of soybeans. (1.10). Vitamin content of mature soybean seeds and soybean meal. (1.11) Fatty acid composition of soybean oil. (1.11A) Enzymes in the soybean: Lipoxidase, urease, lipases, beta-amylase. (1.12) Properties and characteristics of the water-soluble fractions of soybean seeds. (1.12A) Variations in the solubility of proteins from defatted soy flour at various pH levels. (1.12B) Amino acid composition of soybean protein. Address: Lubumbashi, Katanga Province, Congo.

7473. *Ontario Soybean Growers' Marketing Board Newsletter.* 1998. Soybean processing and the Guelph Food Technology Centre. Aug. p. 4.
• ***Summary:*** "For a crop like soybeans, processing is the 'magic' that converts a hard little bean into a wide variety of high quality, nutritious foods and food ingredients. Whole soybeans can be processed into traditional soyfoods like soymilk or tofu, or they can be separated into their primary components: Protein, oil, lecithin and fibre.

"Consumer interest in foods containing soybeans is on the rise... many Canadian food processors have begun to develop new soyfood products for the marketplace. However, soyfood development is no simple task, so many have contracted the services of the Guelph Food Technology Centre," which is located on the main campus of the University of Guelph. The facilities and benefits are described. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

7474. Sato, Satoru. 1998. Chef Sato's all-natural desserts: Delicious cakes, pies, pastries, and other irresistible sweets. Becket, Massachusetts: One Peaceful World Press. 96 p. Foreword by Aveline Kushi. Recipe index. 22 cm.
• ***Summary:*** This innovative little book contains "42 delicious, sugar-free, dairy free desserts." Soymilk is widely used in place of dairy milk (as in fillings), and tofu is used in many frostings. Maple syrup is used as the sweetener. Address: Great Barrington, Massachusetts.

7475. *Bluebook Update* (*Bar Harbor, Maine*)**.** 1998. Devansoy plant in full production. 5(3):3. July/Sept.
• ***Summary:*** Devansoy Farms of Carroll, Iowa, now has a refurbished plant in Kansas, which began production in April of soymilk powder, full-fat soy flour, and low-fat soy flour. Contact Elmer Schettler.

7476. Eden Foods, Inc. 1998. Eden–The highest quality natural food (Catalog). Clinton, Michigan. 12 p. 28 cm.
• ***Summary:*** This 8-page color catalog, with four pages of inserts, introduces Eden Foods, its products, philosophy, and history. A timeline running across the bottom of each page lists 23 milestones in the company's history, which is said to have started in 1968. Note: The founders of this company all agree that it was not founded in any form until Nov. 1969.

Contents: Eden Foods–Thirty years of dedication: Macrobiotic understanding, tribute to Herman Aihara, Old World pasta–goodness of grain, maturing as an organic manufacturer, organic pioneers of the audit trail, Eden today (supporting 200 family farms with over 20,000 acres of organic land). Eden Foods–A dedicated network: Color maps show the source of products in the USA, Japan, and Europe. Intuitive imported foods, the Eden brand–fulfilling a promise, organic pest management, our GEO (genetically engineered organisms) policy (since 1993), preserving organic integrity. Edensoy creates a new food category. Eden in the next 30 years? Company goals (rear cover).

The first insert, dated Sept. 1998, is written and signed by Michael J. Potter, "leading Eden Foods for twenty-seven years" (i.e. since 1971). The second insert lists all or most of Eden's products. The third is a mailer inviting comments. Address: 701 Tecumseh Road, Clinton, Michigan 49236. Phone: 517-456-7424.

7477. Ginsberg, Beth; Milken, Mike. 1998. The taste for living cookbook: Mike Milken's favorite recipes for fighting cancer. Santa Monica, California: CaP CURE. Distributed by Time-Life Books. 118 p. Illust. Index. 26 x 27 cm. [2 ref]
• ***Summary:*** This is a gorgeous, low-fat vegetarian cookbook in which about half the recipes use soy as a major ingredient. It is loaded with color photos (many full page), playful graphics, and good advice. Note: 100% of the proceeds from this book are used to fund prostate cancer research. The book is available at bookstores nationwide, or it can be ordered by dialing toll-free 1-877-884-5433 (LIFE). Contents: Introduction, by Michael Milken. Preface, by Beth Ginsberg. Four nutritional principles of CaP CURE to fight prostate cancer and other hormonal cancers: (1) Limit dietary fat to 15% of total energy intake (calories). (2) Eat 5 or more fruit and vegetable servings per day. (3) Consume 25 to 35 grams of dietary fiber a day. (4) Consume 40 to 60 grams of soy

protein a day. "Americans have a five times higher incidence of prostate cancer than people living in Asia and eating a traditional diet. Soups. Exercise. Entrees. Soy and soybeans. Sandwiches and sides. Cruciferous vegetables. Breakfasts and shakes. Desserts. Healthy pantry. Afterword, by Donald S. Coffey, PhD, President of the American Assoc. for Cancer Research and Professor of Urology, Oncology, Pharmacology and Molecular Sciences, Johns Hopkins Hospital, Baltimore, Maryland: We are what we eat, how does food cause or protect us from cancer (ROS = reactive oxygen species), how did we lose our way?, how did our diet change ("The great apes were primarily vegetarian, consuming great quantities of vegetables that are high in fiber"), what should we do? About CaP CURE.

Soy-related recipes include: French onion soup (with soy cheese and soy sauce, p. 20). Broccoli potato soup (with grated nonfat cheddar-style soy cheese, p. 22). Shiitake miso soup (with silken tofu and low-sodium tamari sauce, p. 22). Taco salad with a chili lime dressing (with 1½ lb fat-free soy meat, p. 26). Chinese roasted tofu salad (p. 33).

Note. This is the earliest English-language document seen (April 2013) that contains the term "roasted tofu;" it refers to grilled tofu.

Orange ginger dressing (with white miso and tamari, p. 33). Chef's salad with miso shallot dressing (and Soy Deli Slices, p. 34-35). Thousand island dressing (with tofu, p. 34-35). Chopped vegetable salad (with 1 cup edamame, p. 36). Teriyaki tofu bowl with Chinese vegetables (p. 40). Tofu dog casserole with a pretzel crust (p. 42). Soy and Soybeans (with a sidebar on "understanding tofu," p. 44-45). Lasagne with "soysage" (with fat-free vegetarian sausage, silken tofu, and soy cheese, p. 46). Spinach cannelloni with fresh tomato sauce (plus soy milk and low-fat tofu, p. 48-49). Vegetable fritatta with roasted tomato salsa (and 2 lb tofu, p. 54-55). Enchilada pie with ranchero sauce (and 1 lb soy cheese). Greek spinach pie in a phyllo nest (with tofu, p. 61; remake of spanakopita). Homemade vegetable pizza with soy cheese (p. 62-63). Vegetable reuben (with tempeh bacon strips, p. 68). Tofu egg salad sandwich (p. 72). New Deli (fat-free hot dog, p. 75). VLT with herb mustard (and fat-free tofu bologna slices, p. 76). Broccoli in soy cheese sauce (p. 78-79). Fruit shake (with soy protein isolate, p. 84). Blueberry banana multi-grain pancakes (with soy milk, p. 87). Strawberry shortcake (with soy milk, p. 96). Carrot cake (with silken tofu, p. 100-01). Devil's "fool" cake with cocoa frosting (plus silken tofu, p. 104). Tofu cheesecake with fresh berry topping (p. 106-07). Banana cream pie (with 3 cups vanilla soy milk, p. 108). Old fashioned chocolate pudding (with 2 cups cocoa soy milk, p. 109). Maple flan (with 2 cups soy milk, p. 110). Address: CaP CURE, 1250 4th St., Suite 360, Santa Monica, California 90401. Phone: 310-458-2873.

7478. Goldbeck, Nikki; Goldbeck, David. 1998. The healthiest diet in the world: A cookbook and mentor. New York, NY: Dutton (Penguin/Putnam Inc.). xiii + 561 p. Sept. Illust. General index. Recipe index. 25 cm. [840+* ref]
• ***Summary:*** This is an excellent book, with a wonderful title that lives up to its promise. Both authors are real professionals, with 25 years in the field. Contains extensive information about the importance of a wholefoods, natural foods diet, with plenty of fresh fruits, vegetables, beans, and soyfoods as sources of the many recently-discovered phytochemicals, which offer promising health benefits. The authors are fans of soyfoods, which are featured in both the text and recipes throughout the book.

In Part I, "Goldbeck's Golden Guidelines," No. 5 is "Super Soy Foods" (p. 14-15) which encourages readers to "Make soy foods a regular part of your diet."

Part II is the recipe section, titled "In Nikki's kitchen: Healthiest diet recipes." The main soyfoods used in recipes are tofu (48 recipes!), tempeh (15), soy milk (14), miso (8), soybeans, whole dry (3), and soy flour (2). This book contains so many soy-related recipes that we cannot possibly list all of their names. So here are two samplers of such recipes to give a feeling of their diversity, extent, and inviting names. (1) Salad dressings and salads: Creamy miso-mustard coleslaw (p. 178). Tofu mayonnaise (p. 190). Creamy tofu Russian dressing (p. 191). Creamy tofu ranch dressing (p. 191). Lemon-tahini dressing (with soy sauce, p. 192). Creamy miso-mustard dressing (p. 193).

(2) Tempeh recipes: Tempeh strips (p. 31). Tempeh breakfast links (p. 32). Baked Italian tempeh (p. 38). Tempeh burgers (p. 39). Skewered tempeh with orange-nut crust (mini kebabs, p. 61). Maple-pecan tempeh (p. 98). Baked corn-tempeh hash (p. 98-99). Picadillo (Latin American sloppy Joes with tempeh, p. 99). Tempeh mushroom stew (p. 100). Asian grill (with marinated tempeh, p. 101). Tempeh kebabs (p. 102). Shish kebab in a bag (p. 103). Tempeh-bean chili (p. 114-15).

In Part III, "Mentor," one entire chapter is dedicated to soyfoods ("5. In praise of soybeans," p. 408-29). The contents of that chapter: Introduction. Soy's special assets. The phytochemical furor. Protein plus. Soy fiber. Vitamins and minerals. Soy concerns. Soy food selection (incl. Western-style dairy and meat alternatives; soy cheese, soy ice cream, "soy-based imitation meat"). Stick with traditional soy foods: Tofu, tempeh, soy milk, soy nuts, whole soybeans (incl. edamame or green soybeans), soy sprouts, soy flour, soy grits, soy sauce, miso, okara (soy fiber), natto. Soy for health: Introduction, cancer (breast, prostate, and other hormonally influenced cancers), heart disease, diabetes, osteoporosis, women and soy, infant feeding. Nikki's dialog boxes: Mixing and matching soy protein. Just because they call it "milk": Nondairy vs. dairy. The question of salt. How to acquire your anti-cancer soy intake. Twenty-five grams of soy protein a day?

Soybeans are also mentioned in Chapter 6, "The beauty of beans" (see p. 431, 434). The 43-page bibliography of

current scientific information on the health benefits of foods is worth the price of the book.

In the chapter titled "Controversial carbohydrates" is a long section about the glycemic index of foods titled "G-Force: A new perspective on carbohydrates" (p. 280-89); it includes a 6-page table showing G-force [glycemic index] ratings for individual foods. "Foods with a high G-Force [55 and above, bad] raise blood sugar levels quickly; this is usually matched by a rapid rise in insulin. Foods with low G-Force cause blood sugar levels to rise gradually, in which case insulin is usually released more evenly." Foods that tend to have a high G-Force are: Desserts and sweets (doughnut 108, graham crackers 106), foods made from refined flours (baguette 136, bagel 103, white wheat bread 100), sweet and refined breakfast cereals (puffed rice 132, Cornflakes 119, Cheerios 106), sugars (maltose 150, glucose 137, sucrose 92). Foods groups that tend to have low G-force are: Fruits (apple 54, apple juice 58, orange juice 63, but watermelon 103), legumes (soybeans 25, chickpeas 47), dairy products (yogurt 20, milk 46). vegetables (non-starchy). Address: Woodstock, New York.

7479. **Product Name:** Soy Dream (Soymilk) [Original, Chocolate, Vanilla, Original Enriched, Chocolate Enriched, Vanilla Enriched].
Manufacturer's Name: Imagine Foods, Inc. (Marketer-Distributor). Made in Manteca, California, by California Natural Products.
Manufacturer's Address: CNP: P.O. Box 139, Manteca, CA 95336. Imagine: 350 Cambridge Ave., Suite 350, Palo Alto, CA 94306. Phone: 650-327-1444.
Date of Introduction: 1998. September.
Ingredients: Chocolate enriched: Filtered water, organic whole soybeans*, rice syrup, cocoa, tricalcium phosphate, sea salt, vanilla, xanthan gum, vitamin A palmitate, vitamin D-2, vitamin E, vitamin B-12. * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 8 oz or 32 oz Tetra Brik Aseptic carton. Retails for $3.98 per three-pack of 8 oz or $1.99 per quart (1998/09 California).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per cup (8 fl oz): Calories 210, calories from fat 40, total fat 4.5 gm (7% daily value; saturated fat 0.5 gm), cholesterol 0 mg, sodium 150 mg (6%), total carbohydrate 35 gm (sugars 22 gm), protein 7 gm. Vitamin A 10%, vitamin D 25%, vitamin B-12 25%, vitamin E 25%, calcium 30%, iron 10%, thiamin (B-1) 10%, riboflavin (B-2) 4%, niacin (B-3) 4%, pantothenic acid (B-5) 4%, folic acid (B-9) 15%, vitamin B-6 8%, phosphorus 25%, magnesium 15%, zinc 6%, copper 8%. Not a significant source of fiber or vitamin C. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Ad (full page, color, trade) in Natural Foods Merchandiser. 1998. Aug. p. 7. "Finally, a premium quality soy beverage line from a proven, consistent supplier." "From the makers of Rice Dream, the best-selling product in the natural foods industry." "Six delicious varieties in quarts and convenient 8 oz sizes." Large photos show the front of each aseptic package. Web: info@imaginefoods.com.

Spot (quarter page, color) in Vegetarian Times. 1998. Sept. p. 12. "Power pack." After years of making rice-based non-soy products, Imagine Foods introduces its first soy product, a soy beverage. "Perfect for stashing in lunch boxes." Made with organic soybeans and fortified with vitamins E and B-12. "Even better: It provides as much calcium and vitamins and D as whole milk."

Talk with Ellen Weiser of Imagine Foods. 1998. Sept. 16. Imagine Foods has been planning this product since before April of this year. The quarts were first available for sale in stores on about 9 Sept. 1998. The suggested retail price is $1.79 to $2.59 for enriched and $1.69 to $2.09 for non-enriched. The product is made by California Natural Products at their factory in Manteca. The Mitchells purchased the necessary equipment and developed the process. Imagine Foods plans to celebrate its 15th anniversary next year. In June 1984 Imagine Foods introduced Rice Dream, a non-dairy frozen dessert based on rice beverage, in hard pack pints in the following flavors: Vanilla, Carob, Carob Chip, Strawberry, Lemon, Orange, and Carob Almond.

Product with Label purchased for $1.99 at Open Sesame (natural food store) in Lafayette, California. 1998. Dec. 23. Aseptic Chocolate Enriched with reclosable lid. Chocolate brown and black on white. Illustration on the front panel shows a thin stream of chocolate soymilk being poured through the "o" in "Soy" into a tall, chilled class where it forms a little wave. Text on front panel: "Soy beverage with vitamins A, D, E, B-12. Rich in calcium. Lactose free." Text on back: "Health benefits of Soy Dream: Lactose and dairy free. High in protein. As much calcium, protein, vitamins A and D as whole milk. Rich in vitamins B-12 and E. Contains soy isoflavones. Low in saturated fat. Cholesterol free. 100% vegetarian." Lists five other lines of "Fine, non-dairy products from Imagine Foods." On one side panel, a table compares the nutritional composition of this product with whole chocolate milk.

Talk with James Terman of White Wave. 1999. May 20. Soy Dream is coming out in a gable-top carton–fresh.

7480. ProSoya Foods Incorporated. 1998. Manufacturer of superior soyfoods products (Ad). *Soya & Oilseed Bluebook* 1999. p. 102.
• ***Summary:*** This one-third-page black-and-white ad shows 4 small aseptic cartons and four large gable-top cartons of ProSoya SoNice organic soy beverage, plus five cups of ProSoya SoNice Yogurt. The soymilk comes in natural, original, vanilla, chocolate & cappuccino (fresh & UHT

packages). The soy yogurt comes in vanilla, strawberry, fieldberry, raspberry, and black cherry. The company's basic listing is on p. 143 of the Bluebook. See also ProSoya Inc. at 5310 Canotek Rd. #2, Ottawa, Ontario K1J 9N5, Canada. Address: 15350 56th Ave., Surrey (Vancouver), British Columbia, Canada V3S 8E7. Phone: (604) 576-8038.

7481. *Soya & Oilseed Bluebook.* 1998--. Serial/periodical. Bar Harbor, Maine: Soyatech, Inc. Peter Golbitz, publisher and editor. Frequency: Annual.
• ***Summary:*** Preceded by Soya Bluebook Plus. A directory and information book for the soybean processing and production industries. The first issue (shipped Sept. 1998) is subtitled "The annual directory of the world oilseed industry." On the cover, below a map of the world is printed the date "1999" in large letters, followed by "A Soyatech Publication." Crops featured on the front cover and inside are "soya, corn, cottonseed, canola, rapeseed, sunflowerseed, palm kernel, palm, coconut, and peanut."

Contents (the four main sections are marked with a fold-out tab): Translations of oilseed terminology (English, German, French, Spanish, and Portuguese). Organizations and government agencies: Complete listings by country. Oilseeds and oilseed products: White pages (Index, individual crops), catalog pages, yellow pages (complete company listing by country). Equipment supplies and services. Oilseed statistics. Oilseed reference: Oilseed glossary, standards and specifications, oilseed technical charts and tables. Indexes: Comprehensive index, internet address index, brand name index, advertiser index.

Soy-related terms appearing in the translation section (p. 9-15) are: (1) Oilseeds and products: dairy analogs, lecithin–edible, lecithin industrial, meat analogs, miso, organic soy products, soy distillate, soy fiber, soy flakes–defatted–edible, soy flakes–full fat, soy flour–defatted, soy flour–enzyme active, soy flour–full fat, soy flour–low fat, soy flour–roasted, soy flour–textured, soy grits, soy isoflavones, soy livestock feed, soy oil margarine, soy oil shortening, soy oil–crude, soy oil–edible, soy oil–hydrogenated, soy oil–industrial, soy oil–refined, soy oil-based fuel, soy protein concentrate, soy protein isolate, soy protein–hydrolyzed, soy protein–industrial, soy sauce, soy sterols & tocopherols, soy-based foods–other, soybean fatty acids, soybean hulls, soybean meal, soybean meal–full fat, soybean seed breeder, soybean seed (for planting), soybean soapstock, soybeans–food grade, soybeans genetically modified, soybeans–green vegetable, soybeans–identity preserved, soybeans–non-gmo, soybeans–organic, soybeans, whole dry, soymilk beverages, soymilk powder, soynuts, tempeh, tempeh starter cultures, textured vegetable protein, tofu & tofu products, tofu powder. (2) Equipment & services: Coagulants for tofu, soymilk & tofu processing equipment, sprouting equipment. Address: 318 Main St., P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207-288-4969.

7482. **Product Name:** Soymilk, Tofu, Soy Snacks.
Manufacturer's Name: Soytein, Inc.
Manufacturer's Address: 480 Douglas St., Mt. Gilead, OH 43338-1019. Phone: 614-766-0688.
Date of Introduction: 1998. September.
New Product–Documentation: U.S. Soyfoods Directory. 1999. p. 42-43. Talk with Bill Lui, founder and owner. 1999. May 3. He started making soymilk in Sept. 1998, then tofu in Dec. 1998. He designed and built all the equipment in his plant. He also sells custom made equipment; it is made in Taiwan to his specifications. A tofu maker will soon arrive to help him.

Letter from Bill Lui. 1999. May 10. A 1-page laser-printed leaflet describes "Soytein Inc." He has clipped and included two color photos of tofu equipment made in Taiwan to his specs.

7483. US Soy, LLC. 1998. Food grade soybeans (Ad). *Soya & Oilseed Bluebook* 1999. p. 101.
• ***Summary:*** This half-page black-and-white ad states that the company offers: Non-GMO guaranteed, identity preserved, certified organic, variety development, cleaning and storage, supplies available all year. Can store over 1.1 million bushels of soybeans. Occupies 25 acres and contains 114 storage bins. Also offers five soy products produced from client specified soybeans: Soy oil and soy flour, spray dried soy milk, roasted soybeans [oil roasted soynuts], and dehulled soybeans. Website: www.ussoy.com. Address: 2808 Thomason Dr., Mattoon, Illinois 61938. Phone: 217-235-1020.

7484. Vitasoy USA Inc. 1998. By popular demand, we've given Vitasoy a little something extra: Introducing Vitasoy Enriched (Ad). *Vegetarian Times.* Sept. p. 39.
• ***Summary:*** This full-page color ad shows many packages of new Vitasoy Enriched, in original and vanilla flavors, against a white background. "We've added calcium, riboflavin, zinc, vitamins A & D–plus vitamin B-12–an essential vitamin for those on a vegan diet... Like all Vitasoy drinks, our Enriched is made from certified organic whole soybeans..." Address: P.O. Box 2012, South San Francisco, California 94083. Phone: 1-800-VITASOY (848-2769).

7485. **Product Name:** Silk Organic Plain (Soymilk Sold Refrigerated in One Quart ESL Gable Top Cartons).
Manufacturer's Name: White Wave Foods Co. (Distributor).
Manufacturer's Address: Colorado.
Date of Introduction: 1998. September.
Ingredients: Organic soymilk (filtered water, whole organic soybeans), calcium carbonate, sea salt, natural flavors,...
Wt/Vol., Packaging, Price: One quart (946 ml) Tetra Pak ESL gable top carton.

How Stored: Refrigerated.
New Product–Documentation: News release (on White Wave letterhead) sent by Holden McClure for White Wave. "Nothing plain about new White Wave Silk Organic Plain soymilk" "TofuTown, USA (Boulder, Colorado), August/ September 1998. White Wave announces the launch of Silk Organic Plain. Third party certified by QAI. It will be launched first in traditional quart cartons, then in half gallons within a few months.

Note: This is the first organic product in the Silk soymilk line. The company expects to have $13 million in sales this year.

7486. **Product Name:** Silk Soymilk (Half Pints, Fortified for Kids) [Plain, Chocolate].
Manufacturer's Name: White Wave, Inc.
Manufacturer's Address: 6123 E. Arapahoe Rd., Boulder, CO 80303. Phone: 303-443-3470.
Date of Introduction: 1998. September.
Wt/Vol., Packaging, Price: Half pint
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: News release (on White Wave letterhead) sent by Holden McClure for White Wave. "Half pints for 'half-pints'–White Wave to launch its popular Silk soy milk in school-size." "TofuTown, USA (Boulder, Colorado), June 1998. White Wave announces the launch of its popular Silk (TM) and Silk Chocolate soy milks in half pint size. The products will be available his Fall, just in time for back-to-school lunch boxes. Great for those with milk allergies or [lactose] intolerance, Silk and Silk Chocolate are low fat (1%) and 100% lactose free and cholesterol free. The half pint products will be a convenient way for parents to offer their kids a tasty, healthy lunch or snack-time beverage that they like."

7487. White Wave, Inc. 1998. ixnay on the ilkmay? Silk is soy (Ad). *Natural Foods Merchandiser.* Sept. p. 202.
• ***Summary:*** This small (2¼ by 4½ inches) but prominent (bright red, orange, and white) color ad is mostly background color and text. On the right is a half-gallon carton of White Wave Silk (fresh soymilk). In the upper right corner is the White Wave logo. Across the top of the ad, in fairly small letters: "As we like to say, lactose-free Silk is delicious in any language."

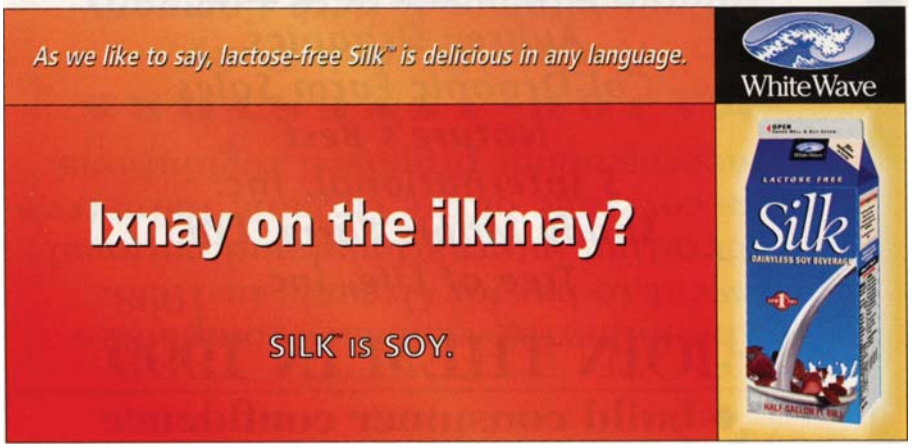
Note: Can you figure out what the title means? A good way to catch one's attention. Steve Demos, founder and president of White Wave, provides the answer (July 2013): it is written in "Pig Latin" and means: "nix on the milk."

Pig Latin takes the first consonant (or consonant cluster) of an English word, moves it to the end of the word then adds the suffix "ay."

Steve adds: "At the time we had no advertising money so we ran very small ads in trade magazines like this." Address: Boulder, Colorado.

7488. Frauenheim, Ed. 1998. Enough to shave off a milk moustache: State ups moo juice price per gallon 15 cents. *Oakland Tribune.* Oct. 1. p. News-1, News-9.
• ***Summary:*** The price of cow's milk varies widely in the USA among states, regions, and seasons. The price of a gallon of milk in California is expected to rise by 15 cents today, due to an increase in the state-determined price paid to dairy farmers. This comes on the heels of an 18 cent rise on August 1. That wholesale price typically gets passed on to consumers. California, which leads America in dairy production (29% of the country's butter and 18% of its cheese), also has some of the nation's highest milk prices. Today's price hike was caused by low production and high demand. The increase was criticized by the "Mad about Milk" coalition (heavily funded by Arizona milk producer Shamrock Foods), which claims that California laws set unfair barriers against out-of-state producers and drive up the cost of milk for California consumers. The price hikes were defended by the Dairy Institute, a trade association of 40 milk producers.

The state's milk pricing system dates back to the Great Depression era, when the cost and availability of milk were very volatile. California also has laws that require more nonfat solids in milk. Address: Business writer.



7489. Harrigan, Brian. 1998. ProSoya Inc. and International ProSoya Corp. (Interview). *SoyaScan Notes.* Oct. 15. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** ProSoya Inc. and International ProSoya Corp. (IPC) are definitely two separate organizations; each is very different in its activities and philosophy. IPC was not created out of ProSoya, but rather as a separate entity with different owners to license ProSoya's large-scale soymilk technology. This relationship

as licensee still exists. IPC does not make equipment or sell equipment worldwide; they make soy products using ProSoya's technology. ProSoya has some ownership in IPC and they have a very small ownership in ProSoya Inc. People do associate these two companies, not realizing that they are totally separate. This confusion (and some things that people from IPC have said and done) has caused ProSoya quite a few problems.

ProSoya does not presently make any soyfood products. The plant on Canotek Road (in Gloucester, near Ottawa), where they used to make some products and have their offices, was originally used solely for R&B, but it expanded so much that it eventually also became a commercial soyfoods production facility. In Oct. 1996 ProSoya sold this plant to IPC and in Jan. 1997 ProSoya moved to separate offices about 500 feet away, on the same road; there they have offices plus a small area at the back for R&D, shipping, and receiving. ProSoya can still take customers and others to see this plant and its operation, but sort of as visitors.

ProSoya is an R&D and technology company. Their equipment is manufactured by other companies (as in India and Russia) for them.

There has been quite a shake-up at IPC recently and things there are rather chaotic. Their soymilk, SoNice was the number one seller in Canada while it was out. It was made in two plants–in Vancouver (BC) and in Ottawa (Ontario, on Canotek Rd.). It's arrival expanded the market for all soymilks sold in Canada; so while Edensoy and Vitasoy lost market share to SoNice, they actually saw their sales volume increase. But recently IPC has had major problems their soymilk; it is no longer being manufactured, but small amounts are still left in the retail pipeline. The product is good, but it is mostly financial factors that have caused it to disappear from the market. IPC has not really commercialized their soy yogurt yet, except perhaps on a small scale for the Vancouver area–and there they were having problems with the formulation, though not with the taste. For more details, contact George Conquergood, who is the vice-president of operations. He is quite open in telling interested people what is happening. The plant in Scotland is a totally separate venture from IPC; Dusty is still there.

A new brand of soymilk in Canada is SoGood. Based on soy protein isolates, it is the same as that made by Sanitarium Foods in Australia. In Canada, it is made (mixed and packaged) under license from Sanitarium by Sunrise (owned by Peter Joe) in Vancouver. Sunrise and Dairyworld (the biggest dairy in Canada) now have a joint venture named SoyaWorld. Dairyworld distributes SoGood soymilk along with their line of dairy products. SoGood is now doing very well in Canada. When SoNice was on the market, it had a bigger market share than SoGood. But SoGood conducted a national advertising campaign that cost several million dollars, and greatly helped their sales. Brian finds the flavor of SoGood rather artificial and the list of ingredients is very long, so consumers tended to prefer the more natural and better tasting SoNice–until it ceased to be available.

Raj Gupta is now more involved with ProSoya Inc, than ever before. He comes to the office every day. When he started ProSoya he was working for the National Research Council (NRC) and working with ProSoya part-time on the side. Now he works on ProSoya full time; about 3 years ago he gave up his position at NRC. ProSoya was growing so much that the company need his full-time presence, and could afford to pay him what he needed.

Note: Other sources say that IPC recently declared bankruptcy. Address: Executive Vice-President, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

7490. Harrigan, Brian. 1998. Update on the work of ASSOY and ProSoya Inc. in Russia and the former Soviet Union (Interview). *SoyaScan Notes.* Oct. 15. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** ProSoya has a technology transfer agreement with ASSOY (Associatsiia "Assoya"), the Russian Soybean Association, which is their partner. Founded and run by the energetic Alexander Podobedov, ASSOY has made more than 250 of the small SoyaCows, and sold them within the former Soviet Union during the last 1½ to 2 years. In addition, ProSoya has sold about 100 of these small SoyaCows elsewhere. In Russia, most of these SoyaCows are in the shops of small entrepreneurs. They make soyfoods to retail to the general public. In Krasnodar alone, ASSOY has opened 7 shops which are called Soyushka, meaning "Little Soya." They sell only soyfoods–tofu, soymilk, soynuts, soy oil, soya flour, soy power and a variety of foods made from soya–such as soya breads. Outside of Russia, there are SoyaCows in the Ukraine, Moldova, Belarus (quite a few there). ASSOY is now actively running newspaper, radio, and TV ads in various countries of the former Soviet Union, and throughout this region Soyushkas are becoming well known and the people are becoming soya-conscious–largely through the efforts of ASSOY. Brian has the whole story, but in Russian, in marketing documents. On paper the story sounds better than it looks when you actually go there. Some of the plants are idle. Some employees haven't been paid in 6-8 months, so they don't work very hard. ASSOY keeps trying to get the Russian government to help them out. The government keeps saying that they will, and they have even signed decrees saying that the government will help send soyfoods to the prisons, schools, and hospitals–where there are dire shortages of protein. But the government never does what it says.

ASSOY provides spare parts for the soy shops, plus all the marketing, recipes and recipe books, everything. The man behind these remarkable developments is Alexander Podobedov, who is a real entrepreneur. But he has a style that is very rough and tough with people, which sometimes

(especially in Russia) helps him and other times (especially with Westerners) limits his effectiveness. Address: Executive Vice-President, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

7491. Iacono, Giuseppe; Cavataio, F.; Montalto, G.; et al. 1998. Intolerance of cow's milk and chronic constipation in children. *New England J. of Medicine* 339(16):1100-04. Oct. 15. [22 ref]
• ***Summary:*** Chronic diarrhea or constipation in children can indicate intolerance of cow's milk. Address: Divisione di Pediatria, Ospedale G. Di Cristina.

7492. Ridenour, Jeremiah. 1998. How Jeremiah Ridenour of Wildwood Natural Foods and Ted Nordquist of TAN Industries developed America's first soymilk in a gable-top carton (Interview). *SoyaScan Notes.* Oct. 20. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Background: Ted Nordquist, a native of California, is perhaps the world's leading developer of soy base and dairylike products derived therefrom. He pioneered tofu, soymilk, and soy ice cream in Sweden, and eventually sold his company to one of Sweden's largest food manufacturers, before moving back to California in the early 1990s (1992-94). His family joined him in Sonoma in August 1994.

Jeremiah and Ted met not long after Ted moved from Sweden to California in about 1993-94. This was before his family came, when he was here by himself. Ted contacted Jeremiah. He wanted to make a soy ice cream in the USA–that was his main focus. He suggested that Jeremiah buy Woody Yeh's soymilk yogurt plant in Hayward, California, because Woody's company (Soyeh Natural, Inc.) was about to go out of business. Jeremiah did not do this and Woody went bankrupt then sold his equipment to an Asian American man [Jim Pong of Pure Land Co.] who is now producing tofu there. Woody is now running an import/export company.

Jeremiah liked Ted and thought his soy base was great, so he introduced him to the packaging company, and to Dreyer's (the ice cream company). They spent time together and talked about gable-top soymilk. On his own, Ted soon met Ken Lee of Soyfoods of America (where Ted's soymilk is now made). Not long after Ted got involved with the packaging company, in early 1995, Jeremiah started developing soymilk formulations using Ted's base, then together they started doing pilot runs (into gable-top pints), then larger tailing runs (into quarters) at the packaging plant. In a tailing run, you come in behind someone else's product run, clean out the system with a slug of cleaner, then run your product into the last 100 or so cases. A tailing run duplicates your pilot run on a larger scale to check that all of your assumptions about scaling up really work. They ran two 100-case runs into quarts–which was pretty expensive–but it proved that everything worked. The minimum soymilk run for Wildwood at this packaging plant would be 3,000 gallons (12,000 quarts). Jeremiah ran some calculations and quickly determined that making and packing that much soymilk would be overstretching the financial resources of Wildwood. The ESL carton will get you a 12-week shelf life, but some precipitation (formation of a little tofu on the bottom) takes place after you add calcium and the carton bulges slightly (which makes it look a little funny) around the 11th week due to some saturation of the packaging material. Therefore Wildwood decided to stamp on a conservative use-by date of 10-weeks. So Jeremiah would have to refrigerate and sell 12,000 quarts of a perishable soymilk in ten weeks. Actually he would have to sell it in 6 weeks, because most retailers won't take a perishable product that has less than 4 weeks (30 days) on it. Thus, Wildwood would have to produce a new batch every 6 weeks. That would be difficult, because it was a new product (the first of its kind in the USA) and no one knew how long it would take to catch on with retailers and consumers. Everyone with experience knew that Murphy's Law operates at full force with new, perishable products. But the cash flow problems were an even bigger problem. Before the first run of 12,000 quarts were sold, Wildwood would have to do a second run–and pay for it. The company was already out trying to raise money to finance expansion of its existing tofu business. Jeremiah finally concluded that he didn't have a big enough cash flow or line of credit to take on the soymilk; it was a great product but was just too risky–and a mistake could sink the company.

If money hadn't been an issue, this new soymilk product could have been on the market in late 1995 or early 1996. Finally Jeremiah had to tell Ted that he and Wildwood did not have the capital and were not willing to take the risk of going ahead on the project. Moreover, Ted's production process at Soyfoods of America had not yet been proven; he did not have the equipment there that he has today, and he had never made 3,000 gallons of soymilk in America–though he had made much more than this in Sweden. Also Jeremiah had questions about the reliability of Soyfoods of America.

Jeremiah's contributions toward developing the new product were choosing the type of sweetener and determining the sweetness level for each flavor. He wanted a sweetness that was very similar to that of dairy milk and that came from an organic ingredient. He eventually chose organic brown rice syrup over organic cane sugar; the former has a roundness of flavor but imparts a tan color to the soymilk. Titanium dioxide, a pigment or bleach, could be added to make the soymilk white, but it would have to be listed on the package as an ingredient and was inconsistent with the company's philosophy on using organic. Most important, Jeremiah introduced Ted to the ESL (extended shelf life) gable-top packaging system.

Ted argued that Wildwood should aim for a quart of soymilk that sold for the same price as a quart of dairy milk–and thus drop the expensive organic ingredients. Jeremiah

responded: "That is not who Wildwood is." So Ted had no choice but to approach Wildwood's competitors. First he went to Westbrae (who was not interested), and then to White Wave–which was the first company to put this fresh, gable-top soymilk product on the market. Named Silk, it was an excellent product, well made and marketed, and it soon became the most successful product in White Wave's history. Many industry watchers were surprised at the response and sales volume. White Wave discontinued their burgers and hot dogs so they could focus on their soymilk and yogurt. Over the next few years, Wildwood's financials improved, and in June 1998 they were finally able to launch their gable-top soymilk–made by Ted Nordquist. Unfortunately, it was now a "me too" product, but moving into a proven market. One big challenge for Jeremiah is how to move his fresh soymilk out of the produce section and into the dairy case. Address: Wildwood Natural Foods of Santa Cruz, Inc., 1560 Mansfield Dr., Suite D, Santa Cruz, California. Phone: 408-476-4448.

7493. Black, Pam. 1998. Is soy the recipe for what ails you? *Business Week.* Oct. 26. p. 162-E18.
• ***Summary:*** The soybean gained prominence as a health food in the 1970s. Now even former junk-bond king Michael Milken is "promoting soy's potential to fight prostate cancer..." During the past decade, scientists have discovered estrogen-like active substances named isoflavones or phytoestrogens which may be responsible for "soy's health effects."

Researchers have proven that soy has cardiovascular benefits, primarily by lowering low-density lipoprotein, or LDL ("bad cholesterol"). The mechanism is not clear; the soy may keep LDL from being oxidized to form plaques that clog arteries. Soy increases flexibility of the arteries, which stiffen and harden with age. Thomas Clarkson, professor of comparative medicine at Wake Forest University School of Medicine (Winston Salem, North Carolina) emphasizes that some amount of soy protein must be consumed for the phytoestrogens to exert cardio-protective benefits. Isoflavone pills alone will not be effective. Scientists recommend consuming 30 to 60 mg of isoflavones per day with 7-10 gm of soy protein. A table shows good sources of soy protein, plus their content of isoflavones (mg) and protein (gm): Solgar Iso-Soy powder (1 oz) 103 / 12. GeniSoy natural protein powder (1 oz) 74 / 24. White Wave baked tofu (3 oz): 52 / 19. White Wave tempeh (3 oz) 47 / 18. Edensoy original drink (soymilk, 8 oz) 41 / 10. Soyboy Not Dogs (1.5 oz per dog) 35 / 7.

Soy's effects on cancer are less conclusive; most researchers doubt that soy is harmful. Soy has great appeal to women approaching or past menopause. Nutritionists think soy phytoestrogens may be safer than Premarin–which may increase the risk of breast cancer.

"And for those of you who've always turned up your noses at tofu, there is good news: Soy is available in such guises as hot dogs, burgers, cheeses, and ice cream."

7494. Bynum, William. 1998. Soy Amazing and Better than Milk. Big changes at Hearty Life, Sovex Natural Foods, McKee Foods, and Fuller Life Inc. (Interview). *SoyaScan Notes.* Oct. 28. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** William has been with the company for about 6-7 months. Soy Amazing is a new product, introduced less than 2 years ago; it is actually the original Better Than Milk formula. However there is another product named Soy Amazing, sold only in Canada, which is the same as the present U.S. Better Than Milk; that is because it is illegal to use the name "Better Than Milk" for this product in Canada.

For many years, Sovex Natural Foods has been owned by the McKee Foods Corporation of Collegedale, Tennessee. The Southern Adventist University is also located in Collegedale. Founded, owned, and run by Jack McKee (a well respected Seventh-day Adventist), McKee Foods makes mostly popular snack foods. Their most popular product line is "Little Debbies," consisting of about 40 different varieties of snack cakes–from Jello Rolls to Honey Buns. For this reason they kept an arms-length relationship with Sovex Natural Foods. Glen Fuller has been with McKee Foods for about 20 years, and has been the vice-president for the past 10-12 years. Glen developed the Better Than Milk formula and line of dry soymilk products about 7 years ago.

On July 3 of this year, Sovex was merged into its parent company, McKee Foods, and made a division of that company; it was no longer a separate subsidiary. Sovex also makes a wide variety of cereals, bran, granola, and the like. The name Sovex ceased to exist; it is now McKee Plant No. 6. Shortly after McKee absorbed Sovex, probably at Glen's urging, McKee decided to spin off and sell him the Hearty Life brand and the Better Than Milk product line–which includes the Soy Amazing products. That transaction was finalized last Friday, October 23. So now Glen is president, CEO, and sole owner of a new company named Fuller Life Inc. The address has changed to 1628 Robert C. Jackson Drive, Maryville, Tennessee 37801. Phone: 423-681-4171. Maryville is about 100 miles from Collegedale, and the site of Glen Fuller's main home; called his "mountain home," the property backs up on the Great Smoky Mountains. Their main product is Hearty Life Better Than Milk–which includes Soy Amazing and many SKUs including five flavors of the soy Better Than Milk, two flavors of the rice Better Than Milk. Most of it comes in canisters or 25 lb bulk bags, but they also have an aseptic UHT liquid soy Better Than Milk (original flavor). William will send some press releases and a sales brochure, with the date that each product was launched.

In 6-8 months Fuller Life plans to introduce a new product name Better Than Milk Plus, which will be an all-

organic, enriched and fortified powdered version of the present Better Than Milk.

Follow-up talk with Darlene Foot, Glen's secretary, still at his office in Collegedale. She joined the company about 5 years ago. At that time Glen Fuller was president. John Goodbrad retired in about 1988-89 and died about 3 years ago. Sovex, the yeast product, still exists. Some years ago Sovex Natural Foods sold the rights to Village Market, located near Southern Adventist University, which subcontracts the production with some other company. Address: Consumer Affairs Administrator, Fuller Life Inc., 1628 Robert C. Jackson Dr., Maryville, Tennessee 37801. Phone: 423-681-4171.

7495. Fuller, Glen. 1998. A brief history of Sovex Natural Foods, Hearty Life, McKee Foods, and Fuller Life Inc. (Interview). *SoyaScan Notes.* Oct. 28. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Glen is interested in the history of Sovex, which is now named Fuller Foods, Inc. John Goodbrad did not buy any business from the Hurlingers in Michigan. Rather, he bought their formula for making Sovex spread and the brand name. The word "Sovex" is derived from the words "soy vegetable extract." The soy part of it was real soy sauce, and still is. Glen has heard of the Hurlingers in Holly, Michigan, but they didn't call their company Sovex. Glen does not know the name of the Hurlinger's company, but he thinks he could find it in the company archives. In about 1961 Ruth Goodbrad, John's wife, began making Sovex in their basement. In the early years, Sovex was basically Ruth's business.

In 1962 John Goodbrad called Glen about the granola business. John had an opportunity to buy a formula for granola, which he later did buy. At the time, Glen was a student at Southern Adventist College, where John worked for Collegedale Distributors, and Ruth, was still manufacturing Sovex in their basement. John bought the granola formula, under an exclusive arrangement, from a fellow named Layton Gentry–who sold the same formula with the same exclusive rights to at least 6 other individuals or companies who wanted to make granola! Every one of them thought they had an exclusive agreement! For example, the founders of the Bread Shop (in California) bought the formula from Mr. Gentry during the same calendar year. Right after John bought the granola formula, he formed a corporation and named it Sovex Foods Inc. after the spread. After John bought the granola formula, Ruth also manufactured the granola in their basement. Ruth continued making these two products in the basement of their home until about 1966, at which time they moved the food processing up into a building in Collegedale.

On 1 March 1974 McKee Foods acquired the business from Mr. Goodbrad, who didn't really want to sell it. He was a fine and honest man, very much dedicated to his company and involved in it, but he had to sell it for financial reasons. That is usually difficult for an entrepreneur. During his 1980 interview with Soyfoods Center, he may not have mentioned the fact that Sovex was owned by McKee since he was always sensitive to the fact that a health food company was owned by a snack food company.

Goodbrad was president of the company from that day in March 1974 until 30 June 1990. During that time he reported to Glen Fuller, who was vice-president of McKee Foods and responsible for McKee's subsidiaries. On 30 June 1990, when Mr. Goodbrad retired, Glen took over the company and moved his offices from the parent company to Sovex. He retained his position as vice-president of McKee, but also became president and CEO of Sovex. In the early 1990s, Glen changed the company name to Sovex Foods, Inc. from Sovex Natural Foods, Inc.

About 4 years ago, Sovex licensed a local business (named the Village Market) in Collegedale to manufacture the Sovex seasoning spread in their little deli kitchen. There are many other similar products worldwide, such as Marmite, Vegex, Solvex, etc.

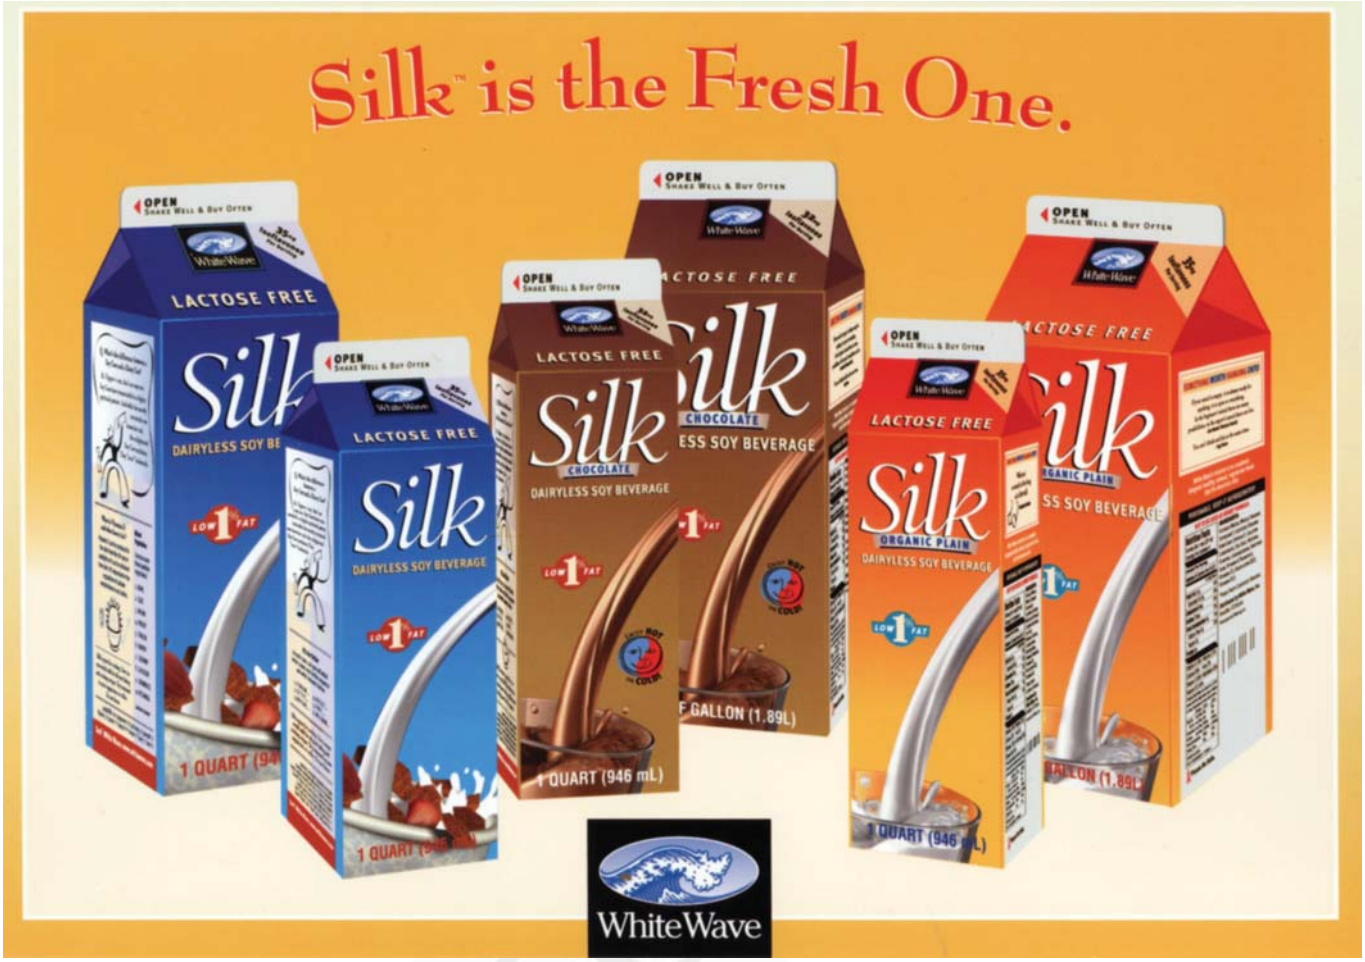
Glen has the "Minute Book" for the corporation which goes back to the date it was established in 1962. He could resurrect most of the history from that book, with solid documentation as to dates.

John Goodbrad is deceased, but his wife, Ruth, is still living in Collegedale and very alert. She really started the manufacturing operations.

Glen has never gotten involved in the actual manufacturing of soymilk. He buys the powdered or fresh soymilk he uses from the manufacturer. Some products also use soy isolates or soybeans. Glen does the product formulation and marketing, Glen has a great deal of interest in how his products are manufactured and his company has very strict quality standards. The company is continually inspecting its suppliers, and trying to stay on the cutting edge of product development. Glen knows Elmer Schettler very well; Sovex marketed Elmer's Solait until 30 Sept. 1998, even after Sovex was merged with McKee Foods. There was apparently a falling out and lawsuit between Elmer and Willis Miller, but it was finally settled. Address: Founder, President & CEO, Fuller Life Inc., 1628 Robert C. Jackson Dr., Maryville, Tennessee 37801. Phone: 423-681-4171.

7496. Fuller, Glen. 1998. Dr. Harry Miller and his descendants (Interview). *SoyaScan Notes.* Oct. 28. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Throughout his life, Glen has heard many fine things about Dr. Harry Miller, though he never had the opportunity to meet him. Glen's wife's parents were Adventist missionaries in China, and they knew Dr. Miller very well. They returned to the USA from China in 1941, several years later than Dr. Miller. Glen's wife was only 3 at the time, but she recalls that there were on one of the



last trains that left from Gulin in central China, just above the Yangtze River. Glen knows his son Willis, and Willis' son (Harry Miller III) who is now about age 30, and who married a lady named Kim Arliano, who worked briefly for McKee Foods in the audit department. Harry III (who lived in Nashville, Tennessee, when they were married) did a lot of work developing and attempting to promote and market a later generation of soymilk. He is quite a promoter of various projects and ideas. About 7-8 years ago he and Glen's nephew worked together on a promotional plan on another formula for soymilk; it never became a commercial product. Address: Founder, President & CEO, Fuller Life Inc., 1628 Robert C. Jackson Dr., Maryville, Tennessee 37801. Phone: 423-681-4171.

7497. White Wave Inc. 1998. Silk is the fresh one (Leaflet). Boulder, Colorado. 1 p. Single sided. 15 x 21.5 cm.
• ***Summary:*** Leaflet (glossy color) sent by White Wave. 1998. Oct. 28. On the front is a photo of 7 cartons of Silk soymilk, and Silk Dairyless Coffee Creamer against an orange and yellow background. Address: 1990 North 57th Court, Boulder, Colorado 80301.

7498. White Wave Inc. 1998. Good news about soy: From your friends at White Wave (Leaflet). Boulder, Colorado. 1 p. Front and back. 21.5 x 14 cm.
• ***Summary:*** Leaflet (blue ink on gray paper) sent by White Wave. 1998. Oct. 28. "Soy beans and soy foods have been called many names lately... good names like miracle beans, wonder beans, magic beans, complete foods and functional foods.

"No longer is soy relegated to use solely in animal feed, but is now considered to be a healthy and smart human food. The reason is simple–scientists and nutritionists have found that soy beans are high in nutrition (protein) and packed with anti-oxidants and cholesterol-reducing compounds.

"First, the protein: Soybeans contain more protein by weight than beef, fish or chicken. And from our body's viewpoint, the protein in tofu is identical to the protein in chicken. And soybeans contain no cholesterol and little saturated fat.

Soy is rich in isoflavones: That's the general term for phytoestrogens unique to soybeans that also act as antioxidants, carcinogen blockers and tumor suppressors. This group of plant sex-hormone chemicals seem to have numerous beneficial qualities.

"Osteoporosis help: Researchers believe that two of these isoflavones, genistein and daidzein, have similar properties to the hormone estrogen. They are thought to block the negative effects of human estrogen and reduce the risk of breast and prostate cancer. The genistein in soy also makes it a natural substitute for hormone replacement that many women seek to combat the negative effects of menopause. Several studies of women who have consumed soy protein showed a lessening of menopausal symptoms such as 'hot flashes' and an increase in bone density and mineral content.

"A lower risk of heart disease: Soy significantly decreases LDL ('bad') cholesterol levels, which can block arteries. While increasing fiber and decreasing your saturated fat intake can also lower your LDL cholesterol, unlike most other foods soy can also raise HDL ('good' cholesterol) levels. HDL acts to clean artery walls by removing the bad cholesterol accumulated there.

"Yet another unique property of soy prevents the oxidation of bad cholesterol. It's that oxidation that makes arteries clog more readily."

At the lower left is the White Wave logo and a tag line: "When it comes to food, we use our beans." Address: 1990 North 57th Court, Boulder, Colorado 80301.

7499. Abourezk, Sanaa. 1998. Oh boy! I can't believe it's not soy: Over 100 gourmet recipes that help prevent cancer, heart disease and alleviate menopause. Sioux Falls, South Dakota: Palmyra Publishing Co. xii + 123 p. Illust. Index. 23 cm.
• ***Summary:*** This is an attractive and unique spiral-bound cookbook, loaded with gorgeous full-page color photos. Most of the recipes are based on eastern Mediterranean or Middle East cuisine. The author, a woman, was born in Syria, is a nutritionist, and learned to cook in Italy and France. Contents: Appetizers. Salads. Soups. Main dishes. Desserts. Glossary.

Though it does not use red meat or poultry as an ingredient, it does contain at least 12 dishes made with salmon. Most of the recipes call for either boiled soy beans, "lite tofu," or "soy vegetable protein crumbles." A few use "nonfat soy milk."

Talk with Sanaa Abourezk. 1999. Feb. 1. This book was self-published in Oct. 1998. Her husband, James Abourezk, who was a Republican senator from South Dakota, has been a vegetarian for 27 years. This is all the more amazing since South Dakota is a cattle state. After they were married, she started developing recipes for him. When his meat-and-potatoes lawyer friends would come for dinner, they would say how much they loved her eastern Mediterranean cooking. She would reply: "There is no meat is these recipes; they are made with soy products." The guests could not believe it. They have quite a few elderly neighbors, with whom Sanaa shares any extra food; they soon started asking her for recipes. Her husband suggested she write a recipe book. Address: P.O. Box 88038, Sioux Falls, South Dakota 57109-1001. Phone: 1-888-351-3663.

7500. Atwood, Charles. 1998. The case against dairy: America's most prominent pediatrician sounds off in *Vegetarian Times* new forum for exploring controversial topics. *Vegetarian Times.* Oct. p. 90, 92-93.
• ***Summary:*** Dr. Spock considered Dr. Charles Atwood his heir, and he turned to Dr. Atwood for assistance in writing the final version of his classic *Dr. Spock's Baby and Child Care* (Pocket Books, 1998), considered the bible of parenting. Dr. Atwood has all the credentials needed to inherit Dr. Spock's mantle. A certified pediatrician since 1964, he is the author of *Dr. Atwood's Low Fat Prescription for Kids* (Viking 1995) and *The Vegetarian Doctor Speaks Out* (Hohm Press, forthcoming). A vegetarian since 1998, he also shuns dairy products. Senior health editor Suzanne Gerber interviewed him recently:

What's so bad about milk and dairy products? Ans: The biggest problem is the widespread allergic reaction of children to milk proteins. Milk contains more than 25 proteins than can lead to allergies. About 70% of Dr. Atwood's patients have allergies. In most cases these children improve when taken off dairy for approximately 3 weeks. And an estimated two-thirds of the world's population has trouble digesting milk because of lactose intolerance. The second concern is saturated fat, one of the primary contributors to heart disease. The third concern is about casein, the primary dairy protein found in all dairy products. There is new evidence that casein is a carcinogen; studies by T. Colin Campbell of Cornell University [Ithaca, New York] show that it can cause liver cancer in laboratory mice. Finally, dairy products are laced with antibiotics, which are initially fed to farm animals. On July 9, 1998. the Committee on Drug Use in Food Animals, a division of the National Research Council, released a landmark report that finally acknowledged that agricultural use of antibiotics poses a public health risk."

Also discusses his views on genetically engineered bovine growth hormone (rBGH, made by Monsanto)." He concludes that it has never been easier to cut back on milk and dairy products because "Supermarkets and natural food stores now carry a variety of milk substitutes made from almonds, soy and rice." A color photo shows Dr. Charles Atwood.

7501. **Product Name:** Country Life Soy-Licious (Dry Mix for Soy Drink) [Dutch Chocolate, or Vanilla Bean].
Manufacturer's Name: Country Life?
Manufacturer's Address: Unknown.
Date of Introduction: 1998. October.
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: Ad (full-page color) in Vegetarian Times. 1998. Oct. p. 7. "Country Life Soy-

Licious: A high protein energizing soy drink." "Provides 15 grams soy protein per serving. Supplementing with soy products can reduce the risk of breast cancer... Highest soy isoflavone concentration of any soy drink available. Call 1-888-476-8647 for more information." Note: No address is given. This ad also appeared in the Oct. 1998 issue (inside front cover) of *Natural Foods Merchandiser*

Spot in Natural Foods Merchandiser. 1998. Nov. p. 80. "Country Life." Available in Dutch Chocolate and Vanilla Bean flavors. A small color photo shows two cans of the product next to a glass of the beverage.

7502. Fitzpatrick, Mike; Dibb, Sue. 1998. Soy infant formula–The health concerns: A Food Commission briefing paper. London, England: The Food Commission. 6 p. [47 ref]
• ***Summary:*** Contents: Background. Eleven health concerns. Removing isoflavones from infant formula. References.

This paper begins: "In July 1996 the UK Department of Health warned that phytoestrogens found in soya infant formulas could affect the health of infants. Issuing advice to health professionals, the Chief Medical Officer, Sir Kenneth Calman, said soya formula should only be given to babies on the advice of a health professional... In 1996 the UK government's Food Advisory Committee asked companies to investigate the removal of soy isoflavones from soy-based infant formulas but, despite evidence that this is possible (see below) companies have not yet done so."

The paper concludes: "The Food Commission believes it is irresponsible for manufacturers of soya formula to continue to place infants at unnecessary risk of exposure to phytoestrogens and we request the immediate removal of phytoestrogens from soya infant formulas." Address: 1. PhD, New Zealand; 2. The Food Commission (a consumer advocacy group), 94 White Lyon St., London N1 9PF, England. Phone: 0171 837-2250 (Dibb).

7503. Gupta, Rajendra; Chopra, Sudhir. 1998. Airless food processor. In: Conference Proceedings, 1998 Appliance Manufacturer Conference & Expo. See p. 225-33. Held 12-14 Oct. 1998 at Opryland Hotel, Nashville, Tennessee. [11 ref]
• ***Summary:*** Discusses a prototype kitchen top machine for making soymilk. "As part of their Advanced Life Support System studies, NASA recently completed tests on a prototype appliance for processing soybeans into soymilk and its byproduct okara. The patented technology used in the appliance provides for the grinding and processing of any food in an oxygen-free environment, thus preventing the degradation of food by oxidation either in flavor or nutritional value.

"The prototype comprises a patented airless grinder with an in-situ steam injection cooker, a steam generator with temperature controls, and provision for timing controls similar to those provided on an automatic bread-maker. The appliance can be used not only to make soymilk, okara, but also pureed soup. It can also grind and steam vegetables, make milkshakes, produce hot beverages, etc.

"In reference to the prototype appliance they tested, scientists as NASA-Johnson Space Center and University of Houston [Texas] concluded that 'with proper care, the production of soymilk from a prototype machine would comply with the requirements imposed by a closed system'.

"Acknowledgements: The authors would like to express their sincere thanks to Yael Vodovotz and Lisa Bye of NASA-Johnson Space Centre for conducting tests on the prototype. They would also like to thank Andre Ladouceur at ProSoya for his continuing involvement in the building and development of the prototype." Address: ProSoya Inc. [Ottawa, ONT, Canada].

7504. **Product Name:** Soy Wonder Soymilk Machine.
Manufacturer's Name: Miracle Exclusives, Inc. (Importer-Marketer). Made in China.
Manufacturer's Address: P.O. Box 8 (64 Seaview Blvd.), Port Washington, New York 11050. Phone: 1-800-645-6360.
Date of Introduction: 1998. October.
Ingredients: -
New Product–Documentation: Six-page brochure sent by Dr. Christopher Harrison, LAc, of Brooklyn, New York. 1999. Feb. 26. "Soy Wonder Soymilk Machine." This brochure, photocopied on light-blue paper discusses: "Introduction. About soymilk. Important safeguards. To make fresh soymilk–2 quarts (1.8 liters)–13 step process with 5 photos. Beverage recipes. Nutritional data. Other uses: Hot chocolate, chocolate soymilk, fruit smoothies, pudding, coffee creamer. Cleaning the machine. Technical data. The machine looks something like a Vitamix blender, and is about the same size. A note from Dr. Harrison states that the machine is made in China and imported by Miracle Exclusives–Phone: 1-800-645-6360. It wholesales for $179. The idea came from a book by Peter Golbitz (phone 207-288-4969). No okara is left over after making the soymilk.

Talk with Gail of Miracle Exclusives. 1999. March 3. This machine (MJ717) was first sold in about Oct. 1998. It wholesales for $179 and retails for $269. It takes about 22 minutes to make 2 quarts. Catalog and price list sent by Miracle Exclusives. 1999. March 4. Effective Nov. 1998. "Catalog 1999-2000: Health appliances for the new millennium." A color photo shows the machine next to a bowl of yellow soybeans, a glass of light tan soymilk, and a copy of the book *The Simple Soybeans and Your Health,* by Mark and Virginia Messina. "Simply insert soaked soy beans, add water, switch on and its done. Its controlled cooking and grinding process produces a delicious soy milk without a "beany" taste at a fraction of the cost of packaged soy products. Recipe book included." Website: www.miracleexclusives.com.

Ad (color, 1/6 page) in *Vegetarian Times.* 1999. July. p.

96. "Make your own fresh soymilk!" Makes 2 quarts in 22 minutes. Call: 1-516-621-3333.

7505. ProSoya Inc. 1998. Creating great opportunities in the health food industry: Advanced soymilk technology (Portfolio). Ottawa, Ontario, Canada. 17 inserts. 31 cm.
• ***Summary:*** The 17 documents enclosed in this portfolio (containing many black-and-white photos) include: (1) Cover letter from Brian Harrigan, Executive vice-president. (2) Creating great opportunities in the health food industry: Advanced soymilk technology (4-page brochure). (3) Soymilk systems: VS 30/40, VS 200, VS 700, VS 2000, VS 3000 and VS 4000. (4) Equipment for upgrading. (5) Production chart. Nutritional comparison of soyfoods (four bar charts). (6) ST 2000–Continuous soaking and hydraulic conveying system. (7) ST 2000-OPT–Dry bean conveying system, washing/dewatering augers, an circulating pumps. (8) EC 200–Extractor. (9) EC 1000 & EC 2000–Twin-stage, self-desludging extractors. (10) EC-OPT–Okara conveying system and spare cone. (11) Continuous heaters. (12) Continuous cookers. (13) VF series–Model 200, 3000, and 60000–Vacuum flash deodorizing systems. Address: 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

7506. ProSoya Inc. 1998. Creating great opportunities in the health food industry: Advanced soymilk technology (Brochure). Ottawa, Ontario, Canada. 4 p. 28 cm.
• ***Summary:*** This 4-page black-and-white brochure (with green and yellow overlays), discusses the company, the technology, the equipment, our customers, business opportunity. "ProSoya technology is currently being used in more than 20 countries. There are large-scale processing plants in Canada, Russia, and Scotland. Over 250 small, to medium-scale plants are located on five continents around the world. ProSoya has technology transfer agreements with companies in Russia and India for the manufacture of smaller soymilk systems under license."

Photos show: (1) ProSoya's VS 7000 system. (2) ProSoya's VS 200 system. (3) ProSoya's VS 40 system. (4) ProSoya's VS 4000 system. (5) A sliced cake of tofu, a glass of soymilk, and scoop of soy ice cream on a cone. Address: 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

7507. Shurtleff, William; Aoyagi, Akiko. 1998. The book of tofu. 2nd ed. Revised. Berkeley, California: Ten Speed Press. 336 p. Oct. Illust. by Akiko Aoyagi Shurtleff. Index. 28 cm. [321 ref]
• ***Summary:*** This edition contains a completely new "Appendix B–Directory of Tofu Makers" (p. 313-316, updated to 1 Aug. 1998). The page "About the Authors" (autobiographical) has been updated, and the original photograph has been replaced with two more recent ones–reflecting the fact that Bill and Akiko separated in Nov. 1993 and their marriage ended in May 1995.

After the first printing in Oct. 1998, the Preface was quite extensively revised (but not updated) to include more about how this book came into being (early dates and names), including the important contributions on Jeffrey and Gretchen Broadbent, and of Nahum and Beverly Stiskin. These Preface changes first appeared in the second printing of May 1999.

On page 336 is "The Best of Vegetarian Cooking from Ten Speed Press" (descriptions of eight cookbooks, with price and ISBN).

The inside rear cover has been updated, and now includes current information about SoyaScan, the unique computerized database produced by Soyfoods Center. This database now contains more than 55,000 records from 1100 B.C. to the present, and more than 73% of all records have a summary / abstract averaging 128 words in length. A description of the four different types of records (published documents, commercial soy products, original interviews and overviews, and unpublished archival documents), and the number of each type, is given.

The front and rear covers, title page, table of contents, and the first page of each section have been redesigned to give the book a much more contemporary look. Still contains 500 vegetarian recipes–both Western and Eastern style.

Ten Speed Press gave this book a new ISBN: 1-58009-013-8. Yet despite the many changes described above, the authors preferred not to have this called a "new edition" or "revised edition." Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

7508. **Product Name:** Tofu, and Soymilk.
Manufacturer's Name: Tiltan HaArgaman
Manufacturer's Address: P.O. Box 76. Hofit 40295, Israel. Phone: +972 53-607435.
Date of Introduction: 1998. October.
New Product–Documentation: Form filled out by Asher Roy. 1998. Nov. 15. The company started to make and sell tofu and soymilk in Oct. 1998. They currently make 2 metric tons/month of tofu and 2,000 liters/month of soymilk.

Talk with (call from) Roy Grant from Israel. 1999. Feb. 26. His company, located in Kfar-Saba, Israel, started making tofu in late 1998. His company was named Tishrei.

7509. Ghiraldini, Maura. 1998. Biolab and Italy's other major tofu manufacturers (Interview). *SoyaScan Notes.* Nov. 9. Followed by a fax. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The two largest tofu manufacturers in Italy are Soyalab and La Fonte de la Vita, but they are both owned by The Key Group, which bought them 4-5 years ago. The Key Group is the largest in Italy in biological (organic) foods.

Biolab, which started in June 1992, is the third largest.

The founder and owner is Massimo Santinelli, now age 34; they also make various types of seitan. Biolab is distributed by some of Italy's bigger distributors of biological (organic) food: Ecor, Probios, Baule Volante, Mustiola, and La Fenice. Biolab presently has 7 employees; all ingredients are from biological agriculture (organically grown).

The company now makes the following products: Seitan: Natural, with spices, smoked, and grilled. Tofu: Natural, smoked, "Mediterranean" (with carrots, olives, etc), erbe (with herbs), and grilled. Soymilk. Rice milk. Burgers with seitan: Rice & mushrooms, millet & carrots, millet & pepper, wheat (spelt/farro) & aubergine (eggplant). Address: Via dei Grabizio 11, 34170 Gorizia, Italy. Phone: +39 481 533522.

7510. Cowley, Geoffrey; Underwood, Anne; Springen, Karen; Davis, Alisha. 1998. Cancer & diet: Can you eat to beat malignancy? A controversial diet book is just one sign of the revolutionary new thinking about food and health. *Newsweek.* Nov. 30. p. 60-66. [3 ref]

• ***Summary:*** This cover story discusses the many phytochemicals in foods which may reduce risk of various cancers. On the cover is a huge fork piercing a piece of broccoli. The cover text reads: "Eating to beat the odds: What you need to know." On the top half of page 60 is a large color photo of a "low-risk dinner," ready to serve on a table. One of the three portions on the plate is a mixture of beans and tofu cubes. An arrow points to this portion; the caption reads: "The fiber in beans fights colon cancer. And the genistein in tofu appears to pack a disease-preventing wallop." On the facing page (61) is a "high-risk dinner" with advice to omit the grilled steak, french fries, cheesecake, soda, butter on white bread, and salad dressing. The article overstates the health benefits of soy and gives no scientific references for its many glowing assertions.

By 1986 laboratory researchers were already discovering many new chemicals in foods; in test tubes these obscure compounds were showing remarkable ability to disrupt the formation of tumors. Some expert oncologists believe that the future of cancer prevention is food. Yet the cancer death rate in America is roughly the same today as it was in 1970. Americans die of breast, colon, and prostate cancer at five to 30 times the rate of people in many parts of the world. Take breast cancer: The death rate in Thailand and Sri Lanka is 2-5 per 100,000 women; in the USA it is 30-40 per 100,000.

A comprehensive analysis published last year by leading cancer researchers concluded that "poor eating habits account for a third of all cancer–roughly the same proportion attributed to smoking." A spate of brash new books, some by physicians, argue that anyone can eat to reduce cancer risk. They offer specific advice, "from eating the right fats to upping your intake of soy." The best selling of these how-to books is *The Breast Cancer Prevention Diet,* by Dr. Bob Arnot, a nonpracticing physician who covers health and medicine for NBC. It now tops the *New York Times* best-seller list. But Fran Visco of the National Breast Cancer Coalition calls it "incredibly irresponsible." All these new books offer medical advice that is not backed by solid scientific evidence.–And so does this Newsweek article! But interesting questions arise: "Should we live on cheeseburgers until the case for soy burgers is seamless?" Most experts answer "no." If people who eat in accordance with what we know today, cancer rates would definitely drop.

A sidebar titled "Eating to beat the Big Four" gives three statistics on each of America's four leading malignancies: Estimated number of U.S. cases this year, percentage of Americans diagnosed during their lifetime, and potential reduction through diet and lifestyle. Prostate cancer: 184,500 / 17% / 10-20%. Breast cancer: 180,300 / 14% / 33-50%. Lung cancer: 171,500 / 7% / 90-95%. Colon/rectal cancer: 95,600 / 6% / 66-75%. "Breast cancer risk may be lowered by eating soy foods." "Weapons against colon cancer include calcium and fiber."

Tumors arise through a three-step process: initiation, promotion, and progression. Preliminary evidence suggests that compounds found in particular foods can interfere with each of these steps. A two-page sidebar shows each step graphically. (1) Initiation occurs when something alters a cell's genetic makeup, causing it to divide more than it should. The most common cause of such DNA damage is oxygen, from highly reactive oxygen molecules called free radicals. They steal electrons from other molecules, setting off a chain reaction that can damage DNA. Food tips: Antioxidants help neutralize free radicals. Garlic contains allyl sulfides which help limit the production of cancer-causing phase I enzymes, which are produced in the liver and break down procarcinogens. Cruciferous vegetables (such as broccoli) boost production of protective phase II enzymes that cart away chemical debris. (2) Promotion occurs when the damaged cell (a precancerous lesion) multiplies out of control to create a tumor. It soon sends out a network of blood vessels to deliver nutrients and oxygen necessary for further growth. Food tips: Tumor cells seem to grow less aggressively on low-fat diets than on high-fat. But Many experts now agree that, for cancer, the type of fat is as important as the amount. Some types of polyunsaturated fats are protective, others probably harmful. Omega-3 (alpha-linolenic) fatty acids may thwart tumor growth, whereas omega-6 (linoleic) fatty acids may promote it. "Trans fats: Artificially processed polyunsaturates, they are the worst for heart disease, and one study linked them to increased breast-cancer risk. Found in packaged snacks" [and many margarines]. "Soy products contain... isoflavones, which act as weak estrogens, and leave less room for strong ones. One color photo shows cubes of tofu, with the caption "Soy may protect reproductive tissues." Another shows estrogen receptors on the surface of a cell. (3) Progression occurs when the tumor (a mass of rapidly dividing cells) builds

itself a blood supply and starts to invade surrounding tissues. The body's own estrogen promotes fast growth of breast cells in women. "Tumor cells release growth factors that promote the development of new blood vessels a process known as angiogenesis."

A sidebar shows four cancer survivors and their diets: Any Grove of Intel, a prostate cancer survivor, has a daily glass of orange juice with green-tea extract and soy protein. Mike Milken is also a prostate cancer survivor. "A soy fanatic, he eats tofu dogs, 'not-meat' loaf, and soy cheese," plus smoothies spiked with vitamins. Christine Pirello, hostess of PBS's 'Christina Cooks,' was diagnosed with leukemia in 1983. She went macrobiotic, loading up on brown rice, cabbage, tofu, and beans, with no dairy or animal products, except for fish.

On page 66 is a long section of text on soy: "Soy foods are another good bet, especially if you're worried about breast or prostate cancer. One of the strongest promoters of reproductive tumors is estrogen. Women exposed to high levels of the hormone–through early menstruation, late childbearing, late menopause, or obesity–suffer far more than their share of breast cancer. Soy contains weak estrogens, or isoflavones, which compete with the full-strength hormone for access to cells. Isoflavones bind with cell receptors that would normally attract the body's own estrogen, but the growth signal they deliver is only one thousandth as strong. That means less cell division and, presumably, less risk that a small lesion will become cancerous. No one has tested that assumption in a controlled clinical trial, but population studies suggest that tofu, tempeh, and soy milk could have some of the same benefits as the prescription drug tamoxifen, without the side effects. Chinese women on high-soy diets had only half the breast cancer incidence of women on low-soy diets." Soy also contains "compounds known as Cox-2 inhibitors, which can impede the growth of new blood vessels." At least in a test tube, tumor cells doused with Cox-2 inhibitors stop producing growth factors that trigger growth of blood vessels.

This is another article about "magic bullets." But the big, new message from Newsweek seems to be their realization that low-fat plant-based diets can reduce one's risk of cancer–as well as heart disease, stroke, and obesity. The article ends: "The real gamble is to stick with fast food [or a standard American diet] and assume you'll be all right."

Note: This is the earliest (and only) English-language document seen (April 2003) that uses the term "soy fanatic."

7511. Fisher, Kate. 1998. Soy isoflavones charge onto supplement scene: Disease-preventing compounds are available in tablets. *Soybean Digest.* Nov. p. 24.
• ***Summary:*** Soy isoflavone tablets are now available from many supplement companies. Novasoy, a soy isoflavone compound made by Archer Daniels Midland Co., is the active ingredient in many of them. While many studies have shown the health benefits of soyfoods and soy protein products, few studies have been done using isoflavone tablets as supplements.

Soy isoflavones are fairly stable and able to withstand normal cooking without breaking down. There is presently no recommended daily allowance, but 30-50 mg per day seems to be beneficial, especially for post-menopausal women.

A bar chart from the University of Kentucky shows the isoflavone content of soybeans and various soyfoods (in mg per serving (svg)): Mature soybeans (170), roasted soybeans (165), green soybeans (70), tempeh (60), soy isolate (57), soy flour (45), tofu (35), textured soy protein (30), soy beverage (20), and soy concentrate (15).

7512. Monteiro, Longteine de; Neustadt, Katherine. 1998. The elephant walk cookbook: The exciting world of Cambodian cuisine from the nationally acclaimed restaurant. Boston: Houghton Mifflin Harcourt. 324 p. Illust. (some color). Index. 27 cm.
• ***Summary:*** Written by the chef-owner of Boston's renowned The Elephant Walk restaurant.

The word "soy" appears on 38 pages of this book, the word "tofu" on 10, the word "bean curd" on 9, the word "soy milk" on 7, etc.

Soy-related recipes include: Stir-fried pork with bean sprouts (*Cha samdaik bandos;* with "½ pound pressed bean curd or spiced dry tofu, cut into ¼-inch-thick slices," p. 129). Stir-fried pork with tofu and chive blossoms (*Cha p'ka kuchai;* with "½ pound spiced dry tofu or pressed bean curd, cut into ¼-inch cubes," p. 134). Pan-seared fish with pork and soybeans (*Chien chuoan;* with "2 tablespoons salted soybeans, and 2 teaspoons mushroom soy sauce," p. 160-61). Steamed fish with lilies (*Trey chamboy;* with "3 tablespoons salted soybeans, mashed slightly, and 2 tablespoons mushroom soy sauce," p. 170). Braised duck (*Hong tiah;* with "2 tablespoons salted soybeans, and 1 tablespoon mushroom soy sauce," p. 197-99).

The "Glossary" (p. 283-308) includes: Mushroom soy sauce (originates with Chinese cuisine). Peanuts. Pressed bean curd: See tofu.

"Salted soybeans [Fermented black soybeans] add complexity to a dish. They come in cans and jars in Asian markets (I usually use Yeo's brand), and they are often available in the Chinese section of mainstream supermarkets."

Soy sauce: See mushroom soy sauce. Spicy dry tofu: See tofu.

"Tofu... is used in moderation Cambodian cooking, primarily in stir-fries, which are Chinese in origin. The two kinds I recommend are Pressed bean curd and Spicy dry tofu, which are drier and firmer than the fresh tofu you buy in tubs in the supermarket and hold up well during vigorous stir-frying. Both are light to medium brown in color, and

their flavors are mild enough not to compete with their companion ingredients. They can be found in the refrigerated section of any Asian market, usually vacuum packed... Fresh tofu–even extra-firm–tends to disintegrate when stir-fried..." About the author (p. 1): She was born into an upper-class Cambodian, or Khmer, family in the capital city of Phnom Penh. Her father, who had studied in Vietnam and received his advanced training under the French system of education there, returned to Cambodia to become the country's first veterinarian... which kept him in constant touch with foreign colleagues and new ideas. The family had many servants living with them as she was growing up. Her father was deeply influenced by French culture and he ate only French food–3 meals a day. She married a diplomat and was expected to entertain. But in April 1975, when the Khmer Rouge took power, her husband had no country to represent, so the family went into exile in France. In 1990 they moved to Boston and in Aug. 1991 they opened The Elephant Walk restaurant in Somerville, Massachusetts, right next to Cambridge. It thrived. Address: Boston, Massachusetts.

7513. *Nutrition Business Journal* (*San Diego, California*). 1998. Haldane leads U.K. market for vegetarian and non-dairy foods. 3(10/11):26. Oct/Nov.
• ***Summary:*** The Haldane Foods Group is owned by agribusiness giant Archer Daniels Midland Co., based in Decatur, Illinois. ADM group vice president Larry Cunningham says Haldane has revenues of under 50 million British pounds, from sales of 350 products sporting such well-known brands as Vegemince (the company's brand leader; a soy-based minced meat alternative), Realeat, Direct Foods, Dietburger, So Good, and Hera.

The *Linda McCartney* line of vegetarian foods, launched in 1991, has become a leader in its category, with retail sales of about 50 million pounds in 1998. Haldane's newest line, launched in April, is *Linda McCartney's Dairylike,* non-dairy desserts developed by Haldane and marketed under a licensing agreement to use the Linda McCartney brand name. The line includes cultured and frozen vegan desserts which are free of lactose and cholesterol and fortified with calcium and minerals. Haldane is promoting the new Dairylike line using national TV and print ads. ADM is test marketing Dairylike in Southern California under the name Dairyless.

About one-third of Haldane's sales come from products made by third party manufacturers such as Asda and McVities.

During the last year Haldane has faced two big challenges: (1) In the spring of 1998 EU food labeling legislation required companies to stop using the term "soya milk" or "yoghurt" or any misspelling of it. Haldane reformulated, renamed, and relaunched its line of non-dairy products. (2) In Sept. 1998 a EU regulation which came into effect requiring products containing genetically modified soy protein to be labelled appropriately. Haldane guaranteed that all its soy products are GMO-free, made from identity preserved soybeans.

Haldane's "Realeat Survey," now in its 15th year, studies attitudes toward meat eating in the British Isles. Each survey is conducted by The Gallup Organization. The 1997 Realeat Survey showed that a record 5.4% of the British population now chooses a vegetarian diet, up 20% over 1995. Thus, Britain now has more than 3 million vegetarians. And 14.3% of the population no longer eats red meat–over 8 million people. Many Britishers avoid red meat because of fear of BSE or Mad Cow Disease. In the 1995 Survey 7% mentioned BSE as their main health concern; this figure rose to nearly 22% in the 1997 survey. The 1998 Survey showed that 13% (over 7 million people) never or almost never eat dairy products. Today roughly half of the British population is actively reducing consumption of meat, especially red meat, and one-third is doing the same with dairy products.

7516. Zind, Tom. 1998. Soy dairy alternatives: The soy dairy category is hot, with organic soybeans taking center stage in new product introductions. *New Product Sightings.* Nov. p. 8-9. [1 ref]

• ***Summary:*** Soyatech (Bar Harbor, Maine) reports that U.S. soymilk sales reached about $150 million in 1996, and that since 1990 the market has been growing at about 12% a year.

The 17th Annual Market Overview, published by *Natural Foods Merchandiser* magazine, reports that sales of only organic dairy alternatives (a category which is mainly soy-based products, but which also includes rice milks, oat milks, etc.) grew 45.5% from 1996 to 1997. Dollar sales grew to $32 million from 22 million. During the same year, non-dairy yogurts (a category which is mainly soy yogurts) grew to $10.6 million from $5.5 million.

The Ontario Soybean Growers' Marketing Board in Canada predicts that sales of soy beverages in that country will increase by about 68% from 1997 to 1998, to 6.7 million liters in 1998 from 4 million liters in 1997. Although the country's large Asian population has long been the largest consumer of soy beverages, the Board believes that most of the new growth is coming from sales to non-Asians (i.e. Caucasian Canadians).

The marketing manager for Vitasoy USA (based in South San Francisco, California) says sales of their Vitasoy soymilk to supermarkets alone has grown at 15-20% for the last few years.

Why all this interest in soymilk? "Health awareness for one. Science has virtually crowned the soybean as one of the most healthful single plant foods known to man, a versatile product with silver-bullet like qualities" for reducing the risk of heart disease and some cancers, easing menopausal symptoms, sidestepping lactose intolerance, and slowing the onset of osteoporosis. Scientists believe that many of the benefits come from isoflavones–of which soybeans are the only common source.

(2) Many packs of SoNice (made by ProSoya Foods of Surrey, British Columbia), in original, chocolate, vanilla, strawberry, and cappuccino flavors. Some are in refrigerated Pure-Pak cartons and other in aseptic cartons. (3) Two aseptic packs of Enriched Vitasoy in original and vanilla flavors. (4) Tofutti Pan Crust Pizza Pizzaz, a pizza product made with soy cheese. Address: Freelance writer living in the Midwest.

7517. Ghiraldini, Maura; Santinelli, Masimo. 1998. Re: History of Biolab of Gorizia, Italy. Form filled out and returned to William Shurtleff at Soyfoods Center, Dec. 5. Form dated Nov. 20. 3 p.

• ***Summary:*** This company history form, sent by Soyfoods Center, was filled out by Maura who got the information by interviewing Massimo on Nov. 20. The company was founded in June 1992 by Massimo Santinelli. That same month they started to make and sell soyfoods commercially. The original purpose was contributing to the development of biologic (organic) agriculture and the production of good vegetable [plant-based] food so that a growing number of people are involved in consuming proteins from wheat or soy. The company address has not changed; the phone number was previously 0481-32261.

Milestones: 1992–Several months after opening, Biolab found its first distributor, Gea, from Treviso. 1994–Massimo's father, Piero, joined his son at Biolab. Now he has become essential to the company's work and is the "seitan master."

Firsts: "Unlike other companies, we aim at producing vegetarian food that tastes good to Italian consumers, who are not always vegetarian, and who like to use tofu or seitan in a Mediterranean diet. So a growing number of people will come closer to meatless diets, without losing the pleasure and health that the Italian way of cooking gives."

Reasons for success: "The good taste of our seitan. And, of course, the help of our distributor, which has grown bigger in the same way we have."

Soyfood products history: Introduced during 1992 and still sold–Tofu, Smoked tofu, Pickled tofu, seitan, smoked seitan. Discontinued: Pickled seitan, Sauce with seitan and tomato, Tomato sauce with olives and capers, Tomato sauce with mushrooms. Introduced in 1993 and still sold: Seitan burgers with millet and carrots, Seitan burger with rice & mushrooms. Discontinued: Tofu burgers, Tofu & seitan kebabs on skewers (very good but too laborious). Introduced in 1994: Grilled tofu, Grilled seitan, Tofu with herbs, Tofu Mediterraneo (carrots, capers, corn, olives), Seitan slices (for making sandwiches). Introduced in 1997: Risolight (rice milk), Roast of seitan. To be introduced in 1999: Seitan burgers with millet & pepper, Seitan burgers with wheat "farro" & aubergine [eggplant].

Present production of various product categories: Tofu (all types) total: 380 kg/week. Seitan (especially regular seitan and grilled seitan): 500 kg/week. Risolight (rice milk): 1,200 bottles/week. The company's three best-sell products in descending order of dollar value: Seitan Naturale 300 kg/week. Tofu Naturale 250 kg/week. Risolight 1,200 bottles.

The company now employs 7 people including the owners (including 2 in management and 5 in production). Last year net sales were 700 million lire. Over the past 2-3 years sales have grown at about 30% a year. The net worth of

the business is about 105 million lire. The present building has about 100 square meters for production and 20 square meters for office space. Massimo is the sole owner of the business. Address: Via dei Grabizio 11, 34170 Gorizia, Italy. Phone: +39 0481 533522.

7518. Karp, Jonathan. 1998. Adding U.S. soybeans to India's spicy diet faces big roadblocks: Protein-loaded legume could help the hungry, if only they'd eat it. Hiding 'that beany taste.' Currying favor? *Wall Street Journal.* Dec. 8. p. A1, A6.

• ***Summary:*** Virgil Miedema, the American Soybean Association's director for South Asia, is the son of a soybean farmer from North Dakota and speaks near-fluent Hindi. He believes that adding American soybeans to Indian diets can do wonders for their health. But there are two problems: (1) India, the world's fifth largest soybean producer, already grows so many soybeans that it exports the soy protein, although the country has a shortage of dietary protein; (2) Indians dislike the beany taste of soy–according to food scientist V.D. Devdhara, who shares Mr. Miedema's mission. The population of India is now growing by 16 million people a year–devouring the gains of the 1960s Green Revolution. Some 53% of Indian children under age 5 are malnourished. Per capita availability of lentil protein is half what it was in 1947, so the Indian government is producing lentil alternatives made of soy protein and wheat flour. The brown pellets, designed to look and taste like dal, contain 60% more protein.

The American Soybean Association (ASA) opened an office in India in 1996. It hired Mr. Miedema who had spent 17 years in South Asia with the Peace Corps and the U.S. Agency for International Development (USAID). His mission is to repeat ASA's success in China, where in just 15 years it helped turn that soybean producer into a major importer. In 1997, China bought $657 million of U.S. soy products. "Of course, the Chinese have been eating soybeans–as soy sauce and tofu, among other things–for millennia." Mr. Miedema's approach is to encourage Indian companies to add soy to everyday Indian foods–such as the wheat flour used to make chapatis.

One company, AFM Foods, Mr. Miedema's first partner, is making soy-fortified flour for chapaties that contains 35% more protein than wheat–"and can reduce the risk of cancer and the aches of menopause."

But attempts to use soy as food in India have failed before. A decade ago the ASA backed three local companies that failed in trying to popularize soymilk. RJR Nabisco Inc. quit making soy oil and Nestle SA (the Swiss food giant) recently withdrew its soymilk powder and soy-based baby food because of poor sales.

Sanjeev Chaudhry (formerly involved with Nabisco's soy oil factory) is head of the India office for Protein Technologies International. He uses Supro brand soy protein isolate to develop turbocharged soy products. He sells about 100 tons a year to 25 customers, mostly food manufacturers.

Large-scale cultivation of soybeans in India began in the 1970s to reduce dependence on imported edible oils. Soy oil still is not popular, and for Indians see soybeans as an evil threat. Ms. Vandana Shiva believes that free trade in agriculture, inevitably controlled by multinational corporations selling expensive genetically engineered seeds, will destroy India's farmers and local foods.

Yet Mr. Verghese Kurien, a famous Indian nationalist from the western town of Anand, has decided to join the soybean forces. As head of India's National Dairy Development Board, he was largely responsible for making India self sufficient in milk and the world's largest producer of cow's milk–while thwarting foreign dairy firms. He then branched out into edible oils to help his country cut costly imports. Though he retired last month, his main project is now developing the lentil alternatives.

The idea has been simmering for a decade, starting with U.S.-funded soybean research at an Indian university. The dairy board, whose sister organization, Amul, is one of India's largest food marketers, accepted the challenge of developing an inexpensive, uniquely Indian protein alternative. Mr. Kurien argues that if soy can be made into chicken and bacon, why not into dal? After years of fine tuning, the product launch is at hand. If it succeeds, the ASA could try for a second wave of products (made from U.S. soybeans) such as "soymilk and tofu, which looks and feels like Indian cottage cheese, called paneer." Indians say that tofu does not taste as good as paneer, but Mr. Miedema responds that its better for you. An illustration (dot-style) shows Mr. Miedema. Address: Staff Reporter.

7519. *SoyaScan Notes.* 1998. Soymilk and cow's milk prices in California, December 1998 (Overview). Dec. 10. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Since Dec. 1983, approximately every other year, Soyfoods Center has conducted a survey of the prices of soymilk and cow's milk in California. In Dec. 1998 at Berkeley Natural Grocer (Berkeley, California), Cindy La reports the following retail prices. (Note: oz = fluid ounces; 32 fl oz = 1 quart; 33.8 fl oz = 1 liter): Westsoy plain/vanilla $1.89/quart. Note: This is the price for 8-9 months a year. Several times a year (back to school sale, company anniversary sale) it will drop as low as $1.49, and for 3-4 months a year it will rise as high as $2.39 (the sticker price). Westsoy chocolate $2.39/quart. Westsoy organic unsweetened $2.59/quart. Westsoy 3 x 8.45 oz packs all flavors $2.59.

Vitasoy all flavors $1.89/quart. Note: This is the price for half the year. The other half it rises to $2.39. Vitasoy 3 x 8.45 oz packs all flavors $2.39.

Soy Dream (Imagine Foods) all flavors $2.15/quart. Soy Dream Enriched all flavors $2.25/quart.

Pacific Foods–Select (organic) all flavors $1.99/quart. Pacific Foods–Enriched (organic) all flavors $2.25/quart. Pacific Foods–Fat Free all flavors $2.39/quart.

Eden Soy organic all flavors $2.25/liter. Health Valley Soy Moo plain $2.49/quart.

Berkeley Natural Grocer also carries dairy milk: Horizon organic milk $1.59/pint or $2.69/quart. Clover Stornetta milk (free of BGH–Bovine Growth Hormone) $1.09/pint.

Cow's milk (fortified with vitamins A and D) sells for the following prices at the Safeway supermarket in Lafayette, California: (1) Fat free (formerly called Nonfat): $1.07/quart or $1.89/half gallon or $3.43/gallon; (2) Low fat (formerly called Extra light, 1% fat, protein fortified): $1.13/quart or $2.05/half gallon or $3.75/gallon; (3) Reduced fat (formerly called Low-fat, 2% fat, protein fortified): $1.13/quart or $2.05/half gallon or $3.75/gallon; (4) Whole (homogenized, fortified with vitamin D only): $1.13/quart or $2.05/half gallon. (5) Acidophilus Plus Bifidus–Low Fat (1% fat): $1.27/quart or $2.18/half gallon. (6) Horizon Organic $2.93/half gallon. The best-seller among these is Fat free in half gallons or gallons.

Thus, during the past two years, the price of soymilk has continued to decrease while the price of cow's milk has continued to rise.

7520. *SoyaScan Notes.* 1998. Chronology of major soy-related events and trends during 1998 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** June–Britain's Prince Charles, who practices organic farming and is a patron of the Soil Association, writes an article attacking genetically modified food that is published in Britain's *Daily Telegraph.* Explaining that he wouldn't eat such food or knowingly give it to his family or guests, he concludes, "I happen to believe that this kind of genetic engineering takes mankind into realms that belong to God and God alone." The prince's surprise article helped unleash a wave of anti-GMO activity and sentiment, that continued for weeks in the British press and carried over to the Continent.

Sept.–New European Union (EU) labeling laws, requiring labeling of genetically modified ingredients, go into effect. However the regulation exempts foods which contain no soy protein but do contain soy oil or soy lecithin. Sept.–Imagine Foods of Palo Alto, California, the natural foods leader in nondairy beverages, launches Soy Dream, the company's first soy product. They support the product with an extensive and very creative advertising campaign.

Sept.–Protein Technologies International starts to offer certified non-GMO soy protein isolates.

Oct.–The Hain Food Group (which owns Westbrae) has announced that it will start to label some of its products as GMO-Free (i.e. free of genetically modified / engineered organisms). It has developed a "Pure Food" logo and a "Just Say No to GEOs" slogan.

Oct. 16–Worthington Foods purchases the Harvest Burger product line from ADM; by agreement, ADM will continue to make the Harvest Burgers at its Illinois plant.

Nov. 1-2–Conference titled "Estrogen, phytoestrogens and cognitive function" held in Seattle, Washington (organized by Mark Messina), largely to learn more about the research of Lon White on tofu and dementia/Alzheimer's disease.

1998 Dec. 31–DE-VAU-GE acquires Bruno Fischer GmbH, which sells bottled soymilk; both companies are located in Germany.

Major trends: (1) The steady expansion of genetically engineered Roundup Ready soybeans. This year an estimated 30% of America's soybean acreage was planted to genetically engineered soybeans. This is one of the hottest and most controversial stories in most countries of the world–except the United States, where it gets unbelievably little media coverage. (2) The hype about the health benefits of soyfoods continues to increase. There are definitely some health benefits, but the exaggerated statements that now routinely appear in articles and advertisements go far beyond what can be supported by scientific evidence. The media seems intent on making as much money as possible as it whips up the story of soy's health benefits. The bigger the story it becomes, the more money they can make later debunking it. (3) The natural foods industry is changing into a supplements industry because of the higher profit margin on supplements. Many consumers are being misled into thinking that supplements are more important than healthy foods in determining good health. (4) Among commercial soy products this year, the ratio of supplements to foods has increased sharply.

Areas of potential danger on the horizon: (1) Lon White of Hawaii and his data on tofu and dementia/Alzheimer's disease. (2) Young girls discovering that overdoses of soy isoflavones could be useful in growing breasts, then publicizing that information using the Internet and World Wide Web. (3) The danger that the media will start to debunk its own hyped story of the health benefits of soy. (4) The concern that the FDA health label claim for soy will not include traditional soy products–such as tofu and soymilk–which contain too much fat. Therefore manufacturers will be tempted to add soy protein isolates to raise the protein to a level that will trigger the health claim.

7523. Golbitz, Peter. 1998. Proposed labeling rule may turn soy to gold. *Newsletter of the Soyfoods Association of North America* (*Washington, DC*). Dec. p. 1-2.
• ***Summary:*** A proposed health claim for food labeling, now under review by the U.S. Food and Drug Administration (FDA), would authorize the use of a health claim on food products which contain soy protein. The rule, published for comment in the U.S. Federal Register on 10 Nov. 1998, resulted from a petition originally filed on 4 May 1998 by Protein Technologies International (PTI) of St. Louis, Missouri. This petition summarizes years of clinical studies related to the cholesterol-lowering effects of consuming products that contain a significant amount of soy protein. The comment period ends on 25 Jan. 1999.

According to FDA, "studies show 25 grams of soy protein per day have a cholesterol-lowering effect. Therefore, for a food to qualify for the health claim, each serving of the food must contain at least 6.25 grams of soy protein, of one-fourth of the 25 gram amount shown to have the cholesterol-lowering effect. The exact wording to be allowed on packages won't be finalized until after the comment period ends, but an example of how the health claim might be used on a package is: "Diets low in saturated fat and cholesterol that include 25 grams of soy protein per day may reduce the risk of heart disease. One serving of (name of food) supplies ___ grams of soy protein.

Since a typical serving of most soyfoods (such as tofu, soymilk, tempeh) etc. contain the required 6.25 grams of soy protein, manufacturers and marketers of these foods will clearly benefit if the rule is approved. But perhaps even more important, food processors will probably consider including soy protein products as an ingredient in a wide variety of foods ranging from breakfast cereals to pasta.

The last four proposed health claim rules were all approved by the FDA, which has up to 540 days from the original filing date to complete action on the proposal. So the two key dates to watch are January 25 and late October 1999.

• ***Summary:*** Table 1 shows the "Percentage of mothers breast-feeding infants at various ages in Singapore." The percentage has decreased, from 85% at birth in 1951, to 73% at birth in 1960, down to only 28% at birth in 1971 and only 4% at 3 months in 1971.

Whether breast- or bottle fed, infants in Singapore are weaned to solid foods from about 4 months of age onward. Soft rice cereal is the first solid food most Asian infants are fed. Tofu is commonly introduced at about the same time. "Many Asian mothers choose tofu for weaning because it is freely available at low cost. The soft consistency is also an important factor. Tofu can easily be mashed into a paste or gruel and mixed with rice cereal for feeding to babies. Asian infants accept tofu readily because it is highly palatable." The nutritional value of tofu is well established and it is highly recommended by dietitians for weaning as a good source of protein and calcium.

There are two main types of lactose intolerance: primary, late-onset intolerance and secondary lactose intolerance. "Lactose intolerance is a clinical syndrome characterized by

abdominal distention, pain, flatulence, and explosive watery diarrhea after ingestion of lactose-containing products. It is due to a deficiency of the digestive enzyme lactase..."

Soy formulas (or soy protein) are better than cow's-milk formulas for infants and children with lactose intolerance (as shown by a bout of infantile gastroenteritis) and are recommended by family physicians and pediatricians. Asian children generally develop lactose intolerance after 2-5 years of age, and incidence generally increases with age. By age 10 about 80% of Asian children are lactose intolerant.

Figure 1 (a bar chart) shows "Percentage of healthy Asian children in Singapore who consume soymilk as their primary beverage." The percentage is about 5% from 1-5 years, then increases to 17% at 6 years, 42% at 7 years, and a peak of 56% at 8 years, falling slightly to 53% at 10 years. Thus (remarkably) about half of all children in Singapore consume soymilk as their primary beverage from age 8 to age 10.

"The incidence of intolerance to cow-milk protein has decreased over the years and intolerance is no longer a common cause of prolonged diarrhea." Address: 1. National University Hospital, Dep. of Pediatrics, Lower Kent Ridge Road, Singapore.

7530. Schlossberg, Suzanne. 1998. Shape achievement awards (1998). *Shape.* Dec.
• ***Summary:*** "Category I: Food and nutrition. Soy to the world. Award: Soy." The text begins: "Of course, there's no such thing as a wonder food, but to read the latest research, soy seems pretty darn close. It appears to protect against a whole host of cancers–including breast, uterine, stomach, colon and lung. Diets high in soy also seem to reduce total cholesterol and LDL cholesterol levels, thereby reducing the risk of heart disease. Among post-menopausal women, high doses of soy protein also have been linked with increased bone density–good news for the prevention of osteoporosis. Soy protein even appears to reduce the incidence of hot flashes. Experts recommend getting about 3O-5O grams of soy protein daily."

On the facing (right) page are three cakes of tofu, piled atop one another, with a green edamame pod and 3 beans on top. The caption: "Soy milk, tofu and soy cheeses are great sources of this wonder food, and we expect to see a number of new foods on the market, such as soy-fortified drinks and baked goods."

7532. Swart, Besty. 1998. The dairy case (Letter to the editor). *Vegetarian Times.* Dec. p. 8.
• ***Summary:*** "Thank you for publishing 'The Case Against Dairy' by Charles Attwood, M.D. I'm vegan and have often wanted to educate others about the health effects of dairy products. This article finally provides me with the information I need in a concise, easy-to-read format.

"There is another reason to give up dairy that your article didn't mention–that is its impact on animals. While driving through northern California recently, I passed a dairy farm and noticed a pile of dead calves, their little bodies stacked up neatly as if it were the most normal thing in the world. I asked someone working nearby how these calves died. He told me that the farm usually only keeps its female calves, sending the male calves to live in veal crates. The pile of little bodies were the excess males that the farmer didn't have room for. I drove away thinking the dead ones were the lucky ones and with a new understanding of the connection between the meat and dairy industries." Address: West Boxford, Massachusetts.

7533. Australian College of Pediatrics. 1998. Position statement: Soy protein formula. *J. of Paediatrics and Child Health* 34:318-19. *
• ***Summary:*** The Australian College of Paediatrics (ACP) has revised its position statement on soya-based infant formula. As in New Zealand and the UK, the advice is that soya formula should only be used when recommended by a health professional for specific medical conditions such as proven cow's milk protein or lactose intolerance. However, even in these circumstances, the authorities recommend the use if alternative non-soy-based infant formula. The ACP statement also says there is some evidence that soy formula may impair immunity and that the long-term effects of contaminants in the formula (e.g., aluminum and phytoestrogens) are unknown.

7534. **Product Name:** Medium Tofu, Soymilk.
Manufacturer's Name: Bui Natural Tofu.
Manufacturer's Address: 520 NE 76th, Portland, Oregon.
Date of Introduction: 1998.
New Product–Documentation: Blog posted on the Web on 12 Jan. 2007 mentions this company. A Vietnamese-American enterprise. Talk with owner and tofu maker Bui Minh. 2008. July 2. This company started making tofu in about 1998. They make only medium tofu and soymilk. He is the owner, but it is a traditional family business run by four brothers; of course, all have the family name of Bui. They deliver to local Asian stores.

7535. IDRC (International Development Research Center). 1998. An effort to promote the production and consumption of soybeans as a means of improving nutrition in Nigeria

(Web article). http://www.solutions -site.org /cat11_sol101.htm.

• ***Summary:*** "Summary: An International Development Research Centre (IDRC) program to encourage soybean cultivation and integrate soybean products into traditional food and commodity production is helping to alleviate malnutrition."

"Background: In 1987, the International Institute of Tropical Agriculture (IITA), under the guidance of Principal Researcher Dr. Kenton Dashiell, launched an ambitious effort in Nigeria to combat widespread malnutrition. With support from the International Development Research Centre, IITA embarked on a project to encourage using nutritious, economical soybeans in everyday food. Soybeans are about 40% protein–more protein-rich than any of the common vegetable or animal food sources found in Africa. With the addition of maize, sorghum, wheat, rice, or any other cereal to soybeans, the resulting protein meets the standards of the United Nations Food and Agriculture Organization (FAO). Soybeans also contain about 20% oil, which is 85% unsaturated and cholesterol free.

"Few Nigerians knew about soybeans until the IITA initiative provided information on everything from their nutritional benefits to how to plant, harvest, store, and prepare them. Since then, soybean production and consumption has increased dramatically, improving nutrition particularly among the urban poor and middle income groups. Soybean-fortified products not only have more protein and minerals than their non-fortified counterparts, they are considerably cheaper than other sources of high-quality protein such as fish, meat, milk, and other protein-rich legumes. The cost of protein, when purchased as soybean, is only about 10-20% of the cost of protein from fish, meat, eggs, or milk. Many Nigerians now incorporate soybeans into their diets, and the Nigerian government has declared soybean production and utilization a national priority."

"Impact: Production increased–Soybean production in Nigeria increased from about 28 tonnes (metric tons) in 1985 to about 200,000 tonnes in 1995. The 1995 crop was worth an estimated US $60 million, saving Nigerians an equivalent amount of foreign exchange in just one year of this project. Since then, soybean production and consumption have continued to increase.

"Number of soybean farmers increased–The number of soybean farmers in Nigeria has increased tenfold to about 500,000. All the soybeans they produce are being used domestically. The price of soybeans has also increased, improving incomes for growers.

"Training increased–As a direct result of the IDRC project, more than 47,000 Nigerians (30 000 of them women) have been trained in producing soybeans and how to incorporate them into their diets. They have, in turn, trained others. Some reasons given by individuals for incorporating soybean into their diet are that it is nutritious, versatile, tastes nice, and is a good substitute for expensive protein.

"New equipment developed–This project has led to developing soybean processing equipment, which has since been adopted for both home and commercial use.

"Industry increasing–The number of soybean-processing industries in Nigeria has increased from less than five to more than 65, including small-scale businesses and larger enterprises. Several large industries, including Nestle Foods and Cadbury, have incorporated soybeans into some of their products, which has proven to be very popular.

"New soybean use developed–The IDRC-sponsored project has been instrumental in encouraging the development of more than 140 soybean-based foods, including soya milk and yogurt, soya flour, biscuits, baby food, condiments, and breakfast cereals. The newest product that has become very popular in Northern Nigeria is tofu. Participating research institutions in Nigeria have developed recipes that incorporate soybeans into new and traditional foods."

7536. Sanlinx Inc. 1998. SoyaJoy Soymilk Maker (for Home / Kitchen Use). 965 EPCO Dr., Dandridge, Tennessee.

• ***Summary:*** Sanlinx website (www.soymilkmaker.com) states (18 Jan. 2013): "Sanlinx introduced the original SoyaJoy soy milk maker in 1998 and created a new category of small kitchen appliance. The original SoyaJoy was quickly endorsed by customers and professionals alike. Over the years, we have been improving our design, adding new features, and introducing new models, such as the hugely successful SoyaJoy Plus and the SoyaJoy G3, both now being replaced by our newest model, the SoyaJoy G4.

"Our last model, the SoyaJoy G3, the third generation of our award-winning SoyaJoy Soy Milk Makers, has remained the #1 rated soy milk maker at Amazon for nearly two years.

"Introducing a new generation–The 4th generation: The SoyaJoy G4 and the SoyaPower G4 are our newest soy milk makers based on the top selling, 5-star rated SoyaJoy G3 and SoyaPower Plus."

"We are so confident that you will like the machine, we offer 90-day return policy." Address: Dandridge, Tennessee.

7537. Vodovotz, Yael; Bourland, C.T.; Rappole, C.L. 1998. Assessment of a prototype soymilk machine for use in an enclosed chamber. *Advances in Space Research* Submitted. * Address: 1. NASA-Johnson Space Center.

7538. Burnham, Trudie. 1998. Innovative soy cooking. Freedom, California: The Crossing Press. 95 p. No index. 15 x 18 cm.

• ***Summary:*** Contents: Preface. Introduction. Appetizers, snacks, and side orders. Salads. Dressings and toppings. Main dishes. Beverages. Desserts and treats.

The introduction begins: "Let's face it. In a society like

ours, obsessed with fast, low-fat food, tofu is the ultimate answer." This is a "user-friendly guide to a soya-based vegetarian diet. Many recipes are vegan, or use a minimum of dairy foods.

The glossary of ingredients includes kelp, kudzu, lecithin, mirin, miso, nutritional yeast, oils (use expeller pressed), sea vegetables, seeds (Sunflower, pumpkin, poppy and sesame are used for eating; alfalfa, radish, red clover, and fenugreek are for sprouting), slippery elm powder, soy milk, soy sauce, soysage, sweeteners, tahini, tempeh, tofu, umeboshi plums, vinegars.

"Missing egg salad: I invented this and word seemed to travel fast and wide, because I saw it in a California deli a year later with the same name." Address: New Zealand.

7539. Fike, Rupert. ed. 1998. Voices from The Farm: Adventures in community living. Summertown, Tennessee: Book Publishing Co. xii + 164 p. No index. 23 cm.
• ***Summary:*** This excellent book (a collection of short vignettes written by various Farm members) captures the spirit and essence of The Farm, a large spiritual in Summertown, Lewis Co., Tennessee–a community that has changed the world (for the better) in many areas.

The Farm traces its roots to the late 1970s with "Monday Night Class," which was led by Stephen Gaskin, an English teacher at San Francisco State College, in California. He held free, open meetings which focused on putting the shared psychedelic experiences of those who attended into the perspective of the world's major religions. He emphasized eternal spiritual values–compassion, self-reliance, development of personal character, and an awareness of the interconnectedness of all life. After talking, Stephen answered questions from the floor, and these sometimes led to broad-ranging discussions. At each meeting there was meditation and often chanting to quiet the mind and nourish the spirit. By 1969 several thousand people were regularly attending this weekly class, and a core group of them began to consider Stephen as their spiritual teacher.

In the winter of 1969 the American Academy of Religion held its meeting in San Francisco. A group of ministers and theologians happened to wander in; they stood at the back of the class and were moved by what they saw and heard. After the meeting several of them stepped forward to invite Stephen to speak at their own congregations and classrooms across America–believing that he might be able to help heal the rift between generations. Stephen agreed and a tour was arranged. Two hundred or so of his students asked if they could come along; any who could put together living quarters on wheels joined the tour. In brightly painted school buses, Volkswagen vans, trucks and campers they left San Francisco in 1970, following Stephen as he spoke on college campuses and in churches from coast to coast. Along the way the group attracted other young people who "were searching for identity, mission, and tribe." After four months and thousands of miles, the Caravan (as it was called) returned to San Francisco. But after their shared Odyssey, the group had become a tightly-knit community–a church. They agreed to pool their money, head back to Tennessee, and buy some land.

Thus, in May 1971, at the height of the counter-culture movement, several hundred young people drove their school buses into Lewis County, southern Tennessee. They had been given permission to park (free of charge) on the Martin Farm until they could find their own land. They stayed on the Martin Farm all that summer, then in the fall purchased the Black ranch (1,000 acres)–less than ¼ mile away. They founded America's largest modern-day intentional community–The Farm. It soon became known and admired by people around the world.

It is said that The Farm had two phases–the Letting Go, which was Monday Night Class, the Caravan, and the Martin Farm. Then there was the Taking Hold–everything after that.

Farm members organized themselves on a communal basis according to a passage in the Bible's *New Testament, Book of Acts,* 2:44-45, which says: "And all that believed were together and had all things in common; and sold their possessions and goods, and parted them to all as every man had need." Each member of the community had to sign this vow of personal poverty. They ate a vegetarian diet–in fact a vegan diet, which contained no animal products, and showed many others how such a diet could be healthful, delicious, and ethical. They started a "Soy Dairy" and used soyfoods (such as soymilk, tempeh, tofu, soy yogurt, soy flour, and whole cooked soybeans) as a key protein source in their diet. They generally used what extra money they had to help impoverished people around the world–both in Third World countries and in the USA. In the late 1970s they worked with people in the village of Solola, Guatemala, to build an innovative Soy Dairy (see p. 78-80, by Doug Stevenson), then helped others start soyfoods businesses in the Caribbean. They did pioneering work in spiritual midwifery, publishing, and many other areas.

By 1977, there were 1,100 farm members and 14,000 visitors–many of whom spent the night. At the peak of its population in 1982, The Farm was home to over 1,500 optimistic young people and the young at heart; about half of these were children, since The Farm offered to raise the child of any woman who was considering an abortion. The community received 20,000 visitors that year alone, as many as 200 on any given night.

But The Farm had one major problem: How to financially support its many members, visitors, and activities. By the late 1970s The Farm had a large and rising debt, and the interest on that debt was starting to get out of hand. By 1980 morale was definitely beginning to suffer. In 1983, after much soul-searching, The Farm decided that no longer would all things be held in common, except for the land. Many people left; it was a diaspora. Each family (or person) who

remained would now be responsible for its own economic survival.

From its beginnings in San Francisco in 1970, The Farm has been an experiment in spiritual communal living. This book tells the story of that experiment (up to the early 1980s) in 66 short chapters, told by many different community members. Its a magnificent, moving story, told in an "energy-based" language invented by The Farm but easily understood by all. Some members recount more than one chapter. Note: This book could be greatly improved by an index. Address: P.O. Box 99, Summertown, Tennessee 38483. Phone: 1-888-260-8458.

7540. Keuneke, Robin. 1998. Total breast health: The power food solution for protection and wellness. New York: Kensington Publishing Corp. xxviii + 416 p. Foreword by Lendon Smith, M.D. Index. 24 cm. [200+* ref]
• ***Summary:*** The key to total breast health (and preventing breast cancer) is a healthy traditional diet and lifestyle. Chapter 7, "Soybeans protect against breast cancer," has these contents: Two pro-soy quotations. Introduction. Some phytochemicals in soy and their properties. Phytic acid. Other benefits of soy for women: Osteoporosis, symptoms of menopause, symptoms of PMS, heart disease, anti-aging benefits, gallstones. Update on the politics of soybeans: Will quality be sacrificed for commercial purposes? Fermented soy foods are especially beneficial. The magic of miso: Folklore was right. The National Cancer Institute is spreading the word about soy's ability to protect against breast (and prostate) cancer. Phytochemicals in soy: (1) Inhibit the growth of tumor cells. (2) Convert cancer cells back into normal cells. (3) Block the entry of estrogen into breast cells; this is beneficial in preventing cancer. "Research shows that soy isoflavones may protect against high levels of synthetic estrogen in the diet." Soy foods include: tofu, tempeh, miso, edamame, soy sauce, soymilk, natto (fermented soybeans), soybeans and second-generation soy foods such as cheese, textured vegetable protein, and meat alternatives such as soy breakfast links.

Contains over 125 internationally inspired recipes, incl. Tofu Cote D'Azur, and Dilled Salmon in Miso-Lemon Sauce.

A portrait photo of Robin (a woman) appears on the inside rear dust jacket. The last page of the book (unnumbered) is "About the author." Address: Norwalk, Connecticut.

7541. Marcus, Erik. 1998. Vegan: The new ethics of eating. Ithaca, New York: McBooks Press. xi + 211 p. Illust. Index. 23 cm. [406 endnotes*]
• ***Summary:*** An excellent, very important book. The New Four Food Groups (p. 194-95) are vegetables, whole grains, fruit, and legumes. Legumes includes soy milk, tempeh, texturized vegetable protein, and tofu.

Dedicated to Henry Spira, a tireless defender of animals. Eric Marcus was born in 1966. Address: Bay Area, California.

7542. *Natural Athlete* (*Evanston, Illinois*). 1998. Cooking with Chef Tina: A natural power breakfast. p. 46, 48-49.
• ***Summary:*** Tina Martini is executive chef at the Franklin Quest Fitness Institute, where she is responsible for teaching some 200 guests a week about the benefits of healthy eating. Many of these guests call her the "Queen of Tofu." She says: "The latest research on soy is that it recruits lean body mass more effectively, than any kind of protein. So I'm a big fan of soy, because along with the increase in strength, you're also getting fiber, which animal protein doesn't offer."

Contains three recipes: Bread pudding (with soy milk). Apple crisp with cashew granola (with soy milk). Natural french toast (with soy milk and tofu). Address: 2859 Central St. #106, Evanston, Illinois.

7543. Rinzler, Carol Ann. 1998. The healing power of soy: The enlightened person's guide to nature's wonder food. Rocklin, California: Prima Publishing. xiv + 194 p. Illust. Index. 24 cm. [119 endnotes]
• ***Summary:*** Contents: Preface. Introduction: Not your ordinary bean, the first soybeans (history), how to talk soy (glossary of soyfoods–miso, soybean oil, soy concentrates, soy flour, soy isolates, soy milk, soy "nuts," soy sauce {shoyu, tamari, teriyaki}, tempeh, texturized soy protein {TSP}, tofu). 1. The nutritional wonder bean: Vitamins, minerals, proteins, fats, carbohydrates, fitting soy into your diet, summing up. 2. Something special in the bean: Hormones and people and plants, fabulous phytoestrogens, the safety of phytoestrogens, summing up. 3. Soy and your heart: Heart Disease and its victims, cholesterol and your heart, soy versus cholesterol, soy's cholesterol busters, beyond cholesterol, summing up. 4. Soy, the cancer fighter: The statistics of cancer, diet and hormone-related cancers, the Asian experience, how soy fights cancer, is soy safe?, a practical guide to your personal war on cancer, summing up. 5. Building better bones with soy: Your hormones and your bones, the hormone dilemma, soy and your bones, getting the calcium you need, summing up. 6. Hot news about hot flashes: What a hot flash is, soy and hot flashes, other plants that may relieve hot flashes, vitamins, minerals and hot flashes, simple lifestyle changes, summing up. 7. Cooking with soy: The joy of soy, whole soybeans, tofu, tempeh, texturized soy protein (TSP), soy flour, soy milk, soy sauces, soybean oil, miso. Appendix A: Shopping for soy through the mail. Appendix B: Directory of soy manufacturers. Appendix C: Directory of soy researchers whose studies are included in this book. Sources.

The author has written seventeen books, including *Nutrition for Dummies* (IDG) and *Estrogen and Breast Cancer* (Hunter House Books). A frequent contributor to

publications such as *American Health, Woman's Day,* and the *New York Times,* she lives in New York.

Note: Another quick, generic book about soy and good health by one who is not very familiar with the subject–though the footnotes show that she consulted many publications; nothing new. The history chapter is full of errors. Address: New York.

7544. Solomon, Charmaine; Solomon, Nina. 1998. Charmaine Solomon's encyclopedia of Asian food. Boston, Massachusetts: Periplus Editions. xiv + 480 p. Color illust. ([28] p. of plates). 29 cm. [67* ref]

• ***Summary:*** An outstanding book; the color illustrations of many ingredients are spectacular and very informative. The author has an insatiable curiosity.

Contents: List of illustrations. Introduction. How to use the *Encyclopedia of Asian Food.* Acknowledgements. A-Z of Asian Food. Bibliography. Illustrated index of selective ingredients. Index of recipes. Index of alternative words and main entries.

Soy related entries: Bean curd (p. 26-28, incl. all the different types, yuba, deep-fried tofu types, fermented tofu incl. ch'ou doufu [chou doufu]: "Despite its overpowering aroma, slimy texture, unappetizing color and the unfortunate odor it leaves on the breath, those brave enough to partake of it consider it a delicacy").

Bean paste, sweet (p. 29. The three colors and types are red {from adzuki beans}, yellow {from mung beans, husked and split}, or black {from black soy beans}. "The pastes are usually available ready-made sweetened in cans. It is possible to make your own, starting out with dried beans." Name in Chinese: dow sa, tau sa {sweet bean paste}).

Bean paste, yellow (p. 29. Despite what the label says, this thick, salty condiment is brown, not yellow, in color).

Bean sauces (p. 29. "Made from fermented soy beans," they range in color from yellow to brown to black [sweet black bean paste]. Their consistency is more like pastes that must be spooned from the jar than pourable tomato ketchup).

Beans, salted yellow (p. 31. Canned yellow soybeans which have been salted and fermented).

Beef (p. 31-37 incl. Teriyaki steak, Sukiyaki, Beef with black bean sauce, incl. "2 tablespoons canned salted black beans [fermented black soybeans]").

Black bean (p. 43-44. Black soy beans which are fermented and salted. "Some are sold in cans in a salty liquid, others in plastic bags, covered with salt crystals." Also called "preserved black beans").

Flours & starches (p. 157-61). Incl. soy flour. "A high protein, low starch flour... used mostly in Japan [where it is called kinako] and China. In Korea roasted soy bean flour and fermented soy bean flour are used to make a variety of bean pastes."

Note. This is the earliest English-language document seen (Nov. 2012) that uses the term "roasted soy bean flour" to refer to kinako.

Legumes & pulses (p. 206-18). A long and interesting section. All entries have a scientific name. Many have an illustration. Those found in many Asian countries (e.g., green bean, green pea) have the name in each country. Includes: Introduction, adzuki bean, asparagus bean (see winged bean), asparagus pea, black-eyed pea (a variety of cowpea), black gram, blue pea, broad bean, butter bean (see lima bean), chick pea, cowpea (see yard-long bean), fenugreek, green bean, green pea, hyacinth bean (see lablab bean), lablab bean, lentil, lima bean, long bean (see yard-long bean), moong bean (see mung bean), moth bean, mung bean, parkia, peanut, pigeon pea, red bean (see adzuki bean), red kidney bean, rice bean, sataw bean (see parkia), snow pea, soy bean (short entry), sugar snap pea, tamarind, white gram (see black gram), winged bean (China: su-ling dou; India: Goa bean; Indonesia: kecipir; Japan: shikakumame; Malaysia: kacang botor; Philippines: sigarilyas; Sri Lanka: dara-dhambala. Thailand: thua pu). Yard-long bean (this is the fresh bean known by a host of names). Recipes: Adzuki bean soup.

Master sauce (p. 232). "Also known as 'flavour pot' or 'lu,' this sauce has a base of soy sauce, water, sugar and Chinese wine or sherry, with a few variable additions..." Cooking with it is similar to 'red-cooking.'

Miso (see soy bean products). Mushrooms & fungi (p. 237-40, incl. recipe for Braised bean curd, cloud ear and vegetables, and Braised soy mushrooms). Natto (see soy bean products).

Oils (p. 258-59, incl. coconut oil, gingelly oil [sesame oil], mustard oil, palm oil, palm kernel oil, peanut oil, perilla oil, sesame oil). Note: Soy oil is not mentioned here! Okara (see soy bean products). Salads, incl. recipe for Indonesian vegetable salad (gado-gado), that calls for 4 oz. fried bean curd. Shoyu (see soy sauce).

Soy bean, dried (349). China: da dau, wong dau, hak dau, tai dau. Indonesia: kacang kedelai. Japan: daizu. Korea: jaa jang. Malaysia: kedelai. Philippines: utaw. Thailand: thua lueang.

Soy bean, fresh. China: mao dau. Indonesia: kacang soja. Japan: edamame. Malaysia: kacang soja. Recipe: Fresh soy beans with bean curd.

Soy bean products (p. 350): Miso (incl. recipe for miso soup). Natto. Soy bean paste (go). Soy milk (including okara). Tahuri (Philippine fermented tofu). Tokwa (tokwan; very firm square tofu).

Soy bean sprouts, with recipe for soy bean sprout salad. China: dai dau nga choi. India: bhat. Indonesia: kacang kedele, taugeh. Japan: daizu no moyashi. Korea: Kong namul. Malaysia: kacang soja, taugeh. Philippines: utaw. Thailand: thua-lueang.

Soy sauce (p. 351-52). Chinese soy sauce: Dark soy sauce. Light soy sauce ("Usually labeled 'superior soy'"). Mushroom soy sauce (Dark soy sauce that has been flavored

with straw mushrooms). Japanese soy sauces: Koikuchi (regular shoyu), tamari, usukuchi. Korean soy sauce ("About the same colour as Chinese light soy sauce, but not as fiercely salty and with a sweet malted aroma"). Thick and flavoured soy sauces: Kecap asin ("A dark, salty soy sauce, from Indonesia, a little thicker than the dark soy of China"). Kecap manis (A thick, sweet soy sauce from Java, Indonesia). Kicap cair: "The Malaysian equivalent of light soy sauce." Kicap pekat: "The Malaysian equivalent of dark soy sauce, though thicker than the Chinese version, but not as thick as kecap manis." Ponzu shoyu. Toyo mansi (p. 352): "A soy sauce used in the Philippines soured with kalamansi juice."

Note: This is the earliest document seen (April 2012) that uses the term "Kicap cair" or the term "Kicap pekat" to refer to light and dark Malaysian soy sauces, respectively.

Tempeh (p. 386). Incl. recipes for Savoury Tempeh and Thai style tempeh. Tofu (see bean curd).

Also discusses: Adzuki bean, agar-agar (incl. almond bean curd, awayuki), almond, amaranth, cowpea, crab in black bean sauce (recipe at crab), daikon, millet, monosodium glutamate ("I would strongly recommend omitting it"), Nonya (pronounced 'Nyonya.' The unique cookery found in Malaysia and Singapore resulting from the fusion of Malay and Chinese cuisine during the last century), peanut, peanut sauce, sago (this palm flowers only once in its life, at about age 15. Just before flowering, it builds up a large reserve of starch in the pith. The tree is felled, the pith scooped out, ground and washed to make sago starch), seaweed (incl. agar-agar, hijiki, kombu / konbu, mozuku, nori / laver, wakame), sesame paste, sesame seed, vegetarian meals ("By far the most important vegetarian food in the Far East... is bean curd"). Address: Australia.

7545. Wise, Victoria. 1998. The vegetarian table: Japan. San Francisco: Chronicle Books; London: Hi Marketing. 156 p. Illust. (color photos by Deborah Jones). 22 x 21 cm. Series: The Vegetarian Table.

• ***Summary:*** Contents: Introduction. Basic ingredients and seasonings for the Japanese table. 1. Appetizers and condiments. 2. Soups. 3. Rice. 4. Noodles. 5. Vegetables. 6. Sweets. Table of equivalents.

Ingredients include: Soybeans, soy sauce, tofu (incl. silken tofu, tofu puffs, grilled tofu), miso (red, white, yellow, brown, barley), fresh soybeans, dried soybeans (incl. black soybeans), soybean sprouts, freeze-dried tofu, soybean milk skin (yuba), and soybean curd pulp [okara]. Azuki beans, sea greens [sea vegetables incl. agar, kombu, nori, wakame], sesame seeds, umeboshi (pickled plums), wasabi, saké.

Contains too many soy-related recipes to list them all. The color photos and food styling are superb–perhaps the most beautiful we have ever seen in a cookbook.

Note: Other books in this series (all published by Chronicle Books) are: France, India, Italy, Mexico, and North Africa. Address: Oakland, California.

7546. Yeager, Selene. 1998. The doctor's book of food remedies: the newest discoveries in the power of food to cure and prevent health problems, from aging and diabetes to ulcers and yeast infections. Emmaus, Pennsylvania: Rodale Press. xiv + 610 p. Illust. Index. 24 cm.

• ***Summary:*** The chapter titled "Soy foods: Help for your hormones–Healing power" (p. 490-95) notes in the subtitle that these foods "Can help: Prevent heart disease, relieve menopause symptoms, reduce the risk of breast and prostate cancer." Contents: Introduction. In the kitchen (using tofu). Good for your heart. The joy of soy: Brief definitions of meat substitutes, soy flour (kinako–made from roasted, ground soybeans), soy milk, tempeh, texturized soy protein, tofu. Turning down the heat (hot flashes and menopause). Powerful breast protection. Protection for men (prostate cancer). Nutritional extras (Good sources of protein and other nutrients). Getting the most: Add soy products last when cooking, shop for power (it's best to eat soy foods in their unadulterated form), look for full-fat soy milk–which contains 50% more phytoestrogens than the low-fat kind. Two recipes: Soy fruit smoothie (with soymilk). Mocha tofu pudding.

Also contains chapters on sea vegetables (p. 477-81), and Thyroid disease: Foods for hormonal health (p. 528-31).

7547. Fallon, Sally; Enig, Mary G.; Fitzpatrick, Mike. 1998? Myths and truths about soy foods (Leaflet). Whangarei, New Zealand: Soy Information Service. 3 panels each side. Each panel: 21 x 9.5 cm. Undated.

• ***Summary:*** Near the bottom of the front is written: "For references and additional information, send $12 to: Soy Alert! 4200 Wisconsin Ave. #106-336, Washington, DC 20007. Copyright Sally Fallon and Mary G. Enig, Ph.D."

The three inside panels are titled "Myths and truths about soy foods." There are 16 pairs of "Myth" and "Truth." The first few myths are: "The use of soy as a food dates back several thousand years." "Asians consume large amounts of soy foods." "Modern soy foods confer the same benefits as traditionally fermented soy foods." Note: The authors are not opposed to the use of traditional fermented soyfoods.

Back left panel: "Soy dangers summarized." Back central panel. "Soy infant formula–Birth control pills for babies."

Note: This leaflet was sent to Soyfoods Center in about 1998 by Richard James of New Zealand. A note stapled to the back reads: "The point being that the industry and the F.D.A. have allowed an unacceptable cancer risk [from soy isoflavones] to continue, especially in baby food, for 20 years." Address: P.O. Box 3285, Onerahi, Whangarei, New Zealand.

7548. Fitzpatrick, Mike G. 1999. Re: Docket No. 98P-0683

[Food labelling: Health claims; soy protein and coronary heart disease]. Letter to Dr. S.M. Pilch, Centre for Food Safety and Applied Nutrition (HFS-465), Food and Drug Administration (FDA), 200 C St., SW, Washington, DC 20204 USA, Jan. 25. 9 p. Typed, without signature (carbon copy). [40 ref]

• ***Summary:*** "My submission does not address the issue of the health claim that soy protein reduces the risk of coronary heart disease *per se*. Rather, it opposes the claims by PTI [Protein Technologies International] that soy protein is a GRAS foodstuff and that there are no risks associated with the daily consumption of between 25 g and 100g of soy protein.

"In fact, the FDA has never granted soy protein GRAS status. I would submit that the proof required to make such a claim is lacking. Also, there are very real risks associated with consuming soy protein. These risks appear to have been ignored by PTI and it is essential that the FDA give their full attention to the exposures to isoflavones and nitrosamines that will occur on daily exposure to 100g of soy protein.

"In this regard, FDA must fully disclose to consumers the possible risks of soy protein as well as the possible benefits." Address: PhD, MNZIC, Senior Consultant, Kingett Mitchell & Associates Ltd., Environmental Consultants, ASDA Plaza, Fred Thomas Dr., P.O. Box 33-849, Takapua, Auckland, New Zealand. Phone: (09) 486-8068. Fax: 486-8072.

7549. Golbitz, Peter. 1999. Re: Follow-up letter concerning FDA proposed health claim for soy protein. Letter (fax) to members of the Soyfoods Association of America, Jan. 25. 1 p.

• ***Summary:*** This fax is on Soyfoods Association letterhead. "It has been brought to our attention that the proposed rule would exclude soy products that don't fit FDA's definition of 'low fat,' which is equivalent to 3 grams of fat per serving. Unfortunately, this would exclude most tofu sold in the market today, as well as soymilks that have more than 6 or 7 grams of protein per serving. This is due to the soybean's natural ratio of approximately 2:1 for protein to fat. Naturally processed soyfood products that have the minimum 6.25 grams of soy protein per serving are likely to have at least 3 grams of fat per serving. Tofu, soymilk, tempeh and soy flour products that contain more than 7 grams of protein per serving might not be able to get the proposed health claim. I don't believe that this was the original intention of FDA in proposing this rule, as they actually used tofu and soymilk in their example of products that may qualify for the health claim."

"I urge all of you to carefully examine your product's nutritional profiles, and if you feel it is important to your company, please send a comment to FDA regarding this potential problem right away... today!" Address: Soyatech, P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207-288-4969.

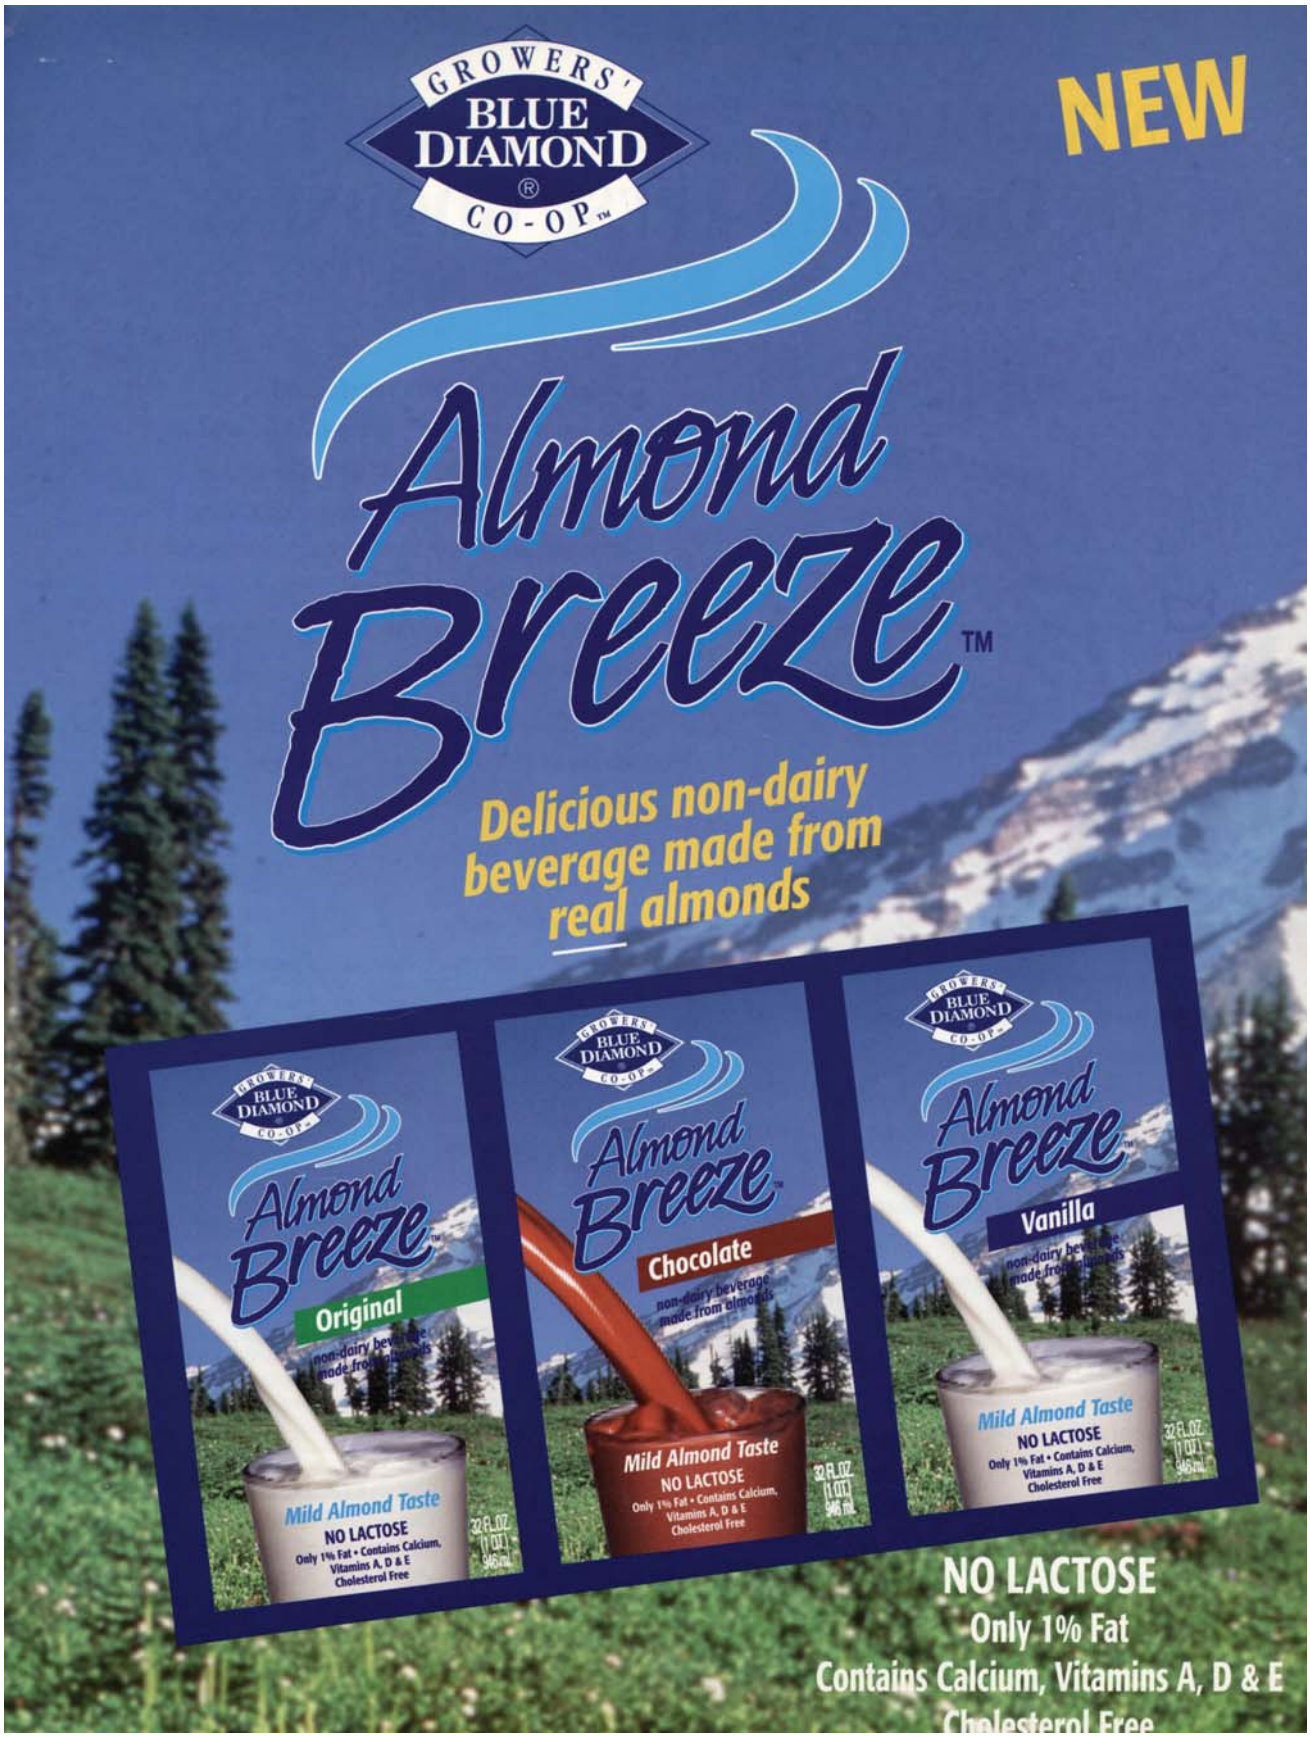
7550. **Product Name:** Breeze (Almond Milk) [Original, Chocolate, Vanilla].
Manufacturer's Name: Blue Diamond Growers (An Agricultural Cooperative).
Manufacturer's Address: 1082 C Street, Sacramento, CA 95814. Phone: 916-442-0771.
Date of Introduction: 1999. January.
Ingredients: Water, evaporated can juice, almonds, natural cocoa, tricalcium phosphate, sea salt, potassium citrate, soy lecithin, carrageenan, vanilla extract, vitamin E acetate, vitamin A palmitate, vitamin D-3.
Wt/Vol., Packaging, Price: 1 quart (946 ml) Aseptic carton. Retails for $2.48 (1999/04, Lafayette, California).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 8 fl. oz. (240 ml): Calories 120, calories from fat 25, total fat 3 gm (5% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 160 mg (7%), potassium 180 mg, total carbohydrate 21 gm (dietary fiber 1 gm [4%], sugars 20 gm), protein 1 gm. Vitamin A 10%, calcium 20%, iron 4%, vitamin D 25%, vitamin E 50%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Leaflet brought by Patricia Smith from Natural Products Expo at Anaheim. 1998. March. 8½ by 11 inches. Full color. On the front background is an alpine scene. The slogan: "Breeze: Delicious non-dairy beverage made from real almonds." An inset shows each of the three different flavors of Breeze being poured into a glass. On the back is general information about the product and the marketing support that Blue Diamond will provide–but no ingredient lists. Consumer research has shown it to be "preferable to popular milk alternatives such as soy, rice, and oat beverages."

Talk with Susan of Blue Diamond. 1999. March 24. This product first started to be sold in about January 1999.

Product with Label (Chocolate flavor) purchased at Open Sesame in Lafayette, California. 1999. April 20. 1 quart Tetra Brick carton with reclosable lid. Blue (3 shades), white, brown, yellow, and green. "Delicious non-dairy beverage made from real almonds. No lactose. Only 1% fat. Contains calcium, vitamins A, D & E. A color photo on the front panel shows chocolate Breeze being poured from the left into a glass with a snowy mountain peak, meadow, and clear blue sky in the background.

Soyfoods Center taste test: Flavor and nutritional value–Much too sweet, it contains about 3 times as much sugar and one-eighth as much protein as a comparable soy beverage. Price: Too expensive.
*

7551. **Product Name:** Veggie Milk (Tetra Pak Quart Cartons) [Original].
Manufacturer's Name: Galaxy Foods (Product Developer-



Marketer).
Manufacturer's Address: 2441 Viscount Row, Orlando, Florida 32809. Phone: 800-441-9419 or 407-855-5500.
Date of Introduction: 1999. January.
Ingredients: Incl. soy protein isolate, rice, and oats.
Wt/Vol., Packaging, Price: 1 quart (32 oz) Tetra Brik Aseptic carton. Retails for $1.99 (1999/05, Concord, California).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: *Monthly Insight* (Galaxy Foods, Orlando, Florida). 1998. Sept. p. 2. "Veggie Milk to make its debut." "Veggie Milk, Nature's Alternative to Milk, will make its debut on store shelves this fall." It is a "highly nutritious blend of organic soy, rice, and oats. Veggie Milk contains more vitamins, minerals (including calcium), protein and fiber than any other milk on the market today. It is the only milk fortified with folic acid. Veggie milk also contains powerful phytonutrients like Isoflavones (found in soy) and Toconutrients (found in rice)... As with all of our Veggie products, Veggie Milk is lactose free, cholesterol free and saturated fat free. And, because it is from the Veggie Kingdom, it will never contain rBST hormones or antibiotics that are often found in animal's milk. Processed by strategically located dairies, the 32 oz. carton of fresh milk will be available in two flavors–original and chocolate–and will be sold alongside conventional fresh milk. Veggie Milk will also be available in a shelf-stable package that can be sold in supermarket dry grocery aisles."

Monthly Insight (Galaxy Foods newsletter). 1998. Dec. p. 2. "On the shelves–Veggie Milk is making its way onto the shelves in Ingles Markets, Kroger and Dierbergs–and its just a matter of time and paperwork until we'll see Veggie Milk on the shelves of all our Veggie accounts!"

Talk with Tina Nelson of Galaxy Foods. 1999. April 2. Galaxy had Veggie Milk at the NFM show at Anaheim and they are just now getting it on the shelves. It was first sold at Ingles Market in Dec. 1998 or Jan. 1999. This soymilk is now out in a 32 oz (1 quart) Tetra Pack carton in one flavor (Original); they plant to introduce a chocolate flavor in June. Tina thinks the product is packaged at several different locations. They make the powder themselves and ship that to the packager. She does not think the product is packaged by Pacific Foods of Oregon. Galaxy manufactures the powder portion of the product, which is a blend of soy (the main ingredient), rice, and oats. At least part of the soy is soy protein isolate, of which they are a major consumer. As far as Tina knows it is the first commercial soymilk that contains fiber (from the oats) and folic acid. They plan to introduce the product in a fresh gable-top carton very soon; they may have already shipped their first order.

Product with Label purchased at Trader Joe's in Concord, California. 1999. April 30. 3.5 by 7.75 by 2.25 inches. Tetra Brik 1 quart aseptic carton. Retails for $1.99. Green, yellow and black on white. A photo on the front panel shows milk being poured into a tall glass. The front panel states: "Nature's alternative to milk. A natural, highly nutritious blend of organic soy, rice & oats. The world's most nutritious milk. Lactose free. Cholesterol free. More calcium. 1% Low fat. Pasteurized. Homogenized. Great source of isoflavones, antioxidants & folic acid. Fortified with vitamins A, B, C, D & E." On the back is a large color photo of seven other Galaxy Veggie products." A table on one side compares the nutritional composition of this product with 1% dairy milk. A "Veggie for life essay contest" is described in detail on one side." Soyfoods Center evaluation. 1999. May 16. This is the worst soymilk product we have ever evaluated. We found the flavor to be terrible–one taster could not drink it at all; he threw it out! The bad flavor appears to come from the first two ingredients (not including water): "organic soymilk solids" (which usually means powdered soymilk) and isolated soy protein. The price is very high–more than 40% higher than comparable brands at this store. The claim that it is a "A natural... blend of organic soy, rice & oats" seems misleading. The third ingredient (not including water) is "brown rice maltodextrin and protein." Usually that refers to a sweetener, but what is the "protein" doing there? Further down the list is "oat fiber." Does that count as "natural" oats?

7552. Golbitz, Peter. 1999. Proposed FDA rule may turn soy to gold. *Bluebook Update* (*Bar Harbor, Maine*) 6(1):1-2. Jan/March.

7555. White Wave, Inc. 1999. Soyfood recipes for the American table: Favorite dishes from the folks at White Wave–America's soyfood company since 1977. Summertown, Tennessee: The Book Publishing Co. 96 p. Illust. with full-page color photos. Index by product. General index. 23 cm. [13 ref]

• ***Summary:*** Contents: About White Wave: Brief company history ("Entrepreneur Steve Demos founded White Wave, Inc., in 1977..."), healthy soil means healthy food (White Wave has supported organic farming practices for over 20 years). About soy. About White Wave products: Tofu, tempeh, Silk soymilk, Silk dairyless soy yogurt, Soy A Melt (cheese alternative), Seitan. Breakfast. Appetizers. Soups. Salads. Main dishes. Desserts.

A very disappointing, overly commercial "quickie" book with two main problems. (1) Every recipe calls for the use of "White Wave" soy products. (2) Many of the recipes in this book are taken from other 11 other books published by The Book Publishing Company–but we are not told which recipes are copies and which are original, or (on each page) where a particular copy came from. The color photos are attractive. This book would be fine if it were given away by White Wave to promote its products. Address: Boulder, Colorado.

7556. Gupta, Rajendra ("Raj") P. 1999. Progress in development of natural soy protein isolates and concentrates (Interview). *SoyaScan Notes.* Feb. 4. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Raj and ProSoya are making good progress in developing soy protein isolates and concentrates made from whole soybeans. All, or almost all, isolates and concentrates are made from defatted soybean meal, which is usually defatted with hexane solvent. Raj first makes the whole soybeans into soymilk, then removes the carbohydrates (fiber and sugars), and finally removes most or all of the fat. It is the last step that is the most difficult, and it is more difficult on a commercial scale than on a laboratory scale. Raj hopes to have the technology ready within 2 years. He will license the technology, rather than make and sell the finished product–although he will also have a demonstration plant that makes products for potential customers to see. Address: President and CEO, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

7557. Gupta, Rajendra ("Raj") P. 1999. What happened to International ProSoya Corp. (IPC) and their soymilk product SoNice (Interview). *SoyaScan Notes.* Feb. 4. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** IPC never went bankrupt or even into receivership. Their SoNice soymilk was doing very well but the quality was inconsistent, so they decided to take it off the market and set up their own packaging facility. It has not come back onto the market since some of the money that was promised to the company was not forthcoming. Therefore a product quality problem became a money problem, which is where things stand now. Lorne Broten is still one of the directors and actively involved in looking for a company to buy a license to manufacture the product. Raj is also involved, since he must approve any license. Raj expects SoNice to be back on the market this spring.

Dusty Cunningham has been back in Victoria, BC, for about a month, after living for a while in the Scotland, where she helped set up a plant that is now making and selling SoNice in the UK. Address: President and CEO, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

7558. Pyle, Amy. 1999. State's tough [milk] price rules scrutinized: Battle lines form as Bay Area lawmaker questions California's regulations and how much consumers spend. *Contra Costa Times.* Feb. 11. p. A1, A20.

• ***Summary:*** Above the centerfold of the front-page story is a color photo of a woman in Martinez restocking the shelves of her store's dairy case. The photo is titled "Got milk-cost problems?" Two half-gallon cartons of Silk (refrigerated soymilk made by White Wave of Boulder, Colorado) are very visible in the same case as the dairy milk.

A new look at age-old disputes about California milk prices among consumer advocates, California dairy farmers, and state regulators is about to begin, prompted by sky-high prices (up $0.49 per gallon during the last 12 months) and a bold newcomer–Mad About Milk, a pseudo-consumer group financed by out-of-state dairies (headed by Arizona-based

Shamrock Foods). California's milk prices are the highest in the nation, and despite big ad campaigns, milk consumption in California is dropping–perhaps in part because of the high prices. Twenty-year-old state policies, that are unbelievably complex and based on special-interest politics (backed by the California dairy lobby), allow the state to set the price that farms must charge for milk and suppresses competition by barring most out-of-state milk. Since 1962 only specially enriched milk can be sold in California, and California is the only state that mandates enrichment beyond federal standards; condensed milk fortified with calcium and protein must be added at the processing plant. California is America's leading milk-producing state; 1.3 million cows produce 2.3 billion gallons a year worth $3.7 billion. California's milk production costs are also among the nation's lowest, thanks to large, modern dairies and relatively warm weather.

Now Jackie Speier (a Democrat from Burlingame) plans to introduce a bill that will challenge the price controls. She argues that the price stabilization program hurts poor people, infants, and children–costing about $300 extra per year for large families. Address: Los Angeles Times.

7559. Soyfoods Association of North America. 1999. Soyfoods sales soar with increased consumer acceptance (News release). Washington, DC. 2 p. Feb. 15. 28 cm.
• ***Summary:*** During the past year, sales of soymilk grew 53% in supermarkets and 24% in natural food stores, according to recent data from SPINS. Retail sales of soymilk reached $161 million in 1997, and are projected to reach $300 million by the year 2000 according to Soyatech, Inc. (Bar Harbor, Maine).

Sales of tofu last year reached $43 million in natural food stores and $37 million in supermarkets. This increase in tofu sales is being sparked by a variety of new baked, flavored, and smoked tofu products, and these categories are growing 12% faster than unflavored tofu products, according to SPINS data.

Meat alternatives are also experiencing very rapid growth, with sales last year growing 53% in supermarkets and 20% in natural food stores, according to SPINs. The fastest growing product in this category is the meatless deli slices, sales of which grew by more than 100% last year. Total sales of meat alternatives should reach $325 million this year, with an estimated 62% of that total coming from supermarkets–according to Soyatech. Address: 1723 U Street, N.W., Washington, DC 20009. Phone: 202-986-5600.

7560. Demos, Steve. 1999. The market for non-dairy yogurts and puddings in the United States (Interview). *SoyaScan Notes.* Feb. 24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** White Wave's soy yogurt used to be named "White Wave Dairyless." But in March 1998 the company reintroduced and repositioned the product as "Silk: Dairyless Soy"–still as a spoonable dessert. It had been reformulated, and a tamper-free sealed lid was added. Steve estimates that the U.S. market for non-dairy yogurts is about $3-$4 million wholesale or $6-$8 million at retail. It is definitely growing at a very healthy rate–more than 30% a year. Silk has about 80% of that market–based on adjusted SPINS data. SPINS gives a somewhat distorted view of reality because it includes only selected distributors (and omits many of the biggest distributors such as Tree of Life, Stow Mills, etc.), and selected natural food stores–from which the information is extrapolated. Today there is only one major competitor (Nancy's of Oregon), and one small competitor (he forgets the name) that sells mostly in the Boston and New England markets. Soy yogurt is a big, important product for White Wave, which sells 100,000 units or more of Silk soy yogurt per week. The company sells more units of tofu, but the tofu generates less profit per unit and requires a huge investment in money and factory space. Yet the company's flagship product is Silk Soymilk–which is number one in both units sold and revenues earned. "Silk is our grand slam."

Ted Nordquist is expected to introduce a new soy yogurt at the Anaheim show next month under the WholeSoy brand. Steve thinks it is being made at Brown Cow in Petaluma, California.

Jonathan Gordon reformulated White Wave's soy yogurt shortly before he left–and he did a good job except for the stabilization. When you make soy yogurt that is set in the cup, then you stir with a spoon, it doesn't fracture smoothly like dairy yogurt. Woody Yeh's SoyaLatté, for example, was an excellent product, but it didn't look that good when you ate it. Making a good soy yogurt is very difficult; there are many small tricks. Soy yogurts are almost always pre-mixed, what is called European-style. You first make the soy yogurt, then put it into huge blenders which effectively homogenizes the consistency, causing a loss of body in the product. So you must reconstitute the body. After Jonathan left, White Wave hired an outside firm to help reestablish the stabilization system. Now White Wave has a "nice, fluffy, reconstituted soy yogurt structure again."

White Wave has two sizes (SKUs) of plain (unflavored) soy yogurt: a quart and a 6-ounce cup. The quart sells phenomenally well. It provides strong support to the premise that flavored yogurts ultimately bring many people to plain. About 15-20% of all White Wave's soy yogurt (by volume) is sold unflavored–even though it is the same price as the flavored products, and it is premixed just like the flavored products. Many people like to use the plain quart in home cooking. They may sweeten it with maple syrup, etc. Every week, the plain sells as well as the most popular flavor

A close relative of soy yogurt is soy pudding (or soy custard). Both are basically spoonable desserts, but the pudding is not acidified, and therefore probably has to be sold in an aseptic package. Steve believes the soy pudding

market is "about to explode" and this category will upstage soy yogurts in the future. Steve would bet that at least three new soy puddings (aseptically packaged) will be introduced within 60 days. Steuben Foods is coming out with one–probably in chocolate and vanilla flavors–probably at Anaheim in March. Jonathan Gordon would love to develop one but he has signed a non-compete agreement. The pudding is basically a co-packed product; nobody would put an aseptic system just for that–at least at the beginning. Finding low-acid aseptic packers is easy. White Wave is very focused on developing a Silk soy pudding that will be aseptically packaged but sold refrigerated–next to the other Silk products. "This product will be huge! It could be the biggest soy product–after you get acceptance of the word 'soy.' But it will be a long time before its sales could pass those of Silk Soymilk." Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

7561. Demos, Steve. 1999. New developments with Silk Soymilk and related products at White Wave. Company growth rates. Looking for one large investor (Interview). *SoyaScan Notes.* Feb. 24. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Despite all the exciting new developments with tofu at White Wave, Silk Soymilk is the company's flagship product; it is number one in both units sold and revenues earned. "Silk is our grand slam." Silk is now labeled as "lactose-free soymilk." The word "milk" has a strong positive connotation and this makes it clear that Silk is an alternative for milk. "Silk has everything that milk has except for the 'milk' part. James Terman came up with that one!" White Wave tries to fortify Silk Soymilk to be nutritionally equivalent to cow's milk.

The FDA has under review (even though they have tabled it) a petition submitted by the Soyfoods Association to legalize the word "soymilk" on product labels. As long as the word "soymilk" is being reviewed by the FDA, White Wave can legally use that word on their products. The FDA cannot make White Wave drop the word unless and until they pass a negative ruling on it–and then White Wave would have a reasonable amount of time to change its labels. Steve is aware that Wildwood Natural Foods was the first to take advantage of this petition to use the word "soymilk" on its product.

White Wave is now looking for one large investor. This coming spring White Wave will be lining up with some very large national companies as distributors and manufacturers of Silk. The interest in Silk by large companies is unbelievable. The companies that are showing interest in working with and/or investing in White Wave are among the top 100 in the U.S.–and we don't have to do much of a sales job. "They'll take it on any level they can get it." All they want is an entry point, so they can look at it later. They also believe that Silk will attract some very, very large competitors. We think that the Silk brand, the product, the position, the price–everything is lined up for Silk right now. We want to see if we can get that in as a household term. If it becomes a household brand name, we can sell Silk anything. We can always line extend. So our focus is on filling up that dairy case with Silk brand beverage and beverage-like products."

White Wave's identity and focus is presently on Silk Soymilk and Silk spoonable desserts (not only yogurt), and tofu under the White Wave brand.

White Wave's total revenues and tonnage continue to grow a very healthy rate. "For us, a bad year is less than 30%. After 21 years, I've gotten used to riding on the back of a tiger." We are predicting 50% or more growth rate for the entire company in 1999.

James Terman was at Bowling Green College in Ohio for 3-4 years at the same time as Steve and Pat Calhoun. Then James went on to be the art director for the state of California's university system–including Berkeley, Santa Cruz–all those universities. Then he and Steve ran into one another in Boulder and now he works for White Wave. "We can honestly say that we have a lot of fun working together as a team." Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

7562. Fisher, Kate. 1999. High-protein soybean may improve infant formula. *Soybean Digest.* Feb. p. 66f.

• ***Summary:*** Prolina, a high-protein soybean variety developed by Joe Burton of USDA's Agricultural Research Service (ARS), could improve the quality of "soy infant formula." Prolina is a rich source of cystine, an amino acid that occurs naturally in breast milk. Cystine is believed to promote brain and eye development.

7563. Lamp, Greg. 1999. Soyfoods health claim nears FDA okay: Heart-risk labeling should boost soybean demand. *Soybean Digest.* Feb. p. 68.

• ***Summary:*** Funds from the soybean checkoff helped generate the research and information that was submitted to the FDA. The process began in 1995 with financial assistance from the Illinois Checkoff Board and the United Soybean Board (USB). Roughly $1 million in soybean checkoff funds were invested in the project. "A coalition to develop the soy health claim involved ASA [American Soybean Association], USB, state checkoff boards and industry partners, such as Protein Technologies International, Central Soya and the Archer Daniels Midland Company."

An estimated 20% of all Americans (54.2 million adults) have high blood cholesterol levels–over 240. ASA predicts that if each of these people consumed 25 grams (less than 1 ounce) of soy protein each day, annual demand for soybeans would increase by more than 55.2 million bushels.

Consumption of U.S. soybeans in the United States now totals about 1.2 billion bushels a year.

A color photo shows two 3-shelf racks of American

foods. Those on the left rack already contain soy protein: Mori-Nu Tofu, Take Care, GeniSoy bars, Harvest Burgers, Galaxy Veggie Slices, SoNice soymilk, Edensoy, Morningstar Farms [Worthington Foods] meat alternatives, etc. Those on the right rack are foods with potential to have soy protein added: Cream of Wheat, Raisin Bran, puddings, Snackwell's cookies, etc.

7564. *Soybean Digest.* 1999. ADM donates soy beverage to Cuba. Mid-Feb. p. 93.
• ***Summary:*** Archer Daniels Midland Co. is donating 100 metric tons of powdered soy beverage for distribution to children in Cuba. This is one of the biggest donations of food ever made to Cuba, according to the U.S. Dep. of Commerce. ADM chair Dwayne Andreas says that this donation is a gift to the children of Cuba from the 23,000 employees of ADM.

7565. Soyfoods Association of North America. 1999. Soyfoods Once a Day for Life (Portfolio). Washington, DC. 21 inserts. Feb. 15. 28 cm.
• ***Summary:*** The following eight news releases are from the Soyfoods Association: (1) Soyfoods Association of North America celebrates April as Soyfoods Month (2 p.). (2) Soyfoods sales soar with increased consumer acceptance (2 p.). (3) Soyfoods Association of North America–Industry insiders (ask the experts, 1 p.). (4) Start young enjoying soy (ideas for kids, 1 p.). (5) 1999 Soyfoods Month sponsors (a half-page profile of 11 companies: Archer Daniels Midland, Galaxy Foods Co., Hain Food Group, Lightlife Foods, Inc., P.J. Lisac & Associates, Inc., SunRich, Inc., Tetra Pak, Vitasoy USA Inc., White Wave, Inc., Worthington Foods, Inc., Yves Veggie Cuisine; 6 p.) (6) Soyfoods Association of North America product list (lists soyfood products of 15 companies, many of whom are sponsors of "April is Soyfoods Month," 11 p.). (7) Soyfoods Association of North America member list (52 companies, 1 p.). (8) Dear member of the press, from Allan Routh, President, SANA (1 p.).

Product brochures from the following companies are also included: (9) Sweet Soybeans–Hearty & Natural Edamame, from SunRich. (10) Vitasoy soymilk, (11) Fresh, ready to heat entrées, from Yves Veggie Cuisine. (12) Go Veggie (dairy alternatives), from Galaxy Foods. (13) Lisanatti–The good health cheese alternative, from P.J. Lisac & Associates (Clackamas, Oregon). (14) Trust the protein authority, from ADM. (15) Fact sheet, from White Wave. (16) Nasoya tofu. (17) Veggie recipes, from Galaxy Foods. (18) Westsoy recipes, from Westbrae Natural. (19) Eating healthy can be soy easy, from Lightlife. (20) The change will do you good, from Morningstar Farms. 7566. Stevens & Associates, Inc. ed. and comp. 1999. U.S. 1999 soyfoods directory. Lebanon, Indiana: Indiana Soybean Development Council. 48 p. 28 cm. [23 ref]
• ***Summary:*** This is the fourth edition of the U.S. Soyfoods Directory. Page 2 states: "And a special thanks goes to the Soy Protein Partnership for sponsoring this project." For a list of farmers and companies that grow soybeans organically, see p. 28. This 1999 Soyfoods directory is now available online at www.talksoy.com. Address: Stevens & Associates, 4816 North Pennsylvania Street, Indianapolis, Indiana 46205. Phone: 317-926-6272.

7567. White Wave, Inc. 1999. America's soy food company (Ad). *Natural Foods Merchandiser.* Feb.
• ***Summary:*** A cartoon shows a boy with a baseball and four arms holding a different White Wave soy food product in each of his four hands: Silk Dairyless, Baked Tofu Oriental, Silk Vanilla Soymilk, and Organic Firm Style Tofu.

The text reads: "Organic Silk soymilk. Organic tofu. Organic baked tofu. Organic Silk yogurt.

The White Wave logo is at the top and the background is orange at the bottom of the ad fading to yellow at the top.

Note: A very similar ad appeared in the May 1999 issue except the title was now: "America's Organic Soyfoods Company." Address: 1990 N 57 Court, Boulder, Colorado 80301. Phone: 303-443-3470.

7568. Santacruz, Cecilia; Santacruz, Nestor. 1999. Re: Introducing Delisoya. Letter to Nohra Puyana de Pastrana (first lady and wife of the president of Colombia), Santafé de Bogota, Colombia, March 1. 2 p. Typed. [1 ref]
• ***Summary:*** The President and First Lady of Colombia have taken an active interest in promoting soyfoods in Colombia. This letter introduces Delisoy and its products.

Accompanying the letter is the response sent via Bienestar Familiar saying that they are working with soy in the Eje Cafetero where a recent earthquake killed thousands of people and destroyed three cities.

Letter from Nestor and Cecilia Santacruz. 1999. April. "They tell us they will invite us to participate in October in a program to be started in Bogotá. We'll try to keep in touch with them, but bureaucracy is tough!" Address: Founders and owners of Delisoya, Calle 78 No. 12-03, Santafe de Bogota, Colombia. Phone: 346-2178.

7569. Stuttman, Len. 1999. What does the term "food-grade soybeans" really mean? (Interview). *SoyaScan Notes.* March 4. Conducted by William Shurtleff of Soyfoods Center. Followed by a fax of June 19.
• ***Summary:*** Len uses the term "food-grade soybeans" a lot. He may have learned it from people in Canada. For making soynuts, he needs special varieties of soybeans that are high in protein, low in fat, have good texture, good taste, and retain their integrity during processing (the seedcoat or hull stays on–does not slough off–during the entire soaking, cooking, and deep-frying process). A soybean with a thin

seedcoat usually has poor integrity. Actually, he must try to find a variety in which he can get as many of these qualities or specifications as possible at a competitive price. This is complicated; the only way to test a particular variety is to put it through the process. Moreover, a variety (such as Sapphire) that works well one year may not work so well the next year. Or a variety grown at one latitude that works well may not work so well when grown at a much different latitude. Soybeans grown at northern latitudes generally work better than those grown to the south. Not all of Canada's "food-grade soybeans" work well for Len's particular application. For example, manufacturers of tofu and soymilk want high protein dispersibility in water. Len wants low protein dispersibility, so that protein is not lost during soaking and cooking.

Thus within this broad category of "food-grade soybeans" each food application has somewhat different requirements. Actually, it gets even more complicated. When most people say "food-grade soybeans" they are usually talking about large-seeded, clear-hilum soybeans–most of which have a Japanese pedigree. Yet makers of natto and soy sprouts want small-seeded soybeans.

Back in the days when public soy varieties predominated, one variety (such as Corsoy) might be around for years and years. But now that most varieties originate from private seed companies, they change more often and they are not generally bred for food use–except in Canada. W.G. Thompson & Sons has a young soybean breeder who is excellent; but they do not have a food laboratory. Address: President and CEO, Sycamore Creek Co., 200 State St., Mason, Michigan 48854. Phone: 517-676-3836.

7570. Gupta, Rajendra P. 1999. Reverse centrifugal filter. *U.S. Patent* 5,882,529. March 16. 5 p. Application filed 12 May 1997. 4 drawings. [1 ref]
• ***Summary:*** Equipment for continuous separation of soymilk (liquid) from okara (solids, sludge). Address: 9 Veery Lane, Ottawa, ONT, K1J 8X4 Canada. Phone: 613-745-9115 or 613-744-4401.

7571. Kessler, Jon. 1999. Re: Unisoya of Canada, and vacuum packaging bulk tofu hot. Letter to William Shurtleff at Soyfoods Center, March 16. 1 p. Typed, with signature.
• ***Summary:*** Note: According to the *Soya & Oilseed Bluebook* (1999, p. 144) Unisoya, Inc. is now an affiliate of Berero Inc. (Tonatur Foods Inc.) and located at 185 Voyer St., St. Isidore Co., Laprairie, Quebec J0L 2A0, Canada. Contact: Jill Renger. Plant manager: Real Beaulieu.

Jon recently met and talked with Gilles Ranger (sales manager) and Bernard Beaulieu were recently in Virginia looking at the BMI (Bean Machines Inc.) centrifuge at Twin Oaks Community Foods (where Jon was manager before starting his own business). Unisoya has an interesting product line (as described on the enclosed business cards). They are presently making about 4,000 lb/day of tofu, 7 days a week, and are planning on expanding their plant. They package their bulk tofu (which is their best seller) in bulk vacuum pouches of 5 lbs per pouch (20 lb per box). Jon was most interested in the fact that they vacuum pack this tofu hot; they do not cool the tofu after it is made before vacuum packing. Then they pasteurize the tofu in its pouch at 205ºF and get a 50 or 60 days shelf life! Jon is considering visiting them this summer.

The enclosed business card, written in both French and English, states that M. Réal and Bernard Beaulieu are the proprietors / owners. The company slogan is: "The true & original." They sell tofu as follows: (1) In boxes of 225 gm, in natural or fines herbs flavors. (2) In packages of 454 or 300 gm in natural, fines herbs, seaweeds, vegetables, soft, and organic. (3) In vacuum packed boxes of 20 lb. (4) In slices or cubes. They also sell soymilk, and do private labeling.

Update: Talk with Jon Kessler. 2000. Oct. 3. His company, Sunergia, now has all its tofu made by Unisoya in Quebec, Canada, and vacuum packed. Address: Founder and owner, Sunergia Soyfoods, P.O. Box 1186, Charlottesville, Virginia 22902. Phone: 804-970-2798.

7572. Perry, Charles. 1999. The origins and early history of almond milk (Interview). *SoyaScan Notes.* March 23. Conducted by William Shurtleff of Soyfoods Center. Followed by a fax of June 19.
• ***Summary:*** Charles Perry is an Arabist and an expert on the history of Arabic cookery. Almond milk was clearly the first non-dairy milk in the Western world, and it was probably first made in Arabic cultures, perhaps as early as the 10th century A.D. The Arabs (in both medieval and modern cookery) preferred nuts to spices as a flavoring and garnish in their cookery, and they had a relatively large supply of reasonably priced almonds. The early texts say to grind almonds, mixing them with water, and they use the verb which means "to milk" (*istahlaba*), meaning to extract the milk from the almonds, or "to milk the almonds." The Arabs used this milk almost entirely for cooking–they did not drink it as a beverage. Charles is sure that Arabs were making almond milk before the Europeans, but that would be hard to prove because the European records don't go back nearly as far as the Arabic records. Early Arabic cookery manuscripts date from the 9th century. Arabs don't use the term "almond milk" and it is never called for as an ingredient; rather they talk about milking the ground almonds, and they describe this process for a particular recipe. One early Arab cookery manuscript titled *Kitab al-Tabikh* (literally "The Book of Dishes"), compiled in the 10th century mostly from 9th century sources around the court of Baghdad [today's Iraq], probably contained a description of the process for making almond milk. It has never been translated into any European language, but a scholarly edition of the Arabic text, based on

the manuscript in the Bodleian Library (Oxford, England), and in the National Library in Helsinki, Finland, was published in the 1980s by a Finnish scholarly press–with an Introduction in English. Charles has translated some of the recipes.

Only two early Arabic cookbooks have been translated into English. One is a 13th century book from Iraq with the same title ("The Book of Dishes"); it is usually known by the name of the author, Al-Baghdadi. A translation was published in 1939 under the title *A Baghdad Cookery Book,* by a well-known Arabist, A.J. Arberry, in a periodical titled *The Islamic Culture* (Hyderabad, India). The Arberry document is scheduled to be published as a book later in 1999 by Prospect Books, with an introduction by Charles explaining where Arberry's translation was wrong, plus about 230 more recipes from an expanded version of that manuscript that has been found in Turkey. Several of these recipes mention the process for deriving milk from almonds–showing that almond milk was being used in Iraq by the 13th century. Before the 20th century, most cookbooks were written by plagiarizing earlier cookbooks, so almond milk may have appeared at an earlier date. Charles published a short recipe collection (40 very sketchy recipes) dating from the 15th century; it appeared about 10 years ago in the periodical *PPC* (*Petits Propos Culinaires,* London); Charles does not remember whether or not almond milk was mentioned.

So the term "almond milk" probably first appeared in Europe. In cooking, almond milk added a highly regarded flavor, a smoother texture than minced almonds, and the prized color white. Arabic cultures raised lots of domesticated animals–especially sheep–which gave milk, but this milk was almost always used in the form of yogurt, rather than as a fresh beverage. Sheep milk yogurt does not curdle when boiled–so it is often considered preferable to dairy milk for cooking. Yogurt, of course, keeps fresh without refrigeration far longer than milk and causes less problems related to lactose intolerance.

When Arabs fast (as during Ramadan) they abstain from all food; no specific foods (such as meat or fish) are prohibited. In fact, in Islam, vegetarianism was generally considered religiously suspect and thought to indicate heresy. Specifically it was called "forbidding that which God has rendered lawful."

By the 13th century, almond milk was being used in Europe, primarily during Lent, when (in those days) animal milks were prohibited. But almonds were very expensive, so almond milk was a luxurious substitute for cow's milk. The definition of foods and beverages prohibited during Lent has varied from time to time and from place to place. But Charles has seen many old European recipes which state: During Lent, substitute almond milk for milk. This concept is present in the earliest European cookbooks, which date from the end of the 13th and beginning of the 14th centuries. Many early recipes for blancmange call for either dairy milk, almond milk, or white chicken meat–anything that was white. Lorna Sass is the editor of a book in which almond milk is mentioned in connection with Lenten dishes. Charles cannot recall ever having seen an article about the history of almond milk. Address: Staff Writer, Food Section, Los Angeles Times, California. Phone: 213-237-7806.

7573. Brauner, Susan. 1999. Almonds and almond milk (Interview). *SoyaScan Notes.* March 24. Conducted by William Shurtleff of Soyfoods Center. [1 ref]
• ***Summary:*** About 70% of the world's almonds are grown in California, 20% in Spain, and 3-4% in Italy. Blue Diamond, a cooperative owned by about 4,000 California Almond Growers, was founded in 1910. Almonds are the only crop that Blue Diamond processes. Susan has a good English-language book on Almonds, published in Italy, that includes historical information on almond milk. She is not aware of a good, scholarly monograph on the almond; their are many such books on nuts, which contain a chapter on almonds. She has been told by many Indians that almond milk has a long history in India. Address: Sent by Susan Brauner, Director of Public Affairs, Blue Diamond Growers (formerly California Almond Growers Exchange), Sacramento, California. Phone: 916-446-8354.

7574. **Product Name:** Power Dream: Natural Energy Drink (Fortified Soymilk in Aseptic Cartons) [Chocolate, Vanilla, Chai, Raspberry, Coffee].
Manufacturer's Name: Imagine Foods, Inc. (Marketer-Distributor). Made in Manteca, California, by California Natural Products.
Manufacturer's Address: CNP: P.O. Box 139, Manteca, CA 95336. Imagine: 350 Cambridge Ave., Suite 350, Palo Alto, CA 94306. Phone: 650-327-1444.
Date of Introduction: 1999. March.
Ingredients: Organic soymilk* (filtered water, organic soybeans), rice syrup, soy protein isolate, gum arabic, cocoa, vanilla, sea salt, vitamins and minerals.
Wt/Vol., Packaging, Price: 11 fl oz (330 ml) Tetra Prisma Aseptic carton. Retails for $1.48 (2000/05, Open Sesame, Lafayette, California).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per package (11 fl oz): Calories 310, calories from fat 45, total fat 5 gm (8% daily value; saturated fat 0.5 gm), cholesterol 0 mg, sodium 180 mg (8%), potassium 460 mg (13%), total carbohydrate 59 gm (sugars 33 gm, dietary fiber 5 gm (20%)), protein 10 gm. Vitamin A 20%, vitamin C 20%, calcium 30%, iron 20%, vitamin D 25%, vitamin E 20%, thiamin (B-1) 35%, riboflavin (B-2) 25%, niacin (B-3) 25%, vitamin B-6 30%, vitamin B-12 25%, biotin 20%, pantothenic acid (B-5) 25%, phosphorus 40%, iodine 20%, magnesium 35%, selenium 20%, zinc 30%, copper 35%, manganese 25%, chromium 20%, molybdenum 20%. Percent daily values are based on a 2,000 calorie diet.

New Product–Documentation: Leaflet (glossy color, front and back, each panel 28 cm) sent by Patricia Smith from Natural Products Expo. 1999. "If you need energy, its time to stop hitting the bars" [energy bars]. "More refreshing than an energy bar. High in soy isoflavones. High in protein and carbohydrates. Packed with 23 vitamins and minerals." A color photo shows the "new and unique 11 oz. cartons." Rear panel: "Multiple placements for maximum sales." This product can be placed in the non-dairy section, or in the refrigerator case, or in the nutritional bar section.

Product with Label purchased at Open Sesame natural foods in Lafayette, California. 2000. May 24. 2.5 inches square by 5 inches high. Octagonal Aseptic package. Orange, yellow, silver, brown and white. In the foreground is a wave of chocolate soymilk breaking in a glass. In the background is a photo of the Grand Canyon with a little snow on the ground. On one side is text about the age and size of the Grand Canyon: "It offers explorers great adventure and challenges of endurance, as well as changing views of awesome beauty." Back panel text: "High in soy protein. Soy isoflavones: 52 mg per serving." Distributed by Imagine Foods, Inc. 1245 San Carlos Ave., San Carlos, California 94070.

Talk with Molly of Consumer Relations at Imagine Foods. 2000. June 19. The product comes in four flavors: Chocolate, vanilla, chai, and raspberry. All were introduced in March 1999.

Nutrition Business Journal. 2000. Dec. p. 19. This line of products, launched in June 1999, is currently being repackaged to convey more of a "sport look."

7575. Imagine Foods, Inc. 1999. Until now, soymilk was an acquired taste (Ad). *Vegetarian Times.* March. p. 5.
• ***Summary:*** This creative and classy full-page color ad shows (from the rear) a lady riding a bicycle. Wearing sandals, a white dress, and white sweater, and a white hat, she is kicking up both of her feet–as in a gesture of joy. A wicker basket on a rack on the back of her bike is loaded with flowers and two cartons of Soy Dream brand soymilk. The entire photograph is in black-and-white except for the two cartons, a dozen red roses in the basket, the headline, and the company name in the lower right corner.

The text reads: "From the first sip, you'll love the smooth creamy taste of Soy Dream, the new soymilk from Imagine Foods, America's leading non-dairy beverage company. With a nutritional profile similar to milk, Soy Dream Enriched is as good for you as it is delicious. It's a great way to enjoy the health benefits of soy each day. Once you taste it, the only thing you'll need to acquire... is more" Address: Palo Alto, California. Phone: 415-327-1444.

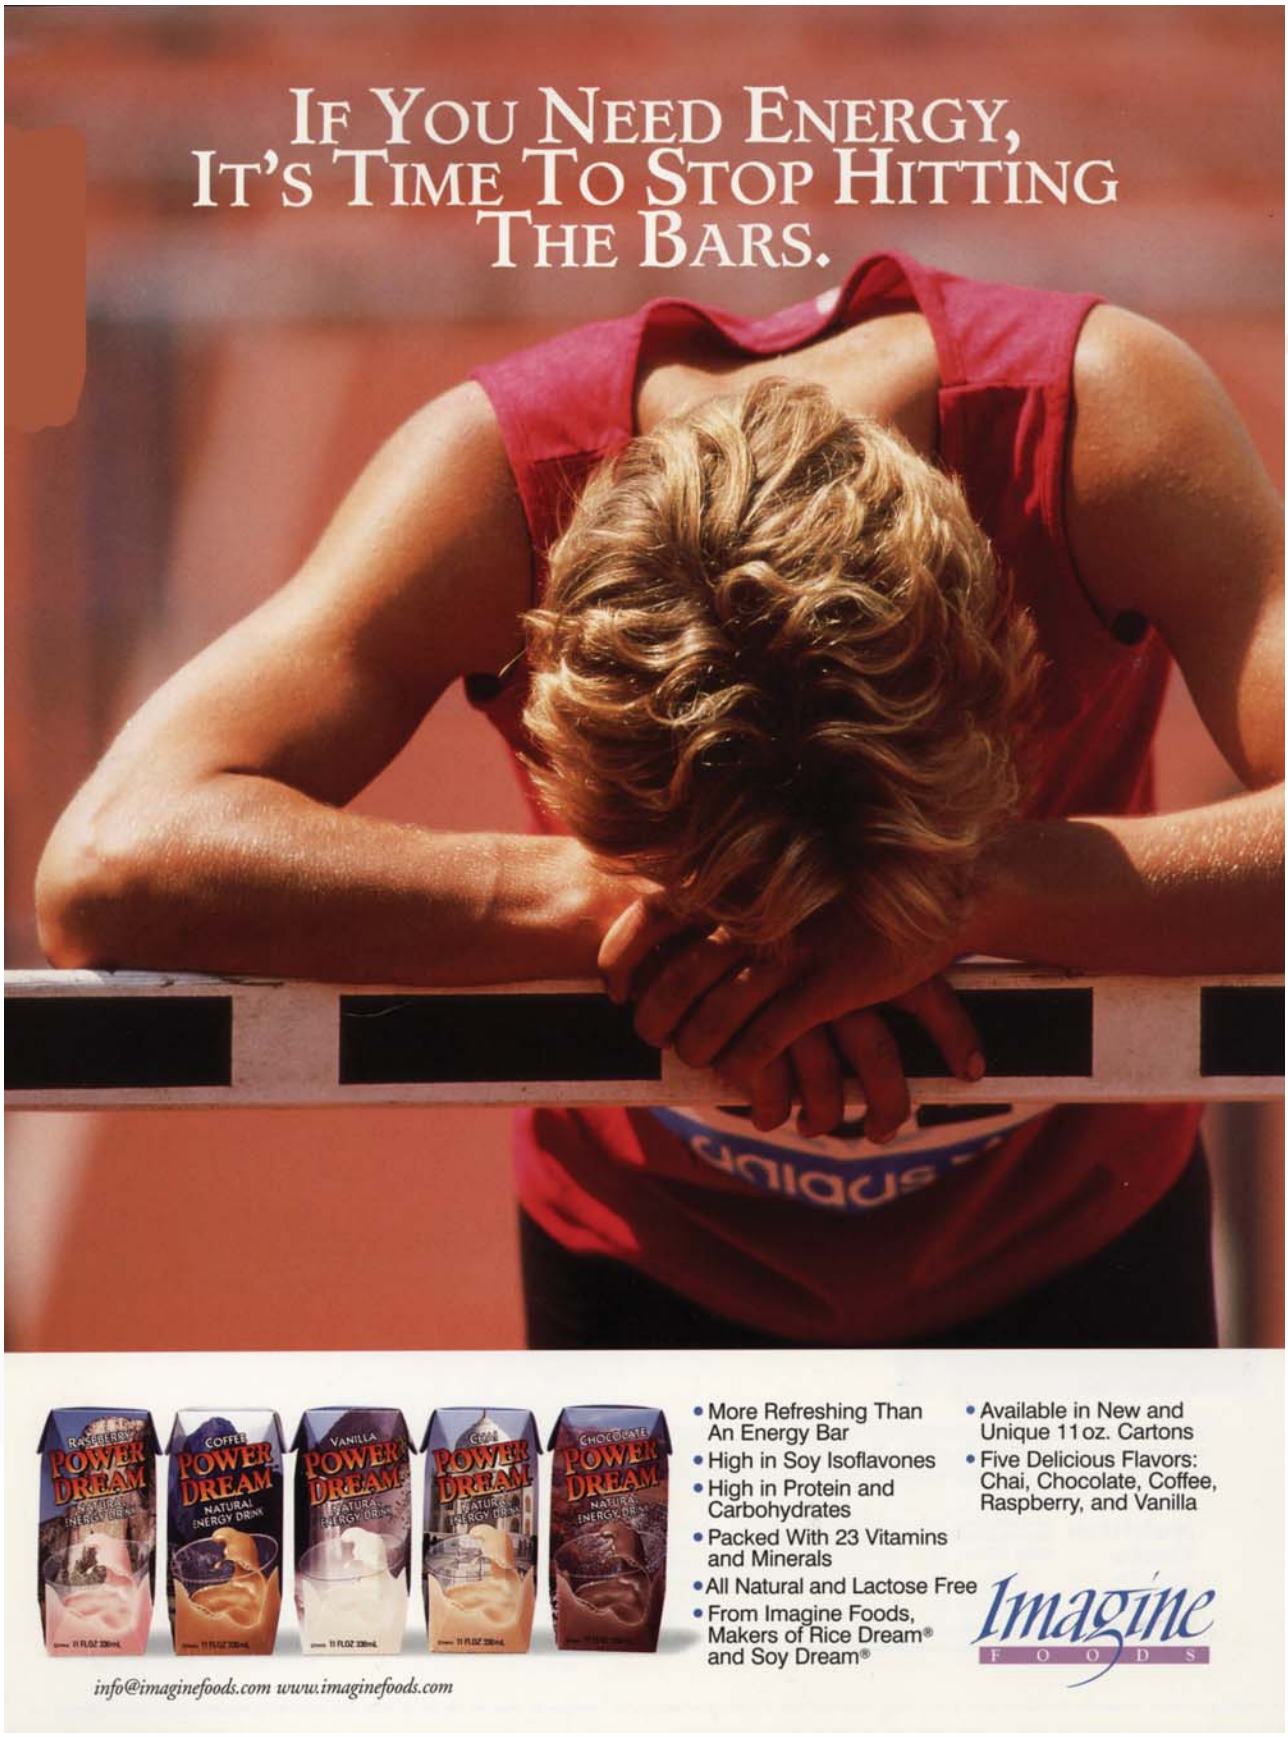
7576. Imagine Foods, Inc.; Barbara's Bakery. 1999. Meet Barbara's dreamy new soy friend (Ad). *Vegetarian Times.* March. p. 20.
• ***Summary:*** This one-third page vertical color ad is for Soy Dream (original enriched soymilk from Imagine Foods) and Barbara's Puffins (cinnamon breakfast cereal). Packages of each are shown together at the bottom of the ad, with many red hearts above them. The text begins: "They only just met and they're already spooning. Of course, some would say that's only natural." Address: 1. Palo Alto, California. Phone: 415-327-1444.

7577. Instituto Colombiano de Bienestar Familiar. 1999. Alimentación a base de soya y germinados [Foods based on soya and sprouts]. Bogota, Colombia. 51 p. 22 cm. [Spa]
• ***Summary:*** Contents: Full-page black-and-white photo of Andres Pastrana Arango (current president of Colombia) with his wife and three children. The family as the basis of development. The soybean (*El fríjol soya*). Recipes–each with basic nutritional information per serving. Dairylike products (*Lácteos*)*:* Basic homemade soymilk, homemade tofu (two methods, each curded with lemon juice), cream cheese, soy yogurt, soy kumis. Meatlike products (*Cárnicos*)*:* Soy burgers (made with ground cooked soybeans–masa de soya cocoda), etc. Baked goods (*Harinas*). Drinks, desserts, and salads (*Bebidas, postres y ensaladas*). Soups, special dishes, and others (*Sopas, especiales y otros*)*:* Incl. soy mayonnaise, pizza with soya.

Note 1. The color photo on the cover of this saddle-stitched book is copied from the Canadian Soyfoods Directory (Nov. 1997). Note 2. Letter from Cecilia and Nestor Santacruz of Delisoya, Bogota, Colombia. 1999. April. This booklet is the successor of one titled *El Cambio es Andres* [Andres stands for change] published in late 1997. They liked the earlier edition better because it contained recipes for whole foods such as brown rice and whole wheat flour, and no meat or dairy products. Quite a few of the recipes in this more recent book call for the use of meat. Address: Bogota, Colombia.

7578. Ionmag Corporation. 1999. Health tofu: Health tofu maker from Ionmag Corporation (Leaflet). Koyang Industrial Complex, 628, Siksa-Dong, Ilsan-Ku, Koyang City, Kyunggi-Do, Korea 1 p. Single sided. 30 cm.
• ***Summary:*** Leaflet (glossy color) sent by Patricia Smith from Natural Products Expo West. 1999. March. A large color photo shows this red and clear plastic home tofu maker against a circle of soybeans with an orange and red border. "Coming to fresh tofu, tasty tofu within short time." Specifications: Weight: 5.5 kg. Height: 370 mm [14.6 inches]. Diameter: 240 mm. Material: Polycarbonate ABS [Acrylonitrile Butadiene Styrene], Stainless steel. Voltage: 110/220 volts. World patent pending.

Note: This machine is also widely advertized elsewhere for homemade soymilk. Address: Koyang City, Kyunggi-Do, Korea. Phone: (82-344) 968-0051/4.



7579. Liu, KeShun. 1999. Oriental soyfoods. In: C.Y.W. Ang, K. Liu, and Y-W. Huang, eds. 1999. Asian Foods: Science & Technology. Lancaster, Pennsylvania: Technomic Publishing Co., Inc. 546 p. See p. 139-99. Chap. 6. March. [60 ref]

• ***Summary:*** Contents: Introduction: Soybeans as a crop, composition and nutritional quality of soybeans, soyfoods–from the east to the west, soyfood classification.

Soymilk: Introduction, traditional soymilk, modern soymilk (techniques for reducing beany flavors, commercial methods, formulation and fortification, homogenization, thermal processing, and packaging), concentrated and powdered soymilk, fermented soymilk (with lactic acid bacteria), soymilk composition and standardization.

Tofu: Introduction, methods of tofu preparation, factors involved in tofu making (soybean varieties, concentration of soymilk, heat process of soymilk, types of coagulants, concentration of coagulants, coagulation temperature, coagulation time, process automation, packaging), varieties of tofu (silken tofu, regular and firm tofu, Chinese semidry tofu {*doufu gan*}, Chinese tofu sheets and tofu noodles, lactone tofu), varieties of tofu products (deep-fried tofu, Japanese grilled tofu, frozen tofu {"Made almost exclusively in rural farmhouses and temples by putting tofu outdoors in the cold weather, frozen tofu was never sold as a commodity in the past"}, Japanese dried-frozen tofu, Chinese savory tofu {"In China there are many specially made tofu varieties known as savory tofu"}, fermented tofu {Sufu or Chinese cheese, varieties of sufu, preparation methods, preparation principle}).

Soymilk film (yuba). Soybean sprouts. Green vegetable soybeans. Other non-fermented soyfoods: Okara, roasted soy powder. Concerning okara: In some parts of China, okara is salted and spiced and used as a pickle. Or it can be simply added to a dish with meat and vegetables. In other parts of China it is made into okara tempeh [called *mei-dou-zha* or meitauza].

Fermented soy paste (Jiang and miso): Koji, koji starter, and inoculum (koji, koji starter, inoculum), Chinese jiang (traditional household method, pure culture method, enzymatic method), Japanese miso (preparing rice koji, treating soybeans, mixing and mashing, fermenting, pasteurizing and packaging), principles of making jiang or miso.

Soy sauce (Jiangyou or shoyu): Chinese jiangyou (traditional household method, modern methods), Japanese shoyu (treatment of raw materials, koji making, brine fermentation, pressing, refining), principles of making soy sauce, chemical soy sauce (made by acid hydrolysis; heat with 18% hydrochloric acid for 8-12 hours, then neutralize with sodium carbonate and filter to remove insoluble materials), proximate composition of soy sauce, quality attributes and grades.

Japanese natto: Methods of preparation, principles of preparation.

Indonesian tempeh: Traditional method, pilot plant method, principles of tempeh preparation. Fermented black soybeans (Douchi or Hamanatto): Chinese douchi, Japanese Hamanatto.

Tables: (1) Names (English, Chinese, Japanese, Korean, Indonesian, Malay, Filipino) general description, and utilization of nonfermented Oriental soyfoods.

Soy sprouts: Chinese: Huang dou ya, Da dou ya. Japanese: Daizu no moyashi. Korean: Kong no mool.

Yuba: Chinese: Dou fu pi, Fu zhu. Japanese: Yuba. Korean: Kong kook. Filipino: Fu chok.

Yuba (Soy pulp): Chinese: Dou zha / doufu zha. Japanese: Okara. Korean: Bejee. General: "Insoluble residue after filtration of soy slurry into soymilk."

Roasted soybeans (Soynuts): Chinese: Chao da dou. Japanese: Iri-mame. Korean: no name. Indonesian: no name

Roasted soy powder: Chinese: Chao dou fen, dou fen. Japanese: Kinako. Korean: Kong ka au. Indonesian: Bubuk kedelai. (2) Names (English, Chinese, Japanese, Korean, Indonesian, Malay, Filipino) general description, and utilization of fermented Oriental soyfoods. (3) Proximate composition (gm per 100 gm fresh weight) of some fermented soyfoods.

Figures show: (1) Flowchart: Traditional Chinese method for making soymilk and tofu (from whole soybeans). (2) A commercial processing method (Alfa-Laval) for making soybase and a subsequent product–soymilk. (3) Photo of homemade firm tofu. (4) Photo of a dish of tofu and mushrooms. (5) Photo of cubes of sufu (Chinese cheese) on a white plate. (6) Flowchart for making sufu from firm tofu. (7) Photo of two packages of dried yuba sticks (Chinese). (8) Photo of a bowl of soy sprouts. (9) Photo of Chinese chiang, and Japanese red and white miso, each on one of three spoons in a shallow white bowl. (10) Flowchart of a common method for making Japanese rice miso [red miso]. (11) Photo of soy sauce in three different containers: dispenser, small bottle, and large Chinese can. (12) Flowchart of a common method for making Japanese koikuchi shoyu (soy sauce). (13) Photo of two chopsticks lifting some Japanese natto from a bowl full of natto; the thin strings connecting the natto above and below are clearly visible. (14) Flowchart of a common method for making Japanese natto from whole soybeans. (15) Photo of tempeh made in the USA in perforated plastic bags (Courtesy of Mr. Seth Tibbott, Turtle Island Foods, Inc., Hood River, Oregon). (16) Flowchart of traditional Indonesian method for making tempeh from whole soybeans. (17) Photo of Chinese *douchi* (fermented black soybeans) on a white plate.

Note: For a biography of KeShun Liu PhD see p. 544. Address: PhD, Soyfoods Lab., Hartz Seed, A Unit of Monsanto, Stuttgart, Arkansas.

7580. McCarty, Meredith. 1999. Sweet & natural. New York, NY: St. Martin's Press. xii + 260 p. Illust. by Magué

Calanché. Photographs by Jeanne Stack. Index. 24 cm. [60 ref]

• ***Summary:*** A macrobiotic cookbook containing "More that 120 naturally sweet and dairy-free desserts." The author's fascination with healthy desserts began in 1974, when she learned to make old-fashioned apple pie in a beginning macrobiotic cooking class. She was working as associate editor of the *East West Journal,* had been diagnosed with mononucleosis a couple of years before, and wanted to learn to satisfy her sweet tooth in a more healthy way.

The long chapter titled "Ingredients" (p. 11-56) gives details on the types of sugars, and commercial natural sweeteners, including brown rice syrup, barley malt syrup, FruitSource (Brown rice syrup and grape juice concentrate), Sucanat (evaporate sugar cane juice). A table (p. 26) gives source and composition of many sweeteners; for example, amazake is 80% glucose and 20% maltose; evaporated sugar cane juice is 89% sucrose, and 1% each fructose and glucose; brown sugar is 98% sucrose. The section on "Dairy and its alternatives" contains a table titled "Calcium sources" (30, incl. two types of fish), soy foods, soy milk, tofu (p. 31-33), amazake (p. 33-34), different vegetable oils, kuzu / kudzu root starch, and tofu as a binder.

Soy-related recipes include: Soymilk: Mango-Key Lime Pie with soy milk filling (130). In crisps and cobblers (p. 141). In cakes (160). In puddings (p. 225). Tofu: Pumpkin pie with tofu cream and soy milk filling (p. 132-33).

Other ingredients: Amaranth, koji, kuzu, peanut butter, sesame butter, sesame seeds. A color photo shows Meredith McCarty in her kitchen. Address: Tiburon, California: P.O. Box 2605, Mill Valley, CA 94942. Phone: 415-435-4102.

7581. Newman, Jacqueline M. 1999. Cultural aspects of Asian dietary habits. In: C.Y.W. Ang, K. Liu, and Y-W. Huang, eds. 1999. Asian Foods: Science & Technology. Lancaster, Pennsylvania: Technomic Publishing Co., Inc. 546 p. See p. 453-85. Chap. 15. [104 ref]

• ***Summary:*** Contents: Introduction. Foods of Bangladesh. Cambodian foods. Chinese foods: Food selection, eating behaviors, intracultural differences, feasts, holidays and special foods. Indian foods. Indonesian foods. Japanese foods. Korean foods. Laotian foods. Malaysian foods. Nepalese foods. Foods of Pakistan. Philippine foods. Thai foods. Vietnamese foods.

In each country and culture, the role and practice of vegetarianism is discussed.

Soyfoods are mentioned as follows: China (p. 458): "For breakfast, Northerners prefer warm soymilk and fried wheat-dough crullers." Vegetarians from both north and south get an important part of their protein "from a sophisticated cuisine based upon considerable use of gluten and tofu," made to look and taste like animal products.

Indonesia (p. 463): "... foods are preferred sweet; even the local soy sauce, kecap manis, is fermented sweetened."

Japan (p. 465): Mentions shoyu and tofu.

Korea (p. 468-69): Mentions tofu.

Malaysia (p. 472): Discusses Chinese who married Malay women (called Nonyas); "their families are called Peranakan or Straits Chinese and their cooking is called Nonya Cuisine. Straits Chinese live mostly in Penang, Malacca, and Singapore; practice Buddhism; and cook their Chinese food with a Malay influence. Their Nonya cuisine is eaten communally; all dishes are served at once,..."

Nepal (p. 473): "During Janai Purnima, a soup called *quantee* is essential; it is made from sprouted soy, chick pea, black beans,..."

Pakistan (p. 476): Pad Thai, a popular lunch dish, is made with tofu. Note: Pad Thai, based on rice noodles, is one of Thailand's national dishes. Address: PhD, R.D., Prof., the Dep. of Family, Nutrition and Exercise Sciences, Queens College-CUNY, Flushing, New York.

7582. **Product Name:** Milk & Soy Blend (100% Lactose Free) [Plain, Vanilla].
Manufacturer's Name: Pacific Foods of Oregon, Inc.
Manufacturer's Address: 19480 S.W. 97th Ave., Tualatin, OR 97062. Phone: 503-692-9666.
Date of Introduction: 1999. March.
Ingredients: Low fat: Fat free milk (lactase enzyme, vitamin A palmitate, vitamin D3), soymilk (filtered water, soybeans), natural cane sweetener, tricalcium phosphate, sea salt, carrageenan.
Wt/Vol., Packaging, Price: 1 quart Tetra Brik Aseptic carton. Retails for $1.69 (1997/05, Berkeley, California).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Leaflet (glossy color, front and back, 28 cm) sent by Patricia Smith from Natural Products Expo West at Anaheim. 1999. March. "Increase your dairy cooler volume with this hot selling new category." The front panel of 6 different products is shown, all in the same aseptic carton: Soy Drink (plain or vanilla). Milk & Soy Blend (low fat or fat free). 100% Lactose Free Milk (fat free or reduced fat). On the rear is given the nutrition facts, ingredients, UPC numbers, and case/pallet information.

Jack Mans. 1999. Dairy Foods. Oct. p. 57-66. "Pacific Foods of Oregon: High-tech aseptic." This milk & soy blend is sold in a square aseptic carton with a screw-top cap. Even though the product does not require refrigeration, it is being marketed to supermarket dairy cases–to get more attention from consumers.

Nutrition Business Journal (San Diego, California). 2000. "Pacific Foods targets $50 million sales: Soymilk manufacturer scrambles to expand production, expects 35% growth to continue." Sept. p. 12. This product, introduced in March 1999, is a blend of lactose-free cow's milk and soymilk.

7583. **Product Name:** Soy Drink (Low Fat Non Dairy

Drink) [Plain, Vanilla].
Manufacturer's Name: Pacific Foods of Oregon, Inc.
Manufacturer's Address: 19480 S.W. 97th Ave., Tualatin, OR 97062. Phone: 503-692-9666.
Date of Introduction: 1999. March.
Ingredients: Plain: Soymilk (filtered water, soybeans), natural cane juice sweetener, isolated soy protein, tricalcium phosphate, natural flavors, sea salt, carrageenan, vitamin A palmitate, vitamin D2.
Wt/Vol., Packaging, Price: 1 quart Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Leaflet (glossy color, front and back, 28 cm) sent by Patricia Smith from Natural Products Expo West at Anaheim. 1999. March. "Increase your dairy cooler volume with this hot selling new category." The front panel of 6 different products is shown, all in the same aseptic carton: Soy Drink (plain or vanilla). Milk & Soy Blend (low fat or fat free). 100% Lactose Free Milk (fat free or reduced fat). On the rear is given the nutrition facts, ingredients, UPC numbers, and case/pallet information. This Soy Drink is sold in a square aseptic carton with a screw-top cap. Even though the product does not require refrigeration, it is being marketed to supermarket dairy cases–to get more attention from consumers.

7584. ProSoya Inc. 1999. VS40 operation (Color videotape). 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. 14 minutes. March.
• ***Summary:*** This excellent color video (in NTSC video format), is professionally produced and narrated, with nice background music. Introduced in March 1999, it describes the operation of ProSoya's VS40 SoyaCow, which makes 40 liters of airless cold-grind soymilk per batch. Use of the soymilk to make tofu (using a forming box and cloths that come with the machine) is also described. The video narration begins: "The VS40 SoyaCow system is a small and economical batch processor for producing highly nutritious, non-beany soymilk with excellent soluble protein yield. Easy to operate and maintain, this system uses an airless cold-grinding process developed by ProSoya Incorporated, world leaders in advanced soymilk technology. The grinder-cooker is the heart of the system. Powered by a single-phase one-horsepower motor..."

Talk with Raj Gupta of ProSoya Inc. 1999. May 30. This color video was produced in-house by a man named Seth Gaurav, who is a native of Bombay, India, and who studied cinema at the Moscow Film School in Russia for nine years (1986-95); he won a scholarship from the Russian government. This is the first video Gaurav produced for ProSoya. ProSoya also has a Russian-language version and also videos for its larger soymilk systems. The company's first video was produced in late 1993 or early 1994. Address: Ottawa, Ontario, Canada.

7585. Quong Hop & Co. 1999. Soy for life: The benefits of eating soy products (Leaflet). South San Francisco, California. 5 panels each side. Each panel: 15.3 x 10.2 cm.
• ***Summary:*** Leaflet (glossy color) sent by Patricia Smith from Natural Products Expo West. 1999. March. On the front panel is a tofu burger under a bun on a light orange plate. At the bottom; The Soy Deli.

Contents: The power of soy foods (anti-cancer, osteoporosis, coronary heart disease, menopausal symptoms, lactose intolerance). Tips for cooking with tofu. Additional recipes. Coupons for Soy Deli Baked Tofu and Nigari Tofu. A photo on the rear cover shows many of Quong Hop's soy products. Soymilk (2 flavors). Tempeh burgers. Tofu burgers. Baked tofu (4 flavors). Soy tempeh. Nigari tofu. Hot dogs.

"Master tofu makers since 1906: In 1906, Sing Hau Lee established Quong Hop, the oldest tofu shop in America. He brought with him his family's tofu-making secrets." Address: 161 Beacon St., South San Francisco, California 94080. Phone: 415-761-2022.

7586. Salmon, Margaret B. 1999. Soy expressions: Common-sense way to small food bills. 404 easy soy recipes. Demarest, New Jersey: Techkits, Inc. x + 160 p. Index. 22 cm.
• ***Summary:*** A quickie spiral-bound soy cookbook. It is not vegetarian; recipes call for the use of lean ground beef, chicken, turkey, frankfurters, turkey frankfurters, tuna, salmon, clams. The section at the back titled "Index" is not really an index. Some form of soy appears in every recipe; the main forms are tofu, soymilk, soybean sprouts, cooked soybeans, soy sauce, teriyaki sauce, soybean oil, "Smart Dogs," black soybeans, soybean flour, and soy bacon bits. Contents: Introduction. How safe are soybeans? Hundreds of soy recipes. Soy foods taste good. A new look at soybeans. Recipes: Soups. Salads and vegetables. Main dishes. Omelets. Breads, cookies, muffins and snacks. Sugar free soy desserts. Desserts: Pies & puddings. Shakes and pops.

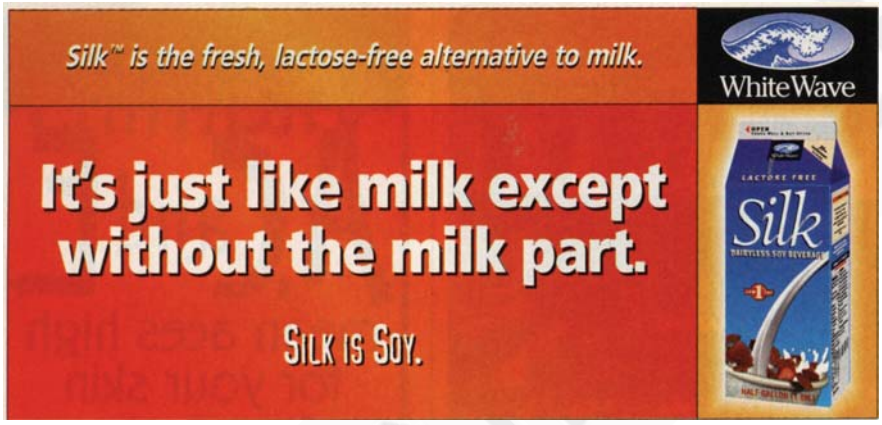
Margaret is the author of many books on food and nutrition. She was "formerly Research Dietitian on the cystic fibrosis research team at Columbia-Presbyterian Medical Center in New York City, and Chief Dietitian and Director of the Dietetic Traineeship Program at St. Joseph's Hospital and Medical Center in New Jersey. She is President of Salmon Consultants, Consultants to physicians, hospitals, schools and federal nutrition programs, and lecturer for schools, colleges, radio and television.

"She received a degree in food chemistry and nutrition at the University of California at Berkeley, and degrees at Columbia University in the science of nutrition and nutrition education. She also has a Certificate of Hospital Dietetics from Duke University and is listed in Who's Who of American Women and World Who's Who of Women and is a Registered Dietitian." Address: R.D., L.D., P.D., Techkits,

Inc., P.O. Box 105, Demarest, New Jersey 07627.

7587. **Product Name:** [Tofu, Soya Milk, Okara].
Manufacturer's Name: Svilen Lapakov Tofu.
Manufacturer's Address: 43/b Gabrovo Str., 9000 Varna, Bulgaria.
Date of Introduction: 1999. March.
New Product–Documentation: Letter from Svilen Lapakov. 2000. Jan. 3. "I live and work in Bulgaria, Europe. I have a workshop for soya milk products. I was the first to open and produce such healthy foods like tofu, okara, soya milk here, in Bulgaria. My small shop has been in existence for 9 months and for now I am the only one producer. I work with a ProSoya device, from Canada. Life in ex-Communist countries is extremely difficult now." Note: This is the earliest known commercial soy product made in Bulgaria.

7588. White Wave, Inc. 1999. Its just like the milk except without the milk part. Silk is soy (Ad). *Vegetarian Times.* March. p. 90.



• ***Summary:*** This small (2¼ by 4½ inches) but prominent (bright red, orange, and white) color ad is mostly background color and text. On the right is a half-gallon carton of White Wave Silk (fresh soymilk). In the upper right corner is the White Wave logo. Across the top of the ad, in fairly small letters: "Silk is the fresh, lactose-free alternative to milk." Address: Boulder, Colorado.

7589. White Wave Inc. 1999. An introduction to our family of wholesome foods, with recipes and quick ideas for ever meal, every taste. Fast + easy. Healthy. Delicious (Leaflet). Boulder, Colorado. 5 panels each side. Each panel: 15.5 x 10 cm.
• ***Summary:*** Leaflet (glossy color) sent by Patricia Smith from Natural Products Expo West. 1999. March. On the front panel is a photo of 3 flavors of Silk soymilk, two types of tofu, seitan and tempeh.

On the remaining panels are recipes (incl. one for Silk Dairyless Soy Yogurt), a mission statement ("Our mission is to creatively lead the full integration of natural, flavorful vegetarian foods into the American diet"), "Good news about soy" (nutritional information). More about White Wave's products (the company now has 13 flavors of Silk Dairyless Soy Yogurt, Silk Dairyless Coffee Creamer, etc.).

Note from James Terman, Vice President Pictures + Words, White Wave. 1999. March. This first appeared in March 1999. Address: 1990 North 57th Court, Boulder, Colorado 80301.

7590. White Wave, Inc. 1999. While Wave's Silk Soymilk and other soy products new certified 100% organic by QAI (News release). 6123 E. Arapahoe Rd., Boulder, CO 80303.
• ***Summary:*** White Wave is pleased to announce that as of January 1, 1999, all of its Silk soymilk line of products and most of its other soy products are 100% Certified Organic by Quality Assurance International."

Only three White Wave products will continue to be made with a combination of transitional and organic soybeans: Reduced Fat Tofu, 12 oz. Extra Firm-Style Tofu, and its "Red Box: Firm Tofu.

Steve Demos says that White Wave has supported transitional and organic soybean farmers for the past two decades, and through their hard work the company has been able to develop a solid network of certified of certified organic suppliers. Address: Boulder, Colorado. Phone: 303-443-3470.

7591. White Wave Inc. 1999. Silk: Put the fastest growing soymilk in your dairy case (Leaflet). Boulder, Colorado. 1 p. Front and back. 28 cm.
• ***Summary:*** Leaflet (glossy color) sent by James Terman, Vice President Pictures + Words, White Wave. 1999. March. This first appeared in March 1999. Shows various sizes and shapes of Silk soymilk and soymilk creamer–against a background that fades from orange into brown. Address: 1990 N 57th Court, Boulder, Colorado 80301.

7592. **Product Name:** WholeSoy Premium Soymilk [Original, Vanilla, Chocolate].
Manufacturer's Name: WholeSoy Co.
Manufacturer's Address: San Francisco, California. Phone: 415-495-2870.
Date of Introduction: 1999. March.
Ingredients: Original: Filtered water, whole organic soybeans,* organic raw cane crystals, calcium carbonate, natural flavors, sea salt, xanthan gum, carrageenan, vitamin A palmitate, riboflavin (B2), vitamin D2, vitamin B12. * = Grown and processed in accordance with the California Organic Foods Act of 1990.

Wt/Vol., Packaging, Price: 32 fl. oz (1 quart) ESL gable-top carton.
How Stored: Refrigerated.
New Product–Documentation: Glossy color leaflet (front and back, 28 cm) sent by Ted Nordquist of WholeSoy. 2005. May. "An incredibly delicious nondairy soymilk!" A photo on the front shows all 3 flavors.

7593. Santacruz, Cecilia; Santacruz, Nestor. 1999. Tofu and other soyfoods in Colombia (Interview). *SoyaScan Notes.* April 1. Conducted by William Shurtleff of Soyfoods Center. [1 ref]

• ***Summary:*** In June 1998 Cecilia and Nestor started the earliest known non-Asian tofu shop in Colombia that focused on traditional, hand-made tofu and made delicious products from tofu. Named Delisoya, it is located in a residential part of Bogota (the country's capital) high in the Andes mountains of Colombia at 8,500 feet altitude. They visited Soyfoods Center from Salinas, California, after being given an excellent tour of the Wildwood Natural Foods soyfoods plant in Santa Cruz. The main things they learned at Wildwood: (1) They can make a large amount of very tasty tofu using an open-top, stem-injection system (without pressure). Nestor would like to get this same kind of system. (3) Their many creative tofu products are delicious; the baked (not fried) tofu burgers were especially interesting. (3) The shop was very clean and sanitary.

Ceci speaks good English, since she lived for a year in Tennessee (with "Ami") during her high school years. This is the third time they have been to the USA.

Ceci and Nestor were both born in Colombia–Ceci on 3 December 1949 and Nestor on 28 Aug. 1955. They both attended the Colombian National University (*Universidad Nacional de Colombia*) where they studied chemistry and graduated in 1982. They were married that same year, shortly after graduation. Nestor got a job in Bogota with Canta Claro, a company that operates soybean crushing plant. They made animal nutrition products from the soybean meal and various foods from the soy oil. Ceci also worked for Canta Claro for 2-3 years in quality control, then she left and worked with her family who owns a small hotel about 150 km (93 miles, 4 hours by car) outside of Bogota. She also spent more time cooking and doing things she enjoyed, alone and with her mother (who has her own foundation and is a very civic-minded person). In 1992 Nestor and Ceci met a macrobiotic group named *Escuela de Educación Vitalicia* (The Life and Vitality Education School) run by students of Tomio Kikuchi, a well-known teacher of macrobiotics who lives mostly in Brazil; this group had been in Bogota since 1985. Later in 1992 Nestor left his job at the soybean crushing plant and began to work as an administrator in Ceci's family hotel. Slowly their lives began to change. In June 1993 they traveled to Brazil to attended the annual winter seminar by Tomio Kikuchi. They found him to be an excellent teacher and, at age 70, a man of remarkable vitality. Bernadette Kikuchi is Tomio's wife. Through her cooking lessons in Colombia and Brazil, in their school, they first made contact with Oriental cooking and foods. Through them they came to know about brown rice and tofu for the first time, 7 years ago. "They are remarkable human beings who left a deep impression on us."

In early 1996 Nestor and Ceci bought some tofu from a Chinese man in Bogota; it was quite hard and the flavor was not very good, so they started to make their own tofu. In late 1996 Nestor and Ceci began to pursue their interest in soyfoods more actively. They saw an article somewhere about Peter Golbitz of Soyatech in Maine, so they wrote him and he sent them a free copy of the 1996 *Soya Bluebook.* In that book they saw a Takai advertisement for tofu and soymilk equipment. Takai sent them a catalog and there they saw the address of Soyfoods Center–from which they ordered several books, including *The Book of Tofu* and *Tofu & Soymilk Production.*

They found that there were already two companies in Bogota that made tofu and other products. Named Hosanna and Sabyi, they each opened in about 1996-97, and were run by Colombians (non-Asians), but their focus was on products such as sausages made with tofu and soy flour, or pimento-flavored tofu, their tofu was not hand-made, and both Nestor and Ceci found the tofu to be very hard and not tasty. So in June 1998 Nestor and Ceci opened Delisoya. There they made traditional handmade tofu and soymilk, plus several tasty second generation soy products such as cheesecake, soy mayonnaise, and soy burgers. The interior is very attractive with a large deli case stretching across the room, and a list of products and prices written by hand on a blackboard on the wall. They gave Soyfoods Center three color slides showing the above views. This is a business with a philosophy and a social mission. They want to teach local people about the goodness of soyfoods and how to use them (including the okara), and they want the shop to eventually serve as a school where other Colombians can learn to make tofu, soymilk, and other soyfoods. Recently the International Monetary Fund (IMF) has demanded that Colombia quickly open its economy to foreign goods. The influx of cheap products has had a drastic effect, creating very high unemployment and widespread suffering. Nestor and Ceci are working to alleviate this crisis.

The soybeans used to make tofu at Delisoya are all grown in Colombia, at Cali, the capital of Valle de Cauca department at 3,327 ft, in western Colombia, bisected by the Cauca River. "Valle" is pronounced "Balle" in Spanish. There is a big Japanese community living in Cali, the area where the first Japanese settled in Colombia many years ago. Another center of soybean production in Colombia is Palmira, a city at altitude 3,000 feet, in Valle de Cauca department, in western Colombia, near the Cauca River. It is about 15 minutes by car from Cali, but 8 hours by car from

Bogota.

Nestor now makes a little more 100 lb of tofu per week; more precisely, he makes about 100 cakes, each weighing 500 gm. He and Ceci are looking for a larger plant near their home in Bogota. He knows a lot about machines and mechanic, so he will make some of the equipment. At the plant they will hire people they know–who are simple and nice.

Ceci and Nestor are interested in translating *The Book of Tofu* into Spanish. They are trying to gain support for the project from Japanese cultural organizations in Colombia, such as JAICA (Japan International Cooperation Agency), and JETRO (Japan External Trade Organization). JAICA is Japanese governmental organization which assists developing countries, including financial support for some projects requested by local people. They send experts in various fields (such as agriculture, earthquakes, etc.) and also send local people to Japan for training. Ceci has a friend, Mrs. Tanaka, who is the wife of the president of JETRO in Bogota.

During the last presidential campaign in Colombia, soybeans were featured by the candidate who won (in June 1998), Pres. Andres Pastrana. In about Sept. 1997 his political campaign published a booklet titled "El Cambio" which means "Change!" It is said that the president's wife, Nohra Puyana de Pastrana, took the idea from people working with soyfoods in Caldas–a department in west central Colombia. Currently, soyfoods are promoted by the *Instituto Colombiano de Bienestar Familiar* (Columbian Institute for Family Well-Being). This institute, which has its headquarters in Bogota but branches in many Colombian cities, now offers free soyfoods cooking classes and printed information (incl. recipes and nutritional facts).

The Colombian government has been studying soyfoods for at least 20 years. The first major organization to do this was the *Instituto de Investigaciones Tecnologicas* (IIT–Institute for Technological Investigations). It existed 20 years ago but ceased operations about 10 years ago. Their purpose was to help industry develop and market new products. Their first soy product was Incaparina [production began in 1963], followed by Bienestarina [first manufactured in Jan. 1976]. IIT made soymilk and targeted local people.

One soy pioneer in Colombia was a man named Joaquin Molano, who was a chemist, is now age 90, and who founded Fundacion del Rio Magdalena. Address: Founders and owners of Delisoya, Calle 78 No. 12-03, Santafe de Bogota, Colombia. Phone: 346-2178.

7594. Fischer, Bruno. 1999. Sale of his company, Bruno Fischer GmbH (in Aetorf, Germany), to DE-VAU-GE in Germany (Interview). *SoyaScan Notes.* April 2. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Bruno is a devout Seventh-day Adventist and DE-VAU-GE (DVG–Granovita) is a Seventh-day Adventist company. Many years ago DVG got out of the soymilk business; they sold their soymilk plant to Korea; it is now the third soymilk plant of Samyung Foods in Korea. Bruno is now interested in getting back into the soymilk manufacturing business in a different way. On 31 Dec. 1998 he sold all of his family-owned company, Bruno Fischer GmbH (in Aetorf, Germany) to DVG–for money. Bruno did not keep or exchange any stock. He now works as a consultant for DVG and no longer owns any part or shares of his former company. He sold the company largely because DVG contacted him at a very appropriate time and offered a very good price. The company had always been run as a triumvirate, his mother, his father, and Bruno. But during the summer of 1998, Bruno's mother had died very unexpectedly. Four weeks later, Bruno's father announced that he would like to get out of the business as soon as possible. This would mean major restructuring. Several months later, out of the blue, came the offer from DVG–like a gift from God. Bruno was not looking for a buyer. The timing was perfect. DVG was looking to buy a company that would allow them to penetrate the organic and natural foods food market better. They had a shopping list and Bruno's company was No. 1 on that list. DVG sells most of their products to the Reform Houses (the predecessor to the natural foods market and stores–*Naturkostlaeden*). DVG already owned a small company in the organic and natural foods market; they had tried for years, using this company, to penetrate the market, unsuccessfully. So they decided that they needed to buy one of the key players in that market.

DVG is owned by the Seventh-day Adventist Church. They contribute significant amounts of money to the church, but if they need money, they must go to non-church sources (mainly banks). Nevertheless DVG has grown at an astonishing rate. Fifteen years ago they had annual revenues (sales/turnover) of about 5 million Deutschmarks; today that figure has increased to about 200 million Deutschmarks. His experience in negotiating with DVG was that they were very ethical and fair. They offered attractive help in moving or severance pay (about one month's salary for each year they had worked for Fischer) to Bruno's former employees in Aetorf after his equipment was moved 400 km (250 miles) away northward to Lueneburg.

Bruno has a non-compete agreement with DVG, but they are interested in buying soymilk from him if should ever decide to make it. They now buy from Alpro.

Katrin [pronounced KAT-rin] Senger, who lives in Munich, is a colleague of Bruno's. She is doing her diploma thesis (something between a BA and an MA thesis) on his behalf on the soy market in Europe.

Bruno has started a new company named Natumi GmbH, located at the same address as his former company. Phone: +49 2243 850 162. Fax: +49 2243 850 172. The sale of his company to DVG is public knowledge. Address: Im Auel 88, 53783 Aetorf, Germany. Phone: 49-2243-4021.

7595. Paroda, R.S. 1999. Jai kisan, jai Vigyan [Interview with Inder Sawhney]. *Times of India* (*The*) (*Bombay*)**.** April 3. p. 12.

• ***Summary:*** Jai means "hail." Kisan means "peasant or farmer." Vigyan refers to the Vigyan Parishad, an apex body for science popularization under the Department of Science and Technology of the Government of India.

Various agricultural revolutions have succeeded in India since the mid-1960s. These are: (1) Green Revolution; the introduction of high-yielding varieties of seeds after 1965 and the increased use of fertilizers and irrigation, which led to a dramatic increase in production of wheat and rice, making India self-sufficient in food grains and largely eradicating famine. The revolution slowed down in the early 1980s and began to be criticised for land degradation, loss of soil fertility, and excessive use of fertilizers and pesticides.

(2) White Revolution in milk production, led by Verghese Kurien, chairman of the Gujarat Co-operative Milk Marketing Federation Ltd., the man who developed the Amul brand. India is now the largest milk producing country in the world. (3) Yellow Revolution in oilseeds and oil production (including soyabeans) (1986-1990). (4) Blue Revolution in fishing (1973-2002).

In this interview, Dr. Paroda, director-general of ICAR, "exudes confidence that India will be a power to reckon with in the field of agriculture." Much of the interview concerns the work of ICAR. Sawnney says that, contrary to popular opinion, the green revolution has benefited the majority of India's farmers.

Question: Presently, almost all of the soyameal produce in India is being exported. "Why is it not being used for making soya products when we are facing a shortage of pulses?"

Answer: Soyabeans can be an effective alternative in helping to meet the shortage of protein and pulses. "Unfortunately our people are not used to soya products. They have to develop a taste for products like soya milk, tofu (soya cheese), soya paste (for using as bread-spread and fish preparations), biscuits, ice cream and soya flour. ICAR as generated technologies for all these products."

Note: India is ready for a soyfoods revolution / movement, based on low-technology, traditional soyfoods, similar to the movement that began in the United States and Europe starting in the mid-1970s. All that is missing is leadership and vision. Address: PhD, Director General of Indian Council of Agricultural Research (ICAR).

7596. Conquergood, George. 1999. History of work with soyfoods and vegetarianism. Part VI. The peak month (May 1998) and on the way down in 1998 (Interview). *SoyaScan Notes.* May 10. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** When did SoNice go off the market? The company's peak month in sales was May 1998 and they couldn't fill all their orders. May 12, 1998 was their last day of UHT aseptic (shelf stable) production. That was the last day that Farmland produced any SoNice soymilk in a shelf-stable package for them. Until July 1998 they continued to produce refrigerated product on a scattered basis–off and on, when they could–and when Farmland didn't dump it all down the drain. Then came that disastrous day in July 1998 when Farmland dumped a huge amount of product–and that was the straw that broke the camel's back. That was the last day any type of SoNice soymilk was made. So the company withdrew all SoNice products (soymilk and yogurt) from sale. They sent a notice to the brokers and the trade that they could not support any more sales; they were withdrawing all products from trade until they could reorganize the company. They were still trying to build the plant in Vancouver, and they were trying to find the money and the people to partner with. They had hoped to settle everything down, to sell product from their warehouses–which they did. Since they had five warehouses (four with shelf-stable product and one with refrigerated) across Canada and the United States, SoNice continued to be available in retail stores until the end of 1998. Moreover, the SoNice distributors all had warehouses full of products, and the retail stores had products. The pipeline was nicely filled in May, but by the fall of 1998 it was becoming difficult for consumers to find products, and it pipeline was empty by early 1999.

George believes that some companies are already using equipment (that they built themselves and keep behind closed doors) that infringes upon the ProSoya patent. It is hard to catch such people; you basically have to send in the "patent police" and catch them red-handed. ProSoya allowed many people to go through their soymilk manufacturing plants, and examine their equipment and process. These include Steve Demos, Ted Nordquist, and (in late 1997 or early 1998) Danilo Callewaert (Director, R&D, Alpro, Wevelgem, Belgium) and Guy Huybrechts (Managing director, Vandemoortele, Soyfoods Division, Alpro). Note: In March 1995, Philippe Vandemoortele, head of Alpro, announced that he was leaving Alpro to work on a new idea he had. He took one of Alpro's most experienced researchers with him. His last words: "I shall return." Continued. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

7597. Conquergood, George. 1999. History of work with soyfoods and vegetarianism. Part I. 1976 to 1994 (Interview). *SoyaScan Notes.* April 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** George was born on 1 Dec. 1946 in Toronto, Ontario, Canada. He went to high school in Toronto but did not graduate, and he never attended college. "I attended the school of hard knocks." He dropped out of high school

at age 15 he began to work full-time. At age 17 he went to work for a textile firm until he was age 20. Then he started his own business in the fields of textiles and clothing. In 1967 he married Wendy Lynn Richardson–who was born on 27 Sept. 1948. In 1973 he received knowledge from Guru Maraji (via Guru Charanan) in Toronto, became his disciple, traveled throughout the United States and (in 1973) to the Houston Astrodome [in Texas] with Guru Charanan, and started a vegetarian diet and vegetarian restaurant. In 1977 he was one of the founding partners of Jolly Green Garden, a vegetarian restaurant in Toronto. He called it "Guru Maraji's restaurant" because many of the employees and customers were disciples of Guru Maraji. There he first got involved with soyfoods. He bought tofu and used it to make various products, such as patties, dressings, etc., which were served in the restaurant. George has been involved with soyfoods for more than 20 years, starting in Toronto.

In early 1979 George and his family moved to southern Alberta. He went to work for the Canadian federal government helping a group of native Blackfeet people there. He set up a company named Pe-Kun-nee Garments that manufactured textiles (garments), put 300 women through a training program, and ran it (with the title of General Manager) for about 4 years. George still has the full-beaded outfit and feathers that he got from the Blackfeet people he helped.

In 1984 George and his family moved to Saskatoon, Saskatchewan, where he started a computerized embroidery business. His wife and three children still run this as a family business. Today his company is one of the top software development firms in North America for computerized embroidery. He worked for a company named Jeffrey E. McPherson, headquartered in Nottingham, England, with North American offices in Greensboro, North Carolina and in Canada; George worked for the North Carolina company. They held the worldwide distribution rights for an embroidery machine made by a Japanese company named Barudan (pronounced buh-ROO-dun) who pioneered the electronic embroidery machine from Japan. The ancient Jacquard looms, which were programmed with punch cards, originated in Switzerland [sic]–which is why we refer to "Swiss embroidery." [Note: The French inventor, Joseph-Marie Jacquard (lived 1752-1834) invented the Jacquard loom at Lyons, France, in 1801 and was awarded a patent and medal by Napoleon in 1804]. The Japanese copied these looms. George was a salesman for their equipment, and he developed a collection of baseball caps because he was one of the first people to sell caps–whether it be importers of blank caps or embroiders of finished caps. George even called himself Captain Capman. He went around and set up embroidery companies to whom he sold his embroidery equipment (from Barudan in Japan) all over western Canada. George was one of the first people to embroider a baseball team insignia direct onto the blank hat–replacing the old crest that was stuck on the hat. It was much classier, and now its the only way they do it.

In 1992 he started another gourmet vegetarian (actually vegan) restaurant, this time named Sweet Carrot Café, located at 702 14th St. East, Saskatoon, Saskatchewan S7N 0P7. Actually, George bought the building for his embroidery business, then opened up a corner of one building on the corner as a lunchroom for his staff. It was an historical building, with three buildings in one. George bought an espresso machine for his lunchroom. Passersby thought it should be a coffee shop. George lined the walls of his lunchroom with his collection of embroidered baseball caps. He soon converted the lunchroom into a coffee bar, which he named it Caps Coffee Bar. A popular menu item was Cappuccino! There was a grand piano in the dining room. It was probably the only vegetarian or vegan restaurant ever to be written up in *Where to Eat in Canada*–two years in a row. In those days most people thought of vegetarian restaurants as places where hippies with beards and long hair sat on picnic benches and ate granola bars. Most people were afraid to eat in such places, so George made his restaurant into a fine dining room. One of the main focuses of George's life since the 1970s has been vegetarianism; his wife is a vegan and teaches tai-chi. In the restaurant George made his own tofu, soymilk, and related products, such as spreads, dressings, etc. In the early days, he made these products in the old fashioned way. The firm nigari tofu was very good tasting but the soymilk had a pronounced beany flavor. He was so busy, and making all these foods was such a chore, that he began looking for other technologies to expand his production. One day in early 1992, at about the time Raj Gupta started publishing his *SoyaCow Newsletter,* a young lady from the United Way in Ottawa came into the restaurant and commented on his organic tofu sandwich. She also tried his soymilk and told him about a soymilk making machine named the SoyaCow, developed by a company named ProSoya in Ontario. George asked for more information and the lady sent him a copy of the newsletter. George immediately phoned Raj Gupta, the inventor of the machine, and was on the next airplane to Ottawa. He ended up buying the only small SoyaCow (SC-20) Raj had. Articles about George, his stylish restaurant, and his new SoyaCow appeared in two early issues of the *SoyaCow Newsletter* (Jan/March and April/June 1993–Vol. 2, Nos. 1 and 2). He used the SoyaCow to make soymilk, which he sold at his restaurant–starting in early 1993. This was the first commercial soymilk ever produced by a SoyaCow. He sold the soymilk in 1 liter glass bottles, with the SoyaCow logo printed directly on the glass on each bottle. He and Frank Daller developed the bottle. So the name of the soymilk was "SoyaCow" and it was sold in seven flavors–including maple, chocolate, vanilla, original, chocolate-peanut butter, and nog (a delicious eggnog alternative made only at Christmas). Dusty Cunningham and Lorne Broten were

both patrons of George's vegetarian restaurant in Saskatoon. A romance soon developed and they were called the "love birds." George was thinking about opening a winery in his restaurant. Since Lorne was an accountant, George started working with him on a business plan for the winery in about 1994. George liked Lorne and hired him as his bookkeeper and accountant for his two businesses–embroidery and vegetarian restaurant.

Soon, within his restaurant (which consisted of three buildings in one), George converted his Caps Coffee Bar into the SoyaCow Health Bar Deli, where he sold at least five soy products, both as part of the menu and for takeout: Soymilk (in six flavors), soy ice cream (many flavors, always changing), soy yogurt (several flavors), tofu, and Soyanaise. He also carried Yves Veggie Cuisine. He used his car to deliver some of the soymilk he made to three local stores; he never delivered his other soy products from the restaurant. He carried the glass bottles in milk crates. Continued. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. 7598. Conquergood, George. 1999. History of work with soyfoods and vegetarianism. Part II. Starting a soy business and creating many more companies–1994 (Interview). *SoyaScan Notes.* April 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued: The winery idea never worked out, but the soyfoods part of the restaurant grew until George decided to start a new company making soyfoods. In 1994 he closed the restaurant, moved out all the soya equipment to focus on doing a soy dairy in Saskatoon, and leased the empty restaurant buildings others who wanted to used them for a new and different restaurant. George and Lorne worked together on the business plan for this new soy dairy company which was going to be called Soybé's Non-Dairy. In 1994 George was already advertising his forthcoming soymilk business and products in the local papers; the products also going to be named Soybé's Non-Dairy, and sold in several flavors. He planned to discontinue his glass bottle and start packaging in gable-top cartons. He found an old dairy in Saskatoon that agreed to sell him their gable-top packer. This would have been the first fresh gable-top soymilk in North America. George had finished his business plan and blueprints, had selected a building, and was getting the building permit–when Lorne learned that Raj Gupta had prototyped an SC-100, which could make 100 liters of soymilk an hour. This changed everything! Lorne now wanted to do a much larger project and buy the rights to the SC-100. George said no, it was too expensive. But to Lorne, money was never a problem. Finally George agreed, so they never built Soybé's. Instead Lorne formed many new "vehicles" for raising the necessary funds to accomplish what *he* wanted to accomplish. His primary interest was in his family's water company in British Columbia (long owned by his family, including his son and brother-in-law), and he saw the opportunity to use the soy business as the catalyst to stir interest in and raise funds for the water company–so that he could bail out of it. Ward Yeager is an investment counselor and broker is Saskatoon. Lorn went to Ward and asked him to raise the money. Ward had no particular interest in soy (though his interest grew as time passed), but he (and a relative of his) wanted to own a chain of coffee franchises–similar to but better than Starbucks Coffee. So he began pushing Lorne to include a coffee business in his plans.

Dusty was not one of the company founders or original shareholders; she was in Europe at the time because her daughter was ill. The original founding partners were George, Lorne Broten, and Ward Yeager. The original corporation created by Lorne was extremely complicated. The original corporation formed for the purpose of raising capital (money) was named Royce Everest Enterprises (REE–as in "Rolls Royce" and "Mount Everest"), the major shareholder equity company which raised capita; it was a shell consisting of three different divisions, with a total of eleven companies. Each of the three founders put up money, but in different amounts and each owned shares. In one of the companies (REE), the shares they received was proportional to the money they invested. REE owned 40% of each of the three divisions; the other 60% was owned by the founders.

The three divisions were (believe it or not) a water business (which Lorne sold to REE; it subsequently lost lots of money), a coffee business, and a soy business. Each of those three divisions was owned 40% by Royce Everest, and contained three companies: A management company, a holding company, and an operating company (which actually made products). In the soy business these three were Pacific ProSoya Management, Soybe's Holdings (owned 60% by Pacific ProSoya Management and 40% by Royce Everest), and Pacific ProSoya Foods Inc. So if you wanted to invest in the company, and you liked the idea of soy, then you had to invest in Royce Everest, because it was the one that was selling shares. But you were also buying into water and coffee–even if you weren't interested in those businesses. Ward could sell anybody anything–and he was good at it.

The three founders owned equal shares of a company named Pacific ProSoya Management, which owned 60% of the soy business; this 60% ownership did not cost them any money originally. The other 40% of the soy business was owned by people who invested money in it.

Back to Dusty: Because of her original involvement in Saskatoon, and because of her association with Lorne in the early days, and because it was basically Dusty's interest that drove Lorne to become involved with George and the work with soy–she was allowed into the company in the early days. Since she didn't want to have anything to do with coffee or water, she didn't want to buy shares in Royce

Everest, but she did want to invest in the company. So Lorne formed another company that also owned shares in Soybe's Holdings. Note: Only accountants and lawyers like this kind of stuff. Then each of the three founders, in their generosity, gave to Dusty a small portion of their shares in Pacific ProSoya Management, though in the end she owned fewer shares than they did.

They raised money again and again, going through two full prospectuses, some rights offerings, first under Pacific ProSoya Foods, then to the shareholders under International ProSoya Corporation, then went back with another "rights offering." Then, when they "ran out of companies to raise money under," they started to sell shares in Pacific ProSoya Management (PPM)–which had a lot of special rights (that the normal common shareholders didn't have in terms of other revenue streams) and owned 60% of the main company. These shares had a higher value. First thing was a rights offering to the shareholders who could put in money to keep their percentage constant. George was not in a position to put in as much money as Loren (who received a big salary) and Ward (who had earned big commissions from raising money). So George allowed Dusty to buy the extra shares that he could have purchased–to increase her percentage ownership. Then they sold shares in PSM to other people as well–further diluting their shareholdings. So in the end, Loren and Ward each owned slightly more shares in PPM than George, who owned slightly more shares than Dusty in PPM. Continued. 7599. Conquergood, George. 1999. History of work with soyfoods and vegetarianism. Part III. Building Pacific ProSoya Inc. and making the base for Silk–1994 to 1996 (Interview). *SoyaScan Notes.* April 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued: George (and Lorne) moved to Vancouver, BC to build a soymilk plant, launch a new soymilk product, and dedicate himself 100% to the soy business; his wife and family stayed in Saskatoon, where they all work in the family business. He is still married, he communicates with his wife and family daily, and they visit one another from time to time.

In Vancouver George and Lorne set up a new soymilk company named Pacific ProSoya Foods. The company had a license to make and sell soymilk, soymilk products, and soymilk equipment in British Columbia and Alberta in Canada, plus Washington, Oregon, and parts of California in the United States. In April 1995 the SC-2000 started to produce soymilk on a trial basis, but it took 8 months to debug the system. Pacific ProSoya's first commercial soymilk was sold in Jan. 1996 to Ted Nordquist of TAN Industries, who used it to make Silk brand soymilk for White Wave in Boulder, Colorado. George started the company, and he and Dusty basically built it up; Lorne, who had been George's accountant, put together the financing.

When IPC started, the company had no plans to make its own soy products. Rather it planned to make soymilk base and supply it to the dairy industry. So selling soy base to Ted Nordquist, their first customer, fell within this general concept. But Ted wasn't buying that much soymilk. George is quite sure IPC never shipped him more than one tanker of soy base (containing about 10% solids) a week; one tanker holds 6,000 gallons. They probably shipped him, on average, 12,000 to 18,000 gallons/month. Ted was formulating product for White Wave's Silk in the 4% solids area. So 1 volume of IPC base would end up as more than 2.5 volumes of Silk, or 37,500 gallons of Silk a month. And that was only several days a month production for IPC's plant. IPC had to do something, so they began spray-drying their organic soymilk in the hope of developing a wholesale market. They shipped large amounts (many container loads), because a broker in the USA led them to believe they could sell plenty. Eventually they did sell small amounts to the USA. One woman buyer ran a health food company that used it in a potato mix. She ordered several 50-lb bags at a time and didn't pay her bills well.

Initially the SC-2000 continuous process SoyaCow didn't work, so George worked with Raj to perfect the technology. This took a long time, and that delay is one thing that took the company so long to get into production.

Actually, International ProSoya Corp. (IPC) was established (incorporated) in 1996. Lorne wanted to negotiate a broader license for Pacific ProSoya Foods that encompassed the whole world. They got rights of first refusal in every country of the world (except the CIS countries of the former Soviet Union), plus an exclusive license for North America. Early in 1996, IPC was formed, licenses were granted, and then (as its first move) IPC bought ProSoya's plant in Ottawa, Ontario (from Raj), and formed a company named IPC Eastern. When IPC launched its first product, it was made in the Ottawa plant (which IPC owned) and packaged by Beatrice.

The company was running into problems in western Canada selling bulk soymilk. They could not convince the big dairy, Dairyworld, to buy milk and package it. But they did get Dairyworld to agree to package and distribute soymilk for them. They even offered Dairyworld a joint venture. Then, shortly after the SIAL trade show in France in early 1996, they developed the brand SoNice and were going to market the product Dairyworld packaged under that brand. Dusty came back from the show with the idea for a brand "Soy-Nice," which after discussions became "SoNice." At about this time an "offering memorandum" went out. When the negotiations with Dairyworld fell through (in early 1996, after IPC was formed) everything changed. Another company, named SoNice Corporation, was formed in 1996.

In Nov. 1996, IPC launched its first product, SoNice. Dusty came up with the product name. Nobody in the firm at that time was aware of the similarity between this name and that of So-Good, a very popular Australian soymilk. George had never heard of the So-Good product, and he thinks that others in IPC also had not. This launch was a momentous event for both the company and the Canadian soymilk market. A.C. Nielsen in Canada attributed the dramatic growth of the Canadian soymilk market to IPC's market entry in 1996 and 1997. Many people who tasted SoNice said it was the best-tasting soymilk on the market. Many chain stores switched brands immediately. To own the patent for the process that makes the world's best tasting soymilk was to own something very valuable–but many of the company's "financial wizards" failed to grasp this. During late 1996 and 1997 the new company grew at breakneck speed. This growth required money. The company's stock was never publicly traded, but it was almost publicly traded.

When IPC packaged SoNice in Canada, they distinguished the Canadian Package from the U.S. package by a little roundel (circular symbol), containing a maple leaf plus "Canadian Technology," on the lower right hand corner of the panel. 7600. Conquergood, George. 1999. History of work with soyfoods and vegetarianism. Part IV. Starting IPC and mistakes–1997 (Interview). *SoyaScan Notes*. April 21. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** George now feels that his biggest mistake was relinquishing control of the company during its formative period. He owned 100% of an idea; he wanted to commercialize Raj's process. But he didn't have the funds to build the plant in Vancouver and invest in an SC-1000, let alone an SC-2000. So he brought in Lorne and other people to take care of the financing. Today he owns 7% of the company–which today is worth nothing. There are now 400 shareholders in IPC and Raj Gupta is the largest; he now owns 10% of the company. The company has raise money both by selling shares and by borrowing. One of the biggest lenders, who was supposed to convert to shares, never did, and this became a major problem. They always wanted the company to wait longer before it went public so shares they had the right to convert to would be worth more. The company had the opportunity to go public, it should have done so, but it never did–which is one reason it no longer exists.

The people who were now driving the company were Loren Broten and the board of directors. George was on the board in the early days but he was asked to get off because there was too much management on the board. By late 1997 the board increasingly became very focused on what George calls "non-operational issues," largely "How do we ingratiate ourselves. When do we get the big hit? When do we go public? etc.–Instead of focusing on driving and expanding the business, they were focusing on how to line their pockets." The board took control of the company and started to undermine management. The company was growing very nicely, and Dusty had left in early 1997 to go to Scotland to help organize a joint-venture soymilk company there. She remained on the board (as the token woman on a very male chauvinist board) the entire time. Dusty (who is a very fine and talented lady) and George were the real disturbers on the board–because they were the only ones focused on the business.

The management had made a presentation to the board that the only way the company could control its own destiny was to have its own soymilk manufacturing *and packaging* plant. IPC's initial plan was to work with Dairyworld Foods, which is the big (billion dollar) cow's milk dairy in western Canada; their initial plans and plant were based on having Dairyworld package their soymilk–but no contract was ever signed. At the last minute Dairyworld refused to package the soymilk for IPC–because they were involved in some other negotiations. So IPC found itself with a soymilk manufacturing plant and no way to package it. IPC soon found itself spending too much money transporting its soymilk–shipping it first to a co-packer, then to distribution centers, and finally it to the consumer. Ted Nordquist never packaged soymilk for IPC; he bought soy base from IPC, did his own formulation, then packaged and sold it to White Wave. But IPC's president kept raising the price until Ted finally stopped buying IPC's soymilk. So Silk is no longer made with ProSoya base.

Initially IPC had its soymilk packaged by Beatrice Foods, which is now Parmalat Canada Beatrice, in Toronto. Beatrice is now a Parmalat brand. Parmalat, the biggest dairy in the world, bought Beatrice not long ago for $400 million.

IPC's board of directors finally accepted its management's proposal to build its own manufacturing and packaging plant–now a key to the company becoming really viable. The plan was to shut down the ProSoya plant in Ottawa, Ontario, move it out west to British Columbia, combine the two soymilk extraction plants in new facility, put in five packaging lines (two aseptic and three ESL gable-top refrigerated), plus equipment to make soy yogurt and ice cream–a full soy dairy. They would make all the products for North America at that one plant until it was operating at full capacity–which they projected would only take about three years–and then build a second plant on the east coast of Canada and ultimately a third plant in the south of the United States. So in Nov. 1997 IPC bought (with down payment and mortgage) a 66,000 square foot building in the same town in British Columbia (a 5-minute drive away from their existing plant) that had been used for food processing.

IPC had a very tight agreement with Raj Gupta in terms of soymilk equipment sale. It was never IPC's focus to set

up people with the technology to be in competition with IPC, but it was IPC's goal to set up people to be in partnership with IPC.

Jerry Duncan came to IPC from the dairy industry. He did some consulting for IPC as early as 1995 and he became president of the company sometime in early 1997. Loren appointed him president. He is presently no longer with IPC; instead he is involved with a food brokerage company, and he is still a consultant. He was one of the vice-presidents of Dairyworld Foods, and he can be very gruff and hard to deal with–though he is a nice person when you get to know him; his bark is much worse than his bite.

Vesanto Melina, who lives in Langley, BC, quite close to the factory, worked for IPC as a consultant several days a week for a little more than a year before it closed. She looked after consumer relations, did trade shows, developed packets of recipe cards, and recommended SoNice in her books on vegetarian cookery. She and Dusty are good friends. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

7601. Conquergood, George. 1999. History of work with soyfoods and vegetarianism. Part V. Rise and fall during 1998 (Interview). *SoyaScan Notes.* April 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** One of the former directors, Robert Landori-Hoffman, asked for and was given the exclusive responsibility to finalize the funding for that facility. He indicated to the board that all the funds were in place, it was a "done deal," and they could go ahead and start development. So they began to "load the land" and engineer the plant, get the building permits, order the very expensive equipment (five packaging lines, holding and blending tanks, compressors, boilers, etc.), and pay deposits on that equipment. They were ready to cut the floors open and put in the drainage. Everything looked great. But by late January 1998 the money still hadn't come in. IPC was in the middle of launching its United States operations, and they had listings (reserved shelf space) in 6,000 U.S. stores in the first 3 months of 1998–Safeway, Albertson's, etc. Note: First the head office lists the product, then individual stores can order it. Most of the listings were not by way of cash slotting allowances but by way of "free fills" (fill the shelf once for free with each flavor) which is a very minimal slotting fee.

The company was shipping products like crazy (initially for aseptic cartons much more than gable-top), repeat orders are coming, the volume was skyrocketing, but now there are quality and volume problems with Farmland Dairy, their co-packer in New Jersey. All the base soymilk sold in North America was made in the Ottawa (Ontario) plant, and was shipped by tanker trucks initially to Beatrice Foods in Toronto (Ontario) for formulation and packaging (in Tetra Brik cartons), but was soon shipped down to Farmland in New Jersey where it was formulated and packed in Combibloc packages–because their Tetra Packer did not have a reclosable top–which was considered essential for entering the U.S. market. Farmland needed business; they were only packaging for Westbrae (in 2 liter cartons). Soon Farmland was packaging IPC's refrigerated products as well. The finished product was sent to five distribution centers. The whole system was very inefficient, in part because it is more efficient to ship west than to ship east. For a while, IPC tried to work with Daisy Linda, the old Loma Linda plant in Riverside, California, to have them package refrigerated products, but then Daisy Linda went through a receivership.

The best way would have been to make, formulate, and package the soymilk in one plant on the west coast in Vancouver (British Columbia), and ship it eastward to distribution centers. So everyone in the company began to focus on the director who said that he had come up with the money to build a new plant. It began to look as if he was trying to suck money out of the company, and consult it to death. The rest of the board and management gave him an ultimatum; come up with the money soon or get out.

SoNice was made with organic soybeans and other ingredients and sweetened with agave. It was a pure product with a great taste. When the product was introduced to U.S. chains like Wegmans and Albertson's, SoNice became the best-selling soymilk in their store overnight–because of the quality. They did in-store demos as their main form of advertising. They developed an elaborate kit, including a book about the product, for people doing the demos. Brokers and the heads of top supermarket/grocery stores were ecstatic with the product. But they did not have the money to support the rapid expansion. But very soon it will happen again, and SoyaWorld has the money and horsepower (distribution, contacts, etc.) to make an even bigger splash. Dairyworld Foods has many affiliates and friends in the USA; they will soon make and formulate the base, package, and distribute it. SoyaWorld is just a marketing company.

At the same time, the IPC leadership started from scratch, and tried to find new ways of putting together a partnership to raise the money. They talked to various financial institutions, institutional investors, etc. Mr. Broten had made the company very complex in terms of the many companies that he formed; it was like a shell game. It became too complex for potential investors. Plus, Raj Gupta wanted a large share of the final deal. His greed was part of the pool of greed that destroyed the company. Raj has a contract which guarantees him a minimum large income per year (from royalties, etc.); this made potential investors uneasy.

So as orders kept growing like crazy, IPC was unable to raise the money needed to keep up with growth and rationalize their production and packaging operations. They had already used up all their working capital in capital expenditures–as in the deposits on the new building (plus a

big mortgage) and on many different pieces of equipment. With no working capital, became very difficult to operate. By May 1998 IPC hit $1.2 million in sales for the month; but they were able to fill only about 85% of these orders. Then they just ran out of money.

Farmland in New Jersey started to not give IPC packing time, due to financial difficulties. Then came the straw that broke the camel's back. By July 1997 IPC was on ad in Canada with A&P stores with a 2-liter products; IPC had paid $25,000 for a huge ad in the A&P newspaper with 2-liter soymilk on special. IPC was producing only refrigerated at that point; the last UHT product was packaged in May. A&P was looking for 10,000 cases of product for this ad, IPC was trying to fill their requirements, but Farmland (who was being prepaid) was flushing the refrigerated UHT soymilk down the toilet, due to packaging problems. On Farmland's last run, they ruined 13,000 gallons of formulated product–which was all pre-sold. That was the last straw, and the last production run that Farmland ever did for IPC. IPC never sued Farmland, which reimbursed IPC for the lost product. Farmland said it did not have enough holding tanks for processing (since they had their own milk in these tanks); Moreover, their Schmidt processor went down. But IPC lost the $25,000 it had spent on the A&P ad, then got fined another $10,000 by A&P for nondelivery of product.

At that point IPC decided to regroup and focus on getting the money to get the new processing and packaging plant into operation. They began talking with everyone they could find about a partnership–from Nestlé to the Alberta Wheat Pool, to Edensoy, etc. Unfortunately the board of directors did not let the people who knew the business best negotiate with other partners for partnering. The board decided to do the negotiating because they represented the shareholders. At one point the board found a firm that would take the company public by raising $12 million, which would be put into new plant construction and operating expenses, and essentially allow to the company to move full speed ahead, with projected sales for 1998 nearing $20 million, and skyrocketing into 1999. They wanted the IPO to be at $1.20 a share. The directors had just finished raising money at $1.60 a share, and had given their shareholders expectations of a big increase. So they wouldn't accept the deal at $1.20 a share. Consequently, at the end of July 1998, the company had to shut down its two soymilk making plants in Vancouver and Ottawa, and go out of business. It was a sad ending, caused largely by greed. The board of directors is now down to two people–Eldon Heppner and Ward Yeager–but they are the two that caused most of the problem, partly because they did not understand the industry, and partly because of their interference in the operation of the company. They raised most of the company from small investors, and were among those who held the company back from going public.

In 1 March 1999 George resigned because he disagreed with the deal that the board of directors had struck with SoyaWorld, and he did not want his name to be on the document that was sent to the shareholders offering them this sale. He was the last employee of the company. After a deal is finalized, George would like to become head of global business development, working as a consultant for SoyaWorld, with a free reign to set up new ventures in countries around the world, including in the natural foods market in North America. He does not want to be a production manager. Most of his experience is in sales and marketing; that's what he has done most of his life. Continued. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

7602. Conquergood, George. 1999. History of work with soyfoods and vegetarianism. Part VII (Interview). *SoyaScan Notes.* April 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** By now the two members of the board of directors are on their knees, begging Dairyworld Foods (the huge, billion dollar dairy products and food company in Vancouver, British Columbia–the largest in Canada) to come to their rescue. In about 1997 Dairy Foods World and Peter Joe signed a joint venture agreement, which had been under discussion and negotiation since about 1995 or 1996. As a result of that, Dairyworld Foods created a division named SoyaWorld Foods, which is a 50:50 joint venture between Dairyworld Foods and Sunrise Markets (Peter Joe, in Vancouver, the largest soymilk manufacturer in Canada). SoyaWorld, which is a marketing company for products made by the two other companies, now controls more than 60% of the non-dairy beverage market in the grocery and supermarket trade in Canada–according to A.C. Nielsen statistics. The second largest player is Beatrice (10-13%), followed by Nutrisoy (a UHT soymilk made by Nutrisoya in Quebec), then the imports (Pacific Foods, Rice Dream, Vitasoy, Westsoy, and Edensoy). SoyaWorld presently markets three soymilk products: Sunrise soymilk (a beany-flavored product made and packaged by Sunrise in plastic bottles), Soyganic (a traditional beany-flavored product made by Sunrise with organic soybeans, packaged at Dairyworld in a gable-top carton and sold refrigerated), and So-Good (licensed from Sanitarium Health Food Co. in Australia, formulated and packaged in gable-top by Dairyworld, and based on soy protein isolates). Soyganic and So-Good appeared on the shelves at about the same time in 1997 under the SoyaWorld brand. They distribute those three products extensively across western Canada, and sell them in the dairy case. They are busy expanding, buying up dairies, so that they are now a national dairy, from coast to coast, in Canada. They own the shelf space in the dairy case across Canada, and they have tremendous synergies with other dairy companies in the United States. They use the dairy

for distribution; SoyaWorld is really just a little marketing group. They don't want to see SoNice on the market because it outsold them 7 to 1–because it was a better product.

Now IPC is in such a mess, with so much debt (about six million Canadian dollars). Of this, about $2.5 million is unsecured to creditors. What could happen that would allow IPC to move forward? (1) A public company could buy the assets of IPC (the equipment, the brand, the goodwill)–not IPC itself; George could get rid of most of the debt with shares in a public company, so the company would not need a great deal of cash. (2) SoyaWorld could buy IPC; since August 1998 they have been trying very hard to do so. They are making a very complicated, long-term offer, with long-term royalties, etc. Both ProSoya (Raj Gupta) and IPC are tied into the deal. The amount of cash that would be put on the table at closing is quite small–not even enough to pay off the secured creditors, let alone the unsecured creditors. George is not happy with this deal, but there is not a lot he can do about it–except to keep on trying to scuttle it–as by talking to Horizon, the organic dairy. George feels very frustrated; he is cooperating with the deal to a degree, but at the same he's looking for a better deal. Yet he thinks the odds are 90% that IPC's assets will be owned by Dairyworld within the next few weeks or months. If it goes through (the closing date is May 4) George will at least get his back pay–he has not been paid since last August–but he would loose a lot as a shareholder. George does not know whether or not he has a future with SoyaWorld if the deal goes through–but he plans to be in the soy business somewhere. Since George knows more about making IPC's soymilk than any other person in the company, he is one of IPC's most valuable assets–yet SoyaWorld has not offered him a firm employment contract. SoyaWorld hopes to buy out Raj Gupta and his patents, and get him out of the picture. Continued. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

7603. Conquergood, George. 1999. History of work with soyfoods and vegetarianism. Part VIII (Interview). *SoyaScan Notes.* April 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In addition, SoyaWorld would instantly take control of the soymilk market in Canada. First they would gain control of the dairy case (which is where the future of soymilk lies), then they would start trying to push out the American-made aseptic soymilks such as Vitasoy. SoyaWorld would also quickly become a major force in the U.S. market by aligning themselves with major dairies to get distribution. George thinks that major American dairies will be putting Canadian-made soymilk in their delivery vehicles, trucking it to supermarkets, and putting it in American dairy cases. In Canada you have Parmalat / Beatrice Foods selling Sensational Soy soymilk from coast to coast. Since Jan. 1997 it has been packaged in 2-liter blue gable-top cartons at the Beatrice plant in Brampton (20 miles / 32 km west of Toronto, Ontario). It has a beany flavor because it is made by Pak Fok Food Products, a small Chinese company [run by Simon Kwan] in Scarborough (a suburb of Toronto), Ontario, that makes tofu and soymilk. There are no other soymilks, besides those sold by SoyaWorld and Beatrice, that have widespread distribution.

By the way, IPC taught Beatrice how to make this soymilk when Beatrice started packaging for IPC in 1996 using 1-liter aseptic, Tetra-Pak cartons. IPC also got a commitment from Beatrice to package gable-top products. When IPC introduced its refrigerated soymilk at the health food show, it got commitments (listings) from major stores to carry IPC's refrigerated soymilk in gable-top cartons. Beatrice was now packaging IPC's aseptic soymilk and IPC kept asking Beatrice when they could start packaging the gable-top soymilk. Beatrice kept stalling, and stalling–month after month after month. Beatrice said there was a problem with their equipment. Finally IPC actually launched its product through Farmland Dairies in New Jersey. IPC pulled all the packaging stock it had from Beatrice and sending it down to Farmland, because the stores were pressuring IPC, asking "Where's the product you promised us?" Then, low and behold, just as IPC starts distributing its gable-top soymilk packaged at Farmland, guess who comes out with a soymilk. Beatrice! IPC's president, Mr. Jerry Duncan, failed to finalize a contract, which contained a non-compete clause, with Beatrice. Nor was such a contract ever signed with Farmland. Duncan had been in the dairy business for more than 20 years, working for various companies. For example, he was very successful developing a novelty ice cream business, which he sold. He was responsible for expanding Dairyworld Foods from simply a dairy company to a food company. And he conducted the initial negotiations for Dairyworld Foods with Peter Joe of Sunrise. When Duncan left Dairyworld Foods after about 5-7 years, Maheb Nathoo took his place in the negotiations with Peter Joe. After Duncan started his own consulting company, IPC hired him as a consultant. So he should have known the importance of such a contract. Thus, it was both greed and lack of basic business skills that brought down IPC.

George is now very interested in functional foods / nutraceuticals. He has developed a soy pudding in this category. He has samples of a similar product, Alpro Soya Dessert, launched in Jan. 1989 in Europe in aseptic cups, four in a pack.

Dusty Cunningham has is now back in British Columbia. She has been hurt financially and still feels very badly about the collapse of IPC. She worked long and hard on the soymilk plant in Scotland.

Lorne Broten has gone back to work on the water company he developed. They use proprietary technology to soften water and to make chlorine from rock salt to avoid

handling liquid chlorine.

George has not received any pay since last August. He is still working on the proper disposition of assets, but the main people working on that are the two men who now constitute the board of directors of IPC; they were both major investors. The final deal will involve a payback over a ten-year period. The dairy company involved wants to get control of the market for both dairy and soymilk across most of Canada. IPC had purchased (with down payment and mortgage) a food processing plant in BC. They had loaded the land and invested a lot of money in that plant. When it was clear that the necessary funds would not come through, they had to walk away from that deal, losing $750,000. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

7604. Conquergood, George. 1999. Re: International ProSoya Inc. Letter to William Shurtleff at Soyfoods Center, April 21. 1 p. Typed, with signature.
• ***Summary:*** "Dear Bill, It was a pleasure to finally talk to you. Your name has been a household word around my place for many years. My copy of *Tofu & Soymilk Production* is quite dog-eared. I am surprised that Raj never mentioned myself or Dusty and Lorne for that matter, but I was never in this for the glory. Like you I just wanted to make a difference.

"I will send you my historical story under separate cover later. For now I am enclosing some articles you may not have had on IPC, as well as sample packages of the products produced." This large box also included many samples of So-Nice soymilk in various flavors and sizes. Address: 15328 Columbia Ave., White Rock, BC, V4B 1J7 Canada. Phone: 604-541-8633.

7605. Park, Alice. 1999. Foods that fight cancer. *Time.* April 26.
• ***Summary:*** "Previous studies showed that women who eat soy products such as tofu and soy milk are less likely to develop breast cancer."

7606. Fischer, Bruno. 1999. Philippe Vandemoortele left Alpro in March 1995 but plans to return (Interview). *SoyaScan Notes.* April 27. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** First some brief background: In June 1980, N.V. Alpro was founded by Vandemoortele to take over production of soymilk previously made by the parent company, Vandemoortele. Inspired and headed by Philippe Vandemoortele, Alpro purchased the land on which it was located from Vandemoortele, and became an independent manufacturer. Alpro quickly became Europe's leading producer of soymilk, making private-label brands for scores of companies.

In June 1990, Alpro opened a new and much larger plant at Wevelgem, Belgium. Alpro was now Philippe's "baby" and his great interest in life.

So what a surprise when, in March 1995, Philippe Vandemoortele announced that he was leaving Alpro to work on a new idea he had. He took one of Alpro's most experienced researchers with him. His last words: "I have a new idea and I shall return."

Update: Oct. 2000. Perhaps Philippe wanted to start a soymilk plant in the United States. See interview with Dana Jacobi (Oct. 2000). Address: Natumi, Im Auel 88, 53783 Aetorf, Germany. Phone: 49-2243-4021.

7607. *SoyaScan Notes.* 1999. Soymilk, rice milk, and almond milk retail prices at Trader Joe's in California, 30 April 1999 (Overview). April 30. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Since Dec. 1983, approximately every other year, Soyfoods Center has conducted a survey of the prices of soymilk and cow's milk in California. Note: 2 quarts = one half gallon. Westsoy Plus all flavors $2.19/half gallon (=$1.10/quart). Westbrae Natural Lite vanilla or plain $2.19/half gallon (=$1.10/quart).

Soy-Um original or vanilla $1.39/quart. Soy-Um three-pack (250 ml each) $1.39 for three.

Pacific Foods Fat Free Soy Drink vanilla or plain $1.29/quart.

Trader Joe's Fresh Non Dairy Soy Beverage $2.69/half gallon (=$1.35/quart–gable top carton sold refrigerated).

Galaxy Veggie Milk $1.99/quart.

Westbrae Rice vanilla or plain $2.19/half gallon (=$1.10/quart). Rice Dream Enriched original or vanilla $1.49/quart.

Breeze almond milk original, vanilla or chocolate $1.59/quart.

Omitting the highest price soymilks, the price of soymilk ranges from $1.10/quart for half gallon cartons to $1.39/quart for quart cartons. A fair average price would be about $1.25/quart.

7608. **Product Name:** Veggie Milk (Fresh in Gable Top Cartons) [Original, or Chocolate].
Manufacturer's Name: Galaxy Foods (Product Developer-Marketer).
Manufacturer's Address: 2441 Viscount Row, Orlando, Florida 32809. Phone: 800-441-9419 or 407-855-5500.
Date of Introduction: 1999. April.
Ingredients: Original: Filtered water, organic soymilk solids, isolated soy protein, brown rice maltodextrin and protein, evaporated cane juice, sea salt, oat fiber, vegetable mono & diglycerides (an emulsifier).
Wt/Vol., Packaging, Price: Quart and half-gallon gable-top carton.
How Stored: Refrigerated.
New Product–Documentation: *Monthly Insight* (Galaxy

Foods, Orlando, Florida). 1998. Sept. p. 2. "Veggie Milk to make its debut." "Veggie Milk, Nature's Alternative to Milk, will make its debut on store shelves this fall." It is a "highly nutritious blend of organic soy, rice, and oats. Veggie Milk contains more vitamins, minerals (including calcium), protein and fiber than any other milk on the market today. It is the only milk fortified with folic acid. Veggie milk also contains powerful phytonutrients like Isoflavones (found in soy) and Toconutrients (found in rice)... As with all of our Veggie products, Veggie Milk is lactose free, cholesterol free and saturated fat free. And, because it is from the Veggie Kingdom, it will never contain rBST hormones or antibiotics that are often found in animal's milk. Processed by strategically located dairies, the 32 oz. carton of fresh milk will be available in two flavors–original and chocolate–and will be sold alongside conventional fresh milk. Veggie Milk will also be available in a shelf-stable package that can be sold in supermarket dry grocery aisles."

Talk with Tina Nelson of Galaxy Foods. 1999. April 2. Galaxy had Veggie Milk at the NFM show at Anaheim and they are just now getting it on the shelves. It was first sold at Ingles Market in Dec. 1998 or Jan. 1999. This soymilk is now out in a 32 oz (1 quart) Tetra Pack carton in one flavor (Original); they plan to introduce a chocolate flavor in June. Tina thinks the product is packaged at several different locations. They make the powder themselves and ship that to the packager. She does not think the product is packaged by Pacific Foods of Oregon. Galaxy manufactures the powder portion of the product, which is a blend of soy (the main ingredient), rice, and oats. At least part of the soy is soy protein isolate, of which they are a major consumer. As far as Tina knows it is the first commercial soymilk that contains fiber (from the oats) and folic acid. They plan to introduce the product in a fresh gable-top carton very soon; they may have already shipped their first order.

Leaflet (8½ by 11 inches, color) sent by Patricia Smith from Natural Products Expo West. 2000. March. "New! Fresh gable. Pour on the profits." A large photo shows Galaxy's new Veggie Milk. The rear shows the ingredients and nutrition facts.

7609. Jacobi, Dana. 1999. The new comfort food: It is possible to cook the creamy classics without a drop of dairy. *Country Living's Healthy Living* 4(2):107-11. March/April.
• ***Summary:*** "You love milk and cheese, but they don't love you." An estimated 25% of adults in the USA are lactose intolerant. These recipes use dairylike soyfoods instead of dairy products. Address: Food writer, New York, NY.

7610. *Monthly Insight* (*Galaxy Foods, Orlando, Florida*). 1999. Veggie Milk pouring on sales. April. p. 1.
• ***Summary:*** Wal-Mart ordered two truckloads of Veggie Milk for its 510 supercenters. A truckload of Veggie Milk was also shipped to Puerto Rico. "We expect Veggie Milk to be available nationwide soon." Note: A major ingredient in the product is soy protein isolate, supplied by Protein Technologies International, a subsidiary of DuPont. A test by PTI comparing Veggie Milk with other milk alternatives found that it ranked No. 1 on every nutritional component, including vitamins, minerals, calcium, soy protein, fiber, and folic acid.

According to the newsletter *Nutrition Business Journal* (April/May 1998), soymilk sales in 1997 were valued at $200 million, and projected to grow to more than $350 million by the year 2000.

Consumers are becoming increasingly aware of the "negative health implications associated with traditional dairy products, such as heart disease, digestive problems, exposure to antibiotics, growth hormones, and more. This increased awareness is fueling a significant shift to soy-based products." Address: Galaxy Foods Company, 2441 Viscount Row, Orlando, Florida 32809. Phone: 800-441-9419 or 407-855-5500.

7611. **Product Name:** Future Shake [Café Latté].
Manufacturer's Name: Odwalla, Inc.
Manufacturer's Address: Dinuba, CA 93618. Phone: 1-800-Odwalla.
Date of Introduction: 1999. April.
Ingredients: Soy beverage (Soybeans, water), water, banana puree, mango puree, agave nectar, coffee concentrate (coffee beans, water), Madagascar vanilla, organic whole oats, vitamins and minerals (calcium, magnesium, vitamin C, iron, vitamin E, niacin, zinc, copper, pantothenic acid, manganese, folic acid, viatmin A, vitamin B-6, riboflavin, thiamine, biotin, iodine, chromium, selenium, vitamin B-12, vitamin D).
Wt/Vol., Packaging, Price: 16 fl oz (480 ml = 1 pint) HDPE plastic bottle. Retails for $3.39 at Safeway supermarket (1999/01 Lafayette, California).
How Stored: Refrigerated.
New Product–Documentation: Product (Café latté, 1 pint) with Label purchased for $3.39 at Safeway supermarket in Lafayette, California. 1999. April 25. Self adhesive label in many colors: blue, reddish pink, orange, purple, green and white on beige. Illustration of colorful, stylized man with an zany design for a head, 3 ears of wheat in his right hand, a glass in his left hand, a long-billed bird on his shirt design, planets whirling around him, and many small spirals. Text on front panel: "Delicious, nutritious, dairy-free. Low fat." One side panel states: "Expresso yourself. Sweet and creamy. Café Latté is a dairy-free shake up of dark espresso roast coffee, organic oats, soy milk, Madagascar vanilla, banana and mango. One bottle provides a wealth of vitamins and minerals, plus 50% of the RDI for calcium and vitamin C and 100% for folic acid. It's delicious low-fat nourishment from real whole foods. The Future is in your hands... shake it up!" "Odwalla (Oh-DWA-la) was founded in 1980 by three

musicians with the dream of a healthy world. Their mission: To make great juice and bring a heart to business." www.odwalla.com. Soyfoods Center taste test: Delicious, but very expensive. Talk with Odwalla representative. 2001. April 30. This product was introduced in 1999.

7612. Simonds, Nina. 1999. A spoonful of ginger: Irresistible, health-giving recipes from Asian kitchens. New York, NY: Alfred A. Knopf. xii + 322 p. April. Illust. Index. 24 x 21 cm. [53 ref]

• ***Summary:*** This beautiful hardcover book and cookbook, printed on glossy paper with many color and black-and-white photos, looks at food in two ways: As medicine, and as the source of delicious recipes. The Asian holistic approach is relaxed and non-rigid; it emphasizes balance. Soyfoods appear throughout. Tofu is used to "increase body energy, produce fluids, and lubricate the system. It is said to have yin, or cooling, properties" (p. 23). Miso chicken soup with snow peas and tofu (p. 34). Grilled miso fish fillets (p. 66). Pan-seared halibut with garlicky black bean sauce ("Seasonings: 3 tablespoons fermented or salted black beans, rinsed, drained, and minced, 2 tablespoons minced garlic, 2 tablespoons minced fresh ginger,... p. 71; "Black soybeans have been used by the Chinese for medicinal purposes for over 2,000 years"). Baked black bean shrimp (with "Seasonings: 2 tablespoons fermented black beans, rinsed and drained; 2 tablespoons minced scallions, white part only; 1 tablespoon minced fresh ginger; 1 tablespoon minced garlic; and 1 teaspoon dried chile [chili] flakes." When the oil in a wok is very hot: "Add the Seasonings and stir-fry for about 10 seconds with a slotted spoon or spatula until fragrant." A side note on this page: *The Chinese System of Food Cures,* by Dr. Henry Lu, says that "a regular diet of fermented black beans can relieve depression and stress and counteract any toxins," p. 75). Stir-fried saucy shrimp (with sweet bean sauce or *jiang,* one of the earliest Chinese seasonings; if unavailable, substitute hoisin sauce, p. 81). Grilled hoisin scallops (with ½ cup hoisin sauce, p. 83). Spicy grilled squid with warm greens (with ½ cup hoisin sauce, p. 86-87). Broccoli or cauliflower with a soy-lemon dressing (p. 173). Grilled leeks in a garlic-soy dressing (p. 174). Grilled wild mushrooms with a teriyaki dressing (p. 178). Black bean acorn squash (with "2 tablespoons fermented black beans, rinsed, drained, and minced." Describes how to make "black bean sauce," p. 179).

One chapter, titled "Soybeans and tofu" (p. 192-215), begins with a discussion of the work of Dr. Albert Leung, author of various books on Chinese herbs and food, and creator of a computerized database on Chinese herbal medicine for the National Cancer Institute. "Like a growing number of doctors, Dr. Leung feels strongly that an integrated approach should be taken in the treatment of many diseases, one that draws from the strengths of both conventional and alternative therapies. He also concurs with Henry Lu that fortifying the immune system is critical to good health. 'Our immune system is the key to health and longevity and there are many factors that throw off our yin/yang balance,' Dr. Leung says. 'When this happens, Traditional Chinese Medicine often uses herbal tonics and food to help restore the balance.'

"Tofu is such a food. Chinese doctors classify its nature as cool and sweet. It is credited with clearing heat from the body, detoxifying the system, and strengthening the spleen and stomach."

A full-page color photo (p. 192) shows tempeh being fried. Simonds notes that the earliest known recorded use of black soybeans dates back to the middle of the eighth century.

A table titled "Soybeans and their byproducts" (p. 196) lists ten products, how each is used, and how long they will stay fresh in a refrigerator. The foods are: Fresh soybeans [as a green vegetable appetizer], soybean sprouts, miso, soybean milk, silken tofu, soft tofu, firm tofu, extra-firm tofu, 5-spice pressed tofu, and tempeh.

Recipes are from many Asian countries": Japanese-style silken tofu. Soybean sprouts and leeks in hot chile sauce. Rainbow salad with spicy peanut dressing (and tofu). Spicy garlic bean curd noodles. Vegetarian roll-ups (with tofu). Fragrant steamed pearl balls (with tofu and glutinous rice). Spicy ma po tofu. Cantonese style tofu in black bean sauce (incl. fermented black beans, garlic, ginger and hot chile paste). Vegetarian kung pao with broccoli and peanuts (with tofu. Note: Kung pao is a style of food preparation associated with Szechuan and Hunan). Curried tofu. Braised cinnamon tofu. Simmered tofu with black mushrooms. Fried tempeh with sweet and sour sauce. Spicy stir-fried tempeh with basil. Ginger teriyaki tempeh.

Also: Chicken-black bean brown rice (with fermented black [soy] beans, garlic, and fresh ginger, p. 231; Dr. Albert Leung says that making fermented black beans is a complicated process, in which small black soybeans are first soaked in water with mulberry leaves and wormwood herb, then they are fermented with salt). Vegetarian pad thai (with tofu, p. 245). Almond soy jelly with litchees and melon (with soy milk, p. 266). Two-spice vanilla tapioca pudding (with soy milk, p. 269; Soy milk lubricates the body, clears the lungs, and is often prescribed for urinary disorders and constipation). Coconut rice pudding with berries (with soy milk, p. 272). Address: Salem, Massachusetts.

7613. Soyatech; Senechal, Jorgenson, Hale & Co. 1999. The North American soyfoods market: A multiclient study. 318 Main St., P.O. Box 84, Bar Harbor, ME 04609. April. *

• ***Summary:*** The price of this market study is $9,500 before 18 Dec. 1998 and $12,500 thereafter. The study will be completed in early April 1999 and presented shortly thereafter at the Marriott Camelback Resort in Scottsdale, Arizona.

Soyatech was founded in 1984 [sic, Jan. 1987]. Address: Bar Harbor, Maine. Phone: 207-288-4969.

7614. *Vegetarian Times.* 1999. Carrot & stick: A carrot to Canadian health officials for refusing to permit the use of recombinant bovine somatotropin (rBST),... April. p. 17.
• ***Summary:*** "... a synthetic hormone that's routinely injected into cows in the United States to increase their milk production."

7615. **Product Name:** Silk (Soymilk Sold Refrigerated in Half-Gallon Pure-Pak / Gable Top Cartons) [Plain {Dairylike}].
Manufacturer's Name: White Wave, Inc. (Product Developer-Distributor).
Manufacturer's Address: 6123 E. Arapahoe Rd., Boulder, CO 80303. Phone: 303-443-3470.
Date of Introduction: 1999. April.
Ingredients: May 2000: Filtered water, whole organic soybeans*, organic raw cane crystals*, calcium carbonate, sea salt, natural flavors, carrageenan, vitamin A palmitate, vitamin D-2, riboflavin (vitamin B-2), vitamin B-12. * = Grown and processed in accordance with the California Organic Foods Act of 1990. Silk soybeans are third-party certified organic by QAI. Silk is certified to containno GMO soybeans.
Wt/Vol., Packaging, Price: Half-gallon Pure-Pak carton.
How Stored: Refrigerated.
Nutrition: Per 1 cup (240 ml): Calories 80, calories from fat 20, total fat 2.5 gm (4% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 75 mg (3%), total carbohydrate 8 gm (dietary fiber 0 gm, sugars 4 gm), protein 7 gm. Vitamin A 10%, calcium 30%, vitamin D 30%, vitamin B-12 50%, vitamin C 0%, iron 2%, riboflavin 30%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Carton with Label sent by James Terman of White Wave. 2000. May 11. 2.75 by 2.75 by 8¼ inches. Tetra Rex package. "Organic–Third party certified. Calcium enriched. Low 1% fat & vitamin enriched." Talk with James Terman of White Wave. 2001. May 29. Silk plain in half gallon cartons was introduced in April 1999. This soymilk was formulated to taste and look as much like dairy milk as possible.

7616. Yasuda, Masaaki; Aoyama, M.; Sakaguchi, M.; Nakachi, K.; Kobamoto, N. 1999. Purification and characterization of a soybean milk coagulating enzyme from *Bacillus pumilus* TYO-67. *Applied Microbiology and Biotechnology* 51(4):474-79. April. [25 ref. Eng]
• ***Summary:*** *Bacillus pumilus* TYO-67 has been isolated from tofuyo, a traditional fermented food made from soybean milk in Okinawa, Japan. This bacterium secretes a soybean-milk-coagulating enzyme (SMCE), which is essential for making tofuyo, however reports on this microbial enzyme are very limited, and its properties have not been sufficiently characterized.

This bacterium was found to be the best producer of SMCE, induced by the addition of soy protein to the growth medium. The enzyme was found to be a monomer with a molecular mass of about 30 kDa [kilodaltons] and an isoelectric point at 9.75. The optimum pH for the enzyme was 6.0 to 6.1 and the optimum temperature was 65ºC. The enzyme was significantly activated by the addition of various ions and its thermal stability was significantly increased by the addition of a Ca (2+) ion.

This enzyme can be applied for the production of various processed foods from soy milk, and may also be widely applicable to other food processing. Address: Dep. of Bioscience and Biotechnology, Univ. of the Ryukyus, 1 Senbaru, Nishihara-cho, Okinawa 903-213 Japan.

7617. Conquergood, George. 1999. Horizon plans to launch a soymilk product (Interview). *SoyaScan Notes.* May 6. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Horizon, the company that has become famous for its organic milk, plans to launch a soymilk fairly soon. When George met with them they asked him several times: "Are you connected with Ted Nordquist of TAN Industries?" He told them he was not. The co-founders of Horizon (in 1992) are Paul Repetto and Mark Retzloff. Mark has been in the natural foods industry for 25 years. He was with Eden Foods during its early days (1969-71), and in 1973 was one of the co-founders of Rainbow Grocery in Denver, Colorado. A food co-op and natural food storefront, it was the first of the new breed of natural food stores in Denver. Mark was also once a devotee of Guru Maraji, and lived in an ashram. George cooked with Mark in 1977 at Guru Maraji's big festival in Orlando, Florida. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

7618. Conquergood, George. 1999. How Rajedra ("Raj") Gupta got into the soymilk business (Interview). *SoyaScan Notes.* May 10. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Raj is a research scientist and a physicist. He wanted to come up with something to feed hungry and starving people in Third World Countries. His native country is India and hunger has long been a major problem in India; he wanted to do something for his people. He focused on developing a low-cost protein source that was palatable. "He knew that soy was superior food, but people in Indian didn't like the taste." He wanted to develop good-tasting alternatives to cow's milk and paneer (fresh dairy cheese), which were quite expensive in India and came from the Holy Cow. Once he had a good soymilk, he wanted to use it as the base of puddings, yogurts, and other such foods which would

be popular in India.

Raj went about this research scientifically, trying to understand what was causing the problem. He found that the oxidation of lipoxygenase enzyme led to off-flavors. To control that, he developed the concept and process of airless cold grinding. An associate of his, Grant Wood, who worked for the research council under him in the same department, is the person who actually designed the original SoyaCow.

Theoretically Raj was working in his home kitchen. But he was a government employee, working for the National Research of Canada, a huge organization in Ottawa. As a professor of physics, he had access to good scientific laboratories–but physics labs rather than food labs. He and Grant Wood did most of this work on their own time. He actually got a Canada Council award for designing the grinder.

Raj filed for two patents on his cold grind airless process. These patents are owned by a U.S. company, Micronics, in partnership with his brother, who is a university professor in the United States.

Note: According to Soyfoods Center records, in March 1985 Raj and his wife, Rashmi, applied for a Canadian patent titled "Process for making soymilk with no beany flavor" (No. 477,902). In 1986, Raj, his wife, and one other Gupta filed an international patent application titled "Food processing in oxygen-free environment" [Soymilk]. In April 1987 they filed for a U.S. equipment patent titled "Equipment for making no-beany flavor soymilk." They assigned the rights to ProSoya Corp. (Maryland Heights, Missouri).

In 1992, when George first met Raj in Ottawa, Raj was using his SoyaCow SC20 to make both soymilk and tofu. He even had a little tofu forming box that he shipped with each SoyaCow. The box would form one batch of soymilk from the SC20 into tofu. A filter press pressed the okara. You would coagulate the soymilk to make tofu. Today the SoyaCow SC20 is being made in both Russia and India.

Frank Daller, who was originally in media in Canada, was an important early figure in ProSoya. Before he met Raj, he was working with a charitable organization in Canada (probably Plenty Canada, or perhaps Child Haven). Frank met Raj shortly before George did, when Raj was busy making his first SC20s. Plenty had an SC20 at The Farm in Canada, and today Plenty has several SC20s in projects operating worldwide. The two main organizations that Raj started working with through a CIDA grant he obtained were Child Haven and Plenty. Frank Daller approached Raj and convinced Raj that he should become the president of the company–the man in charge of daily affairs at the office. He invested a little bit of money; with Raj, if you invest a little bit of money, you can do anything.

In early 1996, Frank Daller left ProSoya and set up his own charitable organization. One advantage of such a corporation is that it is not required to pay any taxes. He got a lot of cash by selling the shares he owned back to ProSoya and IPC. More importantly, he had rights to stock options–which he also sold. Somehow Frank and Loren Broten wound up in some difficulty. Today Frank is the president of Daller & Co. Ltd. in Ottawa, Ontario, Canada. He sells soymilk and tofu processing equipment. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

7619. Harrigan, Brian. 1999. Update on the work of ProSoya Inc., especially in Russia (Interview). *SoyaScan Notes.* May 11 and June 7. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** ProSoya gives 10% of their revenue (not their profit) from the SC-20 to Child Haven, the charitable organization which purchased the very first SC-20 SoyaCow from ProSoya. Child Haven now has a SoyaCow Resource Center in India near New Delhi. The managing director [Ratan Sharma, PhD], a scientist, uses the Center to train people, and he goes on the road and shows the various places that have SoyaCows how to use them. SoyaCows are now also be purchased by private companies who make commercial soymilk; they are also assisted by a Child Haven scientist.

Actually, the name of the SC-20 has now been changed to VS-40. VS can stand for various things in various languages, such as *Vaca Soya* (in Spanish) or *Vache à Soya.* But the main reason for the name change was that ProSoya wanted to have a number that reflected the capacity of the machine in liters per hours. In the SC-20, the "20" referred to the size of the cooking vessel, which was 20 liters. The machine has always been able to produce about 40 liters/hour of soymilk, using a batch process–a little more 13 liters per batch and three batches per hour.

In Russian *EsKa Vacit* means "SC-20" and *Soya Karova* means "Soya Cow." A program called "Feed the Children," is an American charitable NGO headquartered in Oklahoma City, with branches in about 14 countries. They have bought 200 SoyaCows (the VS-40) recently for Russia and they want to buy 800 more next year. There are now more than 500 SoyaCows in Russia–all over the country. Feed the Children buys these SoyaCows from a Russian company named ASSOY, in Krasnodar, run by Mr. Podobedov; these SoyaCows are made in by ASSOY in Russia under license from ProSoya in Canada–part of a technology transfer agreement signed about 3 years ago. The agreement says that ProSoya will get a small royalty on each system sold. ProSoya declined the offer to own part of the ASSOY business. Feed the Children buys the SoyaCows using money from USDA that was earmarked by Congress as part of the billion dollar U.S. Food Aid Program to Russia. This is the only non-food item in the program. Feed the Children got soybeans from USDA, monetized them by bartering them,

then used the money to but SoyaCows from ASSOY in Russia. ProSoya in Canada receives nothing from the deal–except eventually (hopefully) its small royalty each machine sold.

Feed the Children, true to its name, places most of the SoyaCows it buys in social institutions, with the main objective of feeding kids. Brian would estimate the breakdown at 30% monasteries, 20% orphanages, 20% hospitals, 20% schools, and 10% prisons. Monasteries are one of the few social institutions that the Russian people still trust; they have generally remained honest and free of corruption. These monasteries include 50 Russian Orthodox Christian monasteries, which have long run soup kitchens and shelters to serve the hungry and homeless. The main monastery in Moscow, which is the home of the patriarch of the Orthodox Church, has a SoyaCow and now feeds soymilk and tofu (among other things) to more than 600 people a day–plus their own staff of 80 monks and 200 associates. The social institutions typically run their SoyaCows 20 hours/day and sell any excess soymilk to the public consumers. The SoyaCow comes with a cutter mechanism which transforms it into a SoupCow, and enables it to make a thick well-cooked vegetable soup in 20 minutes–starting with water and any mixture of raw vegetables (carrots and potatoes are popular). Okara is often added to these soups–to make them thicker and more nutritious.

This has also created competition. Four different companies are making machines similar to SoyaCows (some are *very* similar, which raises breach of patent issues). One of these competitors is the largest aerospace company in the ex-Soviet Union. They used to build fighter jets; now they make SoyaCow knock-offs.

In Russia, many SoyaCows are owned and operated by small entrepreneurs. They would read an article in a magazine or newspaper, or see the SoyaCow on TV, get the address of ASSOY in Krasnodar, and make contact. With Russia's current food shortages, this is one area rich with opportunities. An estimated 60% of the entrepreneurs bring the SoyaCow into an existing business (especially a food-related business) while the other 40% start a new business based on the SoyaCow. Entrepreneurs are looking for food sources that make them less dependent on food shortages and unreliable distributors.

About 95% of the SoyaCows in Russia make soymilk that is not packaged. Rather, it is sold hot, directly to consumers, either in little plastic cups or the consumers bring their own containers so they can take the soymilk home. Most SoyaCows are operated in the back of small fresh food stores, or in specialized little Soya Shops (Soyushka in Krasnodar). The fresh, hot soymilk is put into a large, clean metal container or drum. Typically two flavors are sold, each in its own large container: Dairylike contains granulated sugar and a little salt; chocolate is dairylike with added cocoa. In Russia, soymilk retails for about $0.12/liter; this is about one-third as much as cow's milk which costs $0.35/liter. Yet cow's milk is not readily available. A lady behind the counter uses a measuring cup to ladle out the hot soymilk (at about 70ºC) out of the pot and into the customer's container.

Through all of this, ProSoya in Ottawa is aiding Russia's transition to a market economy. Brian concludes: "This is a fantastic program! It's unique, has a bright future, and we love it." The presence of ProSoya as a partner in Canada gives important legitimacy and credibility to ASSOY, assuring organizations like Feed the Children that ASSOY is not a "fly-by-night" outfit. They have "milked that relationship to the fullest–which is fine with us." Indeed ASSOY provides soybeans, training, infrastructure, and marketing aid in addition to SoyaCows. Address: Executive Vice-President, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

7620. ProSoya Inc. 1999. SoyaWorld Inc. acquires So Nice soy beverage brand: Leading soy beverage company also secures a strategic interest in ProSoya Inc. (News release). ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. 2 p. May 17.

• ***Summary:*** "Vancouver-based SoyaWorld Inc., a leading manufacturer and marketer of fresh soy beverages, has acquired the So Nice soy beverage brand and a strategic interest in *ProSoya Inc.* Through this transaction the company has also acquired soymilk extraction plants and equipment in Ottawa and Vancouver. Terms of the acquisition were not disclosed.

"'So Nice is an organic soy beverage for health-conscious customers. SoyaWorld will re-launch the product in Canada and the United States as *So Nice Soyganic,* an organic soy beverage fortified with calcium and other essential nutrients. *So Nice Soyganic* will complement the company's successful flagship product So Good [based on soy protein isolates, licensed from Sanitarium Foods of Australia], the mainstream soy beverage and nutritional alternative to milk.

"'*So Nice Soyganic* is an organic beverage, that will be targeted to health conscious customers through distribution in the health food stores and natural food sections of major grocery stores nationwide," said Maheb Nathoo, general manager and chief executive officer of SoyaWorld Inc. 'The new *So Nice Soyganic* beverage is a natural extension of SoyaWorld's business and a quality addition to our portfolio of dairy-free beverages.'

"SoyaWorld will also assume the ownership of the licensor rights of So Nice brand for soy beverages that are currently marketed in the UK.

"SoyaWorld secures exclusive license to ProSoya soymilk technology: ProSoya Inc., an Ottawa-based soymilk technology company controlled by Dr. Raj Gupta, develops technology and equipment for production of 'non-beany'

soymilk using a patented 'air-less cold grinding' process. The ProSoya technology, which provides the soy base used in the manufacture of *So Nice Soyganic,* will now be licensed exclusively to SoyaWorld Inc. in North America, with rights in certain other countries as well.

"In addition, SoyaWorld Inc. gains access to ProSoya's international patents and advanced technology used to extract soymilk from soybeans. A table top version of the ProSoya soy extraction technology was recently tested by the Johnson Space Centre and was determined to be suitable for use in soymilk production on NASA's first manned mission to Mars.

"Soy beverage industry grows: The soy beverage market is one of the fastest-growing beverage categories in Canada. Dollar volume growth for soy beverages increased 106 percent in 1998 over 1997 with Canadians consuming more than 10 million litres last year.

"SoyaWorld Inc. is jointly owned by Dairyworld Foods of Vancouver, one of Canada's leading dairies, and *Sunrise Soya Foods,* Canada's largest tofu company. Formed in 1996, SoyaWorld is Canada's largest manufacturer and marketer of dairy-free beverages, with production facilities in Vancouver, British Columbia; Brampton, and Ottawa, Ontario.

"Contact information: SoyaWorld Inc. Maheb Nathoo, general manager and chief executive officer. (604) 420-0162.

"ProSoya, Inc. Dr. Raj Gupta, President. (613) 745-9115." Address: 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

7621. Conquergood, George. 1999. The two final deals: SoyaWorld and IPC, and SoyaWorld and Rajendra Gupta (Interview). *SoyaScan Notes.* May 18. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The main deal (the takeover of IPC by SoyaWorld) was finalized on Friday, May 14, with SoyaWorld buying the assets of IPC. There was never enough money on the table to satisfy all of the secure lenders/creditors, so they (banks, governments, and a debenture holder–the big thorn in the side of the company) got the lion's share or that cash. Their securities were mostly liens on assets–such as food plants, processing equipment, etc. Everybody else has to wait until the next money-payment time, when the first royalties are paid. Raj Gupta (who has spent much of the past year working on these contracts) negotiated a separate deal from IPC to grant a license to SoyaWorld; they have a license that is very good, but not as good as the one IPC had. Raj came out of both deals in very good shape, at least in the short run. His goal of seeing his high-quality soymilk much more widely available should definitely happen. Dairyworld Foods has the option to buy him out, according to a sliding scale formula, whenever they wish. Assuming the product is successful: As Raj's royalties increase it makes more sense for them to buy him out; the sooner they buy him out, the less it costs them. George thinks he will probably be out of the picture in several of years. George got half of the money he was expecting; he was not offered a job by SoyaWorld or by Raj; Raj is willing to pay him commissions on any equipment he might sell as long a George pays all up-front expenses. Raj is very conservative; he wants his money used for R&D rather than to sell and promote his equipment.

SoyaWorld got two complete SC-2000 systems (including boilers, storage tanks, refrigeration equipment, etc.) and an R&D lab–assets worth several million dollars. One plant is in Ottawa and the other in Surrey, near Vancouver. SoyaWorld hopes to have SoNice back on the market by late May or early June. They will probably launch the product in eastern Canada–probably using product made at the Ottawa plant (formerly owned by IPC), which once made all the SoNice products sold throughout North America (and packaged in New Jersey). Note: ProSoya has its offices two buildings away on the same street (Canotek Road).

The two SC-2000 systems together can each produce 2,000 liters/hour of soy base at 10% solids. This becomes about 7,000 liters/hour of formulated product. This will give SoyaWorld a good start toward its first goal of having fresh soymilk in every dairy case where its milk is sold in Canada. The next expansion will be to the United States, and then to the world. The CEO of SoyaWorld is Maheb Nathoo, a native of India, whose background is in the dairy industry with Dairyworld Foods. When SoyaWorld was created he became its first CEO. Peter Joe, the head of Sunrise, is chairman of the board of SoyaWorld. David Coe, who is head of Dairyworld is so busy buying up small dairies all over Canada that he is rarely seen.

Who was at the table during the months of negotiations that led up to this deal? The two remaining members of IPC's board of directors (Eldon Heppner and Ward Yeager), IPC's lawyers, Maheb Nathoo, and the lawyers for Dairyworld and SoyaWorld. Peter Joe, David Coe, and Raj Gupta were all in the background as active players. Raj is the major shareholder in IPC and IPC is the major shareholder in Raj's company–ProSoya.

SoyaWorld is only semi-interested in offering George a position as head of their world soya development and marketing operations–creating new partnerships, joint ventures, etc. This is disappointing to George who feels they have "kept him dangling for 9 months, saying they are going to offer him a job." Dairyworld Foods has a similar position for their dairy operations. David Coe may want his dairy people to try to look after the soy operations; Maheb and Peter Joe seem to be favorably disposed to George filling the position. If George were to work for Raj, he would, in effect, become part of a planned obsolescence program.

There are three huge dairies in Canada, each about the same size, and worth a little over one billion dollars. They are: Dairyworld Foods in the west, Parmalat Canada (including Beatrice) in Ontario, and the Agropur division

of Natrel (a co-op of dairy farmers in the east–Longueuil, Quebec). But Dairyworld Foods is rapidly expanding by buying dairies in Ontario, Quebec, and the Maritimes. They plan to be Canada's first national dairy company; even now they have total coast-to-coast distribution. Another big daily company was Alt, the old Borden's dairy, but it got split up among AgroPur and Parmalat. Dairyworld believes that the soy industry in North America has a very bright future. Part of their long-term strategy is to use their dominance in the soy industry to dominate the dairy industry. George believes that, starting about now, the dairy industry will start to lead the soymilk expansion, and push even lower the price of soymilk products. They may even be able to sell soymilk, like dairy milk, as a loss leader or at a much lower markup than other refrigerated dairy items.

George thinks that SoyaWorld will produce both aseptic and fresh (gable-top) soymilk. They have a large number of both Tetra Pak machines and ESL (Extended Shelf Life) machines. Any soymilk they make in western Canada at their Ottawa plant can be packaged nearby at their dairy in Brampton, 20 miles west of Toronto. As far as George knows, the same thing happened to Dusty Cunningham that happened to him. She has not been offered a job by SoyaWorld, but she is still doing consulting in Scotland.

Many companies are realizing that it's a good idea to set up a soy dairy adjacent to a plant with state-of-the art packaging equipment. However it is not a good idea to build the soy dairy in the plant, lest dust and microorganisms from the soybeans be introduced into an environment which must be kept extremely sanitary. Moreover, the machines come with such huge capacity, that they can be used most efficiently if they are packaging a variety of products.

Since George was not one of the people negotiating this deal, he has not seen the final agreements. But he knows the general outcome because so many people have talking and consulting with him to get basic information about the company and because he is still a major player (significant shareholder). He and Raj have been in touch regularly throughout the negotiations. Address: Ex Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

7622. Lee, Jenny. 1999. Burnaby-based SoyaWorld tightens grip on market: Patented technology acquired in purchase. *Vancouver Sun* (*British Columbia, Canada*)*.* May 18. p. D1, D12. Business section.
• ***Summary:*** On Monday, May 17, SoyaWorld, based in Burnaby, British Columbia, tightened its grip on Canada's $25 million a year soy beverage market. From International ProSoya Corp. of Surrey (near Vancouver) the SoNice brand, and soymilk extraction plants in Vancouver and Ottawa.

SoyaWorld also acquired a strategic interest in ProSoya Inc., an Ottawa-based company which developed the technology and equipment for producing a good-tasting soymilk using a patented grinding process. Financial terms were not disclosed.

SoyaWorld is jointly owned by Dairyworld Foods–western Canada's largest food company–and Sunrise Soya Foods, one of Canada's largest tofu manufacturers. Both companies are located in Vancouver.

A photo shows Maheb Nathoo, general manager and CEO of SoyaWorld, as he holds up new packaging for SoNice.

Note 1. Talk with receptionist at Dairyfoods World. Their official name is Agrifoods International Cooperative Ltd. They are a cooperative owned by dairy farmers in Canada. Their address: 6800 Laugheed Hwy., Burnaby, BC, Canada V5A 1W2. Phone: 604-420-6611.

Talk with George Conquergood of IPC. 1999. May 28. The date that SoyaWorld officially finalized its deal with IPC was Monday, May 10. May 17 was the date that SoyaWorld sent out its news release.

7623. Khodorych, Alexei. 1999. [A helpful bean]. *Kommersant-Dengi* (*Businessman-Money; Moscow*) No. 19. p. 21-27. May 19. [Rus]*

7625. Cunningham, Dusty. 1999. The founding of ProSoya UK Ltd., a new soymilk manufacturing company in Livingston, Scotland (Interview). *SoyaScan Notes.* May 21. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** ProSoya UK LTd. (formerly called ProSoya PLC) is a new soymilk manufacturing company licensed to use the ProSoya process. They are located at No. 2 Kingsthorne Park, Houstoun Industrial Estate, Livingston, Westlothian EH54 5DL United Kingdom (Scotland). Phone: +44 1-506-433-777. David Simpson is managing director, and David Cormack is production manager. Address: Suite 114, No. 10 Paul Kane Place, Victoria, BC, V9A 7J8 Canada. Phone: 250-361-3225.

7626. Gupta, Rajendra ("Raj") P. 1999. Update on ProSoya Inc. Background on Raj Gupta (Interview). *SoyaScan Notes.* May 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Raj is very happy with the fact that Vancouver-based SoyaWorld Inc. has acquired the SoNice brand and a strategic interest in ProSoya Inc. Raj has 5-6 U.S. patents on his process and equipment. The first patent was issued in about 1990 and has a life of 18 years, so it will be valid until about 2008.

About 35 SoyaCows (VC-40s) are now in operation in India–most of them in private businesses making tofu (soya *paneer*) rather than soymilk. Three or four of these are in New Delhi.

Raj's formal name is Rajendra Prasad Gupta. He was born on 18 Oct. 1942 in Sahranpur, Uttar Pradesh, India. He received all of his formal education, including his PhD degree in India. He married Rashmi in 1975 and is still married; she is very interested in his work with soy.

Grant Wood is a Canadian mechanical technologist who was Raj's colleague at the National Research Council. Raj had approached many people, but they were unable to build the machine he wanted. He told Grant Wood that he was trying to make a small (SC-20 type) soymilk machine, and that he was doing this for humanitarian purposes and for Child Haven. He asked Grant if he could help. As soon as he heard "humanitarian" he immediately got interested. He volunteered all his time, and a great deal of it, with no offer or promise of any future reward. Raj paid all expenses for materials. He had an excellent workshop in the 2,500 square-foot basement of his home in Ottawa, and there he built the first prototype and assembled the first twenty SoyaCows in a workspace on which he paid no overhead. As ProSoya became more of a commercial establishment, in recognition of his generous and selfless work, Raj issued Grant about 10% of the company's shares. He still owns those shares, and he will benefit as the value of the company rises. He is not interested in cash now. He and his wife can get $1 million tax free.

It was not until 1994 that ProSoya outgrew the basement workshop and moved into the first commercial building on which the company had to pay rent.

ProSoya Inc. manufactures soymilk equipment and licenses technology. The brand "So Nice" cannot be registered as a trademark; it can be written as either "SoNice" (pre-1999) or "So Nice" (now). Address: President and CEO, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

7627. Joe, Peter. 1999. Sunrise Soya Foods and the creation of SoyaWorld Inc. in Vancouver, Canada (Interview). *SoyaScan Notes.* May 26. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** First a bit of background: In late 1995 Peter Joe went to Dairyworld and began talking with them about doing a soy yogurt together. Dairyworld is a huge co-operative of dairy farmers in western Canada (not just British Columbia). Gradually the talk turned to soymilk. Dairyworld had powerful packaging and distribution capabilities, while Sunrise had manufacturing and a deep knowledge of the soy business. Dairyworld got more and more interested in soymilk. Initially Peter started talking with a person who is no longer there. As the talks grew more serious, Maheb Nathoo was added to the team that soon drew up a shareholders and joint-venture agreement. Maheb, who is very bright, seemed to have a personal interest in soy. His daughters were into soy. He realized that milk is a commodity, that soymilk is another form of liquid protein, and is part of the milk shelf. Now he has become a convert, and he feels very strongly about the future and potential of soy. Maheb was the person who convinced the board of Dairyworld Foods (which consisted mainly of dairy farmers) that the joint venture with Sunrise was the way to go. These farmers realized that Sunrise was getting more and more space on the dairy shelf (i.e., invading their territory) so, hey, why not get involved with this newcomer. Dairy people also remember what happened with margarine; if they had gotten into the margarine business at an early date, they would have been able to offer it as another product, rather than having to compete with margarine using butter. Finally, the top executives and management people at Dairyworld think beyond the dairy farm and dairy farmer mentality, and they have done a good job over the past 3-4 years in getting the approval of the dairy farmers to go ahead with this joint venture.

At the same time Peter met Sanitarium people at trade shows for a number of years. Sanitarium was trying to sell the product into Canada from Australia in an aseptic package. Finally Peter went to Sanitarium to ask for a license; they were looking to expand internationally, so the timing was good. The final agreement gave Peter exclusive rights to sell So Good in the USA and Canada.

SoyaWorld Inc. was incorporated in Aug. 1996 with Dairyworld Foods and Sunrise each putting in money and owning half the shares. The new SoyaWorld board of directors (4 people, two from each company) was formed at that time. Maheb moved from Dairyworld to SoyaWorld in late 1996. In mid-1997 SoyaWorld got the license to make So Good from Sanitarium Foods (Australia). Test marketing of So Good began in mid-1997 (with the name SoyaWorld Inc. on the package), then in Jan. 1998 the product was officially launched with a big TV advertising campaign. The humorous ad shows a cow confessing that she drinks So Good; it is even endorsed by cows! This may have been the first national mass market TV campaign for soymilk in North America. In late 1997 the Canadian government first allowed soymilk to be fortified with calcium and vitamins. This showed a weakening of their many laws designed to protect dairy products. Use of the word "milk" is still not allowed. Soyganic was launched in mid-1998.

Peter works closely with Dave Coe, who is the CEO and president of Dairyworld Foods and on the board

of SoyaWorld. He is the one who is responsible for the joint venture with Sunrise and for what is happening with SoyaWorld–in a sense. Maheb is now working for SoyaWorld as general manager and CEO; he no longer works for Dairyworld.

If a taste panel consisting of typical Canadians was asked to taste So Good and SoNice Vanilla, Peter thinks So Good would win. SoyaWorld plans to target So Good and SoNice to different markets. SoNice in Tetra-Pak cartons still has a very strong following among natural foods customers, but SoyaWorld will try to sell SoNice in supermarkets as well as natural food stores in both fresh and UHT cartons. So supermarket consumers will have a choice. So Good is sold in both gable-top (fresh) and aseptic / UHT packages, but about 90% of the sales come from the fresh product. Peter would guess that the same would be true in the USA. Many Asian-Canadians love Soyganic, which has a beany flavor; they have grown accustomed to that taste. Address: General Manager, Sunrise Soya Foods, 729 Powell St., Vancouver, BC, V6A 1H5 Canada. Phone: 604-254-8888.

7628. Bramblett, Billy. 1999. SunRich in Minnesota is now a major supplier of fresh soymilk base (Interview). *SoyaScan Notes.* May 27. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** This liquid soy base is made from whole soybeans. Wildwood is starting to buy this base and use it to make their soymilk; their first run will be next week. According to the people that Wildwood has been talking to, SunRich is shipping 16 truckloads a week; each truck contains 6,000 gallons. Billy thinks the quality is excellent. He thinks SunRich may use the airless cold grind to make this soy base; it is his understanding that is the only way you can get the non-beany taste. He is not sure exactly what process SunRich uses, but he knows that the flavor is really good and very similar to that of the original White Wave Silk. White Wave now gets the soy base for their Silk soymilk from SunRich.

They can get up to 15% solids in the base using some kind of vacuum process; Wildwood then dilutes it back down to about 4% solids for their soymilk.

Wildwood sees soymilk as its "crossover" product–the one that will get the company into mainstream stores. They plan to follow behind the soymilk with their bakes and burgers. Wildwood has been meeting with people like Albertson's who want to take the company's products nationwide, but Wildwood is not quite ready to make that leap yet. Plus they want a free fill in ever store–a free case of product for each SKU introduced–and those freebees alone would cost Wildwood some $30,000 to $40,000. Address: Wildwood Natural Foods, 135 Bolinas Rd., Fairfax California 94930. Phone: 415-485-3940 X-47.

7629. Bramblett, Billy. 1999. Wildwood's good, long-standing relationship with Safeway supermarkets in California (Interview). *SoyaScan Notes.* May 27. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Wildwood first started selling its products in Safeway supermarkets in California in late 1987 or early 1988. Safeway was very nice to Wildwood. They allowed Wildwood to "cherry pick," meaning to pick 30 the stores they wanted to service themselves. Rock Island will service any other ones that Wildwood doesn't want to serve. Wildwood picked the stores based on their location and demographics, and on Wildwood's driving routes and schedules. Address: Wildwood Natural Foods, 135 Bolinas Rd., Fairfax California 94930. Phone: 415-485-3940 X-47.

7630. Bramblett, Billy. 1999. Update on Wildwood Fairfax and Wildwood Santa Cruz (Interview). *SoyaScan Notes.* May 27. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Wildwood no longer makes any sandwiches. The 65 people employed at the Fairfax facility include all of Wildwood's driving staff, accounting staff, production staff, and support staff. Santa Cruz is basically a production facility, though three drivers and several administrators operate out of Santa Cruz. Santa Cruz produces all the tofu, and the YoSoy traditional soymilk. Second generation products made at Santa Cruz include the bakes, the burgers, and the tofu cutlets. If it comes in a vacuum-packed bag or a water-pack tub it is made in Santa Cruz. If it comes in a cup (as 18 products do), it is made in Fairfax–including 5 flavors of braised tofu, 2 tofu salads, etc.

Wildwood believes that it makes the best-tasting tofu on the West Coast. It has also been innovative in developing many delicious products, which some other companies are now trying to imitate.

Wildwood has long been in a big crunch making 30,000 lb/week of tofu; about half of this is sold as tofu and half goes into making second generation products. But they could sell twice that much tofu if they had the capacity to make it.

Last year Wildwood started making Baba Ganooj for Trader Joe's (TJ). The project started as a sort of side deal to the Hummus, making maybe 700 units a week. Within a month, Wildwood was making 5,000 units as week for TJ. Bill had to add two shifts and make many other arrangements. TJ liked it and asked what other products Wildwood had. They came and visited, and Wildwood showed them its various products. TJ then asked if Wildwood could make baked teriyaki tofu for them. Billy agreed on the condition that they not order more than 5,000 units/week; TJ agreed. Their buyer for that section is a really great person named Kimberly Sprinkle Kruell, who Wildwood trusts. She told Wildwood that she and TJ like Wildwood and their products, and want to work with the company.

So in an effort to make more "secondaries," Wildwood went to tofu makers it knows and trusts, and ordered a pallet (several thousand pounds) of tofu. They couldn't do it; they

were unable to come up with the volume, the quality, and the shelf life that Wildwood needed. So Wildwood concluded that they have to make the tofu themselves.

Wildwood's fresh soymilk in gable top cartons is now selling well. It looks like they might be doing that for Trader Joe's too. "If that happens, it's gangbusters–outstanding!"

Wildwood was working with Ted Nordquist, who was making their soymilk base; he and Jeremiah have been friends for more than twenty years. But Wildwood "divorced" Ted and went to another supplier of soymilk base. He is very good at making non-dairy products, but he's a character, and working with him is very difficult. He is an enigma, and he doesn't seem to know what he wants. He and Wally Rogers were buddies and partners for many years, and all of a sudden they just split up. Address: Wildwood Natural Foods, 135 Bolinas Rd., Fairfax California 94930. Phone: 415-485-3940 X-47.

7631. Conquergood, George. 1999. SoyaWorld Inc. (Interview). *SoyaScan Notes.* May 28. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** SoyaWorld is only a marketing company. They are located at 4074 Lozells Ave. in Burnaby, a suburb of Vancouver on the eastern side of the city. Dairyworld Foods is also located in Burnaby. The city of Vancouver is located just a few miles north of the Washington state border; to its west is water–the Straight of Georgia. Across the Strait is Vancouver Island. Surrey is a few miles southeast of Vancouver.

SoyaWorld occupies some small offices on the second floor of an old ice cream plant owned by Dairyworld Foods but now no longer operational and used by Dairyworld as a storage facility. About 8 people are employed by SoyaWorld and work in those offices. The president is Maheb Nathoo, and he goes to work there each day. One marketing person, one sales manager, one controller (accountant), etc. also work there. It is now clear to George that he will not be working for SoyaWorld. He had lunch with Maheb yesterday, and they have discussed this matter for months. They may still want to retain George as a consultant some day, or he may end up as their competitor in the soymilk business. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

7632. Conquergood, George. 1999. SunRich, IPC, and soymilk (Interview). *SoyaScan Notes.* May 28. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** SunRich makes all the soymilk sold by Westbrae and George believes they make soymilk for many other companies. They have done so for at least several years. At one point in 1998 Lorne Broten negotiated with Allan Routh, president of SunRich, about buying IPC–or at least coming to their financial aid. Allan was interested in buying the "SoNice" brand–which is more precisely the "ProSoya SoNice" brand since "So Nice" cannot be registered as a trademark by itself. Allan wasn't interested in licensing or buying the ProSoya process; he apparently didn't want to pay Raj Gupta any money. Allan sent some of his soymilk to George; he wanted to know if George could formulate the SoNice product with his soymilk. George did so and was very impressed. In fact, he thinks it tastes very similar to that formerly made by IPC using the ProSoya process–though not quite as good, perhaps because of the formulation.

How would ProSoya find out if SunRich or any other company was using the patented ProSoya process? Raj Gupta says he can do a "footprint" of the product's flavor profile of any soymilk product [perhaps using chromatography] and tell in that way–with only the commercial product for evidence. But George has never seen any proof of this. If Raj is right, he would not have to send any "patent police" into a competitor's plant. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

7633. Conquergood, George. 1999. How IPC made soymilk using the ProSoya process (Interview). *SoyaScan Notes.* May 28. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The washed and soaked soybeans are ground with cold water in a sealed chamber using an "airless cold grind" process. This slurry is piped, still in a sealed airless environment, into a cooker, where it is cooked with steam injection. The internal temperature being raised to 120ºC, it is held there for 3 minutes, then "flashed" into a vacuum chamber. Prior to this "flashing" step no air has come in contact with the slurry. The critical point for the lipoxygenase enzyme is when the bean is being broken or ruptured; after that is less critical. The soymilk is then separated from the okara, in a closed, fairly well sealed environment. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

7634. Conquergood, George. 1999. The four main soy companies created by accountant Lorne Broten from 1994 to 1997 (Interview). *SoyaScan Notes.* May 29. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** After the many early companies–and shell companies–created by Lorne to raise money, he formed four main soy companies: (1) The first real company, Pacific ProSoya Foods Inc. was created in 1994. (2) International ProSoya Corp. (IPC) was formed in early 1996. (3) IPC Eastern was created a few months later–in about March or April 1996 when IPC purchased ProSoya's Ottawa plant. That became an operating company that operated the Ottawa plant. All of the employees were paid by IPC Eastern. (4) ProSoya Foods Inc. was formed by a name change in 1997;

it had formerly been named Pacific ProSoya Foods Inc. That became the operating company for the western plants in British Columbia; it likewise paid those production employees. But any administrative staff, such as George, got paid by IPC. ProSoya Foods Inc. was also the marketing and sales company that sold the soy products. If another company purchased SoNice, they would get an invoice from ProSoya Foods Inc.

George thinks of the formation of these various companies as "shell games." It's a way of shuffling assets, borrowing money, etc. For example, you can borrow as much money as possible under one company name, then go borrow more under another name. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

7635. **Product Name:** Soy Shake [Vanilla Almond, or Mocha Millennium].
Manufacturer's Name: Fresh Samantha.
Manufacturer's Address: 41 Spring Hill Rd., Saco, ME 04072. Phone: 1-800-658-4635.
Date of Introduction: 1999. May.
Ingredients: Vanilla Almond (2001/04): Water, bananas, soymilk powder, cane juice, vanilla extract, vitamins and minerals.
Wt/Vol., Packaging, Price: 16 fl oz (480 ml = 1 pint) PET plastic bottle. Retails for $2.49 to $2.79 (East Coast).
How Stored: Refrigerated.
New Product–Documentation: Leaflets sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2001. March 8-11. "Fresh Samantha Soy Shake: Shake your body healthy!"

Talk with Betsy Schipper of Odwalla Samantha. 2001. April 23. The Soy Shake line was introduced by Fresh Samantha in 1999. The first flavor was Vanilla Almond (May 1999), followed by Mocha Millennium (July 1999, in anticipation of the millennium of 1 Jan. 2000); the latter was reformulated to become Belgian Chocolate in about Sept. 2000. Based on soy powder, the products were made in Saco, Maine. The plant will close down in May 2001 and be moved from Maine to Florida. The product has been sold mainly on the East Coast, from Maine to Florida. It is sold in a 16 oz PET bottle, refrigerated, for $2.49 to $2.79. The company named Fresh Samantha started in 1992 in Maine. Before that it was a sprout company named Down East Sunsprouts, a family company started by Bob and Julie Carter. They made alfalfa sprouts and many other types of sprouts (in their basement), plus a hummus, tabbouli, and Brocamole. They purchased a small company named 24 Carrots and began to make carrot juice. They named the juice Fresh Samanta after their granddaughter. Their first soy product was the Vanilla Almond Soy Shake.

In May 2000 Odwalla purchased Fresh Samantha; they did not change anything about this product. These products are GMO-free and selling well. Their goal is to sell the product nationwide.

Sent by Betsy Schipper of Fresh Samantha. 2001. April 23. (1) "The Fresh Samantha story" (color leaflet, 3 panels each side, front and back). Contents: This is the family story (Brief company history). What we believe in. Nutrition. Why taste matters. Our family of juices. (2) "The juiceheads guide to the universe." A good introduction to nutrition basics, plus nutritional information about the company's juice products. (3) Web pages printout related to soy shakes. (4) "Fresh Samantha power snack: Introducing soy shake–Vanilla Almond flavor." (5) Two samples of each soy product with Labels. Soyfoods Center taste test. Excellent flavor and consistency. Cute and colorful label design. We wish the sweetener were not sugar.

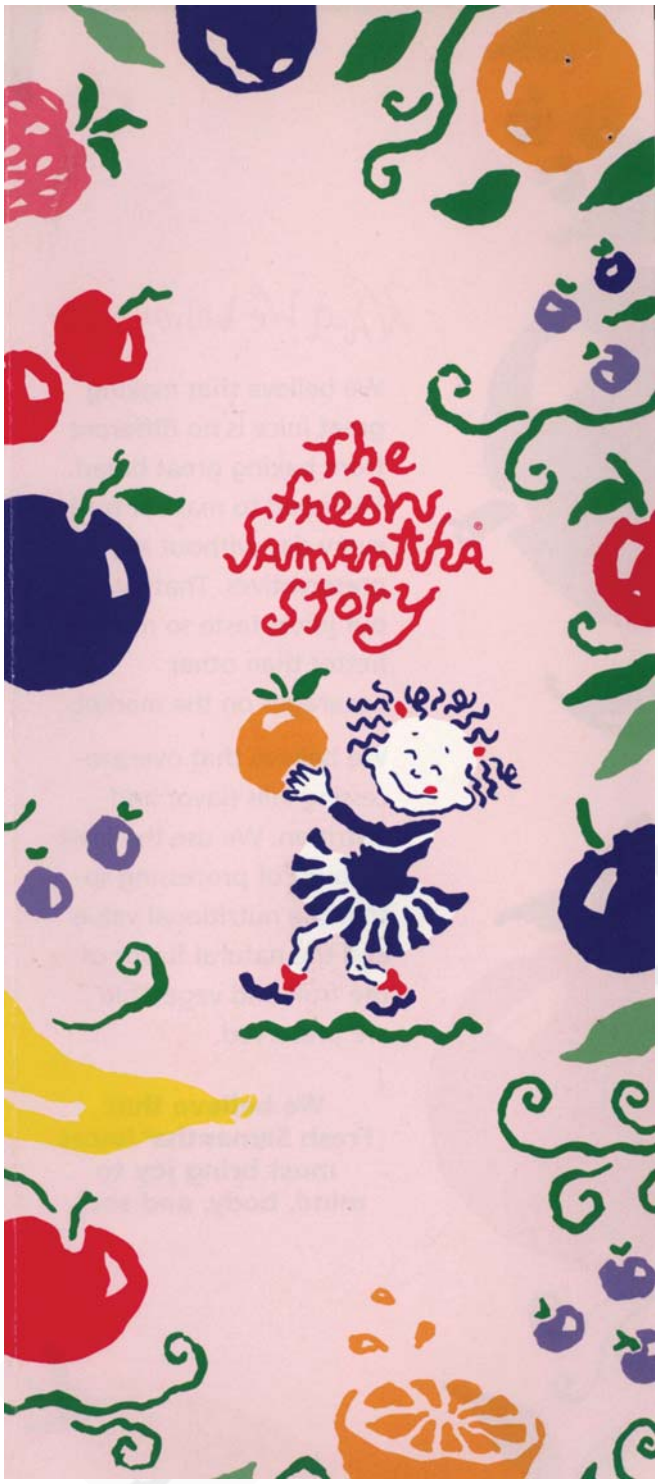
7636. Fuller Life, Inc., BetterThanMilk Div. 1999. Why Better than Milk (R) is also Better than Soy and Rice Beverages (Leaflet). Maryville, Tennessee. 1 p. Front and back. 28 x 22 cm.
• ***Summary:*** This attractive color leaflet (dated May 1999) was sent by Fuller Life in May 1999. A sticker shows that "Better Than Milk" had Booth #1255 in the Food Pavilion. The front states: "Better Than Milk is a mix instead of a liquid, so it: (1) Costs up to 30 percent per quart than liquid quarts. (2) Mixes to your preferred thickness and taste. (3) Makes as little or as much as you need at a time, so its always fresh." On the rear are nutrition facts and ingredients for eight SKUs, which come in either beverage mix cans or pre-mixed cartons.

Note: This product was originally introduced in 1987 by Sovex Natural Foods in Collegedale, Tennessee. In March 1999 the exact same poster (almost) was distributed at Natural Products Expo West (March 1999). Hearty Life, Box 2178, Collegedale, TN 37315. Phone: 1-800-227-2320. It was sent to Soyfoods Center by Patricia Smith. Address: 1628 Robert C. Jackson Dr., Maryville, Tennessee 37801. Phone: 1-800-227-2320.

7637. Tofutti Brands Inc. 1999. Tofutti. 1998 annual report. 50 Jackson Dr., Cranford, NJ 07016. 16 p. 28 cm.
• ***Summary:*** Net sales for the 52-weeks ended Dec. 27, 1998 were $8,991,000, up 21% from the previous year. Net income (profit) rose to $560,000, up 4.7% from the previous year. 1998 was the seventh consecutive year that the company has been profitable.

During 1998 the company introduced the following new products: Sugar free fat free Tofutti in half gallons. Tofutti Too Too's. Better Than Cheese Cake. Pizza Pizzaz. Tofutti Blintzes and Potato Pancakes. Tofutti Cutie Pies. Teddy Bears Chocolate and Pancake Syrups, and Tofutti Totally Nuts.

Accompanying the annual report is a "Notice of Annual



This is a family story

Julie Carter falls in love with Maine during idyllic childhood summers. She decides to pile the whole family into a Ford Station Wagon and head for Maine from Illinois. The year is 1970. Neither Julie nor Bob Carter has a job, so Julie decides to grow sprouts in the basement of her home for a local food co-op. Soon she's delivering sprouts to local supermarkets, enabling Bob Carter to quit his new job in insurance and join up. Their son Michael Carter graduates from Colby College and, after a brief stint at a physics lab, he too joins the rest of the family in the basement.

Doug Levin meets Abby Carter at Wesleyan University in 1983. They get married. After 7 years in advertising in New York City, Doug joins the family in the basement.

By 1992 the basement is quite crowded.

Michael buys 44 acres in Buxton, Maine, and builds his home and a new facility right next door.

That same year the business decides to acquire a small fresh carrot juice processor in Portland, Maine. Within 3 months Fresh Samantha® is born. The product is named after Doug and Abby's daughter who is 2 years old at the time. Abby who is a children's book illustrator, designs the new labels. The first product is Carrot Juice.

Today Fresh Samantha® is sold in Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Philadelphia and Washington D.C. Although Fresh Samantha® has grown dramatically, this is still very much a family business.

Meeting of Shareholders and Proxy Statement (10 p.)." David Mintz' salary rose to $225,000 in 1998, up from $180,000 in 1997 and $155,000 in 1996. The 1998 figure includes a $50,000 bonus for Mr. Mintz. This is a company that is run for the management, not for the shareholders. Address: Cranford, New Jersey. Phone: 201-272-2400.

7638. **Product Name:** Silk Soymilk Creamer (Non-Dairy, Liquid).
Manufacturer's Name: White Wave, Inc.
Manufacturer's Address: 6123 E. Arapahoe Rd., Boulder, CO 80303. Phone: 303-443-3470.
Date of Introduction: 1999. May.
Ingredients: Organic soymilk* (filtered water, organic whole soybeans*), expeller pressed organic canola oil*, organic raw cane crystals*, maltodextrin (from corn), soy lecithin, potassium phosphate, sodium citrate, carrageenan, tapioca starch, natural flavors. * = Organically grown and processed in accordance with the California Organic Foods Act of 1990. Certified by QAI.
Wt/Vol., Packaging, Price: Pint gable-top carton.
How Stored: Refrigerated.
Nutrition: Per 1 tablespoon (15 ml): Calories 15, calories from fat 10, total fat 1 gm (2% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 5 mg, total carbohydrate 1 gm (dietary fiber 0, sugars less than 1 gm), protein 0 gm. Vitamin A 0%, vitamin C 0%, calcium 0%, iron 0%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Talk with Steve Demos, founder and president of White Wave. 1999. Aug. 27. Silk Creamer was introduced in March 1999 at the Natural Products Expo at Anaheim, California. Based on organic Silk soymilk and non-hydrogenated oils, it's sales have already exceeded the first year's sales after only 6 months. Its a huge category. Dean Foods is the No. 1 producer of non-dairy creamers in the USA, but they make powders and Silk is a liquid. Some new flavors are planned for the near future.

Leaflet (color) sent by Mia Fox, Marketing Manager of White Wave. 1999. Aug. "The natural way to smooth out your coffee. The non-dairy creamer you put into your coffee or tea should be as full of goodness as it can be... We include minimally treated, naturally occurring minerals and compounds... to give you a silky smooth creamer that won't curdle in your beverage. Silk Soymilk Creamer is lactose free, dairy free, cholesterol free, organic, and 100% natural." On the front is a large color photo of the product. On the back are ingredients and nutrition facts.

Pint carton with Label sent by James Terman of White Wave. 2000. May 11. 2.75 by 2.75 by 4 inches. Tetra Rex package. "Made with organic soymilk. Organic–Third party certified." Talk with James Terman. 2001. May 29. This product was first sold in May 1999.

7639. Conquergood, George. 1999. IPC's nightmares

packaging SoNice soymilk in Canada and the USA (Interview). *SoyaScan Notes.* June 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In Nov. 1996, when IPC (International ProSoya Corp.) first launched SoNice (in 1 liter aseptic) in Canada, they were planning to make both a regular and a lite (with water added to reduce calories and fat per serving)–except nobody wanted the regular, they all wanted the lite. So they produced a Vanilla Lite and an Original Lite–but Canadian laws forbade them from call the original "original lite" because of some detail (long forgotten) concerning fat ratio. The chocolate and natural were always the "full formula." In the aseptic 250 ml size, introduced after the 1 liter as an emulation of it, they produced only Chocolate and Vanilla Lite.

Then in Jan. 1997 they followed with a refrigerated (gable-top) line in Canada, which bore a rondel in the lower left corner of the front panel; in a semicircle across the top was written "Canadian Technology" and in the center was a maple leaf. This refrigerated line reflected new formulations, with fortification. But the label didn't mention that it was

fortified, except on the ingredient panel–because at that time (in 1997) the regulatory agencies in Canada forbade fortification of soymilk in Canada. Moreover, there are different labeling regulations in the USA and Canada. So IPC must package its soymilk for the American market in a different package, with no French text on half the package, and based on at least four different nutritional labeling rules. (1) The nutritional panel in U.S. products must bear the heading "Nutrition Facts." (2) The rules for rounding off nutrient values are different in the two countries. (3) The serving size is 1 cup (240 ml) in the U.S. vs. 250 ml in Canada. (4) The U.S. prefers quarts while Canada uses the metric system–like almost all other countries worldwide. These differences created a packaging nightmare for IPC.

When IPC originally launched the Canadian refrigerated line it was being packaged by Farmland in New Jersey. They were packaging only Canadian products. But when they launched these products in the USA it was another nightmare, because the packaging on these high-speed machines had to be changed from quarts to liters for the same flavor. So they decided to change the Canadian packaging to all quarts and half gallons–so Farmland didn't have to stop its machines to change packages by flavor. But they still had to change packages by country. The original Canadian refrigerated line in 1 liter gable-top packages was supposed to be packaged at the Beatrice plant in Ontario. You can tell this rare vintage of label because the Kosher symbol is "COR 110" in a circle.

Refrigerated products were first introduced to the U.S. market at the Natural Products Expo (Baltimore, Maryland) in Oct. 1997, and products were first shipped in November or December 1997. Note: On the 1 quart ProSoya SoNice soy beverage for the USA, the manufacturer is given as SoNice Soy Corporation, P.O. Box 93009, Langley (Vancouver), BC, V3A 8H2 Canada. But on the refrigerated 1.89 liter product for Canada the manufacturer is given as ProSoya Foods Inc., Surrey, BC, V3S 8E7. Why? At one point IPC had So Nice Soy Corporation marketing the product. This was a very short-lived print run; it changed as time passed, but its all basically the ever-changing IPC. So we're back to Loren Broten and his shell game. But to make things even more complex (and comical), the original processing plant at 19292 60th Ave. in Surrey is literally on the border between Langley and Surrey. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

7640. Mukherjee, Anjali. 1999. To your health: Soya beans, the elixir of youth. *Times of India* (*The*) (*Bombay*)**.** June 3. p. A7.

• ***Summary:*** "A cup of soya milk a day can keep aging at bay." This might be the maxim of the new millennium. The humble soya bean has been found to contain enough properties and power that can retard aging, fight cancer, reduce blood cholesterol and sugar, and reduce the risk of osteoporosis–to name a few.

This article discusses each of these health claims, with emphasis on cancer prevention and its mechanism.

Although the soya bean has long been a part of diets throughout East Asia, it is relatively new to the Indian palate. "You can consume soya bean protein through various soya bean products like soya milk, soya bean flour, whole soya beans, soya bean chunks, soya bean granules [textured soy flour]. Sadly, soya bean sauce and soya oil, familiar to the Indian palate, do not offer the same benefits."

For best results, try to include in your daily diet a cup of soya milk or 80-100 grams of tofu or about 50 grams of soya flour. Encourage your children to eat soya beans.

The writer then gives ten specific suggestions for ways to adopt soya beans into a family's daily diet: (1) When making chappati [chapati] dough, use equal parts soy flour and wheat flour. (2) For tasty rotis, add a little soya flour to the dough. (3) When baking, replace about one-third of the regular flour with soya flour. (4) Use soya milk as often and in as many ways as possible. (5) Roasted soya nuts, which are sold in both salty or sweet flavours, are a delicious, nutritious snack for both children and adults. (6) When making a fruit shake, use either soya milk or tofu. (7) Use tofu in place of paneer in your favorite recipes. (8) Add soaked whole soya beans to soups, stews, or casseroles. (9) Make Soya khakras in place of regular khakras. (10). When making biscuits, substitute soya flour for part of the wheat flour. Address: Diet and obesity consultant. Runs the Obesity Centre in Colaba and Bandra [in Bombay].

7641. Thrash, Agatha. 1999. History of work with medicine–orthodox and alternative, and vegetarianism (Interview). *SoyaScan Notes.* June 4. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Both Agatha and her husband, grew up in Georgia, and are physicians with MD degrees. They both went to medical school at Medical College of Georgia (he started in 1950, she in 1951). They met in medical school and married after her second year. They did their internships at the University of Louisville (Kentucky), and began their residency in 1954 at Emory University in Atlanta, Georgia. Then in 1960 they started practicing medicine at a regular hospital in Columbus, Georgia; her husband had a private practice in internal medicine, and she was in pathology at St. Francis Hospital, Columbus, Georgia (she later became chief pathologist). They practiced medicine in this way for about ten years. During that time were not Seventh-day Adventists.

Then they began to study the Bible, and to recognize that the Bible doctrines as taught by Seventh-day Adventists are the same as what the Bible teaches. They started to go to an SDA church where A.C. Becker was the pastor; he was a lifelong vegetarian. Pastor Becker and his wife looked very healthy, as did their three children. Agatha and her husband

were "amazed" that a person go live an entire lifetime without eating meat. Earl Prest succeeded A.C. Becker as pastor of this church. In 1964 she and her husband became Seventh-day Adventists. They continued their regular medical practice, but gradually they began to have a bit of unrest. "Surely, this is not all there is to the practice of medicine. You just give drugs, the patients come back again and again, and you usually give them more and more. But we as doctors have done nothing to change the basic course of their disease. We have merely made it tolerable." They got interested in alternative medicine through Seventh-day Adventists. They decided they could never practice such medicine in a hospital, so they started Yuchi Pines Institute in Seale, Alabama. They bought the land in 1968 or 1969, and in 1970 it was organized as a corporation. They have been operating as a "Lifestyle Center" ever since then. They are chartered in the state of Alabama as educational, benevolent, and charitable–a nonprofit, tax-exempt organization. "Now we try to train them to be in charge of their own health, using the eight natural laws of health: Nutrition, exercise, water, sunshine, temperance, air, rest, trust in Divine power. We have been positively amazed that many diseases–such as hypertension, high blood pressure, diabetes, allergies, asthma, and symptomatic heart disease–could be literally cured or greatly improved using these simple, natural methods. We have seen nothing short of miraculous results."

In 1975 she and her husband wrote their first book titled *"Blessed art thou, o land, when... thy princes eat... for strength, and not for drunkenness." Ecclesiastes 10:17.*

Why does our government, which is now so concerned with reducing medical costs, not consider using these methods when appropriate? Agatha thinks it is because of the powerful drug company lobby.

Dr. Thrash was deeply influenced in her medical work by Dr. Dunbar Smith, a Seventh-day Adventist, who ran the Bates Hospital (until the government took it over during World War II), and Adventist hospital in New York. He had been a missionary and a minister, but he had a problem with this voice from overstraining it. So he decided to become a physician. He came back to the USA, studied medicine, practiced medicine for many years, then became the head of the Bates Hospital.

She was also influenced by Earl Prest, the pastor of a local SDA church in Columbus, Georgia. He was from New York and he knew Dunbar Smith; it was from him that Dr. Thrash was introduced to Dunbar Smith. Madison College in Tennessee was a small inspiration.

Concerning powdered soymilks or so-called "tofu milks": She thinks some of them (such as "Better Than Milk") are unhealthful if used as a major food source. The first ingredients are fat and sugar. She knows and likes the major liquid soymilks such as Edensoy, Westsoy, Vitasoy, etc. Address: Yuchi Pines Institute, Route 1, Box 273, Seale, Alabama. Phone: 334-855-4709.

7642. Gorman, Christine. 1999. The joy of soy: Worried about high cholesterol? This versatile bean may be just what the doctor ordered. *Time.* June 7. p. 68-69.

• ***Summary:*** Begins with the story of a woman, age 67, who volunteered for a study to determine whether or not drinking a soy protein shake could lower blood cholesterol. She was delighted when her cholesterol level fell from 245 mg/dl to 205 mg/dl, and her LDL or "bad cholesterol" level fell from 170 mg/dl to 130 mg/dl. Now that the study is over, she still sprinkled soy protein on her breakfast and continues to see results–as more than 25 scientific studies have shown. Every little bit counts; a 1% drop in total cholesterol leads to a 2% drop in the risk of developing heart disease. For best results consume soy in minimally processed forms. Many Americans find boiled soybeans (edamame) to be delicious. Tofu is good if you find the right seasoning. Soy milk is nice on cereal but will ruin a cup of coffee. Miso soup contains quite a bit of salt. Soy powders (soy protein isolates) can be added to shakes or sprinkled on cereal. Soy isoflavone supplements are best avoided.

Many Americans are discovering that soybeans aren't just for vegetarians and livestock anymore. They may be able to fight cancer and build healthy bones. Later this summer or fall the FDA is expected to put soy on its short list of foods (like whole grains, and fiber-containing fruits and vegetables) that may actually reduce one's risk of heart disease.

Scientists are still not sure why soy lowers cholesterol levels. It may be the isoflavones or the soy protein or a combination of both.

In Japan, the incidence of breast cancer is much lower than in the USA [about one-sixth] and other industrialized countries. One reason may be the soy in the Japanese diet; the isoflavones in soy may act as antihormones, like the drug tamoxifen. Yet this is not yet clear. In the worst case, soy might even negate the protective effects of tamoxifen.

Photos show: Two large pods of edamame. A cake of tofu which is "a great source of nutrients." Japanese consume more than 50 lb of tofu per person per year.

7643. Harrigan, Brian. 1999. How to buy a soymilk system made by ProSoya Inc. (Interview). *SoyaScan Notes.* June 7. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** All orders for SoyaCows of any size should be directed to ProSoya in Ottawa, Canada. The only ones they may not be able to accept are those for systems with a capacity of greater than 200 liters/hour that will be used in the USA or Canada; they must refer such orders to SoyaWorld in British Columbia. SoyaWorld might be interest in a joint venture but not in competitors.

The SoyaCow VS-40 system, which makes about 40 liters/hour of soymilk, sells for US$5,950, including the grinder-cooker, press, and 8 kilowatt electric boiler, but not including small utensils (such as plastic buckets and ladles)

and the packaging equipment. The SoyaCow VS-30 has a propane gas boiler.

The SoyaCow VS-200, which makes about 200 liters/hour of soymilk, costs US$42,500, including an electric boiler. A "stripped down" model is available for $25,000; it includes no skid or boiler.

The soymilk that comes out of these two SoyaCow systems contains 8% soy solids. Since ready-to-drink soymilk typically contains 5% soy solids, each system will make about 60% more ready-to-drink than its rated output. Address: Executive Vice-President, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

7644. Kantor, Roy. 1999. Re: The six largest tofu manufacturers in Israel. Letter (fax) to William Shurtleff at Soyfoods Center, June 8. 1 p. Typed, with signature on letterhead.

• ***Summary:*** The follow companies are listed in descending order of the amount of tofu they produce: 1. Shizen Tofu in Kfar Sava. 2. Jerusalem Tofu in Jerusalem. 3. Japanese Tofu in Natanya. 4. Kafri Bari (Healthy Countryside). 5. Ishuzuki Tofu in Ashdod. 6. Taam Ha Chaim (Taste of Life) in Dimona.

Note: Roy's company, Kanero, imports soymilk from Europe. They distribute the Distriborg line. Address: Kanero Group Ltd., 18, Hamelacha St., Solel-Bone Bldg., Suite 208, Raanana I.Z. 43661, Israel. Phone: 972-9-740-9398.

7645. Murphy, Patricia A. 1999. A new database on the isoflavone levels in foods, commercial ingredients, and soybeans (Interview). *SoyaScan Notes.* June 24. Conducted by William Shurtleff of Soyfoods Center. [1 ref]

• ***Summary:*** In April 1999 a new database became available on the Internet at www.NAL.USDA.gov/FNIC/FoodComp / Data/Isoflav/Isolfav.html. There are several files which are downloadable. Data are given for 160 foods, most of which are soy-related. Many individual branded products are included, such as Gimme Lean! or Lightlife Lean Links or Mead Johnson's Prosobee (infant formula). Soy oil is also included–just to show that it contains no isoflavones.

For each food, data may be given for daidzein, genistein, glycitein (pronounced gly-SEE-tun; if available), and total isoflavones. For each of these four information may be given on: Average, mean, and maximum, standard error, sample size, confidence code (A=best, C=least). of all published data. Finally a list of the numbers of all the references used to get this data. So there might be 7 references used to generate the mean value for tofu.

Soybeans themselves are also included, with data given for food-type soybeans, commodity-type soybeans, plus reports from Japan, Korea, Taiwan, etc. But there is no data on individual soybean varieties. Supplements are not included. For each food, some data is given on the isoflavone content The information in the database comes from published scientific studies and from work at Iowa State University's project on national sampling of foods. The food composition lab people will be updating the data as it is collected. There is also a separate file for items which are more typical of clover and alfalfa, which have different isoflavones.

The person in charge of the project is Gary Beecher, in the USDA Beltsville Lab. [Maryland], food composition group. David Haytowitz is the statistician. The funding came from the U.S. Army, Medical Branch, Breast Cancer Research Initiative. This year Congress, "in its wisdom," couldn't give any more money to HHS (the U.S. Department of Health and Human Services), so they gave a large amount of money to the Defense Department for work that would typically be done by NIH (National Institutes of Health). But the army has run this huge program very well–perhaps better than some NIH programs.

Note: NIH is under the Public Health Service, within HHS. Address: 2312 Food Sciences Building, Food Sciences and Human Nutrition Dep., Iowa State Univ., Ames, IA 50011.

7646. Harrigan, Brian. 1999. Re: Prices for VS 30/40 system and VS 200 systems sold in the USA: Quote USA/96A25. Letter (fax) to William Shurtleff at Soyfoods Center, June 25. 3 p.

• ***Summary:*** All orders for SoyaCows of any size should be directed to ProSoya in Ottawa, Canada. A VS-40 system with an 8 kW electric boiler costs US$7,000. A VS-2000 system with a 40 kW electric boiler costs $45,000.

Note from Brian. The prices for these systems are higher when sold to the USA than anywhere else in the world because of the 15% higher insurance premiums ProSoya has to pay and because litigation and other legal pursuits are a national pastime in the USA. The prices for the same systems sold anywhere else in the world are 15% less, i.e., $5,450 for the VS30 and $5,950 for the VS40. If the application is humanitarian, there is a 15% discount. There are also discounts for multiple orders. Address: Executive Vice-President, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

7647. *SoyaScan Notes.* 1999. The rise and fall of Soyalac soy-based infant formulas (Overview). June 25. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Dr. Harry W. Miller, M.D., a student of Dr. John Harvey Kellogg, went to China in 1903 (with his wife) as a Seventh-day Adventist medical missionary. In 1926 in Shanghai he began to focus his attention on developing a better soymilk. In January 1928 the Shanghai Sanitarium and Hospital opened, with Dr. Miller in charge. In 1932 he established the Vetose Nutritional Laboratory to further his research. For two years (1936-1937) he fed soymilk he had

formulated to several hundred children (mostly infants) at the Shanghai Clinic, running control tests with fresh cow's milk and various American and European prepared baby foods. The study turned out well and he and C.J. Wen wrote an article which was published in the April 1936 issue of the English-language *Chinese Medical Journal.* "Our experimental work on infant feeding has been carried on over a period of more than two years, mostly in the Shanghai Sanitarium Clinic." In 1936 in Shanghai he started one of the first commercial soy dairies in China. One of its products was Vetose Soya Milk Powder with claims of nutritive value the equivalent of other prepared powdered milk food for infants.

In 1937, when the Japanese began bombing Shanghai, Dr. Miller returned to the United States. In Mt. Vernon, Ohio, he and his sons built a soymilk factory and established a new company named International Nutrition Laboratories. In 1940 this company introduced SoyaLac, a powdered infant formula based on soymilk. Several experiments on Soyalac were conducted by leading pediatricians and child specialists on large groups of babies over a long period of time in America, Japan, the Philippines, and China. Finally, by July 1951 Soyalac was accepted as a hypoallergenic food by the American Medical Association's Council on Foods. Soyalac then began to be prescribed by physicians for allergic infants, and soon started to sell quite well.

In early 1951 (following the death of his wife), Dr. Miller sold (at book value–a very low price) his factory, land, and various soymilk products to Loma Linda Foods (owned by the Seventh-day Adventist Church) of Riverside, California. Loma Linda renamed the product Loma Linda Soyalac Infant Powder and continued to make it at Dr. Miller's plant in Mt. Vernon, Ohio.

In Jan. 1951 Loma Linda Foods added a second soy-based infant formula product to its line, Loma Linda Soyalac Infant Concentrate. In about 1960 they added Loma Linda Soyagen Infant Powder, in 1977 Granolac Infant Soya Milk (sold by Granose Foods in the UK), and in 1979 i-Soyalac, a non-dairy infant formula based on soy protein isolates. In 1979 Loma Linda was making 2.24 million gallons of ready-to-use Soyalac infant formula.

In an interview in March 1990, Eric Fehlberg, director of the Seventh-day Adventist international food operations, said that the church wanted to sell off the infant formula part of Loma Linda Foods because of the high cost of liability insurance. The FDA are really down on infant formula foods. If anything goes wrong, there is no end to the strife. LLF had one small recall due to a small shortage of vitamin A–from dissipation. It was very expensive. In 1989 Loma Linda sold the infant formula part of its business to Nutricia, a Netherlands-based manufacturer of infant formulas, and the second largest manufacturer of such formulas in Europe after Nestle. In the Netherlands, Nutricia had 90% of the dairy-based infant formula market. They had never made soy-based infant formula before they acquired Loma Linda, nor had they ever made infant formula in the United States. Nutricia began making infant formula using new equipment in Riverside, California; they also kept the plant operating in Ohio. Just as they were getting the new plant running, disaster struck, and they had to do a recall. So in late 1990 Nutricia shut down the plant in Riverside, spent more than $12 million revamping the plant in Ohio, then used it to start making various forms of i-Soyalac (from soy protein isolates) and Soyalac (from whole soybeans). The plant in Riverside went up for sale although Nutricia's sales and marketing departments remained in the office. In mid-1993 Nutricia decided to close their offices at the Riverside and move the rest of the company's operations to Mt. Vernon, Ohio. But later in 1993 Nutricia had another recall–and another disaster, which even drove down the stock price of Nutricia in the Netherlands. Nutricia's management at headquarters in the Netherlands probably said "This American company is too dangerous for us. We'd better sell it"–which they did in 1994 to Nestle/Carnation. The Soyalac brand disappeared from the market–forever. Nutricia is a good company, but they quickly learned that regulation (by the FDA) is much stricter in the USA than in Europe.

7648. Clute, Mitchell. 1999. Breaking the mold with tempeh: Praise from the chorus for *Rhizopus oligosporus. Natural Foods Merchandiser.* June. p. 71, 74.

• ***Summary:*** At Avogadro's Number, a restaurant in Fort Collins, Colorado, Jon Long now makes 700 lb/month of tempeh; he supplies several local eateries with fresh tempeh patties.

"As a result of recent health bulletins about the benefits of soy, as well as changing dietary habits, the world seems awash in soy foods of every stripe–soy milk, soy proteins, and of course, the ubiquitous tofu. But American palates have been slower to embrace tempeh, the Cinderella of soy foods."

Long has many years of experience as a baker; he used to run his own business, Jon's Natural Bread, but he never considered making tempeh until restaurant owner Rob Osborne suggested it. He is now in the "postexperimental stage." The process he uses is described in detail.

His fascination with tempeh had led him to create a Web site (www.home.att.net/~tempehinfo/) devoted entirely to information about tempeh. Contains a recipe for Barbecued Southern Tempeh. A color photo shows Jon Long carrying two trays of freshly made tempeh.

7649. **Product Name:** Soy Dream (Soymilk, Refrigerated in Gable-Top Cartons) [Original Enriched, Vanilla Enriched, Chocolate Enriched].
Manufacturer's Name: Imagine Foods, Inc. (Marketer-Distributor). Made in Manteca, California, by California Natural Products.

Manufacturer's Address: CNP: P.O. Box 139, Manteca, CA 95336. Imagine: 350 Cambridge Ave., Suite 350, Palo Alto, CA 94306. Phone: 650-327-1444.
Date of Introduction: 1999. June.
Wt/Vol., Packaging, Price: Quart or half gallon.
How Stored: Refrigerated.
Nutrition: Per cup (8 fl oz): Calories 210, calories from fat 40, total fat 4.5 gm (7% daily value; saturated fat 0.5 gm), cholesterol 0 mg, sodium 150 mg (6%), total carbohydrate 35 gm (sugars 22 gm), protein 7 gm. Vitamin A 10%, vitamin D 25%, vitamin B-12 25%, vitamin E 25%, calcium 30%, iron 10%, thiamin (B-1) 10%, riboflavin (B-2) 4%, niacin (B-3) 4%, pantohenic acid (B-5) 4%, folic acid (B-9) 15%, vitamin B-6 8%, phosphorus 25%, magnesium 15%, zinc 6%, copper 8%. Not a significant source of fiber or vitamin C. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Ad (full page, color, trade) in Natural Foods Merchandiser. 1999. June. p. 13. "The best tasting soymilk just got cooler." Available in quarts (Original Enriched, Vanilla Enriched, and Chocolate Enriched) and half gallons (Original Enriched and Vanilla Enriched). The original and vanilla flavors are made from organically grown soybeans.

7650. Imagine Foods, Inc. 1999. The best tasting soymilk just got cooler (Ad). *Natural Foods Merchandiser.* June. p. 13.
• ***Summary:*** This classy full-page color ad shows Soy Dream, a soymilk made by Imagine Foods and now sold in the refrigerated case, packaged in gable-top cartons. Available in quarts (Original Enriched, Vanilla Enriched, and Chocolate Enriched) and half gallons (Original Enriched and Vanilla Enriched). The original and vanilla flavors are made from organically grown soybeans. On the top of each carton is written: "Lactose free. High in soy protein. 47 mg isoflavones per serving. As much calcium and vitamins A & D as milk." The ad states: "Refrigerated soymilk is an exploding category. From Imagine Foods, makers of the best selling product in the natural foods industry." Address: Palo Alto, California.

7651. Messina, Virginia; Schumann, Kate. 1999. The convenient vegetarian: quick-and-easy meatless cooking. New York, NY: Macmillan USA. viii + 184 p. Illust. Index. 24 cm.
• ***Summary:*** This is a vegan cookbook. The index contains 9 entries for tofu, 9 for textured vegetable protein (TVP), 3 for soy food products (soy foods) 3 for soybeans, 2 for tempeh, 1 each for miso, soy cheese, soymilk, soynuts, and soy yogurt. Address: 1. MPH, RD, coauthor of *The Vegetarian Way.*.

• ***Summary:*** Alexander Vasil'evich Podobedov has pledged to feed Russia in 2-3 years, and to relieve the severe protein shortages; 75% of the population eats mostly bread, potatoes, and pasta. His answer: The soybean. In two years, Podobedov has established a new industry in Russia, feeding about one million people–using SoyaCow technology from ProSoya in Canada.

Note: This article appears in the section of the periodical titled "From the Rib of Adam Smith." Address: Russia.

7653. Yates, Scott C. 1999. U.S. milk prices at system's mercy. *Natural Foods Merchandiser.* June. p. 12.
• ***Summary:*** The U.S. federal milk pricing system is (and for the foreseeable future will continue to be) unbelievably complicated and convoluted. It started during the Great Depression in the 1930s when the U.S. government decided that anybody should be able to buy (and afford) milk all year long. In 1937, most of America's milk was produced in Wisconsin, and trucking refrigerated milk nationwide was impossible. So the government set up the national "Eau Claire system" containing 31 regions. The further from the town of Eau Claire, Wisconsin, the higher the price. That system is still in place. Milk producers have to pay the federal government a "pooling charge" which is supposed to aid farmers when prices drop. Colorado-based Horizon Organic Dairy, America's largest supplier of organic milk, has recently been hit hard by these pooling charges. Consumer advocates say the current federal system unnecessarily adds about 18 cents to the price of a gallon of milk.

Note: This system, and federal dairy price support systems, both help soymilk compete for price with dairy milk.

7654. Moore, Amity K. 1999. The soy solution: Is it shelf-stable? Nondairy? And a milk substitute? Yes, and health-conscious consumers are asking for it, and, increasingly, savvy retailers are responding. *Supermarket News.* July 5.

7655. Abourezk, James G.; Douglas, Jim; Rabhan, David. 1999. Re: Production of soy infant formula in Iran. Letter to Jim Douglas and David Rabhan, Nutrition Dynamics, Inc., 1522–18th Ave. #402, Seattle, WA 98122, June 29. And reply of July 6. 2 p. Typed, with signature on letterhead.
• ***Summary:*** On June 29, Abourezk wrote Douglas for additional information about the work of David Rabhan with soy in Iran. The questions and answers are given together below: 1. How many plants in Iran did you own that manufactured soy infant formula? Ans: One. 2. Where was it located? Ans: Damgham, Iran. 3. When did it begin operation? Ans: 1976. 4. What were the type of soy related products manufactured and what were the names of these products? Ans: Mamalak (infant formula), Manna (food

supplement), Complete (complete meal). 5. What was the capacity of the plant? Ans: 10,000 tons, 8,000 tons, 5,000 tons. 6. For each year at the plant what was the approximate annual sales in U.S. dollars and the amounts of profit made? Ans: $69,000,000 ($16,000,000 profit), $32,000,000 ($8,000,000 profit), $30,000,000 ($6,000,000 profit). 7. What was done with the plant once it was confiscated by the Iranian government, if you know. Ans: Some of the machinery of the infant formula plant is still there, and we are negotiating at this time with Mr. Ali Radmard at: 011-98-261-443327, to help them reconstruct their new infant formula plant using spray-dried milk as the basis. This plant will include a spray-drying operation and will produce only powdered infant formula. Milk-based product will be 90% and soy-based product 10%. Soy isolate will be imported from the United States.

The other soy-related plants were dismantled and parts sold individually in the height of the revolution. There is a court order (of which I have a copy) ordering all confiscated properties to be returned to me.

The infant formula plant closed within a few months of my arrest; each of the other plants ran for approximately two (2) years, then closed due to raw material shortage, foreign exchange difficulty, replacement parts. 8. What were the names of the Iranian officials you dealt with concerning the soy plant before your captivity? Ans: Bankers–a. Agriculture Development Bank, Hussein Habbie, b. Bank of Holland and Iran, Hassan Mahammidle, c. bank of Sapah, Mohammed Sabrie, d. Health Ministry, Mahmood Tehranie. 9. Do you have any financial records or other business documentation remaining from the Iran operation, if so, can you provide those to us? Ans: After twenty (20) years, no. 10. What are other soy related businesses that you have been involved in? Ans: None. 11. Are you currently operating a soy infant formula plant? Ans: If so, where? Ans: No. Address: P.O. Box 1164, Sioux Falls, South Dakota 57101-1164. Phone: (605) 334-9404.

• ***Summary:*** "Soy is in, it's hot, it's healthy, and your customers want it NOW!"

"Tofu is probably the most familiar soy product. It is nothing more than curded soy milk (think: cheese making)." Address: Rd, EdD, CCE.

7659. **Product Name:** Trader Joe's Soy-Um: Dairy-Free Soy Drink [Coffee].
Manufacturer's Name: J&G Inc. (Distributor). Made in Oregon by Pacific Foods.
Manufacturer's Address: 60 East Elm, Chicago, IL 60611. Phone: 312-787-5157.
Date of Introduction: 1999. July.
Ingredients: Organic soymilk* (Filtered water, whole organic soybeans*), brown rice syrup (filtered water, brown rice), natural milled cane sugar, Colombian spray dried coffee, coffee flavor with other natural flavors, tricalcium phosphate, sea salt, guar gum, xanthan gum, carrageenan, locust bean gum, vitamin A palmitate, vitamin D-2. * = Organically grown and processed in accordance with Oregon Tilth standards and the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 32 fluid oz. (1 quart) 946 ml Tetra Brik Aseptic carton. Retails for $1.99 (2000/05, Lafayette, California).
How Stored: Shelf stable; refrigerate after opening and use within 7-10 days. Best served chilled.
Nutrition: Per cup (8 fl. oz = 240 ml): Calories 130, calories from fat 25, total fat 2.5 gm (4% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 115 mg (5%), total carbohydrate 21 gm (7%; dietary fiber 2 gm = 6%, sugars 16 gm), protein 4 gm, vitamin A 10%, vitamin C 0%, calcium 30%, iron 15%, vitamin D 30%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Product with Label purchased at Trader Joe's in Lafayette, California. 2000. May 27. On the front of the carton (copyright 1999) a bold banner with a yellow blending to orange background reads: "Contains natural isoflavones." Below that are four checked boxes: "Calcium enriched. No saturated fat. No cholesterol. Isoflavones–30 mg per [1 cup] serving." The headline on the back panel reads: "Supporting our future through organic agriculture."

Talk with Trader Joe's manager in Lafayette. 2000. Sept. 4. This product was introduced in about July 1999.

7660. Jacobi, Dana. 1999. Shake it up! Unbelievably luscious, rich and refreshing smoothies. *Vegetarian Times.* July. p. 48, 50-54. [1 ref]
• ***Summary:*** Contains seven recipes (and many color photos) for smoothies made with fortified soymilk, soy yogurt, and/or soy protein powder (isolates, lecithin, and flavoring): Mango cream smoothie. Kiwi-melon smoothie. Peach glow smoothie. Chai cooler. Chocolate-peanut butter smoothie. Coconut-banana smoothie. Banana-berry smoothie. Sidebars: "Smoothie secrets" (Four secrets for making good smoothies). "Soy by the numbers" (discusses soy milk, soy protein powder, and soy yogurt; the word "numbers" refers to the grams of fat and protein in some of these products). Address: [New York City].

• ***Summary:*** Gives the content of daidzein, genistein, glycitein. Isoflavone levels ranged from 1 microgram per gram in soy sauces to 540 micrograms per gram in tempeh. "Soymilk and tofu represented the major portion of the soy foods evaluated."

Also includes: Tofu (different kinds, raw and cooked), soy sauce, miso (white and red), tempeh (raw and cooked), FriChik (soy chicken, raw and cooked), meatless frank (raw and cooked), Harvest Burger (raw and cooked), Meatless links (raw and cooked), Soy/beef burgers (raw and cooked). Address: 1-4. 2312 Food Science Building, Food Science & Human Nutrition Dep., Iowa State Univ., Ames, Iowa 50011.

7662. Urquart, John. 1999. A health food hits big time: Taste makeover moves soy milk into mainstream. *Wall Street Journal.* Aug. 3. B1, B4.
• ***Summary:*** Sales of soymilk in the USA are predicted to top $300 million in 1999, up 38% over 1998, and a rise from only $2 million in 1980–according to Soyatech Inc. of Bar Harbor, Maine. Sales of Silk, the soymilk product that pioneered the new and booming refrigerated category, are expected to double this year, says Steve Demos, president of White Wave. Silk is now distributed through dairies across the U.S. Sales of Vitasoy in the USA rose 34% during the last year, according to Jennifer Corsiglia Keim, the company's marketing manager.

Indeed soymilk is one of the few products that has been able to cross over from natural- and health-food stores into supermarkets. One of the keys to this cross-over is expected to be the change of packaging and positioning. Traditionally soymilk was sold in "special airtight boxes that require no refrigeration." Now, starting with Silk, it is being sold next to milk in cartons that look like milk cartons. Imagine Foods of Palo Alto is currently introducing a refrigerated version of its Soy Dream brand of soymilk. White Wave plans to hand out several million half-pint samples of Silk during the next 12 months to further stimulate demand. He says he has been making soyfoods for the last 21 years just "waiting for this year."

One reason for the growing interest in soymilk is the growing body of scientific evidence showing that soy has health benefits. Former junk-bond king Michael Milken, who was diagnosed with prostate cancer six years ago, tries to consume 40 grams of soy protein per day–including a soy hot dog and soy shake. Another reason is improvement in the taste of soymilk. Soymilk sales are expected to get another boost if the U.S. Food and Drug Administration allows a health claim saying that soy products reduce cholesterol.

Soymilk is also being promoted in coffee houses. About one year ago Peet's Coffee & Tea (Berkeley, California) introduced Vitasoy as a coffee creamer at its 47 coffeehouse outlets. The consumer response has been "terrific."

In Canada, the soymilk market is also booming; it grew 75% Last year and is expected to grow at about the same pace for the next 4-5 years–according to Maheb Nathoo, CEO of the new SoyaWorld Inc. of Vancouver, British Columbia. SoyaWorld now advertises its soymilk on television. A cow, with its face disguised, confides in an interview on the beverage: "I tried it. I liked it. That's all I can say.

But compared with dairy milk, soymilk still has a minuscule share of the market; cows still supply 99% of the milk market.

The high price of soymilk remains a problem. In some places it can cost twice as much as cow's milk. But prices have dropped to about half their level a decade ago in the USA. In Canada, So Good, made by SoyaWorld Inc. using soy protein isolates, has recently been selling at Loblaw's Ottawa (Ontario) superstore for the same price as cow's milk. Address: Staff Reporter.

7663. Urquhart, John. 1999. A health food hits big time: Taste makeover moves soy milk into mainstream. *Wall Street Journal.* Aug. 3. p. B1, B4. Eastern Ed.

7664. *SoyaScan Notes.* 1999. The soybean: Animal, vegetable or mineral? (Overview). Aug. 4. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** A traditional American parlor game and quiz show named "Twenty Questions" was based on the assumption that all things in the universe could be classified as either animal, vegetable, or mineral. Clearly the soybean is a vegetable, and it is most like a vegetable when served as edamamé or green vegetable soybeans. But soybean pods and leaves are unusually hairy, and the soybean can easily be transformed into alternatives to almost every known animal food product–more specifically into all kinds of meats and dairy products. It can be made into meatless burgers,

hot dogs (wieners), breakfast sausages, beef jerky, bacon bits (such as Bac*Os) or meatless bacon, juicy chicken drumsticks or meatless chick nuggets, meatless steak, and the like. Or it can be made into all the dairy alternatives such as milk, yogurt, ice cream, cheese, coffee creamer, whip topping and the like.

Soybean oil can also be made to imitate the greatest commodity of the 20th century: petroleum. We now have soy ink, soy diesel fuel, soy resins, soy paints and varnishes, etc.

Thus, of all the vegetables in the world, the soybean is the most versatile–the most like an animal and the most like a vegetable. What will they think of next?

Note: Twenty Questions began on radio in 1946, then played on television from Nov. 1949 until May 1955.

7666. Nordquist, Ted. 1999. Soymilk in America–past and future: The soymilk wars are heating up. Part I (Interview). *SoyaScan Notes.* Aug. 10. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** After SoyaWorld was created in Vancouver (BC, Canada), because ProSoya was developing soymilk in Vancouver, they needed a quick way to get soymilk on the market. So they started negotiating with Ted to see if he could start sending soybase up to Vancouver from California. Then Sanitarium Foods (from Australia) came into the picture and threw a lot of money towards SoyaWorld, encouraging them to purchase a license to make So Good using soy protein isolates. This would also be Sanitarium's entry into the USA and North America. SoyaWorld took this approach and because of Dairyworld Foods' excellent distribution system, So Good has done very well in Canada. Their aim is to work down into the United States; they have been trying to negotiate with Suiza Foods Corp., but Suiza has its own ideas. Ted has heard that Sanitarium is involved in a lawsuit over its So Good soymilk, perhaps with SoyaWorld, because they believe that SoNice is an infraction on the name of their So Good product–the names SoNice and So Good are too close.

Soy is really getting into the mainstream now. Ted's company has done a lot of market studies in supermarkets and the presence of soymilk is "essentially zero." The big change will take place over the next year as soymilk starts to enter the dairy case of supermarkets. Ted is aware that Horizon has its eyes on this market. SoyaWorld is powerful, but they are up against Dean Foods, Suiza, and others. Wait until November or December of this year to see what is going to happen. Ted may be part of the action or he may get squashed–like the bug under your carpet.

Ted learned a lesson when he was making Silk for White Wave; they came out with a different product, and it didn't seem to matter much to consumers that it wasn't as good, as long as it was approximately as good. Money, labeling, distribution, networking, etc. determine the success of a product. Ted designed Silk with a very low solids content (4% solids) for very specific reasons. The main reason was money–so the product could be sold at a competitive price. But with the FDA health claim anticipated, Imagine Foods now has 7 grams of protein per serving, and White Wave's Silk soymilk has 5-6 grams of protein. You cannot use the health claim if a product contains 6.25 grams of protein per serving, because that is rounded down to 6 grams on the label. So you must have a label that states 7 grams of protein. As the solids content of a soymilk rises, any beany flavor is harder to mask, so the flavor of the soybase becomes more important, and the formulation less important. And the flavor of the soybase becomes even more important with soy yogurt, and even more important with soy ice cream–because both have higher solids content. So, if one were rational and logical, the trend toward higher solids would give Ted an advantage. Ted disagrees strongly with Steve Demos who thinks that the soybase and the formulation are of about equal importance in determining the flavor of the final product. Ted believes that the soybase contributes about 80% of the final flavor and the formulation about 20%. Steve's Silk soymilk is now made by SunRich, in Minnesota. The only other companies that make what Ted considers an acceptable soybase are Pacific Foods of Oregon, and Imagine Foods.

If SunRich were using ProSoya's airless technology and if ProSoya took SunRich to court, Raj Gupta would argue that he patented his oxygen-free process in 1988. Alfa-Laval could go to ProSoya and say that they were selling a plant that made soymilk using an oxygen-free process before that patent was instigated, and they demonstrated that plant at an international conference in 1984. The process was not patented, but it was described in published literature and was well known. To get a patent, Raj Gupta had to prove that there was no prior art; thus Ted believes that the ProSoya patents are not valid. Ted and Raj planned to do a joint venture at one time, but they disagreed on many processing issues. His process is based on the *concept* of an oxygen-free grind, but it is not strictly so. Then he makes claims that you don't have to soak the beans, etc. So there are many things that the patent office has accepted in his patent that Ted believes would not stand closer scrutiny.

Ted has compared his soybase with that made by the ProSoya process; he believes that his is much better. Shurtleff says that he always assumed that the reason Ted used the ProSoya process in Vancouver to make Silk was because it was better than his own. Ted laughs and laughs.

The real reason he didn't make the soybase himself was because he had no equipment or plant with which to make it.

Ted started to develop Silk using soymilk made by Pacific Foods of Oregon. Even when he was still in Sweden in the late 1980s, he began to cooperate with them in developing a soy ice cream. Ted bought soybase from all over the world to compare it with the soybase he was developing in Sweden. He ended up using Pacific Foods' aseptically packed soybase (containing only soybeans and water) as a control for his Tofu Line and Swedish Glass ice creams. So when he came to the California in the early 1990s, his goal was to make soy beverages, yogurt, and ice cream. When Ted started doing his work in Gustine, he was using Pacific Foods' soybase. They even had an agreement on the cost of the soybase, the fact that he would be buying it in tankers, etc. The first samples Ted sent to Steve Demos were made with Pacific Foods' soybase. But when the person who finally bought the product made from that soybase turned out to be Steve Demos, then Pacific Foods of Oregon backed off. They didn't want to make soybase for a competitor in the soymilk market. So Ted had to look for a new supplier, and he came into contact with ProSoya in Surrey, near Vancouver. At that time, they were just starting up their soymilk plant and they were really naive; they could make soymilk on a small restaurant scale, but they knew almost nothing about making soymilk on a large commercial scale in a continuous process. It was a nightmare for them at the beginning. Ted did not help them with their process; he just sent them orders, which forced them to get their act together because Ted needed to buy 6,000 gallons (one tanker full) at a time. As ProSoya was learning, Ted was starting to build his own plant, but he couldn't do that until he had money, and his money would have to come from sale of ProSoya soybase to Steve Demos. So Ted went to ProSoya, not because they made better soymilk but because he didn't have the money to do it any other way. Continued. Address: TAN Industries, Inc., 49 Stevenson St., Suite 1075, San Francisco, California 94105-2975; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-495-2870.

7667. Nordquist, Ted. 1999. Soymilk in America–past and future: The soymilk wars are heating up. Part II (Interview). *SoyaScan Notes.* Aug. 10. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** If Ted had had a lot of money at the beginning, would he have done things differently? Answer: That's an interesting question. ProSoya went bankrupt in large part because they built the plant first and then went out to sell the product. Ted learned in Sweden that its much better to sell the product first, then build the plant once you have the volume. In Sweden, Ted found a juice company in which to install his machines; in the USA he found Soyfoods of America (owned by Ken Lee) in Duarte, California. Ken Lee is now selling a huge volume of soymilk in half gallon containers. It is produced using the same equipment he uses to make soymilk for tofu, and sells for some ridiculously low price–like $0.89 per half gallon. He distributes it all himself, and also makes a lot of tofu and related products.

Shurtleff says: "Within the next 12 months, I think we are going to see the biggest expansion and changes yet in the soyfoods industry. Companies that sell soymilk but have no fresh product in gable-top cartons will almost surely lose market share." Ted agrees; hang on. Ted adds that finding available extended shelf life (ESL) gable-top packaging equipment in California is impossible today. There are no machines available. Dean Foods has no such packaging equipment west of Colorado; their plants in Kentucky and Florida are both full. Even if they wanted to add a line on the West Coast, it would take about 12 months. Suiza Foods Corp. could add on a new line to their plant in California–and they now know how to make good soymilk because of Ted–whether he likes it or not. Bill notes: "As we shoot the rapids during the next 12 months, I hope your kayak comes out right side up." Address: TAN Industries, Inc., 49 Stevenson St., Suite 1075, San Francisco, California 94105-2975; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-495-2870.

7668. Maharaj, Davan; Fulmer, Melinda. 1999. Fortified milk not required: Door opens for out-of-state dairies after ruling strikes down California regulations requiring extra calcium and protein. *Contra Costa Times.* Aug. 11. p. A1, A16.

• ***Summary:*** A state appeals court (4th District in San Diego) ruling on Monday struck down California's 1962 regulations that require low-fat milk sold in the state to be fortified with 27% more calcium and protein. California is the only state that requires enrichment beyond federal standards; this process is expensive and therefore discourages most out-of-state competition. Adding the extra nutrients is estimated to cost 14 to 22 cents a gallon.

The ruling opened the door for less expensive but less nutritious milk to be sold in California. Consumers will probably be offered more milk choices and a break from what has been the most expensive milk in the USA. Arizona-based Shamrock Foods Co. in Arizona has been involved in a 5-year court battle with state regulators to break into California's $3.7 billion dairy industry. Address: Los Angeles Times.

7669. White Wave, Inc. 1999. Silk soymilk smoothies (Brochure). Boulder, Colorado. 8 panels. Aug. 15 cm.

• ***Summary:*** This stylish fold-out brochure, printed with mango pink and green heads plus blue lettering on light blue paper, offers recipes for: Peach glow smoothie. Chai cooler. Coconut-banana smoothie. Banana-berry smoothie. Chocolate peanut-butter smoothie. Kiwi-melon smoothie. Mango creme smoothie. Plus four secrets for making good

smoothies. "Recipes appeared in *Vegetarian Times,* July 1999." All recipes call for the use of White Wave Silk Soy Yogurt or Soymilk.

Note: Though these recipes were developed by Dana Jacobi and her name appears as author of the *Vegetarian Times* article, her name does not appear in this brochure–because she asked them not to use it. Address: 6123 E. Arapahoe Rd., Boulder, Colorado 80303. Phone: 303-443-3470.

7670. White Wave, Inc. 1999. Dean Foods announces alliance with White Wave Soyfoods: Becomes minority shareholder in White Wave Inc. (News release). Boulder, Colorado. 2 p. Aug. 18.

• ***Summary:*** Dean Foods (Franklin Park, Illinois) and White Wave (Boulder, Colorado) will work together to place Silk soymilk into the refrigerated dairy case of supermarkets across America. Howard M. Dean is Chairman and CEO of Dean Foods Company (NYSE: DF), "the country's number one dairy processor and distributor." Steve Demos is "President and Founder of White Wave, Inc., America's number one soyfoods company." Today they jointly announced the new relationship. "This alliance will support White Wave's new product development and marketing initiatives to reach new audiences. White Wave has annual sales of approximately $21 million. Its product line includes the successful Silk organic soymilk line, the first nationally distributed fresh, refrigerated soymilk sold in the dairy case."

"Mr. Dean remarked, 'Through this collaboration, we are investing in the future of soyfoods in America. As Dean Foods has been an innovator in the dairy market, White Wave is a leader in the innovation and integration of soyfoods into the American diet. We look forward to supporting White Wave as it expands its reach in both the natural products and mainstream market place.'

"Steve Demos stated that 'Dean Foods has shown vision in supporting organics and soy, realizes the current and future value of the natural foods market, and has embraced the concept of promoting complementary proteins–dairy and soy–thus giving American consumers more options. It's a great fit.'"

White Wave is riding a wave of soyfoods popularity. "Annual sales are up over 30% in each of the last five years, while some products such as the company's Silk Soymilk line have seen over 100% growth in each of the last three years. For more information, see the White Wave website at www.whitewave.com.

"Dean Foods is the nation's leading dairy processor and distributor, producing a full line of branded and private label products, including fluid milk, cottage cheese, and ice cream sold under the Dean's and other regional brand names. Dean dips and Marie's refrigerated salad dressings are the leading brand names in their respective categories, while Dean Foods is also the leader in private-label pickles and non-dairy coffee creamers. For more information see Dean Foods website at www.deanfoods.com."

Note 1. This is the earliest document seen (Aug. 2013) that mentions both White Wave and Dean Foods.

Note 2. Dean Foods has ESL packaging plants in Kentucky and Florida, and will soon have one in California. The company operates a trucking business and has 11,200 employees.

Note 3. A 3-page brochure titled "Dean Foods–Introduction" (from about 1996) states: "Dean Foods was founded in 1925 as a small Midwestern dairy. What began as the Dean Evaporated Milk Company with one plant in Pecatonia, Illinois has grown into a major Fortune 500 broad based Dairy and Specialty Foods manufacturer with over 12,000 employees and annual sales of over 2.7 billion dollars." Specialty Foods are now an important part of the company with brands like Birds Eye (acquired in 1993), Freshlike, and Veg-All. About 50% of Dean Foods' growth has come from acquiring other companies; the rest is internal growth, with much of that coming from new product introductions. "The Company's first formal Research and Development lab was established in Rockford in 1943. The original powdered non-dairy creamer was one of the first major product innovations to come out of this lab." Address: Boulder, Colorado. Phone: 303-449-2526.

7671. Kairava (J. Spaelstra); Seemo (H. Shapira). 1999. Re: Update on Dakini Health Foods Pvt. Ltd. in Pune / Puna, India. Letter (fax) to William Shurtleff at Soyfoods Center, Aug. 22. 1 p. Typed, without signature on letterhead.

• ***Summary:*** Gives details on their work with tofu and tempeh. They do not yet have a recipe book nor do they vacuum pack their tempeh. They are, however, developing a nice label. They have contacted Raj Gupta of ProSoya by e-mail about soymilk equipment.

"The nutrition situation in this country and on all income levels is no good–from severe protein deficiency on the lower income rungs to fancy diseases for the rich. Developing soyfoods production here is most crucial, urgent, and possibly also a good investment!

"At a later stage, to avoid spreading ourselves too thin right now, we are interested in trying our hand at more fermentations such as Taucho, Miso, Soysauce. We are looking for more material to study." A copy of the recent article from *Citadel Pune* (full of errors) is attached. Address: Dakini Health Foods Pvt. Ltd., S.N. 33, Bhoiwasti, Keshavnagar, Mundhwa, Pune / Puna 411 036, India. Phone: +91 20-613985.

7672. Osho, Sidi M. 1999. Update on work with soyfoods in Nigeria (Interview). *SoyaScan Notes.* Aug. 23-24. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Dr. Sidi Osho's new business, named Cidis Ltd., is headquartered in Ibadan, Nigeria in a big, old house which

she began to lease in Oct. 1997; they signed a 5-year lease. Sidi does not know the size of the building. They converted the "boy's quarters" in the back of the building into the soy processing space, and the garage in the front into the soy supermarket–which is called Cidis Soyamart. The company is a corporation whose shares are owned entirely by Sidi and her husband.

Their first two products, sweetened soymilk and vegetable oil (soy oil) were introduced in Dec. 1997. Sidi made the soymilk at her home. They moved into the building in January 1998 and that month they established their first kiosk nearby in the Bodija market, the main market in Ibadan. Each kiosk is staffed by a company employee, and sells only Cidis' products. They now have six kiosks, all in Oyo State in western Nigeria.

Today the company's best-selling product is soymilk, of which there are four flavors: sweetened (the best-seller), chocolate, vanilla, and plain (mostly for diabetics). Immediately after the soymilk is made, it is run into sterilized plastic bottles, then placed in a refrigerated storage room. Before being sold at the kiosks, many bottles are packed in ice in a cooler chest then delivered in a van. The next most popular product is soy flour–both roasted (like kinako) and plain whole-fat. Other products include Soya Fufu and Soya Ogi (both fermented). The company presently has 16 employees.

In Jan. 1999 Sidi filled out the papers and completed the first registration for a nonprofit NGO named Cidis Foundation. The final papers and approval came through in Aug. 1999. The Foundation, which works closely with Cidis Ltd., conducts training and educational programs, and disseminates information on soyfoods. The Foundation also helps to reduce year-end taxes, because some of the company's profits are put into the Foundation and used for philanthropic activities.

Cidis makes its own expeller-pressed soybean oil using an InstaPro-600 Junior. It is unrefined and filtered several times. Address: PhD and founder, Cidis, Ltd., No. 32 Awolowo Ave., Bodija. G.P.O. Box 38719, Dugbe, Ibadan, Oyo State, Nigeria. Phone: 234-0281-00301.

7673. Seemo (H. Shapira). 1999. Re: Another update on Dakini Health Foods Pvt. Ltd. in Pune / Puna, India. Letter (fax) to William Shurtleff at Soyfoods Center, Aug. 24. 1 p. Typed, without signature on letterhead.
• ***Summary:*** Their company started business in April 1996 making white tahini. Sometime later they introduced peanut butter.

The third partner in their business is Bodhi Yahaan; they call him Yahaan, and he has been with the company for nearly two years. Like Seemo, he is from Israel where his name was Mr. Natan-Ran Diamant; now he lives in Pune. He does not work in the factory, but he does get the computer to work. He brought in the much-needed finance and also organizes loans when the banks fail. "He owns 50% of the company's shares and a very good friendship is growing."

"Mr. Donnelly (our Indian partner) resigned near the end of 1996, and since last year we got all government permissions to run the company without any Indian partner."

In Goa, "a friends couple of ours, Lisa Camps and her French friend Richard, are making tofu and tempeh on a small but interesting scale. This year they are growing and opening their own retail outlet with a delicatessen counter and a salad bar. We managed to convince them to invest in a good grinder, a small screw press, and a simple dehulling device for their tempeh. Also, I am building them an incubation cabinet so they will no longer mysteriously lose so many cakes of tempeh. Also, since last year, we are supplying their tempeh starter, and, from this year, their soybeans. Their address: Lisa Camps, H.S. No. 1684 Ouneachem Baht, Anjuna Bardez, Goa, India." Address: Dakini Health Foods Pvt. Ltd., S.N. 33, Bhoiwasti, Keshavnagar, Mundhwa, Pune / Puna 411 036, India. Phone: +91 20-613985.

7674. Rabhan, Erwin David. 1999. Introducing commercial soy products to Iran (Interview). *SoyaScan Notes.* Aug. 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In 1979 David started a company named Nutrition Dynamics International (NDI) which developed and introduced four commercial soy products to Iran: Mamalak (Powdered Infant Formula), Manna (Food Supplement), Complete (Complete Meal), and Snacks. The Mamalak was made with isolated soy protein imported to Iran via a broker. Manna was a dry breakfast cereal, made from an extruded mixture of corn and soy (or defatted soy flour), and sold in a box. It was served like a gruel or mush by simply adding hot water, and eaten mostly by children. The Manna was made with soybean grown in Iran; but when the supply was inadequate, Rabhan imported soybeans. Complete was a canned food (500 gm) that had the consistency of a sausage, fortified with soy. A consumer would cut both ends off the can, push it out, then slice it crosswise and either eat it as is, fry it, or crumble it and add it a stew called a horseh or to other dishes, use it as a spread, etc. It was very inexpensive, and supplied a sold meal for two men. It was used mainly by adults, not children. These first three food products were all sold through retail stores, not to government programs. After the revolution started, his company had to give 20% of revenues to the government. The only products he sold to the government were the snacks.

His company made extruded snacks for 2.3 million school children, using soy and corn. The government gave these snacks away as part of their 10:00 a.m. school snack program. The name of the snacks in Farsi was Sin-Nun-Kay, which is pronounced snacks. They had seven different snack products–kind of like Fritos or cheese curls–but fortified with

soy. The snacks were made in a different plant from the other products.

These products were made in four different plants, and the cans for Complete were made in a fifth plant. The plants were located in Damghan (Mamalak and Manna, in separate plants), Semnon (Complete and the can factory), Abayak (the snacks), and Bandar Abbas (snacks; a seaport in southern Iran on the Strait of Hormuz). Each product was made by a different company, but all the companies were owned by NDI. The company's assets were valued at about $14.5 million at the time they were confiscated by the government. Another plant made corn The princess got interested in soy and she built a plant (Rabhan does not know if it ever opened) where she wanted to make soy cookies and compete with Rabhan. Other companies in Iran also had extruders, just before he went to jail. The plants are still operating in Iran. Address: Swainsboro, Georgia.

7675. Demos, Steve. 1999. White Wave and Dean Foods: The inside story and future plans (Interview). *SoyaScan Notes.* Aug. 27. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** White Wave now has its Silk soymilk in 6,000 supermarkets and chain stores–not counting natural foods chains like Whole Foods Market. White Wave's goal is 10K by 2K = 10,000 stores by the year 2000. In most cases Silk is in the refrigerated dairy case, but in a few cases it is in specialty food or soft drink refrigerated cases. Fred Meyer has Silk in the health food section, but White Wave is battling for the dairy case. But at Ralph's in Los Angeles it is next to Lactaid in the dairy case.

White Wave has already won the footrace in the USA with SoyaWorld and Dairyworld. From now on its a question of who has the most money to stimulate consumers to try their brand. That's the last face of the mountain to climb. Dean Foods brings to the alliance the fact that they distribute to 17,500 stores (mainly supermarkets and chains), and they have the national brokerage and delivery trucks and 70 factories that support that system. They own two ESL plants today (in Florida and Kentucky) and they have several more on the books (one in California). White Wave also has two coming in, and they now work with Western Quality Foods in Utah (Dairy Farmers of America and Sinton Dairy out of Colorado).

Dean Foods is a superfactory for Nestle. Nestle has three or four superfactories: H.P. Hood, Dean Foods in Kentucky, and Ador in Los Angeles. Dairy Gold in Seattle, Washington, may be a fourth. Nestle Quick, the chocolate milk, is a billion dollar brand. That warrants tremendous investments in systems and efficiencies, which leads to co-pack opportunities for things that are beyond our dreams. Dean was the inventor of The Chug–a single-serve chocolate milk in a disposable plastic bottle, with a screw cap, that looks like an old-fashioned milk bottle; this made it possible to sell single-serve chocolate milk from convenience stores, and per-capita consumption of chocolate milk jumped. The Chug was a $600 million a year innovation. Also are headed toward the aseptic single serving, Dean Foods is definitely endorsing soy as a concept.

In the dairy business, per-capita consumption of fluid white milk has been decreasing for the past 50 years. The "Got Milk?" and "Milk Mustache" ad campaigns have only slowed the rate of decline from 4% down to 2% a year–but these ads are costing the dairy industry more than $100 million a year. Part of the problem is that milk has never been considered a pleasure beverage; its just a commodity.

How did White Wave contact Dean Foods? "It's kind of like fishing. You put out your hook with the bait, seen who bites, then let them come after you." Indeed, Steve went after them and convinced them that this is a concept and category worth paying attention to. Suiza Foods Corp., because they have been associated for a year with Horizon Organic in Boulder, was not a potential partner. Suiza has already invested $10 million in Horizon. Notice that the plant in Gustine, California, where TAN Industries packaged soymilk, is owned by Morningstar, which is a Suiza division–you can figure out in a hurry where this war is going to be fought. The rumor that Suiza will get into soymilk through its alliance with Horizon will soon be confirmed. The Gustine facility turned down business from Lactaid, which wanted to introduce a soymilk because White Wave is making such a dent in their sales. The people at Gustine told Lactaid that they did not want to start a project that they would have to stop in Jan. 2000, when they planned to introduce their own brand of soymilk.

"It's now a whole new game for White Wave. There's no time to take a breath." The deal with Dean Foods was a very unusual one in that everyone seemed to come out winning. White Wave got everything that they wanted, plus a huge vote of confidence. Steve anticipated their future desires and he accommodated those in the agreement by certain opportunities as time goes on. "I think the biggest accomplishment was we get to ride this thing for a while."

The news release was picked up as a blurb in the back of the Wall Street Journal last Tuesday, but the announcement has been getting a lot of national play. The news release and the recent (Aug. 3) *Wall Street Journal* article on Silk have been reinforcing one another, and creating a new round of interest in White Wave and its products, which is translating sales. The local papers and trade journals also picked up the news release. *Natural Foods Merchandiser, Prepared Foods,* and *Dairy Foods* all plan to do stories. They story appeared in 3-4 national TV announcements. It's very exciting for people throughout the company. For example, the advertising and marketing people are now interviewing full agencies–which were previously unaffordable. "The ability to be whimsical, be creative, and be a little bit off center with things has been a key driving force which we hope

not to lose. Nothing that happens, to be quite honest, could influence me enough to take my hands off the throat of this thing. Not until I'm gone. When I sit in meetings today I say, 'If you thought I was a pain in the ass before, watch this!'" Susan Holden and Holden McClure have done White Wave's PR for the past 7 years. Before that, White Wave had no PR firm.

White Wave has big plans in the dairy alternatives market–for every product you can imagine. Silk Creamer, based on organic Silk soymilk and non-hydrogenated oils, was introduced at Anaheim in March of this year; after only six months, its sales have surpassed its first year projections–and supermarkets are major buyers. Its a huge category. Dean Foods is the No. 1 producer of non-dairy creamers in the USA, but they make powders and Silk is a liquid. Some new flavors are planned for the near future. The Silk brand represents dairy alternatives and the White Wave brand represents tofu. "Silk" is the word that the public is saying. It's a cool word, and "Smooth as..." There's lot of room for play and fun: "Silk boxers in every carton." White Wave has dabbled and played with non-dairy frozen desserts in the past; now they could go big time–pretty fast. But the company will not step outside the dairy alternatives category with things like energy bars or power drinks; it will keep tightly focused on dairy-like non-dairy products.

"Its very important to conduct your mission with some levity and fun–otherwise it never works. Business is an excuse to have parties. We need to pursue that philosophy for as long as possible. We just scheduled our next party; I rented a theater in Boulder for the middle of October." On using the Silk carton for advertising: "Serve people's intelligence and needs and you give them two products instead of one. Once you have the consumer's attention and focus, you can spoon feed them a lot of very wholesome, beneficial things. Our job now is to gain their trust and attention. We have always been say that we deliver more than food; we deliver a little bit of entertainment, and a bunch of information. We want you to think of the package as part of the product." On the red half-gallon Silk, James Terman has put the story of Henry Ford's work with soy. "At least 25-33% of our packages will always be used for some additional information other than 'Buy my stuff.'" The carton of Silk, along with breakfast cereal, is one of the few packages that gets onto the breakfast table or dining table. Steve learned this lesson when he heard from dairy people about all the complaints they received about pictures of missing children on milk cartons. That meant people were reading the cartons; its the perfect captive market. Quotations from Suzuki roshi and Yogi Berra appeared together on one of the Silk cartons. "In the beginner's mind there are many possibilities; in the expert's mind there are few"–said Roshi. "You can't think and hit at the same time"–said Berra. "James Terman and I went into stitches when we put the two of those together. It was such great juxtaposition–so enlightening–just way out there." Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

7676. Bernard, Richard L. 1999. Good tasting soybeans vs. large seeded soybeans (Interview). *SoyaScan Notes.* Aug. 30. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Not all good-tasting or "edible" soybeans are large seeded. Rather small seeded soybeans may make good tofu or soymilk.

Note: According to the SoyaScan database, the four largest-seeded soybeans are Hahto (1,250 seeds/pound), Hiro (1,312), Suru (1,320), and Hokkaido (1,328). By contrast, the four smallest-seeded vegetable type soybeans are Bansei (2,004 seeds/pound–the smallest), Higan (1,962), Toku (1,952), and Nanda (1,952). Address: USDA/ARS Soybean Germplasm Collection, Room 229 EASB, 1101 W. Peabody Drive, Univ. of Illinois, Urbana, IL 61801.

7677. Berman, Alisa. 1999. Booming market for dairy alternatives. *Organic & Natural News* (*Phoenix, Arizona*) 2(8):28. Aug.
• ***Summary:*** This thriving industry is driven by consumers who are lactose-intolerant, vegetarians, vegans, and those interested in the benefits of dairy alternatives. More than 50 million Americans are lactose intolerant. Soy has cancer-fighting isoflavones. Organically grown soy products appeal to consumers who wish to avoid the pesticides, herbicides, hormones, and antibiotics found in regular dairy milk and milk products. At least one soymilk product in a store usually retails for $0.99 per quart.

7678. ProSoya Inc. 1999. Introduction to ProSoya (Color videotape). 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. 8 minutes. Aug.
• ***Summary:*** This excellent color video (in NTSC video format), is professionally produced and narrated, with nice background music. Introduced in August 1999, it begins: "The soybean is a powerhouse of high-quality protein and other nutrients. Soyfoods have been proven to reduce the risk of cancer, heart disease, and other ailments. These health advantages, coupled with relatively low infrastructure and production costs, make soybean processing a fast-growing industry–and we can help you make this a wonderful business opportunity in the 21st century. Welcome to ProSoya, a world leader in advanced soymilk technology.

"Dr. Raj Gupta, a scientist formerly with the National Research of Canada and McGill University, is the president and founder of ProSoya." He appears and says: "Our objective is to help you produce nutritional* soya foods and beverages that consumers will enjoy because they taste good."

"ProSoya creates innovative and cost-effective processing systems that produce an excellent soymilk base naturally from the raw soybean. The first soymilk systems

were small, designed primarily for humanitarian aid, hospitals and small businesses. Today, ProSoya offers the widest range of soymilk production capacities, from modest 30 liters-per-hour batch processors to large, fully automated industrial plants with capacities up to 4,000 liters per hour. The smallest system is a 2-liter prototype that NASA tested for its manned space mission to Mars. ProSoya offers individual production components or complete turnkey plants, and can also assist in the formulation and packaging of soymilk beverages and foods.

"ProSoya's commitment to its customers is demonstrated by its vigorous research and development program. In addition to its own in-house R&D team, ProSoya engineers work closely with researchers in various government laboratories and other industry partners around the world. At the heart of all ProSoya systems is the patented airless cold-grinding process–a truly revolutionary technology invented by Dr. Gupta... The resulting soymilk is free from the beany flavor or chalky mouthfeel. Bill Shurtleff, world-renowned expert on soyfoods and author of over 50 books comments: 'I have no hesitation in saying that ProSoya's airless cold-grind process is one of the best for making soymilk.'

"The soymilk base can be used as is, or to create a whole range of healthy, nutritious, high-quality soyfoods, including beverages, tofu, yogurt, ice cream, soymilk powders, and mayonnaise."

There follows a list of systems designed and sold by ProSoya. "ProSoya delivers reliable equipment and prompt technical support." "Brian Harrigan, an engineer with an MBA degree, is the executive vice-president and director of marketing. 'At ProSoya we don't just sell equipment. We build relationships. Our pride is in the contribution we can make to the success of our clients.'"

"ProSoya technology is presently being used in more than 30 countries. There are large-scale processing plants in Canada, Russia, and Scotland. Over 500 other small to medium-scale plants are benefitting people on five continents. This is what some of our clients have to say." There follow three glowing testimonials.

"In Canada, the retail sales of soy beverages increased from $12.1 million in 1997 to $25 million in 1998, a growth rate of 106%. Are you ready to take advantage of the booming soyfoods industry? ProSoya, with its market-leading technology, continuing R&D, and highly trained personnel can be your ideal partner in pursuing the opportunities which await us in the new millennium." Address: Ottawa, Ontario, Canada.

7679. Sirtori, C.R.; Pazzucconi, F.; Colombo, L.; Battistin, P.; Bondioli, A.; Deescheemaeker, K. 1999. Double-blind study of the addition of high-protein soya milk v. cows' milk to the diet of patients with severe hypercholesterolaemia and resistance to or intolerance of statins. *British J. of Nutrition* 82(2):91-96. Aug. [36 ref]
Address: Center E. Grossi Paoletti, Inst. of Pharmalogical Sciences, Univ. of Milan, Italy.

7680. South Dakota Soybean Research & Promotion Council. 1999. Favorites from the heartland. Sioux Falls, South Dakota. 81 p. Illust. Recipe index. 22 cm. [1 ref]
• ***Summary:*** A full-color, glossy and very original spiral-bound cookbook–loaded with full-page color photos of dishes prepared from recipes. Contents: Why eat soy? Practical ways to incorporate soy into your diet. How to cook soybeans. Breads (incl. prize-winning Carrot tofu muffins, and Tofu herb bread). Soy flour tips. Main dishes. Green soybean (Sweet Bean [green vegetable soybean]) tips. Salads. Desserts (incl. prize-winning Glistening cheesecake, and Pineapple cake). Beverages and snacks (incl. prize-winning Tofu shake). Soy products: Dried soybeans, tofu, soy milk, soy flour, fresh green soybeans, textured vegetable protein (TVP). Soyfoods substitutions (from meat and animal products). For more information: 1-800-talk-soy, or www.soyfoods.com.

Talk with Betty Hansen at South Dakota Soybean Board. 2000. May 15. This cookbook (which is undated) was first published in the summer of 1999. Many of the recipes were adapted from local favorites, and all these were tested in the office. Some also came from the winners of a recipe contest sponsored by the South Dakota Soybean Board. Address: Sioux Falls, South Dakota. Phone: 605-330-9942.

7681. White Wave, Inc. 1999. Silk (Ad). *Vegetarian Times.* Aug. p. 13, 65, 67.

• ***Summary:*** This attractive, color one-third page ad is run in an innovative format: It appears in a slightly different

form (but all the same size) in the lower right corner of three different pages of this magazine–leading the reader to stop and say–"Didn't I just see that ad?" The text for "Vanilla Soymilk" on page 13 reads: "Soymilk never tasted this good: Rich in naturally occurring isoflavones."

The text for "Plain Soymilk" on page 65 reads: "The soymilk when taste is important: Lactose free. Low fat. No cholesterol."

The text for "Chocolate Soymilk" on page 67 reads: "When its gotta be chocolate. All natural. Made with organic soybeans."

These 3 ads also ran in the Jan. 2000 issue on pages 57, 59, and 61. However the ad on p. 59 for "Plain Soymilk" has new text: "It's just like milk except without the milk part. Lactose free. Cholesterol free. Calcium rich." Address: Boulder, Colorado.

7682. **Product Name:** Enlightened Organic Soy Beverage (Fresh, ESL Gable Top Carton) [Plain, Vanilla, Cappuccino, Chocolate].
Manufacturer's Name: Zen Don.
Manufacturer's Address: 155-04 Liberty Ave., Jamaica, NY 11433. Phone: 718-291-3333.
Date of Introduction: 1999. August.
Ingredients: Chocolate (1999/11): Filtered water, organic whole soy beans, organic granulated cane juice, natural cocoa, natural flavors, calcium carbonate, sea salt, vitamin A palmitate, vitamin D-2, riboflavin (B-2), vitamin B-12.
Wt/Vol., Packaging, Price: Quart and half gallon ESL cartons.
How Stored: Refrigerated.
New Product–Documentation: U.S. Soyfoods Directory. 1999. p. 45. Talk with Brian Lee of Zen Don. 1999. May 3. A line of new ESL filling and packaging equipment will be installed in the company's Buffalo plant at the end of May. The product will fresh (refrigerated) be sold in both quart and half-gallon cartons. The quart should be out first. They decided to do a refrigerated product (like Silk) because the market for aseptic soymilk is so saturated. This company, Zen Don, is a division of Worchester Creamery, owned by Henry Schwartz. The soymilk is being made in Elma. This product as expected to be on the market on 1 Jan. 1999; it would be packaged at another facility. They decided to delay the product launch until July 15 (they have a slotted run date with Buffalo), after the new fillers were installed in their own plant; they way, nobody got their formula.

Silas will be the president of this new company. Brian will be one of the account executives. A sister company introduced Juniper Valley Organic Milk, one of America's early brands of organic cow's milk. The product was No. 1 in the New York Metro area until Horizon bought them out. The sister company has a processing agreement with Horizon in one of their other facilities, and that sister company is an exclusive distributor of all the Horizon organic milk products.

Newsday (Long Island, New York). 1999. Oct. 20. "Soy milk goes mainstream." A large photo shows a carton of Zen Don Soy Milk.

Leaflet (color) sent by Patricia Smith from Natural Products Expo (Baltimore, Maryland). 1999. Oct. 26. "Introducing Zen Don Organic Soy Milk. 'Soy as Happiness.'" The product now comes in four flavors in 1 quart gable-top cartons: Plain, Vanilla, Cappuccino, and Chocolate. The phone number is now 718-558-0692. An illustration on the front panel of each quart shows a large panda seated upright, drinking a glass of soy milk. "What is Zen Don? Literally 'Zen Don' means 'magic potion' in Mandarin."

7683. **Product Name:** Enlightened Organic Soy Pudding [Banana, or Chocolate].
Manufacturer's Name: Zen Don.
Manufacturer's Address: 155-04 Liberty Ave., Jamaica, NY 11433. Phone: 718-291-3333.
Date of Introduction: 1999. August.
Wt/Vol., Packaging, Price: Quart and half gallon ESL cartons.
New Product–Documentation: U.S. Soyfoods Directory. 1999. p. 45. Talk with Brian Lee of Zen Don. 1999. May 3. This product will be packaged on the company's standard pudding filler. It is expected to be out by about July 1999, and hopefully it will be in stores before the Natural Products Expo in October in Maryland. Zen Don had a booth for this product in Oct. 1998 at the Natural Products Expo in Maryland–a year before the product was available. "We were test marketing the product. We had mock-up packaging."

7684. **Product Name:** Soy Pudding [Chocolate, or Banana].
Manufacturer's Name: Zen Don.
Manufacturer's Address: 155-04 Liberty Ave., Jamaica, NY 11433. Phone: 718-558-0692.
Date of Introduction: 1999. August.
Ingredients: Chocolate (1999/11): Filtered water, organic whole soy beans, organic granulated cane juice, modified food starch, natural cocoa powder, natural flavors, potassium phosphate, calcium carbonate, lecithin, sea salt, vitamin A palmitate, vitamin D-2, riboflavin (B-2), vitamin B-12.
Wt/Vol., Packaging, Price: Four x 4 oz cups in a sleeve. Retails for $2.59 to $3.00 (1999/12, New York City).
How Stored: Refrigerated.
New Product–Documentation: Leaflet (color) sent by Patricia Smith from Natural Products Expo (Baltimore, Maryland). 1999. Oct. 26. "Introducing Zen Don Soy Puddings. 'Soy as Happiness.'" The product comes in two flavors in aseptic cups. An illustration on the side of each sleeve shows a large panda seated upright, drinking a glass of soy milk. "What is Zen Don? Literally 'Zen Don' means 'magic potion' in Mandarin."

7685. Rose, Richard. 1999. Big problems between Ted Nordquist of TAN Industries Inc. and White Wave (Interview). *SoyaScan Notes.* Sept. 7. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Richard heard from Wally Rogers that White Wave owes TAN Industries $320,000. White Wave, which had usually been ordering one tanker full of soymilk from Ted Nordquist, suddenly ordered six tankers full. After they took delivery of the product, they refused to pay–not because of any claim that the product was defective but for other reasons. The only way that Ted can resolve that is to go to court. The six tankers were apparently enough to keep White Wave supplied with soymilk until they could switch over to a new supplier. White Wave also thought that TAN Industries was charging them too much for the product.

Richard imagines that White Wave will say that they have a contract with TAN industries, which says that TAN will not formulate soymilk for any other companies. TAN's position is that they did not do any formulation; they just sold soy base to other companies, which formulated it themselves.

Talk with Ted Nordquist. 2000. April 14. The above story is basically true. White Wave did have unpaid invoices of $320,000. They refused to pay because they said (incorrectly) that Ted had broken a contract by selling soy base to Gary Stein. It took Ted's partner, Henry Waxman (who is an attorney) 4 months to collect the debt. In the meantime, White Wave's attorney tried to get TAN to settle for a lower amount. Address: President, Rella Good Cheese Co., P.O. Box 5020 (616 Davis St.), Santa Rosa, California 95402-5020. Phone: 707-576-7050.

7686. Iverson, Ron. 1999. Re: Signature Ingredients, LLC is a new company that plans to develop and market a good tasting, nutritious soy milk. Letter (fax) to William Shurtleff at Soyfoods Center, Sept. 16. 24 p. Typed, with signature on letterhead.

• ***Summary:*** "Enclosed is information on FSPGold, a powder that they claim makes good soy milk." FSP stands for "Fine Soy Powder" which is actually fine-mesh whole soy flour.

"Company profile–Start: Soy Protein Technologies (USA), LLC is a continuation of Toshoku Co., Ltd. established in Kyoto, Japan over 20 years ago by FSP inventor Zentaro Iwamoto. FSP has been produced and sold in Japan for over 15 years; however, due to the need to import soybeans and the economic infeasibility of production and infrastructure in Japan, the decision was made to transfer the business to the United States.

"In April of 1999, a partnership was established between newly established Iowa company Soy Protein Technologies (USA), LLC and World Food Processing, LLC to begin construction on a 58 acre site located in Oskaloosa, Iowa–aptly named World Food Park.

"Construction of the FSP plants is scheduled to be completed around April of the year 2000. The initial production capacity is approximately 6000 metric tons per year. The Oskaloosa site will have the capacity to grow as the level of business increases.

"Principals:

"The principals of Soy Protein Technologies (USA), LLC are as follows:

"Zentaro Iwamoto–President, Manager

"Harrison Copper–Vice President, Member

"Yoshinori Iwamoto–Vice President of Operations, Member

"The principals of World Food Processing, LLC are as follows:

"Jerry Lorenzen–President, Manager

"Duane Bushman–Vice President, Manager

"http://www.fspgold.com/prome/index.html.

"Infrastructure

"Soy Protein Technologies (USA), LLC will be located within World Food Park site in Oskaloosa, Iowa. The production facility will be adjacently located next to World Food Processing which is a large, super-sophisticated soybean cleaning facility equipped with chilled storage for soybeans. The proximity of the soybean cleaning and storage as well as the availability of state of the art equipment will enable Soy Protein Technologies (USA), LLC to always be readily supplied with soybeans which are handled well beyond the requirements of the most stringent grain handling / food safety laws.

"The production facility is located on a railroad spur which connects to a ramp in Newton, IA. Rail access will enable us to conveniently and economically ship to all regions in the United States as well as all major ports which facilitate export shipments.

"A highway is also being installed which connects to this facility and will greatly facilitate freight traffic efficiency to the production site."

Company goals: "... We intend to produce FSP with non-GMO varieties of soybeans, which may be grown organically, on a chemical free program, and commercially grown. By doing so we intend to create markets for soybeans grown in the midwest [sic. Midwest].

"Marketing: Soy Protein Technologies (USA), LLC has special ties with The North American Marketing Corp., which is a company designed for the sales and marketing of FSP in the North American market (USA, Canada, Mexico)..."

"Meet the inventor of FSP: Zentaro Iwamoto of Kyoto, Japan is the inventor of FSP Gold. In his facility at Yagi, he has produced and experimented with FSP for over 15 years. His initial inspiration to produce soy powder was the fact that soy food production was inefficient and that many nutrients were lost in the traditional methods of producing tofu and soy milk. This fact was especially significant for

Zentaro Iwamoto because he experienced life in post-war Japan where food shortages were a major problem.

"Starting the end of 1999, Mr. Iwamoto will relocate to Oskaloosa, IA with his son Yoshinori Iwamoto to begin construction of the FSP facility. Mr. Iwamoto will hereafter be a resident in the United States..." Address: Chairman, 693 Ponce de Leon Dr., Tierra Verde, Florida 33715. Phone: (727) 865-1833.

7687. Harrigan, Brian. 1999. Re: Overview of utilization ProSoya's equipment abroad. Letter (fax) to William Shurtleff at Soyfoods Center, Sept. 22–in reply to inquiry. 1 p. .

• ***Summary:*** 1. Commercial vs. non-profit: Of the machines ProSoya has sold directly, about 80% were sold to commercial firms and the remaining 20% to non-profit organizations. If we include the machines that have been made and sold by the Russians and Indians under license from ProSoya (over 500 SoyaCows), these can be estimated at 70% commercial and 30% non-profit.

2. Type of product produced: Soymilk beverage production 50%. Tofu production 40%. Other soyfoods 10%.

Use in developing vs. developed countries: In terms of value, about 75% is in developing countries. In terms of number of liters, about 90% is in developing countries.

There are presently about 250 locations or clients using ProSoya's equipment worldwide, with about 175 of these in Russia alone. Address: Executive Vice-President, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

7688. *Bluebook Update* (*Bar Harbor, Maine*). 1999. New study finds soyfoods sales healthy. 6(3):1, 7. July/Sept.

• ***Summary:*** A market study titled *The U.S. Soyfoods Industry* was recently completed by Soyatech, Inc. and Senechal, Jorgenson & Hale Co. It found that retail sales of soy products reached 1.7 billion in 1998 and are expected to reach $2.12 billion by the end of 1999, $2.56 billion by the end of 2000, and 3.67 billion by the end of 1002. After growing at less than 10% a year from 1990 to 1995, sales for the entire soyfoods category shot up quickly, growing 11.5% in 1997, and 17.7% in 1998; they are expected to increase 23.2% in 1999. A major reason for this growth is a keen interest in health by consumers who believe that soyfoods can provide health benefits.

Looking at the various market segments, the one with the most rapid growth has been meat alternatives, which grew 48% in 1997, 45.8% in 1998, and is expected to grow 44.8% in 1999. The category already has retail sales of $500 million a year.

Soymilk is another category with strong growth; retail sales rose 38.7% in 1998 and are expected to grow 38% in 1999.

The study is composed of three major parts: (1) U.S. Soyfood Products & Market, which covers sales, companies, products, and market trends; (2) The Soyfoods Consumer, which provides a detailed analysis of who this consumer is; and (3) Soy Protein Ingredients, which outlines the industry and market for soy ingredients. The report can be purchased in its entirety or by section.

Note: A brochure describing this study, from the two companies that conducted it, states that it was completed in April 1999 and costs $12,500.

7689. Dibb, Sue; Fitzpatrick, Mike. 1999. Fórmulas infantiles a base de soya: Preocupaciones para la salud [Soy-based infant formulas: Health concerns]. *Dietistas & Nutritionistas* 4(4):6-12. Sept. [49 ref. Spa]

Address: 1. The Food Commission, 94 White Lyon St., London N1 9PF, UK; 2. PhD, P.O. Box 33-849, Takapuna, New Zealand. Phone: Fitzpatrick: 0064-9 486 8068.

7690. Grogan, Bryanna Clark. 1999. Soyfoods cooking for a positive menopause. Summertown, Tennessee: Book Publishing Co. 192 p. Sept. Index. 23 cm. [31 + 49 websites ref]

• ***Summary:*** On the front cover: "Reduce the discomforts of menopause naturally. Lower your cholesterol. Reduce your risk of heart disease and cancer. Over 150 family pleasing recipes." Eating a diet rich in soyfoods may alleviate many of the discomforts of menopause.

Content: Introduction. Glossary. 1. The soy prescription. 2. Soy for strong bones and weight loss. 3. Preventing the number one killer of women-heart disease. 4. Can soy prevent cancer? 5. A soyfoods primer. 6. Baking and cooking with soyfoods. 7. Breakfast foods and beverages. 8. Condiments, sauces, dips, dressings, and spreads. 9. Appetizers, salads, and soups. 10. Lunch, supper, and side dishes. 11. Dinner entrees. 12. Desserts. Bibliography and websites. Sources for ingredients.

7691. Kneen, Brewster. 1999. Farmageddon: food and the culture of biotechnology. Gabriola Island, BC, Canada: New Society Publishers; Philadelphia, Pennsylvania: New Society. viii + 231 p. Illust. Index. 22 cm. [43 + 233 endnotes]

• ***Summary:*** An early book about genetic engineering of farm crops. Contents: Acknowledgments. Introduction: What was the problem? 1. Undertones of death. 2. Moral blackmail. 3. A case of bad attitude. 4. Where did biotechnology come from? 5. Progress it is not. 6. Hormonized milk. 7. The eternal tomato. 8. Killer potatoes. 9. Made to order: Regulation. 10. Lifelines. 11. Apocalypse, Armageddon. 12. Growing resistance.

Appendixes: (1) The Farmageddon lexicon [a facetious, humorous glossary]. (2) The science of genetic engineering [how it's done]. Recommended reading. Notes. About the author (with portrait photo. "He is known internationally as Canada's foremost expert on the global food system").

Soybeans are not mentioned in the index. However biotechnology, life science corpration, bovine somatotrophin (BST), deKalb Genetics Corporation, Delta & Pine Land Company, Monsanto, Novartis, rbGH (recombinant bovine growth hormone), etc.

Review in *E–The Environmental Magazine:* "'Buyer beware,' warns Kneen. We are all guinea pigs in a corporate experiment that may be putting our health at risk. Kneen describes the inner working of genetic engineering in detail and calls for a public movement against it. He says genetically engineered food should be labeled." Address: Author and expert on food systems, Sorrento, British Columbia, VOE 2WO Canada.

7692. **Product Name:** Future Shake [Dutch Chocolate].
Manufacturer's Name: Odwalla, Inc.
Manufacturer's Address: Dinuba, CA 93618. Phone: 1-800-Odwalla.
Date of Introduction: 1999. September.
Ingredients: Soy beverage (Soybeans, water), water, banana puree, agave nectar, mango puree, Dutch cocoa (processed with alkali and soy lecithin), Madagascar vanilla, organic whole oats, vitamins and minerals (calcium, magnesium, vitamin C, iron, vitamin E, niacin, zinc, copper, pantothenic acid, manganese, folic acid, vitamin A, vitamin B-6, riboflavin, thiamine, biotin, iodine, chromium, selenium, vitamin B-12, vitamin D).
Wt/Vol., Packaging, Price: 16 fl oz (480 ml = 1 pint) HDPE plastic bottle. Retails for $2.99 at Safeway supermarket (1999/10 Lafayette, California).
How Stored: Refrigerated.
New Product–Documentation: Product (Dutch Chocolate, 1 pint) with Label purchased for $2.99 at Safeway supermarket in Lafayette, California. 1999. Sept. Self adhesive label in many colors: dark brown, red, black, orange, purple, green and white on light brown. Illustration of colorful, stylized man with an zany design for a head, 3 ears of wheat in his right hand, a glass in his left hand, a long-billed bird on his shirt design, planets whirling around him, and many small spirals. Text on front panel: "Delicious, nutritious, dairy-free. Low fat." One side panel states: "Live a lush life! Sweet and velvety. Dutch Chocolate Future Shake is a luscious blend of real dutch chocolate, organic oats, soy milk, banana and mango. One bottle provides a wealth of vitamins and minerals, plus 50% of the RDI for calcium and vitamin C and 100% for folic acid. It's delicious low-fat nourishment from real whole foods. The Future is in your hands... shake it up!" "Odwalla (Oh-DWA-la) was founded in 1980 by three musicians with the dream of a healthy world. Their mission: To make great juice and bring a heart to business." www.odwalla.com. Copyright 1999. Soyfoods Center taste test: Delicious. Very rich in chocolate and quite expensive. We preferred the Mocha Motion.

7693. **Product Name:** Future Shake [Inner Chai].
Manufacturer's Name: Odwalla, Inc.
Manufacturer's Address: Dinuba, CA 93618. Phone: 1-800-374-6554.
Date of Introduction: 1999. September.
Ingredients: Soy beverage (Soybeans, water), chai tea (black tea, cinnamon, cardamom, ginger, black pepper, clove, citric acid), mango puree, banana puree, honey, Madagascar vanilla, organic whole oats, vitamins and minerals (calcium, magnesium, vitamin C, iron, vitamin E, niacin, zinc, copper, pantothenic acid, manganese, folic acid, vitamin A, vitamin B-6, riboflavin, thiamine, biotin, iodine, chromium, selenium, vitamin B-12, vitamin D).
Wt/Vol., Packaging, Price: 16 fl oz (480 ml = 1 pint) HDPE plastic bottle.
How Stored: Refrigerated.
New Product–Documentation: Product with Label purchased for $2.99 at Safeway supermarket in Lafayette, California. 1999. Oct. Self adhesive label in many colors: purple, red, red, black, orange, green and white on light orange. 7697. Soyatech, Inc. 1999. Soya & Oilseed Bluebook 2000: The annual directory of the world oilseed industry. Bar Harbor, Maine: Soyatech. 432 p. Sept. Comprehensive index. Internet address index. Brand name index. Advertiser index. 28 cm.
• ***Summary:*** On the cover is a color photo of rare and beautiful soybeans of variegated colors, including various shades of purple, red, blue, etc. The background is solid soybeans made to appear blue. The inside front cover and first page contain full page color ads from Lucas Meyer, "The Lecithin People." On the back cover is color ad from ADM titled "The next century belongs to soy," written over a huge yellow soybean with a prominent hilum.

To celebrate the year 2000, a special supplement has been included near the front of the book, titled "2000 and beyond: The future of soy. Soyatech brings together a panel of key individuals in the soybean industry to talk about the future" (p. 9-16). Its contents: Introduction, by Peter Golbitz. The introduction of biotechnology. The blossoming demand for identity preserved soybeans. Soyfoods and health benefits. Organic farming has become a growing $4.2 billion dollar industry. Soybean products improve as technology continues to evolve. Alternative technologies for a developing world industry: The world produces 150 million metric tons of soybeans, of which less than 10 percent is used directly for human food. Growth of world markets shaped by American soybean farmers investments (American Soybean Association and United Soybean Board). Soybeans find fertile ground in South America. Soyfoods past, present, and future (incl. Vitasoy and Yvonne Lo). Beyond 2000.

Note that Soyatech has moved to a new address. Address: 7 Pleasant St., P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207.288.4969.

7698. SunRich Natural. 1999. Soy Supreme (Ad). *Soya Bluebook Plus* 2000. p. 139.
• ***Summary:*** This full-page black-and-white ad states that "Soy Supreme is a nutritious, versatile, high-quality soy

powder. Ideal for soymilk, baked goods & desserts, its applications are unlimited!" A photo shows a beaker filled with white powder surrounded by a gable-top half gallon carton of "Soy Milk," liquid soymilk being poured into a glass, soybeans in and around a mortar and pestle. The following specifications are given: Functionality, packaging, storage, typical analysis, microbiological date, and physical appearance. Address: P.O. Box 128, 3824 S.W. 93rd St., Hope, Minnesota 56046. Web: www.sunrich.com. Phone: 1-800-297-5997 or 507-451-6030.

7699. Vierhile, Tom. 1999. Food trends: Got (soy) milk? *Health Products Business.* Sept.
• ***Summary:*** "Introductions of soymilk and soy-based beverages have tripled since 1993." Meanwhile sales of cow's milk are slowly decreasing.

In the 12-month period ended June 1998, sales of soymilk rose 53% in mainstream supermarkets, compared with a still-respectable 25.2% rise in the natural foods channel. Address: General Manage, Marketing Intelligence Service, Ltd., Naples, New York.

7700. Yourk, Jim. 1999. Non-dairy beverages are a mainstream necessity. *Griffin Report of Food Marketing* (*Rockland, Mass.*). Sept.
• ***Summary:*** The article begins: "What was the hottest thing in Natural Foods last year? Soy. What is the hottest thing in Natural Foods this year? Soy... Non-Dairy beverages, which are soy and rice milk, are still the biggest things in the Natural Foods category."

Note: This article also appeared in Griffin's Modern Grocer (Hackensack, New Jersey). Sept. 1999. Address: Category Manager, Natural Foods, Milbrook Distribution Services.

7701. Daniel Rosenberg. Dow Jones News Service. 1999. FDA approves new health claim for soy protein. New York, NY: 1 p. Oct. 20 [Eng]
• ***Summary:*** "Chicago (Dow Jones)–Products containing soy protein will be allowed to boast new health claims on their labels starting next Tuesday, the Food and Drug Administration said Wednesday.

"Foods containing at least 6.25 grams of soy protein per serving will be allowed to claim on their labels that soy protein can reduce the risk of coronary heart disease."

The new health claim is in response to a petition submitted to the FDA by Protein Technologies International.

7702. Flagg, Michael. 1999. A local price war turns analysts sour on Vitasoy: U.S. prospects aren't enough to sway opinion. *Asian Wall Street Journal* (*Hong Kong*). Oct. 20. [Eng]
• ***Summary:*** Vitasoy International Holdings sells soy milk in Hong Kong, the U.S. and China. In 1998, the company bungled the opening of its U.S. factory, a converted shrimp processing plant near Boston, Massachusetts [Nasoya]. The state-of-the-art production line for tofu experienced many start-up problems, which drove Vitasoy profits down 13%. In 1996 profits plunged 75% following a recall in Hong Kong. A graph shows that Vitasoy stock, selling at HK$3.4 in Nov. 1998, has plunged to a 52-week low of HK$2.15 today.

But there are grounds for optimism. In the USA soy milk sales, which were US$2 million 20 years ago, are expected to reach US$300 million this year. Yet Vitasoy's big problem is a price war in Hong Kong, where the company still gets two-thirds of its sales.

7703. Food and Drug Administration, U.S. Department of Health and Human Services. 1999. FDA Approves new health claim for soy protein and coronary heart disease. *FDA Talk Paper* T99-49. Oct. 20.
• ***Summary:*** "On October 26, 1999, the FDA will authorize use of health claims about the role of soy protein in reducing the risk of coronary heart disease (CHD) on labeling of foods containing soy protein. This final rule is based on the FDA's conclusion that foods containing soy protein included in a diet low in saturated fat and cholesterol may reduce the risk of CHD by lowering blood cholesterol levels.

"Coronary heart disease, one of the most common and serious forms of cardiovascular disease, is a major public health concern because it causes more deaths in the U.S. than any other disease. Risk factors for CHD include high total cholesterol levels and high levels of low density lipoprotein (LDL) cholesterol.

"This new health claim is based on evidence that including soy protein in a diet low in saturated fat and cholesterol may also help to reduce the risk of CHD. Recent clinical trials have shown that consumption of soy protein compared to other proteins such as those from milk or meat, can lower total and LDL-cholesterol levels.

"Foods that may be eligible for the health claim include soy beverages [soymilk], tofu, tempeh, soy-based meat alternatives, and possibly some baked goods. Foods that carry the claim must also meet the requirements for low fat, low saturated fat, and low cholesterol content except the foods made with the whole soybean may also qualify for the health claim if they contain no fat in addition to that present in the whole soybean.

"Scientific studies show that 25 grams of soy protein daily in the diet is needed to show a significant cholesterol lowering effect. In order to qualify for this health claim, a food must contain at least 6.25 grams of soy protein per serving, the amount that is one-fourth of the effective level of 25 grams per day. Because soy protein can be added to a variety of foods, it is possible for consumers to eat foods containing soy protein at all three meals and for snacks.

"An example of a health claim about the relationship between diet and the reduce risk of heart disease is:

"Diets low in saturated fat and cholesterol that include 25 grams of soy protein a day may reduce the risk of heart disease. One serving of (name of food) provides ____ grams of soy protein.

"This new health claim rule responds to a petition submitted to the FDA by Protein Technologies International. This rule is based on the proposed rule that was published in the Federal Register on November 10, 1998, and comments received by the FDA. Use of the claim in food labeling is authorized immediately." Address: Public Health Service, 5600 Fishers Lane, Rockville, Maryland 20857.

7704. Riccardi, Victoria Abbott. 1999. Enjoying soy: You know it's good for you. Now learn to like it. *Boston Globe.* Oct. 20.

• ***Summary:*** When people hear the word "soy," different images come to mind. "For devotees of sushi, it might be emerald green soybeans. For the Woodstock generation, it could be custardy blocks of tofu. And for juice bar addicts, it might be soy milk for smoothies." But whoever you are, soy has "likely crossed your radar screen. And pretty soon its going to be on every channel."

Peter Golbitz, president of Soyatech Inc. (Bar Harbor, Maine) has just completed a market study. In 1998 total soyfoods sales were $1.78 billion, up 18% from 1997. They are projected to be $2.6 billion by the year 2000.

Gives a good profile of two local mom-and-pop companies: Health-Trip Foods Inc. of Concord, owned by Eileen Moriarty and Dan Sanford, makes soynut butter. 21st Century Foods Inc. of Jamaica Plain, owned by Rudy and Lovin Canale, makes 800 lb/day of tofu. Before coming to the USA, Rudy ran a health food restaurant in Italy. He came here in 1977 to study macrobiotics at the Kushi Institute in Becket, Massachusetts. In 1981 he and an Italian friend started making tempeh in Brookline. Soon they added tofu products, using tofu made by another company. When the cost of the tofu became prohibitive, they started making their own. Now he and his wife, Lovin, do all the work and delivery. Last year they had $175,000 sales, and even with no advertising they make a profit.

7705. Sterngold, James. 1999. Dairy farmers in California find gold in urban sprawl. *New York Times.* Oct. 22. p. A1, A14.

• ***Summary:*** Several years ago California passed Wisconsin to become America's leading milk-producing state–a little known but very important fact. New York is the nation's #3 dairy state. The dairy industry crowded into the Chino Valley in San Bernardino County in southern California is a marvel of automation and high yields. Because of urban sprawl, many dairy farmers are selling their now outmoded dairy facilities and valuable tracts of land, and using the ample profits to build even larger and more efficient operations in more pastoral areas. These are some of the most profitable times the industry has ever known; feed costs are low and milk prices are high. A typical farm generates $250,000 to $300,000 a month in milk sales.

Another reason the dairy farms are moving is that the intensive farms, with an average of 25 cows per acre, create huge amounts of manure–and the smell that goes with it. Winter rains can spread water contaminated with manure off the farms. The county is putting pressure on the dairies to clean up the environment and "to ship out the 900,000 tons of manure they produce each year, as well as the 2 million tons of manure currently stockpiled."

The owners view their cows as pieces of machinery that work in an automated factory. Each cow has a number and its own record in the computer. If they don't produce milk, they become beef.

7706. Jacobi, Dana. 1999. Impressions of the Natural Products Expo in Baltimore, Maryland (Interview). *SoyaScan Notes.* Oct. 26. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The Expo was great! There were an unusually larger number of new companies selling soy products; Dana picked up many sell sheets. The Soyfoods Association had a meeting at the Expo at which Peter Golbitz announced that the FDA health claim concerning soy protein and heart disease will allow traditional, whole soyfoods (such as tofu and soymilk) to bear the claim–even though they contain more fat than allowed under the claim. This was an unexpected development–and very good news. The claim says that 25 grams of soy protein in a low-fat diet may reduce the risk of heart disease. The Association also presented a new position paper on genetically engineered soybeans in soyfoods, stating that foods containing GMO ingredients should be so labeled. The Association did not oppose the use of GMO soybeans in soyfoods, noting that genetic modification will be used for many different purposes, some of which may have health benefits.

Two prepared soy puddings were debuted at the Expo–one from Westbrae and one from Zen Don. Both came in two flavors: chocolate and vanilla. The chocolates were both delicious; the vanillas were not so good. Zen Don is run by a young man age 30-32 who has introduced a soymilk under the brand Zen Don, which has a picture of a panda on the package, and which he has positioned for the mainstream market to compete with Silk. Dana believes that with this name and graphics, the product is mispositioned; moreover she finds it much too sweet.

White Wave debuted Silk eggnog in quarts. They were also dispensing Silk in four new flavors from a cooler and asking for comments: Lemon (which Dana found delicious), strawberry, chai, and cappuccino.

Abbott Laboratories (Chicago, Illinois) is now the mother company for HealthSource (formerly Health Source, from a subsidiary of Protein Technologies International–

PTI), the protein powder drinks from Ross Products. This is not cleared stated on sales sheets.

Dana did not see the FDA health claim in today's (Tuesday's) *New York Times.* It will probably be in the Wednesday edition, which has a special food section–as do many other major newspapers. Address: New York City.

7707. Brasher, Philip. 1999. Soy becomes healthy option: Under new rules that allow health claims, the milk alternative is expected to find a wider audience despite its relative lack of flavor. *Contra Costa Times.* Oct. 27. p. C1, C4. Business/technology section. Wednesday.
• ***Summary:*** The U.S. government is now allowing food labels to tout soy's ability to lower cholesterol, so a new surge of interest is expected–and not just in traditional soy-based foods such as tofu and soy milk. To qualify for the label claim, a food must contain 6.25 gm of soy protein per serving; this is one-fourth of the 25 grams of soy protein daily that studies have shown is needed to have a significant cholesterol-lowering effect. Carlos Gutierrez, president of the Kellogg Co., says soy is a big food opportunity. Sales of soy-based foods are expected to reach $2.14 billion this year, up from $852 million in 1992, according to Soyatech. Address: Associated Press.

7708. *Denver Post.* 1999. Soy labels expected to boost sales. Oct. 27. *

7709. Bogo, Jennifer. 1999. Tools for green living: The better brown bag. *E–The Environmental Magazine* 10(5):52. Sept/Oct.
• ***Summary:*** This small article discusses organic foods sold by White Foods Co., and Walnut Acres Organic Farms LLC. Walnut Acres offers an extensive selection of organic nut butters, such as cashew, sunflower and soy, as tasty peanut-free alternatives. They also offer a delicious peanut-honey-sesame spread which goes nicely with their organic fruit spreads such as sour cherry or apricot, or the company's old-fashioned jams, like raspberry or strawberry.

White Wave sells "half-pint soy milks."

7710. Egan, Jeanette Parsons. 1999. Soy! Soy! Soy! Enjoy soyfoods' benefits in delicious recipes. Tucson, Arizona: Fisher Books. xxx + 162 p. Oct. Illust. Index. 23 cm. Simply Healthy Series.
• ***Summary:*** This is a soyfoods cookbook. Contents: Dedication. Acknowledgments. Why I love soyfoods: Why eat soyfoods?, soy's health benefits, reduces heart disease, helps prevent cancer, soy for your bones (osteoporosis), to flash or not to flash (menopause), what about soyfoods allergies, how much soy should I eat? (soy protein, isoflavones), where to purchase soyfoods, how to add soy to your diet, important notes about eating soy. A soyfoods glossary: Black soybeans and yellow soybeans, green soybeans (edamamé), meat alternatives or analogs, miso, soy cheeses, soy cream cheese, soy flour, soy grits, soy milk (soy beverages), soybean oil, soynuts, soynut butter (roasted soybean butter), soy protein concentrates, soy protein isolates, soy sauces (tamari, shoyu), soy yogurt, tempeh, textured soy protein (TSP), tofu. Appetizers. Soups. Salads. Main dishes. Side dishes. Breads. Breakfast dishes. Desserts. Mail order sources for soyfoods. Other sources.

Contains 8 full-page color photos showing recipes. This is not a vegetarian cookbook. Recipes call for the use of chicken (4 recipes), ground beef, ham, crab meat, etc.

7711. Fallon, Sally; Enig, Mary G. 1999. Nourishing traditions: The cookbook that challenges politically correct nutrition and the diet dictocrats. 2nd ed. Washington, DC: New Trends Publishing Inc. xvi + 668 p. Illust. by Marion Dearth. Subject index. Recipe index. Menu index. 26 cm. [200* ref]
• ***Summary:*** Contains over 700 recipes. Contents: Preface. Introduction: Politically correct nutrition, fats, carbohydrates, proteins, milk & milk products, vitamins, minerals, enzymes, salt, spices & additives, beverages, about food allergies and special diets, parting words, guide to food selection (nourishing traditional foods, compromise foods {such as tofu}, newfangled foods {such as soy protein isolates and commercial soy milk}), a word on equipment, kitchen tips & hints, references (188). Mastering the basics. Great beginnings. The main course. A catalog of vegetables. Luncheon and supper foods. Grains & legumes. Snacks and finger foods. Desserts. Beverages. Feeding babies. Tonics and superfoods. Appendixes (A-F). About the authors.

Some of the basic recommendations in this book fly in the face of modern nutritional science: Eat more meat. Eat dairy products made from raw milk; pasteurization harms the milk. The worst fats are *trans* fatty acids, produced by hydrogenation; cholesterol and saturated fats do not cause heart disease. Consume plenty of enzymes. Meat should be eaten raw, rare, or braised in stock. Moreover, the authors propose a conspiracy in which doctors, researchers, nutritionists, and spokesmen of various government agencies are giving bad nutritional advice to the American public (p. 2). The authors wish, sentimentally, for the return of the small American farm. Moreover, they do not examine some the non-dietary issues related to a diet based on meat and dairy products: What is its impact on the environment? How would it affect the ability of the Earth to feed more than 6 billion people? What right do humans have to kill animals?

However the authors also make a number of recommendations that many people would agree with: Eat more natural, traditional, fresh, and unrefined foods instead of refined and processed foods. Avoid sugar and hydrogenated fats. This book is strongly influenced by the observations of Dr. Weston Price, a dentist, whose important book *Nutrition and physical degeneration: A comparison of*

primitive and modern diets and their effects, was published in 1939.

Concerning soyfoods, the authors favor the use of small amounts of fermented soyfoods (such as traditionally fermented soy sauce and miso) but are strongly opposed to the use of non-fermented soyfoods such as tofu and soymilk.

Soy-related recipes and information: Commercial soy formulas are low in saturated fats and devoid of cholesterol (p. 6). Today most of the fats in the American diet are polyunsaturated and derived from vegetable oils such as soy (p. 10). The cheapest oils, such as soy oil, are often hydrogenated; this creates *trans* fatty acids (p. 14-15). Cows lose valuable Activator X when fed high-protein soy-based feeds. Lecithin is found in butter (soy, the main source of lecithin worldwide, is not mentioned). Mother's milk is high in cholesterol because it is essential for growth and development (p. 16-17).

Omega-6 (bad) and omega-3 (good) fatty acids in soybean oil (p. 19). Fermented soy foods contain compounds that resemble vitamin B-12 but they are not absorbed by humans (p. 28). Isolated protein powders made from soy are usually obtained by a high-temperature process that over-denatures the proteins to such an extent that they become essentially useless, while increasing nitrates and other carcinogens. These isolated soy proteins can cause osteoporosis (p. 29).

Beef should not be fed soy meal for protein, but rather animal parts (p. 31). Avoid farm raised fish [aquaculture] that have been fed soy meal (p. 32). Cultured soybean products from Asia, such as natto and miso, are a good source of food enzymes if they are eaten unheated (p. 47). The natural glutamic acid in soy sauce and miso gives these foods their rich, meat-like taste (p. 49). Many processed foods contain MSG or hydrolyzed protein, "especially soy-based concoctions" (p. 50).

Heavily yeasted foods, such as soy sauce and Worcestershire sauce, often exacerbate the symptoms of chronic yeast [candida] infection (p. 56). Beans cause digestive problems because they contain two complex sugars, farrinose [sic, raffinose] and stachyose (p. 60). The macrobiotic diet and soybeans: Use only as fermented products like miso, natto, and tempeh. Problems with tofu, soy milk, and phytoestrogens in soy (p. 62). The sickening effect of soy on ruminants (p. 87). In Japan, a typical meal contains miso, soy sauce, and pickles, all fermented products. In Indonesia, they eat tempeh (p. 94).

Ode to naturally brewed tamari soy sauce and teriyaki sauce (p. 147). Soy products increase the body's need for vitamin B-12 (p. 164). Soy in Chinese history. Miso soup. Tofu in fish stock and soy sauce broth (p. 201). Macrobiotic diets (p. 343). Soy foods block zinc absorption (p. 348). Eat natural salmon; farm-raised salmon are fed inappropriate soy meal (p. 418). Problems with soy flour and modern soy products: phytates, antinutrients, omega-3 fatty acids, disagreeable taste, phytoestrogens, phytic acid, enzyme inhibitors (p. 477, 495).

Soybeans are low in two essential amino acids (p. 496). Textured soy protein contains three antinutrients: Phytic acid, trypsin inhibitors, and isoflavones (p. 502). Person fed soybean milk as an infant had a spleen filled with ceroid (p. 546). Infants should not be fed soy-based formulas which contain phytic acid and estrogen compounds (p. 599, 603-04).

Note: The first edition was apparently published in 1995 by ProMotion Publishing (San Diego, California). Address: California. Phone: (877) 707-1776.

7712. **Product Name:** Joy Soy: Non Dairy Soy Beverage [Original, Vanilla, Extra Rich Vanilla, Extra Rich Carob].
Manufacturer's Name: Joy Soy Products, LLC.
Manufacturer's Address: P.O. Box 258, Clifton, TN 38425. Phone: 1-888-456-9769 (4-Joy-Soy).
Date of Introduction: 1999. October.
Ingredients: Extra Rich Carob (1999/10): Whole organic soybeans, fructose (from corn), expeller pressed canola oil, natural cane juice crystals, pure vanilla, carob powder, sea salt, potato flour, guar and xanthan gum, carrageenan.
Wt/Vol., Packaging, Price: 21 oz can.
How Stored: Shelf stable.
New Product–Documentation: Leaflet (color) sent by Patricia Smith from Natural Products Expo East (Baltimore, Maryland). 1999. Oct. 26. "Joy Soy. So delicious! So nutritious!" On the back is "The Joy Soy story." The company, founded by Joyce, also makes soy-based Instead O' Butter, and Instead O' Cheese.

7713. Mahoney, Rob. 1999. Got Silk? A vegetarian cuisine company's trek into mainstream supermarkets passes right through the dairy case. *Prepared Foods.* Oct.
• ***Summary:*** The story of how Steve Demos of White Wave Inc. developed Silk soymilk in a gabletop carton, then teamed up with dairy milk giant Dean Foods to get it into supermarkets nationwide. An illustration shows Steve Demos. White Wave now has 100 employees and projects sales of 28 million in fiscal year 2000. Address: Managing editor.

7714. Mans, Jack. 1999. Pacific Foods of Oregon–High-tech aseptic: At the forefront of the boom in soy-based and other nutritional beverages and packaging. *Dairy Foods.* Oct. p. 57-58, 60, 62, 64, 66.
• ***Summary:*** Pacific Foods was founded in 1987 to make tofu using a new, automated process. But they quickly found that soymilk was their main product, sold in aseptic cartons. Many of these are now packaged in one-quart aseptic cartons with resealable flip-top spouts.

The company, which recently expanded, now has nine buildings totalling 250,000 square feet on its 21-acre

site. Three of the buildings are dedicated to processing, packaging, and office space; the rest are for warehousing, maintenance, etc.

This year Pacific Foods introduced a new type of soymilk in a new type of carton. Named Milk & Soy Blend, it is 100% lactose free and comes in plain and vanilla flavors, sold in a square aseptic carton with a screw-top cap. Even though the product does not require refrigeration, it is being marketed to supermarket dairy cases–to get more attention from consumers. Pacific Foods is the first company in the USA to use the new screw-top aseptic package. Address: Plant operations editor [Chicago, Illinois].

7715. *NSRL Bulletin* (*National Soybean Research Laboratory, Urbana, Illinois*). 1999. U of I program seeks to expand use of soybeans around the world. 6(3):6. Oct.
• ***Summary:*** INTSOY Director Weingartner talks about work to assist the private sector in developing countries to process and use soybeans–with financial aid from USAID. In Bulgaria an entrepreneur is processing soybeans into meal for poultry feed. A businessman from Biolink Technologies Ltd. in Bangladesh is manufacturing and selling a high-protein biscuit made from soy flour; the company currently employs 60 people and soon plans to open a second plant. INTSOY has helped a large soymilk company in Thailand to improve its product. "According to Weingartner, the most important element in the success of all these efforts has been the cooperation of American agribusiness."

7716. *Ontario Soybean Growers' Marketing Board Newsletter.* 1999. Profiles: Mike Snobelen, owner of Snobelen Farms, a non-GMO exporter. Oct. p. 7.
• ***Summary:*** "The safest bet for many farmers hoping to profit from the introduction of biotechnology may, ironically, be to plant non-biotech crops.

"The strategy is reaping dividends in Huron and Bruce Counties, where 500 growers this year contracted to deliver non-Roundup Ready soybeans for a 40 cent per bushel premium to Snobelen Farms elevators at Lucknow, Ripley and Dungannon."

"'This is a customer-driven business,' Snobelen says. 'It has nothing to do with whether biotechnology is good or bad. It's whether biotechnology is what the consumers want.'"

"Snobelen started non-biotech sales with two boatloads shipped in 1997 with the help of marketing firm Manna International. Six boatloads from the 1998 crop were shipped to the UK and Belgium, and three vessels are already booked for 1999 crop, with more sales in the works."

"To date, most Snobelen exports have gone to soymilk makers. Now, the company sees that market widening out. There is more interest in using non-biotech soybeans for bread improvers."

A portrait photo shows Mike Snobelen. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

7717. Stewart, Kim. 1999. Dean Foods buys minority share in White Wave. *Natural Foods Merchandiser.* Oct. p. 21.
• ***Summary:*** Dean Foods (NTSE: DE), America's No. 1 producer and distributor of fluid dairy products, announced in August that it has purchased a minority share in privately held White Wave Inc. White Wave plans to place its Silk brand soymilk and yogurt, plus various tofu and baked tofu products, in the more than 17,000 supermarkets that Dean Foods presently supplies. During the year 2000 White Wave's goal is to reach 10,000 of those stores or "10K by 2K," according to Steve Demos.

Data from SPINS shows that Silk brand soymilk products are the most popular of the 10 leading brands, and that sales of the Silk brand grew 74.7% during the past year (June 1998 to Jun 1999). During that time, 70% of White Wave's income came from the natural foods marketplace. The company predicts that this will drop to 50-60% during fiscal year 2000 as Silk moves into the mass market.

White Wave's two plants in Boulder, Colorado, now have about 43,000 square feet in two locations; the company plans to increase that by 15,000 square feet or 34%. The existing facilities were designed to produce about 12 million units of product a year, but are now producing about 15 million.

A color photo shows Steve Demos smiling as a pours a glass of Silk brand soymilk. Note: Talk with Bob Gerner of Berkeley Natural Grocer. 1999. Oct. 18. White Wave often shorts Bob on his orders of Silk; he almost never gets as much as he orders.

7718. United Soybean Board. 1999. National report on consumer attitudes about nutrition–1999-2000. Seattle, Washington. 8 p. Oct. 22 cm.
• ***Summary:*** This sixth annual nationwide survey, commissioned by the United Soybean Board, was conducted in July 1999 by an independent research firm in Seattle, Washington. It included telephone interviews with 1,028 randomly selected consumers and primary household shoppers of all ages throughout the USA. They were asked a series of up to 23 questions. The standard margin of error for the study is ±3.1%.

Contents: Concern about nutritional content of food (1996-99). Americans changing eating habits due to concern about nutrition (1996-99). Specific dietary changes (Big changes: Reduce fat 49%, more vegetables 25%, more fruit 18%, less red meat 17%). Importance of nutrition in selecting groceries and restaurants. Americans recalling stories on health and nutrition issues.

Consumer perceptions of genetically modified food, biotechnology, and labeling: Aware of the term "genetically modified food"–42% in 1999 vs. 48% in 1998; aware of "biotechnology"–36% in 1999 vs. 41% in 1998. "Consumers continue to view biotechnology more favorably than

genetically modified. When asked if they would continue to purchase a product with these terms on the label, 71% said yes or maybe to the term biotechnology, while 58% said yes or maybe to the term genetically modified."

Consumer perception of cooking oils: "More consumers (89%) perceive soybean oil as being healthier than any other oil"–followed by olive oil (87%) and canola (86%). "However most Americans (78%) are unaware that vegetable oil is often synonymous with soybean oil."

The healthiness of soy and soy products: "The number of consumers who perceive soy and soy products as very healthy increased significantly to 71% from 67% in 1998 and 59% in 1997.

"Forty percent of consumers are aware of specific health benefits of soy, such as reducing the risk of heart disease (14%), lowering cholesterol (10%), reducing the risk of breast cancer (8%) and prostate cancer (5%) and relieving or reducing the symptoms of menopause (7%)."

Consumer awareness and use of soy products: "Consumers report they are eating more soy products. Of those who have tried soy products, 68% report using them regularly. Twenty-four percent report using soy products once a week or more, compared to 15% in 1998. More consumers also report that they eat soy occasionally, about once a week.

"The three products that ranked highest in consumer awareness are tofu (78%), soy veggie burgers (72%) and soy milk (63%).

"Tofu and soy veggie burgers continue to receive the highest level of trial among consumers at 43% and 38%, respectively."

Consumer perceptions of *trans* fat and hydrogenation. "Over half of consumers are aware of *trans* fatty acids (58%) and hydrogenation (54%). Fifty-three percent understand what the term *trans* fatty acids represents and 64% are familiar with the term hydrogenation.

"Most consumers view hydrogenation either neutrally or positively (56%), while 44% view the term negatively.

"Consumers seem to be confused about the healthiness of *trans* fatty acids. Forty-five percent think of *trans* fatty acids as somewhat or very healthy while 55% view it as somewhat unhealthy or very unhealthy.

"Consumers are also split between their likeliness to purchase a product with *trans* fatty acids listed on the Nutrition Facts label. Forty-five percent are either very likely or somewhat likely to purchase a product with a *trans* fatty listing on the label and 55% would be somewhat or very unlikely to do so. This split also seems to indicate confusion among consumers about the term *trans* fatty acids."

Talk with Vicki M. Nesper of United Soybean Board / Publicis Dialog, in Seattle, Washington. 2002. May 2. This survey was conducted in July 1999, about 3 months before the FDA issued its health claim. The preliminary results were released at the IFT convention that summer. The report itself was published in October–as it is each year.

Note: As of Aug. 2008 this full survey is available gratis in PDF format at www.soyconnection.com /health_nutrition / pdf/.

7719. Vitasoy USA Inc. 1999. Twentieth anniversary celebration brunch (Card). 400 Oyster Point Blvd., Suite 201, South San Francisco, CA 94080. 1 p. Oct.
• ***Summary:*** This 4½ by 6¼-inch card, printed red on beige, mailed Oct. 7, invites recipients to a 20th anniversary celebration brunch (1979–1999), Sunday, November 14, 1999, 11:00–3:00 p.m., The Mark Hopkins Intercontinental Hotel, Number One Nob Hill, San Francisco. RSVP by Nov. 1. A separate stamped return envelope is enclosed for the response. Address: South San Francisco, California. Phone: (650) 583-9888.

7720. **Product Name:** Organic Soymilk [ESL Gable Top Carton–Fortified Rich Chocolate, or Fortified Creamy Original].
Manufacturer's Name: Vitasoy USA Inc.
Manufacturer's Address: 1575 Burke Ave., San Francisco, CA 94124. Phone: 1-800-328-8638 (= Eat Tofu).
Date of Introduction: 1999. October.
Ingredients: Rich Chocolate: Filtered water, whole non-genetically modified organic soybeans, organic cane juice (dried), organic barley flour, cocoa (processed with alkali), tricalcium phosphate, sea salt, zinc oxide, riboflavin (B-2), vitamin A acetate, vitamin B-12, vitamin D-2.
Wt/Vol., Packaging, Price: ½ gallon ESL Gable Top Carton.
How Stored: Refrigerated.
New Product–Documentation: Leaflet (color) sent by Patricia Smith from Natural Products Expo (Baltimore, Maryland). 1999. Oct. 26. "Mooove over! Vitasoy is in the dairy case." A large color photo shows the front of the 2-quart package, with red and white on blue. On the back of the leaflet are nutritional facts and ingredients for each product. Next to a photo of gold medal, which appears on the top of each carton, is written: "Proven best taste: Vitasoy is a premium organic product and the best tasting soymilk you can buy. The proof? We won a Gold Medal and 'Best of Show' from the American Tasting Institute in its once-a-year judging by world experts. Consumers consistently rank Vitasoy No. 1 for best taste. Judge for yourself... take a sip... and savor a long-lasting swirl of rich flavor and creamy refreshment. Satisfying and nutritious... It's 'the delicious one!'" Across the bottom of the leaflet is a color photo of each of the company's other soymilk products. Across the top of each carton is written: "Lactose free soymilk. 60 mg naturally occurring isoflavones per serving" [of 8 fluid ounces].

7721. Hack, Greg. 1999. Adding marketing muscle. *Kansas*

City Star (*Missouri*). Nov. 2.
• ***Summary:*** A table titled "Selected soybean product sales" gives U.S. statistics (in millions of dollars for) for four years: 1996 / 1997 / 1998 / 1999.

Soy milk: 12.2 / 13.4 / 15.4 / 18.7.
Meat substitutes:
Gardenburger: 6.2 / 10.2 / 44.9 / 45.9.
Morningstar Farms: 30.6 / 33.0 / 37.1 / 40.4.
Boca Burger: 5.3 / 7.6 / 12.3 / 17.3.

7722. Houle, Barbara M. 1999. Oh boy, soy! *Telegram & Gazette* (*Worcester, Massachusetts*). Nov. 3.
• ***Summary:*** Elizabeth M. Ward of the American Dietetic Association discusses the new FDA heart health claim for soy. Foods include whole dry soybeans / mature dry soybeans, fresh immature soybeans [edamame], roasted soy nuts, tofu, and textured soy protein. Large photos show: Green soybeans in the pods, roasted and salted soy nuts, and many cartons of soymilk. Address: Food Editor.

7723. Royal New Zealand College of General Practitioners. 1999. GPs call for caution on soy milk for infants (News release). 88 The Terrace, P.O. Box 10 440, Wellington, New Zealand. 2 p. Nov. 3.
• ***Summary:*** "New Zealand's General Practitioners have joined the British Food Commission, and American nutrition foundation [named] the Weston A. Price Foundation in cautioning against the use of soy milk as an infant food 'other than in very exceptional circumstances'.

"'While the Ministry of Health is correct when it says that soy milk provides a useful alternative for babies who cannot tolerate dairy-based infant formulas, what they don't emphasise is that this represents a very small number of infants,' explained Royal NZ College of General Practitioners Chairperson Dr. Ralph Wiles.

"'The debate on dairy milk formula vs. soy milk also risks drawing attention from the best sustenance of all–breast milk,' he pointed out. 'Society as a whole needs to do much more to practically support women's choice to breastfeed, with everything from trained facilitators to a campaign promoting breastfeeding as a healthy, natural activity. That anyone can still object–as from time to time we read of them doing–to a woman discreetly breastfeeding a baby in a public area is unbelievable.'" Address: Wellington, New Zealand. Phone: 071 628 7774.

7724. Kluger, Jeffrey. 1999. What's for dinner? Our chef whips up a tasty meatless meal that's good for you–and for nature. *Time*. Nov. 8.
• ***Summary:*** In the "health and environment" section: The article begins: "If the human race becomes vegetarian in the next century, animal-rights activists will be ecstatic. But what about the rest of us? Can we possibly enjoy a meat-free, dairy-free [sic] future when hunter-gatherer appetites will still be hard-wired into our genes?"

Time has chosen Louis Lanza, executive chef at and owner of Josie's Restaurant and Juice Bar in New York City, to prepare a dinner for the year "2025 that would be good for the body–and the planet. In his tasty menu, liver pate gives way to lentil pate, steak is replaced by tofu cutlet and a banana-and-ice-cream dessert is made with rice milk instead of cow's milk."

The dinner includes: "Soup and salad: Chick-pea miso soup with salad of organic baby greens, heirloom tomatoes and toasted soy nuts.

"Entree: Seared tofu cutlets in an orange chipotle glaze with mushrooms, butternut squash and wheatberries." For dessert is a sundae of rice "ice cream" [Rice Dream].

7725. Altland, Bonnie. 1999. Soy milk makes great smoothies. *Sun* (*Hanover / York, Pennsylvania*). Nov. 10.
• ***Summary:*** "The FDA has recently announced soy protein may help lower cholesterol levels when used as part of a low-fat diet." Silk, launched in 1996, was been named the industry's best-tasting soy milk in June 1999.

Contains recipes for Peach glow smoothie and Chocolate-peanut butter smoothie, each made in a blender with soy milk. To make smoothies extra refreshing, use frozen fruit and/or frozen juice concentrates.

7726. Kilburn, Roger. 1999. Harvest Direct owns Devansoy. Other makers of powdered soymilk (Interview). *SoyaScan Notes*. Nov. 15. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Harvest Direct Inc. assumed control of Devansoy Inc. in June 1998. Elmer Schettler is still the president of Devansoy and also a shareholder. As far as Roger knows, there are only two manufacturers of powdered soymilk from whole soybeans in the United States: Devansoy and SunRich. Quite a few large food companies are developing new products using Devansoy.

SunRich also makes liquid soy base. All of their customers get the same base, and have it formulated and packaged elsewhere. Westbrae buys its liquid soy base exclusively from SunRich. In exchange for this exclusive agreement, Roger understands that Westbrae retains the right to say who else SunRich can sell soy base to. Address: P.O. Box 50906, Knoxville, Tennessee 37950-0906.

7727. Schultz, Stacey. 1999. Pass the tofu tacos: Soy-based foods are disease fighters, but they can taste pretty weird. *U.S. News and World Report*. Nov. 22. p. 77-78.
• ***Summary:*** Another typical soy article: Soy is healthy, sales are booming, the stuff tastes awful. During the past year,

soyfood sales have increased 35% to $494 million, largely because of reports of soy's health benefits–many of which are caused by isoflavones. Studies show that older women who consume soyfoods are likely to benefit. In one recent study, post-menopausal women who ate 40 grams of isolated soy protein a day for 12 weeks experienced a 45% decrease in the number of hot flashes.

A sidebar titled "How to fit soy into your diet" gives short descriptions of some "whole soy foods" and the number of grams of protein per serving: Soy milk, whole soybeans (edamame or cooked dry soybeans), miso, textured soy protein, and tofu. A large photo soys many types of prepared soyfoods (not in packages). Contains several factual errors, e.g. soy nuts are high in cholesterol, etc.

7728. Greenfield, Beth. 1999. Yo! Soy! The road to enlightenment is easy to discover in India. Finding tofu is another matter. *Long Island Voice* (*New York*) 3(46):11. Nov. 18-24.
• ***Summary:*** The author, a vegetarian, hungered for tofu as she traveled in sun-drenched Goa on the southwestern coast of India. An Indian state since 1987, Goa used to be a Portuguese colony, and the capital of Portuguese India. Suddenly she discovered a new-looking restaurant named "Bean Me Up," started by Lisa Ann Camps (age 37) of Islip, Long Island.

In 1984 Lisa had come to Goa from Florida to take care of an ex-boyfriend who had broken his arms and legs in an accident. She never left. And the reason was Goa–not the ex-boyfriend. During the late 1960s, Goa had been made popular as India's southern beach resort by wandering Western hippies in search of enlightenment and sunny escapism. Always resourceful, Camps began by starting her own lingerie company named Ooh La La. But as a vegetarian, she missed tofu. So she learned how to make her own soymilk and tofu. Then last year (1998), at the urging of veggie tourists, she started her own tofu shop using soybeans imported from the northern state of Himachal Pradesh. Since local restaurants were reluctant to carry her tofu and since she had restaurant experience from Florida, she decided to start her own place to serve the tofu she made. Camps, now an apostle of tofu in India, hopes to introduce this vegetarian source of protein to rich and poor alike who come to enjoy India's Riviera.

Photos show: (1) The sign announcing Bean Me Up; the words are written across a large circle with a figure seated in meditation at the center. (2) Lisa Camps, in Indian-style dress, seated at a table in her restaurant. Address: New York.

7729. American Natural Snacks. 1999. When a kid's gotta chug... a kid's gotta chug... so tell her to chug this... Kids Balanced (Ad). *Vegetarian Times.* Nov. p. 22.
• ***Summary:*** This is a one-third page colored vertical ad for Kids Balanced, a new nutritional drink which comes in two flavors: Very Vanilla and Choco Chocolate. Totally natural, it's formulated to meet the needs of growing kids–from toddlers to teens. "It's packed with 25% of the RDI of 24 vitamins and minerals; loaded with soy protein, calcium, fiber and iron; and it tastes great! Plus, its cholesterol free, lactose free, dairy free, and 99% fat free." Color photos show the label (front panel) of each flavor. Address: P.O. Box 1067, St. Augustine, Florida 32085-1067. Phone: 1-800-238-3947.

7730. Hain Food Group, Inc. 1999. Annual report 1999. Uniondale, New York. 24 p. Nov. 28 cm.
• ***Summary:*** Net sales for the year ended 30 June 1999 were $205.969 million, up 98% from $104.253 million in 1998. Net income in 1999 was $11.030 million, up 3.3-fold from $3.292 million in 1998.

Accomplishments this year: Completed acquisition (on 1 July 1998) of four businesses and brands from The Shansby Group: Garden of Eatin', Arrowhead Mills, Terra Chips, and DeBoles. Completed acquisition (on 18 May 1999) of the Natural Nutrition Group, including the Health Valley, Breadhsop's, and Casbah brand names, which are among the best-known in the business. Page 6 is devoted to Health Valley, showing color photos of many Health Valley products. In Sept. 1999 acquired Earth's Best Baby Food from H.J. Heinz. This organic baby food brand pioneered the category. Also, the Hain Food Group sold 2.5 million shares to Heinz for $82 million, resulting in Heinz holding a 19.5% interest in the company. The proceeds were used to reduce debt to an extremely low level.

In soy beverages, Hain (mostly Westbrae, plus a little from Health Valley's Soy Moo) has a 32% market share. A new consumer ad campaign is "Enjoy your soy." Two new products introduced over the past year are Westsoy JuiceBar, and tea-based Westsoy Chai. JuiceBar, sold in Tetra Brik cartons and described on the label as "A non dairy blend of natural juice and organic soy beverage" comes in flavors like Berry Blast. Chai, in the same type of carton, is described as "A delicious blend of tea and spices & non dairy organic soy beverage." On the front cover of the catalog is a photo of "Westsoy Low Fat Chocolate Pudding." Address: 50 Charles Lindbergh Blvd., Uniondale, New York 11553. Phone: 516-237-6200.

7731. *Nutrition Business Journal* (*San Diego, California*). 1999. Soy protein is big news for suppliers. 4(10/11):5-6. Oct/Nov.
• ***Summary:*** The health claim for soy protein, approved Oct. 26, was granted under the Nutritional Labeling and Education Act (NLEA). The claim was submitted in 1998 by Protein Technologies International (PTI), a company of DuPont. On the day the claim was approved, PTI ran full-page ads in the *New York Times* and *Wall Street Journal*–a good idea since neither paper ran the story. Both Kellogg

and General Mills are rumored to be developing a breakfast cereal containing soy protein.

In 1998 sales of soyfoods totaled an estimated $1.7 billion and should reach over $2 billion in 1999. During 1998 sales of soy milk grew to almost $200 million (up 20%), tofu to $200 million (up 15%), and tempeh $17 million (up 5%)–according to Peter Golbitz of Soyatech Inc. In 1999, with interest in soyfoods skyrocketing, Golbitz predicts overall growth of 20%, with soymilk up nearly 40%, and meat alternatives, tofu, and other prepared foods containing soy gaining between 20% and 50%, depending on the product.

7732. *Nutrition Business Journal* (*San Diego, California*). 1999. Sales of soy protein isolate set to grow. 4(10/11):21-22. Oct/Nov.

• ***Summary:*** The market for soy protein isolate is dominated by two manufacturers: Protein Technologies International Inc. (PTI, St. Louis, Missouri, a business of DuPont) and Archer Daniels Midland. PTI claims to have sales of $500 million in 1999 and to have captured about 75% of the soy protein isolates market. By extrapolation, this implies a U.S. market of $700 million/year.

About 40% of PTI's isolate sales are to meat and fish processors, 16% to nutritional and sports beverages, 10% to infant formulas, 9% to the paper industry, 5% to young animal feed (milk replacers), and 20% to "developing opportunities."

Other manufacturers of soy protein isolates are Santista of Brazil, and Fuji Oil of Japan.

A new PTI product is Supro XG, an isolate enriched with genistein. Top customers include Ross Laboratories (Ensure), Nestle, SlimFast, and Weider.

The second half of the article discusses ADM's efforts to educate mainstream consumers–in part is using the umbrella brand, Nutrisoy. This tradename will start appearing on supermarket shelves during the first quarter of 2000. Del Cahill, North American manager for ADM's specialty proteins, sees a new trend. The mainstream food industry, recognizing that the U.S. has an aging population, believes that the easiest way to prevent long-term chronic disease is through diet. These companies are now trying to develop and market better food choices.

7733. *Nutrition Business Journal* (*San Diego, California*). 1999. SunRich acquired by NASDAQ company [Stake Technology Ltd. of Ontario, Canada]. 4(10/11):22-23. Oct/Nov.

• ***Summary:*** In July 1999 Stake Technology Ltd. (Norval, Ontario, Canada) acquired SunRich Inc. in a stock-for-stock deal. Stake is an environmental company with technical expertise in steam explosion pulping, cleaning of metals, and recycling. In 1998 it had revenues of $14 million. SunRich, a $35 million niche producer, makes various soy products and contracts with 700 growers in the Midwest. Soy products comprise approximately 60% of SunRich's sales, and soymilk contributes approximately 20%, according to Allan Routh, president and CEO. SunRich makes three basic categories of soymilk: a standard [dried] product used as an ingredient in second generation products; several soy beverages; and soymilk with various protein and fat contents.

SunRich was founded [as Minnesota Waxy Corn Growers Export Inc.] in 1978, and changed its name to SunRich in 1994. Some 30-40% of SunRich's revenue's are international, primarily from Japan, reflecting its roots as an exporter. Less than a year ago, SunRich launched its own retail division, Hearty & Natural.

Note: Talk with Allan Routh of SunRich. 2001. Nov. 6. The acquisition was finalized on 1 Sept. 1999.

7734. **Product Name:** Health Source: Soy Protein Shake Powder [Vanilla, Strawberry, Chocolate, or Unflavored].
Manufacturer's Name: Ross Products, Div. of Abbot Labs.
Manufacturer's Address: Columbus, Ohio.
Date of Introduction: 1999. November.
Wt/Vol., Packaging, Price: Canned.
How Stored: Shelf stable.
New Product–Documentation: Spot in Prepared Foods (Highlands Ranch, Colorado). 1999. Nov. "Oh boy, more soy." Now that the FDA has approved food labels stating that soy protein may reduce cholesterol and lower the risk of heart disease, "expect tons of new soy products to hit store shelves." Ross Products has already gotten into the act.

Food Technology (Chicago). 1999. Nov. "Sipping into the beverage mainstream."

7735. Sando, Shirleen. 1999. Beyond low-fat baking: Cancer-fighting foods for the millennium. Dallas, Texas: Skyward Publishing, Inc. ix + 288 p. Illust. Recipe index. 22 cm. [12 ref]

• ***Summary:*** Contains reduced-fat recipes fortified with soy. Contents. Acknowledgments. Introduction, by Stephen A. Smith, M.D. Message from the author. Tofu for good health. Eat more grains. 1. No-fuss machine breads. 2. Those scrumptious breads. 3. Quick and easy breads. 4. Biscuits and scones. 5. Old time corn bread. 6. Healthy pancakes and waffles. 7. Pizza, flatbread, and focaccia. 8. 7736. **Product Name:** WestSoy Low Fat Pudding [Chocolate, or Vanilla].
Manufacturer's Name: Westbrae Natural Foods (Product Developer-Distributor).
Manufacturer's Address: Uniondale, New York 11553. Phone: 1-800-SOY-MILK.
Date of Introduction: 1999. November.
Ingredients: Filtered water, organic soy beverage (filtered

water, organic soy beans)**, dehydrated cane juice, tapioca starch (heat modified), cocoa processed with alkali, expeller pressed canola oil, natural flavors, sea salt, pectin, lecithin. ** = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 4 x 3.5 oz cups = 14 oz (37 gm).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per cup (99 gm): Calories 130, calories from fat 25, total fat 3 gm (5% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 60 mg (2%), potassium 170 mg (5%), total carbohydrate 25 gm (dietary fiber 2 gm [7%], sugars 18 gm), protein 2 gm. Vitamin A 0%, vitamin C 0%, calcium 2%, iron 2%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Talk with Dana Jacobi. 1999. Oct. 26. At the Natural Products Expo in Baltimore, Westbrae introduced (sort of) a soy pudding, in an aseptic 4-pack. They had samples but no literature. Hain Food Group. 1999. Annual Report (Nov. 1999). A color photo of the Westsoy Chocolate Pudding package is on the front cover of this report. But it is not mentioned inside as a new product–yet.

Product (Chocolate) with Label brought by Bob Gerner of Berkeley Natural Grocery Co. 2000. March 13. The product is sold in a 4-pack with a paper sleeve. Label: 6 by 10.75 inches. Paperboard. Chocolate brown, tan, and pink on white. Photo of a spoon filled with a swirl of pudding. "Made with organic soy beverage. All natural. No cholesterol. Contains 7 mg of isoflavones per serving." Soyfoods Center taste test: Flavor and texture: Superb. Very chocolaty and smooth. Package design: Good.

Talk with Elyse Kops, WestSoy brand manager, Uniondale, New York. 2000. March 14. The puddings, which come in chocolate and vanilla flavors, were first available in retail stores in about Nov. 1999. The recommended retail price is $3.39 per four-pack.

7737. **Product Name:** Silk Nog (Eggless Eggnog made with Soymilk in Gable Top Cartons).
Manufacturer's Name: White Wave, Inc. (Product Developer-Distributor).
Manufacturer's Address: 1990 N. 57 Court, Boulder, CO 80301. Phone: 1-800-488-9283.
Date of Introduction: 1999. November.
Ingredients: Organic soymilk* (filtered water, whole organic soybeans*), organic raw cane crystals, natural flavors, salt, carrageenan, annatto (vegetable color). * = Grown and processed in accordance with the California Organic Foods Act of 1990. Certified organic by QAI.
Wt/Vol., Packaging, Price: Quart Pure-Pak carton.
How Stored: Refrigerated.
New Product–Documentation: Leaflet (color, 6 by 8½ inches) sent by Patricia Smith from Natural Products Expo East (Baltimore, Maryland). 1999. Oct. 26. "Nog yourself out. Only White Wave brings you soymilk made for the holidays." On the front is a large color photo of the Silk Nog carton. On the back are ingredients and nutrition facts.

Lehndorff, John. 1999. "Times call for sharing family recipes." *Camera* (Boulder, Colorado). Nov. 3. Keep an eye out for the new seasonal soy Egg Nog from White Wave Vegetarian Foods of Boulder.

Note: Our clipping service picked up 11 newspapers nationwide that ran a new release in early December for Silk Nog–a new product.

Quart carton with Label sent by James Terman. 2000. May 11. 2.75 by 2.75 by 8¼ inches. White, yellow. red, and blue on green. Tetra Rex package. "Made with soymilk. Organic–Third party certified."

Glossy color leaflet (front and back, 28 cm) sent by Patricia Smith from Natural Products Expo East. 2006. Sept. "'Tis the season for Silk Nog: Silk's best selling specialty flavor." It is now made by "WhiteWave Foods Company, 12002 Airport Way, Broomfield, Colorado 80021. Phone: 800-488-9283. www.silksoymilk.com

Product with Label purchased in the dairy case at Safeway supermarket in Lafayette, California. 2010. Dec. 18. One quart retails for $3.29–very expensive! By comparison, a half gallon of Safeway's (Lucerne brand) "Holiday Eggnog" retails for $2.99. So the Silk Nog is more than twice as expensive (2.2 times as much) per fluid ounce. White Wave is now a brand owned by Dean Foods. The ingredients are no longer organic. "Evaporated can juice" has replaced raw cane crystals. The package design is new. Soyinfo Center product evaluation: Flavor: Good. Consistency: Fair, too thin. Package design: Excellent.

7738. Roller, Ron. 1999. The complexities and details of growing and certifying organic and GMO-free soybeans for Edensoy beverages. Part I (Interview). *SoyaScan Notes.* Dec. 3. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Not many people in the organic farming and foods industries have begun to deal with the complex problems of growing and procuring GMO-free soybeans. Most believe, incorrectly, that organically-grown soybeans are automatically GMO-free. "The problem is pervasive and harder to deal with than the organic industry thinks it is. Organic now has to be looked at less as a noble standard and more realistically as a series of technical problems. To assume that certified organic soybeans are GMO-free, unless you have done something to monitor for GMO, is naive." Organic certifiers cannot be relied on to do this monitoring.

Ron first became aware of genetically engineered soybeans several years ago during a talk with William Shurtleff. Since that time, he has become increasingly involved in ensuring the his organically grown soybeans are also GMO-free.

As an example of the problems: This year Carl Garrich

of the Lone Pine Rice and Bean Farm, in Lone Pine, Arkansas, bought GMO-free soybeans from Asgrow Seed Company (now wholly owned by Monsanto) and grew them organically on 600 acres. The seed was certified by Asgrow to be 98% pure; the remaining 2% could be anything. Ron met with him and showed him how to do the GMO strip test developed recently by Strategic Diagnostics Inc. of Newark, Delaware (phone: 1-800-544-8881). When he tested the 600 acres he found an unacceptably high level of GMO soybeans. When he contacted Asgrow to ask them how that could happen, they said that the GMO beans must have been among the uncertified 2%. Carl took a huge loss, and had to sell all 600 acres of his soybeans to the local elevator as regular, non-organic soybeans–at the commodity price. It was a nightmare for Carl, but if the news media picked up the story it could become a public-relations nightmare for Asgrow. Moreover, Asgrow could not afford to let him win a lawsuit or pay him off on it; that would open up their liability big-time. Though it's not Carl's style to file lawsuits, he would probably tell the whole story if some reporter called him. Carl's experience shows that just because a crop is organically grown, doesn't mean it is automatically GMO-free. Finding a totally reliable source for the seed, outside normal commercial channels, is the key to being sure that seed is GMO-free.

Ron used to buy his soybeans from Pioneer Hi-Bred and Northrup King, but with their increasing focus on GMO and because the best food-grade soybeans usually give lower yields and are not very popular, they dropped the varieties he wanted for Edensoy. So about 3-4 years ago, Ron decided to make a big change, due to the growing problems caused by GMO soybeans and difficulty in finding the varieties he wanted. He decided to start working with Iowa State University; he contracted for them to grow foundation seed (F1) of what Ron considered to be the single best variety for Edensoy; they removed any unusual looking beans (e.g. dark hilum beans) by hand before planting. Is there any chance that there could be some GMO soybeans in the foundation seed? Ron has learned the hard way that "There is a chance of anything, anywhere, anytime. It doesn't take much to start the ball rolling. From one grain, ten thousand grains–as George Ohsawa liked to say."

Then Ron contracted with a seed grower in Michigan to grow those seeds, certified organic, to create the next generation (certified or F2 seeds). He started with one soybean variety at first; now he is growing four varieties because Edensoy is best when made from a mixture of varieties. Last year he supplied 3 varieties to about 60 growers who grew 85-90% of the soybeans he needed; the farmers got the remaining 10-15% independently off an approved seed list.

The main thing that Ron has done is to remove himself from the commercial trade in soybean seeds. He now gets his seed independently and stores his crop independently. Because all of these problems and procedures are new, they are both interesting and scary. For example, sending the seed out to the growers is a bit scary. Supposing he supplied non-GMO seed to them and they delivered a crop with some GMO back to him. Whose problem is it?

Before the ASP plant started in 1986, Ron worked as a buyer for Eden Foods, dealing with many different organic crops–including soybeans. When he transferred to ASP, he focused solely on soybeans. As the market for Edensoy expanded, Ron had to constantly expand his "grower base." One of Ron's biggest and most time consuming problems is finding enough farmers to grow the organic soybeans that he needs. Over the past 20+ years, he has worked to develop trust with a growing core group of soybean farmers. Ten growers have been with Ron for 20 years and 40-50 have been with him at least 10 years. These farmers each have a deep personal interest in and commitment to organic farming. "Once a farmer starts working with ASP, they stay–because we treat them right. There is a physical building here and a factory. Seeing that makes a big difference for many growers–as opposed to selling to a trader who exports their crop. They see what happens to their soybeans." The continuity over many years and Ron's work "with each person as another human being has made a big difference. We develop trust. The organic soybean crop is keeping many small farms alive because the premium is so much higher than the commercial market. I have to have a price that most growers will accept. I don't pay the highest price or the lowest." Supply and demand almost requires that Ron try to "steal" experienced organic growers from other companies. The traders, who export organic soybeans, have often not treated their growers well. They may sign a separate contract with each one, try for as low a price as possible, not ship their beans on time, etc. Today about 80-85 farmers grow soybeans organically for Ron and ASP. Before 1997 he would bring in a core group of soybean growers to discuss prices for the upcoming contract period. At first it was 5-6 grower, then it became 10-12 growers.

It's hard to grow soybeans organically on a big farm; dealing with the weeds mechanically takes too much time. Organic soybean farmers don't spread manure (which must be composted first) on their fields, but the good ones plow in green manure, etc. Continued. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

7739. Roller, Ron. 1999. The complexities and details of growing and certifying organic and GMO-free soybeans for Edensoy beverages. Part II (Interview). *SoyaScan Notes.* Dec. 3. Conducted by William Shurtleff of Soyfoods Center. • ***Summary:*** Continued: Two years ago, in December 1997, in anticipation of the plant expansion, he organized the first big meeting at American Soy Products' (ASP's) Edensoy factory in Saline, Michigan. He wanted to try dealing with

the farmers as a group, where he paid them all the same price and had only one contract. Ninety-five growers showed up, both former ASP growers and new farmers who thought they might like to start working with ASP, depending on the conditions; most were attracted by the premium price offered, the chance to get a contract and the opportunity to see the Edensoy plant. Most of the growers live near the plant, in southern Michigan or northern Ohio, but some come from as far away as Nebraska. Having the growers spread over a fairly wide area reduces the risk the weather damage to the entire crop. During the catered lunch, Ron explained "Here's who we are, here's what we do, here are the quality issues in terms of growing soybeans for us, and here is the contract." The variables in the contract are price and varieties. Ron asked Chad Geater of Iowa State to come to talk to the farmers (with a slide show) about GMO soybeans. Over the years, ASP has become more and more specific about acceptable varieties. Starting several years ago, ASP made farmers who signed their contract agree not to grow GMO soybeans. The issues of GMO seed contamination were explained. Rather than negotiate for price, Ron took a calculated risk. After lunch, asked them to decide on a price themselves, then he left the room. They decided on $19.00 per "net clean bushel delivered." ASP's elevator does the cleaning; it does not clean any GMO Products. This compared with $4.50 to $5.00 they would get for regular soybeans at their local elevator. Not all the farmers signed up, but those who did were happy, and so was Ron–who acquired about 80% of his organic soybean needs in one hour. In previous he might have to make 700-800 phone calls before he got all the soybeans he needed for the coming year. "That meeting really increased our presence among farmers. Its a pretty incredible to be in the room with all these growers who normally never see each other or are in the same place together, openly discussing the organic issues that affect them." New farmers generally learn organic methods from another farmer who is already doing it. Years ago, Ron used to do the organic inspections and certification himself, but he did a little teaching of organic methods; he no longer does any of these things.

ASP uses OCIA, a farmer owned and run group, as their third-party organic crop certifier. Each participating farmer must join a local chapter of OCIA, attend their meeting, etc. Each chapter teaches organic methods and provides lots of social interaction. Last year at the same type of meeting, 160 farmers showed up.

Organic is one issue but GMO-free is quite another. The term "GMO-free" is meaningless. You would have to test (and destroy) every soybean to say a sample was "GMO-free." So the heart of the matter is determining tolerance levels, and testing accurately for those levels. ASP "fronts" the soybeans to the growers; that means they do not pay for the seed beans until the crop is harvested.

Previously tests to check for GMO (like that from Genetic ID) were too expensive, at $300 a sample. But a company named Strategic Diagnostics in Delaware developed an "instant" GMO test kit which uses a "strip test." This crucial new tool was developed by Strategic with Monsanto to identify genetically modified plants. Now, for the first time, ASP can test every sample from every farmer for a reasonable price. Each strip is like a little piece of litmus paper made with colloidal gold. They key is determining what tolerance level you want; the higher your tolerance level, the more beans must be in your sample. A 0.1% tolerance level, for example, requires 600 soybeans. To test: Put the beans in a regular blender and grind to a powder. Add water, blend and dilute. Use an eye dropper for them kit to draw off a certain amount of liquid, put that in a test tube, add 3-4 drops of buffer, than put in the little test strip and wait for 5 minutes. The strip will tell you whether or not there are any GMO soybeans in that sample at your level of tolerance. Each test requires two strips and 100 tests cost $300. ASP's new program works like this. Each grower sends ASP a sample of each variety before they deliver any beans to the elevator. Those beans are then graded for quality and tested for GMO. A form is filled out and the actual test strips are attached to that form, as a physical record of the test. The sample is retained. That then goes to the elevator as approved for delivery. The elevator then conducts the exact same GMO test with each load that arrives, taking 3 probes per load. In this year's crop, one sample out of 85 tested GMO-positive. Ron called the grower and asked what could have happened. He said that his combine had broken and he had his neighbor combine the soybeans. The neighbor grew probably GMO soybeans and some must have been left in the combine. Ron said he could not accept the load soybeans; the grower was surprised but accepted Ron's decision. The system worked! Organic beans could also potentially become contaminated during cleaning, storage, or shipping.

So when organic soybeans are said to be "GMO-free" one must also ask: To what tolerance level, and as determined by what exact testing program? Because the Strategic Diagnostics' strip test is so new, the organic industry still does not understand these key points.

Edensoy now has a little malted corn in its sweetener; compared to soybeans, organic corn is a nightmare when it comes to keeping it GMO free. Note: For example, pollen from GMO corn can drift up to ½ mile in the air. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

7740. Roller, Ron. 1999. Update on Edensoy beverages and the soymilk market in the USA (Interview). *SoyaScan Notes.* Dec. 3. Conducted by William Shurtleff of Soyfoods Center. • ***Summary:*** American Soy Products (ASP) finished its plant expansion in Sept. 1998. Before the expansion, it could make 4 metric tons per hour of soymilk. After the expansion it could make 10 metric tons per hour. The plant

is not presently running at full capacity, but with the soymilk market growing so fast, it is hard to say how long it will be until the plant again reaches full capacity.

Competition in the soymilk market is intense, in price and quality, and big new manufacturers are entering. Eden is fortunate in that they have a long-term user base of many loyal consumers. But Suiza Foods Corp. (a powerful dairy consolidator) is expected to have a soymilk on the market by Jan. 2000 and, with Dean Foods and Silk, that should lead to big changes. Refrigerated is a big, big question in Ron's mind, but this is not his job or responsibility. Ron is reluctant to talk about this issue. He makes the soymilk. Eden Foods owns the brand and is the "sole sales agent" responsible for marketing it. Distribution is the problem for Edensoy, since Eden Foods does not presently sell any refrigerated products.

Right now, all is going well at ASP. Getting the new line up and running was tough. There were the inevitable start-up problems with the new, complex machines and getting the people trained. ASP has a pretty experienced crew now. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

7741. Israel, Cocavatiyah Baht. 1999. Re: Update on "Eternity" and Taste of Life vegetarian restaurants in Israel. Letters to William Shurtleff at Soyfoods Center, Dec. 12 and 10 Jan. 2000. 2 p. + 2 p. Handwritten, with signature. Plus leaflet. [1 ref. Eng; Heb]

• ***Summary:*** This group used to be known as "Eternity," an all vegetable ice cream parlor. Now they serve their vegetarian ice cream plus a menu "consisting of many various dishes (vegetable) that include tofu and the vegetable protein product seitan. We are vegan–no animal by-products, no artificial food coloring, no cholesterol. Kosher." They now have a second restaurant at Hakishon St. (across from Magen David), Tiberias, Israel. Phone: 06 671 2133. They also have a factory that produces the ice cream, tofu, and most of the take-out products and carob candies. The main dishes (entrees) and some vegetarian products are made in the restaurant daily. They make tofu at: Nature's Gate Ltd., Mivne Taaseya Haradash 76, Box 029, Dimona, Israel 86000. Phone: 972-7-655-7774. Fax: 972-7-655-7769. In 1986 they started to make and sell tofu as tofu. They sell their tofu at about 30 different places outside their two restaurants. Nature's Gate Ltd. own the factory and L'Haiem owns the restaurants.

They also make their own soymilk at Nature's Gate Ltd. Presently they produce the soymilk only for their own use, but in the future they hope to expand.

Enclosed is a one page recipe in Hebrew and English. The 12 food categories are: Desserts (incl. 9 flavors of non-dairy ice cream), candies, beverages (incl. soya milk), dressings, salads, breads, breakfast (incl. tofu links, scrambled tofu), sandwiches (incl. tofu cheese, marinated tofu, okara sticks, tofu falafel, tofu burger, tofu vege burger, stir-fry with tofu, stir-fry with seitan), steamed vegetables, take away (take-out), main entrees (incl. tofu teriyaki, tofu with gravy, tofu medley), a la carte (incl. tofu medley). Address: 60 Ben Yehuda St., Tel Aviv, Israel. Phone: 03 620 3151.

7742. Skiff, James. 1999. New Japanese law concerning labeling of foods made with genetically engineered ingredients (Interview). *SoyaScan Notes.* Dec. 22. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Jim is aware of this Japanese law, which was passed in Oct. 1999 but does not take effect until 1 April 2001. Jim Echle, head of the American Soybean Association office in Tokyo, told Jim about the law; Echle is extremely receptive to the needs of his Japanese customers, such as tofu makers. ASA is also getting more involved with issues involving identity preserved (IP) soybeans; they are organizing an IP conference on Jan. 17 in St. Louis, Missouri.

Skiff then faxes Shurtleff a provisional translation of the labeling guidelines, in the form of a 1-page table. The translation was done by ASA-Tokyo and sent to Skiff by Jim Echle. There are three columns: (1) Classification of food: A. Not equivalent to conventional foods with regard to composition, nutrients, or intended use. B. Equivalent to conventional foods, but modified DNA or protein produced therefrom remains after the manufacturing process. C. Equivalent to conventional foods, but modified DNA or protein produced therefrom is removed or decomposed and no longer exists in the in the final food. (2) Examples of the three types of foods: A. High oleic acid soybean oil. B. Tofu and tofu products, soybean sprouts, natto, soymilk, miso, soybean flour, roasted soybeans, corn, popcorn, potatoes, etc. C. Soy sauce, soybean oil, high fructose corn syrup. (3) Method of labeling: "Soybean (genetically modified),..." Address: US Soy, 2808 Thomason Dr., Mattoon, Illinois 61938. Phone: 217-235-1020.

7743. *SoyaScan Notes.* 1999. Chronology of major soy-related events and trends during 1999 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** April–Kevin Cross sells Soy Power Co., Inc. in Santa Monica, California, to Nature's Best.

May 10–SoyaWorld Inc. of Burnaby, British Columbia, Canada, purchases the SoNice brand and two soymilk extraction plants from International ProSoya Corp. (IPC). SoyaWorld is jointly owned by Dairyworld Foods (the largest dairy and food company in western Canada) and Sunrise Soya Foods (Canada's largest tofu manufacturer). SoyaWorld plans to (and has the ability to–because of Dairyworld Foods) put fresh and Aseptic soymilk in every supermarket and grocery store in Canada. Then they will move into the USA. This is a very big story!

July 12–Deutsche Bank, one of its strongest advocates of ag biotechnology, issues a report in which it reverses its previous "buy signals" on many of the companies commercializing ag biotech (such as Monsanto and Pioneer Hi-Bred). It now urges caution, and signals the beginning of trouble for the ag biotech industry.

Aug. 18–White Wave (Boulder, Colorado) and Dean Foods (Franklin Park, Illinois) jointly announce that Dean Foods has created an alliance with White Wave by becoming a minority shareholder in White Wave. The two companies will work together to place Silk soymilk into the refrigerated dairy case of supermarkets across America–and try to get there before SoyaWorld of Canada. A very big story for soymilk in the USA.

Sept. 1–Stake Technology Ltd. (Norval, Ontario, Canada) acquires SunRich Inc. (Hope, Minnesota) in a stock-for-stock deal.

Sept.–In this month's issue of *Consumer Reports,* a 6-page article on genetically engineered (transgenic) foods titled "Seeds of Change" recommends that "federal officials should require that all foods containing genetically engineered ingredients be labeled as such, including milk with recombinant bovine growth hormone."

Oct. 1–DuPont (a large chemical company) buys the 80% share of Pioneer Hi-Bred International Inc. that it doesn't already own–a major move into biotechnology.

Oct. 4–The Kellogg Co., maker of breakfast cereals in Battle Creek, Michigan, agrees to buy Worthington Foods for $307 million. Worthington makes vegetarian meat alternatives.

Oct. 7–The *Wall Street Journal* runs a major front-page story on concern about and opposition to genetically engineered foods in the USA and Europe. Runs two more such stories on Nov. 30 and Dec. 14. Dec.–During the last 6 months of 1999 consumer awareness of and concern about genetically engineered food issues in the United States has increased dramatically. It has moved from a counter-culture to a mainstream concern, and fairly large amounts of money are now flowing into antibiotech organizations. GMO was a widely discussed issue in the breakdown of and mass demonstrations against the World Trade Organization talks in Seattle, Washington.

Oct. 20–The U.S. Food and Drug Administration (FDA) announces its approval of a health claim for soy protein and coronary heart disease. The claim, which goes into effect Oct. 26, can be used on food labels in either of two formats, the first of which is: "25 grams of soy protein a day, as part of a diet low in saturated fat and cholesterol, may reduce the risk of heart disease. A serving of (name of food) supplies ___ grams of soy protein." This promises to have a huge, positive impact on the soyfoods market.

Dec.–General Mills acquires Small Planet Foods (Cascadian, Muir Glen) for $60 million.

Dec.–Kellogg Co. purchases Worthington Foods.

In 1999, for the first time in history, more acres were planted to soybeans in the USA than to any other crop. U.S. soybean acreage exceeded that of corn by 3% and that of wheat by 34%. Worldwide, the acreage planted to soybeans has increased fivefold since 1950.

7744. **Product Name:** Grainaissance Amazake Pudding [Almond].
Manufacturer's Name: Grainaissance, Inc.
Manufacturer's Address: 1580 62nd St., Emeryville, CA 94608. Phone: 415-547-7256.
Date of Introduction: 1999. December.
Ingredients: Filtered water, organic brown rice*, almonds, rice koji, tapioca starch modified, natural vanilla flavor. * = Organically grown and processed in accordance with the California Organic Food Act of 1990.
Wt/Vol., Packaging, Price: 6 oz (170 gm) plastic cup. Retails for $1.49.
How Stored: Refrigerated.
Nutrition: Per cup (170 gm.): Calories 190, calories from fat 30, total fat 3.5 gm (5% daily value; saturated fat 0.5 gm), cholesterol 0 mg, sodium 20 mg (1%), total carbohydrate 37 gm (dietary fiber 2 gm [8%], sugars 35 gm), protein 3 gm. Vitamin A 0%, calcium 4%, vitamin C 0%, iron 8%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Product with Label purchased at Open Sesame in Lafayette, California. 2000. March 14. Front of plastic cup is reddish brown, white, yellow, orange, and tan. "Non-Dairy. Naturally sweet. Organic rice treat."

7745. **Product Name:** Instant Soy Pudding (Dry Mix): [Chocolate Fudge, or French Vanilla].
Manufacturer's Name: Harvest Direct, Inc.
Manufacturer's Address: P.O. Box 50906, Knoxville, TN 37950-0906. Phone: 800-838-2727.
Date of Introduction: 1999. December.
Ingredients: Chocolate: Unbleached cane sugar, soybeans (made into powdered soymilk), cocoa powder, vanilla powder, potato starch, flaxseed, salt.
Wt/Vol., Packaging, Price: 4 oz foil pouch. Recommended retail price: $1.99.
How Stored: Shelf stable.
New Product–Documentation: Leaflet (black and white) sent by Patricia Smith from Natural Products Expo East (Baltimore, Maryland). 1999. Oct. 26. "New!! Instant soy puddings." Shows both labels in black and white. "Just add water. Non-dairy. Low fat. Vegan. Non-GMO soybeans." Taste test by Dana Jacobi. "Very Jello-y. Only the chocolate is good." Talk with Roger Kilburn, owner and founder of Harvest Direct. 1999. Nov. 15. The main soy ingredient in this product is powdered soymilk made from whole soybeans by Devansoy. Harvest Direct assumed control of Devansoy in June 1998. The first products will be shipped in Dec.

1999.

7746. *SoyaScan Notes.* 1999. Major soy-related company acquisitions and mergers worldwide 1990-1999 (Overview). Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** 1990 Jan.–Worthington Foods acquires La Loma Foods of Riverside, California (formerly Loma Linda Foods, owned by the Seventh-day Adventist Church).

1990 (early)–Daniel Gevaert purchases the Lima Andiran site at Andiran (near Mezin) in southern France from Lima Foods–but not the Lima trademark. In June 1990 Daniel and his wife, Valerie, established Danival.

1990 Aug. 3–Hong Kong Soya Bean Products Co. Ltd. (makers of Vitasoy soymilk) acquires Nasoya Foods of Leominster, Massachusetts.

1990 Dec. 21–The Haldane Foods Group (a subsidiary of British Arkady Ltd., which is in turn owned by ADM) acquires Unisoy Milk 'n' By-Products Ltd. of Cheshire, England.

1991 Jan. 1–The Haldane Foods Group acquires Granose Foods Ltd. of Watford, Hertfordshire, England (formerly owned by the Seventh-day Adventist Church).

1991 Jan. 28–Tetra Pak International acquires Alfa-Laval AB.

1991 April–Huegli Naehrmittel A.G. acquires Soyastern Naturkost GmbH / Dorstener Tofu Produktions GmbH.

1991 Dec.–Specialty Food Ingredients (SFI) Europe BV acquires Solnuts BV (Netherlands) and Solnuts Inc. (Hudson, Iowa).

1992 Oct.–Central Soya Co. acquires the Protein Division of Aarhus Oliefabrik in Denmark.

1993 June–Vitasoy purchases Azumaya Inc. (America's largest tofu manufacturer, and the low-price leader) in California, for an estimated $4-$5 million. Vitasoy is now in the tofu business.

1993 June–21st Century Foods acquires Farm Foods from Barricini Foods.

1993–House Foods of Japan purchases the remaining 50% of House Foods & Yamauchi, Inc. from Mr. Shoan Yamauchi. The new company is named House Foods American Corporation.

1993 July–Nutrition et Santé (part of the Sandoz Group) acquires Société Soy of Saint-Chamond, France. The latter company was renamed Nutrition et Soja, and on 15 Oct. 1994 it moved into a new factory at Revel (near Toulouse), France.

1993 (mid)–B & K Holdings of Switzerland acquires Sojinal of Issenheim, France.

1993?–Kineret (pronounced kuh-NAIR-et) Acquisition Group acquires Farm Foods from 21st Century Foods, then in Nov. 1993 the Hain Food Group acquires Kineret plus some assets of Barricini Foods Inc.

1996 April 22–Alpro (Belgium) purchases Sojinal (France).

1995 April 21–Irene and Len Stuttman buy back control of their company, INARI Ltd. (dba. Sycamore Creek) from J. Charles Follett (former CEO) and Peter L. Pairitz (accountant).

1995 April–Quest International, a unit of Unilever, acquires A.E. Staley's Gunther Products Division.

1997 Feb. 3–Monsanto purchases Asgrow Seed Co. from Seminis Inc., a subsidiary of Empresas La Moderna, S.A. (ELM).

1997 Aug. 24–DuPont signs a letter of intent to acquire Protein Technologies International, a wholly-owned subsidiary of Ralston Purina Co.

1997 Oct. 14–The Hain Food Group acquires Westbrae Natural, Inc., makers of soymilk. Westbrae's new name becomes Hain Food Group–Westbrae. 1997 Dec. 3–DuPont finalizes its purchase of Protein Technologies International (PTI–the world's leading manufacturer of soy protein isolates).

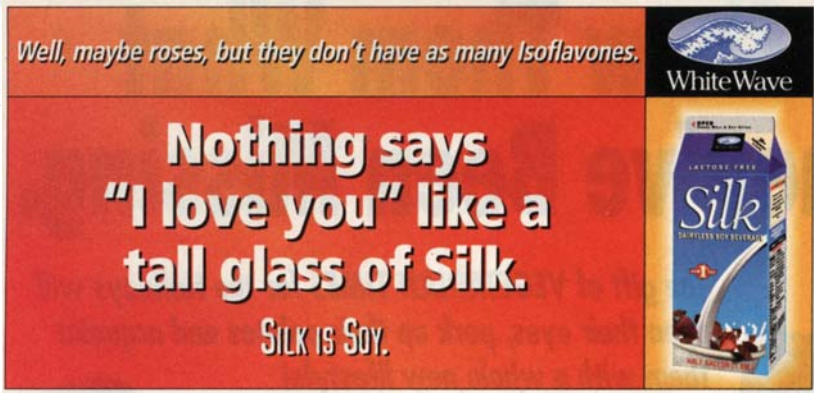
1998 Oct. 16–Worthington Foods purchases the Harvest Burger product line from ADM; by agreement, ADM will continue to make the Harvest Burgers at its Illinois plant.

1998 Dec. 31–DE-VAU-GE acquires Bruno Fischer GmbH, which sells bottled soymilk; both companies are located in Germany.

1999 Jan. 4–W.G. Thompson & Sons Ltd. of Blenheim, Ontario, Canada, purchases Sycamore Creek Co., a maker of soynuts and soynut butter (located in Mason, Michigan).

1999 Oct. 4–The Kellogg Co. (famous maker of breakfast cereals, Battle Creek, Michigan) buys Worthington Foods Inc., America's leading maker of meat alternatives.

7747. White Wave, Inc. 1999. Nothing says "I love you" like a tall glass of Silk. Silk is soy (Ad). *Vegetarian Times.* Dec. p. 78.



• ***Summary:*** This small (2¼ by 4½ inches) but prominent (bright red, orange, and white) color ad is mostly background color and text. On the right is a half-gallon carton of White Wave Silk (fresh soymilk). In the upper right corner is the White Wave logo. Across the top of the ad, in fairly small letters: "Well, maybe roses but they don't have as many

isoflavones." Address: Boulder, Colorado.

7748. *Whole Foods.* 1999. U.S. FDA authorizes soy protein health claim. Dec.
• ***Summary:*** During the 12 months ending June 1999, overall sales of soyfoods reached $494.4 million, up 34% over the previous year–according to statistics compiled by Spence Information Service (SPINS, San Francisco, California) and AC Nielsen. This included $117.9 in sales at natural foods stores (a 31.4% rise) and 376.5 million at supermarkets and mainstream food/drug/mass merchandise outlets (a 35.2% increase). Note that this growth took place *before* announcement of the FDA health claim.

A table (based on figures provided by SPINS) gives growth rates for selected soy subcategories and (in parentheses the growth rate for the entire subcategory): Soy supplements 120.8% (27.0%). Soy-based frozen desserts 98.4% (11.4%). Soy beverages (non-dairy) 45.7% (25.9%). Tofu 42.4% (all tofu is soy). Soy-based meat alternatives 16.4% (15.8%). Address: South Plainfield, New Jersey.

7749. Wildwood Natural Foods. 1999. Joymilk soyful holidays (Folded card). Santa Cruz, California.
• ***Summary:*** This very creative card arrived on December 16, shortly before Christmas and after Hanukkah–in a red plastic card with a "Greetings" stamp. It is in the shape of a two-dimensional Wildwood soymilk carton, with an identical front and back. In place of the typical Wildwood trees and birds motif are decorated Christmas trees. A sort of spout sticks out to one side near the top, and near it is written: "Pull festively to open." When you pull the tab, which is one point of a star, out pops a a white paperboard streamer, like the tail behind a shooting star. On one side is written: "Soyfoods–the protein source of the new millennium." On the other side: "Merry protein and happy isoflavones." Address: Wildwood Natural Foods, 135 Bolinas Road, Fairfax, California 94930.

7750. **Product Name:** Soy Synergy.
Manufacturer's Name: Pacific Foods of Oregon, Inc.
Manufacturer's Address: 19480 S.W. 97th Ave., Tualatin, OR 97062. Phone: 503-692-9666.
Date of Introduction: 1999.
New Product–Documentation: *Nutrition Business Journal* (San Diego, California). 2000. "Pacific Foods targets $50 million sales: Soymilk manufacturer scrambles to expand production, expects 35% growth to continue." Sept. p. 12. In 1999 Pacific Foods introduced an innovative product named Soy Synergy, a functional food designed to be mixed with soymilk or rice milk.

7751. American Soybean Association. 1999. Soya: El rey de los frijoles [Soya: The king of beans (Leaflet)]. [Mexico City, Mexico]. 2 panels each side. Each panel: 21.5 x 14 cm. Undated. [Spa]
• ***Summary:*** Printed with black ink on glossy white paper. The front panel begins: "We live in a difficult moment, in a critical situation. Foods are very expensive. There is not enough education and information about good sources of nutrition..." The inside left panel describes how to make soymilk at home from whole soybeans. The inside right panel gives recipes for *Pericos de tofu* and for *Sorbete de soya,* sorbet made from soymilk and fruits. The back panel gives a recipe for soybean stew [*guisado*] using whole soybeans, plus the slogan "Grain for grain, more protein at less cost."

7752. Davidson, Alan. 1999. The Oxford companion to food. New York, NY and Oxford, England: Oxford University Press. xviii + 892 p. Illust. by Soun Vannithone. Index. 29 cm. [1500+* ref]
• ***Summary:*** The 2,650 alphabetical entries in this excellent encyclopedia and cornucopia represent 20 years of Davidson's work. The 175 illustrations by Laotian artist Soun Vannithone are superb. There are 39 longer entries about staple foods such as rice, noodles, and apples. A comprehensive bibliography provides access to further information. The book does not contain recipes.

Soy-related entries include: Bean sprouts (p. 64). Black beans, fermented (*chi,* p. 79). Kecap (Indonesian soy sauce, made "basically from soya beans and palm sugar only." "The word 'kecap' has passed into the English language as catchup or catsup and then as Ketchup, which now means something quite different." p. 429). Ketchup ("probably via the Malay word *kechap,* now spelled *kecap,* which means soy sauce. The word was brought back to Europe by Dutch traders who also brought the oriental sauce itself. The sauce has changed far more than has the word, although the name has appeared in a large number of variations such as catchup and catsup."

Tomato ketchup is now the best known and widely used–in fact almost the only ketchup left. Whereas tomato ketchup contains much sugar and vinegar, mushroom ketchup contains neither, and is basically a salted mushroom extract with a liquid, transparent consistency. The British food historian, C. Anne Wilson (1973), believes that mushroom ketchup was the first kind of ketchup in Britain; she argues that people used to pickle mushrooms, intending to use the mushrooms, but then started using the pickle too, and finally began using the pickle by itself.

"Oysters, mussels, walnuts, and many other ingredients have been used to make ketchup, and cold be blended with spices, garlic or onions, wines and spirits to vary the flavour" p. 430-31). Koji (p. 435). Lecithin (p. 447). Miso (p. 509). Natto (p. 530). Soybean (p. 739). Soy milk (p. 739-40). Soy sauce (p. 740). Tempe (or tempeh, p. 788). Tofu (p. 798-99), including plain tofu (doufu in Chinese), pressed tofu (*doufu-kan,* sic, *doufu-gan*), *wu-hsiang kan,* cotton tofu or momendofu, kinugoshi or silk tofu, sui-doufu, freeze-

dried tofu [dried frozen tofu], smoked tofu. Cooked forms of tofu: Deep-fried tofu, doufu pok, cha-dofu, abura agé or deep-fried thin slices which can be opened to make Inari-zushi, ganmodoki or deep-fried tofu balls, yaki-dofu or tofu which has been grilled. Fermented tofu: The generic term is doufu-ru. The most popular type is white doufu-ru, and there is red doufu-ru, tsao-doufu, ch'ou doufu [chou doufu], chiang doufu. In the Philippines fermented tofu is called tausi [sic, tahuri, tahuli; tausi is fermented black soybeans]. Miscellaneous: A specialty of Japan is *umesutsuke,* "tofu pickled in plum vinegar with a purple exterior." Note: As of Oct. 2011 not one hit / result for umesutsuke can be found on Google. Nor have we ever heard of such a Japanese tofu product.

Dofu nao (literally "bean brain") or smooth curds, yuba or "bean curd skin" or "tofu skin," okara or "presscake" (pulped skins of soya beans) (p. 798-99). Yuba (p. 860-61).

Also discusses: Alfalfa (p. 10). Almond (p. 12-13, incl. "almond milk"). Amaranth (p. 13). American cookbooks, history (p. 15-17). Azuki beans (p. 44-45). Barley, barley breads, and barley sugar (p. 58-60). Beef–BSE (mad cow disease, p. 68). Chia (p. 166). Cowpea (p. 230-31). Chufa (p. 185). English cookery books, history (p. 276-80). Five grains of China (p. 305). Gluten (p. 341). Groundnuts (or peanuts, p. 356-57). Hemp (p. 377-78). Hydrogenation (p. 391). Japanese culinary terms (p. 415-17). Kudzu (p. 437). Linseed (p. 454-55). Lupin (p. 463). Margarine (p. 478-79). Mung bean (p. 518). Nori (p. 534). Noodles of China (p. 537, incl. "Gan si {soya bean noodles}" and "Fen si {also fen-szu} {mung bean vermicelli})." Oncom (p. 553-54). Quark (p. 644). Quinoa (p. 645). Seaweeds (incl. hijiki, kombu/konbu, nori, wakame, etc., p. 712). Sesame (p. 713). Shortening (p. 721-22). Sprouts (no listing). Tahini (p. 779). Toast (p. 797, incl. Melba toast). Ume and umeboshi (p. 817). Winged bean (p. 849).

The entry for "Fermentation" states that the two main reasons for subjecting a food to fermentation are: (1) To "convert it from a form that will not keep, such a milk, to one which will, such as cheese." (2) To "make foods which are indigestible in their original state, such as wheat or soya beans, digestible by turning them into products such as bread or tempe." Other benefits include improvements in flavour. Many do not realize that fermentation is part of the process of making coffee, cocoa, vanilla, and many kinds of sausage. A brief biography and nice portrait photo of Alan Davidson, a man of extraordinary knowledge in the world of food, appear on the rear dust jacket.

Note: The paperback edition of this book (2002) is titled *The Penguin companion to food.* Address: World's End, Chelsea, London, England.

7753. Hagler, Louise. 1999. Meatless burgers: Over 50 quick and easy recipes for America's favorite food. Summertown, Tennessee: Book Publishing Co. 94 p. Illust. Index. 23 cm.

• ***Summary:*** A vegetarian cookbook. Contents: Introduction. Glossary of ingredients: Incl. (with a definition and description of each): Almond milk, arame, flaxseeds, hemp seeds, hulled, millet, miso, oat milk, quinoa, rice milk, shiitake, silken tofu, soy flour, soymilk, soy yogurt, tempeh, textured soy protein, tofu, vital wheat gluten.

Bean & grain burgers. Soyfood burgers: Tofu, tempeh, textured soy protein & soybeans. Vegetable burgers. Burgers with an ethnic flair. Accompaniments. Buns. Side dishes. Nondairy shakes. Address: Summertown, Tennessee.

7754. Klingel, Brigitta. 1999. Gesundheit fuer die Zellen–Soja-Lezithin [Health for the cells–Soya lecithin]. Munich, Germany: Suedwest Verlag GmbH. 96 p. Illust. (color photos). Subject index. Recipe index. 21 cm. [9 ref. Ger]

• ***Summary:*** A popular introduction to lecithin, with basic information about other soyfoods and vegetarian recipes. Contents: Lecithin–The multitalented. Soya lecithin. Help for the heart. Lecithin lowers blood cholesterol. Mental and bodily top fitness. Beauty thanks to lecithin. Soyfood products: Dry soybeans, soymilk, yuba, okara, tofu, tempeh, miso, soy sauce, soy sprouts. Recipes with lecithin. Address: Germany.

7755. Kramer, Heather Lynn. 1999. Evaluation of physical and chemical properties of soybean cheese. MSc thesis, University of Missouri-Columbia. x + 152 leaves. Illust. (some color). 29 cm. *

7756. Mowe, Rosalind. ed. 1999. Southeast Asian specialties: A culinary journey through Singapore, Malaysia, and Indonesia. Cologne, Germany: Culinaria Koenemann. 319 p. Illust. (color photos by Günter Beer). Index. 26 x 22 cm.

• ***Summary:*** Translated from the German. Includes headings in Chinese. This book is a feast for the eyes, printed on glossy paper with informative color photos on almost ever page. The structure and content are also creative and very interesting; it has caught the heart and spirit and nuances of the culture. On some pages, however, the type is too small to read. The name of most recipes and ingredients is given in their native language. A 2-page map of Southeast Asia appears near the front. The basic structure: Singapore (p. 12-109). Malaysia (p. 110-215). Indonesia (p. 216-301). Glossary (p. 302-04). Introduction to Chinese nutritional theory, by Andrea Fülling (p. 305-06): Introduction, yin and yang, the three warmers, the warming effect of foods (the five energy states are hot, warm, neutral, refreshing, and cold), the five elements. Acknowledgements. Photo credits. Index.

The contents includes: Healing herbs (p. 26-29). Soup as medicine (p. 30-33). Soybean (in Singapore, p. 40-47): Introduction (familiar forms are sprouts, soy sauce, beancurd, tempeh; new disguises are "vegetable protein," emulsifier,"

"lecithin," "vegetable oil" which are found in dairy products, canned fish, candies, desserts, and much more), in the West soybeans are "often grown as monocultures, with the disadvantages that this entails, such as the use of chemical fertilizers and pesticides," and genetically engineered soybeans, great nutritional value yet rarely used as whole dry soybeans, most of the harvest in SE Asia is processed into beancurd and tempeh, importance of fermentation, soy milk resembles cow's milk and is an excellent substitute, soy sauce is used throughout this cuisine. Photo of green soybean plants with green pods.

Soybean sprouts: "Black soybeans are imported from Thailand and Myanmar (Burma)." After washing, the beans are spread out in deep baskets and kept in the dark for 6 days. "Before the baskets of sprouts can be sold, the top layer if green leaves is trimmed off. They are used as feed for chickens and ducks. One basket yields 154 lb (70 kg) and the output of a medium-sized business is 60 baskets a day." Soybean "sprouts should never be eaten raw, nor should they be cooked for too long." Mung bean sprouts are better known than soy sprouts, but both can be bought fresh.

Dou ban jiang ("Salted soya bean sauce." Photo of jar and Sinsin label). Dou chi ("Black bean sauce." Photo of jar and Sinsin label). Note 1. Typically Dou chi are named "Salted black beans." Photo of five glasses showing how dry soybeans are transformed into soymilk, then curds.

Tofu: Meat from the fields (p. 42-44). The best tofu is made from special types of soybeans that are different from those that are crushed to make oil and meal. Most of the tofu in Singapore is made from soybeans imported from Canada. Describes the basic process for making commercial pressed tofu or soft tofu, with 7 photos showing the steps. Implies that making yuba is part of the process for making tofu; it "is eventually sold as dried beancurd sticks (*fu chok*).

Soy milk products: Fu pei–dried tofu skin [yuba]. Fu chok–dried tofu sticks [dried yuba sticks]. Tim chok–sweet tofu pieces [sic, sweet dried yuba / ama-yuba].

Note 2. This is the earliest English-language document seen (Feb. 2012) that uses the term "Tim chok" to refer to sweet dried yuba, or that uses the term "dried tofu sticks" to refer to dried yuba sticks.

Tofu fa–soft tofu as a dessert [tofu curds]; a little tapioca flour may be added. "Served warm or cold with a syrup flavored with almond extract." Color photo shows yellow yuba atop hot soymilk, and a woman removing a slab pressed tofu from its mold.

Tofu recipes for every taste (p. 44-45): "Tofu on its own is rather bland in taste, but this is precisely its strength, since when it is combined with different ingredients and condiments it tastes new and different every time. Recipes: Niang dou fu (Fried beancurd pockets). Xia ren dou fu (Stir-fried beancurd with jumbo shrimp). Hong shao dou fu (Braised beancurd). Sui rou zheng dou fu (Steamed soft beancurd with ground pork). Dou hua (Sweet beancurd dessert). Zha fu pi juan (fried beancurd skin [yuba] roll). Color photos show the 2nd and last recipes.

Soy sauce (p. 46-47): A naturally fermented product made with mold cultures of *Aspergillus oryzae.* Describes the process for both light and dark soy sauce; the koji is made in shallow round trays, ready after 4 days. It is "then transferred into fiberglass tanks [or earthenware jars], covered with brine, and left to ferment for 3 months," after which the 1st extraction of crude soy sauce takes place [but not through pressure]. More brine is added and a second extraction takes place 1 month later; this process is repeated for the third extraction. "At this point, the paths of the different soy sauces diverge." The saltier, light-colored soy sauce is mixed with a preservative, pasteurized, "and stored in tanks to clarify before bottling." The dark soy sauce is mixed with both a preservative and caramel coloring, is allowed to mature for an additional 4 weeks, then is pasteurized and bottled. Note 3. What happens to the 2nd and third extractions? Color photos show five steps in the process, but a traditional earthenware vat is shown instead of the fiberglass tanks. Dark soy sauce is thicker than light. Recipes: Jiang you ji (Chicken in soy sauce, with marinade). Hong shao niu nan (Braised shoulder of beef).

Oyster sauce (contains no soy). Sesame oil (p. 49, with 7 photos).

Condiments (p. 50-51): Color photos show the front and label of 15 separate jars and bottles with a substantial description under each. Those containing soy are: Hoisin sauce. Dou chi (Fermented bean dried). Dou ban jiang (Tou cheong). Fu ru (Beancurd preserved). Jang qing (light soy sauce). Hei jiang you (Dark soy sauce). Tian jiang (Sweet sauce).

Peking duck (p. 62-65; soybean paste {no Chinese name is given} and Hoisin sauce are ingredients in the sauce). One key is the crisp skin. It is served in thin Mandarin pancakes.

Suckling pig (p. 86-87): Piglets are bred in Hunan province. Slaughtered at the age of 3-4 months. After a dead piglet has been patted dry, it is brushed with soy sauce, then coated with a marinade that includes fermented red bean curd and light soy sauce. As with Peking Duck, suckling pig is prized for its crisp, tasty skin. Six photos show the skewered baby pig.

Symbolic foods (p. 98-101): One of these is Moon Cakes from the mid-autumn festival (15th day of the 8th lunar month). "Traditional fillings include sweet black bean or lotus paste." Is the sweet black bean filling made from soy beans?

Instant cup noodles [instant ramen] (p. 48): Note 4. Wikipedia says at Momofuku Ando: ORS [Order of the Rising Sun], (lived March 5, 1910–Jan. 5, 2007) was the Taiwanese-Japanese businessman who founded Nissin Food Products Co., Ltd. He is famed as the inventor of instant noodles and cup noodles, which he launched on 25 Aug. 1958 (at age 48) under the name Chikin Ramen–after months

of trial and error experimentation to perfect his flash-frying method. On 18 Sept. 1981 he launched his most famous product, Cup Noodle.

Beansprouts (p. 154-57): With a long introduction, a description of the process, beautiful photos, and recipes: Taugeh goreng kucai (Fried beansprouts with chives). Taugeh masak kerang (Fried beansprouts with baby clams). Tahu goreng (Fried tofu with beansprouts). Bihun goreng (Fried rice noodles). Urap taugeh (Fried beansprouts with grated coconut).

Nasi tumpeng (rice cone) (p. 220). Served with sambal goreng tempe (crisp-fried marinated strips of tempeh). Gudeg (rice with green jackfruit cooked in a sweet sauce, p. 221) is served with a side dish of tahu goreng bacem (tofu cooked with spices, then fried).

Tempeh (p. 228-29), soybeans fermented with *Rhizopus oligosporus* mold. Indonesians consume more tempeh than tofu. The process is described, with 4 color photos: Recipe: Tempe goreng (fried tempeh).

Glossary (p. 302-04) includes: Fermentation. Soy sauce ("Probably the best-known Asian seasoning agent,..."). Sticky rice (also known as glutinous rice). Tahu (Indonesian; tofu). Tempeh. Tofu (beancurd, incl. hard, soft, and smoked).

7757. Sanginga, P.C.; Adesina, A.A.; Manyong, V.M.; Otite, O.; Dashiell, K.E. 1999. Social impact of soybean in Nigeria's southern Guinea savanna. Ibadan, Nigeria: International Institute of Tropical Agriculture. 34 p. http://www.hubrural.org/ IMG/pdf/ iita_soybean.pdf [52 ref]
• ***Summary:*** This case study surveyed 203 households in Benue State to determine the level of adoption of soybean using social impact assessment (SIA). The results showed soybean adoption rates rose from 9% of farmers in 1989 to 75% in 1997. The high adoption rates are attributed to improved material welfare, household income generation, and human capital development. This study also showed that soybeans were an acceptable substitute in traditional foods. Virtually all the farmers used soybean dawadawa, 90% used soybean akpupa, a steamed bean flour cake, and 60% used soybean akwese, fried bean cakes. Innovative soybean utilization, such as soymilk, and a local `tofu' were moderately adopted at 25% utilization (Summary by Shao 2002, p. 87). Address: 1, 3, 5. IITA, Ibadan, Nigeria.

7758. Wakai, Kenji; Egami, Isuzu; Kato, Kumiko; et al. 1999. Dietary intake and sources of isoflavones among Japanese. *Nutrition and Cancer* 33(2):139-45. [35 ref]
• ***Summary:*** The dietary intake and sources of isoflavones (daidzein and genistein) among Japanese subjects were examined based on dietary records (DRs). The subjects comprised two groups: 1,232 who completed one-day DRs (Group 1) and 88 men and women who kept four four-day (16-day) DRs. For quantitative data on the level of daidzein and genistein in soy foods, the literature was thoroughly examined, particularly for Japanese soy foods, and adopted the median value for each food. The median intake of daidzein was 12.1 and 9.5 mg/day among Groups 1 and 2, respectively, while the corresponding values for genistein were 19.6 and 14.9 mg/day. About 90% of the daidzein and genistein in the Japanese diet comes from 3 soyfoods–tofu (including fried tofu), miso, and natto.

Table 2, titled "Estimated total daidzein and genistein contents of soy foods: Median values among results of food" lists these foods: Soybeans, dry. Soybeans, green [edamame]. Soybeans, boiled. Kinako (roasted and ground soybeans). Soybean sprouts. Tofu. Tofu, freeze dried ("kohri tofu"). Fried tofu, thin ("abura-age," deep-fried). Fried tofu, thick ("nama-age," fried briefly). Fried tofu and minced vegetables / seaweed ("ganmodoki"). Soy milk. Okara (tofu lees). Yuba (dried soy milk skim). Natto (fermented soybeans). Miso. Soy sauce. Address: Dep. of Preventive Medicine, Nagoya Univ. School of Medicine, 65 Tsuramai-cho, Showa-ku, Nagoya 466-8550, Japan.

7759. **Product Name:** WestSoy Crème de la Soy: Non Dairy Soy Creamer [Original, French Vanilla, Amaretto].
Manufacturer's Name: Westbrae Natural Foods (Product Developer-Distributor).
Manufacturer's Address: Uniondale, New York 11553. Phone: 1-800-SOY-MILK.
Date of Introduction: 1999. January.
Ingredients: Original: Organic soy beverage (Filtered water, organic soybeans)*, filtered water, brown rice syrup, organic expeller pressed soy bean oil*, natural flavors, dipotassium phosphate, carrageenan. * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 16 fl. oz. (473 ml) aseptic Combibloc carton. Retails for $3.19 (2000/06, Lafayette, California).
How Stored: Shelf stable; refrigerate after opening and use within 7-10 days.
Nutrition: Per tablespoon (15 ml): Calories 20, calories from fat 10, total fat 1.5 gm (2% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 0 mg, total carbohydrate 2 gm (dietary fiber 0 gm, sugars 1 gm), protein 0 gm. Not a significant source of vitamin A, vitamin C, calcium or iron. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Product with Label purchased at Open Sesame in Lafayette, California. 2000. June 5. Combibloc carton. Bluish green, white, and blue on a wood-colored (tan) background. The word "Soy" is written with a small coffee cup in place of the middle letter ("o"). At the bottom of the front panel: "All natural. Lactose free. No tropical oils." For more information: www.westbrae.com. Note: In May 1992 Westsoy introduced its first such product named "WestSoy Lite Non Dairy Creamer." Talk with Westsoy representative. 2000. June 5. This product comes in

three flavors (see above). All were introduced in Oct. 1999. Soyfoods Center taste test. 2000. June 5. The color is tan. The flavor is bland and not too sweet.

7760. Young, Grace. 1999. The wisdom of the Chinese kitchen: Classic family recipes for celebration and healing. New York, NY: Simon & Schuster. xxii + 282 p. Illust. (some color photos by Alan Richardson). Index. 24 cm.
• ***Summary:*** On the front cover is a large color photo of the three generations of women Grace's grandmother, Fung Tong Lai Lan, her mother (Mama), and Grace herself. On the first page of every chapter is an old family photo. The food and their names are Cantonese. Both of her parents were born in China. Growing up in San Francisco, Grace "observed that the principles of yin and yang–a balance of opposites–were integrated into our everyday fare. For example, vegetables considered cooling, such as bean sprouts, were stir-fried with ginger, which is warming" (p. xii). And she "ate Cantonese home-style food every day" (p. xiii).

The name of each recipe is written three ways: (1) In English. (2) In light-orange Chinese characters, vertically to the left of the English name. (3) In Cantonese phonetics (in small black letters).

Soy related recipes: Stir-fried asparagus with shrimp (and black bean sauce, p. 29). Beef chow fun (with black bean sauce, p. 31). Steamed spareribs with black bean sauce (p. 41). Steamed sole with black bean sauce (p. 43). Sandpot braised lamb (with dried yuba sticks {foo jook}, p. 42-43).

Sprouting soybeans (gives a good introduction to bean sprouts and describes how to make soybean sprouts at home) (p. 80-81). Includes many recipes for soybean sprouts: Grandfather's stir-fried soybean sprouts (p. 82). Soybean and spareribs soup (p. 212).

Stir fried clams in black bean sauce (p. 111). Buddha's delight (with fried tofu, dried yuba and red fermented tofu, p. 126-27). Soy sauce chicken (p. 174-75). Foxnut soup (with dried yuba sheets, p. 198). Homemade soymilk (from ½ cup dried soybeans, p. 209). Savory soy milk (p. 210). Gingko nut porridge (with dried yuba sticks, p. 222-23).

The excellent Glossary (p. 246-68) includes entries for: Adzuki beans (*zeck siu dul*). Barley, Job's tear (*ye mai*): A different variety than Western barley. Bean curd: *See* Fried bean curd, Sheet dried bean curd, Stick dried bean curd, Tofu, and Wet bean curd [fermented tofu].

Bean sprouts (*gna choy*): The two varieties of Chinese sprouts are mung bean sprouts (*gna choy*), which are more commonly available, and soybean sprouts (*dai dul gna choy*), which are more nutritious, being rich in protein. The head is the most nutritious part of the sprout. "Don't eat raw soybean sprouts, as they are toxic."

Chinese dried black beans (*dul see*): Also known as salted black beans, fermented black beans, or preserved beans. Note: These are soybeans. "Before being used, the beans must always be rinsed in several changes of cold water." They are usually crushed with the handle of a cleaver or a wooden spoon and combined with soy sauce, garlic, or ginger before cooking. Her favorite brand is Yang Jiang Preserved Beans.

Fried bean curd (*dul foo gock*): Also known as bean curd puffs, or fried tofu. "They are triangles, squares, or cubes of tofu that have been deep-fried." Sold refrigerated. Green mung beans, dried (*look dul*):

Ground bean sauce (*meen see*): "This chocolate-colored sauce is also known as brown bean sauce, bean sauce, brown bean paste, or yellow bean sauce." It is sold in cans and jars. She prefers the Lee Kum Kee brand. It is made from naturally fermented soybeans, flour and sugar. Refrigerate.

Hoisin sauce (*hoisin zheung*): Made from sugar, soybeans, garlic, sesame seeds, chili peppers, and spices. A chocolate-brown sauce, mildly sweet and smoky. She prefers the Lee Kum Kee brand.

Red beans, dried (*hoong dul*): Not to be confused with the elongated adzuki beans. These red beans are used in soups, red bean paste, and desserts.

Seaweed (*see choy*): Also known as nori, roasted seaweed, or kizunori. Note: Many other types of seaweed / sea vegetables are used as food in East Asia.

Sheet dried bean curd (*bien foo jook*): Also known as dehydrated bean curd, dried bean thread [or dried yuba].

Soybeans, dried (*wong dul*): Also known as yellow soybeans.

Soy milk (*dul cheung*): Although it looks like dairy milk, it has a completely different taste and consistency. To learn how to make it at home, see p. 208. The soy milk sold in Western health-food stores is generally different from that sold in Chinatown (which is available sweetened or plain).

Soy sauce (*see yul*): Of the many varieties, the two are most essential for cooking are: (1) Black soy (*low zul*): Also known as soy superior sauce or dark soy sauce. It is darker, thicker, richer in color, and slightly sweeter in taste. (2) Thin soy (*sang zul*): Also known as superior soy, premium soy sauce, or light soy sauce. It has the most flavor but is saltier than Black soy. This soy is most often used in cooking. "The soy sauce sold in Western markets is generally thin."

Stick dried bean curd (*foo jook*): Also known as dehydrated bean curd, dried bean thread [or dried yuba sticks]. The pieces are "ivory colored, about 12 inches long, and shaped like a giant horseshoe."

Sweetened red bean paste (*dul sah*): To make it at home, see p. 139.

Tofu (*dul foo*): Also known as bean curd. "Tofu is high in protein, cholesterol free, low in saturated fats, and rich in phytochemicals." The important types of tofu are: (1) Firm tofu (*dul foo*): Comes in 3-inch squares, ½-inch thick. (2) Five spice tofu (*nmm hueng gul foo gawn*): Also known as spiced tofu or flavored bean curd. (3) Silken tofu (*wat dul foo*): "This is custardlike and more delicate"

Wet bean curd (*fu yu*): Also known as fermented bean

curd [or fermented tofu]. Sold in a brining liquor in jars (typically 1 pint). A favorite brand is Chan Moon Kee. The two basic types are (1) Wet bean curd, white (*bock fu yu*)*:* Often spiced with dried red chilies. (2) Wet bean curd, red (*nom yu*)*:* One-inch red cubes fermented in a thick red sauce.

Yellow mung beans, dried (*look dul hoy pay*)*:* "Also known as peeled mung beans," these look like small yellow split peas. "They are green mung beans that have been hulled." They are used in Savory rice tamales.

()*:* Address: A native of San Francisco, she currently lives in Manhattan with her husband Michael. For 16 years she has been the Test Kitchen Director and Director of Food Photography for Rebus, Inc., a New York Publishing Company.

7761. Wild Oats Community Market; Alfalfa's Markets. 2000. The joy of soy: Resolve to evolve. This millennium, pick up a good habit. Your guide to soyfoods–True health food. Colorado. 8 panels. [10 ref]

• ***Summary:*** This is a chain store newspaper (published from time to time; copyrighted 1998), with this issue devoted to soyfoods. It contains ads for many soy products sold at the store, many of them on sale. "Soy strategy: 3 New Year's resolutions. 1. Get healthy. 2. Lose weight / cut down on bad fats. 3. Help protect the environment.

A sidebar titled "Cool beans! Top ten reasons to enjoy soy" states: "1. Soy protein helps reduce cholesterol levels, thereby reducing the risk of coronary heart disease, which accounts for more than 500,000 deaths in the U.S. per year.

"2. The soybean is the only vegetable to offer a complete protein profile, equal to both meat and eggs in its protein content.

"3. As a complete protein, soy contains all nine essential amino acids. (The human body needs twenty amino acids, only eleven of which are produced by our bodies).

"4. Soybeans are higher in essential, healthful fats than most vegetable foods.

"5. Soybeans are a good source of several vitamins and minerals, including calcium, zinc, copper, magnesium, iron and many of the B vitamins.

"6. One acre of soybeans provides about 30 times more protein than one acre devoted to raising beef.

"7. Soy is also the richest dietary source of isoflavones, which act as phytoestrogens that may help protect against cancer, osteoporosis and menopause.

"8. Soy may increase bone density and reduce the risk of osteoporosis.

"9. Soy may reduce menopausal hot flashes in women–good news for those women who do not wish to take hormone replacement therapy.

"10. Other heart-healthy benefits of soy include low saturated fat, high calcium content, high essential fatty acid (EFA) content, high vitamin E content and no cholesterol."

There are definitions of and information about: Miso, shoyu, tamari, tofu, tempeh, soy milk, soy yogurt, soy cheese, soy desserts, soy oil, soy flour, texturized soy protein, soy grits, soy nuts, edamame (soy in the pod), and meat alternatives.

7762. Galeaz, Kim. 2000. Great tasting soy yogurt, great tasting recipes. *News* (*Okeechobee, Florida*). Jan. 26.

• ***Summary:*** Soy yogurt is now a part of the ever expanding line of soyfoods. Years ago, when yogurt was a rarity, its flavor and texture were not nearly as good as those of dairy yogurts. But now that has changed, and one can find "many new, different and great tasting soy yogurts on the market." These include WholeSoy Creamy Cultured Soy, White Wave Silk Dairyless Soy, and Galaxy Foods Veggie Yogurt.

Most soy yogurt is sold in a 6-ounce plastic cup, whereas dairy yogurt is typically sold in 8-ounce cups. However White Wave Silk Dairyless Soy is also sold in a 32-ounce (1 quart) container.

Soy yogurt may cost a few cents more, but they are "worth the extra money because of their tremendous health benefits. And soy yogurt is certainly a good way to help you with your goal of eating 25 grams soy protein daily to lower high blood cholesterol." Most soy yogurts contain about 5 grams of protein per 6 oz container.

Soy yogurt recipes: Peach parfait. Refreshing raspberry drink. Super strawberry breakfast smoothie (with "1 carton {6 oz.} strawberry soy yogurt," "1 cup vanilla soy milk," and "2 scoops... soy protein powder"). Address: RD, Indiana Soybean Board.

7763. **Product Name:** SoBe Soy Essentials (Soy Protein Infused Fruit Blend Beverages) [Qi Essentials {Berry}, Shen Essentials {Peach Flavor], or Jing Essentials {Citrus Blend}].
Manufacturer's Name: South Beach Beverage Co.
Manufacturer's Address: Norwalk, Connecticut.
Date of Introduction: 2000. January.
Ingredients: Incl. soy protein isolate.
How Stored: Refrigerated.
New Product–Documentation: Gourmet News (Yarmouth, Maine). 2000. Jan. The products are sold in 14-ounce glass bottles. Jing Essentials is a citrus blend which combines ginkgo and gotu kola with rosemary, sage, lemon balm and primrose.

7764. **Product Name:** Sun Soy [Creamy Original, Vanilla, Chocolate].
Manufacturer's Name: Suiza/Morningstar.
Manufacturer's Address: Gustine, California. Phone: 209-854-6461.
Date of Introduction: 2000. January.
Wt/Vol., Packaging, Price: ESL gable-top carton.
How Stored: Refrigerated.
New Product–Documentation: Talk with Dana Jacobi.

2000. March 5. She tasted this product recently and it is probably the worst-tasting soymilk she has ever tasted; she spit it out! She hopes the bad flavor doesn't do too much damage to the soymilk market. She thinks there are three flavors: Plain, vanilla, and chocolate.

Talk with Ted Nordquist. 2000. March 7. This product, launched in Jan. 2000, tastes "ugly." It is sold at Ralph's supermarkets in California. It is made from some sort of instant soy powder and added canola oil plus some wheat protein–which will make it unacceptable to those with wheat allergies. It contains no organic ingredients. It can't survive very long; when it dies, Dean Foods and Silk will fill in the slots.

Ad (full-page color) in *Vegetarian Times.* 2000. April. p. 21. "New Sun Soy. Good enough to drink straight." A color photo shows one large view of a carton and three smaller views of the cartons in three flavors.

Talk with Ann Shaw, researcher at the Morningstar plant in Gustine. 2000. March 27. This product is packaged in an ESL gable-top carton made by International Paper. It has a "screw cap fitment."

7765. **Product Name:** Soy Beverage [Strawberry].
Manufacturer's Name: Trader Joe's (Distributor-Retailer).
Manufacturer's Address: South Pasadena, CA 91031.
Date of Introduction: 2000. January.
Ingredients: Whole crushed strawberries, whole crushed bananas, apple juice from fresh apples, grape juice, coconut juice, fresh orange juice, isolated soy protein. "All ingredients have been flash pasteurized."
Wt/Vol., Packaging, Price: 1 quart (32 oz) or 1 pint plastic bottle. Quart retails for $2.29 and pint for $1.29 (2000/03, Lafayette, California).
How Stored: Refrigerated.
Nutrition: Per 8 oz (240 ml): Calories 200, calories from fat 30, total fat 3.5 gm (5% daily value; saturated fat 2.5 gm), cholesterol 0 mg, sodium 150 mg (6%), total carbohydrate 28 gm (dietary fiber 3 gm [12%], sugars 26 gm), protein 12 gm. Vitamin A 4%, calcium 4%, vitamin C 190%, iron 15%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Product with Label purchased at Trader Joe's in Lafayette, California. 2000. March 24 (Grand opening). 10 inch high plastic (polyethylene) bottle with a screw-on red lid. Label is red, white, green, and black. An illustration shows strawberries resting an a bed of dark green and black. "Perishable. Shake well. Keep refrigerated. No preservatives." This product is also all natural, and contains no added sweeteners. "Soy" is the biggest word on the label but the last of the seven ingredients, so it is used as a marketing device. Nevertheless, the drink contains 12 gm of protein per cup–a lot, and almost all of it from the soy protein. The product is given the thick consistency of a milk shake by the crushed whole strawberries and bananas. Soyfoods Center taste test: Delicious! A very creative product. Talk with Jason of Trader Joe's, Lafayette. Trader Joe's introduced this product about 2 months ago.

7766. **Product Name:** Trader Joe's Organic Soy Beverage (Quart Pure-Pak carton) [Chocolate, Vanilla, Original].
Manufacturer's Name: Trader Joe's (Marketer-Distributor).
Manufacturer's Address: P.O. Box 3270, South Pasadena, CA 91031-6270. Phone: 818-441-1177.
Date of Introduction: 2000. January.
Ingredients: Chocolate (April 2000): Water, ground organic soybeans*, organic cane sugar crystals*, organic natural cocoa powder*, calcium carbonate, organic vanilla extract*, sea salt, guar gum, carrageenan, vitamin A palmitate, vitamin D-2. * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: One quart (946 ml). Gable-top Pure Pak carton. Retails for $1.59 (California 2000/04).
How Stored: Refrigerated.
Nutrition: Per 8 fl oz (240 ml): Calories 160, calories from fat 25, total fat 2.5 gm (4% daily value; saturated fat 0.5 gm {3%}), cholesterol 0 mg, sodium 75 mg (3%), total carbohydrate 29 gm (dietary fiber 2 gm, sugars 25 gm), protein 6 gm. Vitamin A 10%, calcium 30%, vitamin C 0%, vitamin D 30%, iron 8%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Product with Label purchased at Trader Joe's in Lafayette, California. 2000. April 21. Black, white, and chocolate brown. Three panels are identical. "Low fat & ultra pasteurized. Fortified with vitamin A, vitamin D & calcium. Perishable."

7767. **Product Name:** Silk (Soymilk Sold Refrigerated in Quart or Half Gallon Pure-Pak / Gable Top Cartons) [Vanilla].
Manufacturer's Name: White Wave, Inc. (Product Developer-Distributor).
Manufacturer's Address: 6123 E. Arapahoe Rd., Boulder, CO 80303. Phone: 303-443-3470.
Date of Introduction: 2000. January.
Wt/Vol., Packaging, Price: Quart or half gallon Pure-Pak Carton.
How Stored: Refrigerated.
New Product–Documentation: Three ads in *Vegetarian Times.* 1999. Aug. Pages 13, 65, and 67–for Silk Soymilk in half-gallon cartons in vanilla, plain, and chocolate flavors.

Quart and half-gallon cartons with Labels sent by James Terman. 2000. May 11. 2.75 by 2.75 by 8¼ inches. Tetra Rex package. "Organic–Third party certified. Calcium enriched. Low 1% fat & vitamin enriched." Talk with James Terman of White Wave. 2001. May 29. When Silk was first introduced in Jan. 1996 it was flavored with vanilla and sweetened, but it was not called "Vanilla" until "Plain" was introduced

in quarts in July 1998. In Jan. 2000 the panel about Henry Ford first appeared on a Silk cartons–on all flavors and sizes. The best-seller at that time was vanilla half-gallons. It reads as follows: "Henry Ford: A man who used his bean. Soybeans originally travelled to the United States [Province of Georgia, North America] by ship when Samuel Bowen smuggled them from China in 1765. But it was Henry Ford who put them in cars. When the Great Depression hit, it hit farmers especially hard. Huge farm surpluses meant low crop prices and dwindling income. All of a sudden, Henry Ford's best customers–American farmers–could no longer afford his cars, trucks and tractors. Ford knew that 'If we want the farmer to be our customer, we must find a way to be his.' Figure out a way to use agricultural products in industrial manufacturing, and everyone would benefit. He put his chemists to work determining what products could be developed from plants. After testing numerous crop plants, they narrowed their focus to soybeans. Experimentation was soon rewarded with the discovery of soybean oil which made a superior auto body enamel. Soybean meal was converted to plastic used to make over 20 parts including horn buttons and gearshift knobs. By 1936, Ford was using a bushel of soybean in every car that rolled off the line. But Henry Ford didn't stop there. While his chefs developed a variety of tasty and nutritious American-style foods (including ice cream) from soy Henry invented soybean 'wool,' a fiber half the cost of sheep's wool. Soon a fabric containing 25% soybean wool was being used to upholster many Ford autos. And on special media occasions Mr. Ford would sport a suit made of soybean fiber."

7768. Branson, Roy. 2000. Harry Miller: Adventist hero of social reform. A dedicated doctor changed the way the world eats. *Adventist Review* (*Hagerstown, Maryland*). Feb. 10. p. 13-15 (p. 213-15).
• ***Summary:*** A very well-written story of Dr. Miller's life and work with soybean foods. This article begins: "He had a résumé that turned heads. Trained at Battle Creek Sanitarium by internationally renowned surgeon John Harvey Kellogg, he had gone on to Chicago to study under some of the finest surgeons in the country. By 1903 he was already, at 24, an instructor at Rush Medical College in Chicago. That year he and another researcher, who would later become one of the nation's foremost dermatologists, had written an article that took up nearly the entire May l903 issue of the *Journal of Dermatology.* John Harvey Kellogg had every reason to expect that his Adventist protégé would become a nationally acclaimed professor of medicine.

"But Harry Miller was about to drop his bright career in academic medicine and go to China. He would take with him his wife, Maude, another of Adventism's top physicians–she had surprised Harry by outscoring him on the Illinois state medical examination. When Kellogg heard what Harry and Maude were planning to do, he jumped on a train to Chicago. He would talk some sense into his prize pupils. A lot had gone into producing such fine physicians. The effort shouldn't be wasted.

"Kellogg had taken students like Harry Miller, born in a log cabin north of Dayton, Ohio, instructed them at the Adventist medical school in Battle Creek, then plunged them not only into academic medicine but into the disease and poverty of downtown Chicago. Working in some of the six health and social reform institutions Kellogg had established at the turn of the century, Miller knew there was a great work of reform to accomplish in America's cities. The Seventh-day Adventist Medical Missionary Benevolent Association had already established health reform institutions in 17 American cities. The *Life Boat,* edited by Dr. David Paulson, one of Miller's Adventist teachers, was the Adventist voice of urban mission, publishing articles on such social reform topics as juvenile delinquency, child labor, and prison reform. At its peak, the *Life Boat* reached an astonishing 200,000 subscribers.

"When Kellogg arrived in Chicago, he told his protégés that he wanted Harry to achieve his full potential, to become a professor at a top medical school, an emissary for Adventism to America's university life. But in the face of their strong-willed teacher's advice, Harry and Maude Miller held firm. They insisted on expanding Adventism's encompassing vision of reform across the Pacific. Harry Miller plunged on with his commitment to service and became the 'China Doctor.'

"In refusing Kellogg's entreaties, Miller nonetheless honored his mentor. Just as Kellogg had established a national reputation as an abdominal surgeon, Harry Miller would became a world-renowned thyroid surgeon. Kellogg had erected a half-dozen social reform institutions in Chicago–one of which would become the Chicago campus of the University of Illinois Medical School. Miller would found clinics, hospitals, and food laboratories throughout East Asia. Kellogg transformed America's breakfasts with corn-flakes; Miller would introduce commercially successful soy milk to the world. Kellogg would live to be 91, Miller to 97..." Address: Senior research fellow, Kennedy Inst. of Ethics, Georgetown Univ. [Washington, DC].

7769. Fitzpatrick, Mike. 2000. Soy formulas and the effects of isoflavones on the thyroid (Editorial). *New Zealand Medical Journal* 113(1103):24-26. Feb. 11. [42 ref]
• ***Summary:*** Contents: Introduction (In Nov. 1998) the New Zealand Ministry of Health (MOH) issued an update on its position on soy formulas. The goitrogenic effect of soy. Isoflavones: the goitrogenic agents in soy. Isoflavones: levels of dietary exposure. Isoflavones: the risks to consumers. Conclusion. Address: Kingett, Mitchell & Associates, Auckland, New Zealand.

7770. Purvis, Kathleen. 2000. Say soy! New foods and

drinks keep sprouting from these magic beans. *Post-Dispatch* (*St. Louis, Missouri*). Feb. 14.
• ***Summary:*** Perhaps the tastiest form of soy is edamame. These green soybeans, boiled, salted, and served chilled, are the "latest craze in the chi-chi ["chic"] cocktail set." In Japan they are served as snacks with beer or sake.

In the six months before June 1999, sales of soyfoods have grown 34.4%, according to data from SPINS. Sue Havala notes that soymilk is now available at mainstream food stores / supermarkets. A full-page color photo shows bright green edamame, with the pods both opened and closed. Contains four recipes and a glossary of the following: Green soybeans, soymilk, soy flour, soy nuts, canned soybeans, soynut butter, miso, tofu, tempeh, soy sauce. Address: Knight Ridder Newspapers.

7771. Erickson, Marsha. 2000. Soy foods may lower cholesterol: In season. *News-Tribune* (*Duluth, Minnesota*). Feb. 17.
• ***Summary:*** "Editor's note: The American Heart Association has designated February as American Heart Month. Throughout the month, In Season is focusing on the 'right stuff' to feed your heart. Today the spotlight is on soy foods. Coming next week: Whole grains."

Soyfoods are good for the heart. They "are rich in special plant chemicals called isoflavones. These isoflavones may directly lower blood cholesterol. In addition, soy foods are low in saturated fat, high in soluble fiber, cholesterol-free and contain high quality protein.

"Food sources of soy include soynut butter, roasted soynuts, soy flour, miso, tofu, tempeh, textured soy protein and soymilk."

A black and white photo has a border of "green soybeans," both in the pods and shelled. The text, titled "Great soy sources," states: The FDA now allows products that contain at least 6.25 grams of soy protein per serving to say on the label that the product may reduce the risk of heart disease. Products that are good sources of soy protein per serving are:

4 ounces of firm tofu contains 12 grams of soy protein. 4 ounces of soft tofu contains 9 grams. 1 soy burger contains 10-12 grams. 8 ounces [1 cup] soymilk contains 10 grams. ½ cup cooked soybeans contains 16 grams. ½ cup green soybeans [shelled edamame] contains 10 grams. ½ cup tempeh contains 19 grams. ½ cup roasted soy nuts contains 39 grams. Address: Registered Dietitian, Miller-Dwan Medical Center; Duluth representative of the Minnesota Dietetic Assoc.

7772. United Press International (UPI). 2000. Things we don't understand (News release). *National Wire*. Feb. 22.
• ***Summary:*** The National Milk Producers Federation (Arlington, Virginia), a dairy trade association, says the term "soy milk" is misleading and the manufacturers of soy beverages ought to stop using it.

They are calling on the U.S. Food and Drug Association (FDA) to restrict use of the word "milk" to the stuff that comes from dairy cows.

The dairy group's petition caught the American Soybean Association (ASA) by surprise.

"ASA spokesman Bob Callahan wonders whether the dairy group would seek similar restrictions on such products as goat's milk, coconut milk, or even milk of magnesia."

7773. Jessop, Doug; Mullin, John. 2000. How their Canadian miso won a prize in the Japanese miso contest (Interview). *SoyaScan Notes*. Feb. 28. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Canada has been working for many years to develop food-grade soybeans that are especially well suited for making Japanese soyfoods, such as miso. This year Doug and John entered their miso in the Japanese national contest and won two Special Participation awards. Dough explains: They started by making miso using three Canadian soybean varieties: Harovinton (released in 1989), AC Onrei (released in 1997; "AC" stands for Agriculture Canada), and AC 756 (a double lipoxygenase null variety). They made miso from each of these three soybean varieties and sent it for evaluation to the Nagano Research Institute. NRI said that, of these three, the miso made from the AC Onrei variety was the best, so they concentrated on making miso from that soybean for competition. AC Onrei is a very large-seeded, long-season, white hilum, buff colored soybean, one of whose parents is Enrei–a large-seeded Japanese variety. Most of the miso they entered was red miso; some of it was rough (unground) and some was finished/fine (smooth/ground). They entered their miso in two different contests: The All-Japan content and the Nagano contest, and they won an award for each. This was surprising because AC Onrei was not bred as a miso-type soybean; it has a high protein content and was originally developed as a soymilk and tofu bean. For miso soybeans, the Japanese always look for high sucrose–over 7%; AC Onrei has 6.8%. They also look for total free sugars, of which AC Onrei contains about 10.5-11% (about average). Even though about half the sugars are probably bound up in pectins or cellulose and have no effect on the miso flavor, they still like to know the total sugar content.

Entering and winning this contest was a new step forward for the Canadian soybean folks. "It's really something special." Doug has been taking Japanese language lessons. The miso group of which John is the project leader is now starting to log in soybean variables on a database, which has fields for sucrose, total free sugars, color, etc. For miso soybeans (including red miso or long-term soybean miso), the Japanese prefer a yellow color to a whiter color–which the tofu and soymilk makers look for.

John explains that he is a food scientist, not a soybean breeder. We talked about 6 years ago when he was starting

to work on miso, and he ordered a search on miso from the SoyaScan database. The breeders are the key to the process; at Harrow they breed mostly food-type or food-grade soybeans rather than commodity-type or oilseed-types–which are bred mostly at Ottawa and Guelph.

John's miso group at Harrow has developed a close working relationship with the Food Research Institute in Nagano; they now work directly with one another. About two years ago, Mr. Fujimori, a miso maker with whom they have developed strong ties over the years, was in Canada on one of his trips. John gave him (for the first time) some homemade miso that his group had produced. He sniffed it and looked at it and said "This isn't too bad." He took it back to Japan, where it was evaluated and the results were sent to John–with Mr. Fujimori's interpretation. The conclusion was: "It's okay but... don't give up your day job." John wrote back asking how his group could improve the miso. That was they key! Mr. Fujimori came to Harrow again with another person, gave John's group a lot of technical information, suggested that he use that information to make more miso–and to enter the miso in the annual Japanese miso contest! Mr. Fujimori provided the koji and John got a microbiologist involved. John's group now made miso from three different soybeans (see above) and the scientists and judges at the FRI in Japan "were quite surprised." They said "This isn't bad." They chose the best one. So John's group made larger batches and sent them to Japan in October 1999 for entry in the annual contest. In November John went to Japan to be present at the contest–although nobody can observe the judging. He learned that this was the first miso ever entered by foreigners in the Japanese contest. He also learned that the Canadian miso was not being judged with or against the Japanese miso. They were judging it separately in a special category–of which it was the only entry. Both awards for an "E" for effort and for reaching a high standard. "Miso is kind of a religion in Japan and it for an upstart like us to come in might not go down too well. But we found it interesting that they used our presence there for publicity–in a big way." John also discovered that the koji in all miso entries *must* be made from Japanese rice–even though a lot of Thai rice is used in making commercial miso in Japan. "Our real mission there was to raise the profile of Canadian-grown soybeans and to increase exports of Canadian soybeans. We want to breed soybeans that are very well suited for making miso in Japan. We are not interested in making miso to sell to Japan. However there is a good possibility of developing a domestic market for miso in Canada."

John is also deeply involved in trying to understand "stone seeds" or hard-seeded soybeans that do not absorb water well. Part of the problem seems to be related to weather/environmental conditions during the growing season. John hopes to try to understand the problem at the genetic level. "We now have a very heavy experimental stone-seed line."

John enjoys miso at home and he has served miso soup at the research station on several occasions. Last week he had it served at the Rotary Club. In each case, everybody liked it. "Fermented foods add such a variety of textures and flavors that people enjoy." Address: 1. Food Processing Technologist; 2. Food Scientist: Both: Agriculture and Agri-Food Canada, Greenhouse and Processing Crops Research Centre (GPCRC), Highway 18 East, Harrow, ON N0R 1G0, Canada. Phone: 519-738-2251.

7774. White Wave. 2000. Advertising program for Silk soymilk in 19 national magazines from 1 May 2000 to 25 March 2001. Boulder, Colorado. 1 p. Feb. 28.
Address: Boulder, Colorado.

7775. Skrzycki, Cindy. 2000. Dairy group has a cow over 'milk' that doesn't. *Washington Post.* Feb. 29.
• ***Summary:*** Says Bob Byrne of the National Milk Producers Federation: "We don't want them using milk's good name for their product"–which is not "the lacteal secretion of cows."

Milk once had an untarnished image in the USA. But that was before the medical establishment began warning about butterfat, cholesterol intake, and calories. Suddenly whole milk lost out to 2% and then 1% and then skim / nonfat milk.

7776. *Wall Street Journal.* 2000. Heinz agrees to buy owner of Beech-Nut. Feb. 29.
• ***Summary:*** H.J. Heinz Co. has agreed to acquire Milnot Holding Corp, owner of Beech-Nut Nutrition Corp. Milnot paid $68 million last year to acquire Beech-Nut from Ralcorp Holdings Inc. Heinz will be Beech-Nut's fourth owner is little more than a decade. Beech-Nut used to be a unit of Nestle SA until the Swiss firm sold it to Ralcorp in 1989. Address: Staff Reporter, Wall Street Journal.

7777. **Product Name:** Regular Tofu, Savory Tofu, Almond Tofu, Mushroom Onion Tofu, Lemon Grass Tofu, Sweet Ginger Tofu, Soy Noodles, Soymilk [Unsweetened, or Sweetened], and Tofu Skins.
Manufacturer's Name: Ahimsa Gourmet.
Manufacturer's Address: 1520 International Marketplace, San Pablo, California 94806. Phone: 510-235-8343.
Date of Introduction: 2000. February.
New Product–Documentation: Talk with George Weissmann, founder of Veat Gourmet. 2000. April 12. About two months ago his partner, Van Thi Dang, who is Vietnamese, started a small business named Ahimsa Gourmet in San Pablo, California, where they make tofu, soymilk, and many other soyfood products.

Talk with Van Thi Dang. 2000. April 12. She and her business partner, Tony Tieu (who is Chinese-Vietnamese), founded this business in mid-Feb. of this year. Tony makes all of the soy products. Even though she and Tony are

Vietnamese, they produce their soyfoods for everyone, without targeting any particular ethnic group.

7778. Jaret, Peter. 2000. The joy of soy: Hailed as the king of all health foods, the mighty soybean has been touted as a weapon against heart disease and cancer. *Harper's Bazaar.* Feb. p. 152, 156.
• ***Summary:*** "Wonder foods come and go... But the new superfood of the moment promises to be different. Eventually it's going to get everyone's attention, because the health claims being made for it are just too big to ignore." "A stream of scientific papers have shown evidence that it can fight heart disease and cancer." Even those who hate tofu are finding that soy can taste pretty good. Many like edamame–those slightly furry green pods served at Japanese restaurants. You run them through your lips and suck out the smooth, slightly salty soybeans inside. "Edamame have become so popular, they're being sold in bulk stores from New York to California." At Trader Joe's, a nationwide retail chain, sales of frozen edamame now rival those of frozen corn and broccoli. Even soymilk is poised to go mainstream. A key reason for the health benefits of soybeans is that they are rich in isoflavones–substances that resemble the natural hormone estrogen. Isoflavones are also powerful antioxidants.

Color photos show: (1) Two large red chopsticks holding one cooked yellow soybean. The caption: "The soybean, Asian staple, may be a big reason why cancers of the breast and prostate are uncommon in Japan and China." (2) Edamame in the pods, topped with a sprinkling of coarse white salt, on a square bamboo tray. The caption: "Edamame, the salty finger food served at sushi bars, is so popular, specialty food markets are beginning to sell it by the pound."

7779. Kuchan, Matthew J.; Ostrom, Karin M.; Smith, Carla; Hu, Peter E. 2000. Influence of purine intake on uric acid excretion in infants fed soy formula. *J. of the American College of Nutrition* 19(1):16-22. Feb. [37 ref]
• ***Summary:*** Most mammals catabolize purines to uric acid, which is oxidized by the enzyme uricase to urea and allantoin. However, since humans and primates do not have the enzyme uricase, they produce uric acid as the end product of purine catabolism. This metabolic trait has been used as a diagnostic tool to determine if humans can absorb dietary purines.

These two studies tested the hypothesis that increasing intake of purines, delivered as RNA from infant formula based on soy protein, would increase uric acid excretion in infants.

In Study One, each of the feedings resulted in mean serum acid levels within the normal range. Feeding soy formula led to higher serum uric acid levels than human milk, and human milk to levels indistinguishable from formulas based on cow milk. In Study Two, infants excreted significantly more uric acid in the urine when fed the Standard Purine formula compared to the Reduced Purine formula. In Study Three, infants fed the Standard Purine formula has a significantly higher concentration of uric acid in their urine compared to those fed the Reduced Purine formula. Address: 1-2, 4. Pediatric Clinical Nutrition Research, Medical and Regulatory Affairs, Ross Products Div. of Abbott Laboratories, Columbus, Ohio.

7780. White Wave, Inc. 2000. Silk: Put the fastest selling soymilk in your dairy case (Ad). *Natural Foods Merchandiser.* Feb. p. 16.
• ***Summary:*** This color ad (8½ by 11 inch) contains a photo of a half gallon carton of Silk Vanilla Soymilk (organic, Calcium and vitamin enriched). "The Number 1 selling refrigerated soymilk in America.

"Silk Vanilla half-gallon soymilk is also the largest selling non-dairy beverage in America's top 600 natural foods supermarkets, SPINS data Oct. 1999." Address: Boulder, Colorado.

7781. Nordquist, Ted. 2000. Update on the soymilk wars in America (Interview). *SoyaScan Notes.* March 7. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In June 1999 Ted was set to launch his WholeSoy Soymilk nationwide in three flavors–original, vanilla, and chocolate. Neil Donovan of Pacific Coast Brands (makers of Lactaid) had agreed to put $43 million into the launch. It was planned as a big and serious launch–the result of a year's work. The plates for the cartons were ready, the formulations were all tested, and many focus-group studies had been completed. Ted was waiting for the final okay from Dallas, which is the headquarters of the Suiza group. The key to the launch was the Suiza distribution network–the same network that distributes Lactaid. Lactaid is made at various plants, including the Suiza plant in Gustine, California. Lactaid has had a licensing agreement with Morningstar since long before Suiza bought Morningstar. Ted had been working closely with Suiza for several years (he packaged his soymilk at their plant in Gustine, California) and had gone to Suiza's headquarters in Dallas, Texas, three times. He submitted several reports to them.

One day in June 1999, as the launch date was approaching, Ted got a phone call from Terry O'Brien, who is a young sales manager at Suiza, in Dallas. He said that Suiza had decided (after looking at all of Ted's marketing information) that launching soymilk nationally was a great idea–so Suiza had decided to do it themselves with their own label, and to totally ignore Ted and his expert advice. O'Brien added that not only could Ted not use the Suiza distribution system, he could also no longer pack his soymilk in the Gustine plant–where he had been packing it for several years. That killed Ted's timing, because he would have been the first to have gable-top soymilk distributed nationally

to supermarkets in the USA. The White Wave-Dean Foods alliance was not announced until Aug. 18. Suiza launched its Morningstar Sun Soy in Jan. 2000. Ted has tasted it–"ugly."

After Ted got kicked out of Suiza, he went to Dean Foods and talked to their head of marketing; he went to the president who said that he could not work with Ted because he was already in negotiations with another company–which turned out to be White Wave.

So Ted no longer plans to try to launch a national soymilk. Now, 8 months later, Ted has found another packing company, and he is still contemplating launching WholeSoy Soymilk, but now it is very risky. He will introduce it at the Anaheim show this month then decide whether or not to invest the $180,000 needed to print the cartons. The refrigerated soymilk shelf space is natural food stores is pretty crowded.

Horizon Foods is still thinking about launching a soymilk, but their present management is very divided on the subject. Feinbloom and some other people Ted knew well have gone. Ted has heard that the main reason for the split is that the many dairy farmers who supply Horizon with organic cow's milk don't like the idea of their starting to sell soymilk–a competing product. Other dairy farmers are also upset at Dean Foods and Suiza for the same reason. Ted has talked with Horizon about doing a soymilk together, but he has heard that they may do that with some European company. Suiza owns about 20% of Horizon Foods. Ted thinks the odds are that Horizon will not launch a soymilk.

Note 1. In Jan. 2000 Suiza/Morningstar launched Sun Soy, in Creamy Original, Vanilla, and Chocolate flavors. Note 2. Dana Jacobi commented to Ted that most of the soyfoods executives she has interviewed are "practical idealists." Address: TAN Industries, Inc., 49 Stevenson St., Suite 1075, San Francisco, California 94105-2975; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-495-2870.

7782. Chapman, Nancy. 2000. Re: Soymilk and soymilk standards. Letter to Joseph A. Levitt, Director (HFS-1), Center for Food Safety and Applied Nutrition, U.S. Food and Drug Administration (FDA), 200 C Street, S.W., Room 6815, Washington, D.C. 20204, March 9. 6 p. Typed, with signature on letterhead.
• ***Summary:*** Response to letter to FDA from the National Milk Producers Federation; a copy of this letter will also be sent to FDA Docket No. 97P-0078.

"The Soyfoods Association of North America... is a trade association that represents 60 manufacturers and distributors of soy-based products, including soymilk, tofu, miso, tempeh, and other items, in the United States and elsewhere in North America.

"We write in response to a letter dated February 14, 2000 that we have recently learned has been sent to you by the National Milk Producers Federation ("NMPF"). In that letter, the NMPF complains to FDA about use in labeling of the nomenclature "soymilk" to describe beverages that are made from soy and asks FDA to take enforcement action to prevent use of such labeling." Address: Executive Director, Soyfoods Center, of North America, 1723 U Street, N.W., Washington, D.C. 20009. Phone: 202-986-5600.

7783. Kelly, Barbara J. 2000. White Wave's Silk Soymilk gains foothold in dairy case. *Boulder County Business Report* (*Colorado*). March 9.
• ***Summary:*** White Wave's products are now carried in more than 11,000 stores nationwide. The company's line of Silk soymilk products has been "the fastest growing item in the dairy case in the past year."

7784. Cohen, Deborah L. 2000. Functional food fever hits local tastemakers. *Crain's Chicago Business.* March 13.
• ***Summary:*** Food companies are starving for growth, and they see a way to get it in functional foods. Kraft spent nearly $400 million this year to buy Boca Burger (a maker of veggie burgers in Chicago) and Balance Bar (a maker of nutrition bars in California).

Dean Foods (of Franklin Park, Illinois), faced with sluggish sales of dairy milk, took a minority stake last year in White Wave Inc. (of Boulder, Colorado), a maker of Silk soy milk. Dean Foods, a large dairy company, has already increased the number of Silk distribution outlets sixfold, says Dennis Purcell, head of Dean's specialty business unit. White Wave had roughly $21 million in sales in fiscal 1999.

Small photos show packages of Silk, Boca Burger, and Balance Bar. Address: Managing editor.

7785. Messina, Mark J. 2000. Update on soy and nutrition (Interview). *SoyaScan Notes.* March 29. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Even though ABC's TV program 20/20 did a positive story about soymilk, they will soon be airing a very negative program on soy. They started by focusing on Lon White's study associating tofu and Alzheimer's in Hawaii. They then added the idea that there is a conspiracy between the soy industry and the FDA for the health claim. Mark has spent six hours on the phone with the 20/20 people, and he expects the program to be very negative. He is concerned.

Another important negative article titled "Eating well: Doubts cloud rosy news on soy," by Marian Burros (*New York Times,* 26 Jan. 2000) concerns soy and breast cancer. She argues that soy may be contraindicated for breast cancer and quotes Steve Barnes as saying that women with ER-positive tumors (that means the estrogen receptors respond to estrogen) tumors should not consume soy. There was a second article on tofu and Alzheimer's by Rosie Mestel in the *Los Angeles Times* that was much more negative than the first article by Susan Essoyan. Moreover, Rosie is confused about what constitutes "moderation," because Lon White's study indicated that 2-4 servings of tofu per week

caused brain problems, whereas most studies show that you must consume at least 1½ servings of tofu a day to get any benefits. In short, Mark believes that the media is and will be increasingly running negative stories on soy. Ken Setchell feels like "everybody has now jumped the soy ship and he's the only one still promoting it." "It's now hitting the fan right and left–so that we have gone to the other extreme." In July of this year, a panel on soy and safety is scheduled for the NNFA (National Nutritional Foods Association) show. The toxicity issues are now starting to take center stage–as Mark has been warning for several years. Mark does not see how any food company could consider coming out with a new soy product in the current atmosphere–with all the controversies being raised." The newspapers are carrying the negative stores because the magazine stories that are running now were written 6 months ago.

Over the past few years, many people in the soy industry have accused Mark of being an alarmist for presenting the whole truth–both sides of the issue. For example, Mark was telling dietitians that soy might be contraindicated for women with ER-positive breast tumors. Steve Barnes did not agree with Mark on this point. David Heber (a "big shot," M.D., PhD at UCLA) was hosting a soy meeting at UCLA on Jan. 20th 1998, in cooperation with PTI, to try to calm any concerns that some UCLA endocrinologists had about soy and breast cancer. It was a sort of "one-day dog and pony show" with five positive talks on soy by UCLA-associated people. He was very critical of Mark's position on the subject and even shouted at Mark on the phone for 10 minutes for scaring women away from soy when soy was so wonderful.

The last four studies on the ability of soy protein to lower blood cholesterol levels have shown no effect. We must be clear that there are two separate issues in these studies: (1) Does it work? and (2) Does it matter? If it does work, it probably doesn't matter, because those people with very high cholesterol levels would probably be put on drugs anyway.

In a recent position paper on women's health, the American Dietetic Association recommended that women avoid phytoestrogen supplements. Address: PhD, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

7786. ABC (American Broadcasting Co.). 2000. 20/20–Gimme a break [Soymilk segment]. Television broadcast. Friday, March 24. Channel 7 (California). 10:30 p.m.
• ***Summary:*** John Stossel discusses (unsympathetically) the dairy industry's actions to try and make use of the word "soymilk" illegal. The segment begins: "It's a war of words over what to call this drink [shows a carton of soymilk]. It looks like milk and tastes like milk, but milk producers say 'You can't call it milk.' Are they protecting consumers or milking the market?"

"What's in a name? Apparently, a lot of money! Because there's a tug-of-war going on now over the name 'milk.' Milk producers say 'We own it.' And to that we say 'Gimme a break.' Yes, because competition should take place on a level playing field. Whatever product consumers prefer wins. But that's not how it works with milk. The milk business seems to think its special." Milk makers was the Food and Drug Administration (FDA) to take immediate action against misuse of the word "milk." They're upset about soymilk, sold in packages that look like those used for regular milk, and showing up in the dairy case. Soymilk comes, of course, not from cows, but from soybeans.

20/20 did as taste test in a supermarket, giving soymilk to 50 people; most of them liked it–even people who were sure they wouldn't like it. When 20/20 give these consumers a blind taste test, some preferred the soymilk–so they are buying the wrong product. Not only do people like the taste of soymilk, it may be better for you. The FDA says that soyfoods help lower cholesterol and reduce the risk of heart disease. "So this is a threat to milk producers. And to that I say, 'Too bad!'... The competition is good for us consumers."

But the milk industry thinks it's special; its used to getting special breaks like the price-fixing deals called "price supports" which prop up the price of milk with taxpayer dollars then force consumers to pay more for milk. So its no surprise that the milk folks are trying to use government and laws to defeat the competition. Its Political Action Committees give millions of dollars to politicians every year and it has come to expect protection. Now they say that soymilk should be called "soy beverage." It's all because they're worried about consumers being hurt. Gimme a break.

7787. **Product Name:** Soy Fusion (Soy Beverage) [Berry, or Matcha Green Tea].
Manufacturer's Name: American Soy Products.
Manufacturer's Address: 1474 N. Woodland Dr., Saline, MI 48176. Phone: 313-429-2310.
Date of Introduction: 2000. March.
Ingredients: Berry: Filtered water, organic soybeans*, organic evaporated cane juice [sugar], apple juice, raspberry juice, carrot juice, and red cabbage juice (water, juice concentrates), pectin, citric acid, calcium, natural flavor, vitamin C, beta-carotene. * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 250 ml and 1 liter Tetra Brik Aseptic carton. The liter retails for $1.69 (2001/10, Lafayette, California).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Leaflets (8½ by 11 inches, color, glossy, front and back) sent by Patricia Smith from Natural Products Expo at Anaheim, California. 2000. March 24. The front panel shows a glass (with a flex-straw) of the whitish-pink berry beverage against a pink background. "Less than 1% fat. Light, refreshing, delicious. Excellent

source of antioxidant vitamins A & C. Made with certified organic soybeans (non-genetically altered). A good source of calcium. 12 mg of soy isoflavones per serving." A color photo shows the front panel of all four aseptic packages. The back panel states: "Sales of soy beverages through all channels increased 52% in 1999." The berry contains only 2 gm of protein per serving, and the matcha 3 gm.

Product (Matcha) with Label purchased at Trader Joe's in Lafayette, California. 2001. Oct. 6. This store carries both Berry and Matcha. "Made with matcha–powdered whole green tea leaves. 75 mg antioxidant catechins/serving." Soyfoods Center taste test. 2001. Oct. 13. Pretty good flavor, but much too watery and diluted. The use of sugar (a whopping 16 gm/serving) makes it undrinkable, so we regretfully discard it. Overall: Poor.

7788. **Product Name:** Luna Bar [Chai Tea, Tropical Crisp, S'mores, Sesame Raisin Crunch].
Manufacturer's Name: Clif Bar Inc.
Manufacturer's Address: 1610 Fifth St., Berkeley, CA 94710. Phone: 510-558-7855 X-236.
Date of Introduction: 2000. March.
Ingredients: Chai Tea: LunaPro (soy protein isolate, rolled oats, rice flour, roasted soybeans, crisp rice [isolated soy protein, rice flour, malt, salt], flaxseeds), brown rice syrup, natural flavors, sea salt, decaffeinated tea extract. Chai Coating: evaporated cane juice, fractionated palm kernel oil, soy milk (soybeans, water), soy lecithin. Chai Blend (ground ginger, green tea leaves, cloves, anise, cinnamon, cardamom), natural flavors. Vitamins and minerals (lists 23).
Wt/Vol., Packaging, Price: 1.69 oz (68 gm) in foil bag. Retails for $1.19 (2000/05, Lafayette, California).
How Stored: Shelf stable.
New Product–Documentation: Talk with Molly Lori, Registered Dietitian, Consumer Service, Clif Bar Inc. in Berkeley, California. 2000. May 17. The Luna Bar was designed for women. The first four flavors were available in July 1999. The most recent four were available in March 2000. The Luna Bar has fewer calories per bar, which is what women want.

"Luna Bar fact sheet" sent by Molly. 2000. May 17. Lists the eight flavors with nutritional facts and ingredients for each. Four flavors are called "New!"

7789. CNN-FN (Financial News). 2000. Business unusual. Television broadcast. CNN. March 1. 4 minutes, 50 seconds.
• ***Summary:*** This interview with Steve Demos begins: "Well, it certainly isn't the usual path to business success. My guest was a '60s hippie who dropped out of American society, moved to India, and practiced yoga in the Himalayas–and lived in a cave, by the way. And when he finally dropped back in, he did so by practicing a philosophy of 'Wealth without guilt,' and launched White Wave, a multi-million-dollar enterprise built on, of all things, soy!"

Steve says that he realized that he wanted to contribute to our society, and to do so he had to keep score by "extracting wealth." He wanted to make a positive contribution, "Something the world was better off with, rather than without." He chose soy because it was a "nonviolent contribution that is nutritional." He started making tofu in 1977. The host (a woman) notes that "its really just sort of catching on more mainstream now in the U.S." Demos agrees: "This is how to get rich slow... Not the overnight success."

The host asks again about the route that he took, "back from a cave in India, doing yoga for days and meditating." Then: "What does your family think of you now?" Answer: They are much more approving. Steve notes that business for him is a philosophy, and he has a great passion for what he is trying to accomplish. White Wave had sales of $30 million last year and the company is forecasting $60 million this year. They expect sales to double for the next three years as a result of the FDA endorsement stating that soy is a "healthy benefits food." The host says she hopes that one day all Americans will be dunking their Oreo cookies in soymilk, then closes with "Keep up your principles."

7790. **Product Name:** Eco Soy Pudding (Organic) [Vanilla, Chocolate, or Chocolate-Orange].
Manufacturer's Name: EcoFoods, Inc. (Product Developer-Distributor).
Manufacturer's Address: Palo Alto, California 94303. Phone: 650-978-9696.
Date of Introduction: 2000. March.
Ingredients: Organic soy beverage* (Filtered water, organic whole soy beans*), fructose, tapioca starch (modified), organic cocoa*, expeller pressed canola oil, organic agave nectar*, natural flavor, calcium, carob powder, lecithin, sea salt, carrageenan. ** = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 4 x 4.5 oz (128 gm) cups = 18 oz (510 gm). Retails for $2.99 to $3.20 (4 pack in California).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per cup (128 gm): Calories 140, calories from fat 25, total fat 3 gm (5% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 60 mg (2%), potassium 170 mg (5%), total carbohydrate 25 gm (dietary fiber 0 gm, sugars 18 gm), protein 2 gm. Vitamin A 0%, vitamin C 0%, calcium 20%, iron 0%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Product (Chocolate) with Label brought by Bob Gerner of Berkeley Natural Grocery Co. 2000. March 13. The product is sold in a 4-pack with a paper sleeve. Label: 6 by 10.25 inches. Paperboard. Chocolate brown, green, blue, and pink on white. Illustration of a spoon filled with a swirl of pudding. "Made with organic soy beans. Excellent source of calcium. Low fat & non

dairy. 15 mg isoflavones per serving. Organic, genetically unmodified soy beans." Soyfoods Center taste test: Flavor, texture, and package design: Okay.

Leaflet (8½ x 11 inches, glossy color, front and back) brought by Bob Gerner. The front shows the three flavors packaged in sleeves. "A great taste non-dairy pudding with non GMO organic soy beans." The back gives product ingredients and specifications.

Talk with Carole Corb of EcoSoy and C.J. Corb Intl. (phone: 805-773-8801). 2000. March 14. This product was developed by Daniel Adam, who lives in Israel where he runs a natural foods import business, importing Edensoy, Garden of Eatin' products, Galaxy soy cheeses, etc. The product, which is made in Minnesota, was first launched in Israel on 15 Jan. 2000, then in America in March 2000. Her favorite flavor is Chocolate-Orange. The recommended retail price is $2.97+.

7791. **Product Name:** Kôgi Café (Soymilk) [Amaretto Mocha, or Swiss Almond Decaf].
Manufacturer's Name: Flavor Organics, Inc.
Date of Introduction: 2000. March.
Ingredients: Amaretto Mocha: Fresh brewed 100% Colombian organic coffee, organic soymilk (filtered water, soybeans), organic evaporated cane juice, organic brown rice syrup, organic corn syrup solids, organic cocoa, organic flavors, natural flavors.
Wt/Vol., Packaging, Price: 9.5 fluid oz (281 ml) glass bottle.
New Product–Documentation: Leaflet sent by Patricia Smith from Natural Products Expo West at Anaheim. 2000. March.

7792. *Food Trade Journal U.S.A.* (*Ikegawa Food Specialists*). 2000. FDA as well as media help Japanese food industry: Soy products and green tea are highlighted. 10(2):1, 3-4. March. [Eng; Jap]
• ***Summary:*** Each article in this newspaper is published in both English and Japanese. Last October, the FDA gave its approval for U.S. companies to begin using a health claim on foods containing at least 6.25 gm of protein per serving. Except for traditional soy products (such as tofu), each serving must contain no more than 3 gm of fat, 20 mg of cholesterol, and 480 mg of sodium. The FDA believes that adults who consume 25 gm/day of soy protein could experience a decrease in their blood cholesterol, which reduces their risk of heart disease. The mainstream soyfoods that benefited from this announcement are veggie burgers, soymilk, tofu, and soy cheese. But now edamame has emerged as a big seller at supermarkets since a few years ago. A Japanese-style cartoon shows two blonde girls seated at a table. A boy, who is standing, says "I show you how to eat Edamame." Holding a pod of edamame in his right hand, he is popping the beans into his mouth. A circular inset, showing how his fingers hold the pod, is titled "Squeeze." Another cartoon shows Takuji Kimura [Mr. edamame in America], drawn by his son.

The article gives lengthy excerpts from two recent American articles: (1) Hesser, Amanda. 1999. "Bet you can't eat just one soybean." *New York Times.* Sept. 8. p. F3. (2) Deane, Donna. 2000. "Get more soy in your life." *Los Angeles Times.* Jan. 12. p. H1, H3. Food section.

According to Shigeru Shirasaka, president of House Foods (a leading U.S. tofu maker), his company shipped 29 million pieces of tofu in 1999, which is a 70% increase over 1995.

The last page of this article is about edamame, by Takuji Kimura, America's leading edamame broker, Concord, California. Japanese restaurants have been the showrooms for edamame, and they are part of the reason for its growing popularity. Tak Kimura started trying to sell edamame in 1994 at several natural food stores, but nobody seemed interested. He contacted the produce manager of Whole Foods in Berkeley–a woman–without an appointment. When he asked her to try his edamame, she said that she knew what it was–an appetizer at sushi bars! She liked it very much and had tried to find a source, but the restaurants would not disclose their sources. During his first demo day at Whole Foods he sold only 8 packs in 8 hours. But after 2 weeks sales started to increase. Then he got permission to sell edamame at other Whole Foods Markets, and then at the Wild Oats chain of natural food stores. In 1998 sales started to increase rapidly. Now the FDA is supporting edamame and major newspapers are doing stories, so sales continue to grown.

7793. **Product Name:** Veggie Burst (Drink Mix for Kids) [Very-Very Vanilla, Berry-Berry Strawberry, Chock-Full of Chocolate].
Manufacturer's Name: Galaxy Foods.
Manufacturer's Address: 2441 Viscount Row, Orlando, FL 32809. Phone: 800-441-9419 X107.
Date of Introduction: 2000. March.
How Stored: Shelf stable.
New Product–Documentation: Galaxy Foods Nutraceuticals order form sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2000. March. For the "Veggie Burst" (Drink Mix for Kids) three flavors are available–as shown above. A case is 6 x 16 oz packs. This is a dry mix.

7794. **Product Name:** GeniSoy Soy Milk Beverage Mix [Natural, Chocolate, Vanilla].
Manufacturer's Name: GeniSoy Products Co. (Distributor).
Manufacturer's Address: Fairfield, CA 94533. Phone: 1-888-436-4769.
Date of Introduction: 2000. March.

Ingredients: Banana Nut: Syrup blend (cane juice, brown rice, organic agave), soy protein (IP toasted soy beans, IP Supro brand isolated soy protein and IP soy flour), fruit paste (raisin and/or plum), rolled oats, whole wheat flour, dried cranberries, glycerine, peanut butter, canola oil, salt, natural flavors.
Wt/Vol., Packaging, Price: 2.3 oz (66.5 gm) in foil wrapper.
How Stored: Shelf stable.
New Product–Documentation: Leaflet (8½ by 11 inch, color) sent by Patricia Smith from Natural Products Expo East. 2000. Sept. "GeniSoy's Soy Milk: A creamy and delicious milk alternative." Dated: March 2000. This is a dry mix based on isolated soy protein.

Ad in Natural Foods Merchandiser. 2000. July. "GeniSoy's Soy Milk: A creamy and delicious milk alternative." This ad also appeared in the Sept. 2000 issue (p. 76).

7795. GeniSoy Products Co. 2000. GeniSoy's soy milk: A creamy and delicious milk alternative (Leaflet). Fairfield, California. 2 p. March. Front and back. 28 cm.
• ***Summary:*** The front of this glossy color leaflet shows cans of three flavors of GeniSoy Soy Milk (Natural, Chocolate, Vanilla), plus a pitcher filled soymilk, a stemmed glass filled with sliced fruits and half filled with soymilk, and a bowl of cereal, topped with sliced fruits and nearly filled with soymilk. These stand on a bed of soybeans, strawberries, chunks of chocolate, bananas, sliced kiwi fruits, etc. In the background is blue sky with white clouds. "IPP certified non-GMO soybeans. Mix with water. Low fat, cholesterol free. Non-dairy, high in calcium. Isoflavones (Genistein & daidzein). Heart healthy. Vegan. GeniSoy soy protein products: The magic of soy. www.genisoy.com." On the back is the soy heart health claim, plus nutrition facts and ingredients for each product. Address: Fairfield, California 94533. Phone: 1-800-436-4769.

7796. Hain Food Group, Inc. 2000. The Hain Food Group (Portfolio). Uniondale, New York. 35 inserts. 28 cm.
• ***Summary:*** The inserts, all printed with black ink on 8½ by 11 inch paper (usually colored), include: (1) Westsoy Singles and other Westsoy products. (2) Health Valley Soy O's Cereals (like Cheerios, New product March 2000). (3) Westsoy just got cool! Now in gable-top cartons. (4) Westsoy Soy Central (Display rack). (5) Arrowhead Mills stone ground whole wheat flour (Commemorating 40 years of organic heritage). (6) Westsoy pudding cups (vanilla or chocolate). (7) Crème de la Soy (original, French vanilla or Amaretto). (8) Westsoy VigrAid quarts, Pudding Cups, Westbrae Natural Café, Chai, Juice Bar, Health Valley Soy Moo. (9) Westsoy Organic Malteds, Lite Malteds. Address: 50 Charles Lindbergh Blvd., Uniondale, New York 11553. Phone: 516-237-6200.

7797. Odwalla, Inc. 2000. Odwalla: Nourishing the body whole. National brand leader (Leaflet). Dinuba, CA 93618. 2 panels each side. Each panel 21.5 x 14 cm. Front and back.
• ***Summary:*** Leaflet (glossy, color) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2000. March. On the front panel is the colorful Odwalla logo. On the inside two panels are four bar charts" (1) Consumer's choice. (2) Odwalla's growth (8%, $32 million) is outpacing the category (which includes Naked and Fresh Samantha). (3) Odwalla is the brand leader in all refrigerated functional juice segments. (4) Odwalla has the highest sales velocity (leads in 7 out of 10 items per sales point of distribution).

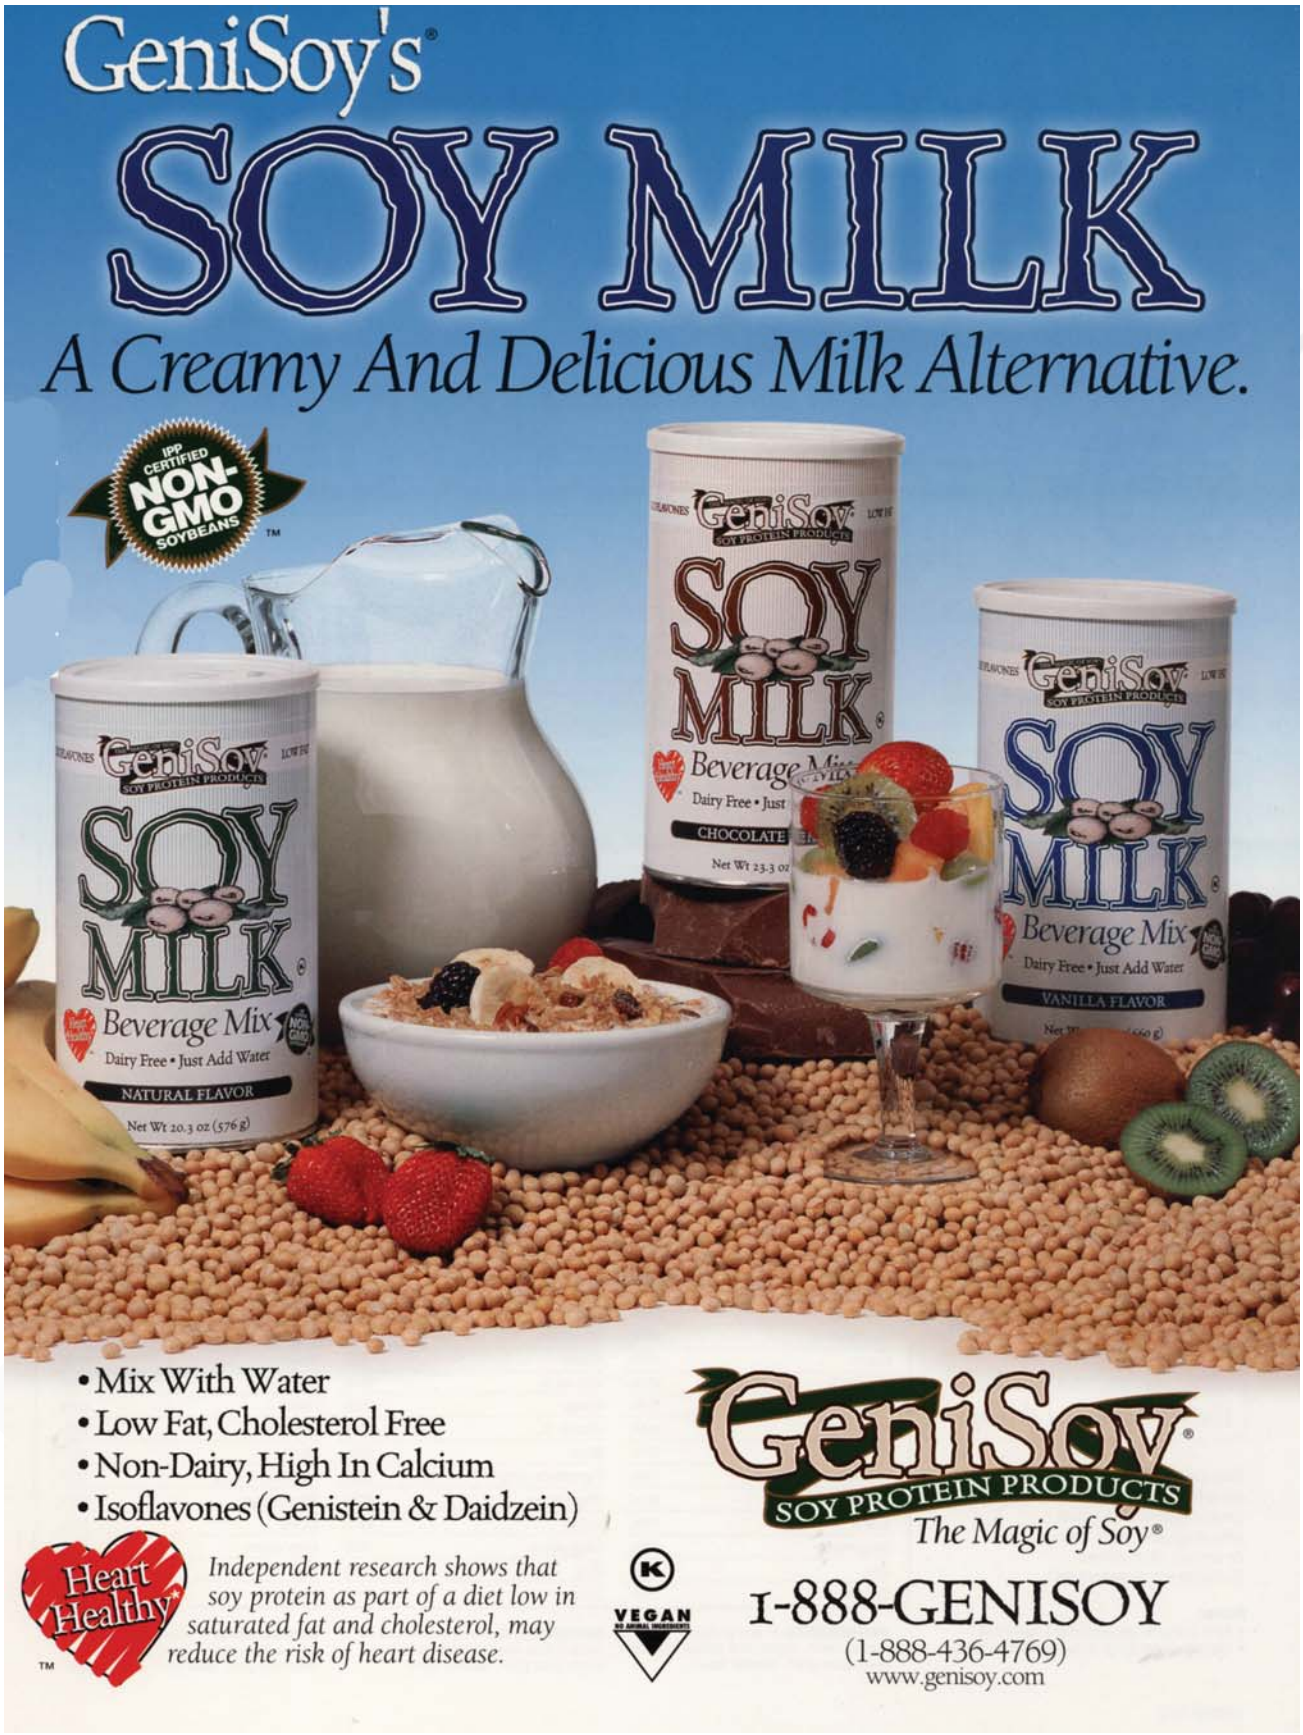
On the rear panel is (1) A chronology (1980 to 1999) of what year each Odwalla product was launched. (2) Odwalla's products by category, which include Nutritionals, Future Shake, and Smoothies. Address: Dinuba, California.

7798. Soy isoflavone content of specific soy milks (Leaflet). 2000. Single sided. 28 cm.
• ***Summary:*** This leaflet, printed with black ink on white paper, contains a full-page table with three columns: Brand, manufacturer (and phone number), and isoflavones/8 oz. The six brands are as follows: (1) Edensoy, from Eden Foods (range 40-45 mg). (2) Pacific, from Pacific Foods of Oregon (range 2-53.5 mg; the 53.5 mg is for Original unsweetened). (3) Silk, made by White Wave (35 mg for all 3 flavors). (4) Soy Dream, from Imagine Foods (40-47 mg). (5) Vitasoy, from Vitasoy (range 16-35 mg; the 35 mg is for Creamy Original). (6) Westbrae, from Westsoy/Hain (range: 4.8 to 50 mg; the 50 mg is for VigorAid).

The products with the lowest isoflavone content are those which are "Light" (watered down) or Fat-free (low fat).

Note: This leaflet was available at a natural foods store in Colorado in March 2000. The compiler and publisher are unknown.

7799. Soyfoods of America. 2000. Ancient Asian wisdom meets Western technology and tastes in our new SoyWise soy food product line (Brochure). Duarte, California. 3 panels. Front and back.
• ***Summary:*** On the cover of this stylish brochure is a magnificent golden dragon racing through a blue sea of clouds. Below the fold is written "Furama" in white letters next to a Chinese seal on royal red. The inside three panels explain that Soyfoods of America is introducing three lines of products: SoyWise soymilk (in vanilla nut, coffee, chocolate, sweetened, and unsweetened flavors), SoyWise cultured soymilk (in strawberry, peach, cactus pear, and plain flavors), and SoyWise smoothie (in raspberry, mandarin orange, peach passion fruit, strawberry banana, and apricot mango). Address: 1091 E. Hamilton Rd., Duarte, California 91010. Phone: 626-358-3836.



7800. Stephens, Roger; Stephens, Jane Ade. ed. and comp. 2000. Soyfoods guide 2000: Helpful tips and information for using soyfoods. Indianapolis, Indiana: Stevens & Associates, Inc. Distributed by the Soy Protein Partners. 24 p. Illust. No index. 28 cm. [23 ref]
• ***Summary:*** This guide is available only on a limited basis to dietitians and health professionals. Contents: Health: Add soy to diet to reduce heart disease (FDA recommends 25 grams of soy protein a day to reduce blood cholesterol levels), sample day soy meal planner (easy ways to add 25 grams of soy protein). Daily soyfood guide pyramid. Soy and your health–Scientists are learning about soy's health benefits: Isoflavones, heart disease, menopause & osteoporosis, cancer, allergies, diabetes & kidney disease, fat. Soyfood Descriptions: Meet the bean: Green vegetable soybeans (edamame), hydrolyzed vegetable protein (HVP), infant formulas, soy-based, lecithin, meat alternatives (meat analogs), miso, natto, nondairy soy frozen desserts, soy cheese, soy fiber (okara, soy bran, soy isolate fiber), soy flour (50% protein), soy grits, soy protein concentrate, soy protein isolate (isolated soy protein, 90% protein), soy protein, textured (flour or concentrate), soy sauce (tamari, shoyu, teriyaki), soy yogurt, soybeans, soymilk, soy beverages, soynut butter, soynuts, soybean oil & products, sprouts (soy), tamari (see soy sauce), tempeh, Teriyaki sauce (see soy sauce), tofu & tofu products, whipped toppings, soy-based, yuba. Helpful charts: Soyfood substitutions, soyfood isoflavone content. Soyfoods web site. Soyfood composition. Recipes using: Meat alternatives, textured soy protein, whole soybeans, soy flour, soynut butter, soymilk, tofu. Address: 4816 North Pennsylvania Street, Indianapolis, Indiana 46205. Phone: 317-926-6272.

7801. **Product Name:** Westsoy Juice Bar Singles (Soymilk and Juice Mixture) [Berry, Orange, Apple].
Manufacturer's Name: Westbrae Div. of Hain Foods (Product Developer-Marketer).
Manufacturer's Address: New York City, New York.
Date of Introduction: 2000. March.
Ingredients: Soymilk, fruit juice.
New Product–Documentation: Talk with Zaida. 2000. Aug. 7. She has a package of this product.

7802. **Product Name:** Silk Soymilk Creamer (Non-Dairy, Liquid) [French Vanilla].
Manufacturer's Name: White Wave, Inc. (Marketer-Distributor).
Manufacturer's Address: 6123 E. Arapahoe Rd., Boulder, CO 80303. Phone: 303-443-3470.
Date of Introduction: 2000. March.
Ingredients: Organic soymilk* (filtered water, organic whole soybeans*), expeller pressed organic canola oil*, organic evaporated cane juice*, natural flavors, soy lecithin, potassium phosphate, sodium citrate, carrageenan, tapioca starch. * = Organically grown and processed in accordance with the California Organic Foods Act of 1990. Certified by QAI. Silk is certified to contain no GMO soybeans.
Wt/Vol., Packaging, Price: Pint gable-top carton.
How Stored: Refrigerated.
Nutrition: Per 1 tablespoon (15 ml): Calories 20, calories from fat 10, total fat 1 gm (2% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 5 mg, total carbohydrate 1 gm (dietary fiber 0, sugars 3 gm), protein 0 gm. Vitamin A 0%, vitamin C 0%, calcium 0%, iron 0%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Pint carton with Label sent by James Terman of White Wave. 2000. May 11. 2.75 by 2.75 by 4 inches. Tetra Rex package. "Made with organic soymilk. Organic–Third party certified." Talk with James Terman of White Wave. 2001. May 29. This product was first sold in March 2000.

Leaflet (22 x 15 cm, glossy color) sent by Patricia Smith from Natural Products Expo East. 2000. Sept. "More flavor for your coffee. Naturally." A large photo shows a package of the creamer. "Lactose free. Dairy free. Cholesterol free. Organic. 100% natural."

7803. Edmondson, John Robert. 2000. J.B. "Ben" Edmondson, soybean pioneer in Hendricks County, Indiana (Interview). *SoyaScan Notes.* April 9. [1 ref]
• ***Summary:*** John, who is the son of J.B. "Ben" Edmondson, was born in 1914 (the same year his father started to grow soybeans) and so is now age 86, but his memory is excellent. He lives on his father's farm near Clayton, the same farm on which he was born. This farm, now several hundred acres, straddles the Hendricks-Morgan county line, and his father was born on the Morgan County part. His parents had only two children; John was four years older than his sister, Marian. His mother was Amanda Pearl Richardson; everyone called her "Pearl." She was born near Hazlewood in Hendricks County, about 1½ miles north of J.B.'s farm. John knew Taylor Fouts better than the other Fouts brothers. "They were primarily seedsmen."

Each August, just prior to harvest, J.B. Edmondson (who graduated from a 4-year course at Purdue in 1911) and his brother Ralph (who was not a college graduate) would have a soybean meeting on one of their farms; this greatly helped to develop interest in soybeans. They always had a variety plot each year on one of the two farms. They would invite local farmers plus Keller Beeson and M.O. (Merville Oleo) Pence, extension agronomists and soybean specialists at Purdue University, to speak about soybeans. Typically 35-50 men attended. The Edmondsons would serve lemonade (John had to squeeze the lemons) and all the men would spend the afternoon discussing soybean varieties, especially varieties and cultural practices. These annual meetings began in about 1920, several years before the founding of the Mid-State Soy Bean Association, and they continued after the Association

was founded.

Dunfield variety soybeans were grown mostly in Hendricks and Morgan counties. In about 1925 John's dad, two of his four brothers, and some other men who lived nearby organized the Mid-State Soy-Bean Growers' Association, to promote yellow Dunfield soybeans and to have them certified. Ralph Edmondson was one of J.B.'s brothers who lived on the adjacent farm; he and J.B. were the co-founders of the Mid-State Association. Clarence Edmondson, J.B.'s elder brother, grew soybeans nearby and was a member of Association, but was not very involved with its activities. J. Frank Edmondson, a first cousin of J.B. Edmondson, was a Purdue graduate, farmed in this area, and helped to develop the Association. Then he contracted tuberculosis and decided to move to California. So he quit farming, went to a local college, got a teacher's certificate, and moved to Merced, California, in 1930; he taught vocational agriculture until he died.

Each year the Edmondsons went to the International Live Stock and Grain Show in Chicago, Illinois; they had a booth and promoted their certified Dunfields. There were about as many farmers interested in soybeans for hay as for grain. Soybeans were never a very good hay crop, because they came in the fall when it was dusty and that was an aggravation to animals. In those days they were always full of weeds, stems, and other stuff. The Mid-State Association promoted soybeans as a supplement to corn for hogs–enabling hog farmers to grow their own feed and become independent of feed mills–and of the need for cash. But then the soft-pork problem arose because mostly full-fat soybeans were used with the corn. That problem was solved by the use of defatted soybean meal.

The American Soybean Association held part of their ninth annual meeting on the Edmondson farm in about 1928. *"Prairie Farmer* had little old biplane and they flew that thing down here and landed on our field. That was really something for the books!" John recalls that they baked soybeans like Boston Baked Beans for about 3 days in a Dutch oven, then served them to those attending. The local women's organization furnished the meal, and they made everybody take a serving of those soybeans–which not everybody liked.

Prairie Farmer absorbed the *Farmer's Guide* of Huntington, Indiana. J.B. was the associate editor of the *Farmer's Guide* for a year or two–1912 and 1913–after he graduated from Purdue. He and John's mother lived in Huntington before they moved to the farm where John now lives and started farming. They started by purchasing 10 acres adjacent to brother Ralph's farm from an outsider (a non-relative). They added 80 acres the next year, then 65 more acres 3-4 years after that.

J.B. carried on a very active correspondence. For example, he was one of the 4-5 founders of the Indiana state Farm Bureau in about 1919 or 1920. "He was also very strong in the Presbyterian church, and he worked with its general assembly." Most Edmondsons were Presbyterians. Politically, J.B. was a Democrat. And of course he wrote in connection with soybeans. "His old typewriter would be rattlin' when I'd go to bed, and he made a carbon copy of every letter he wrote, and kept everything neatly filed. But after he retired from farming, he and his wife moved to Danville, Indiana, and moved all his files into the basement of an old house. He died in 1962 and his wife died in 1983. "Some twenty or more boxes of files in the basement deteriorated (from water and mold/mildew) to the point that we had to take it all to the dump. Everything smelled awful. It was just a catastrophe." Ralph Edmondson lived until about 1960, but he was not the kind to keep records.

John does not know when or how the soybean was first introduced to Indiana. When asked if he has ever heard of a man named Parsons, he replies that he knew a man named Adrian Parsons who lived in northern Hendricks County. John also knew Adrian's grandson, who was also named Adrian. John recalls that Adrian Parsons was a friend of his dad's but he does not recall Adrian coming to annual meetings on the Edmondson farms. Adrian did nothing to promote soybeans as far as John can recall.

When John was a student at Purdue, an agronomy professor named Fred Robbins (who had graduated from Purdue in about 1912) did more experimentation on the food qualities of soybeans than anyone else. He made soybean milk, and roasted soybeans like peanuts. In the late 1920s there was also a company in Chicago named Kato Nuts; they bought several truckloads of soybeans from J.B. They retailed them for 5 cents a bag in little cello bags. Another company in Chicago made a soy-based malted milk powder that, when mixed with milk, made a sort of chocolate milk. "Since dad furnished them with soybeans, they furnished us with samples." Address: 10725 Hodge Rd., Clayton, Hendricks Co., Indiana 46118-9171. Phone: 317-539-2349.

7804. Weissman, George. 2000. Founding Veat Gourmet (Interview). *SoyaScan Notes*. April 12. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** George founded this company in 1998; he was the sole founder. He came across the Taiwanese technology to make this very unique textured soy protein because his partner (Van Thi Dang) is Vietnamese, and she brought it home from a Chinese grocery store. He ran across something similar, but gluten-based in a Chinese monastery, where he was doing a Chan [Chinese Zen] Buddhist retreat. He is a practicing Buddhist. He was in academia at the time; he as a physicist having earned his PhD degree from Cal Berkeley. He worked on the foundations of quantum theory/paradigm. He started a group at the Lawrence Berkeley Lab in 1974 to discuss physics and spirituality. Fritjof Capra (Austrian by birth) was a member of the group, as was Gary Zukoff. After that he went to the Swiss Polytechnical University where he

did a post-doctorate program. George is a vegetarian and is also very interested in issues related to world water usage and water as a limiting resource in food production.

About two months ago his partner, Van, started a small business named Ahimsa Gourmet in San Pablo, California, where they make tofu, soymilk, and many other soyfood products. Address: 4690 East 2nd St. #9, Benicia, California 94510. Phone: 1-888-321-8328 (toll free).

7805. Shaw, Ann. 2000. History of Avoset Foods, Morningstar Foods, and Suiza (Interview). *SoyaScan Notes.* March 27. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The plant in Gustine (where Ann has worked in research for 26 years) used to be called Avoset Food Corp. Avoset has been a pioneer in ESL products since the company started; this plant is almost 90 years old. Originally it was a creamery, owned by Foremost, then by Smith-Kline (a pharmaceutical company). In the 1940s, during World War II, Avoset pioneered ultra-pasteurized products for the U.S. military–such as whipping cream in little glass jars for use on submarines. In the 1950s they pioneered whipped toppings in pressurized squirt cans. In the mid-1960s Avoset was the first U.S. company to install a gable-top ESL (extended shelf-life) packaging machine, which packaged long-life whipping cream, and half-and-half. The non-ESL products had a shelf-life of 10-14 days and were considered "nuisance items" by fluid dairies and retailers. In about 1975 Smith-Kline sold Avoset to Anderson Clayton, which broke up the company and sold it to Quaker Foods, which sold it in June 1987 to Kraft, which sold it in about 1988 Morningstar–which was basically a group of venture capitalists from the Southland Dairies in Texas which bought specialty dairies (such as Bancroft Dairy) making value-added dairy products such as cultured foods, coffee creamers, whipping cream, half-and-half, etc.–products other than just fluid milk. Other branded Morningstar products included Second Nature (cholesterol-free eggs), International Delight (coffee creamers), etc.

In about 1997 (3 years ago) Suiza Foods Corp. purchased Morningstar. Suiza started with one dairy in Puerto Rico in the 1980s; then they started to buy other dairies, and became a major "dairy consolidator," putting together these many dairies under umbrella. Suiza was basically an acquisitions firm, which did not have any corporate structure beyond the people in the main office who were involved in acquiring new companies. One of the reasons they purchased Morningstar was for the corporate structure–human resources, research labs, etc. So all the research work for Suiza is done by Morningstar. After Morningstar bought Avoset, the technology, packaging, and formulations improved, but the basic business remained unchanged–until 5-6 years ago when Ted Nordquist arrived and Morningstar first began to work with soy. The first development of formulation for Silk soymilk was done at Gustine. Ann knows Ted extremely well.

On the front of the building where Ann works is written "Morningstar Foods" in large letters; below that in smaller letters is written "Avoset." Gustine is near Merced, California. Morningstar and Suiza have their corporate headquarters in the same building in Dallas, Texas. For information on Sun Soy (which is sold at Ralph's supermarkets in southern California), contact Patty Herbeck (phone: 214-303-3400) in Dallas. Wildwood soymilk is also made at the Gustine plant. They also package products for Trader Joe's. At Morningstar's yogurt plant in Fullerton, they package soy yogurts for Ted Nordquist and Trader Joe's. Address: Research Dep., Morningstar Foods (a Suiza Company), 299 Fifth Ave., Gustine, California 95322. Phone: 209-854-6461.

7806. Eden Foods, Inc. 2000. Eden's GEO-free policy since 1993 (Ad). *Vegetarian Times.* April. p. 1.

• ***Summary:*** This full-page color ad features a letter written by Eden chairman Michael J. Potter on 13 Feb. 1993, titled "Policy Statement. Re: Genetically Engineered Foods," which states that "Eden Foods will not purchase or sell any food ingredient known to be genetically engineered." A sidebar states: "Eden Foods has had a policy since 1993 requiring affidavits from all of its growers and suppliers guaranteeing that their food is free of genetically engineered organisms (GEOs). In 1998 New York Times hired a laboratory to test for GEOs in eleven soy and corn based foods. The only one that tested negative was Edensoy soymilk."

"Founded in Ann Arbor, Michigan in 1968, Eden Foods is one of the few remaining independent pioneer natural food companies." A small circular logo shows: "Eden Foods: 32 years. 1968-2000." Color photos show: (1) Michael J. Potter, Chairman & President, and William Swaney, Executive Vice President, standing by a large Eden delivery truck. (2) Mr. Bernard Pease, 3rd generation organic farmer.

Note: Soyfoods Center believes that the term "GEO" (as used above) is much more accurate than "GMO." Address: Clinton, Michigan 49236. Phone: 1-800-248-0320 or www.edenfoods.com.

7807. Manson, JoAnn E. 2000. By the way, doctor... *Harvard Health Letter.* April. p. 8.

• ***Summary:*** Soy, a staple of the traditional Asian diet, is rich in two phytoestrogens, daidzein and genistein. Although the research is limited, there is no research that these–in the amounts consumed in soymilk, tofu, or other soy-based foods–are harmful to breast, uterine, or prostate tissue. "The jury is still out, however, on what will happen if people take large doses of these phytoestrogens as pills or supplements over long periods of time."

Soy has beneficial effects on cholesterol levels, which is good for the heart; it lowers harmful LDL cholesterol

and raises protective HDL cholesterol. It has shown some promise in relieving the hot flashes of menopause. Conclusion: "Our understanding of soy is still very much a work in progress." Address: M.D., Dr.P.H., Chief of Preventive Medicine, Brigham and Women's Hospital.

7808. Morningstar Foods. A Suiza Company. 2000. New Sun Soy. Good enough to drink straight (Ad). *Vegetarian Times.* April. p. 21.
• ***Summary:*** This simple, full-page color ad shows one large view of a carton and three smaller views of the cartons in three flavors. At the bottom right is written in small letters: "Look for Sun Soy in your dairy case in three surprisingly delicious flavors: Creamy Original. Vanilla and Chocolate. www.suizafoods.com." Address: 299 Fifth Ave., Gustine, California 95322. Phone: 209-854-6461.

7809. Myers, Steve. 2000. The soy boom. *Organic & Natural News* (*Phoenix, Arizona*) 3(4):24-25. April.
• ***Summary:*** The decision in Oct. 1999 by the U.S. FDA to allow a heart health claim for soy has boosted sales and growth rates, but the real key to the growing interest has been the ongoing scientific research on the health benefits of soy. The combination of the two is impressive. According to SPINS, which collects scanner data from natural foods stores, sales of soy products were $184.3 million, up 37% over the previous six months. In mainstream stores, sales for the 12 months ended Oct. 1999 were $418.7 million, up 45% over the previous year. This mass market data was supplied in conjunction with ACNielsen.

Ranked by sales in natural products supermarkets, the top five soy products are (in million dollars for the 6 months ended Oct. 1999) are: (1) Soy beverages $58.7. (2) Meat alternatives $31.9. (3) Energy bars $25.5. (4) Tofu $32.1. (6) Frozen entrees $6.2.

Ranked by growth rate in natural products supermarkets, the top five soy products (for the 6 months ended Oct. 1999) are: (1) Energy bars 56%. (2) Soy beverages 34%. (3) Meat alternatives 28%. (4) Tofu 26%. (5) Frozen entrees 26%. Source: SPINS.

Ranked by sales in mainstream stores, the top five soy products are (in million dollars for the 12 months ended Oct. 1999) are: (1) Meat alternatives $176.2. (2) Energy bars $81.6. (3) Soy beverages $77.4. (4) Tofu $46.0. (6) Frozen entrees $3.2.

Ranked by growth rate in natural products supermarkets, the top five soy products (for the 12 months ended Oct. 1999) are: (1) Energy bars 93%. (2) Soy beverages 85%. (3) Frozen entrees 45%. (4) Meat alternatives 26%. (4) Tofu 19%. Source: SPINS/ACNielsen.

7810. Potter, Susan. 2000. Soy: Good news for the heart. *Healthy & Natural Journal* 7(2):68-71. April.
• ***Summary:*** While experts are not sure exactly how soy protein works, they are convinced that a significant improvement in America's cardiovascular health can be achieved by the consumption of as little as 25 grams/day of soy protein. A large color photo shows a tall glass of soymilk, a white bowl of dry soybeans, a cake of tempeh broken in half, and a cake of tofu–all on a wooden cutting board, placed on a woven cloth mat.

Note: Until recently, Dr. Potter was with the Dep. of Food Science and Human Nutrition, University of Illinois, Urbana, Illinois. Address: PhD, Research Scientist, Director of Nutrition Science, Protein Technologies International.

7811. South River Miso Co. Inc. 2000. The little book of miso: Recipes from South River. South River Farm, Conway, MA 01341. 24 p. 22 cm. [5 ref]
• ***Summary:*** This 24-page booklet is illustrated by Gaella Elwell. Contents: What is miso? The art of making miso soup. Recipes: Soups and stews, pasta and grain dishes, miso porridge & grain milk [homemade "Creamy oat milk"], dressings, dips and spreads, miso with vegetable & bean dishes. South River miso varieties. Suggested reading (5 books). South River products. Mission statement. Acknowledgments. Photos show: South River Miso Co. in the snow. The Elwell's daughter. Jars of miso. Address: South River Farm, Conway, Massachusetts 01341. Phone: (413) 369-4057.

7812. *SoyaScan Notes.* 2000. Chronology of Avoset Foods in Gustine, California (Overview). Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** 1917–California Milk Products Company builds a milk sugar (lactose) plant in Gustine, in the San Joaquin Valley of California. It is built by Roy Kruger at First Avenue and Fourth Street. It faced Highway 33 and a spur track was built from the railroad to the plant. This was the first such plant built in the United States

Later in 1917 California Milk Products Co. is purchased by Smith, Kline and French Laboratories (SK&F, of Philadelphia, Pennsylvania; now Smith Kline Corp.), a manufacturer of pharmaceuticals and other health care products. The company is looking for a source of milk sugar (lactose), which is a critical ingredient in Eskay's Baby Food, a product it made and sold at the time–and in other baby food products and military flares.

In Tillamook, Oregon, an area famous for its cheese, SK&F finds a bankrupt company that has equipment for removing milk sugar from whey. They purchase this equipment and move it to Gustine, some 700 miles away.

Soon, both the casein and the milk sugar lines are rolling at CMP, a subsidiary of SK&F. The casein produced at Gustine, known as K-B Brand Casein, became the quality standard for U.S. paper-coating caseins. The lactose was used in making baby foods and pharmaceutical products. These milk derivatives (plus butter) were sold in bulk

to processors who used them to manufacture consumer products.

1929–SK&F purchased a company named Gustine Creamery to ensure a constant source of quality skim milk.

1930s–The company started a research program to develop new products from milk. Laboratories were constructed at Gustine and grants were awarded to colleges to aid in the research.

1939–A new process was discovered for sterilizing liquid foods. Arrangements were soon made with the inventor of the process to develop it commercially. Sterilized cream had never been made successfully before as a commercial product. The cream had to be heated to a high temperature rapidly, then cooled just as rapidly in a sterile environment with sterile packaging. Most important, the product had to taste good to consumers. The first product made using this process was a sterilized cream named and trade-marked Avoset. The word could be pronounced in any language–in anticipation of an international market. Avoset cream stayed sweet for many months on the refrigerator shelf.

1940 July–A company, named Real Cream, Inc., is formed to market Avoset.

1941–Avoset was first sold commercially. It was the company's first venture into consumer products. Is less than a year the new sterilized cream was being sold in many countries where fresh cream was difficult or impossible to obtain.

1943–The Sterile Cream Division of the Gustine Creamery is manufacturing "stabilized cream" for the United States Army, Navy, and Lend-Lease purposes, only (The Redskin, "Gustine Helps" {High School Newspaper} 1943).

1945 late–The Avoset Company introduces another new product, a sterilized whole milk named Avo. It was readily accepted, along with Avoset, by the U.S. armed forces and in many foreign countries where refrigerating foods was a problem. Avo, later renamed Avoset Sterilized Whole Milk, kept its fresh taste for months without chilling. It lasted a year or longer without refrigeration and soon became a household word wherever it was sold.

1947–The Gustine Creamery, California Milk Products Co., and Avoset merge into one company named Avoset Company.

1950 summer–Avoset introduces Qwip, a real cream topping packaged in an aerosol can. It soon became the company's best-seller.

1960–Avoset began to offer its experience in packaging sterilized liquid foods to other manufacturers who were in need of that know-how using the concept of "contract packing." Its first two products were a sterilized infant-food formula and a sterilized ice-cream mix. Avoset did not own the formula and did not market the products. Avoset's private label business grew rapidly; more than 60 companies now buy their own-label milk products from Avoset. Yet Avoset is still the only company in the world that produces a sterilized, pressurized whipping cream.

1963–Avoset establishes a department to market the company's aerosol foam-type valve to other companies packaging foam-type aerosols.

1967–Avoset saw the need for sterilized products in Pure-Pak paper containers. With Avoset's background in sterilized processing, it wasn't long before dairy and nondairy products were being aseptically packaged under the labels of Avoset's customers.

Recently (about 1967) the company introduced 'True Whip, a pressurized nondairy dessert topping–indicating a possible new direction for the company.

1967 May 25–Avoset celebrates its 50th anniversary in Gustine. "Avoset, along with The Borden Company, The Carnation Company, and Foremost Dairies Inc., provide Gustine with a solid economic backbone" ("The Avoset Story," in *The Gustine Standard,* "Salute of Avoset" supplement, 25 May 1967).

1968–Avoset starts apply its aseptic packaging knowledge to portion control packaging. By 1976 Avoset provided most major airlines with individual three quarter ounce servings of salad dressings and sterilized non-dairy half-ounce portion control creamers for coffee that come with airline meals. Avoset is regarded as a pioneer in "portion control packaging."

1973–Avoset Food Corporation has 125 fulltime and 60 seasonal employees. Avoset now makes products under 1,200 labels for over 200 companies–including Foremost, Carnation, Lucerne, Albertson's, Arden, Meadow Gold, etc. ("Any label: Avoset Gustine's largest industry," in *Westsider,* 6 Sept. 1973. Avoset Food Corporation: History, 1976).

1978–Avoset is sold to Anderson, Clayton Co. (Houston, Texas).

1987–Quaker Oats buys Anderson Clayton Co and thereby acquired Avoset.

1987 June–Kraft Foods Co. acquires Avoset from Quaker Oats.

1988 April–Kraft sells Avoset to Duncan-Cook, a Houston based investment group. Avoset is now a 125,000 square foot facility in Gustine.

2000 April–The name over the door at 299 5th Ave. in Gustine now says "Morningstar Foods," with "Avoset" on the 2nd line. Morningstar Foods belongs to Suiza of Houston, Texas.

In 2012 Ted Nordquist wrote: "In 1994-95 I developed the Silk soymilk using formulations I brought from Sweden, using the Morningstar pilot plant and the help of Laura Tewnion and Ann Shaw. We never produced soybase at the Morningstar (Avoset) plant in Gustine. We had soybase made using our equipment at Soyfoods of America in Duarte, California, and this soybase was shipped in 6,000 gallon tankers to Gustine, where, according to my formula, the Gustine plant produced Silk soymilk for Steve Demos

(White Wave) beginning in January, 1996, until March 1998. Our equipment was integrated with Soyfoods of America equipment; we paid Soyfoods of America for this soybase by the gallon."

Note: Thanks to Patricia Snoke of the Gustine Historical Society for sending (on 17 April 2000) a packet of 13 documents she assembled concerning the history of Avoset.

7813. Tezuka, Masanori; Taira, Hideharu; Igarashi, Yasuo; Yagasaki, Kazuhiro; Ono, Tomotada. 2000. Properties of tofus and soymilks prepared from soybeans having different subunits of glycinin. *J. of Agricultural and Food Chemistry* 48(4):1111-17. April. [20 ref]*

7814. **Product Name:** Trader Joe's Low Fat Fresh Non-Dairy Soy Beverage (½-gallon Pure-Pak carton) [Original Flavor].
Manufacturer's Name: Trader Joe's (Marketer-Distributor). Made in Chico, California, by Healthy Harvest Foods.
Manufacturer's Address: P.O. Box 3270, South Pasadena, CA 91031-6270. Phone: 818-441-1177.
Date of Introduction: 2000. April.
Ingredients: Filtered water, organic whole soybeans*, brown rice syrup, calcium carbonate, sea salt, carrageenan, vitamin A palmitate, vitamin D-2. * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: Net 64 fl oz (½ gallon) 1.89 liters. Gable-top Pure Pak carton. Retails for $2.69 (California 1997/01).
How Stored: Refrigerated.
Nutrition: Per 8 fl oz (240 ml): Calories 130, calories from fat 25, total fat 2.5 gm (4% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 80 mg (3%), total carbohydrate 22 gm (dietary fiber 0 gm, sugars 11 gm), protein 9 gm. Vitamin A 10%, calcium 30%, vitamin D 25%, vitamin C 0%, iron 6%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Starting in Oct. 1996 this product was made for Trader Joe's by Healthy Harvest Foods, owned by Nancy Knudsen of Chico, California. Nancy's maiden name was Nancy Potter; she ran Eden Foods (developer of Edensoy soymilk) while her brother, Michael, was in jail.

Talk with Ted Nordquist of TAN Industries. 2000. April 12. Ted now makes the soymilk in this product at his plant [at Soyfoods of America] in Duarte, California. Gary Stein buys the soymilk from Ted and has it shipped from Los Angeles to Gustine, where it is formulated and packaged. It is then distributed by Rockview Farms, the company that distributes all of Trader Joe's fresh products. Gary started making this product for Trader Joe's in early 1998; he was the first to package it in an ESL gable top carton. Before that it was packed in a non-ESL gable top carton. Before Gary, Trader Joe's was getting this soymilk from John Yamauchi in Los Angeles. Ted does not know when Gary or John began making this soymilk for Trader Joe's.

7815. Hymowitz, Ted. 2000. Some very big U.S. companies are getting into the soyfoods industry (Interview). *SoyaScan Notes.* May 10. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In his regular search for soy on the Internet, Ted learned that Pepsico is planning to introduce a line of flavored soy drinks under their Tropicana Brand. Address: Prof. of Plant Genetics, Dep. of Crop Sciences, Univ. of Illinois, Urbana, Illinois.

7816. Goldman, Lea; Post, Tom. 2000. A cry in the wilderness: Steve Demos is selling something that's good for you–and tasty, too. Too bad a lot of people think its the yuckiest food in America. *Forbes* 165(11):322-24. May 15.
• ***Summary:*** About Steve Demos, White Wave, and Silk soymilk–with much incorrect information and a negative bias toward soymilk. Examples of incorrect information: (1) Demos learned to make tofu in India during the early 1970s while on a spiritual retreat. (2) Since then "he has been convinced he's found the path to entrepreneurial nirvana." (3) It's been a lonely quest.

On the right-hand page is an excellent full-page color photo of Demos holding up a half-gallon gable-top carton of Silk against a background of blue sky.

A graph shows annual sales (in dollars) of soymilk versus cow's milk from 1990 to 1999. Sales of cow's milk have been almost flat, rising from about $17 billion to $20 billion during the decade. Sales of soymilk have risen from $82 million in 1992 to $300 million in 1999.

Founded by Demos in 1977 with only $500 in startup, White Wave seemed in danger of crashing by 1986. The company had $200,000 in bank debt with sales stalled at $5 million.

White Wave launched Silk in 1996, packed in typical milk carton and sold refrigerated in the dairy case. But consumers didn't think to look for it there. As a result, White Wave lost $400,000 in six months. But consumers liked the product when they tasted it, so this year White Wave will give away 4 million half-pints of Silk to shoppers in 5,000 stores at a cost of $2.5 million.

Last year White Wave had profits of $1 million on sales of $30 million. This year Demos hopes to double revenues. He is also trying to block competitors like Suiza by signing exclusive agreements with his manufacturers.

Last summer Dean Foods, one of America's largest dairy companies, bought a 25% share in White Wave that is now worth $17 million. Demos' goal is to have a national brand of soymilk–a goal that has eluded dairy milk producers so far. "That would indeed be a triumph of tenacity over taste."

7817. Terman, James. 2000. New developments at White Wave (Interview). *SoyaScan Notes.* May 15. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** America is definitely ready for refrigerated soymilk. Silk is turning rapidly and selling well; it is America's No. 1 refrigerated soymilk. White Wave is starting to get that critical mass; they have been on NPR [National Public Radio] and 20-20, and are doing some mass market advertising in regular magazines–such a *People* magazine–in the special issue on the "Fifty most beautiful people." It debuted last week but is still on grocery store racks. This is part of a new ad campaign run by a PR agency White Wave recently hired. Address: White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

7818. Fargo, Carolyn. 2000. Ag director sees South Africa as potential soybean market. *Illinois State Journal–Register* (*Springfield*). May 31.
• ***Summary:*** Joe Hampton, Director of the Illinois Department of Agriculture, who returned this week from a trade mission to South Africa with Governor George Ryan, sees an immediate potential for exporting soybeans there. Illinois must work to become the provider of choice–which will not be easy. Hampton said that having an Illinois trade office in South Africa is a big step forward.

The South African government is trying to improve the diet of its people. "But with the lower price of soy milk and soy products and enhanced nutrition, it makes (soybean exports) an immediate possibility." Address: Agribusiness editor.

7819. Golbitz, Peter. 2000. Milk producers sour about "soymilk" label. *Bluebook Update* (*Bar Harbor, Maine*) 7(2):1-2. April/June.
• ***Summary:*** On Feb. 14 the National Milk Producers Federation (NMPF) registered a complaint with the U.S. Food and Drug Administration (FDA) "regarding the rise of fraudulent labeling and marketing of an expanding number of products labeled as 'soymilk.'" They asked the FDA to "take appropriate regulatory action" against soymilk companies that used the word "milk" anywhere on their package. Their objection is based on the FDA standard of identity for "milk" which states that "Milk is the lacteal secretion, practically free from colostrum, obtained by the complete milking of one or more healthy cows."

However in Feb. 1997 the Soyfoods Association of North America (SANA) filed a citizen petition asking the FDA to grant them a "common or usual name regulation" for soymilk. In effect, they asked the FDA to recognize the word "soymilk" as the common or usual name for this class of products made from soybeans and water.

On 9 March 2000 members of SANA and leading U.S. soymilk manufacturers visited the FDA in Washington, DC, and met with Dr. Christine Lewis, Acting Director of the Office of Nutritional Products, Labeling, and Dietary Supplements. They presented a letter, drafted by the group's attorney, that explains the legal, procedural, and policy faults in the NMPF letter, and asks the FDA to follow their standard procedures in regard to the NMPF complaint.

7820. Heaney, Robert P.; Dowell, M.S.; Rafferty, K.; Bierman, J. 2000. Bioavailability of calcium in fortified soy imitation milk, with some observations on method. *American J. of Clinical Nutrition* 71(5):1166-69. May. [14 ref]
• ***Summary:*** The calcium in fortified soymilk (typically tricalcium phosphate) is absorbed about 75% as well as the calcium in cow's milk. Thus, soymilk containing 500 mg of calcium per serving would supply approximately as much usable calcium as does a serving of cow's milk containing 300 mg of calcium. Therefore, fortified soymilk is a good source of calcium, but not as good as cow's milk. Address: Osteoporosis Research Center, Creighton Univ., Omaha, Nebraska.

7821. Jacobi, Dana. 2000. The joy of soy: 75 delicious ways to enjoy nature's miracle food. Roseville, California: Prima Publishing. xii + 244 p. May. Illust. Index. 22 cm. Series: The natural kitchen. [16 ref]
• ***Summary:*** This is basically a reprint of Dana's 1996 book titled *Soy! 75 Delicious Ways to Enjoy Nature's Miracle Food,* also published by Prima Publishing. It contains no new text and no new recipes; a few small errors have been corrected and the design of both covers and the title page is new. Address: Food writer, New York, NY.

7822. Lear, Jane Daniels. 2000. Kitchen notebook: Behind the scenes with *Gourmet's* cooks. *Gourmet* 60(5):255-58, 261. May.
• ***Summary:*** The title page announces that in this article you will learn "How to work soy into your everyday culinary repertoire." The full-page section titled "Toying with soy" (p. 256) observes that there has recently been an "explosion of soy." It's no longer limited to natural foods stores and Asian markets. In a typical grocery store or supermarket, you'll find tubs of tofu in the produce section, soy milk next to the cow's milk in the dairy case, and *edamame* soybeans in the frozen foods section.

"Well, the stuff is good for you." So Americans are learning how to cook with it and make it delicious–as many people in East Asia have long known how to do. Focuses on four foods: Edamame ("better than beer nuts"), miso, tofu, and Chinese fermented black beans (actually fermented black soybeans, sold in Asian markets and sometimes labeled "Preserved beans"). A large photo shows these four foods; the edamame are in a metal Japanese-style strainer.

"Perhaps the most irresistible, and nutritious, cocktail nibble going these days is edamame–young, tender soybeans usually eaten straight from the pod. (Gently suck the beans

into your mouth, and when serving them, don't forget to provide a bowl for the pods.)"

One recipe is given: Kemp Minifie's panfried tofu with Chinese black bean sauce (with "2 tablespoons Chinese fermented black beans"–which is standard fare at her Sunday night suppers. "Her ten-year-old daughter loves it so much that she's requested it as her birthday meal for several years").

7823. *Natural Foods Merchandiser.* 2000. Natural Products Expo West. May. p. 1.
• ***Summary:*** The largest Natural Products Expo ever was held at the Anaheim Convention Center. The 255,000 feet of conference and exhibition space was put to good use as a record 30,704 attendees visited more than 2,400 booths sponsored by 1,400+ companies. Color photos show: (1) One busy, colorful hall with a giant ten-foot-tall carton of White Wave's Silk soymilk in the foreground. (2) A lady carrying a tray of Galaxy soy cheeses, probably to give away as samples.

Patricia Smith and Dana Jacobi who both attended this show note that "there was an explosion of soy products at the show."

7824. *New Soy Times* (*Carmichael Lynch Spong, Minneapolis*). 2000. From ripple to tidal wave, Silk availability and sales soar in 1999: White Wave Silk soymilk becomes national bestseller. May. p. 1.
• ***Summary:*** "Following its quarterly board meeting held on January 31, White Wave announced that its top selling Silk soymilk is available at more than 11,500 mainstream supermarkets–a dramatic increase from over a year ago when the product was only sold in natural food stores and fewer than 100 mainstream supermarkets.

"'Our growth is almost unheard of within the grocery industry,' says White Wave President Steve Demos, 'and the exciting thing is that we're not slowing down. Silk will soon be available in 15,000 stores nationwide.'

"According to IRI data, the increase in refrigerated Silk sales of 600 percent in the last year rivals the climb of products from companies such as Starbucks and Celestial Seasonings."

"As the top-selling refrigerated soymilk, Silk was a major factor in helping the soymilk category reach $300 million in sales last year–its best year ever."

7825. *New Soy Times* (*Carmichael Lynch Spong, Minneapolis*). 2000. Silk soymilk fills mainstream America's cereal bowls: New ad campaign shows consumers an easy way to enjoy the benefits of soy. May. p. 3.
• ***Summary:*** "White Wave, one of the largest soyfoods manufacturers in the U.S., is launching an integrated campaign promoting Silk, leading with a series of striking and colorful print ads. The campaign was created by Minneapolis-based Carmichael Lynch, the agency's first for White Wave, which awarded its advertising and media buying account to CL without a review in October.

"The campaign uses variations on a theme to demonstrate a tasty way for people to integrate soy into their daily diets by pouring Silk over their favorite cereals. Each execution features a birds-eye view of a bowl filled with Silk and cereal, which has been arranged into symbolic shapes and icons.

"In 2000, White Wave will invest $10 to 15 million in an integrated marketing communications campaign that includes print, radio and online advertising, public relations, even marketing and trade shows. The print advertising campaign will break in May with a presence in broad-based, health/fitness and holistic lifestyle publications, including *People, "O"*–Oprah Magazine, *Prevention, Self, Shape, Health, Cooking Light* and others."

Note (from p. 4): White Wave, a privately owned company, has 91 employees and annual sales of nearly $30 million. The company produces more than 40 soy products.

7826. **Product Name:** Fresh Samantha Soy Shake [Belgian Chocolate].
Manufacturer's Name: Odwalla, Inc.
Manufacturer's Address: 41 Spring Hill Rd., Saco, ME 04072. Phone: 1-800-374-6554.
Date of Introduction: 2000. May.
Ingredients: Incl. soy powder.
Wt/Vol., Packaging, Price: 16 fl oz (480 ml = 1 pint) HDPE plastic bottle.
How Stored: Refrigerated.
New Product–Documentation: Leaflets sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2001. March 8-11. "Fresh Samantha Soy Shake: Shake your body healthy!"

Talk with Betsy Shipper of Odwalla Samantha. The Soy Shake line was introduced by Fresh Samantha in 1999. The first flavor was Vanilla Almond, followed by Mocha Millennium (launched just before 1 Jan. 2000), followed by Belgian Chocolate.

7827. Sears, Barry. 2000. The soy zone. New York, NY: HarperCollins (ReganBooks). x + 338 p. Index. 25 cm. [216 ref]
• ***Summary:*** Contents: Acknowledgments. Introduction. 1. The health benefits of soy. 2. Enter the soy zone. 3. Zoning your kitchen. 4. Soy zone cooking tips. 5. Soy zone meals. 6. Modifying your favorite recipes. 7. Fine-tuning the soy zone diet. 8. Your longevity report card: The tests you want to pass. 9. Insulin: Your body's Dr. Jekyll and Mr. Hyde. 10. Soy science. 11. How the soy zone diet stacks up against the traditional vegetarian diet. 12. Frequently asked questions. 13. World health implications for the soy zone diet. Appendixes. A. Technical support. B. Zone validation

studies. C. Calculation of lean body mass. D. Zone food blocks for making soy zone meals. E. Synthesis of DHA. F. Glossary of terms. G. Resources. H. References.

Note: This book has all the hallmarks of a "quickie" written by a person who does not know his subject. Moreover, we believe the nutritional science and dietary philosophy are seriously flawed. Address: Ph.D., Swampscott, Massachusetts.

7828. **Product Name:** Silk (Soymilk) [Chai, or Mocha].
Manufacturer's Name: White Wave, Inc. (Marketer-Distributor).
Manufacturer's Address: 6123 E. Arapahoe Rd., Boulder, CO 80303. Phone: 303-443-3470.
Date of Introduction: 2000. May.
Ingredients: Chai: Filtered water, organic whole soybeans*, naturally milled organic cane*, black tea, green tea, caramel color, cardamom, cinnamon, ginger, clove, natural flavors, calcium carbonate, carrageenan, disodium phosphate, sodium citrate, zinc gluconate, vitamin A palmitate, riboflavin (B-2), vitamin D-2, vitamin B-12. * = Organically grown and processed in accordance with the California Organic Foods Act of 1990. Silk soybeans are third-party certified by QAI and contain no GMO soybeans.
Wt/Vol., Packaging, Price: Quart gable-top cartons. Retails for $2.39 to $2.69.
How Stored: Refrigerated.
Nutrition: Per 1 cup (240 ml): Calories 130, calories from fat 30, total fat 3 gm (5% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 125 mg (5%), total carbohydrate 20 gm (dietary fiber 1 gm, sugars 15 gm), protein 6.5 gm. Vitamin A 6%, vitamin C 0%, calcium 30%, iron 6%, vitamin D-2 20%, riboflavin 20%, vitamin B-12 15%, zinc 6%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Talk with White Wave. 2000. May 8. These two new flavors will be available later in May. *New Soy Times* (Carmichael Lynch Spong, Minneapolis, Minnesota). 2000. May. "White Wave announces two new flavors of soymilk: Introducing Silk Mocha and Silk Chai." p. 1.

Quart cartons with Labels sent by James Terman. 2000. May 11. 2.75 by 2.75 by 8¼ inches. Tetra Rex package. "Made with soymilk. Organic–Third party certified." Chai: "A premium beverage of teas, soy and spices." Mocha: "A premium blend of coffee, soy & chocolate flavor."

Leaflet (color glossy) sent by James Terman. 2000. May 11. "Sip into something silky." On the front, a color photo shows quart cartons of both chai and mocha flavors against a chocolate-brown background. In the foreground a portion of a white mug filled with each beverage is visible. On the back are the nutritional facts, ingredients, and case pack information.

Ad in Natural Foods Merchandiser. 2000. June. p. 71. "Sip into something silky."

Glossy color leaflet (front and back, 8½ by 11 inch) sent by Patricia Smith from Natural Products Expo East. 2005. Sept. (dated 2005). "Silk quarts: Ideal size. Great taste. Variety." "America's most popular soymilk brand."

The company's name has now been changed to WhiteWave Foods Company; it is owned by Dean Foods Co., one of America's largest dairy companies.

Product with Label purchased by Martine Liguori in Oakland, California. 2007. Jan. Package design is copyrighted 2006. Front panel: "Silk Chai. Made with organic soybeans. A premium beverage of teas, soy and spices. Enjoy hot or cold. Vitamin fortified." Retails for $0.99, but regular retail price is about $2.79.

7829. Tannehill, Carol. 2000. Pizza Hut tests new cheese here first. *News-Sentinel* (*Fort Wayne, Indiana*). June 27.
• ***Summary:*** Galaxy Foods chose Fort Wayne, as a typical U.S. city (in terms of demographics), to be guinea pigs for pizza made from its low-fat, cholesterol-free mozzarella. The Veggie Mozzarella Pizza debuted last week at The Village at Coventry Pizza Hut for a six-week test. During the test, the Pizza Hut "customers can choose which cheese–regular dairy mozzarella or soy-based Veggie Shreds–they want on their pizzas."

Galaxy Foods (of Orlando, Florida) says its vegetable-based, non-dairy cheeses, milk, butter, sour cream and other products are available at 13,000 supermarkets. Now the company is branching out into the restaurant industry.

The new pizza is not vegan because it contains casein–without which it will not melt. It is also a bit more expensive than pizza with regular dairy cheese. Address: Restaurant notes.

7830. Demos, Steve. 2000. White Wave reflects on growth and Dean Foods investment: Q&A with Steve Demos, CEO of White Wave. *Nutrition Business Journal* (*San Diego, California*) 5(6):12-13. June.
• ***Summary:*** Products with the White Wave and Silk brand names are now sold in virtually all natural foods stores and over 17,000 mainstream supermarkets in the USA and Canada.

The past 12 months have been the most dynamic period of change and growth in the history of White Wave. In 1999 the Silk beverage line was in less than 1,000 supermarkets, but by May 2000 that number had increased to over 17,500. This increase was not a result of anything Dean Foods (a $4+ billion dairy and specialty foods manufacturer and marketer) did for White Wave. White Wave already had strong momentum before the relationship with Dean Foods began. In 1998 White Wave's distribution was 85% natural foods and 15% supermarkets/grocery stores. In 1999 it was 55% natural and 45% supers. This year the company expects a shift to about 65% supers and 35% natural. For the fiscal year ending 31 March 2000, White Wave's sales were up

more than 100% over the previous year, and for the month of March 2000, they were up 400% over the same month one year ago.

White Wave's greatest short-term challenge is to attract, train, and retain personnel who can meet the challenges of the company's growth and, even more important, maintain the company's culture and identity.

Silk's success in supermarkets has attracted several very large corporate competitors. Soymilk products now sold in the refrigerated beverage case include those from Suiza Foods, Hain Foods (Westsoy brand), Imagine Foods, Vitasoy, Best Foods Co., and Pepsico/Galaxy Foods.

White Wave's market share, (according to March data from Spins and April data from IRI) is 20% of the non-dairy beverage sales in natural foods and 78% of refrigerated non-dairy sales in mainstream supermarkets.

FDA approval of a health claim for soy protein has been one factor leading to dramatic growth for White Wave. During the past fiscal year, the company has operated on its previously developed "out-of-sight" growth plan (for very fast growth), which has led to 74% growth in existing markets and 108% growth in sales increase with less than 0.5% out of stock and almost no quality problems.

Concerning industry consolidation, Demos is glad to see natural foods becoming more widely available in America through new channels of distribution. The problem is that large, multinational companies seldom, if ever, are involved in innovative product development of natural or organic foods. When the entrepreneurial element leaves, the passion to innovate is often lost. No one at White Wave is cashed out or retired, and the passion remains.

Looking back: During the 1970s and 1980s, survival was the key to success for soyfoods companies. During the 1989s it was R&D leading to product innovation and better flavor. During the next decade it will be serious financial backing, dependable and far-reaching distribution, establishing consumer brand loyalty, having consistent and high quality goods and services, and differentiating your company and products from competitors.

7831. Global Food Industries, Inc. 2000. Company profile (Portfolio). Townville, South Carolina. Ten inserts. 28 cm.
• ***Summary:*** Inserts: (1) Cover letter: The company "has been in business since 1982, as one of the leaders in manufacturing soy-based dehydrated entrees." Four sales U.S. offices: Mid-Atlantic, Southeast (Florida), West Coast (California), Armed Forces. (2) Food processing: They have U.S. manufacturing plants in Illinois (Ashcomb), Mississippi, and Iowa. Sales offices in Florida, California, Mexico City, San Salvador (El Salvador), and La Paz (Bolivia). R&D office: Champaign, Illinois. Manufacturing plants in USA and 21 countries. (3) Letter from the president, Neal Pfeiffer.

(4) International organizational chart: Ramlakhan Boodram is in charge of equipment and product development. Paulette Harary is in charge of International development. (5) Five main reasons for using our low cost, high protein entrees: Tastes great, nutrition, alternative diets (vegetarian, kosher, halal), quick, easy, consistent preparation, convenient (light weight, shelf life of 2 years, 1 cubic foot holds 500 servings). (6) Menu description: Ala King, "Chicken" style dinner in sauce, Chili, Chunky "beef" style stew, Chunky "chicken" style stew, Country breakfast, Goulash (New!), Picadillo (New Mexican meal!), Butterscotch, chocolate & vanilla puddings, Salsa verde (Mexican meal–coming soon!), Seafood chowder (Coming soon!), Sloppy joe, Spaghetti, Stroganoff, Sweet and sour, Tinga (Mexican meal–coming soon!), Vegetable "beef" style soup (Coming soon!), Other products, Beverages. (7) Countries with operations: Vegetable oil extraction facilities are in: Ibadan, Nigeria; Roseau, Dominica; St. Paul, Minnesota, USA; Mayaro, Trinidad. Essential oil distillation facility is in: St. Georges, Grenada. Soymilk production lines are in: Roseau, Dominica; Kingston, Jamaica; Mexico City, Mexico; Lagos, Nigeria; Rome, Italy. Extruded products facilities are in: Cairo, Egypt; Giza, Egypt; Ho Chi Min City, Vietnam. Health supplement packaging line is in: Port-of-Spain, Trinidad. Powdered products canning line is in: St. Louis, Missouri, USA. (8) Easy and creative recipes using Global Food as a starter (title page). (9) Potato tart. (10) Nutrition information (sample) (Title page). (11) Nutrition facts–Ala King. Address: P.O. Box 489, Townville, South Carolina 29689. Phone: 1-800-225-4152 or 864-287-1212.

7832. Potter, Michael. 2000. Eden Foods rides growth in soy, focuses on quality: $60 million Eden remains independent in the midst of consolidation. Q&A with President Michael Potter. *Nutrition Business Journal* (*San Diego, California*) 5(6):10-11. June.
• ***Summary:*** Since its founding, Eden has distributed dry groceries, not refrigerated or frozen foods. They sell to customers who want quality natural, organic and macrobiotic foods. Their top category is Edensoy soymilk, which represents about 50% of Eden's sales–followed by canned beans, imported Japanese foods, and pasta. Eden's average soymilk sales have grown 28% a year over the last six years. The company's total sales are about $60 million a year. They have not yet added the FDA health claim to their Edensoy label, and may not.

During the 1970s Eden was a wholesale company distributing to retailers in the Midwest and Northeast. In the early 1980s they withdrew from wholesaling and started selling branded products exclusively to distributors–not to retailers. That's what they still do. In addition, natural and organic products are now in demand in mainstream stores and supermarkets; during the past 5 years, their growth has been strongest in that channel–especially with Edensoy. Tree of Life and United Natural Foods have become primarily

DSD (direct store delivery) distributors, especially where their mainstream customers have "natural food sets."

One highlight in the history of Eden Foods was the introduction of Edensoy in July 1983 at the NNFA show in Denver, Colorado. By the following winter, Edensoy had become the fastest moving item in the natural- and health foods industry and created the non-dairy liquid food category. More recently, the highlight has been the continued gains in conversion of soil to organic agriculture.

There is more competition today for organically grown foods, but Eden has long paid its growers well and promptly, so the company gets first call on quantity and quality. The $30 million plant in Michigan that makes Edensoy buys more soybeans than anyone, and is probably the largest organic processing facility in the USA.

Michael is the sole owner and shareholder of Eden Foods. People with lots of money want him to take the company public and do an IPO (initial public offering). But he has chosen the path of slow and steady growth–like the tortoise. By staying independent, he stays free to focus on his mission of quality.

Michael says he founded Eden Foods when he was age 19. Note: This is not true. Eden Organic foods was founded in Nov. 1969 by Bill Bolduc. At about that time, Michael had a good-paying job at an art gallery in Royal Oak, Michigan. Then he began working for, and eventually became a partner in Joyous Revival, a macrobiotic and natural foods retail store in Birmingham, Michigan. In Jan. 1971 Bill Bolduc hired Michael Potter to work at Eden Foods. So Michael was not a founder or "co-founder" of Eden Foods, but he has served as President since 1972. The article says that Potter was one of the founders of the Soyfoods Association of America; this is also not true. He is now age 50, with six children and two grandchildren.

7833. Schweitzer, Peter. 2000. A village soy demonstration [in Belize]. *Plenty Bulletin* (*Summertown, Tennessee*) 16(2):2. Summer.

• ***Summary:*** Describes the ongoing work of Plenty, Inc. to introduce soybeans to Belize. "During our recent stay in Belize, we participated in a 'soy demonstration' organized by Gomier (Plenty's soy technician) in the village of Aguacate. The Aguacate Farmers' Coop is growing more soybeans than any group in Toledo and this was their first soy demo. The Coop members invited the school in particular and the turnout was half school kids and half farmers and village leaders. First we set up the cooking station and heated a pot of water, while Gomier did his introduction about the health benefits of soybeans. We all trooped down to the village corn mill (where the village grinds its corn for tortillas) to grind the 5 lbs. of beans that had been soaking in water for 8 hours. Afterward we went back and cooked the mash, strained the milk and served it in cups three ways–plain, sweetened with sugar, and sweetened with cacao. Several gallons were consumed by the 30-40 people present. Gomier made patties from the okara (leftover soy pulp) with carrots, celery, onion and seasoning and fried them. These were likewise eaten as fast as they could be cooked. Gomier also made soynuts which were very popular too."

A photo shows Plenty board member Richard Schoenbrun serving soy milk to nine dark-skinned people, mostly kids.

7834. Santacruz, Cecilia; Santacruz, Nestor. 2000. Re: More searching for the roots of soya in Colombia. New developments at Delisoya. Letter to William Shurtleff at Soyfoods Center, July 19. 2 p. Typed, with signature. [1 ref]

• ***Summary:*** Cecilia traveled to Corpoica but was unable to obtain the 1930 Boletin by Durán Castro: Molina Garcés. All records of the Granja Experimental de Palmira were sent to ICA, and the ICA can't find them.

"Our small business demands a lot of time and we are not integrated; we make and sell the tofu in different places. We started a new activity (see the yellow paper) in Delisoya–making lunches. Gloria, my new partner, a young girl and I. Nestor keeps making tofu and soymilk."

Accompanying the letter is Deli Soya's daily lunch menu (black on yellow background) which includes: Brown rice mixed with tofu. Whole-grain lasagna with Italian tomato sauce, tofu and spinach.

In a handwritten note at the end, Cecilia says that she is studying Japanese, and has been invited to stay at the home of Japanese friends. Address: Founders and owners of Delisoya, Calle 78 No. 12-03, Santafe de Bogota, Colombia. Phone: 346-2178.

7835. Bawa, Ravinder. 2000. Straight answers: Jason Baker, Coordinator, People for Ethical Treatment of Animals (PETA), India. *Times of India* (*The*) (*Bombay*). July 26. p. A1.

• ***Summary:*** Baker answers four questions posed by Bawa. The third question is: "What are the alternatives to milk consumption?" Answer: You don't need to drink milk. However delicious alternatives, which are easy to make, include soya milk and nut milks. "Tofu (bean curd) makes great soya paneer."

7836. Khaleque, Abdul. 2000. Re: Work with soymilk and soybeans in Bangladesh. Letter (fax) to William Shurtleff at Soyfoods Center, July 27. 1 p. Typed, with signature on letterhead.

• ***Summary:*** "My name is Abdul Khaleque. I carried out research on soymilk at Massey University, New Zealand in order to fulfill the requirement for the degree of Doctor of Philosophy from 1969-'71 and published a number of papers in National and International Journals.

"I worked for about 35 years in Bangladesh Council of Scientific and Industrial Research (a national research

organisation) and retired as Director. After retirement, I joined as Technical Director in a big National NGO named Gonoshasthaya Kendra (GK). As the authorities of Gonoshasthaya Kendra knew me and about my work, they appointed me to implement a project on production of soymilk for commercialization. We are in a final stage of implementing the project." Address: Director (Tech.), Gonoshasthaya Kendra, Peoples Health Centre, Nayarhat, Dhaka-1344, Bangladesh. Phone: 933 22 45.

7837. Demos, Steve. 2000. New developments at White Wave (Interview). *SoyaScan Notes.* July 31. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Steve actually did live in a cave practicing meditation for one month outside of Rishikesh, India in the 1970s–but he never told anyone in the soyfoods industry about it until he told CNN Financial News [1 March 2000]. They "ran with it."

Silk is now in 24,000 supermarkets nationwide. Dean Foods supplied the slotting money, but otherwise White Wave basically got into the stores using its own sales force. White Wave does not now use, and never has used, the Dean Foods distribution system. Rather, they ship Silk from the factory where it is made to the supermarket warehouse, whence it is distributed to individual supermarkets.

Getting into supermarkets was like running a 100-yard dash; the only competitor was Suisa, whose Sunsoy soymilk is now in about 50% of supermarkets in the USA. Suisa now has about 4% of the market. The next race is to take soymilk to the national media; this is more than a 44 yard dash. White Wave will be spending about $10 million on this media campaign. Their goal is to develop "top of the mind awareness" or TOMA, so that when people hear the word "soy" they think "Silk."

In the natural foods trade all Westsoy products still have a larger market share than all the Silk products.

During the next few weeks White Wave will launch a new version of Silk soy yogurt, a cultured yogurt with live cultures, made at a dairy in the USA. It will be sold in a new carton–an aseptic single-serving plastic cup.

Steve has learned several key things from people at Dean Foods. First, how to manage data, especially market statistics, and to use them in making decisions, allocating marketing dollars, and targeting interested populations. Second, Steve has a mentor at Dean Foods, Lou Nietto, who is teaching him about the mainstream food business. Lou got his MBA from Harvard Business School and came to Dean Foods from Kraft. White Wave grew up in the natural foods industry, but they are no longer primarily in this business. Steve and Lou talk by phone once a month, and phone to person once a quarter. Lou really believes in White Wave's products, concept, and entrepreneurial spirit. "We turned their heads."

Silk is certainly one of the fastest growing products in the food industry in recent times, and may be *the* fastest.

Steve is the second child in his family; his elder brother is a surgeon. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

7838. Mercola, Joseph. 2000. Experts in the field: Clinician of the month–Infants and soy milk. *John R. Lee Medical Letter* (*Windsor, California*). July. p. 5-6. [16 ref]
• ***Summary:*** Dr. Mercola shares "important new information" on the "profound adverse effects that soy products have on infants and young children." He is not a fan of soy and he plans to go on the national media later this year to dispel the pervasive myth in the health food industry that unfermented soy products, like the majority soy foods consumed in the USA, are not good for people.

He limits his responses to the deleterious effects of unfermented soy products on infant nutrition, "and I can best make my case with information abstracted from writings by Dr. Mary Enig and Sally Fallon."

The website for John R. Lee, M.D., describes itself as: "Your information source for Natural Hormone Balance and Natural HRT" [hormone replacement therapy]. Address: D.O. [Doctor of Osteopathy], St. Alexius Medical Center [1555 Barrington Rd., Hoffman Estates, Cook Co., Illinois 60194].

7839. *Ontario Soybean Growers Newsletter.* 2000. Soyfoods opportunities conference. July. p. 3.
• ***Summary:*** "On April 13th, over 130 delegates attended the 'Soyfoods Opportunities Conference' held in Guelph [Ontario]. The purpose of the conference was to bring together industry stakeholders to explore" new opportunities. "Soyfoods are becoming one of the fastest growing food groups in North America." "Peter Golbitz, one of the leading authorities on the world soyfood market, spoke on current and emerging trends in soyfoods." He noted that only 10% of the world's soybeans are currently being used as soyfoods, and of that amount, 90% are in Asia. Sales of soyfoods in the USA this year is expected to top $2.6 billion–led by growth in soymilk and meat alternatives.

Yves Potvin described his very successful work with soyfoods. "After the conference, many of the delegates gathered to discuss the feasibility of creating a Canadian Soyfoods Association. 40 people from across Canada voiced unanimous support..." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

7840. *Ontario Soybean Growers Newsletter.* 2000. Pepsi to market soymilk. July. p. 8.
• ***Summary:*** "Coming soon to U.S. theatres: A cold soymilk-and-fruit drink to wash down that hot buttered popcorn. The drink is a product of PepsiCo Inc's Tropicana brand, one of several big food and beverage companies trying to get in on the growing market for soy. Kellogg, Kraft and H.J. Heinz

have also recently acquired soyfood companies.

"Known as 'Tropicana Smoothie made with veggie milk', this icy drink is a joint venture with Galaxy Foods in Florida. In addition to some theatres in Florida, the drink is going to be tested in selected restaurants and Kroger supermarkets.

"Galaxy Foods hopes to soon market the Tropicana Smoothie, as well as other soy products, in Canada." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

7841. Taira, Ele; Taira, Terry; et al. 2000. Auntie Aloha's–A taste of soy. Honolulu, Hawaii: Independent Distributors of Nutrition for Life. 92 p. Recipe index. 22 cm.
• ***Summary:*** These are Hawaiian-style recipes that use various NFLI (Nutrition for Life International) meatless soy products made from whole soy flour, such as: Harvest Beanuts, Heartful Gourmet Beef Chunks, Heartful Gourmet Beef Strips, Heartful Gourmet Chicken Chunks, Heartful Gourmet Chicken Strips, Heartful Gourmet Ground Beef, Heartful Gourmet Ground Turkey, Nutri-Flour Blend, Powdered Soymilk, or Vegetable Curls. Recipes also include traditional soyfoods such as shoyu, tofu. The name of the person who developed and submitted each recipe appears below the recipe title.

Contents: Salads. Soups. Pupus. Pasta & rice. Main dishes. Desserts and breads.

Proceeds (less costs) from the book go to HopeLine, the advice line for young people sponsored by Karing for Kids, a Christian charity. The HopeLine currently operates 8 hours/day on average. Its budget will enable 65,000 youths to call and receive help each year. Yet the goal is to make HopeLine available 24 hours a day, every day, year-round.

Letter (fax) from Ele Taira. 2002. Aug. 6. All the NFLI Healthful gourmet product are meatless and made from soy. For details visit the website at www.nutritionforlife.com. Address: Ele Taira, 1015 Ala Napunani Street #701, Honolulu, Hawaii 96818. Phone: 808-836-4994.

7842. White Wave, Inc. 2000. Five new leaflets from White Wave (Leaflet). Boulder, Colorado. 1 p. each Single sided. 19 x 14 cm.
• ***Summary:*** These playful, glossy color leaflet (or post cards) were sent to Soyfoods Center by Steve Demos on 1 Aug. 2000. Each contains a beige plate with a design on it against a different background color. On the bottom of each is a color photo of a ½-gallon carton of Silk Soymilk with the tag-line "Get your soy with Silk." (1) "Think globally. Spoon locally" (green). (2) "Its one of those soy meets girl love stories" (dark pink). (3) "Taste and nutrition co-habitate harmoniously" (dark red). (4) "A taste bud lovefest." (5) "Have a good life span."

An identical set of five cards is smaller (15 x 11 cm).

7843. Yap, Bwee Hwa Flora. 2000. Re: Tempeh Promotion Day in Germany. Good tempeh now sold in Germany at a reasonable price. Letter to William Shurtleff at Soyfoods Center, Aug. 7. 1 p. Typed, with signature.
• ***Summary:*** This year Tempeh Promotion Day was held on July 1, in Bonn, in the Indonesian Embassy, sponsored by Garuda Airways. The day was successful, with about 150 people in attendance, thanks to Miss Birgit Steffan of the cultural department of the embassy. Lectures about tempeh were given by Dr. Suyanto (Director of Bioindustrial Technology, Agency for the Assessment and Application of Technology, Jakarta) and Dr. Jha (a cancer researcher at the Univ. of Bonn). On the walls were pictures of the different stages of tempeh making. The lunch, consisting of tempeh dishes, was served outdoors in tents by the Java Restaurant (of Koeln). After lunch there were more lectures and a show of Indonesian dances.

Dr. Suyanto will come to Germany again this August or September. Flora plans to go with him to Maldegem, Belgium, where there is a very modern tempeh factory–previously owned by De Hobbit.

In Germany, very nice frozen white tempeh, made in Holland, is now sold in Asian Shops for DM2.50 for 250 grams–a very reasonable price. The tempeh sold in natural food stores retails for about DM6.00 is made by Viana (owned by Bernd Drosihn). Bernd plans to move his factory to the Eifel.

A second letter, dated Aug. 15, accompanies two new books on tempeh. Flora adds: "It is a pity that German people still have not learned to appreciate tempe. Tofu is sold in supermarkets, also soymilk and desserts." Spreads for bread made of soy, are found mostly in natural food shops (Naturkost Laden). One of the reasons that tempe is not made in households is that the starter is difficult to buy in Germany. Address: P.O. Box 4132, D-66386 St. Ingbert, Germany. Phone: 6894-53609.

7844. Rice, Judy. 2000. Wyoming will be home of new soy milk facility. *Beverage Online.* Aug. 10.
• ***Summary:*** A new soymilk production company named Star Valley Natural Foods has been established. Principals in the joint venture include Jeremy N. Kendall, chairman and CEO of Stake Technology Ltd. Allan Routh, president of SunRich, Inc. And Dennis Anderson, chairman and CEO of Northern Food & Dairy, Inc., which currently produces soy milk at its facilities in Alexandria, Minnesota.

The partners have purchased a 20,000 square foot plant and equipment to make soy milk in Afton, Wyoming; it is scheduled to begin operation in September and will supply the West Coast market.

Located in the Star Valley in the Teton Range of the Rocky Mountains, the plant will use the crystal-clear water from the world's largest cold-water geyser in making its soy milk.

Northern Food & Dairy and SunRich recently formed a

joint venture named Nordic Aseptic to purchase a soy milk packaging plant. Stake announced its intention to acquire Northern Food & Dairy.

Note: For more information phone Walt Humbert of Star Valley Natural Foods at 307-886-5212. As of 20 Nov. 2000 the plant had not yet begun operation.

As of 21 Nov. 2002 the phone is 307-885-3060.

7845. Lee, Ken. 2000. New developments with yuba, soymilk, and tofu at Soyfoods of America (Interview). *SoyaScan Notes.* Aug. 18. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Soyfoods of America still makes yuba and, in fact, cannot keep up with the demand. The fresh frozen sheets is their best selling yuba product; it is sold mostly to restaurants, where it is used like an egg-roll wrapper. The dried yuba sticks are used in soups. Ken is developing the equipment and a process for automating the yuba-making process.

The company's best selling product of all is Furama soymilk, sold in both the Oriental and Caucasian markets in the USA. Ken no longer makes tofu; he has House Foods make it for him under his label, since they are the lowest-cost manufacturer.

Two weeks ago Ken's company introduced a cultured soy beverage under the Trader Joe's label, in peach and strawberry flavors. It was developed by Tim Huang. Ken will soon introduce a similar product under his SoyWise brand. Address: President, 1091 E. Hamilton Rd., Duarte, California 91010. Phone: 626-358-3836.

7846. Nordquist, Ted. 2000. Update on work with soyfoods (Interview). *SoyaScan Notes.* Aug. 18. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Sales of Ted's WholeSoy soy yogurt "are going through the roof" = increasing dramatically. Ted is moving production from Fullerton to SSI (Super Store Industries) in Turlock, California–just south of Modesto. He leaves home at 4:00 in the morning to arrive there last Sunday and Monday at 6:00 a.m.

Ted's ice cream is also "flying off the shelves" = selling very well. Things are going very, very well for Ted's business. He is still trying to find a partner to do the soymilk–after Suiza Foods Corp. went off on their own. Ted would have a hard time partnering with people who have betrayed him. "They'd almost have to elect me chairman of the board before I'd agree to go back and work with them." With his WholeSoy Soymilk, Ted was actually 3-4 months ahead of White Wave in the "100-yard dash" to get into supermarkets. Ted was ready to go in June of 1999, ready to sell it through Pacific Coast Brands with Neil Donovan, the man who makes Lactaid–but Neil uses Suiza's distribution. Ted is now talking to some big players, but it would be very expensive to launch the product. He is talking with some big chains about Ted making the WholeSoy Soymilk under his label, then the chain would distribute and sell it. Ted can't afford to pay the upfront marketing expenses–including slotting allowances for individual stores. If White Wave's Silk and Ted's WholeSoy were compared right now in a well designed taste test, Ted's product would definitely get higher scores. Address: TAN Industries, Inc., 49 Stevenson St., Suite 1075, San Francisco, California 94105-2975; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-495-2870.

7847. Dhawan, Himshani. 2000. Soya bean milk alternative to bovine milk. *Times of India* (*The*) (*Bombay*). Aug. 19. p. 5.

• ***Summary:*** "Mumbai: A recent study by a Washington [DC] -based research group called the Physicians Committee for Responsible Medicine (PCRM) has revealed that there was a growing demand for a viable alternative to conventional bovine milk in Indian hospitals." The study–which was conducted in more than 20 teaching hospitals across India–suggests soya bean milk as a viable alternative and concludes that although Indian hospitals need soya milk, many were unable to obtain it in adequate amounts.

The major findings of the study were: (1) 92% of respondents agreed that soya milk reduced the intake of saturated fat and cholesterol. (2) 84% said it was a viable alternative for those in high risk categories with regard to heart attacks and cancer. (3) 92% of respondents found soya milk to be a good alternative to cow's milk for those who were lactose intolerant.

An independent study concluded that 50% of India's adult population was lactose intolerant.

The article discusses this study and contains interviews with various pediatricians and dietitians about its conclusions.

7848. Cooper, Kim. 2000. Soyfoods Canada, the new Canadian soyfoods association (Interview). *SoyaScan Notes.* Aug. 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Current members of the new organization are the Canadian Ministry of Agriculture, Ontario Soybean Growers, Natures Milling (Ontario), St. Clair Agri Services Ltd. (a soybean exporter in Ontario), University of Guelph, SoyaWorld Inc. (Vancouver, BC), ADM (Maureen Callahan, from USA), and Galaxy Foods (Ontario).

The group is presently headquartered at the Ontario Soybean Growers' offices in Chatham. Janet Nauta (in charge of communications at OSG), who is serving as executive director, is working on different brochures and cookbooks. The main goal is to raise awareness of soyfoods in Canada. The ultimate question people ask is "What do I do with this stuff?"

The group has already had three meetings with a fourth scheduled for October 25th in Toronto, Ontario.

Note: Because of Canada's archaic food laws, Galaxy

Foods can't sell its cheese alternatives in Ontario. The government is considering rescinding this law. One of the focuses is on government relations, and standardizing laws that relate to soyfoods within the various provinces. Address: Marketing Specialist, OSGMB, Chatham, Ontario, Canada N7M 5L8. Phone: (519) 352-7730.

7849. Vergano, Dan. 2000. What's brewing: A coffee that could prevent cancer. *USA Today.* Aug. 21. p. D1. Life section.

• ***Summary:*** Thomas Slaga, of the AMC Cancer Research Center in Denver, Colorado, is working with Oncology Sciences Corp. of Austin, Texas, to develop a coffee that contains polyphenols–cancer-fighting compounds. Within 18 months, Slaga plans to license his roasting process (at around 400 degrees) to a large coffee company to create a "wellness" coffee.

Two decades ago, scientists worried that coffee might cause pancreatic cancer. Recently, however, they have found that coffee contains many of the same beneficial compounds as green tea.

Last year wellness drinks, such as soy milk, juice blends, and ginseng teas, accounted for 18.5% of new beverages, and represented one of the biggest trends of 1999.

Well-Bean Coffee Co. of Rochester, New York, which blends equal parts soybeans and coffee beans, hopes to attract America's coffee drinkers to the wellness ranks. A photo shows Thomas Slaga holding a tray of fresh-roasted coffee. Address: USA Today.

7850. Elliott, Julia. 2000. Simply soy: Nature's own antidote. Clifton, Virginia: Pocol Press. xiv + 112 p. Aug. Index. 22 cm. [37 ref]

• ***Summary:*** Contents: Prologue. The problem: Menopause–a natural event, causes... and effects, my own changing. The solution: The soybean–a little bean with a big history, soy–nature's own alternative, the benefits of soy. The program: Soy food products, cooking with soy, soy recipes, cooking with tofu, tofu recipes. Guideposts for the journey: Warning, risks, and wisdoms, vitamins, minerals, and water, herbal alternatives, meditation, massage, and acupuncture. Epilogue. Appendices: Readings and resources (women's health resources, books about menopause, menopause web sites, books about soy and tofu, general information sources, soy product sources, soybean web sites), source notes, bibliography. About the author. Address: 10 Guyton St., Kingston, New York 12401. Phone: 914-338-6368.

7851. Ernst, Mathew. 2000. Profiles in agricultural entrepreneurship: Iowa Soy Specialties, LLC, Vinton, Iowa. Lexington, Kentucky: University of Kentucky, Cooperative Extension Service. 12 p. Agricultural Economics-Extension Series No. AEC-2001-01. [13 ref]

• ***Summary:*** Contents: Introduction. The idea: Gathering information. Financing: Business formation. Process development: A different process. Market development: A new product and a new company, first customers, educating the brokers. Regulations: Non-GMO, certified Kosher. Managing growth: Forming partnerships and new companies, Hy-Vee alliance, sales and service expertise, research and development (Flour / TSP, soy oil). Conclusion. Acknowledgments.

"More than five years of efforts seeking to add value to the agricultural production in Benton County, Iowa, resulted in the formation of Iowa Soy Specialties, LLC, in 1997. Today, Iowa Soy is housed in three buildings with over 18,000 square feet under roof on the north side of Vinton, Iowa. The company is actively expanding its soy product line around the globe, enjoying the burgeoning market for soy food products.

"Three Benton County farmers are the principal investors and serve as the company's officers: Dave Van Steenhuyse (President), Homer Showman (Vice President), and Marlyn Jorgensen (Vice President)." "They wanted people to 'realize the health benefits of soy without having to eat tofu,' and their original goal was to make and sell soy flour as a baking ingredient and provide soy oil for use by large companies. They would use a mechanical process to extrude the oil from the soybeans." "Iowa Soy's initial stock offering was bought by 33 local investors."

"Iowa Soy became a half partner is Specialty Proteins, LLC, a company which manufactures the line of textured soy proteins sold by Iowa Soy. The other partner in Specialty Proteins, LLC, is the company which makes the equipment used in producing textured soy protein. Production is presently well underway. To enter the soy milk market, Iowa Soy aligned itself with a Minnesota company and soy milk producer [SunRich]. Production there has not yet begun due to a buyout and restructuring of the Minnesota company. Most recently [spring 2000], Iowa Soy has formed an alliance with WholeSoy Foods," an LLC headquartered in Des Moines; it will market the new soyfood products under the Heartland Fields brand name.

Sidebars: (1) Iowa Soy Specialties products. (2) Industry focus: The soy foods explosion. (3) Industry focus: Natural and health food markets. (4) Program focus: REVAMP (Rural Economic Value-Added Mentoring Program) and VAAPFAP (Value Added Agricultural Products and Processes Financial Assistance Program). Both trace their existence back to 1991, the year that the Office of Renewable Fuels and Co-Products (ORFAC) was established by the Iowa Department of Agriculture and Land Stewardship. (5) Program focus: REVAMP. Directed by Pat Paustian. (6) Program focus: VAAPFAP. Directed by Joe Jones. (7) Process focus: Dry extrusion. (8) New organic product introduction. (9) The organic audit process. (10). Non-GMO food claims. (11) "Spin-ff" companies from Iowa Soy: Specialty Proteins, LLC (formed in 1999 in partnership

with company [Triple "F" / Insta-Pro] that manufactures equipment used to make textured soy protein. Startup operating budget: $900,000). WholeSoy Foods (Formed in the spring of 2000 to market new soy foods under the brand name "Heartland Fields." Startup operating budget: $3.9 million). (11) Chronology of Iowa Soy Specialties growth (1991 to Summer 2000; 10 entries).

Note: As of 2006, Specialty Proteins appears (by a Web search) to be located at 1601 West D St., Vinton, Iowa. Phone: (319) 472-4555. However the Nutriant R&D Center is actually located there. Address: Extension Associate, Cooperative Extension Service, College of Agriculture, Univ. of Kentucky, Lexington, KY 40546.

7852. **Product Name:** Nutriline (Soymilk).
Manufacturer's Name: Fraser & Neave (Singapore) Pte. Ltd.
Manufacturer's Address: Shah Alam, near Kuala Lumpur, Malaysia.
Date of Introduction: 2000. August.
New Product–Documentation: Letter from Wataru Takai. 1999. Dec. 16. Takai Tofu & Soymilk Equipment Co. has had many enquiries from F&N [Fraser & Neave] in Singapore and Malaysia, starting 1 year ago. Mr. Takai visited their factory in Shah Alam, near Kuala Lumpur with his staff.

After two days meeting in their factory, Takai received an order for a soya milk extraction plants. Takai will ship it to them from Kanazawa Port to Port Kelang near Kuala Lumpur at the middle of February, 2000.

The name of Coca Cola Co. in Malaysia is F&N COCA-COLA (MALAYSIA) SDN BHD. Takai will ship two production lines with soaking tanks, automatic pressure cooker plants and okara screw presses and okara rotary feeders with air conveyors. Takai will install them in Shah Alam factory and fill soymilk in aluminum cans in Shah Alam factory. They transport chilled soymilk to Selangor factory to fill in pure cartons. They sell them throughout Malaysia. The total capacity of their soymilk plants is 4000 liters/hr. Coca Cola Co. has many soymilk factories all over the world.

7853. **Product Name:** Rice Dream (In Refrigerated Gable-Top Carton) [Organic Original Enriched, or Vanilla Enriched].
Manufacturer's Name: Imagine Foods, Inc. (Marketer-Distributor). Rice milk made by California Natural Products, Manteca, Calif.
Manufacturer's Address: 350 Cambridge Ave., Suite 350, Palo Alto, CA 94036. Phone: 1-800-333-6339.
Date of Introduction: 2000. August.
Ingredients: Filtered water, certified organic non-GMO brown rice (partially milled)*, expeller pressed high oleic safflower oil, sea salt. * = Organically grown and processed in accordance with Section 26569.11 of the California Health and Safety Code.
Wt/Vol., Packaging, Price: 23 fl oz (946 ml) Tetra Brik Aseptic carton. Retails for $1.59 (11/93 at Trader Joe's, Concord, California).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Spot in Vegetarian Journal. 2000. Sept/Oct. p. 28. "Rice Dreaming. For those of you who don't do soy, Rice Dream now comes in refrigerated cartons, just like its sister product Soy Dream. Rice Dream is made from non-GMO brown rice and is free of dairy, lactose, cholesterol, and soy."

7854. Jaret, Peter. 2000. Sumptuous soy: If you think it still means bland cubes of tofu, you're in for a surprise. New products make it a pleasure to add just the right amount of this potent disease-fighter to your meals. *Health.* July/Aug. p. 112-17.
• ***Summary:*** About the health benefits of soy, with many wise comments from expert soy cook Dana Jacobi. The first page contains a full-page color photo of edamame, with the caption: "Japan's favorite finger food is becoming an American fad."

A sidebar titled "Should anyone take soy pills?," by Jaret, argues that consuming soy in concentrated form–such as isoflavone pills–is not a smart idea. Experts agree. Address: Contributing editor.

7855. Byrne, Jennifer. 2000. Soy milk processor heads here. *Bridgeton News* (*New Jersey*). Sept. 6.
• ***Summary:*** White Wave Inc. of Boulder, Colorado, is setting up a soymilk manufacturing plant in Bridgeton, New Jersey. White Wave is presently a customer of Cumberland Dairy, which is leasing White Wave a portion of its storage facility at 70 Rosenhayn Avenue. The city council authorized White Wave to apply for a permit to enter a wastewater treatment facility. Cumberland Dairy will play a role in the processing (ultra-pasteurization) and packaging. Cumberland Dairy already performs these functions for White Wave, which has annual revenues of approximately $28 million and presently employs 91 people.

7856. *SoyaScan Notes.* 2000. Status of the soybean in the USA and worldwide as of Sept. 2000: A few basic facts and statistics (Overview). Sept. 6. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** The soybean is by far the world's most important oilseed or legume: World production in 1998 in million metric tons was: Soybeans 134.06. Cottonseed 33.52. Rapeseed 31.33. Peanut 26.37. Sunflowerseed 23.50. Total of the top 5 oilseeds: 249.14, with soybeans accounting for more than half of the total (54.0%).

The United States is by far the world's largest producer of soybeans, producing almost as much as all other countries

combined! Leading world soybean producing countries in 1998-199 in million metric tons were: United States 75.028 (and 28.6 million acres). Brazil 31.000. Argentina 18.300. China 13.800. India 6.000. Paraguay 3.100. Canada 2.737.

Top four soybean producing states (million bushels) in the USA in 1998: Iowa 501. Illinois 468. Michigan 285. Indiana 235.

Value of the U.S. soybean crop in 1998: $14.6 billion. Of the Indiana soybean crop: $1.25 billion.

How are U.S. soybeans utilized? About 35.6% of the crop is exported as whole soybeans, 60% is crushed to make soy oil (by far the most widely used vegetable oil in America today) and soybean meal (which is fed to livestock, poultry, and aquaculture animals), about 3% is transformed from whole soybeans into various soyfoods such as tofu, soymilk, miso, etc., and the rest is used as seed to plant next year's crop. Of the crushed soybeans, about 9% goes into industrial uses (non-food, non-feed) such as soy ink, soy diesel, etc.

How is soybean oil utilized in the USA? 96.2% is used for food and 3.8% is used for industrial (nonfood) uses. Of the total food uses: Cooking and salad oils 48.7%. Shortening 37.3%. Margarine 12.9%. Other 0.5%. Of the total industrial uses: Fatty acids, soap and feed 56.94%. Resins and plastics 18.14%. Inks 17.03%. Paints and varnishes 6.31%, Biodiesel 1.42%.

A good source of current soybean statistics is the ASA (American Soybean Association) website: www.unitedsoybean. org/soystats2000.

7857. Rice, Judy. 2000. Making a stake in soymilk. *Beverage Online.* Sept. 21.
• ***Summary:*** Stake Technology Ltd. (Norval, Ontario, Canada) has acquired 100% of the common shares of Northern Food & Dairy Inc. (Alexandria, Minnesota). On 18 Aug. 2000 the shareholders of Stake Technology Ltd. overwhelmingly approved the transaction. Northern produces 65% of the soymilk sold in the USA. The U.S. soy milk market has grown by more than 30% a year in recent years to exceed US$300 million in sales in 1999.

7858. Jaret, Peter. 2000. Sumptuous soy: If you think it still means bland cubes of tofu, you're in for a surprise. New products make it easy to add this disease-fighter to your meals (Ad). *People.* Sept. 27.
• ***Summary:*** This 2-page article was reprinted–as a special advertising supplement–from the July/August issue of *Health* magazine (p. 112-17). Photos show: Edamame. Veggie burgers. A tall glass of chocolate soy milk.

7859. **Product Name:** NutraBlend (Original, Vanilla, Orange, Apple).
Manufacturer's Name: Bestfoods (formerly CPC International Inc.).
Manufacturer's Address: Englewood Cliffs, New Jersey.
Date of Introduction: 2000. September.
Wt/Vol., Packaging, Price: 1 quart aseptic pack retails for $2.19. Or 8.4-oz three-pack retails for $1.99.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Dairy Network. 2000. Sept. 14. "Responding to U.S. interest in soy drinks." This line of four soy beverages was created to respond to consumers' desire for healthful, yet great-tasting foods. Bestfoods is one of America's largest food companies, with 1999 sales of $8,600 million. Food Chemical News. 2000. Sept. 15. "Bestfoods says new soy beverages respond to functional foods interest."

7860. Business Communications Co. 2000. Soyfoods: Trends and developments. Norwalk, Connecticut. 137 p. Sept. *
• ***Summary:*** This study of the soyfoods market, No. R2-419, retails for $3,450. One section is titled "Whole soybean products." By type of product: Largest share and fastest growth–Soymilk. Next largest share and fastest growth–Tofu. Good share: Soy sauce. By application: Largest share–Substitute meat products. Fastest growth–Substitute dairy products. Industry structure: Market influences–Consumers, age/gender, media messages, health benefits, retailing outlets. Driving forces–Regulations, technology, price, niche marketing. Most active manufacturers–Market leaders, industry environment.

The second section is titled "Soyfoods as ingredients–Soy protein, soy fiber, soy isoflavones. By type of product: Largest share–Soy flour (defatted). Fastest growth–Soy protein concentrates. Next fastest growth–TSP [Textured Soy Proteins] Good growth: Soy protein isolates. Slow growth–Soy grits, soy fiber. Soy isoflavones. By application: Largest share–Substitute meat products. Fast growth–Substitute dairy products.

The third section is "Soyoil products–Soybean oil and lecithin." Address: Norwalk, Connecticut.

7861. **Product Name:** Fresh Soymilk.
Manufacturer's Name: Dakini Health Foods Pvt. Ltd.
Manufacturer's Address: S.N. 33, Bhoiwastai, Keshavnagar, Mundhwa, Pune 411 036, India. Phone: 020-613985.
Date of Introduction: 2000. September.
Ingredients: Whole soybeans, water.
Wt/Vol., Packaging, Price: 250 ml, 500 ml, or 1000 ml plastic bags. Retails for Rupees 32 per 1000 ml.
How Stored: Refrigerated.
New Product–Documentation: Letter with 2 labels from Seemo and the Dakini crew. 2000. Oct. 10. Their soymilk has been an instant success in Pune. They got their printed polyethylene bags during the first week of September and now they are selling 350-400 liters/month of soymilk. Seemo expects this rate to triple by the end of this year. Their soymilk is medium rich with a milk-to-bean ratio of 7 or 8 to

1. It retails for the premium price of Rupees 32 per liter (Rs 25 per liter wholesale) which is slightly less than double the retail price of regular packed pasteurized cow's milk at Rs 16.5 per liter.

Their next product, now in development, is Soyogurt and they are having excellent results using their old tempeh incubator and a Swiss probiotic yogurt starter.

Labels. Thick rectangular clear plastic bag printed with purple ink. In the upper left are the two Chinese characters for soymilk. To the right of that a unique yin-yang symbol. "Naturally made from whole soy beans and water only. Absolutely no additives or preservatives. Ready to use, cold or warm. Cholesterol free. Lactose free. Keep refrigerated 4-7ºC."

Note: This is the last document seen concerning Dakini Health Foods Pvt. Ltd. A search of the web in June 2010 shows that their last address was S No. 33 Bhoiwasti Keshav Nagar Mundhwa, Pune, Maharashtra state, India. Phone: 020–26813985. They appear to be out of business. We have no idea why or when they discontinued this thriving business.

7862. Dean Foods Co. 2000. 75th anniversary annual report: 1925-2000. Franklin Park, Illinois. 42 p. 28 cm.
• ***Summary:*** Net sales in 1999 was $4,065 million ($4.065 billion). Net income after taxes was $106.118 million. This annual report contains an excellent history and chronology of the company, and also a list of its "firsts."

1925 June–Dean Foods begins as Sam Dean, Sr. purchased the Pecatonica Marketing Co., an evaporated milk processing facility in northwestern Illinois.

1927 Jan.–The company name was changed to Dean Evaporated Milk Company. During 1927 Dean purchased dairy plants in Belvidere and Chemung, Illinois. 1929–The company name was changed to Dean Milk Company. 1936–The last horse-drawn milk wagon was replaced by a Dean milk truck.

1940–Dean introduced fluid milk, packaged in waxed paper cartons.

1993 Dec.–Dean acquired its first national brand label, *Birds Eye* frozen vegetables. But then Dean vegetable operations were sold in Sept. 1998.

1998–Dean introduced its innovative Chug packaging, providing single-serve containers for on-the-go consumers with the "Milk Where You Want It" slogan.

2000 July–Dean completed its largest dairy acquisition with the purchase of the Land O' Lakes Upper Midwest fluid Dairy operations, expanding Dean's marketing area.

Accompanying the annual report is an announcement of the Annual Meeting of Shareholders and Proxy Statement (26 p.). Howard M. Dean is chairman of the board and CEO. This year (2000) his salary was $700,000 and his bonus $677,408. He was also granted 86,000 shares of company stock, with each share worth $37.31 = $3,208,660.

Under "Specialty Products" (p. 15) we read: "Another promising relationship was established in fiscal 2000 with an equity investment in Colorado-based White Wave, Inc., a producer of soy-based products. White Wave sells its refrigerated soymilk products under the brand name *Silk.* Other products include soy-based yogurt and tofu products. Recent focus on the value of soy-based products and the related health benefits has increased consumer awareness in this area and contributed to White Wave's strong sales growth. We are encouraged by the long-term prospects in this exciting functional food area." Color photos show a half-gallon carton of Silk Vanilla Soymilk, and a pint carton of Silk Soymilk Creamer. Address: 3600 North River Rd., Franklin Park, Illinois 60131. Phone: 847-678-1680.

7863. Hagler, Louise. 2000. Soja: Wandelbarste Bohne der Welt. Eine 'coole' Proteinquelle [Soya: The most versatile bean in the world. A 'cool' source of protein]. Aitrang, Germany: Windpferd. 140 p. Illust. Index. 18 cm. [Ger]
• ***Summary:*** Foreword by Peter Golbitz. Foreword by Louise Hagler. Introduction by Dr. Mark and Virginia Messina. Basic soyfoods. Feeding babies and children soyfoods. Breakfast, brunch & bread. Whole soybeans. Sauces, spreads, dips & dressings. Soup & salad. Main dishes. Desserts. Drinks & yogurt.

No dairy products or eggs are used; honey is called

for in some recipes. Address: The Farm, Summertown, Tennessee.

7864. Hain Celestial Group, Inc. 2000. Westsoy (Leaflet). Uniondale, New York. 2 panels each side. Each panel: 22 x 9.5 cm.
• ***Summary:*** On the cover of this glossy, color leaflet, the word "Westsoy" is written vertically in large white letters against a red background. Four color photos show: (1) Soymilk being poured into a glass. (2) A woman running along the beach with sea foam in the background. (3) Soymilk being poured onto breakfast cereal topped with blueberries. (4) A woman holding a glass of soymilk, meditating in the cross-legged position.

On the inside two panels is a large color photo of the many Westsoy non-dairy beverages–mostly soymilk–and answers to the bold question "Why drink Westsoy soymilk?" Also a 55 cent coupon for any quart or half gallon Westsoy beverage.

On the back panel is a description of nine Westsoy products: WestSoy Plus (new packaging), WestSoy Lite, Low Fat WestSoy Soymilk Drink, 100% Organic Westsoy Soymilk, Vigoraid, Juice Bar, Chai, Cafe Westbrae. Address: 50 Charles Lindbergh Blvd., Uniondale, New York 11553. Phone: 516-237-6200.

7865. Hain Food Group, Inc. 2000. The Hain Food Group (Portfolio). Uniondale, New York. 32 inserts. 28 cm.
• ***Summary:*** The inserts, some printed using a color printer in white paper and others printed with black ink on 8½ by 11 inch paper (usually colored), include (1) Health Valley Soy Flakes. Ship date 15 July 2000. (2) Westsoy Smart Plus soymilk (aseptic carton). Ship date 13 Nov, 2000. (3) Westsoy low fat soymilk drink (Chocolate; aseptic carton). Ship date 13 Nov. 2000. Address: 50 Charles Lindbergh Blvd., Uniondale, New York 11553. Phone: 516-237-6200.

7866. **Product Name:** SoyO's [Original, Honey Nut, Apple Cinnamon], and Soy Flakes [Original, or Raisin] (Breakfast Cereals).
Manufacturer's Name: Health Valley Company.
Manufacturer's Address: 16100 Foothill Blvd., Irwindale, CA 91706-7811. Phone: (626) 334-3241.
Date of Introduction: 2000. September.
Ingredients: Original SoyO's: Organic oat flour*, wheat starch, soy protein, organic oat bran*, organic cane juice*, sea salt, baking soda, cream of tartar, natural caramel color, natural beta carotene, natural vitamin E (for freshness). * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
How Stored: Shelf stable.
New Product–Documentation: Leaflets for both product lines (glossy, color, two-sided) sent by Patricia Smith from Natural Products Expo (Baltimore, Maryland). 2000. Sept. "Profit from the healthy benefits of soy! 8 grams of soy protein in every delicious serving. No genetically modified ingredients."

7867. **Product Name:** Yü Organic Rice Beverage [Dark Chocolate, Green Tea, Natural, Basmati, Apple Rose, Mixed Berries].
Manufacturer's Name: Internova Inc.
Manufacturer's Address: St.-Lambert-de-Lévis, Québec, G0S 2W0, Canada. Phone: 1-800-993-6455.
Date of Introduction: 2000. September.
Ingredients: Apple Rose: Spring water, organic brown basmati rice, organic sunflower oil, natural apple rose flavor, carmine color, sodium ascorbate.
Wt/Vol., Packaging, Price: 32 fl oz (1 quart) or 8 fl oz (1 cup).
How Stored: Refrigerate after opening.
New Product–Documentation: Two leaflets (8½ by 11 inches, color) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2001. March 8-11. (1) "Yü–Super premium rice beverages." The front describes the company and products and shows the front panel of each flavor–very stylish designs. All are organic. The back gives nutritional facts, ingredients, UPC codes and ordering information. (2) "Internova Express. Special edition. Internova launches Yü and Earth Shake: a brand new generation of health drinks." The Earth Shake line comes in 6 flavors, combining soya and oats, and enriched with minerals and vitamins. Website: www.yubeverage.com and internova.ca.

7868. **Product Name:** SoySense (Enriched Organic Soymilk) [Original, Vanilla, or Chocolate].
Manufacturer's Name: Jasper Products, LLC.
Manufacturer's Address: 3877 E. 27th St., Joplin, MO 64804. Phone: 877-769-7367.
Date of Introduction: 2000. September.
Wt/Vol., Packaging, Price: 1 quart (946 ml, 32 fl. oz.). Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Leaflet in portfolio sent by Patricia Smith from Natural Products Expo East. 2000. Sept. Color photos show the front and back panels of two types of aseptic cartons, one a new square carton with a screw top. However, the ingredients are not given. "Lactose free. 31 mg isoflavones per serving. Vitamins A, D & E. Calcium." Contains all the natural fiber found in soybeans.

The front panel of the portfolio states: "Jasper products: With over twenty years of experience in the food processing business, Jasper Products is committed to excellence and quality. The company has its roots in a privately held business established in 1902. The fourth generation owners are still active in the operations of Jasper Products to this day."

7869. **Product Name:** RiceSense (Enriched Organic Ricemilk) [Original, Vanilla, or Chocolate].
Manufacturer's Name: Jasper Products, LLC.
Manufacturer's Address: 3877 E. 27th St., Joplin, MO 64804. Phone: 877-769-7367.
Date of Introduction: 2000. September.
Ingredients: Filtered water, organic brown rice syrup, high oleic safflower oil, tricalcium phosphate, lecithin, xanthan gum, sea salt, tocopheryl acetate, vitamin A palmitate, vitamin D-3.
Wt/Vol., Packaging, Price: 1 quart (946 ml, 32 fl. oz.). Aspectic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Leaflet in portfolio sent by Patricia Smith from Natural Products Expo East. 2000. Sept. Color photos show the front and back panels of aseptic cartons "Lactose free. 100% vegetarian. Cholesterol free. Vitamins A, D & E. Calcium."

7870. **Product Name:** TotalSense: Total Nutrition Shake (Fortified Soyshake) [Original, Vanilla, or Chocolate].
Manufacturer's Name: Jasper Products, LLC.
Manufacturer's Address: 3877 E. 27th St., Joplin, MO 64804. Phone: 877-769-7367.
Date of Introduction: 2000. September.
Wt/Vol., Packaging, Price: 1 quart (946 ml, 32 fl. oz.). Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Two leaflets in portfolio sent by Patricia Smith from Natural Products Expo East. 2000. Sept. Color photos show the front and back panels of aseptic cartons. One leaflet gives the nutritional composition and ingredients in each of the three flavors. "25 vitamins and minerals. 31 mg isoflavones per serving. Lactose free." Loaded with fiber. Use as a meal replacement or nutritious snack. Made from "Heartland Soypure" non-GMO soybeans.

7871. **Product Name:** SoyPure (non-GMO Soymilk) [Original, Vanilla, or Chocolate].
Manufacturer's Name: Jasper Products, LLC.
Manufacturer's Address: 3877 E. 27th St., Joplin, MO 64804. Phone: 877-769-7367.
Date of Introduction: 2000. September.
Wt/Vol., Packaging, Price: 1 quart (946 ml, 32 fl. oz.). Aspectic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Leaflet in portfolio sent by Patricia Smith from Natural Products Expo East. 2000. Sept. Color photos show the front panel of aseptic cartons with flip top. A table compares the composition of SoyPure Original and whole cow's milk. However the ingredients are not given. "Lactose free. 31 mg isoflavones per serving. Vitamins A, D & E. Plus calcium. Cholesterol free." Contains 6.25 gm of soy protein per serving. "Our chemical free soybeans are grown without using chemical pesticides and are tested by an independent laboratory to certify that they are free of chemical residue."

Note: A vice president of this company (1 March 2002) says this product is made from finely ground soy flour; the okara remains in the finished product.

7872. Mangels, Reed. 2000. Nutrition hotline: The phytate component of soy products. *Vegetarian Journal* (*Baltimore, Maryland*) 19(5):2. Sept/Oct.
• ***Summary:*** "Phytates interfere with the absorption of minerals, but do not completely prevent us from absorbing minerals like calcium and iron. The presence of phytates is not a good reason for avoiding soy products. Whole grains and other dried beans also contain phytates."

"Fermented soy products, including tempeh and miso, have a lower phytate content so that zinc from these foods is better absorbed than from unfermented soy products like tofu and soymilk." Address: PhD, R.D., Baltimore, Maryland.

7873. *Nutrition Business Journal* (*San Diego, California*). 2000. GeniSoy markets to an expanding demographic: Soy manufacturer introduces new products, expands distribution and secures non-GMO supplies. 5(7/8):10-11. Annual Industry Overview 2000.
• ***Summary:*** GeniSoy's parent company, MLO Products, was founded 36 years ago [in Nov. 1964] as a sports nutrition company that relied heavily on soy protein. Today its subsidiary, GeniSoy Products Co., launched only three years ago (in March 1997), accounts for about 50% of total sales–of about $40 million, to which GeniSoy contributed $18 million in FY 2000 (ended April 30). More remarkable, GeniSoy's $18 million is double what it was a year ago, and it is expected to double again next year.

MLO had traditionally marketed soy protein drinks aimed at athletes between the ages of 15 and 40. GeniSoy products are targeted to an entirely different market–those (mostly women ages 35 to 69) areas in which soy provides benefits, such as heart disease, menopause symptoms, etc. The idea come to MLO quite by accident about 5½ years ago when they were asked by another company to produce a soy protein bar for a university study on soy and cancer. After GeniSoy was launched, its products were sold mainly through MLO's established distribution channels. But soon they picked up many new distributors.

When the FDA announced its soy-heart health claim in Oct. 1999, soy became a very hot category. Many retailers began to develop a "soy set" in their stores–an area where soy products are grouped together. General Nutrition Centers (GNC), for example, are developing such a set, and GeniSoy's products tend to sell more quickly when they are placed in such a set than when they are placed with other bars.

Many consumers believe that soy products don't taste so god, but when they try GeniSoy bars they quickly change their minds and tell their friends. So bars are a great way to introduce consumer to soy.

In Feb. 1999 GeniSoy introduce their first products guaranteed to be free from genetically engineered organisms (GMOs); these included two shakes and one protein powder in the new UltraSoy line. The company says these were made more for the European than for the American market. Later in 1999 the GeniSoy secured a long-term supply contract for non-GMO isolated soy protein from Protein Technologies International, then announced in October 1999 that its entire product line would be made with non-GMO soy.

Recently MLO Products completed a new plant at its Fairfield headquarters, thus bringing its total office and manufacturing space to 125,000 feet. Its extruded candy production capacity has grown to 20 million bars/month. It plans to bring in-house its formerly contracted soynut roasting facilities with a capacity of 2 million lb/month.

Today GeniSoy has 29 SKUs in the U.S. market, 26 in Canada, and 15 in Australia. Two new products are scheduled for release next year: (1) A kind of a soy chip, between a potato chip and a mini rice cake, that will meet the FDA health claim; (2) A Soy Nutty Bar, made with toasted soy nuts, and tasting like a candy bar.

Note: This is the earliest document seen (Sept. 2000) that gives statistics for larger U.S. nutrition bar companies.

7874. *Nutrition Business Journal* (*San Diego, California*). 2000. Pacific Foods targets $50 million sales: Soymilk manufacturer scrambles to expand production, expects 35% growth to continue. 5(7/8):12. Annual Industry Overview 2000.

• ***Summary:*** Pacific Foods Inc. of Tualatin, Oregon, was established in 1987 to make shelf-stable tofu in aseptic packaging. After buying expensive manufacturing equipment, made in Europe, the tofu business failed.

The company had to scramble in order to stay in business and put its large capital investment to work, so they found clients for private-label soymilk–the main product that is made into tofu. In 1989, after watching the category grow rapidly, Pacific Foods began producing its own brand of soymilk. The company has been growing at more than 35% a year and in calendar year 2000 expects to exceed $50 million in sales.

In 1998 Pacific Foods expanded to 250,000 square feet, doubling its production capacity. It now also makes soymilk and rice milk under the Trader Joe's and Fred Meyer brands.

Pacific Foods is not for sale, but it has recently entered into a marketing alliance with a major company to help it enter the mass market via Albertson's and other supermarkets in the Pacific Northwest. Martell of Pacific Foods declined to reveal the name of the partner, but it is a non-U.S. company with "a big name worldwide."

Pacific Foods has changed its soymilk packaging design quite frequently, each time based on reformulation of the products. The company conducts many taste panels and focus groups. Most of its advertising is in trade publications, but in the last few months it began advertising in *Vegetarian Times* and a few other consumer magazines. It has recently done a cross-promotion with cereal maker Nature's Path. One innovative product introduced last year was named Soy Synergy, a functional food designed to be mixed with soymilk or rice milk. In March 1999 Pacific launched several products targeted to the mass market, including a blend of lactose-free cow's milk and soymilk; the products are moving slowly.

7875. *Nutrition Business Journal* (*San Diego, California*). 2000. White Wave leads growth in $300-million soymilk category: FDA health claim and refrigerated soymilk refreshes the category. 5(9):12. Sept.

• ***Summary:*** White Wave's fiscal year begins each April. The company's revenues for FY 2000 were 108% greater than those for FY 1999–more than double! These revenues are expected to double again next year. In 1998 White Wave's products were distributed 85% in natural foods channels and 15% in conventional [mainstream grocery]. Last year this changed to 55% natural, 45% grocery. This year, for the first time in White Wave's history, grocery is expected to surpass natural, with 35% natural and 65% grocery. According to Demos, White Wave has 78% of the non-dairy beverage share in mainstream supermarkets, according to spring data from SPINS and IRI, and over 20% share of the non-dairy beverage share in the natural products channel.

Contains many comments about the U.S. soymilk industry and market by Bill Shurtleff, founder and director of Soyfoods Center (Lafayette, California).

7876. *Nutrition Business Journal* (*San Diego, California*). 2000. Natural, organic, and functional beverages: Functional drinks multiply as beverage companies seek opportunity in healthier opportunities. 5(9):1, 3-5. Sept.

• ***Summary:*** In 1999 sales of all U.S. beverages reached $110 billion. Functional beverages accounted for 6% of this total and natural/organic beverages for 2%. A pie chart shows a breakdown of the $8 billion market for natural/functional beverages: Juices 34%, sports/energy drinks 30%, ready-to-drink (RTD) teas 9%, tea 7%, soy/rice milk 5%, soft drinks 3%, milk 3%, and other 9%.

Functional beverages are those which have been enriched or nutritionally enhanced with vitamins, minerals, herbs, soy protein, fiber, fructo-oligosaccharides, and even oxygen.

7877. Soyatech, Inc. 2000. Soya & Oilseed Bluebook 2001: The annual directory of the world oilseed industry. Bar Harbor, Maine: Soyatech. 424 p. Sept. Comprehensive index.

Internet address index. Brand name index. Advertiser index. 28 cm.
• ***Summary:*** On the cover is a color photo of a group of soybean leaves superimposed on a purple and blue integrated circuit. Across the bottom: "The ultimate industry resource: In print and online. www.soyatech.com." On the inside front cover is a color ad from Tetra Pak, showing soymilk, its processing and packaging. On the first page is a full page color ad from Northland Organic, "Leading the way naturally." On the rear cover is a color ad from ADM titled "When it comes to soy protein, we bring more to the table." A large color photo shows many of ADM's soy protein products made into edible foods, each labeled. Also displays the logo for "NutriSoy: Natural soy protein. The heart of a healthy diet."

The Foreword states that Soyatech has a newly designed website (soyatech.com) which "includes the entire *Soya & Oilseed Bluebook* as part of its many new features." To gain access, paid subscribers must first register. Address: 7 Pleasant St., P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207.288.4969.

7879. SunRich. 2000. Processing and packaging partner services (Leaflet). Hope, Minnesota. 2 panels each side. Each panel: 28 x 22 cm.
• ***Summary:*** A 4-page leaflet sent by Patricia Smith from Natural Products Expo East. 2000. Sept. On the cover is a photo of different beverage packages, including Soymilk. Contents of the next 3 panels: Packaging and processing services. The SunRich advantage. Nordic Aseptic Packaging facility. NFD ingredient processing (Northern Food & Dairy is a custom ingredient processor). SunRich capabilities. Processing & packaging. IP, non-GMO & organic ingredients. Contains 7 more photos. Address: P.O. Box 128, 3824 S.W. 93rd St., Hope, Minnesota 56046. Phone: 800-297-5997.

7880. SunRich. 2000. Soymilk Trends (Leaflet). Hope, Minnesota. 2 panels each side. Each panel: 28 x 22 cm.
• ***Summary:*** A 4-page leaflet sent by Patricia Smith from Natural Products Expo East. 2000. Sept. Dated "Fall 2000 issue."

Contents: From niche market to mass market. Soymilk sales: Accelerating growth. Dairy milk per capita consumption declines (from 229.2 lb in 1980 to 204.1 lb in 1997) while soymilk shows significant increases. Soymilk is the fastest growing non-dairy beverage (comparing soy, rice, almond, and multigrain) (soymilk has 66% of this market segment). Non-dairy consumers: an "unlimited" market. Approximately 40% of Americans do not drink dairy milk (this is 78 million consumers, many of whom have allergies or are lactose intolerant). Soy foods deliver significant health benefits: cancer fighter, bone builder, heart helper, menopause reliever. Whole soyfoods compared to supplements. FDA authorized health claims for soy. Seed selection and improved processing. Sunrich ingredient and processing capabilities (IP, non-GMO, organic, processing, packaging).

Two graphs on page 1 (using data from US Soyfoods Market, published in 1999 by Soyatech Inc.) show (1) Liters of soymilk sold in the United States have increased from 37 million liters in 1990 to an estimated 125 million liters in 1999, and has been growing at 38% a year. (2) Total retail sales of soymilk in the United States have grown exponentially from only $1.5 million in 1980 to $300 million in 1999 and are forecast to grow to nearly $600,000 in 2002. Address: P.O. Box 128, 3824 S.W. 93rd St., Hope, Minnesota 56046. Phone: 800-297-5997.

• ***Summary:*** A glossy color leaflet sent by Patricia Smith from Natural Products Expo East. 2000. Sept. On the cover is a large photo of various soy products on an orange background.

Soymilk, oatmilk, multigrain beverages. Soymilk powders with a range of protein levels. Soy flour for premium flavor applications. TSP (textured soy protein) for meat alternatives. Address: P.O. Box 128, 3824 S.W. 93rd St., Hope, Minnesota 56046. Phone: 800-297-5997.

7883. White Wave Inc. 2000. Silk soymilk smoothies (Leaflet). Boulder, Colorado. 4 panels each side. Each panel: 15 x 10 cm.
• ***Summary:*** Leaflet (glossy color) sent by Patricia Smith from Natural Products Expo East. 2000. Sept. Contains 7 recipes for different smoothies, each with a fanciful delectable name, each with White Wave Silk Soymilk as the

major ingredient. Address: 1990 North 57th Court, Boulder, Colorado 80301.

7884. Singh, J. 2000. Re: Making tofu and soymilk in Belgium, and tempeh in The Netherlands. Letter (fax) to William Shurtleff at Soyfoods Center, Oct. 2. 1 p. Handwritten with signature on letterhead. [Eng]
• ***Summary:*** This company makes tofu and soya milk in Belgium, and they also own a tempeh factory (the biggest in Europe) in The Netherlands. They make about 20,000 kg/week of tofu and 8,000 kg/week of tempeh.

The tempeh company is: Tempé Produkten B.V., Tunnelweg 107, 6468 EJ Kerkrade, Netherlands. Another name of the company is YIP Soya Products (Bolda, Holland). Mr. Singh purchased the tofu company in Belgium in 1986, and the tempeh company in Holland in 1990. Address: Benelux Soya N.V. Factory: Industrieweg 3, 2320 Hoogstraten, Belgium. Phone: 03-314-5632.

7885. Jacobi, Dana. 2000. Provamel/Alpro is planning to build a soymilk plant in the USA (Interview). *SoyaScan Notes.* Oct. 9. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In September, Dana visited the Alpro booth at the Natural Products Expo in Baltimore, Maryland. This is the first time she has seen their booth at this annual expo. It was staffed by three men from Belgium and was giving out samples of Alpro's pudding (sold in 4-pack aseptic cups) and soymilk. Dana found the pudding to be delicious. It was introduced in that packaging 3-4 years ago.

While talking with Francois Madoe at the booth, Dana learned that Alpro is planning to construct a soymilk plant in the United States. When she jokingly told them that *Alpo* was the name of a popular American dog food, they laughed and indicated that they already had discovered that; so they will probably not use their Alpro brand in the USA. Address: New York City.

7886. Rice, Judy. 2000. Chocolate soymilk wins GH [Good Housekeeping] taste test. *Beverage Online.* Oct. 9.
• ***Summary:*** In independent blind taste tests conducted by Good Housekeeping magazine, consumers preferred Silk brand chocolate soymilk (made by White Wave) to the world famous Hershey's chocolate milk. In fact, everyone who tasted preferred the chocolate Silk, of which one consumer said: "It just tastes so good. It's much lighter and not so sweet."

White Wave president Steve Demos welcomed the good news that consumers now prefer a healthier, lower-fat beverage that actually does them good. Chocolate Silk is lactose free, cholesterol-free, dairy-free, and has a fat content equal to that of 1% milk.

Silk is available is chocolate, vanilla, and plain flavors, along with Silk Mocha and Silk Chai. Address: Managing editor.

7887. Barovick, Harriet. 2000. I was a teen vegetarian. *Time.* Oct. 16.
• ***Summary:*** TV-cartoon heroine Lisa Simpson is a vocal vegetarian. "With mainstream groceries carrying products like Boca Burgers, soy milk and tofu, and fast-food restaurants like Wendy's offering veggie pitas, meat-eating meat-eating parents are having an easier time accommodating their kids and, in some cases, are following suit."

7888. Adie, M. Muchlish; Widowati, S.; Soedarjo, M. 2000. The characteristics of Indonesian soybean varieties, and its importance to the soybean processing. In: Kyoko Saio, ed. 2000. Proceedings–Third International Soybean Processing and Utilization Conference. Tokyo, Japan: Korin Publishing Co., Ltd. [xxiv] + 728 + 8 p. See p. 79-80. [6 ref]
• ***Summary:*** A survey by Indrasari (1991) showed that consumption of tempeh and tofu in Indonesia were 1,065 gm per capita per month, and 866 gm per capita per month, respectively. Address: 1,3. Research Inst. for Legume and Tuber Crops, PO Box 66 Malang, Indonesia; 2. Research Inst. for Food Crops Biotechnology, Jalan Tentara Pelajar 3A Bogor, Indonesia.

7889. Greenberg, Patricia. 2000. Soy desserts: 101 fresh, fun & fabulously healthy recipes. New York, NY: ReganBooks (Imprint of HarperCollins). ix + 166 p. Oct. Illust. Index. 24 cm.
• ***Summary:*** This is a book about how to make delicious soy desserts that are actually good for you! Contents: Introduction. Cakes and frostings. Pies and tarts. Quickbreads, muffins, brownies, bars and scones. Candy and cookies. Parfaits, custards, mousses, puddings, and soy ice creams. Soy source index. Contains 8 full-page color photos in the middle of the book. These recipes call for soymilk, soy cream cheese, soy yogurt, tofu, soy flour, and soy margarine. Contains four recipes for Tofu cheesecake. On the inside back dust jacket is a photo and brief biography of Patricia Greenberg. Address: P.O. Box 10853, Beverly Hills, California 90213. Phone: (323) 938-3975.

Proceedings–Third International Soybean Processing and Utilization Conference. Tokyo, Japan: Korin Publishing Co., Ltd. [xxiv] + 728 + 8 p. See p. 117-120.
• ***Summary:*** Japan is the world's largest soybean importer. Of the 4.9 million tonnes (metric tons) imported, about one million tons (actually 960,000 tonnes or 19.6%, called "food soybeans") are used for making tofu, miso, natto, soysauce, etc. The rest are crushed to make soybean oil and meal.

A table (p. 118) shows the quantity of soybeans obtained from various sources to make each of the major Japanese soyfoods in 1998, 1999, and 2000. In the year 2000, some 512,000 tonnes were used to make tofu, 168,000 tonnes for miso, 125,000 tonnes for natto, 40,000 tonnes to make soy protein and products, 30,000 tonnes to make soysauce (from whole soybeans), 6,000 tons to make soymilk, and 79,000 tons to make other products. Grand total 960,000 tonnes. Address: Marubeni Corp., Japan.

7892. James, A.T.; Bumstead, E.E.; Grant, T.J. 2000. Development of fast small-scale tests to measure tofu potential in raw beans. In: Kyoko Saio, ed. 2000. Proceedings–Third International Soybean Processing and Utilization Conference. Tokyo, Japan: Korin Publishing Co., Ltd. [xxiv] + 728 + 8 p. See p. 157-158. [1 ref]
• ***Summary:*** To produce soymilk, the researchers used 80 gm samples of the grain of each of 3 soybean varieties and applied four treatments. The first two treatments involved soaking the beans overnight in 485 ml water at either 4ºC or 20ºC before grinding into a slurry. The second two treatments were to pre-grind dry beans or to grind dry beans into a slurry using a kitchen blender and 485 ml added water. The samples were then heated in a microwave oven, stirring after each 30 seconds until the mean temperature of the slurry reached 75ºC. Samples were then transferred to a water bath held at 98ºC, and removed 4 minutes after the temperature of the slurry reached 98ºC. The slurry was then poured slowly through a centrifugal juice extractor... Address: CSIRO Tropical Agriculture, 120 Meiers Rd., Indooroopilly 4068, Qld, Australia.

7893. Ono, Tomotada. 2000. The mechanisms of curd formation from soybean milk to make a stable lipid food. In: Kyoko Saio, ed. 2000. Proceedings–Third International Soybean Processing and Utilization Conference. Tokyo, Japan: Korin Publishing Co., Ltd. [xxiv] + 728 + 8 p. See p. 51-52. [6 ref]
• ***Summary:*** The lipids / fats in tofu are stable and no subject to oxidation. During the curd formation, first protein particles (80 nm = nanometers in size) combine with an oil globule (300 nm) because of the addition of magnesium or calcium ions [in the coagulant]. Then the bound globules aggregate with one another to hold water. The curd is formed as soluble proteins are combined with a decrease in the pH. The oil is packed in triple layers of protein, that is oleosin (oil body protein), protein particles, and soluble proteins.

Figures show: (1) Scanning electron microgram of the floating fraction of soymilk. (2) Formation of tofu-curd from soymilk (speculation). Address: Dep. of Agro-Bioscience, Faculty of Agriculture, Iwate Univ. Ueda 3-18-8, Morioka, Japan.

7894. Oser, Marie. 2000. More soy cooking: Healthful renditions of classic traditional meals. New York, NY: John Wiley & Sons, Inc. xi + 307 p. Foreword by John A. McDougall, M.D. Oct. Index. 23 cm. [61 ref]
• ***Summary:*** Contents: Foreword, by John A. McDougall, M.D. Acknowledgments. Introduction. The need for a plant-based diet: The protein question, the dairy myth, the international connection, what's eating North America?, soy: Food of the future, Functional foods. Soy-centered cuisine: Soyfoods and more: a glossary, beyond soyfoods. Kitchen tools, techniques, and tofu: Tools, techniques, tofu, cooking with spirit! The recipes: Amazing appetizers, the skinny on soups and salads, enlightened entrées, pasta and pizza, select sides, delightful desserts. Resource guide. Recommended reading.

7895. Poysa, V.; Woodrow, L.; Anderson, D. 2000. Effect of soy protein composition on soymilk and tofu yield and quality. In: Kyoko Saio, ed. 2000. Proceedings–Third International Soybean Processing and Utilization Conference. Tokyo, Japan: Korin Publishing Co., Ltd. [xxiv] + 728 + 8 p. See p. 53-54.
• ***Summary:*** Genotype and year effects were found to be significantly greater than location effects on protein content, its sub-unit profile, and seed composition; soymilk and tofu yields, solids levels, and pH; and tofu color, and hardness and firmness in ten soybean lines grown at three locations for two years. Individual protein fractions (such as 7S and 11S) expressed as a percentage of the total detected, all showed significant genotype effects. The 7S fraction, especially alpha and alpha prime content, and the glycoprotein fraction were positively correlated with tofu yield. Address: Agriculture and Agri-Food Canada, Greenhouse and Processing Crops Research Centre, Harrow, Ontario, Canada, NOR 1G0.

International Soybean Processing and Utilization Conference: Dawn of the innovative era for soybeans. Tokyo, Japan: Korin Publishing Co., Ltd. [xxiv] + 728 + 8 p. Held 15-20 Oct. 2000, Tsukuba, Ibaraki, Japan. Illust. Author index. 30 cm. [Eng]
• ***Summary:*** The first international conference of this type was held in Jilin, China, in 1990. The second was held in January 1996 in Bangkok, Thailand. Foreword. Program committee for ISPUC-III. Contents: Keynote session (3 papers). Session 1: Production for processing and utilization (20 oral presentations/papers, 22 poster presentations). Session 2: Quality control (13 oral, 7 poster). Session 3: Nutrition and physiological functionality (23 oral, 25 poster). Session 4: Traditional products (23 oral, 19 poster). Session 5: Modern processing and utilization of foods (32 oral, 20 poster). Session 6: Edible oil and feeds (9 oral, 5 poster). Session 7: Innovative non-food uses (10 oral, 4 poster). Session 8: Strategies for dissemination (18 oral, 4 poster). Satellite session: Monodisperse microspheres and microchannel technologies (12 oral, 15 poster). Public symposium: The miracle of Asia–Marvelous fermented soyfoods (6 oral presentations/papers). Author index. Sponsors: Organizations/companies (55), individuals (33), others (8). Within each category, listed in order of date contributed. Exhibitors (29; an exhibition was held with the Conference). Advertisers (6 companies purchased full-page black-and-white ads). Address: Chair of the Program Committee, ISPUC-III, Tsukuba, Japan.

7897. Trongpanich, Kulvadee; Hiraga, C.; Hengsawadi, D.; Phawsungthong, U. 2000. Feasibility study on production of dietary fiber concentrate from soymilk residue. In: Kyoko Saio, ed. 2000. Proceedings–Third International Soybean Processing and Utilization Conference. Tokyo, Japan: Korin Publishing Co., Ltd. [xxiv] + 728 + 8 p. See p. 95-96. [2 ref]
• ***Summary:*** "It was found that it was possible to use soymilk residue for the dietary fiber concentrate production. After the soy milk process, there was about 37.5% of soy flesh residue (on dry basis), and contained about 37% total dietary fiber (TDP). It was found that the soy flesh residue was suitable to be used as dietary fiber concentrate, since it still contained high protein that may be used to increase the protein content in foods. Water extraction and defatting process was the feasible production for the dietary fiber concentrate from the soy flesh residue when compared to the enzymatic method." Address: Inst. of Food Research and Product Development, P.O. Box 1043, Kasetsart Univ., Bangkok 10903, Thailand.

7898. United Soybean Board. 2000. 7th annual national report: Consumer attitudes about nutrition, 2000/2001. Seattle, Washington. 8 p. Oct. 28 cm.
• ***Summary:*** This seventh annual nationwide survey, commissioned by USB, was conducted in July 2000 by an independent research firm in Seattle, Washington. Random telephone interviews were completed with 800 consumers. The study's margin of error is ±3.5 percent and has a confidence level of 95%.

Contents: Nutritional concern and habits. Dietary changes in eating habits. Consumer awareness of nutrition terms and information. Media sources and nutritional information. Consumer perceptions of genetically modified food, biotechnology, and labeling. Consumer perceptions of *trans* fat and hydrogenation. Consumer perceptions of cooking oils. Consumer awareness and perception of soy products. Consumer perceptions of the healthiness of soy.

Consumer awareness and perception of soy products: 1. The number of consumers eating soy products once a week or more continues to rise, up to 27% in 2000. 2. The top 3 soy products that consumers are aware of are tofu (86%), soy veggie burgers (79%), and soymilk (79%). Other products that received a high level of awareness include soybean oil (78%), soy infant formula (67%), soy protein bars (50%), and soy supplements (49%). 3. Tofu and soy veggie burgers are the top two products consumers have tried, at 45% and 41% respectively. 4. There was a significant increase in the number of consumers who have tried soymilk, from 18% in 1999 to 25% in 2000.

Note: As of Aug. 2008 this full survey is available gratis in PDF format at www.soyconnection.com /health_nutrition / pdf/.

7899. Vijayalakshmi, P.; Mercy, Paul. 2000. Supplementation of energy, protein rich mix to expectant mothers. In: Kyoko Saio, ed. 2000. Proceedings–Third International Soybean Processing and Utilization Conference. Tokyo, Japan: Korin Publishing Co., Ltd. [xxiv] + 728 + 8 p. See p. 187-188.
• ***Summary:*** In 1997 the U.S. Food and Drug Administration (FDA) allowed a health claim for soluble oat beta-glucan when consumed at a level of 3 gm per day. Since soybeans and oats both have promising futures in nutraceutical foods, the combination of both materials is being studied. Soy protein foods included in the study are soy flour, soy protein concentrates and isolates, tofu, and soymilk. Address: Avinashiligam Deemed Univ., Coimbatore, India.

7900. *Time.* 2000. Numbers. Nov. 6.
• ***Summary:*** "4: Years of protest by a vegan prisoner in Lewisburg, Pennsylvania, before a judge ordered the facility to serve soy milk.

"145,000: Total number of federal prisoners, now offered meatless cuisine like veggie burgers and barbecued tofu."

7901. Pate, Kelly. 2000. White Wave rides tsunami of soy. *Denver Post* (*Colorado*). Nov. 12.
• ***Summary:*** Last year White Wave of $30 million. In 2000 it projects sales of $80 to $95 million. Steve Demos, founder and president, says that within the last 18 months the number

of supermarkets stocking White Wave products has jumped from 100 to 24,000. And Silk will start shipping to Costco in 2 weeks. A large color photo shows Steve Demos standing in front of a huge delivery truck advertising his company's Silk soymilk on its side. Address: Business writer.

7902. *SoyaScan Notes.* 2000. How genetically engineered soybeans took over the soybean storage and distribution system and led to increased use of organic soybeans (Overview). Nov. 27. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** In the mid-1990s U.S. farmers began to deliver the first crop of genetically engineered (GE) soybeans to their local elevators. There they were accepted without question and mixed in with the traditional non-GE soybeans. They had entered the "stream" and taken over the system with no notification of soybean users, no discussion with consumers, no debate in Congress. It was a silent coup d'état. But the impact of this "non-decision" and "non-issue" was immense.

Soyfoods manufacturers that for decades had purchased their soybeans from the "stream" now suddenly found that, like it or not, they were buying GE soybeans mixed in with their regular soybeans. Magazines and newspapers began to analyze foods and report that certain brands of tofu, veggie burgers, or soymilk contained GE soybeans–even though there was no mention of this on the labels. Consumers began to call the companies that made their favorite soyfoods and ask if those foods now contained GE soybeans. The honest answer was a simple "Yes." Many companies fudged by saying that they were buying soybeans from the same source they always had.

As consumer concern rose (starting in 1999 and 2000) many company felt compelled to make products that were free of GE soybeans. They had two choices: (1). Buy non-GE soybeans, or (2) Buy organic soybeans. Many chose the organic approach. In this way GE soybeans helped the organic movement to prosper.

7903. *Camera* (*Boulder, Colorado*). 2000. Industry watch: Hain Celestial Group launches soy milk. Nov. 28.
• ***Summary:*** Hain teamed up with Heinz North America to launch Great Awakenings Soymilk.

7904. Hain Celestial Group, Inc. (The). 2000. Annual report 2000. Uniondale, New York. 30 p. Nov. 28 cm.
• ***Summary:*** On 30 May 2000 The Hain Food Group completed a merger with Celestial Seasonings, Inc. by issuing 10.3 million shares of Hain common stock in exchange for all of the outstanding Celestial common stock. Each share of Celestial common stock was exchanged for 1.265 shares of Hain common stock. Hain subsequently changed its name to the Hain Celestial Group, Inc. Irwin D. Simon is President, Chairman, and CEO of the new company. Celestial Seasonings is the best-selling specialty tea brand in the USA. The financial statements in the annual report are consolidated from both companies.

Net sales for the year ended 30 June 2000 were $403.543 million, up 28% from $315.820 million in 1999. Net income in 2000 was a loss of $19.097 million, way down from a profit of $13.517 million in 1999.

Westsoy, the leading soymilk brand in the USA, has seen sales grow at a rate of 58% in recent months (p. 1). New Westsoy products: Westsoy Chai, Westsoy Juice Bar, Westsoy Plus (in half gallon refrigerated), and Westsoy Smart Plus (with 33% more protein than other soy beverages or dairy milk).

Accompanying the annual report is a "Notice of Annual Meeting of Stockholders and Proxy Statement" (21 p.). Irwin Simon's annual compensation was: Salary: $375,000. Bonus: $625,000. Other compensation: $5,400. Total: $1,005,400 million. Address: 50 Charles Lindbergh Blvd., Uniondale, New York 11553. Phone: 516-237-6200.

7905. Woodrow, Lorna; Poysa, Vaino; Anderson, Dale. 2000. Effects of soy protein composition on soymilk and tofu yield and quality. *Canadian Soybean Bulletin* (*OSG, Chatham, Ontario, Canada*) 14(2):4. Nov.
• ***Summary:*** For these studies, five large-seeded, food-grade soybean cultivars with acceptable agronomic performance were used. 100 seeds averaged 25 gm in weight and his protein contents, averaging 46% on a dry matter basis (range 44-48.4%). They were used to make silken (kinugoshi) tofu, using two different coagulants: glucono-delta lactone (GDL) or calcium sulfate dihydrate (CS).

There was a significant positive correlation between seed protein content and tofu yield, tofu hardness, and tofu firmness. The 11S and 7S proteins represent 70% of the total protein in the soybean and form the gel when soymilk is coagulated to make tofu. "They are considered to be the key proteins in determining tofu quality." They are extracted then separated by electrophoresis. These cultivars demonstrated a wide range in their content of 11S and 7S proteins. The seed protein profile also changed very significantly from year to year. The 7S content was positively correlated with tofu yield, whereas the 11S content was not. Address: Greenhouse and Processing Crops Research Centre (GPCRC), Highway 18 East, Harrow, ON N0R 1G0, Canada.

7906. Pate, Kelly. 2000. 21 [Colorado] companies to watch in 2001. *Denver Post* (*Colorado*). Dec. 10.
• ***Summary:*** The last of these 21 companies is White Wave. This is a condensed version of an article by Kelly Pate in this newspaper in November. The same photo (but in black and white) shows Steve Demos. Address: Business writer.

7907. *SoyaScan Notes.* 2000. Soymilk and cow's milk prices in California, December 2000 (Overview). Dec. 10.

Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Since Dec. 1983, approximately every other year, Soyfoods Center has conducted a survey of the prices of soymilk and cow's milk in California. In Dec. 2000 at Berkeley Natural Grocery Co. (Berkeley, California), Cindy La reports the following retail prices. (Note: oz = fluid ounces; 32 fl oz = 1 quart; 33.8 fl oz = 1 liter. 2 quarts = one half gallon. All soymilk products at Berkeley Natural Grocery Co. are now organic).

Shelf-stable / Aseptic soymilks: Westsoy Light and Plus all flavors $2.39/quart (but $1.89 when on special). Westsoy original creamy $2.59/quart. Westsoy 3 x 8.45 oz packs all flavors $2.79.

Vitasoy all flavors $1.99/quart. Note: This is the price for half the year. The other half it rises to $2.39. Vitasoy enriched all flavors $1.99/quart (on special). Vitasoy Light all flavors $2.39/quart. Vitasoy 3 x 8.45 oz packs all flavors $2.39.

Soy Dream (Imagine Foods) all flavors $2.15/quart. Soy Dream Enriched all flavors $2.25/quart.

Pacific Foods–Select all flavors $1.99/quart. Pacific Foods–Enriched all flavors $2.25/quart. Pacific Foods–Fat Free all flavors $2.39/quart.

Edensoy and Edensoy Enriched all flavors $2.29/liter. Edensoy and Edensoy Enriched 3 x 8.45 oz packs all flavors $2.29. Health Valley Soy Moo plain $2.59/quart.

Refrigerated / Fresh soymilks (in gable-top cartons) at Berkeley Natural Grocery Co. White Wave Silk $1.79/quart or $2.99/half gallon. Westsoy Plus $3.59/half gallon. Wildwood all flavors $1.99/quart or $3.89/half gallon.

Berkeley Natural Grocery Co. also carries dairy milk: Horizon organic milk $1.89/quart. Clover Stornetta milk (free of BGH–Bovine Growth Hormone) $0.95/quart.

Safeway: Cow's milk (fortified with vitamins A and D) sells for the following prices at the Safeway supermarket in Lafayette, California: (1) Fat free: $0.99/quart or $1.84/half gallon or $3.25/gallon; (2) Low fat (1% fat, protein fortified): $1.07/quart or $2.02/half gallon or $3.39/gallon; (3) Reduced fat (2% fat, protein fortified): $1.07/quart or $2.02/half gallon or $3.39/gallon; (4) Whole (homogenized, fortified with vitamin D only): $1.09/quart or $2.05/half gallon or $3.45/gallon. (5) Acidophilus Plus Bifidus–Low Fat (1% fat): $1.07/quart or $2.13/half gallon. (6) Horizon Organic $2.99/half gallon. (7) Lactaid: $1.89/quart or $3.35 per half gallon. The best-seller among these is Fat free in half gallons or gallons.

Thus, during the past two years, the price of cow's milk has generally decreased slightly for the first time in at least 15 years. Soymilk prices have largely remained unchanged. Therefore the gap between soymilk and cow's milk prices has increased slightly.

7908. *SoyaScan Notes.* 2000. Soymilk, rice milk, and almond milk retail prices at Trader Joe's in California, 20 Nov. 2000 (Overview). Nov. 20. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Since Dec. 1983, approximately every other year, Soyfoods Center has conducted a survey of the prices of soymilk and cow's milk in California. Note: 2 quarts = one half gallon.

Shelf-stable / Aseptic soymilks: Pacific Foods Fat Free Soy Drink vanilla or plain $1.29/quart. Pacific Foods Multi Grain original $1.69 quart.

Soy-Um all flavors $1.49/quart. Soy-Um Fat Free $1.39/quart. Soy-Um three-pack (250 ml each) $1.69 for three.

Westsoy Plus all flavors $2.49/half gallon (=$1.25/quart). Westbrae Natural Lite vanilla or plain $2.29/half gallon (=$1.15/quart).

Refrigerated / Fresh soymilks (in gable-top cartons): Trader Joe's Fresh Non Dairy Soy Beverage $2.69/half gallon (=$1.35/quart–gable top carton sold refrigerated).

Non-Soy Non-Dairy Beverages: Aseptic beverages. Breeze almond milk original, vanilla or chocolate $1.59/quart. Trader Joe's Rice-Um original, original enriched, vanilla, or vanilla enriched $1.39/quart. Westbrae Rice plain or vanilla $2.29/half gallon (=1.15/quart).

Products discontinued since last year: Galaxy Veggie Milk. Rice Dream.

Omitting the highest price soymilks, the price of soymilk ranges from $1.15/quart for half-gallon cartons to $1.39/quart for quart cartons. A fair average price would be about $1.27/quart.

7909. Barboza, David. 2000. New sprouts, old doubts for A.D.M. *New York Times.* Dec. 24. p. BU1.
• ***Summary:*** The company's top executives say a new ADM is emerging, one "that offers not just bulk grain but also a growing array of health and nutritional products like veggie burgers, soy milk, natural vitamin E and isoflavones, a soy extract that may reduce the risk of osteoporosis." In short, ADM is looking for alternatives to commodities, and working hard to grow its nutraceutical division.

It has been two years since the "retirement of Dwayne O. Andreas, the legendary chairman who built A.D.M. into one of the world's most powerful corporations." In 1997 the board chose G. Allen Andreas, Dwayne's nephew, to replace him as CEO; in 1999 Allen moved up to chairman of the board as well. Yet today, the leadership and future direction of the company are unclear. The big question concerns Michael D. Andreas, Dwayne's son and once the heir apparent. After his three-year prison term (for illegally conspiring worldwide to fix the price of lysine) ends in 2002, will he return to ADM. And if so, what office or offices will he hold?

In 1996 ADM paid a $100 million fine to settle the governments charges in the lysine price fixing case. It was one of the largest price-fixing settlements in U.S. history, Although ADM never admitted wrongdoing, the company

has been unable to rebound. Although the world is awash in vegetable oil, the European demand for soybean meal is rising due to the ban on bone meal in animal feeds. Graphs show that ADM's net income and stock price have fallen significantly since 1996.

7910. *SoyaScan Notes.* 2000. Chronology of major soy-related events and trends during 2000 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jan. 8–The Kerry Group (of Wisconsin and Iowa) purchases Solnuts, a pioneer manufacturer of dry-roasted soynuts, in Hudson, Iowa.

Jan.–Kraft Foods Inc. (Illinois) purchases Boca Burger Inc., America's third largest maker of veggie burgers, after Worthington Foods and Gardenburger.

March 6–The Hain Food Group announces that it will acquire the Celestial Seasonings tea company to become the largest natural foods company in the USA.

March 9–The USDA formally approves a rule change allowing soy protein products to completely replace meat products in the Federal School Lunch Program.

March 31–Monsanto, the world's leading agricultural biotech company, merges with Pharmacia & Upjohn (a large pharmaceutical company), and the new company is renamed Pharmacia Corporation.

April–An article by Lon White on tofu and brain aging is published in *J. of the American College of Nutrition.*

June 9–20/20 (ABC) television program, titled "Soy–The untold story," airs on Friday at 10:00 p.m. discusses many of the shortcomings of soyfoods, but in a very fair way.

June 13–Martha Stewart, on her popular nationwide TV program *Living,* has a very positive segment on edamamé.

July 14–Lightlife Foods Inc. (of Turners Falls, Massachusetts) is purchased by ConAgra, Inc., a $25 billion food company based in Omaha, Nebraska–for an undisclosed amount. Lightlife's plant, employees, and management team will stay in place. Lightlife is a leading maker of vegetarian meat alternatives, with 150 employees and about $25 million in annual sales.

July–At a joint meeting of ASA and USB, the International Soy Protein Program (ISPP) was born as ASA and the Illinois Soybean Program Operating Board (ISPOB) formalized their joint commitment to "Increase the international consumption of soy protein by humans in new markets–developing countries–and thereby create new opportunities for disappearance of soybeans and provide higher economic returns to U.S. soybean producers." ISPOB and its Executive Director Lyle Roberts were instrumental in conceiving the program and raising its initial funding. This program was later renamed WISHH.

Sept.–Monsanto's patent on glyphosate expires. Glyphosate is the active ingredient in *Roundup,* the world's best-selling herbicide.

Dec.–Sanitarium Foods of Australia acquires the 47% of SoyaWorld owned by Sunrise Soya Foods (Vancouver, BC, Canada).

Trends: 1. This year, the momentum created by the FDA health claim in Oct. 1999 has propelled the soyfoods industry to new heights. Existing companies are growing rapidly, and many new companies (including some of America's biggest food companies) are entering the market with new products.

2. This year, for the first time, soymilk has become a mainstream American beverage. As of May, White Wave Silk soymilk is sold in 24,000 supermarkets nationwide. Edamamé (green vegetable soybeans) have gone mainstream in California, and are rapidly becoming popular on both coasts of the USA.

3. In the United States and Europe, the tide seems to be flowing increasingly against genetic engineering of foods and food plants. More and more companies in the natural foods industry are labeling their products as "non-GMO" or "GMO-free" or "No GMOs." Monsanto has stopped its efforts to develop genetically engineered soybeans for food use and focused its attention instead on livestock feeds. It now seems likely the genetic engineering of plants has a future, but not in the area of foods–at least in developed countries.

4. Interest in "food-grade soybeans" continues to grow in the USA and has increased substantially this year. Canada began focusing on identity-preserved food-grade soybeans 10-15 years before the USA. U.S. interest began to grow in about 1995 with the introduction of genetically engineered soybeans and with the accelerating interest in food uses of soybeans.

5. While pro-soy articles (mostly about health benefits) continue to increase, so do anti-soy articles and Internet sites. The loudest anti-soy voices are those of Sally Fallon and Mary Enig of the USA (they believe traditional fermented soyfoods–such as miso, shoyu, natto, and tempeh–are good, traditional non-fermented soyfoods–such as tofu, soymilk, and edamamé–are not very good, and modern soy protein products–such as soy protein isolates, concentrates, and textured soy flour–are the worst of all, being highly processed with chemicals such as hexane solvent). Also: Richard and Valerie James of New Zealand, and Lon White of Hawaii. Some of the concerns they raise are legitimate and deserve further research, but the majority (we believe) are not. Nevertheless, many of the health claims made for soy in popular articles are exaggerated or somewhat sensational, and not firmly supported by scientific evidence.

6. As we are about to enter a new century and a new millennium on 1 Jan. 2001, soyfoods appear to have a bright future, worldwide. This past year has seen more activity and interest in, and media coverage of, soyfoods than at any time in the history of the United States.

7911. Huang, H.T. (Hsing-Tsung). 2000. Science and

civilisation in China. Vol. 6, Biology and biological technology. Part V: Fermentations and food science. Joseph Needham series. Cambridge, England: Cambridge University Press. xxviii + 741 p. Illust. Index. 26 cm. [200+ soy ref]
• ***Summary:*** This is the most important book on soyfoods in China ever written, and it is especially good on their origins and early history in China. It is also one of the best books seen on food in Chinese culture and history.

The section titled "Soybean processing and fermentation" (p. 292-378) comprises 14.3% of the book's text, and has the following contents: Introduction. Soybean sprouts. Soybean curd and related products: The origin of bean curd, transmission of *tou fu* to Japan, products associated with *tou fu* (soymilk {*tou fu chiang*}, tofu curds {*tou fu hua* or *tou fu nao*}, pressed tofu sheets {*ch'ien chang* or *pai yeh*}, yuba {*tou fu i* or *tou fu p'i*}, deep-fried tofu {*yu tou fu* or *tou fu p'ao*}, pressed tofu {*tou fu kan*}, five-spice pressed tofu {*wu hsiang tou fu kan*}, plain dried tofu [pressed tofu] {*pai tou fu gan*}, smoked tofu {*hsün tou fu*}, dried tofu soaked in brine and fermented {*ch'ou tou fu kan*}, frozen tofu {*tung tou fu*}), making fermented tofu {*fu ju*}, comparison of *tou fu* and cheese, addendum. Fermented soybeans, soy paste, and soy sauce: *Ferments* for food processing, fermented soybeans–*shih,* fermented soy paste–*chiang,* fermented soy sauce–*chiang yu,* soy fermentations in China and Japan.

There are also long sections on the history koji (*qu*) and of red rice koji (*hong qu*) in China (p. 192-203).

Note: This is the earliest English-language document seen (April 2013) that uses the term "hsün tou fu" [pinyin: *xun doufu*] to refer to smoked tofu. Soy is also discussed in other parts of the book. Address: Alexandria, Virginia.

7912. Kansas Soybean Association. 2000. Its soy easy to cook with soy: A cookbook of simply delicious, easy recipes to incorporate soy protein into a heart healthy diet. Topeka, Kansas. 20 p. No index. 24 cm.
• ***Summary:*** A full-color cookbooklet on glossy paper. Address: 2930 S.W. Wanamaker Dr., Topeka, Kansas 66614. Phone: 1-800-328-7390.

7913. Larson, Stephanie. 2000. The soyfoods boom: What's driving the explosion? First in a series. *Soybean Digest.* Dec. p. 10-11.
• ***Summary:*** Mark Messina says the whole market is driven by consumer demand because of health effects. Sales of soyfoods and soy protein products was $2.1 billion in 1999. Of that total, soymilk sales accounted for $300 million, up 38% from 1998. A graph shows soymilk sales (in million dollars) from 1992 to 1999, with projection to 2002. These sales rose from $100 million in 1993 to $300 million in 1999, projected to reach $500 million in 2001.

The United Soybean Board calculated that last year Americans consumed 37 million bushels of soybeans via soyfoods. A color photo shows many commercial soyfood products with colorful labels: Bergin Nut Company Soynuts (no salt), Fantastic Foods Tofu Scrambler, MCOA Brown Rice Miso, Spectrum Soy Oil, Health Trip Soynut Butter, Midwest Harvest Textured Soy Protein, Low-Fat Soy Flour, and Firm Tofu, Country Choice Soy Cocoa, Eden Organic Black Soy Beans, and Whole Foods Soy Ginger Sauce.

7914. Shurtleff, William; Aoyagi, Akiko. 2000. Tofu & soymilk production. 3rd ed. Lafayette, California: Soyfoods Center. 336 p. Illust. by Akiko Aoyagi Shurtleff. Index. Dec. 28 cm. [223 ref]
• ***Summary:*** Contains many new advertisements, plus changes on the title page, copyright page, and rear cover of both paperback and hardcover editions (new ISBN for each). Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

7915. **Product Name:** Soylove Soymilk and Tofu Maker.
Manufacturer's Name: Ionmag Corporation. Renamed Ronic Corporation by March 2005.
Manufacturer's Address: Korea
Date of Introduction: 2000.
New Product–Documentation: Leaflet (3 panels each side. Each panel: 22.5 x 20 cm, glossy color) sent by Patricia Smith from Natural Products Expo West. 2003. March. On the front panel: "Soylove: For your health." With a photo of the top of the plastic machine. Inside 3 panels: (1) "Make it easy by yourself" (8 different types of food, including tofu soup and soymilk). (2) "Modern design" (for the IOM-201B and the IOM-501A). (3) "Soylove is consist of [sic] in this way" (diagram of the six key parts of the machine) and "Operating principles of soymilk maker." 5th panel: "Making with one-touch button." A business card from H.B. Kim of Ionmag is attached with a staple.

Leaflet (3 panels each side. Each panel: 21 x 10 cm, color) sent by Patricia Smith from Natural Products Expo West. 2005. March. "Soylove.com." On the front panel is a photo of the plastic machine. The inner three panels: "To make flavored punches" [and soymilk / ricemilk]. "To make soup (porridge)." "To make tofu & soy noodles."

Back panel: Patented in Korea, USA, Japan, Taiwan. The patent number for each country is given.

Awards: "2000 Int'l Institute of Invention and Innovators in Germany (Gold Award).

"2001 Int'l Institute of Invention and Innovators in England (Silver Award)."

7916. Davis, Brenda; Melina, Vesanto. 2000. Becoming vegan: The complete guide to adopting a healthy plant-based diet. Summertown, Tennessee: The Book Publishing Co. v + 281 p. Index. 25 cm. [153 ref]
• ***Summary:*** An excellent vegan sourcebook (not a cookbook) by two registered dietitians. Contains perhaps

the most up-to-date, accurate, and concise yet complete information in vegan nutrition.

Contents: Acknowledgements. From the authors. 1. Vegan roots. 2. Perspectives on vegan health. 3. Plant protein. 4. Big fat lies. 5. The two faces of carbohydrates. 6. Prospecting for minerals. 7. Vitamins for vegan vigor. 8. Phytochemicals. 9. The vegan food guide. 10. Building vegan dynamos. 11. Growing vegans. 12. The prime of life. 13. Overweight. 14. Eating disorders. 15. Underweight. 16. The vegan athlete. 17. Vegan diplomacy.

This book begins with a good history of veganism and contains (throughout the book) a wealth of accurate, positive information about many different types of soyfoods (especially tofu) and related subjects, including tofu, soymilk, tempeh, soy yogurt, soy cheese, soy sauce, tamari, and soy oil (incl. omega-3 fatty acids). Plus Adventist Health Studies, dietary fiber, phytochemicals and sea vegetables. Address: 1. Kelowna, British Columbia; 2. Langley, British Columbia. Both: Canada.

7917. Fruehschuetz, Leo. 2000. Soja [Soya]. Schaafheim, Germany: Bio Verlag. 144 p. With recipes by Judith Braun. Illust. Index. 15 cm. [12 ref. Ger]
• ***Summary:*** Contents: Forward: Portrait of the soybean: From China to the entire world, the composition of whole beans, does soya help with cancer?, protein and oil for the world economy. The original soybean and what followed: Introduction (there is not much to improve on in the soybean), the "labor-bean" (Monsanto and Roundup-Ready soybeans), the results for farmers, for the environment, for health, politics without results, for trade and the end-users, the forgotten results, soya in animal feeds. Organically grown soya–without genetic engineering and pesticides. Versatile: Soya in the wholefoods kitchen: Soybeans: whole, ground, and sprouted, the fluid bean–milk, yogurt (fermented), and oil, tofu–the meat without bones, tempeh–the noble cultured food from Indonesia, soy sauce–aged in wooden vats, miso–soya for soups, soyameat–saved from the wolf. Recipes: Soymilk, soy flour and flakes, tofu, tempeh, soy meat and granules, miso, soy sprouts. Address: News journalist for natural foods and long-lived people, co-worker with Schrot&Korn.

7918. Holtzman, Rachel. 2000. Trader Joe's soy foods: Answers to commonly asked questions. Nutrition information (Leaflet). Needham Heights, Massachusetts: Trader Joe's. 3 panels each side. Each panel: 21.5 x 9 cm.
• ***Summary:*** Question and answer format: Contents: What is soy anyway? Why should I include soy in my diet? Does soy have fat? Some soy products say soy wards off heart disease. What does this mean? Ans: The FDA "recently approved a new health claim linking soy protein to a reduced risk of coronary heart disease. Studies show that foods with soy may help stave off heart attacks and other complications of heart disease by lowering cholesterol. The FDA says it takes 25 grams of soy protein a day to have this desired effect (as long as you also follow a diet that's low in saturated fat and cholesterol.) The product needs to meet the strict criteria to bear the new claim, but it will soon be appearing on more labels."

What are isoflavones and where can I find them? Ans: "Soybeans contain a unique compound called isoflavones, which are phyto (plant-based) estrogens. There are three isoflavones: genistein, daidzein and glycitein. Some research suggests that isoflavones are responsible for soy's health properties. One half cup of tofu has an average of 40 milligrams (mg) of isoflavones; one cup of regular soy milk has about 20 mg; one serving of Trader Joe' Soy Protein Powder has 43 mg. Lower fat products have fewer isoflavones. Soy protein concentrates lose isoflavones during processing. Isolated soy protein (ISP) and textured soy protein (TVP) are good sources of isoflavones. Heat treatment does not appear to significantly affect isoflavone content." What is the difference between isoflavones and soy protein? How can I include soyfoods in my diet? Ans: Trader Joe's carries soymilk, tofu, tempeh, soy nuts, edamame (soybeans), soy protein powder, meat substitutes, soybean butter. What is tofu and how can I use it? How much soy should I eat? Ans: About 25-50 grams per day. Address: R.D., Trader Joe's Nutritionist, Needham Heights, Massachusetts.

7919. Kornfeld, Myra. 2000. The voluptuous vegan: more than 200 sinfully delicious recipes for meatless, eggless, and dairy-free meals. New York, NY: Three Rivers Press. [xi] + 305 p. Illust. (by Sheila Hamanaka). Index. 24 cm.
• ***Summary:*** A vegan cookbook with some macrobiotic flavor. The excellent glossary includes: adzuki beans, agar-agar, almond butter, barley malt, barley miso, carob powder, edamame, gluten, haricots verts, Hass avocado, hijiki, Hokkaido pumpkin (kabocha squash), kanten, koji, kombu, kudzu, maple sugar (crystallized maple syrup), mirin, miso, MSG, nori, oden, Rice Dream, rice syrup, sambal (Indonesian word for chutney), sea salt, seitan, shiitake, shoyu, soybean, soy milk, Sucanat, tahini, tempeh, umeboshi paste, wakame, wheat gluten, Yannoh coffee. The index contains 29 entries for tofu, 9 for seitan, 5 for tempeh, 2 for miso, 1 for "Cheese"–tofu (p. 214), "Sour cream"–tofu (p. 25), and teriyaki vegetables. Note: Soy milk is called for in many recipes. Address: Professional Chef, New York City.

7920. Liberty, Anne. 2000. Super soy! Protect yourself against bone loss, heart disease, cancer, menopause, high cholesterol. Boca Raton, Florida: American Media Mini Mags Inc. 66 p. 14 cm. [1 ref]
• ***Summary:*** This mini-book (only 5½ inches high) was sold (for $1.19) next to the tabloid magazines at the checkout stand at Longs Drug Store in Lafayette, California. On the

little cover is a color photo of a grey-haired and healthy-looking lady holding a glass of soymilk. Contents: All about soy: Inside the soybean (phytoestrogen, isoflavones, genistein, protease inhibitors), eight of soy's top health benefits (antioxidant protection from free radicals, breast cancer protection, cholesterol control, colon cancer protection, strong bones, hot flash reduction, a strong immune system, and kidney disease prevention), different soy products (green soybeans, hydrolyzed vegetable protein {HVP}, infant formula {soy-based}, lecithin, meat alternatives, miso, non-dairy frozen soy ("soy ice cream"), soy cheese, soy flour, soy grits, soy protein (incl. TSP = textured soy protein = textured soy flour), soy sauce, soy yogurt, whole soybeans, soy nut butter, soy nuts, soy oil, soy sprouts, tempeh, tofu, whipped soy-based topping, yuba), nutritional value, how much do you need? Bone loss. Heart disease and cancer: Heart disease, cancer (genistein, isoflavones, phenolic acids, phytates, protease inhibitors). Menopause. Cholesterol. Cooking with soy products: Soy flour, miso, soy milk, soy protein, tofu, tempeh. Delicious soy recipes.

The author frequently refers to Earl Mindell, PhD, but has no real scientific references. Many of the recipes were provided by the United Soybean Board. On the last page are two sources of more information and recipes: The United Soybean Board website www.talksoy.com and the Indiana Soybean Board website www.soyfoods.com.

7921. McMann, Mary Carol. 2000. Soy protein: What you need to know. New York, NY: Penguin Putnam Inc. (Avery). 60 p. Index. 22 cm. Avery's Nutrition Discovery Series. [74 ref]
• ***Summary:*** Contents: Introduction. 1. What makes soy so special? 2. Cardiovascular disease. 3. Cancer. 4. Osteoporosis. 5. Menopause and menopausal symptoms. 6. Incorporating soy (protein) into your diet. Conclusion. Glossary. References. About the author.

7922. **Product Name:** Odwalla Bar [Super Protein].
Manufacturer's Name: Odwalla, Inc.
Manufacturer's Address: Dinuba, CA 93618. Phone: 1-800-Odwalla.
Date of Introduction: 2000. January.
Ingredients: Incl. 16 gm of soy and rice protein.
Wt/Vol., Packaging, Price: 2.2 oz (62 gm). Retails for $1.19.
How Stored: Shelf stable.
New Product–Documentation: Leaflet (4-panels, glossy, color) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2001. March 8-11. "Odwalla Bar! Nourishing food bar. A breath of fresh in the food bar category." Copyright 2000. The "energy bar category" is thriving! During the last 12 months (ending April 2000) it has grown 42% in supermarkets and grocery stores and 26% in natural food stores. Odwalla Bar continues to outpace category growth in both natural food stores (85% to 26%) and supermarkets (192% to 42%) during the same last 12 months.

7923. Ohwalla, Inc. 2000. Introducing OdwallaMilk (Brochure). Dinuba, California. 6 panels. Front and back. Each 22 x 14 cm.
• ***Summary:*** Gives "Four reasons for OdwallaMilk," photos of various products, nutrition facts, and nutritional comparison of OdwallaMilk (original) with whole dairy milk.

Sales of non-dairy soy beverages grew 97%, to $142 million, during the 12 months ending Sept. 2000–according to data from SPINS.

Sales (in dollars) of refrigerated dairy-free products [mostly soy beverages] increased by an astonishing 630% in supermarkets and grocery stores and by 74% in natural food stores during the 12 months ending Sept. 2000. Sales of shelf-stable dairy-free products [again mostly soy beverages] has increased 31% in supermarkets and 8% in natural food stores during the same period. Address: Dinuba, California 93618. Phone: 1-800-Odwalla.

7924. Patil, R.T.; Joshi, K.C.; Ali, Nawab. 2000. The course manual for entrepreneurship development course on production of soymilk and soybean. Bhopal, India: Soybean Processing & Utilization Project, Central Institute of Agricultural Engineering. *
• ***Summary:*** This course was organized by the Soybean Processing and Utilization Center (SPU Center), CIAE, Bhopal. Address: Soybean Processing and Utilization Project, Central Inst. of Agricultural Engineering, T.T. Nagar, Bhopal–462 003, India.

7925. Salmon, Margaret Belais. 2000. Soy discoveries: Recipes for life. Over 700 quick soy recipes. Philadelphia, Pennsylvania: XLibris Corp. 474 p. Recipe index. 22 cm. [60 ref]
• ***Summary:*** Contents: Acknowledgments. Introduction: The truth about food additives and chemicals in food, approximate measurements. Recipes: Soups. Salads and vegetables. Main dishes and appetizers. Omelets. Breads, muffins, pancakes / waffles, cookies. Desserts. Sugar-free desserts. Drinks. Appendix: Food safety.

The rear cover contains a portrait photo and a brief biography of Margaret Salmon with a list of other books she has written. She received a degree in food chemistry and nutrition at the University of California at Berkeley, and degrees at Columbia University in the science of nutrition and nutrition education. She has a certificate of Hospital

Dietetics from Duke University. She was formerly research dietitian on the cystic fibrosis research team at Columbia-Presbyterian Medical Center, New York City, and chief dietitian and director of the dietetic traineeship program at St. Joseph's Hospital and Medical center in New Jersey. Address: R.D., L.D. [Licensed Dietician], P.D. [Professional Diploma, Columbia Univ., specialist in nutrition education], Salmon Consultants, 435 Lynn St., Harrington Park, New Jersey 07640. Phone: 201-768-4457.

7926. Sharma, Ratan. 2000. Soymilk and tofu: An update in Indian context. Technical Bulletin. Haryana, India: American Soybean Association (ASA) / United Soybean Board. 10 p. 28 cm. [7 ref]

• ***Summary:*** Contents: Introduction and history. Future of soy products in India. Soymilk, Tofu, Okara. Soymilk powder. Nutritional value. SoyaCow Project. SoyaCow. Cost of SoyaCow component pieces of equipment. ASA International Offices.

Color bar charts show: (1) Protein yield from cultivation of different crops (in kg/ha). The soya bean gives by far the highest protein yield, 509 kg/ha. (2) Percentage of protein in common foods. Soya bean is by far the highest at 40%. (3) Essential amino acids in soya milk and cow's milk as compared to the ideal protein source. (4) Essential amino acids in soya milk and cow's milk as compared to the recommended daily intake by an adolescent. (5) A comparison of nutrients in mother's milk, cow's milk & soya milk, normalised to the same water level. (6) Flow chart of the many different products that can be made from 1 kg of soya beans. (7) Cost benefit analysis for SoyaCow SC20 system, with net cost of production, monthly income, net profit per month, and payback period for four products: Soy milk (plain), flavoured soya milk, curd, tofu. All values are in Indian Rupees. Photo of SoyaCow SC20.

Pages 6-7: The SoyaCow project was started in India in 1991 by Child Haven International (CHI), a Canadian based NGO (non-governmental organization, and follower of Gandhian philosophy) "working in India and Nepal, and ProSoya Inc. of Canada, a leading name in soymilk technology. Initially the project was granted substantial funding by CIDA (Canadian International Development Agency). Its main objective is to provide low cost nutrition to the general Indian population in the form of soymilk and its derivatives.

The "SoyaCow Centre was established in India jointly by Child Haven International and ProSoya in the year 1993, and the patented technology of manufacturing table top soymilk machines suitable for the cottage industry in India was transferred to SSP Ltd., a Faridabad (Haryana) based well known dairy, food processing and pharmaceutical equipment manufacturing company. Now these machines are being manufactured at SSP under the guidance of the SoyaCow Centre. This centre is providing all kinds of assistance" from making business plans to installation of the machines, operator's training, developing recipes suitable to the local taste, helping the users of the machines in marketing soy products, and providing all the know-how on soymilk to the general population. In association with the American Soybean Association this center has developed the technology to give 4-6 months shelf life to soymilk in bottles without any refrigeration. Also, vacuum packaging technology is provided to pack tofu for a longer shelf life. This technology is given free to SoyaCow users. Sites using this technology are doing very well. Address: PhD, The Child Haven International, SoyaCow Centre, KH-177 Kavi Nagar, Ghaziabad–201002, UP, India; American Soybean Assoc., Asia Subcontinent, 168 Jor Bagh, New Delhi–110 003, India.

7927. Shimbo, Hiroko. 2000. The Japanese kitchen: 250 recipes in a traditional spirit. Boston, Massachusetts: Harvard Common Press. xiii + 512 p. Foreword by Ming Tsai. Illust. (by Rodica Prato). Index. 23 cm.

• ***Summary:*** An excellent book with exquisite illustrations. The index contains 46 entries for miso, 20 for tofu, 12 for shoyu, 10 for teriyaki, 7 for edamame, 6 for natto (fermented soybeans), 6 for soybeans, 5 for koji ("a fermentation starter"), 3 for koyadofu (freeze-dried tofu), 2 for soy milk, soy sauce dressing, soybean lover's soybean rice, soybean miso, soybean pulp, 1 each for kinu dofu, moyashi (incl. soybean sprouts; "Until recently, moyashi used for cooking in Japan were predominantly soybean sprouts," p. 42), nama-age, nama-miso, nama-shoyu, okara (soybean pulp), saikyo miso, and tamari.

In the section on *Daizu* "(Dried soybeans)" (p. 96-97) both roasted soybean flour and *kinako* are mentioned. Dried green soybeans, are toasted then ground to a flour (*kinako*) which "is mixed with sugar and used to coat moist or sticky Japanese sweets." During the summertime, edamame (fresh green soybeans) are boiled and served in the pods.

The section on "Koyadofu" recounts the story of its origin: "The dried form of tofu, koyadofu, was invented by accident around the twelfth century, when, it is said, a priest at Mt. Koya Temple left freshly made tofu as an offering on the altar one snowy night. The next morning the tofu was frozen, so he threw it away in the back garden." After several sunny days of melting and evaporation, the tofu was found completely dried. It was found that this dried form can be kept for a long time.

The section on *Tofu seihin*–"Cooked tofu products" (p. 139-41) includes *Abura-age*–"Fried thin tofu." "One type of *abura-age,* called *sushi-age,* is sold specially for the preparation of *inarizushi,* a small barrel-shaped brown sushi, *Sushi-age* comes slit to make a pocket into which sushi rice can be stuffed."

Note: This is the earliest English-language document seen (April 2013) that uses the term *Sushi-age* to refer deep-

fried tofu pouches used to make inari-zushi.

Atsuage–"Fried tofu." *Ganmodoki*–"Fried tofu dumplings." *Yakidofu*–"Lightly broiled tofu." *Yuba*–"Soy milk sheet."

The latter section states nicely: "Because freshly collected yuba is soft and fragile, many sheets may be piled together and rolled into a 1-inch-thick stick. The stick is chilled, cut into bite-sized pieces, and eaten with a little shoyu (soy sauce) and grated wasabi. Fresh yuba has a wonderful creamy texture and a sweet, nutty taste."

"Because fresh yuba is perishable, most yuba found in stores is in the form of a dried sheet." It must be reconstituted in water, but after it has regained its flexibility it makes an excellent wrapper for other foods in fried or simmered dishes.

Shimbo-Beitchman is a knowledgeable and talented Japanese cooking teacher who ran a cooking school in Tokyo for eight years and in London for two; she now teaches in New York City. Address: Teacher of Japanese cooking, Hiroko's Kitchen, London, England. Phone: Fax: 44-171-289-0855.

7928. Sievin, Colleen. 2001. Company built on a blender. *Journal* (*Rapid City, South Dakota*). Jan. 14.
• ***Summary:*** Steve Demos, age 51, founder and president of White Wave, "likens his success to the fairy tale, 'Jack and the Beanstalk,' where the main character trades in his cow for magical beans."

A photo shows Demos holding a carton of Silk soymilk. Address: Associated Press.

7929. *Arizona Republic* (*Phoenix*). 2001. For a healthy treat, shake it up! Eating well. Jan. 17.
• ***Summary:*** One "of the newest trends in the smoothie world is adding soy to the mix of healthy additions. Consumption of soy products has increased tenfold in the last decade."

Last year the US FDA stated that 25 grams of soy protein eaten daily, together with a diet low in saturated fat and cholesterol, may reduce the risk of cardiovascular disease.

7930. G.T.B. Group of Japan, Inc. 2001. Questionnaire [concerning edamame]. Denver, Colorado. 6 p. Jan. 31. Unpublished typescript.
• ***Summary:*** This research was conducted over a 2 month period from 1 Dec. 1999 to 31 Jan. 2000. The questionnaire was administered by an in-store demonstrator. The GTB is the edamame vender for Whole Foods, Wild Oats, and King Sooper. The questionnaire consists of 11 questions, with about 4-5 choices after each question. The number of respondents to each question varies from 59 to 132.

1. How long have you known about Edamame? More than 1 year: 49%. First time: 22%.

2. How often do you purchase Edamame? 1-2 times per month: 44%. Once every 2 weeks: 22%.

3. How often do you eat soy products? (Tofu, Dried soybeans, Soymilk etc.). 1-2 times per week: 51%. 2-3 times per week: 22%. 1-2 times per month: 18%. 2-3 times per month: 9%.

4. Reasons for purchasing our Edamame. Good Taste: 37%. Great health benefit: 33%.

5. Price. Reasonable: 59%. Expensive: 38%.

6. How do you like the flavor of our Edamame? Just Right: 88%. Do not need any salt at all: 7%. Not Enough Salt: 4%. Too Salty: 1%.

7. How do you eat Edamame? By Itself: 81%. Put them into salad: 13%. Put them into stir fry: 5%.

8. How do you feel about the person doing the demonstration? Very friendly: 59%. Provides great information: 23%. Answers customers' questions clearly: 17%.

9. How did you find out about Edamame? By shopping grocery: 53%. At restaurant: 26%.

10. What are other food products you would prefer to eat as snack or quick-preparation meal? Sushi: 37%. Miso soup: 29%. Noodle soup: 28%.

11. If you have any other comments or suggestions, please feel free to give us anything! Address: Denver, Colorado.

7931. Descheemaeker, Koen; Debruyne, Ignace. eds. 2001. Soy and health 2000: Clinical evidence, dietary applications. Leuven, Belgium and Apeldoorn, Netherlands: Garant Publishers. 197 p. No index. 24 cm. [535 ref]
• ***Summary:*** This book contains the proceedings of the international conference "Soy & Health 2000" which was held in Brussels, Belgium, on 13-14 Oct. 2000. The texts of keynote lectures, presentations, and poster abstracts offer a good review of clinical research relating to soy.

Contents: Soy protein and heart disease (4 papers). New products and technology (1). Soy and cancer (3). Obesity (1). Health implications of soy lecithin, oil and phytosterols (3). Soy and hormonal effects (3). From science to market (4). Abstracts poster session (22 presentations).

Note: According to Mark Messina (e-mail, April 2005): This conference was organized by the editors of the proceedings. Koen Descheemaeker, PhD, used to work for Alpro in Belgium. He left in about 2000 to become a full time event organizer, specializing in nutrition events. He has become very successful at this and each year holds the largest nutrition conference in Belgium. Ignace Debruyne, PhD, works for the American Soybean Association in Belgium. He has a background in soy, especially related to processing and soymilk. The money for the conference was raised from sponsors (such as ASA and Alpro). It was a for profit event. Address: 1. PhD, Nutrimedes Communication & Consultancy, Zonnebecke, Belgium; 2. PhD, Ignace Debruyne & Associates, Izegem, Belgium.

7932. Glenville, Marilyn. 2001. Natural alternatives to HRT* (* hormone replacement therapy) cookbook: Understanding estrogen and foods that benefit your health. Berkeley, California: Ten Speed Press. 192 p. Illust. Index. 24 x 21 cm. [37* ref]

• ***Summary:*** Every woman who experiences menopause has probably experienced unpleasant symptoms such as joint pains, mood swings, weight gain, hot flashes, etc. Yet these symptoms can be avoided, or at least alleviated–by simple and safe changes in diet to include more phytoestrogens and isoflavones. This books tells and shows you how. Already a best-seller in the U.K. with over 20,000 copies in print.

Although this is not a vegetarian cookbook (recipes call for the use of fish and shellfish such as crab, mussels, salmon, tuna, etc.), there is extensive discussion of the benefits of soyfoods in a diet for menopausal women and many recipes that use soy (especially tofu). The chapter titled "What you need to eat at menopause" contains a good discussion (p. 17-18) of the benefits of isoflavones / phytoestrogens and natural soyfoods. It is known that "legumes contain good levels of isoflavones, and soy ranks the highest." Phytoestrogens are also good for bone health, and soy protein helps to reduce cholesterol (p. 25).

In the "Introduction to the recipes" is a section on "Soy products" (p. 47) that discusses miso, soy milk, soy sauce, tempeh, and tofu (which is "wonderfully versatile"). Soy-related recipes include: Scrambled tofu (p. 71). Tofu vegetable quiche (p. 90). Russian salad deluxe with tofu dressing (p. 96). Vegetable, bean sprout and tofu stir-fry (p. 104-06). Tofu and mushroom stroganoff (p. 106-07). Herby tofu and oat sausages with nutty mash (p. 112). Austrian bean salad with tofu dressing (p. 130-132). Deluxe kebabs (p. 136). Apricot tofu ice-cream (p. 156). Tofu cheesecake (p. 157). Mixed berry fool (p. 159). Miso broth (p. 176). Soy mayonnaise (p. 179). Sesame tofu dressing (p. 180). Tofu dip for raw vegetables (p. 180). Mocha tofu cream (p. 183). Tofu cream (p. 183).

Marilyn Glenville, PhD, earned her doctorate at Cambridge University and is Chair of the Governing Council for the British Association of Nutritional Therapists. She has practiced nutritional therapy in the U.K.and U.S. for more than twenty years, and specializes in the natural approach to female hormone problems. She practices from three private clinics in London and Kent, including the prestigious Hale Clinic. Address: PhD, nutritional therapist, UK.

7933. Hagler, Louise. 2001. Miso cookery. Summertown, Tennessee: The Book Publishing Co. 96 p. Illust. Index. 23 cm.

• ***Summary:*** Contains 70 recipes (each with a nutritional analysis) that use miso as an ingredient, and four full-page color photographs. Contents: Introduction. It's alive!!!! (visit to American Miso Co. in North Carolina). Soups. Spreads. Salads and dressings. Sauces and gravies. Vegetables. Main dishes. Side dishes. Sweet things.

Many recipes call for the use of tofu as an ingredient, and some call for the use of edamame, gluten, soymilk, soy yogurt, tempeh,

On the rear cover is a color photo of Louise Hagler; her vegetarian cookbooks have sold over 750,000 (or 742,000) copies worldwide. Address: Summertown, Tennessee.

7934. **Product Name:** Spiru-Tein (Soy Protein Beverage with Spirulina) [Vanilla, or Chocolate].
Manufacturer's Name: Nature's Plus. Div. of Natural Organics, Inc.
Manufacturer's Address: 548 Broadhollow Rd., Melville, NY 11747. Phone: 1-800-645-9500 or 1-800-525-0200.
Date of Introduction: 2001. January.
Wt/Vol., Packaging, Price: 8 oz Tetra Brik Aseptic carton.
How Stored: Shelf stable.
New Product–Documentation: Advertising supplement (12 page, glossy, color) inserted into Natural Foods Merchandiser. 2001. Jan. After p. 16. "This will change the way you think about energy drinks forever." Slick, flashy, and misleading. Fails to list ingredients. How can a product with so much protein and only 220 calories be called an "energy drink"? One carton contains 22 gm of protein and many different vitamins and minerals.

7935. White Wave, Inc. 2001. Silk is the hottest selling name in soy (Ad). *Natural Foods Merchandiser.* Jan. p. 42.

• ***Summary:*** This 8½ by 11 inch color ad shows a large white carton of Silk Cultured Soy (strawberry flavor) against a blue background. "Smart new package graphics. Now contains live cultures. Award winning favor. Made from organic soy. Contains 50% daily requirement of calcium." To the left is a "2000 Gold Taste Award" medal. At the lower right is a carton of Silk Soymilk. www.whitewave.com.

This ad also appeared in the March (p. 52), June (p. 34) issues of this magazine. Address: [Boulder, Colorado].

7936. Demos, Steve. 2001. New developments at White Wave (Interview). *SoyaScan Notes.* Feb. 1. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Silk soymilk is now made a five dairies in the USA, and the rest is made by Dennis Anderson at SunRich. They use the basic APV system for making their soybase. Each of these systems costs about $5 million.

Company research has shown that Silk is now in 1-2 million U.S. households, and the average household buys ½ gallon a week. Sales this year are projected to top $100 million.

Consumers now know what soy is and 76% believe that it has health benefits.

One farmer supplies all the organic soybeans used to make Silk. Yet the composition of these soybeans changes

from year to year, so the formula must be adjusted to account for these changes. Making this adjustment so consumers can't taste the difference is a delicate and complex process.

Steve is very happy with the company's new public relations firm. "They are fabulous." They are lining up many stories on the emergence of White Wave as a business and on the spectacular success of soymilk as a new category. Can you think of any other category that has gone mainstream as fast as soymilk? Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

7937. **Product Name:** Edensoy Light: Organic Soymilk [Original, Vanilla].
Manufacturer's Name: American Soy Products, Inc.
Manufacturer's Address: 1474 N. Woodland Dr., Saline, MI 48176. Phone: 800-248-0320.
Date of Introduction: 2001. February.
Wt/Vol., Packaging, Price: Tetra Brik Aseptic cartons. 1 liter (33.8 oz, 1.06 quart) or 250 ml.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Ad in *Natural Foods Merchandiser* (8½ by 11 inches, color). 2001. Feb. p. 38. "The best tasting soymilk just got a little lighter." On the large front panel is a prominent logo, black on yellow, which reads: "Certified organic. Tested GEO free." Near the bottom: "Organic soymilk. Less than 1% fat. Fortified with vitamin D2 & calcium."

Ad in *Natural Foods Merchandiser* (8½ by 11 inches, color). 2002. July. p. 18. "EdenSoy: Increase volume sales." A large color photo shows a woman in a food store facing an aisle of foods and holding out a case of EdenSoy Light. Near the bottom of the ad are photos of cartons of EdenBlend and EdenSoy Original.

7938. Collins, Sherry. 2001. Beans in the beverage market. *Soybean Digest.* Feb. p. 65.
• ***Summary:*** Tropicana, a subsidiary of PepsiCo, is test-marketing a soy smoothie in Florida restaurants and Kroger supermarkets. The drink contains fruit puree, juice, and soy. A 12-oz serving contains 8 gm of soy protein.

7939. Illinois Soybean Board. 2001. Leadership paves a path. There is a solution... World Initiative for Soy in Human Health (Brochure). Bloomington, Illinois. 6 panels. Front and back. 21 x 12 cm each.
• ***Summary:*** "More than 1 in 7 people throughout the world will not have enough food to meet their most basic nutritional needs. U.S. farmers face a surplus of more than 170 million bushels of soybeans and commodity prices at near 30-year lows." The World Initiative for Soy in Human Health includes five activities. (1) Humanitarian effort: U.S. soybean farmers have asked the federal government to designate soybeans, soybean meal, and soybean oil in surplus and that the USDA purchase these and other soybean products as soon as possible under the CCC Charter Act. (2) Private Voluntary Organization (PVO) planning: Supports the efforts of PVOs such as CARE and Save the Children to incorporate more soy-fortified and soy-protein products into their international feeding programs. (3) World Food Program (United Nations) assistance. (4) Global Food for Education initiative. (5) International AIDS initiative.

"For information about this initiative, contact Jim Hershey, WISHH Program Director, American Soybean Association, 1-800-688-SOYA (7692) or visit the website www.wishh.uiuc.edu."

Talk with Jim Hershey and Forest Roberts of ASA. 2001. May 10. This brochure was targeted to U.S. soybean farmers. It comes in two forms. The first was simply a 3-panel brochure. The other was a wider 3-panel brochure and the central panel contained six samples in small (2 inch square) seam-sealing bags: whole soybeans, soybean meal, soybean oil, defatted soy flour/grits, textured vegetable protein, soy protein concentrate, soy protein isolate, and milk replacer. A brief paragraph next to each gives the uses, protein composition (percentage), and calories per 100 gm.

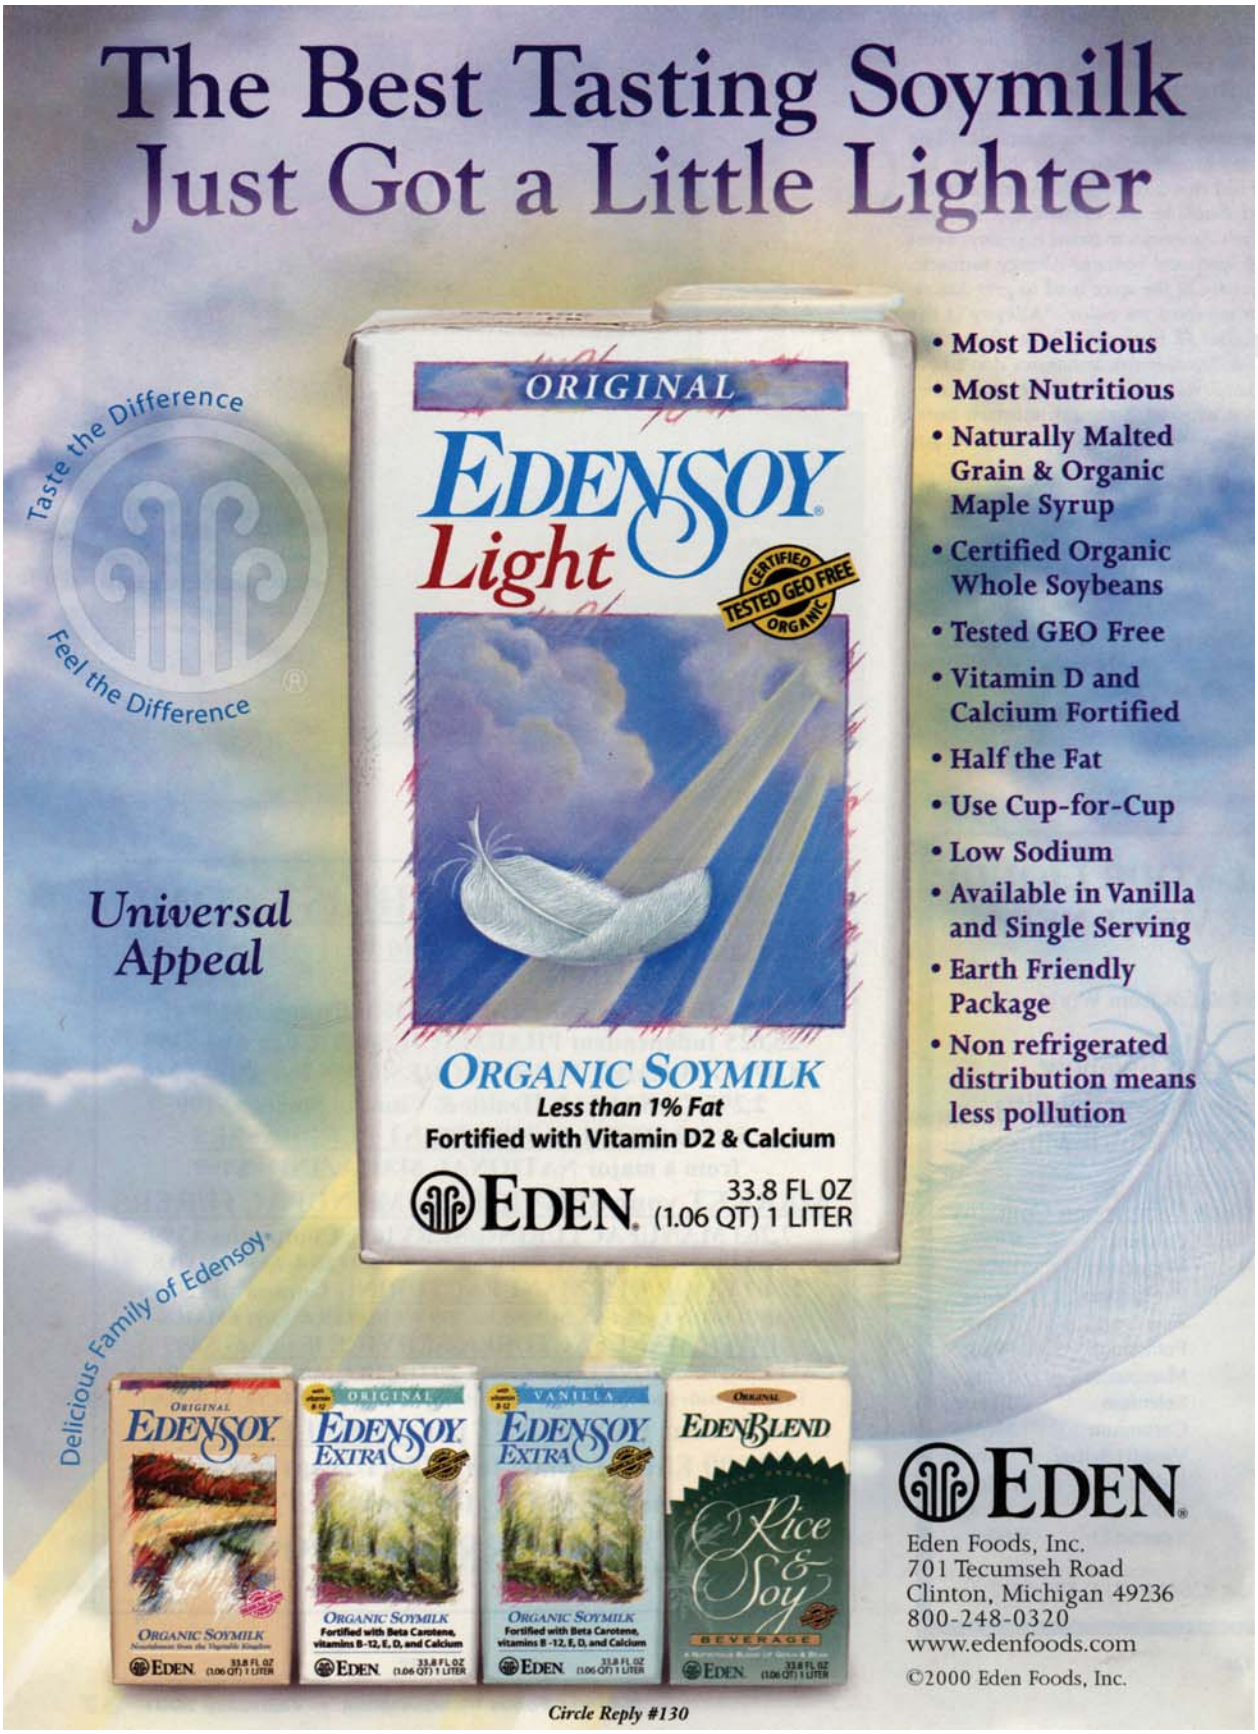
Note 1. This is the earliest document seen (July 2007) that mentions the WISHH program.

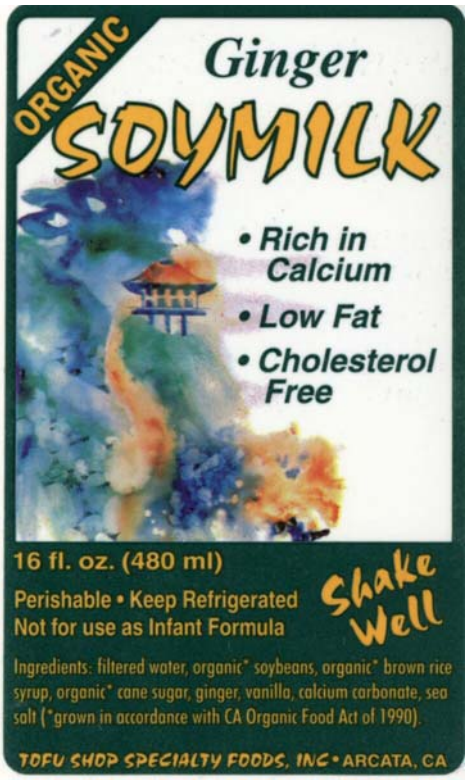
Note 2. The World Soy Foundation website (www.worldsoyfoundation.org) says (July 2007) that "U.S. soybean farmers started the World Initiative for Soy in Human Health (WISHH) Program in July 2000,..." Address: Bloomington, Illinois.

7940. Mangels, Reed. 2001. Vegetarian Journal's guide to soy, rice, and other non-dairy "milks." *Vegetarian Journal* (*Baltimore, Maryland*). Jan/Feb. p. 27-30. [1 ref]
• ***Summary:*** Based on a survey of 19 brands, and about 25 SKUs. Address: PhD, RD.

7941. *Nutrition Business Journal* (*San Diego, California*). 2001. Imagine Foods sets sights on sports set: Imagine converts natural soup line to organic without missing a beat. 6(2):12. Feb.
• ***Summary:*** Imagine prefers to sell organic products–such as their Power Dream. Presently, about 60-70% of the company's products are made with organic ingredients, according to Robert Nissenbaum, president and CEO.

7942. **Product Name:** Soymilk [Natural Unflavored, Vanilla, Chocolate, or Ginger].
Manufacturer's Name: Tofu Shop Specialty Foods Inc.
Manufacturer's Address: 100 Ericson Ct., Suite 150, Arcata, CA 95521. Phone: 707-822-7409.
Date of Introduction: 2001. February.
Ingredients: Vanilla: Filtered water, organic* soybeans, organic* brown rice syrup, organic* cane sugar, vanilla, calcium carbonate, salt. * = Grown in accordance with the California Organic Food Act of 1990.





Wt/Vol., Packaging, Price: Pint and quart plastic bottles.
How Stored: Refrigerated.
New Product–Documentation: Four Labels sent by Matthew Schmit. 2002. Sept. 9. The Vanilla was introduced in 1980, the other three flavors (and their labels) in Feb. 2001. 2.37 by 4 inches. Self adhesive. Red, brown, or green and orange-yellow on white. A handsome, impressionistic watercolor illustration shows a tofu shop on stilts on a cliff near the ocean with a tree arching overhead.

7943. **Product Name:** Westsoy Smart Plus Soymilk [Plain, or Vanilla].
Manufacturer's Name: Westbrae Div. of The Hain Celestial Group (Product Developer-Marketer).
Manufacturer's Address: New York City, New York.
Date of Introduction: 2001. February.
Ingredients: Organic soymilk (filtered water, organic soybeans*), filtered water, brown rice syrup, tricalcium phosphate, natural flavors, sea salt, vitamin A palmitate, vitamin D-2, riboflavin (vitamin B-2). * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 1 quart (32 fl. oz.) aseptic Tetra Pak carton–Liter square with spincap. Retails for $1.78 (2001/02, Lafayette, California).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 gm.: Calories 190, calories from fat 45, total fat 5 gm (8% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 90 mg (4%), total carbohydrate 22 gm (dietary fiber 5 gm [21%], sugars 14 gm), protein 11 gm (22%). Vitamin A 10%, calcium 30%, iron 15%, vitamin D 25%, riboflavin 25%, phosphorus 25%, magnesium 15%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Product with Label purchased at Trader Joe's in Lafayette, California. 2001. Feb. 3 by 3 by 7.75 inches. Aseptic carton. Purple, red, white and blue. Front panel text: "33% more protein than whole milk. Logo: Made with organic soymilk. Excellent source of calcium. With vitamins A & D and riboflavin. 50 mg isoflavones per serving. Lactose and dairy free. Logo of a red heart with a soy protein banner: See side panel for information on the relationship between soy protein and heart disease." A color photo shows soymilk being poured onto flaked breakfast cereal.

Talk with customer service rep. at The Hain Celestial Group. This product was first available in stores in Feb. 2001.

Talk with Janice Palmer, soy beverage expert, of Tetra Pak Inc, Pomona, California. 2001. March 26. This new carton is called "Tetra Brik aseptic Liter square with spincap." It is resealable, so it will not leak when placed on its side in a refrigerator. When you twist open the cap to break the tamper-evident seal, a plastic claw is pushed down so that it penetrates laminated layers of foil and polyethylene, breaking the interior package seal. The foil blocks light and oxygen and gives evidence of tampering; the polyethylene provides the aseptic seal for the laminated paperboard carton. SPINS refers to soymilk, rice milk, almond milk etc. as the "Non dairy beverage category."

7944. **Product Name:** Westsoy Low Fat Soymilk Drink [Chocolate].
Manufacturer's Name: Westbrae Div. of The Hain Celestial Group (Product Developer-Marketer).
Manufacturer's Address: New York City, New York.
Date of Introduction: 2001. February.
Ingredients: Organic soymilk (filtered water, organic soybeans*), filtered water, brown rice syrup, dehydrated cane juice, natural flavors, cocoa powder (treated with alkali), tricalcium phosphate, sea salt, carrageenan, vitamin A palmitate, vitamin D-2, riboflavin (vitamin B-2). * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 1 quart (32 fl. oz.) aseptic Tetra Pak carton–Liter square with spincap. Retails for $1.78 (2001/02, Lafayette, California).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 gm.: Calories 180, calories from fat 25, total fat 3 gm (4% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 95 mg (4%), total carbohydrate 32 gm (dietary fiber 3 gm [13%], sugars 26 gm), protein 6 gm. Vitamin A 10%, calcium 30%, iron 10%, vitamin D 25%, riboflavin 25%, phosphorus 25%, magnesium 10%. Percent daily values are based on a 2,000 calorie diet.

New Product–Documentation: Product with Label purchased at Trader Joe's in Lafayette, California. 2001. Feb. 3 by 3 by 7.75 inches. Aseptic carton. Chocolate brown, red, white, and tan. Front panel text: "33 mg isoflavones. Logo: Made with organic soymilk. Excellent source of calcium. With vitamins A & D and riboflavin. Lactose and dairy free. Logo of a red heart with a soy protein banner: See side panel for information on the relationship between soy protein and heart disease." A color photo shows chocolate soymilk being poured into a tall glass.

Talk with customer service rep. at The Hain Celestial Group. This product was first available in stores in Feb. 2001.

Talk with Janice Palmer at Tetra Pak. 2001. March 26. This new carton is called "Liter square with spincap."

7945. Gupta, Rajendra ("Raj") P. 2001. Changes in ownership of SoyaWorld, Inc. (Interview). *SoyaScan Notes.* March 17. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In Dec. 2000, Saputo, a large American cheese company, acquired Dairyworld Foods (Burnaby, British Columbia, Canada) and thereby also acquired Dairyworld's 50% ownership of SoyaWorld, Inc.

Then in Jan. 2001 Sanitarium Foods of Australia bought Peter Joe's 50% ownership of SoyaWorld. Maheb Nathoo is still the managing director of SoyaWorld, and the company is doing well. Maheb is basically a financial man. So SoyaWorld, Inc. is a separate company owned by Sanitarium Foods.

The soymilk company in Scotland, which used ProSoya technology and which Dusty Cunningham helped to start, has declared bankruptcy. Raj is now negotiating with another company to take over the plant and equipment.

Raj has heard that Dean Foods is for sale, and that White Wave's Silk is not yet profitable. Address: President and CEO, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

7946. Chajuss, Daniel. 2001. Soy protein concentrate: Processing, properties, and prospective. Paper presented at the 92nd Annual Meeting of the American Oil Chemists' Society. 13 p. Held 13-16 March 2001 in Minneapolis, Minnesota.

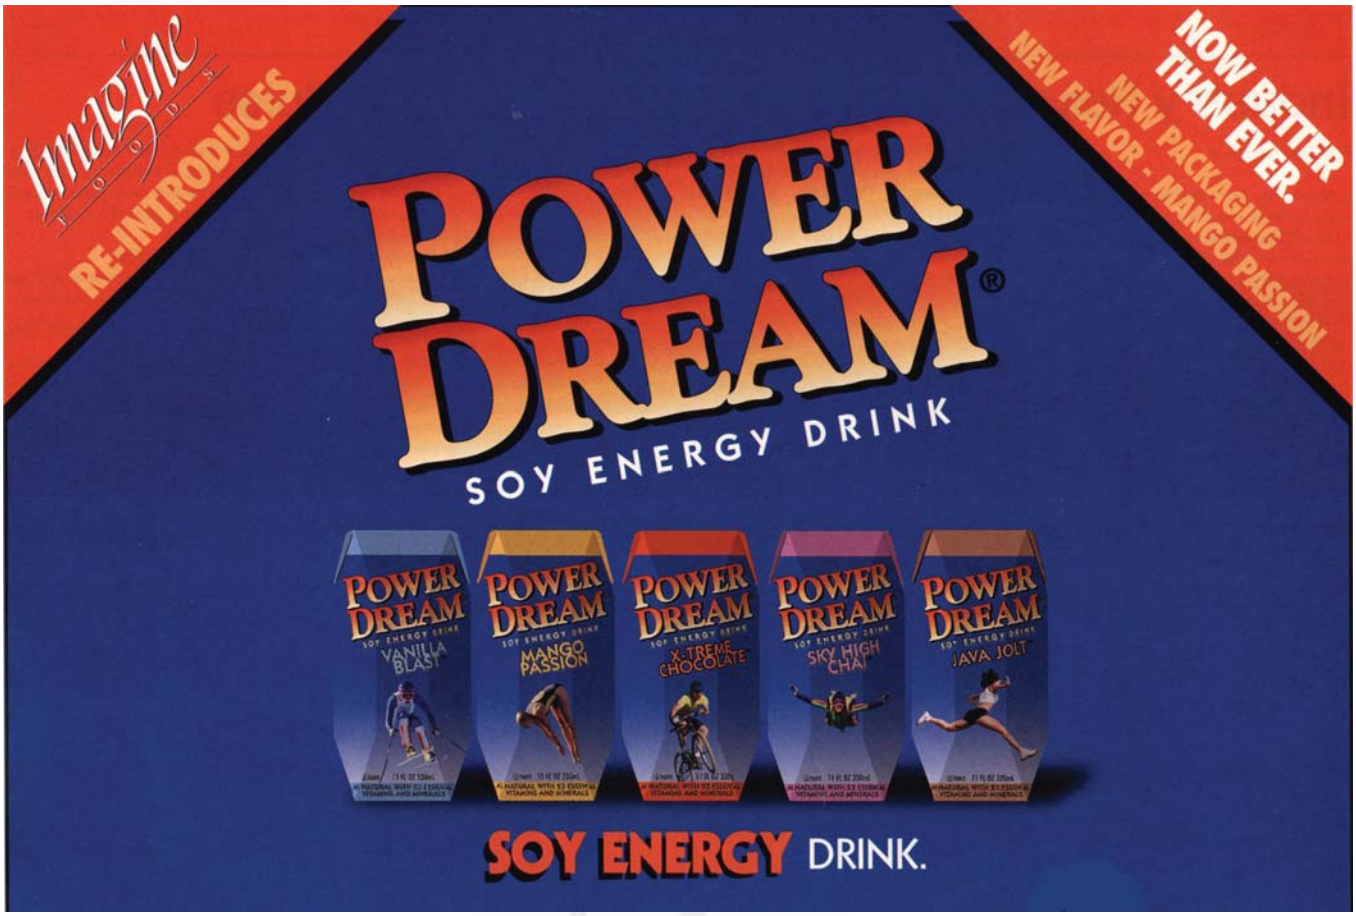
• ***Summary:*** This paper consists of 13 PowerPoint presentation graphics / frames photocopied on 13 pages. 1. Title page. 2. Main presently available industrial soy protein ingredients for the food industry (4 types of soy flours, enzymatic treated soy products, soy protein isolates, soy protein concentrates {SPC}). 3. Soy protein concentrates (three processes: Aqueous alcohol washed "traditional" {Hayes System} concentrates–about 450,000 tonnes {metric tons} per year. Acid washed concentrate–about 20,000 tonnes per year. Hot water washed concentrate–none currently produced). 4. Aqueous alcohol washed soy protein concentrates are usefully applied in (minced meat products, minced and canned fish products, meat analogs and alternatives, bakery products, dietetic foods, infants' formulas, calves milk replacers, fish and piglets feeds and pet foods, other food products). 5. Nutritive advantages of aqueous alcohol washed soy protein concentrate (6 advantages). 6. Technological advantages of aqueous alcohol washed soy protein concentrate (5 advantages). 7. Alcohol washed soy protein concentrate typical material flow. 8. Functional soy protein concentrates (3 types). 9. Typical gross analysis of traditional aqueous alcohol washed ("Hayes System") soy protein concentrate (Moisture 6.0–10.0%. Protein {N x 6.25} dry basis 68.0–72%). 10. Major world processors of soy protein concentrates (table). 11. Cost and margins–Soy protein concentrates by aqueous alcohol wash. 12. Prospective–Soy protein concentrate (Steadily growing market, about 15% per year. "Functional" concentrates with tailor made properties are expected to see rapid future growth). 13. Hayes General Technology Company Ltd.

The table of major world processors of soy protein concentrates shows: ADM (Netherlands) AAW (aqueous alcohol washed). Solae LLC–Central Soya Aarhus (Demark)* AAW. Solae LLC–Central Soya Sogip (France)* AAW. Solbar Hatzor (Israel) AAW. Shemen / Soyprotec Industries (Israel) AAW. ADM (USA) AAW. ADM (USA) Acid washed. Solae LLC–Central Soya (USA)* AAW. Solae LLC–Ceval Alimentos / Bunge (Brazil)* Acid washed. ADM China AAW.

Note: Letter (e-mail) from Daniel Chajuss. 2006. July 8. Asterisks mean that these plants that had once belonged to several firms now (2006) all belong to Solae. The main reason for the two plants using the acid wash process is that these manufacturers had soy isolate plants before they got soy concentrate plants, and this already had the equipment needed (such as a spray drier, decanter, centrifuges, etc.) to produce acid wash soy protein concentrate. The acid washing system is much less widely used today; it was a prior technology.

There is now concern among infant nutrition experts about the high levels of phytoestrogens, and their estrogenic activity, in infant formulas and foods fed to young growing people. "Thus an advantage of the aqueous alcohol wash SPC process, for certain and very special foods, is that it retains *less and not more* of the soy phytoestrogens in the final concentrate."

Nutritional advantages of aqueous alcohol washed SPC: (1) Devoid of antigenic protein components (2S, 7S, 11S proteins, glycinin and beta conglycinin). (2) Devoid of soy "antinutrients" (hemagglutinins, phytates, non-digestible sugars, saponins, etc). (3) Low in antiproteolytic enzyme activity (trypsin and chymotrypsin activity–Kunitz and Bowman Birk trypsin inhibitors). (4) Low estrogenic activity (low in isoflavones / phytoestrogens). (5) Balanced amino



acid ratio. (6) Help to reduce the risk of coronary heart disease (CHD). All these make traditional SPC better suited for making calf milk replacers, piglets starters and fish feeds, and a more nutritive product than other industrial soy protein products, especially for the above noted purposes as well as for young human infants.

It is true today that essentially all soy-based infant formulas are made from soy protein isolates. However, in the past, they have also been made from traditional SPC. So why don't isolate makers use the aqueous alcohol wash process to make isolates (with low estrogenic activity) specifically for use in infant formulas and feeding? Because it is technically difficult and costly–although it would be an ideal product for infant feeding. "Personally I believe that 'refolded-functional' soluble alcohol washed SPC would be better nutritionally, safer, and a more economical product for infants."

SPC producers do not compete (and never have competed) on the high levels of isoflavones / phytoestrogens in their concentrates, as all alcohol washed SPC has low levels of these substances. Address: Managing Director, Hayes General Technology Company Ltd., Misgav Dov 19, Mobile Post Emek Sorek, 76867 Israel. Phone: (972) 8 592925.

7947. **Product Name:** Grainaissance Rice Shake [Vanilla Soy Creme].
Manufacturer's Name: Grainaissance, Inc.
Manufacturer's Address: 1580 62nd St., Emeryville, CA 94608. Phone: 415-547-7256.
Date of Introduction: 2001. March.
Wt/Vol., Packaging, Price: 16 oz (pint) plastic bottle.
How Stored: Refrigerated.
New Product–Documentation: Ad (1/6 page, color) in Natural Foods Merchandiser. 2001. March. p. 143. "Naturally soy... Perfectly delicious." Amazake: The amazing shake!... "A great tasting, naturally sweet blend of rice, vanilla, and smooth creamy soymilk... Made with organic rice and non-GMO soy with no added sweeteners." Spot in *New Product Review* (Penton/NFM, Colorado). 2001. Spring. p. 4. "Grainaissance announces a new flavor to its line of Amazake Rice Shakes: Vanilla Soy Crème." It is made with organic rice and non-GMO soy, has no added sweeteners, and contains 32 mg of naturally occurring isoflavones per 16 oz serving.

7948. **Product Name:** Power Dream: Soy Energy Drink (Fortified Soymilk in Aseptic Cartons) [Vanilla Blast, Mango Passion, X-Treme Chocolate. Sky High Chai, Java Jolt].
Manufacturer's Name: Imagine Foods, Inc. (Marketer-

Distributor). Made in Manteca, California, by California Natural Products.
Manufacturer's Address: CNP: P.O. Box 139, Manteca, CA 95336. Imagine: 350 Cambridge Ave., Suite 350, Palo Alto, CA 94306. Phone: 650-327-1444.
Date of Introduction: 2001. March.
Wt/Vol., Packaging, Price: 11 fl oz (330 ml) Tetra Prisma Aseptic carton. Retails for $1.48 (2000/05, Open Sesame, Lafayette, California).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Ad in Natural Foods Merchandiser. 2001. March. p. 21. "Imagine Foods re-introduces Power Dream: Soy Energy Drink." A photo shows 5 packs of the various flavors against a deep blue background. "Finally, an energy bar you don't have to wash down. All the benefits of soy. Organic soybeans... Huge consumer advertising campaign. Over 65 million impressions during the spring and summer."

7949. **Product Name:** Baby's Only Organic Soy [Toddler Formula].
Manufacturer's Name: Nature's One, Inc.
Manufacturer's Address: 12 Westerville Square, Suite 308, Westerville, OH 43081. Phone: 614-898-9758.
Date of Introduction: 2001. March.
Ingredients: Organic brown rice syrup, organic soymilk powder, organic high oleic sunflower oil, organic coconut oil, tricalcium phosphate, calcium ascorbate (vitamin C), natural vanilla flavor, soy lecithin (non-GMO), calcium citrate, sodium chloride, etc.
Wt/Vol., Packaging, Price: Can.
How Stored: Shelf stable.
New Product–Documentation: Leaflet (8½ by 11 inches, black-and-white, 6 panel front and back) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2001. March 8-11. "Baby's Only Organic: Supporting Your Baby's Health Organically." On the front panel is an illustration of a can of this product. Contents of leaflet: Frequently asked questions. Nutritional comparison chart. Product description. Ingredients. Contact information. Website: www.naturesone.com.

Talk with John Falk. 2002. Sept. 27. He has heard: (1) They have a patented process for adding an enzyme to break down the complex carbohydrates that cause flatulence. (2) The product is not doing well–according to a product manager at Ross Labs.

7950. **Product Name:** OdwallaMilk [Original, or Chocolate].
Manufacturer's Name: Odwalla, Inc.
Manufacturer's Address: Dinuba, CA 93618. Phone: 1-800-Odwalla (639-2552).
Date of Introduction: 2001. March.
Ingredients: Original: Organic soymilk (water, organic

whole soybeans*), organic basmati ricemilk (filtered water, organic basmati rice*), organic oatmilk (filtered water, organic whole oats), organic evaporated cane juice*, peaches, mangoes, bananas, natural flavor, kosher sea salt, Madagascar vanilla extract, carrageenan (natural seaweed product), vitamins and minerals (tricalcium phosphate, folic acid, vitamin B-12, vitamin A palmitate, vitamin D-3, vitamin E acetate). * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 15.2 fl. oz. (450 ml), or half-gallon HTP plastic bottle. 450 ml retails for $1.69 (2001/04, Lafayette, California).
How Stored: Refrigerated.
New Product–Documentation: Ad (8½ by 11 inch, color) in New Product Review (Penton/NFM, Colorado). 2001. Spring. p. 18. "Introducing OdwallaMilk." This dairy-free product is "A delicious blend of organic soy, rice and oat milks. Nourishment at a glance: More calcium than whole milk. Good source of protein. Vitamin A & D enriched. Zero cholesterol. Drink it & thrive! No GMO. Udder(less)ly fantastic."

Talk with Odwalla customer service rep. 2001. March 30. This product was first available in stores on March 5. Suggested retail prices are: 15.2 fl oz (450 ml; single serve)

$1.69, quart $1.99, half gallon $3.49. The chocolate flavor is not available in the half gallon size. In retail stores it is sold in the Odwalla cooler and sometimes also in the refrigerated dairy case.

Product with Label (original, and chocolate) purchased at Safeway supermarket in Lafayette, California. Plastic bottle. Red, yellow, blue and black on white. Label text is the same as ad above. Soyfoods Center taste test. The Original is a delicious, very original product. The use of rice and oat milks gives the product a thick, creamy consistency like that of a milk shake. Excellent! The Chocolate is nothing special.

Brochure (6-panels, color) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2001. March 8-11. "Introducing OdwallaMilk." Gives "Four reasons for OdwallaMilk," photos of various products, nutrition facts, and nutritional comparison of OdwallaMilk (original) with whole dairy milk.

7951. **Product Name:** Pacific Heart Health (Healthy Lifestyle Drinks): [Chocolate, Tropical Sunrise, Orange Blossom Chai].
Manufacturer's Name: Pacific Foods of Oregon, Inc.
Manufacturer's Address: 19480 S.W. 97th Ave., Tualatin, OR 97062. Phone: 503-692-9666.
Date of Introduction: 2001. March.
Ingredients: Tropical Sunrise: Filtered water, oat base (filtered water, natural oat groats), organic soymilk* (filtered water, whole organic soybeans*), natural cane sweetener, soy protein isolate, oat bran, phytosterols, etc. * = Certified organically grown and processed in accordance with the Oregon Tilth standards and the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 8 oz. pack. Ready to drink.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Leaflet (8½ by 11 inches, color) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2001. March 8-11. On the front is a color photo of the label. "Promotes healthy cholesterol levels." "Contains three ingredients–soy, oats, and phytosterols–all approved by the FDA and proven to reduce the risk of heart disease by lowering LDL 'bad' cholesterol. Antioxidants (Vitamins A, C. E, and selenium) are added to protect cells from free-radical damage." "Non-GMO. Low fat, cholesterol and dairy free." On the back are nutritional facts, ingredients, and three flavors with the UPC of each.

7952. **Product Name:** Pacific Bone Health (Healthy Lifestyle Drinks): [Orange Smoothie, Strawberry Guava, Mixed Berry].
Manufacturer's Name: Pacific Foods of Oregon, Inc.
Manufacturer's Address: 19480 S.W. 97th Ave., Tualatin, OR 97062. Phone: 503-692-9666.
Date of Introduction: 2001. March.
Ingredients: Orange Smoothie: Organic soymilk* (filtered water, whole organic soybeans*), orange juice (filtered water, orange juice concentrate), filtered water, natural cane sweetener, inulin/FOS (fructooligosaccharides from chicory)... soy isoflavones, plus vitamins and minerals. * = Certified organically grown and processed in accordance with the Oregon Tilth standards and the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 8 oz. pack. Ready to drink.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Leaflet (8½ by 11 inches, color) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2001. March 8-11. On the front is a color photo of the label. "Promotes healthy bone density." "A delicious, creamy, non-dairy blend of soy and 30% fruit juices, Bone Health contains 500 mg calcium, 80 mg soy isoflavones, and essential bone nutrients like boron, magnesium, vitamins K and D along with FOS (3g/serving) to synergistically enhance calcium absorption." "Non-GMO. Low fat, cholesterol and dairy free." On the back are nutritional facts, ingredients, and three flavors with the UPC of each.

7953. **Product Name:** Pacific Fiber Balance (Healthy Lifestyle Drinks): [Berry Lemonade, Strawberry Guava, Pineapple Orange Banana].
Manufacturer's Name: Pacific Foods of Oregon, Inc.
Manufacturer's Address: 19480 S.W. 97th Ave., Tualatin, OR 97062. Phone: 503-692-9666.
Date of Introduction: 2001. March.
Ingredients: Pineapple Orange Banana: Filtered water, oat base (filtered water, natural oat groats), fruit juice concentrate blend (pineapple concentrate, banana puree, orange concentrate), natural cane sweetener, soy fiber, vegetable fiber, inulin (a fiber source from chicory root), plus vitamins and minerals. * = Certified organically grown and processed in accordance with the Oregon Tilth standards and the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: Three 8 oz. cartons per pack. Ready to drink. Retails for $1.99 (2001/04, Lafayette, California).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Leaflet (8½ by 11 inches, color) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2001. March 8-11. On the front is a color photo of the label. "Promotes regularity and a healthy digestive system." "Fiber Balance is a delightful blend of fruit juices combined with 13 grams (total) of both soluble and insoluble fiber and our own blend of antioxidant vitamins, minerals and B-complex vitamins, creating a unique and completely natural alternative to bring balance to your body." "Non-GMO. Low fat, cholesterol and dairy free." On the back are nutritional facts, ingredients, and three flavors with the UPC of each.

Product with Label purchased at Trader Joe's in

Lafayette, California ($1.99 for 3-pack). 2001. April 23. Yellow, purple, black and white on orange and red. A double silhouette shows a slender person. Contains 30% juice, and both soluble and insoluble fiber. 50% daily value of fiber.

7954. **Product Name:** So Nice Soyganic [Mocha].
Manufacturer's Name: SoyaWorld Inc.
Manufacturer's Address: Blaine, Washington 98230. Phone: 1-877-414-2078.
Date of Introduction: 2001. March.
Wt/Vol., Packaging, Price: 1 quart.
How Stored: Refrigerated.
New Product–Documentation: Leaflet (8½ by 11 inches, color, single sided) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2001. March 8-11. "So Nice... So delicious. New So Nice Soyganic Mocha. New flavor." A large color photo shows the carton and Label. "Enriched soy milk. Enriched with 14 essential nutrients & low fat. Made with certified organic soybeans. ProSoya Process." Website: www.sonice-soyganic.com.

7955. SoyaWorld Inc. 2001. Corporate profile (Leaflet). Burnaby (suburb of Vancouver), BC, Canada. 1 p. 28 cm. Single sided.
• ***Summary:*** This leaflet, printed on one side using a color printer, describes the company and its four products: So Good, So Nice Soyganic, Sunrise, and Rice Choice. No address or phone number are given. Address: 4074 Lozells Ave., Burnaby (suburb of Vancouver), BC, Canada.

7956. SoyaWorld Inc. 2001. Healthier sales, healthier profits in a heartbeat (Leaflet). Blaine, Washington. 1 p. Front and back. 28 cm.
• ***Summary:*** On the front of this glossy color leaflet are color photos of four So Nice Soyganic soymilk products in three different cartons: 1 quart gable-top, ½-gallon gable-top with screw cap, and 1 quart Tetra Brik Aseptic Slim. Nine benefits of the products are listed, incl. "No refined sugar–Soy Nice Soyganic is subtly sweetened with organic agave syrup naturally extracted from the blue cactus of Mexico." Note: This syrup has a very low glycemic index. On the back, tables show nutritional information, ingredients for each of four flavors (natural, original, vanilla, chocolate), UPC codes and case and pallet ordering information. • ***Summary:*** A glossy color leaflet sent by Patricia Smith from Natural Products Expo West. 2001. March. All recipes call for Sweet Beans (SunRich's green vegetable soybeans). Address: P.O. Box 128, 3824 S.W. 93rd St., Hope, Minnesota 56046. Phone: 800-297-5997.

7961. SunRich. 2001. SunRich: Premium whole soybeans. Your direct link to nature (Leaflet). Hope, Minnesota. 1 p. Front and back. 28 cm.

• ***Summary:*** A glossy color leaflet sent by Patricia Smith from Natural Products Expo West. 2001. March. On the cover is a large photo of wooden bowl filled with whole dry soybeans, next to soy sauce and cubes of tofu. "At Sunrich we produce and supply Identity Preserved (IP), Non Genetically Modified (Non-GMO) and Organic soybeans."

Soybean varieties for all food applications: Soymilk, tofu, soysauce, miso & natto, nimame, edamame. Address: P.O. Box 128, 3824 S.W. 93rd St., Hope, Minnesota 56046. Phone: 800-297-5997.

7962. Wildwood Natural Foods. 2001. The premier supplier of organic vegetable protein since 1980 (Leaflet). Santa Cruz, California. 3 panels each side. Each panel: 22 x 9 cm.

• ***Summary:*** Leaflet (green, yellow and red on beige) sent by Patricia Smith from Natural Products Expo West. 2001. March. Similar in design to a leaflet released in 1998. On the front panel is a square illustration of green trees growing beside a lake and reflected in its placid water. "our mission is to nourish health and well-being through the promotion of dietary and agricultural change."

The inside 3 pages: Across the bottom half is the light green silhouette of trees. "Wildwood roots (founded in 1980). The westcoast's soy dairy. Tofu: What is that stuff?, get your money's worth, know your tofu, Great, but what do I do with it? Fat from soy oil: Isn't tofu high in fat? Nutritional info for Wildwood Nigari firm style tofu vs. Calcium fortified tofu, medium style.

Panel 5: One recipe plus 18 recipe ideas. Rear panel: Partial list of Wildwood products: Organic firm tofu. Organic medium low-fat tofu. Organic soymilk (plain or honey vanilla). Braised and grilled entrees. [Tofu] Fillets and cutlets: Baked, Smoked, or Agé style, Savory, Teriyaki, Thai, Szechwan, BBQ, or Hawaiian flavors. Vegie burgers: Original, Mexican, or Wild West (Southwestern style). Tofu salads: Dill, Mediterranean, Antipasto, or Firenze. Mid-East Hummus & Baba Ganooj. "For a complete list of Wildwood products, visit our website, www.wildwoodnaturalfoods.com." Address: 1560 Mansfield Ave., Santa Cruz, California 95062; 135 Bolinas Rd., Fairfax, CA 94930. Phone: 800-499-TOFU.

7963. *SoyaScan Notes.* 2001. Safeway supermarket in California is now carrying many brands and flavors of refrigerated soymilk and rice beverage (Overview). April 2. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Before March 2001 Safeway supermarket in Lafayette, California, had never carried refrigerated soymilk; they did carry 1-2 flavors of soymilk in aseptic

cartons, always unrefrigerated and shelved in an unlikely place. Suddenly in March 2001, as part of a major expansion program, Safeway began carrying the following products in two refrigerated locations. (1) In the dairy case next to cow's milk, all in gable-top cartons: Westsoy Plus, vanilla, organic, $3.19/half gallon (equivalent to $1.60/quart). White Wave Silk (calcium enriched), chocolate, vanilla, or plain, organic, $1.89/quart, or $3.29/half gallon vanilla. Rice Dream (rice beverage), vanilla or original, organic, $3.59/half gallon (equivalent to $1.80/quart).

(2) In the Odwalla cooler at the opposite corner of the store near the produce section: Odwallamilk, original, organic in plastic bottles $1.69/15.2 oz, or $1.99/quart, or $3.49/half gallon (equivalent to $1.75/quart). Odwallamilk, chocolate, non-organic, $1.69/15.2 oz. Wildwood Soymilk, real vanilla or chocolate, organic, gable-top cartons, $1.99/quart.

By comparison: Lactaid is shelved next to soymilk in the refrigerated dairy case. Lactaid quarts are $1.99–the same price as Silk. Lactaid half gallons (fat free, low fat, or fat free) are each $3.59–$0.30 more expensive than Silk half gallons and $0.40 more expensive than Westsoy Plus.

7964. Callahan, Patricia; Kilman, Scott. 2001. Seeds of doubt: Some ingredients are genetically modified, despite labels' claims. Lab test finds altered DNA in SoyO's, Veggie Bacon, belying market pitch. No proven dangers to health. *Wall Street Journal.* April 5. p. A1-A14.
• ***Summary:*** Tests of 20 food products bearing the words "Non-GMO" on their package, commissioned by *The Wall Street Journal,* found some genetically engineered (GE) material in 11 products, and more substantial amounts in another 5 products. The largest amounts of GE soybeans were found in Yves Canadian Veggie Bacon. Yves first placed the new label on its products about a year ago, but the company isn't recalling packages already on the shelves because, according to a spokesman, there are no safety or health issues associated with GE soybeans. However the federal Food, Drug, and Cosmetic Act prohibits placing misleading labels on food products.

The non-GMO label is one of the hottest new trends in food marketing. Industry watchers believe the non-GMO segment is growing about as fast as that of organically grown products, a market worth $7.8 billion that is growing at 8 times the rate of the packaged foods market as a whole.

In late Jan. 2001, a national phone survey conducted by the Pew Charitable Trusts, found that 75% of respondents wanted to know about the presence of GE ingredients in food, and 58% opposed such ingredients. The carton of Silk-brand soymilk, made by White Wave, promises that its contents are "Certified GMO Free Soy." However, says the article, there is no such thing as "certified GMO-free." This long, excellent article discusses each of the many points at which a product can become contaminated with GE soybeans, then points out why no reasonable company should claim that none of its products labeled "Non-GMO" are 100% free. The first thing that is needed is a tolerance level, probably less than 1%.

In a letter to the editor (April 25) responding to this article, Gregory Jaffe (Co-Director, Biotechnology Project, Center for Science in the Public Interest, Washington, DC) notes that the FDA does not "approve" genetically engineered (GE) crops for humans. It does not even require notification before a GE crop is marketed. If a seed company wishes to voluntarily submit safety data on a GE crop, the FDA will review it to see that the food complies with existing laws. "The FDA should approve the safety of every genetically engineered food before it is marketed. Only a mandatory approval process will safeguard our food supply and bolster public confidence in those foods." Address: Staff Reporters, Wall Street Journal.

7965. Deogun, Nikhil; Helliker, Kevin. 2001. Suiza nears $1.5 billion deal for Dean Foods: Combination would involve big dairy processors, raise antitrust issues. *Wall Street Journal.* April 5. p. A3, A14.
• ***Summary:*** Suiza Foods plans to acquire rival Dean Foods for about $1.5 billion in stock and cash and the assumption of nearly $1 billion in debt. The deal would join America's two biggest dairy processors and create a company with about $10 billion in annual sales. Suiza's FY 2000 revenues were about 42% larger than those of Dean Foods. Suiza entered the dairy business less than 8 years ago and has become the leader consolidator of the decentralized / fragmented industry. Suiza now has a 20% share of this market, compared with 14% for Dean Foods. The boards of both companies have approved the agreement yesterday. Suiza makes a soymilk, Sun Soy. Dean Foods owns a share in White Wave that makes Silk, America's best-selling soymilk. Address: Staff Reporters, Wall Street Journal.

7966. King, Paul E. 2001. Work with soyfoods. Founding *The Soy Daily* (Interview). *SoyaScan Notes.* April 24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Paul was born in Hawaii of parents who are Theosophists and vegetarians. His father was a sculptor. Raised a vegetarian, he lived in Hawaii until age 10. Then went to law school but never passed the bar. He worked for 17 years as an administrator at Massachusetts General Hospital–the hospital for Harvard University–so it was very rigorous and professional work.

He is still largely a vegetarian, but now eats seafood. His wife, Gail, is a meat eater = omnivore.

Paul and has wife, Gail (married for about 4 years) are very excited about soy; they published a soy recipe book in Jan. 2000 (also available as an e-book that people can download from their website, or on CD-ROM). On 25 Aug. 2000 they started a website named The Soy Fan Club's

Drive-in (www.thesoyfanclub.com). The same website is now also named www.thesoydailyclub.com.

On 13 Nov. 2000 they published the first issue of a bi-weekly e-zine (Web magazine that people pay to download) named *The Soy Daily;* back issues can be found at their website. Membership in the Club, which includes the e-zine, costs $21/year. Before long, *The Soy Daily* was sent out free of charge, and began to be published once a week.

The content of the original *Soy Daily* issues covered research into the soybean itself, and use of soy in a variety of ways including food and biodiesel. Some content about soy farming was always part of *The Soy Daily.*

On 22 Oct. 2000 they began to teaching classes at Northern Essex Community College–Timothy School in Methuen, Massachusetts. They taught two classes a week on Wednesday evenings from 7 to 9 p.m. in this non-credit, adult education, special interest course. They gave soy information, taught recipes for breakfast, lunch, and dinner, and had many soy products to taste. Their first class brought in 6 students. Their largest class was 10 students beginning on 25 March 2001. The class is presently held on 3 Wednesday nights each week.

Paul and Gail got a "scholarship" (free admission) to the Natural Products Expo at Anaheim in March 2001. There they first met many people in the natural foods industry, the most memorable and impressive of whom were: (1) Brenda Oswalt of Dixie USA; formerly an anthropologist, she worked on the "Lucy" dig in Africa. (2) Peter Murry of Iowa Soy in Vinton, Iowa–very friendly.

The second generation of SunSoy soymilk is much better than the first; it has been reformulated. Their four favorite soymilks are: Sunsoy Vanilla, Vendon Cappuccino, Pacific Strawberry, and (as a plain soymilk for cooking) Vitasoy Creamy. Address: The Soy Fan Club's Drive-in, 42 Conrad St., Methuen, Massachusetts 01844-2712. Phone: 978-681-6606.

7967. Soyfoods Association of North America. 2001. Presenting: The secret ingredient for good health. Washington, DC. 6 cards with index tabs. April. 11 x 19 cm.
• ***Summary:*** Each glossy card contains a colored tab and usually a color photo or logos. The index tabs on the six cards read: Announcement (April is soyfoods month). SANA website (www.soyfoods.org). Beverages and toppings. Entrees. Ready-to-eat. Survey. Between the cards are various coupons and small promotional brochures. The cards are packaged in paperboard box 23.5 by 4 by 11 cm high. Participating companies and brands are: SunRich. Silk (White Wave). Galaxy Nutritional Foods. Soy-7 Soy Enriched Pasta (Martha Gooch). Lightlife. Westsoy (Hain). Heartland Fields. Smoke & Fire. Vitasoy. So Nice (SoyaWorld Inc. / ProSoya). Boca. In the back is a news release titled "Start your heart towards health in February–Enjoy soy" released for Heart Month in Feb. 2001. Address: 1723 U Street, N.W., Washington, DC 20009. Phone: 202-986-5600.

7968. *SoyaScan Notes.* 2001. General Mills and DuPont announce launch of new soymilk product in joint venture (Overview). May 14. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** About 8th Continent soymilk.

7969. Tellijohn, Andrew. 2001. Big G [General Mills], DuPont venture to release first soy product. *CityBusiness* (*Minneapolis, Minnesota*) 18(51):7. May 18.
• ***Summary:*** "Nothing in the healthy food industry is more en vogue right now that soy products," and General Mills Inc. (Golden Valley, Minnesota) soon plans to enter that market. Sixteen months ago General Mills announced a joint venture with a subsidiary of DuPont Co. The resulting company, 8th Continent (based in Minnetonka, Minnesota) will release its first product, soy milk, this summer. It will be available in original, vanilla, and chocolate flavors.

"Because of its respected status nationally, General Mills' entry into the so-called 'functional foods' market will legitimize the soy movement, said William Shurtleff, founder and president" of the Soyfoods Center (Lafayette, California). When General Mills puts its name on a product, that is a kind of guarantee, Shurtleff added.

7970. Severson, Kim. 2001. Jury is out on benefits of soy. *San Francisco Chronicle.* May 23. Food section. p. 1, 7.
• ***Summary:*** Expresses concern that some Americans may be overdosing on soy. People are going way overboard since the FDA announced that soy reduces the risk of heart disease. Address: Staff writer.

7971. Terman, James. 2001. Update on White Wave's Silk soymilk (Interview). *SoyaScan Notes.* May 29. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Vanilla Silk was introduced in quart and half-gallon cartons in Jan. 1996; but the word "Vanilla" did not appear on the carton until "Plain" was introduced in July 1998. Chocolate Silk was introduced in quart cartons in April 1996 and half gallon cartons in April 1998. Plain Silk [dairylike, only two-thirds as sweet as vanilla] was introduced in quart cartons in July 1998 and half gallon cartons in April 1999.

Today, half-gallons are outselling quarts; quarts are more of an introductory size. Plain [dairylike] is now the best-selling flavor. White Wave has never sold just plain soymilk with nothing added; moreover, James is not aware of any other major soymilk company that offers such a product.

Silk is doing very well financially; it is quite profitable. White Wave is working to bring their margins up by bringing their costs down, now that they have their own soymilk extraction facility, which will pay for itself quickly. Silk just

got into Walmart, which is a huge nationwide account.

General Mills is planning to introduce a soymilk named 8th Continent in July or August. It will be based on soy protein isolates from DuPont's Protein Technologies International and will be sold in quarts (32 oz) and 8 oz plastic (PET) bottles. James has heard that General Mills plans to spend a lot of money putting this new product in dairy cases nationwide.

White Wave plans to introduce Silk in an 11-ounce single-serve PET bottle (chocolate and vanilla) in July 2001.

James is very excited about the future of White Wave's baked tofu; it will be repackaged, it will be cubed to make it more convenient, and new flavors will be introduced. When America really starts to consume tofu, it will be as a baked, flavored, ready-to-eat product–that is very convenient. "We're only one Mad-Cow outbreak away from having tofu sales shoot for the stars." The sleeper is baked tofu; James thinks it could be as big as or bigger than Silk, in part because America consumes more meat than dairy products.

James has just read a very interesting book, *The Cultural Creatives,* by marketing expert Paul Ray. His premise is that these people are not connected or part of any network. Its 55 million people who all think they are unique individuals and mavericks, and don't think there is anyone else like them out there. Its a psychographic, not a demographic, profile. Financially they range from just below the very poor to just below the very wealthy. But they are not materialists and they do not subscribe to the consumer society or worldview. They are careful consumers. Address: Vice President–Marketing, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

7972. FutureHarvest. 2001. Research gives birth to Nigerian soybean industry: Tofu becomes a hunger fighter and cash earner for women farmers and entrepreneurs (Web printout). *www.scienceinafrica. co.za /may /tofu.htm.* May. Printed 27 Aug. 2009.

• ***Summary:*** The article begins: "Ask any farmer in central Nigeria which local food crop is good for her children, puts cash in her pocket, and enriches the soil, and she'll probably say 'soybean.' Then ask her how she prepares it, and she'll likely say 'as tofu.'

In just over two decades, Nigeria–the continent's most populous country (est. 148 million in 2007)–has become Africa's largest producer of soybeans and soy products. In the year 2000 Nigeria harvested about 500,000 tons of soybeans, a 20-fold increase in just over 20 years. That crop, which was valued at US$85 million, "was used to produce a variety of traditional dishes, as well as processed foods such as soymilk and specially formulated foods to help malnourished infants and children."

"A near-perfect crop: 'Soybeans are a near-perfect crop for a country like Nigeria,' says Lukas Brader, director general of the International Institute of Tropical Agriculture, IITA, one of the 16 Future Harvest centers. 'Nutritionally, they carry twice the protein of meat or poultry and contain all eight essential amino acids needed for childhood development. Soybeans are also good for the environment,' Brader says. 'Because they evolved in Asia, they are far less vulnerable to local insects than African bean crops and require fewer insecticide sprays. They also fix atmospheric nitrogen, which reduces the need for farmers to purchase fertilizer.'

"Best of all, they are affordable. In Nigerian markets, soybeans cost about one-fifth as much as other forms of protein, including dairy and fish, and are easier to store and transport. "'Those are big advantages for a crop,' Brader says. 'But to get to that stage, our researchers had to produce an entirely new plant type that could cope with high disease pressure, compete with parasitic weeds, and grow in African soils.'

"'Basically, our plant breeders had to redesign the crop,' he says. IITA soybeans, he notes, are two to three times more productive under Nigerian conditions than U.S. and Asian varieties.

"Funding for the research, some US$20 million, was provided by the members of the Consultative Group on International Agricultural Research (CGIAR), building on seed money provided by Canada's International Development Research Centre (IDRC)."

"My Second Husband: 'Soybean has been a godsend for Nigeria,' says Professor Dele Fakorede, an agricultural expert based at Nigeria's Obafemi Awolowo University. 'Our farmers are earning good money, our small industries are prospering, and our children and young mothers are benefiting from a locally-made, protein-rich food.'

"Nigerian women would seem to agree. In Benue State, a major soybean producing area in the central part of the country, women farmers often describe the crop as their 'second husband' because it helps to pay school fees and medical bills.

"'Soybeans are making it possible for a lot of women to earn their own way and achieve a greater degree of independence than ever before,' says Fakorede.

"While the new plant types have made it possible to expand soybean farming across large parts of the country, most observers agree that what sparked production was the development of soy-based food products, including a West African version of tofu. It was a Japanese researcher, Osamu Nakayama, who got the idea to use tofu as a substitute for *wara,* a traditional but expensive kind of local cheese, says Brader. 'And, of course, there were skeptics.'

"'A lot of people had doubts that we would succeed or that tofu would ever be accepted by Nigerian consumers,' Nakayama says, 'but eventually we succeeded in making a good *wara* substitute using soymilk and local plant extracts.' Nakayama worked at IITA as part of a scientific exchange program sponsored by the Japan International Cooperation

Agency (JICA).

"The idea, Nakayama says, came from watching what local village women did to prepare food for their families. 'We learned a lot through simple observation and by asking questions about traditional methods, he says.' Nakayama's 'wara-tofu' is similar in appearance to farmers' cheese or firm yogurt and has a taste and texture that's only slightly different than Asian-style tofu. Local cooks say that it is easily incorporated into traditional recipes and costs about a third as much as wara made from cow's milk.

"Today, the demand for tofu and other processed soy foods is growing at an annual rate of 20 percent, fueling a major cottage industry in rural Nigeria. A follow-up report by researchers at Nigeria's University of Ibadan points out that children who grow up in soybean-producing communities are generally healthier and suffer less malnutrition than the average Nigerian child. Improved nutrition, researchers believe, also helps to limit the spread of HIV/AIDS.

"In the places where soybeans are grown, roughly 40 percent of the income earned by women is thought to be derived from soybean production or processing. Thus far, nearly 100,000 Nigerians, three-fifths of them women, have been trained in soybean production and in the preparation of soy products by local NGOs, hospitals, and church groups working in cooperation with IITA and various government agencies.

"Currently, about 140 soy-based food products have been developed for use in Nigeria."

A color photo shows a Nigerian woman, in traditional dress, holding a plate filled with pieces of fried "wara-tofu."

7973. Shurtleff, William; Aoyagi, Akiko. 2001. The book of tofu. 2nd ed. Revised. Berkeley, California: Ten Speed Press. 336 p. May. Illust. by Akiko Aoyagi Shurtleff. Index. 28 cm. [321 ref]

• ***Summary:*** The spine has a new look, with dark brown letters on a beige background. At the base of the spine is the Ten Speed Press logo in orange.

This edition contains an updated "Appendix B–Directory of Tofu Makers" (p. 313-316, updated to 22 Feb. 2001). The copyright page and inside rear cover have also been updated; the SoyaScan database now contains 62,000 records. The preface has been expanded. Numerous other small changes have been made throughout the book. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

7974. **Product Name:** Westsoy Soy Smoothie [Banana Berry, or Tropical Whip].
Manufacturer's Name: Westbrae Div. of The Hain Celestial Group (Product Developer-Marketer).
Manufacturer's Address: New York City, New York.
Date of Introduction: 2001. May.
Ingredients: Banana Berry: Filtered water, organic soymilk

(filtered water, organic whole soybeans*), dehydrated cane juice, banana puree (banana puree, citric acid, ascorbic acid), juice concentrate blend (apple, strawberry, cherry, raspberry and blackberry), natural flavors, pectin, tricalcium phosphate, citric acid, sea salt, carrageenan (carrageenan and salt), beet juice (for color). * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 1 quart (32 fl. oz., 946 ml) aseptic Tetra Pak carton–Liter square with spincap.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Leaflet (8½ by 11 inch, color) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2001. March. First ship 15 May 2001. A color photo shows the front panel (label) of each product.

7975. **Product Name:** Westsoy Soy Shake [Chocolate, or Vanilla].
Manufacturer's Name: Westbrae Div. of The Hain Celestial Group (Product Developer-Marketer).
Manufacturer's Address: New York City, New York.
Date of Introduction: 2001. May.
Ingredients: Chocolate: Organic soymilk (filtered water, organic whole soybeans*), filtered water, dehydrated cane juice, cocoa powder, natural vanilla flavor with other natural flavors, tricalcium phosphate, sea salt, carrageenan, vitamin A palmitate, vitamin D-2, riboflavin. * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 1 quart (32 fl. oz., 946 ml)

aseptic Tetra Pak carton. Retails for $1.79 (2001/10, Lafayette, California).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Leaflet (8½ by 11 inch, color) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2001. March. First ship 15 May 2001. A color photo shows the front panel (label) of each product.

Product (Chocolate) with Label purchased at Trader Joe's in Lafayette, California. 2001. Oct. 6. This store carries both Chocolate and Vanilla. 3 by 7.75 by 3 inches. A color photo on the front panel shows a tall, foamy glass of chocolate soymilk with a straw (on which is a red spiral pattern) in it. Soy protein heart health claim on lower right front. "Excellent source of calcium. With vitamins A & D and riboflavin. Lactose and dairy free." On the back panel: "Check out Westsoy's benefits: 30 mg of isoflavones. No soy protein isolates. Excellent source of calcium. Delicious creamy taste–not 'beany' like others. A cholesterol free food. Low sodium. Totally lactose & dairy-free." Dated: 2001. Soyfoods Center taste test. Nice thickness (like a shake), but too rich and too sweet. Contains a whopping 23 gm of sugars per serving–from cane sugar! Overall: 6.

7976. **Product Name:** Westsoy Green Tea Chai.
Manufacturer's Name: Westbrae Div. of The Hain Celestial Group (Product Developer-Marketer).
Manufacturer's Address: New York City, New York.
Date of Introduction: 2001. May.
Ingredients: Filtered water, organic soymilk (filtered water, organic whole soybeans*), dehydrated cane juice, organic expeller pressed canola oil*, natural vanilla flavor with other natural flavors, natural tea blend (black tea, green tea), cinnamon, carrageenan, sea salt, guar gum. * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 1 quart (32 fl. oz., 946 ml) aseptic Tetra Pak carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Leaflet (8½ by 11 inch, color) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2001. March. First ship 15 May 2001. A color photo shows the front panel (label).

7977. **Product Name:** Westsoy Unsweetened Vanilla Soymilk.
Manufacturer's Name: Westbrae Div. of The Hain Celestial Group (Product Developer-Marketer).
Manufacturer's Address: New York City, New York.
Date of Introduction: 2001. May.
Ingredients: Organic soymilk (filtered water, organic whole soybeans*), natural vanilla flavor with other flavors. * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 1 quart (32 fl. oz., 946 ml) aseptic Tetra Pak carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Leaflet (8½ by 11 inch, color) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2001. March. First ship 15 May 2001. A color photo shows the front panel (label).

7978. Vitasoy USA Inc. 2001. Announcement of Yvonne Lo's retirement (News release). 400 Oyster Point Blvd., Suite 201, South San Francisco, CA 94080. 1 p. June 14.
• ***Summary:*** "Vitasoy USA President and CEO Yvonne Lo has resigned effective June 30, 2001. Yvonne's brother, Winston Lo, executive chairman of Vitasoy International Holdings, Ltd., will assume Yvonne's position and responsibilities until a new CEO is selected." Address: South San Francisco, California. Phone: (650) 583-9888.

7979. *SoyaScan Notes.* 2001. White Wave is suing Dean Foods and Suiza (Overview). June 15. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Dana just read an Associated Press wire stating that White Wave is suing Dean Foods and Suiza Foods Corp. Dean Foods, which is now being acquired by Suiza, owns 36% of White Wave's common stock. In an agreement with Dean Foods, White Wave has the right of first refusal to buy back this stock in the case that Dean Foods should be acquired by another company. Apparently Dean Foods and Suiza have agreed to void that part of the agreement. Suiza produces Sun Soy soymilk, a major competitor of White Wave's silk in supermarkets.

7980. Tofu Shop Specialty Foods, Inc. 2001. Wholesale price list. Arcata, California. 1 p. June 15. Front and back. 28 cm.
• ***Summary:*** Contents: Fresh tofu, water-pac tubs (firm nigari, regular calcium [sulfate], soft calcium). Fresh bulk tofu–institutional (firm nigari, regular calcium). Baked tofu–retail or institutional (marinated cutlets, sausage patties, Mexi patties, vegie patties). Smoked tofu–Smoked Stiks (original, BBQ, spicy). Fresh soymilk (natural, chocolate, ginger, vanilla). Tofu salad and spreads (eggless egg, basic everyday spread, garlic 'n dill everyday spread, sweet pickled beet dip, hot habañero carrot dip, smoked tofu spread).

Accompanying this price list are the following new and colorful self-adhesive labels: Organic Tofu (Regular, Firm, or Soft). Soymilk (Vanilla or Chocolate). Tofu Shop: Fine tofu products. Crafted in small batches from whole, organic, GMO-free soybeans. Also the following numbered vegetarian "Favorite seasonal tofu recipes": 1. Wild mushroom and asparagus frittata. 2. Tofu egg foo young. 3. Tofu 'ricotta' salad. 4. Creamy miso vinaigrette (with tofu). 5. Hunan style tofu. 6. Tofu turkey with herbed bread stuffing. 7. Almond orange cake (one layer). 8. Tofu apple

sausage. Address: 65 Frank Martin Court, Arcata, California 95521. Phone: 707-822-7401.

7981. Fetters, Luke. 2001. Sovereign foundations and educational antecedents to the Hong Kong Conference, Church of the United Brethren in Christ. Paper presented at the second annual meeting of the United Bretheren Historical Society. 31 p. Held 29 June 2001 in Huntington, Indiana. [34 ref]

• ***Summary:*** "In this paper I will present a historical overview of the United Brethren outreach to the Chinese prior to 1950, focusing on the work of three key figures who shaped a United Brethren missiological strategy for reaching the Chinese: Moy Ling, Chiu Yan Tze, and Wan Kwai Chin. All three were Chinese. All three were educators. All three were related by marriage. All three were highly entrepreneurial. And most impressive, all three displayed remarkable resilience in the face of numerous setbacks."

Chiu Yan Tze is an important figure in the history of soymilk in China and the USA. Therefore we will focus on his life, and that of his wife, Wan Kwai Ching. Here is a brief chronology: 1890 April 14–Y.T. Chiu born in Canton, China, the eldest of 9 children, into a devout Christian family with a strong Baptist heritage. His grandfather on his mother's side was the first Baptist preacher in Canton. His uncle (Mrs. Moy Ling's father) was at one time pastor of the Canton Baptist Church. His father came to Portland, Oregon, in 1855, and while studying in one of the mission schools in Portland, became a Christian; before his death he became one of the elders of the Baptist Church in Hong Kong. His mother was a teacher in the Canton Baptist School before she was married. Therefore Y.T. Chiu was a 3rd generation Christian. 1893–Chiu's father moves his family to Hong Kong, and the son studies in private schools there from 1895 to 1903. 1895 ca.–Wan born in Hong Kong. 1905–At age 15, Chiu baptized in Baptist Church in Hong Kong. 1908–Chiu leaves Hong Kong to study science and education at the University of California at Berkeley. While in school, he was an active Christian leader. He served as teacher and assistant principal of evening school in Berkeley. 1913–Chiu receives his B.S. degree in Chemistry from U.C. Berkeley. 1914–He moves to New York City to attend Columbia University. 1915–Chiu receives his MS degree in chemistry from Columbia. 1915–Chiu returns to Canton to serve as prof. of chemistry and chair of Religious World Committee at Lingnan University (then known as Canton Christian College, Baptist). 1916–Chiu and Wan are married. Her mother died when she was 12 years old. She was the eldest of 3 living children. She graduated from teacher's college at age 16. Upon graduation, she founded Ming To school for poor children in Hong Kong and served as principal for 2 years. She resigned to marry Chiu; the marriage was arranged by their families. 1927–Chiu receives his PhD degree in chemistry at Cornell University (Ithaca, New York). 1937 Aug. 31–Japanese start bombing Canton. 1938 Oct. 12–35,000 Japanese troops occupy Canton; Chiu is in Hong Kong. 1941 Dec. 8–Japanese bombing of Hong Kong begins, followed soon by occupation. Wan evacuates to Hong Kong, where she works in education, evangelism, and refugee relief. 1942-46–Chius flee Hong Kong with family, staff and students. They travel in the Chinese interior, providing education and relief work. 1946–Chius return to Canton to find demolished homes and school buildings. Their person effects are gone. They repaired, rebuilt, and started over. 1947 summer–Chiu returns to USA to teach at Huntington College, Indiana, as a guest professor. Wan supervises work in China. 1949–Communist revolution in China. In Oct. Chiu moves to Hong Kong because of his extensive ties to America. 1949 Oct. 14–Communists take control of Canton. Wan remains in Hong Kong to supervise work. 1957 March 30–Wan is permitted to leave China for Hong Kong. 1959–Chiu serves as director of Hong Kong conference until 1967, at which time the Chius retired to California. 1981–Wan dies. 1987–Chiu dies.

Includes a timeline of Dr. Chiu's life. Note: Both K.S. Lo and Y.T. Chiu lived in the village of Linshan during the war. His name: Chiu Yan-Tsz (Cantonese; he wrote it like this on all his papers) or Chao En-tz'u (Mandarin); Zhao Enzi (pinyin). She says Yan = Grace and Tsz = Given. He was a Rev and PhD; in 1927 he wrote his PhD thesis on soymilk at Cornell Univ. Address: Asst. Prof. of Educational Ministries, Huntington College, 2303 College Ave., Huntington, Indiana 46750.

7982. Monahan, John. 2001. Market Overview 2000. *Natural Foods Merchandiser.* June. p. 18, 24, 26.

• ***Summary:*** A large table titled "Natural products stores 2000 sales by category" shows that sales of nondairy beverages (soy, rice, oat, etc.) was $431 million; this category accounted for 2.8% of total sales. Sales of organic nondairy beverages were $262 million; 61% of this category was organic. The category grew at 18.4% during the year.

• ***Summary:*** Steve Demos, founder and president of White Wave, "has been honored by the U.S. Small Business Administration with the regional Entrepreneurial Success Award, which is given to individuals who have turned a small business into a large one with SBA's help."

A portrait photo shows Demos.

7984. *Soyfoods Canada Newsletter.* 2001. Who is buying soyfoods in Canada? June. p. 3.

• ***Summary:*** In Sept. 2000 Flamaglo Food Consultants commissioned a study by Omnitel on the market for soy products. The study was basically a national telephone interview with 2,000 Canadians, randomly selected. The data

was provided by Francis Lo.

Findings: Tofu was the most popular soy product; about 25% of the sample had tried it during the past 12 months. About 18% of the sample had tried soymilk and less than 7% had tried soy-based meatless patties or sausages. Only a small percentage had tried soy ice cream.

In general: About 40% of the sample had consumed one of the above four products in the last 12 months. Most current users live in metropolitan areas with a population over 500,000. The higher the person's income and/or the higher their income, the greater their use of soyfoods. Current users tend to be female.

7985. *SoyaScan Notes.* 2001. Suiza is now buying soymilk from SunRich. White Wave's plant, purchased from APV, is not yet in operation. White Wave's suit against Suiza will be conducted in Colorado (Overview). July 19. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** For White Wave, this must be difficult and expensive.

7986. Dillman, Erika. 2001. The little soy book. New York, NY: Time Warner. xiii + 190 p. Index. 15 x 16 cm. [58 ref]
• ***Summary:*** Contents: Introduction. 1. It's soy time. 2. Why eat soy? Health benefits of soy? Soy foods: Soy milk, soybean oil, soy sauce, soy meat alternatives, tofu, tempeh, miso, whole soybeans, edamame, soy nuts, soy nut butter, soy sprouts, soy ice cream, soy yogurt, soy cheese, soy flour and grits, textured soy protein (TSP), soy protein concentrate, soy protein isolate, hydrolyzed vegetable protein, infant formula, lecithin, natto, yuba, soy fiber, Cooking with soy (recipes). Notes [references]. Resources [Directory]. Glossary. Address: Seattle, Washington.

7987. *Soyafoods* (*ASA, Europe*). 2001. Alpro to build Florida factory. 12(3):2. Summer.
• ***Summary:*** Alpro NV of Belgium is planning to build its first U.S. soymilk plant in Jacksonville, Florida. It has chosen the name Belsoy for its U.S. operations and line of North American products. The plant, located in the 1,000 acre Westside Industrial Park, will be quite large (180,000 square feet) and is expected to create 59 jobs. The company is expected to hire a CEO for this specific North American plant.

• ***Summary:*** Conclusions: "Exposure to soy formula does not appear to lead to different general health or reproductive outcomes than exposure to cow milk." Address: 1. Center for Clinical Epidemiology and Biostatistics, Univ. of Pennsylvania School of Medicine, Philadelphia.

7989. Nordquist, Ted. 2001. Making tofu the hard way in Cheboksary, Russia (Interview). *SoyaScan Notes.* Aug. 28. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ted has just returned from two weeks (Aug. 4-18) in Russia working as a volunteer consultant to Soya-Ch [pronounced SOYA-chee], a small tofu company in Cheboksary, which is a city of about 340,000 people situated on the Volga River about 650 km east of Moscow–a 14-hour train ride from Moscow. "They were great people and I had a wonderful time." He was sent there by ACDI/VOCA, a volunteer overseas organization that uses American tax dollars to send American consultants overseas to help businesses that apply to VOCA for help. VOCA stands for "Volunteers in Overseas Cooperative Assistance." Website: www.acdivoca.org.

The tofu company is: Soya-Ch Closed Joint Stock Company, 42800 Chuvashia Republic, Cheboksary, Kanashskoe shosse, 19, Russia. Phone: 8352/66-93-78 or 66-92-69. Director: Alexeeva Anna Alexandrovna.

This tofu company was started in 1998 by Alexeeva, a woman who had previously been hospitalized with severe digestive problems. The doctors couldn't figure out what her problem was; she was near death. Fortunately, her closest friend had read about soy, so in the hospital she stopped consuming dairy products and started eating soyfoods. Her symptoms quickly disappeared, which proved that she was lactose intolerant. As soon as she got out of the hospital, she started a company making tofu. She is now director and she hired her husband, Alexeev Vaycheslav Konstantinovich, as deputy director, and the son of her closest friend as marketing director. They have 32 employees and make about 17 tonnes (metric tons) of tofu a year–which is not very much.

They have two Russian-made SoyaCow USM-150 semi-continuous systems. Each SoyaCow produces 150 liters/hour of soymilk, so the two lines produce about 300 liters/hour. The equipment is very poor quality (it does not use the airless cold grind process so the soymilk has a beany flavor) and the process by which they make tofu is extremely slow and inefficient because their instruction manuals are so poorly written. Each line makes only about 16 kg/hour of tofu. The equipment is made illegally in Russia with no supervision or license from ProSoya Inc., Raj Gupta's company in Canada.

Soya-Ch produces plain tofu and five types of flavored or seasoned tofu (with raisins, dried apricots, caraway, sea tangle or laminaria {*konbu*, a type of sea vegetable}, or salt). They call their tofu "soy cheese" and consumers buy it and use it like cheese. They typically slice it and serve it on bread; it is never pan-fried, deep-fried, sauteed, stir-fried, etc. It retails for about 30% less than dairy cheese–which is its most important selling point in Russia.

The company's total tofu production is about 15,000 kg/month; over 80% of this is plain tofu, which is sold in bulk to a dairy which uses the tofu as an extender for their low-fat dairy cheese. Of the remaining 20%: (1) About 30% is sold as plain tofu 125 gm packs; (2) About 50% is sold as flavored tofu (five flavors) in 125 gm packs; and (3) About 20% is sold as flavored soy cottage cheese dessert in 125 gm round cups.

To make the soy dessert: Place whole raisins or bits of pre-chopped dried apricots in the bottom of a curding vat. Run hot soymilk into the vat in three stages, adding one-third of the total nigari coagulant at each stage. The soymilk flowing into the vat stirs both the fruits and the nigari; no paddle is used for stirring. The fruit distributes itself evenly distributed throughout the curds–naturally! While the soymilk is finishing its coagulation, line a second perforated vat with a cloth pressing sack. Ladle the curd-fruit mixture into the pressing sack; whey will begin to drain out through the holes in the vat. When the sack (and vat) is full, lift the sack out of the barrel and hang it in a cold place over a drain or basin to catch the dripping whey. For best results, hang the sack in a walk-in cooler with a strong fan to hasten cooling and extend the shelf-life of the finished product. Package the fruit-sweetened curds in 125 mg cups. Serve cold as a ready-to-eat dessert. No added sweetener is needed. Ted found this latter product to be very innovative and interesting.

The company sells its tofu at all 42 supermarkets in Cheboksary, and they deliver it in their own refrigerated trucks. They do not make any soymilk for sale as such because of the expense of packaging; however they may sell a small amount in bulk. Financially, they are doing quite well.

It was very easy for Ted to show them how to make tofu correctly, and how to make many additional new products such as flavored tofu, soy yogurt, and soymilk. After Ted's visit, they plan to make soy yogurt using a 140 liter/hour yogurt plant from Israel. They expect to be able to make and sell soy yogurt for 25% less than dairy yogurt. Ted advised them to price the soy yogurt at the same price as dairy yogurt, but to periodically put it on sale at 20-25% off–a Western marketing trick! When they introduce the product, or introduce it to a new store or chain, have it on sale for one month. Then, 2-3 times per year, for one month at a time, have it on sale for 25% off; at those times, try to have demo in as many stores or chains as possible. When introducing new flavors, have the product on sale.

One big problem in Russia is the Sanitation Board. Each new product a company makes must get a permit from this department, but only after they have started to make the product. The product is then sent to Moscow where a bureaucrat must give it his stamp. "The one thing they seem to like most in Russia is stamps." Address: TAN Industries, Inc., 49 Stevenson St., Suite 1075, San Francisco, California 94105-2975; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-495-2870.

7990. **Product Name:** 8th Continent Soymilk [Vanilla, Chocolate, Original].
Manufacturer's Name: 8th Continent, L.L.C. [General Mills].
Manufacturer's Address: Box 200, Minneapolis, MN 55440. Phone: 1-800-247-6458.
Date of Introduction: 2001. August.
Ingredients: Soymilk (water, soy protein [isolate], soybean oil, calcium phosphate), sugar, fructose, potassium citrate, color added, cellulose gel, salt, dipotassium phosphate, soy lecithin, sodium hexametaphosphate, natural and artificial flavor, cellulose gum, xanthan gum, vitamin A palmitate, vitamin B-12, vitamin D, vitamin B-2 (riboflavin). Contains soy ingredients.
Wt/Vol., Packaging, Price: 1 quart (946 ml) plastic bottle with screw-on cap. Retails for $2.29 (2001/10, Lafayette, California).
How Stored: Refrigerated, 7 day shelf life.
Nutrition: Per 8 fl oz.: Calories 90, calories from fat 25, total fat 3 gm (4% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 170 mg (7%), total carbohydrate 11 gm (dietary fiber less than 1 gm [3%], sugars 10 gm), protein 7 gm. Vitamin A 10%, vitamin C 0%, calcium 30%, iron 4%, vitamin D 25%, riboflavin 25%, vitamin B-12 15%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Talk with James Terman, Vice President of Marketing, White Wave Inc. 2001. May 29. General Mills is planning to introduce a soymilk named 8th Continent in July or August. It will be based on soy protein isolates from DuPont's Protein Technologies International and will be sold in quarts (32 oz) and 8 oz plastic (PET) bottles. James has heard that General Mills plans to spend a lot of money putting this new product in dairy cases nationwide.

Talk with Dmitry Torba of Orinda, California. 2001. Oct. 8. This product is sold at Safeway supermarkets in a plastic bottle. He likes it better than Silk.

Product with Label purchased in dairy case at Safeway supermarket in Lafayette, California. 2001. Oct. 15. Plastic bottle covered with dark blue and white shrinkable sleeve. Lettering in yellow and white. On the front panel: "Simple change, better health." Low fat. Excellent source of calcium. Naturally and artificially flavored." On one side: "Shake well. Keep refrigerated. Use within 7 days of opening. ME 5¢ dep." Back panel: "8th Continent is more than a place... its an attitude about wellness. It's knowing that sticking with small changes can be more important than waiting for miracle cures. 8th Continent... A simple change that can make a difference." "Helps lower cholesterol" (heart health claim; 8th Continent contains 7 grams of soy protein per serving"). American Heart Association logo. Nutrition facts. Quality guarantee. Solae logo (green on white). "Solae is a

trademark of Protein Technologies International, Inc. Made with Solae (TM) soy protein, the soy protein with proven health benefits." "Lactose free." Note in the ingredients listing that the word "isolate" is omitted.

Talk with sales rep at 8th Continent. Their first and only product is soymilk. All three flavors come in the quart plastic bottle; vanilla and chocolate also come in 8 oz single-serve bottle. The product was launched in Aug. 2001 on the East Coast.

Note: This is America's first soymilk made with soy protein isolates rather than whole soybeans. It is packed by Jasper Products in Joplin, Missouri.

Nutrition Business Journal. 2001. Oct. p. 9. General Mills has launched 8th Continent soymilk, the first product out of its joint venture with Protein Technologies International. It competes with Silk, the refrigerated market leader.

Product (Vanilla quart) purchased at Safeway supermarket in Lafayette, California. 2003. Dec. 3. $2.49. Titanium dioxide is not listed among the ingredients. A special offers two ½-gallon vanilla bottles for the price of one = $6.00. The word "isolate" is still omitted in the ingredient listing.

7991. Demos, Steve; Fredman, Catherine. 2001. Got soy? White Wave tried and failed to force-feed U.S. consumers. Not one to cry over spilled milk, founder and CEO Steven Demos changed his soy strategy from pushing an unfamiliar product to giving the people what they want. *Hemispheres Magazine.* Aug. p. 21-23, 26.

• ***Summary:*** Developing Silk refrigerated soymilk was White Wave's "smartest mistake." The company (with sales of $6 million/year) lost $600,000 in the first six months after the product was introduced because nobody could find it.

Also contains a company history and an account of White Wave's near-bankruptcy experience in the mid-1980s. Address: 1. Founder and CEO, White Wave, Boulder, Colorado; 2. Author.

7992. Jacobi, Dana. 2001. Amazing soy: A complete guide to buying and cooking this nutritional powerhouse, with 240 recipes. New York, NY: William Morrow. An imprint of HarperCollins Publishers. xiv + 364 p. Aug. Index. 24 cm. [50 ref]

• ***Summary:*** Contents: Introduction. Ingredients and techniques. Breakfast. Smoothies and drinks. Dips and starters. Soups and breads. Salads and dressings. Wraps, burgers, and savory pies. Pizzas and pastas. Stews, casseroles, and chilis. Steaks, chops, skewers, and meat loaf. Stir-fries and curries. Seafood. Mainly vegetables. Desserts. Sources. Bibliography.

Kinako (roasted soybean powder) is called for in the recipe for Cinnamon toast (p. 59). Address: Food writer, New York, NY.

7993. Mai, Pham. 2001. Pleasures of the Vietnamese table: Recipes and reminiscences from Vietnam's best market kitchens, street cafés, and home cooks. New York, NY: HarperCollins Publishers. xii + 242 p. Aug. Illust. (Photos by Martin Jacobs, some color). Index. 24 cm.

• ***Summary:*** This is a marvelous, very original book, with real passion for food and cookery and a deep curiosity on this subject and desire to learn. It overflows with warmth, devotion, and kindness, and is full of insights about Vietnam, its food, and most of its best cooks–street food cooks. Here we see the origin of the modern restaurant and its chefs. Contains more than 100 authentic recipes and many black-and-white photos.

The Vietnamese eat fresh herbs like vegetables. The Hmong are one of Vietnam's ethnic groups.

The ancestors of today's Vietnamese migrated south from southern China in about 1500 BC. By the 2nd century BC they had annexed the country and introduced their system of government, Confucianism, and Buddhism. Over the centuries they introduced their food traditions–stir-frying, eating with chopsticks, steaming, and such ingredients as soy sauce, tofu, noodles, and ginger.

Vietnam is often divided into three culinary regions: the fertile south, the cooler central region, and the harsh, mountainous north–which suffered most from recent American war.

Important ingredients include: Bean sauce (tuong hot). Hoisin sauce (sot tuong). Soy sauce (nuoc tuong {liquid}; Brands–Pearl River Bridge, Kikkoman. Although not used as widely as fish sauce, soy sauce is a common seasoning in vegetarian and stir-fried dishes).

Soy related recipes: Vietnamese bean dipping sauce (tuong goi cuon, with ¼ cup fermented whole soybeans {tuong hot}, p. 28). Soy-lime dipping sauce (nuoc tuong pha, with 1/3 cup soy sauce, preferably light Chinese style sold under the brands Kim Lan, Bo De, or Pearl River Bridge, p. 29). Sweet soy sauce with chilies and ginger (nuoc tuong den ot, with 3 tablespoons sweet soy sauce, p. 30, 37). About soy sauces (light, dark, and sweet, p. 37. Kikkoman is considered light. There are two types of dark soy: One, also called "black soy," contains molasses and is thick. The other, called sweet soy sauce, is even thicker and sweeter).

Tofu, tomato and chive soup (canh dau hu he, with 6 ounces soft or medium tofu, p. 74). About fermented black beans [fermented black soybeans] (tau xi, an ancient Chinese seasoning, also called salted black beans, are sold in 1-pound plastic bags, paper cartons, or earthenware jars. The author prefers Yang Jiang Preserved Beans with Ginger by Pearl River Bridge).

Chapter 7 is "Return to the grandmotherland: Vegetarian favorites and meatless recipes." Of her beloved grandmother (now age 102) she writes: "When my grandfather died years ago at an early age, my grandmother was forced to raise

seven kids by herself while running the family plantation. That twist of fate turned her into a vegetarian, in part because vegetarianism is a form of merit-making" (gaining merit, duoc phuoc). "In doing so, one's wishes would be granted. In my grandmother's case she prayed for the well-being of her children." "Many Vietnamese are vegetarians who practice vegetarianism on one level or another... With the shortage of animal protein and the pervasiveness of the Buddhist influence in the culture, it is not uncommon to find many Vietnamese dishes eaten in two ways–*man* (with meat) and *lat* (without meat). Indeed almost every meat dish in this book can be made vegetarian."

Vegetarian recipes (p. 185-99, with tofu unless stated): Salad rolls with jicama, peanuts and basil (bo bia chay, with 1 {6 ounce} piece tofu and 1 tablespoon soy sauce). Salad rolls with tofu and mushrooms. About tofu and *tau hu ky* [yuba or dried yuba sticks]. Cucumber and tofu salad (goi chay). Vegetarian pho noodle soup (pho chay). Vegetable curry (ca ri chay, with 2 pieces dried bean curd skin [yuba]). Spicy lemongrass tofu (dau hu xa ot). Rice noodles with stir-fried vegetables (bun chay). Vegetarian claypot rice with ginger (com tay cam chay). Black mushrooms with bean threads in claypot (nam kho). Water spinach with tofu (rau muong xao). Twice-cooked eggplant with garlic and basil (ca tim xao rau que).

Warm soymilk with pandanus leaf (sua dau nanh, with 1 pound dried soybeans made into fresh soymilk, p. 220-21). The headnote to this interesting recipe begins: "I grew up on soy milk, but never thought of making it fresh until I started going back to Vietnam. There, fresh soy milk is sold at markets and on street corners early in the morning and late at night. Sometimes I can walk into a market and just sniff my way to a soy milk vendor. I definitely have a nose for *sua dau nanh,* especially if its been flavored with pandanus leaf."

Glossary (p. 223-32) includes: Bean sauce (*tuong*). Fermented black beans (*tau xi*). Fermented soybeans (*tuong hot*). Hoisin sauce (*sot hoisin,* incl. soybean purée). Peanuts (*dau phong*). Tofu (*dau hu*).

About the author (with portrait photo on inside rear dust jacket): She was born in Vietnam and raised in both Vietnam and Thailand. She fled Vietnam "just days before Saigon fell to Communist rule on April 30, 1975. We left with the clothes on our backs, fighting our way through the pandemonium at the airport before climbing aboard a plane that would fly us to safety." Six years ago she ventured back to Vietnam for the first time–to be with her grandmother (and give her a modern wheelchair) and to eat *pho.* Her inaugural tour to Vietnam in 2000 was televised internationally by CNN, and was frequently rebroadcast on United and Delta airlines. She has returned about once a year since then, for the same reasons but also to learn about the food and cookery from the best cooks in the country–at market stalls, not fancy restaurants. She is now chef and owner of the acclaimed Lemongrass Restaurant in Sacramento, California. She also writes and teaches. Her first book, *The Best of Vietnamese and Thai Cooking* was published in 1996. Address: Chef and owner, Lemon Grass Restaurant, Sacramento, California.

7994. Monahan, John. 2001. White Wave wants its stock back. *Natural Foods Merchandiser.* Aug. p. 2, 12.
• ***Summary:*** White Wave Inc., which has about 79% of the refrigerated soymilk market, has filed a complaint in Denver federal court against its largest outside shareholder, Dean Dip and Dressing Co., a subsidiary of Dean Foods Co. White Wave alleges that its agreement with Dean Foods requires Dean, in its proposed merger with Suiza Foods Corp., to first offer White Wave–and then other shareholders–an opportunity to purchase those shares, before it transfers those shares to Suiza. The complaint also alleges that Dallas-based Suiza, the maker of Sun Soy and Lactaid (and White Wave's main competitor in the refrigerated soymilk market), improperly induced this violation.

Dean Dip owns 36% of the common stock in White Wave–shares that it purchased for $15 million in 1999 and 2000. White Wave used this capital to expand its sales of Silk soymilk. According to a statement by White Wave in June, if Suiza gets White Wave's shares, "Suiza will have significant control rights over White Wave, including blocking rights with respect to all major corporate transactions, access to all of White Wave's proprietary information and the right to elect two of seven members to White Wave's board of directors."

Dean Foods, meanwhile, filed suit in a Chicago federal court asking the court to exempt it from the 1999 shareholders' agreement on which White Wave bases its claim to first rights to buy back its shares from Dean Dip. A second option allows Dean Dip to purchase all remaining shares of White Wave at an undisclosed price in September 2002. A small color portrait photo shows Steve Demos.

7995. *Nutrition Business Journal* (*San Diego, California*). 2001. Regional distribution depth proves key to success for Wildwood Natural Foods: Organic Growth in San Francisco Bay Area sets up a next stage of national distribution in soy and tofu. 6(5/6):25-26. Industry Overview [Aug.].
• ***Summary:*** Wildwood, which reached $8 million in revenues last year, has continued to grow at 18-20% a year. The company (incorporated in 1980) become the third largest selling tofu through the natural foods channel in the USA. This is remarkable since Wildwood products are distributed only on the West Coast.

Wildwood presently operated 13 direct distribution routes that run 3 days a week throughout the Bay Area. All of the company's products are fresh, refrigerated, and ready to eat. Most are also organic. About 70% of Wildwood's sales are natural foods stores but the remaining 30% are to some mainstream markets in the Bay Area to which it also distributes, such as Andronico's, Molly Stone's, and 30

Safeway supermarkets. A sub-distributor, Rock Island Foods, distributes Wildwood products as far north as Medford, Oregon. Additional sub-distributors in Portland (Oregon), Seattle (Washington state), and Southern California, expand Wildwood's reach to include most of the West Coast.

Wildwood is now in the process of raising money to build a new and larger factory in the South Bay to expand production and enable the company to expand eastward–with the eventual goal of going nationwide.

Soymilk is the company's best-selling product, followed by plain tofu. Soymilk also shows the fastest growth.

7996. **Product Name:** Pathmark Soymilk [Original, Vanilla, or Chocolate].
Manufacturer's Name: Pathmark Stores, Inc. (Marketer-Distributor).
Manufacturer's Address: Carteret, New Jersey.
Date of Introduction: 2001. August.
Ingredients: Original: Filtered water, whole organic soybeans, evaporated organic cane juice, natural flavors, tricalcium phosphate, sodium citrate, potassium citrate, carrageenan, tocopheryl, acetate, vitamin A palmitate, vitamin D-2, riboflavin (vitamin B-2), vitamin B-12.
Wt/Vol., Packaging, Price: 32 fl oz (1 qt) Tetra Brik Aseptic Liter Square carton with reclosable cap and foil pull tab.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Three empty cartons sent by Denis Bolger of New York, NY. 2001. Sept. 25. Each carton has the same basic front panel design, showing a stream of soymilk being poured into the top of a glass, however original has a red background, vanilla a blue background, and chocolate a brown background. "Made with organic soybeans. 31 mg isoflavones per serving. Rich in calcium. Lactose free. With vitamins A, D, E, B-2 & B-12." The right half of the back panel and the lower half of one side panel are devoted to recipes: Original has Zesty cornbread muffins, Strawberry banana frosty, and Creamy Italian dressing. Vanilla has Cinnamon honey dressing, Strawberry banana frosty, and Instant chocolate pudding. Chocolate has Chocolate cream pie, and Hot chocolate. On one panel is a heart health claim and "Quality assured: Satisfaction guaranteed or your money back."

Product with Label sent by Martine Liguori. 2007. March. Purchased at Grocery Outlet, Oakland, California. 1 quart retails for $0.99. Taste test: Too sweet. Chalky taste. Not good.
*

7997. Shurtleff, William; Aoyagi, Akiko. 2001. The book of tempeh: A cultured soyfood. 2nd ed. Revised. Berkeley, California: Ten Speed Press. 176 p. Aug. Illust. by Akiko Aoyagi Shurtleff. Index. 28 cm. [374 ref]
• ***Summary:*** This revision has completely new front and rear covers, designed and illustrated by Akiko. It contains a completely new "Appendix B–Directory of Tempeh Makers" (p. 157-58, updated to 16 June 2001). The page "About the Authors" (autobiographical) has been updated, and the original photographs have been replaced with more recent ones–reflecting the fact that Bill and Akiko separated in Nov. 1993 and their marriage ended in May 1995.

The last page, "Soyfoods Center," has been updated.

On page 176 is "The Best of Vegetarian Cooking from Ten Speed Press" (descriptions of eight cookbooks, with price and ISBN).

The inside rear cover has been updated, and now includes current information about: (1) *Tempeh Production,* a book published by Soyfoods Center about how to start and run a company making tempeh on any of four scales and budgets in North America, and on either of two scales in tropical developing countries. (2) *Tempeh and Tempeh Products: Bibliography and Sourcebook,* published by Soyfoods Center. (3) SoyaScan, the unique computerized database produced by Soyfoods Center. This database now contains more than 62,000 records from 1100 B.C. to the present, and more than 76% of all records have a summary / abstract averaging 146 words in length. A description of the four different types of records (published documents, commercial soy products, original interviews and overviews, and unpublished archival documents), and the number of each type, is given.

The title page, copyright page, and table of contents have been redesigned and updated to give the book a much more contemporary look. Other small changes have been made throughout the book. Still contains 130 vegetarian recipes–both western and Indonesian.

Ten Speed Press gave this book a new ISBN: 1-58008-335-8. Yet despite the many changes described above, the authors preferred not to have this called a "new edition" or "revised edition." Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

7998. *SoyaScan Notes.* 2001. White Wave's lawsuit against Dean Foods and Suiza: What's really happening? (Overview). Sept. 5. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** The following is a summary based on discussions with several people who are close to, and are closely following the acquisition of Suiza Foods Corp. by Dean Foods. The White Wave lawsuit is not mentioned in the 174-page report describing the proposed merger between Suiza Foods Corp. and Dean Foods Inc. sent to shareholders in August 2001. There are two real issues in this lawsuit: (1) The smaller, technical issue is whether the merger constitutes a transfer (Dean Foods is quite confident that it does not); this is partly related to the fact that Dean Dip and Dressing Co. (DDDC), a subsidiary of Dean Foods Co., owns the White Wave stock. If the merger is consummated, DDDC

will eventually become a subsidiary of Suiza. (2) The big economic issue is the agreement that gives Dean Foods the first right of refusal to purchase the remaining stock at a specified price. When this agreement was signed in August 1999, White Wave had roughly one-tenth the annual sales that it now does. Neither Steve Demos nor Dean Foods anticipated that White Wave would grow as fast as it has since the agreement was signed, nor that it would be worth as much as it now is. That agreement essentially enables Dean Foods (or Suiza) to buy White Wave for less than Demos thinks the company is worth–and Demos is probably about right as to how much it is worth. Yet at the time the agreement was signed, many at Dean Foods believed the formula had them paying much too much in the future for the remaining White Wave shares. The Silk brand has been extraordinarily successful. Its movement into refrigerated supermarket dairy cases and a ten-fold increase in sales happened so fast it was almost unbelievable.

If White Wave loses its suit, we must ask: "How is Suiza likely to relate to White Wave and Silk?" First, Gregg Engles, the founder, Chairman and CEO of Suiza is an excellent businessman, with little pride of ownership. He has already decided to give up the Suiza name and use Dean Foods as the new company's name. Morningstar is better positioned than Dean Foods to grow White Wave and Silk. However the U.S. Justice Department may very well ask Suiza to divest itself of either Sun Soy or Silk brand soymilk, since owning both would give Suiza about a 90% share of the refrigerated soymilk market. Engles would be crazy to divest Silk, which has 80% of the refrigerated grocery market. If Engles instead sells off Sun Soy he can argue that he then has no more concentration than White Wave had before the merger. Since profit margins on soymilk are much higher than those on cow's milk, Engles would also be crazy not to do everything he can to grow Silk soymilk. Morningstar will offer significant opportunities to cut manufacturing and packaging costs.

Will Demos stay on at White Wave if Suiza buy's the majority of White Wave's stock? Engles will probably ask Demos to stay, since he understands the soymilk market better than anyone in America. Steve's decision as to how long he stays will probably depend on the "fun factor" and the terms of his employment contract. He would almost certainly be restricted by a "non-compete" clause.

It is hoped that the merger will be completed by 31 Dec. 2001. People who now own Dean Foods shares will end up owning Suiza shares.

Another unrelated issue is: How much did Dean Foods help White Wave to get Silk where it is today? First, they helped a lot by providing funding that White Wave needed very much. Second, White Wave's alliance with Dean Foods probably made it easier for White Wave to get Silk into dairy cases in supermarkets. The alliance gave White Wave a kind of staying power and may have saved them a lot of money in slotting allowances. If a supermarket wants a product very much, the maker can usually avoid paying the huge slotting allowances.

7999. Thym, Jolene. 2001. A twist on tofu: New, tastier food products put the joy in soy. *Oakland Tribune.* Sept. 5. Bay Area Living section. p. 1, 6.
• ***Summary:*** This front-page story contains a long interview with Dana Jacobi, author of *Amazing Soy,* plus a large color photo showing ten different types of soyfoods. The writer has discovered that "there's a whole lot more to soy than plain tofu." A sidebar titled "Name that food" is a glossary including: Edamame, silken tofu, miso, tempeh, fermented bean curd, fried tofu balls, yakidofu, yuba, soynuts, soy sauce, soy milk. Contains four recipes from Jacobi's book. Address: Staff writer.

8000. Bramblett, Billy. 2001. Wildwood Natural Foods and Midwest Harvest merge to form Wildwood Harvest Foods, Inc. (Interview). *SoyaScan Notes.* Sept. 24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** On 24 Aug. 2001 Wildwood merged with Midwest Harvest, a small tofu company in Iowa. The new company is named Wildwood Harvest Foods, Inc. but they don't plan to "pump up that new name very much." They are an Iowa corporation, and as a result they got some investment from the state of Iowa, from a fund that is managed by the tecTERRA fund. Iowa is the biggest soybean producing state in America, and also the biggest commodity state. That's a problem, because they are on "the low end of the food chain" as it were. So the mandate of this fund is to help Iowa companies turn Iowa commodities into value-added products. Cybus Capital Markets manages the tecTERRA fund. Thus Wildwood was able to obtain Iowa public money because they agreed to make this an Iowa corporation, located in Iowa, and because Tom Lacina is an Iowa farmer, and because the company was doing at least $5 million in sales–which is why Midwest Harvest needed Wildwood.

Farm Bureaus now do a lot of investing, with the goal of giving their member farmers shares of companies that use the state's farm crops. "We're really trying to live our mission statement." Tom Lacina, who runs Midwest Harvest, is very sharp, and he has a very sharp brother, Dr. Sam Lacina, who is a pediatric cardiologist in Grand Rapids, Michigan. Billy will send a news release by an investment firm that also came into the deal. Paul Orbuch and Frank Rosenmayr are no longer with the company; their shares were purchased for cash by Tom Lacina and his brother, Sam, so that there are now still four shareholders, each owning 25% of the company.

The new company will retain both the existing brand names (Wildwood Natural Foods and Midwest Harvest–they are still "brand building") and the existing products. Tom

Lacina built his tofu factory on his organic soybean farm. The new company plans to build another tofu-making facility on 10 acres they bought at the Grinnell Industrial Park, located south of Grinnell, Iowa–about 3-4 miles from the Lacina farm. Zoning and other issues prevented the larger tofu plant from being built on the Lacina farm.

Last week from California (Billy, Jeremiah, and their wives) went to Iowa for the initial board meeting. The wives went because "this is really a family deal." The new board of directors consists of several investment people, the four principals/owners (Jeremiah Ridenour, Billy Bramblett, Tom Lacina, Dr. Sam Lacina), Van Tunstall (former CEO of McCormick Shilling, who is also on the board of Monterey Pasta and Organic Food Products), plus several other people whose names appear in a second new release. Van Tunstall, who has his own consulting firm, has been helping Wildwood with its strategic planning for the past three years. "He's been around the block many times, and he's a great guy."

There was also a ground breaking in Grinnell, Iowa, last week. The mayor of Grinnell and 65 people showed up. They had stainless steel shovels and construction hats that said "Wildwood Harvest" across the front.

Wildwood has already purchased a building in Watsonville, California. It was originally Ken Miller's Meats, then it was Alfaro's Bakery for many years.

Presently both firms are maintaining their own separate websites, but by the end of this year they will probably have a Wildwood Harvest website, which will link the two separate websites.

Tom Lacina's wife, one of the Soy Sisters, will be part of the company's marketing strategy; they have their own website.

This is how the two groups met: Tom e-mailed Billy about 18 months ago and said that he had seen Wildwood's website and heard about the company. He asked for some advice, since he was just an Iowa farmer who had built a tofu factory on his farm. Wildwood has often wished that it had built its tofu factory on the farm that produced its organic soybeans to eliminate freight bills. Billy e-mailed him back: "You're a genius for doing that; we should have done that a long time ago." Tom responded: "My wife, Alesia, probably wouldn't agree with the 'genius' part." Billy answered: "Hey, my wife's also named Alicia–but spelled differently." Tom answered: "My wife is really a graphic artist." Billy answered: "So is my wife." Tom responded: "I'm really a musician." Billy e-mailed back: "Wait a minute here, I'm really a musician too."

Billy continues: "We knew we had something going at that point, so we traded cookbooks, and aprons. He and his brother-in-law, and her wife (Francene Coons, the other Soy Sister) live on the farm in the other house. All four work on their 320-acre farm and in the tofu factory together. They are all incredibly wonderful people. Tom is an 'A-Type' who can do a thousand things and keep it all going. I have many interests but I've got to take a rest every once in a while. Tom is also a practicing attorney, formally trained in music, plays in church every week. Tom's brother, the cardiologist, had a heart attack at age 40, so now he is an expert on heart health and heart nutrition, and a great admirer of Dr. Dean Ornish. We all had a great time together."

They have been working on the merger since May of this year. The new plant in Iowa should be in operation by early 2001, at which time Wildwood's line of products will start being made and distributed from the Midwest. The distributor will be Blooming Prairie, which is Midwest Harvest's distributor to nine Midwestern states. Wildwood is also looking at wider distribution on the West Coast. They have a new sales and marketing person named Pat Deveau; she has been with Nature's Best for the past 8-10 years, is very well connected, and is working on building Wildwood's distribution and broker network.

White Wave will soon become Wildwood's competitor. Billy has known Steve Demos for years. Steve's girlfriend, Cheryl, used to work for Wildwood years ago, before she went to Mountain People's Warehouse.

Wildwood has its soymilk base made in two places: SunRich Northern and Soyfoods of America. Wildwood used to have its soymilk base formulated and packaged at the Morningstar plant (formerly Avocet) in Gustine. Morningstar kicked out Wildwood (for reasons that are not clear) so Wildwood found another co-packer–Heritage Foods, in Santa Ana. Address: Wildwood Natural Foods, 135 Bolinas Rd., Fairfax California 94930. Phone: 415-485-3940 X-47.

8001. Eden Foods, Inc. 2001. Edensoy in new six pack cases (News release). 701 Tecumseh Road, Clinton, MI 49236. 1 p. Sept. 25.

• ***Summary:*** "All Edensoy and EdenBlend one liter containers are now being packaged in 'six packs' of six liters per case instead of twelve. This new case pack is North America's first and only in the aseptic soy and rice milk category." Address: Clinton, Michigan.

8002. Carter, Rachel; Kistner, Stephanie. eds. 2001. The soy alternative. Vancouver, BC, Canada: Whitecap Books Ltd. 240 p. Illust. (color). Index. 26 cm.

• ***Summary:*** This is an attractive book, with a full-color photo on almost every other page. However it is edited by a team of people who apparently don't know much about the subject, since it contains many factual errors. It has no real author and many publishers, the main one being Murdoch Books, a division of Murdoch Magazines Pty. Ltd. (Sydney, Australia).

Contents: The soy story. Glossary of ingredients. Soy for breakfast. Breakfast in a glass. Soy for lunch. Soy for Sunday lunch. Soy for vegetarians. Note: The rest of the book is not vegetarian, containing recipes for beef, lamb,

chicken, pork, etc. Soy for dinner. Soy for parties. Soy for dessert. Soy at teatime. Cookery terms. Address: 351 Lynn Ave., North Vancouver, BC, Canada V7J 2C4.

8003. Liu, Keshun. 2001. Manuales de procesamiento de frijol soya 1: Sabor afrijolado de la soya y su control [Manuals for soybean processing 1: Beany flavor of soya and its control]. Mexico City, Mexico: Asociación Americana de Soya. 16 p. Sept. Illust. 21 x 11 cm. [Spa; Eng]
• ***Summary:*** This booklet is in both Spanish (left hand pages) and English (right). Contents: Introduction. Beany flavor and its significance in soyfood acceptance. Key causes for beany flavor formation (lipoxygenase enzyme in the presence of oxygen). Processing to control beany flavor (soymilk). Breeding to control beany flavor. Summary. Address: Liu: PhD, Monsanto Co., St. Louis, Missouri; American Soybean Assoc.: Jaime Balmes 8–2º piso, Colonia Los Morales Polanco 11510. Phone: +52 5281-0120.

8004. Robbins, John. 2001. The food revolution: How your diet can help save your life and our world. Berkeley, California: Conari Press. xxii + 449 p. Illust. Index. 23 cm. [945 endnotes]
• ***Summary:*** Contents: Foreword by Dean Ornish, M.D. Acknowledgments. 1. Introduction: What is the food revolution? Part I: Food and healing. 2. Healthy heart, healthy life. 3. Preventing cancer. 4. The great American diet roller coaster. 5. A healthy plant-based diet. 6. Got BS? 7. Unsafe on any plate. 8. Policing the pathogens. Part II: Our food, our fellow creatures [Animals]. 9. The pig farmer. 10. Old McDonald had a factory. 11. Misery on the menu. 12. Eating with conscience. Part III: Our food, our world [environment]. 13. Choices for a healthy environment. 14. Once upon a planet. 15. Reversing the speed of hunger. Part IV: Genetic engineering. 16. Pandora's pantry. 17. Farmageddon. 18. The emperor's new foods. 19. The turning of the tide. 20. Conclusion: Our food, our future.

For more information: www.foodrevolution.org.

Soy milk is discussed and praised in the section titled "Cow's milk versus soy milk" (p. 105-07). Genetically engineered soybeans are discussed in Chapter 16 titled "Pandora's pantry" (see esp. p. 310-11, 316-17). Address: John Robbins Inst. for Health and Compassion, 420 Bronco Rd., Soquel, California 95073.

8005. Soyatech, Inc. 2001. Soya & Oilseed Bluebook 2002: The annual directory of the world oilseed industry. Bar Harbor, Maine: Soyatech. 444 p. Sept. Comprehensive index. Brand name index. Advertiser index. 28 cm.
• ***Summary:*** On the cover is a rectangular color photo of a soybean in a micrometer, next to a pair of silver calipers, edamame, and exotically colored soybeans–surrounded by a wide, colorful border on a blue background. Across the bottom: "The ultimate industry resource: In print and online. www.soyatech.com.

On the inside front cover is a color ad from Tetra Pak, showing soymilk, its processing and packaging. On the first page is a full page color ad from Vigan Engineering s.a. of Belgium. "Ports and silos equipment–Ships and barges, loading / unloading." On the back cover is color ad from ADM titled "The nature of what's to come." The imaginative collage features edamame in a Chinese paper takeout box with chopsticks on one side, all inside a wok.

The Foreword states: "Our mission is to create an information platform that supports the expansion and development of the soybean and oilseed industry for all people, in all countries." Soyatech's eNews service brings industry-wide news stories to thousands of individuals and companies. "Exciting new multi-client and research studies are slated for production throughout the year." Soyatech will also "be more involved with the creation of symposiums and other opportunities to allow the exchange of ideas, technology, and innovation between industry members." Address: 7 Pleasant St., P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207.288.4969.

8006. Gonzalez, Yvonne. 2001. Teaching a tofu class in Costa Rica (Interview). *SoyaScan Notes.* Oct. 15. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** While visiting Costa Rica with a devotee of the Indian guru, Ammachi, Yvonne was invited to teach a tofu class on Oct. 3 at the only public school in the small town of Puerto Viejo, on the Caribbean coast of Costa Rica. The class was a great success. Some of the 43 people who attended were Seventh-day Adventists.

Yvonne began her preparations the day before the class. Her friend, Gia, went to a firm named Earth, located in Limón province. One of the companies that grows organic soybeans in Costa Rica on a large scale, they export large amounts of the soybeans they grow. Gia purchased 100 kg of soybeans from them. Yvonne went to the nearby ocean, got a container full of seawater, filtered it, boiled it until only the solids remained, then used the solids as nigari to make tofu the next day. At Gia's home where she was staying, Yvonne made a batch of tofu and a batch of soymilk. She then used this tofu to make Tofu Ceviché (her favorite tofu recipe, where tofu takes the place of fish; it requires no cooking). She added freshly ground cacao beans to the soymilk to make chocolate soymilk. Then she used the okara in a stir-fried dish.

The next day, she made tofu and soymilk again for the class, using a two-burner electric stove and nigari from the ocean. While the little stove was heating the soymilk, she served the three dishes she had prepared the day before. Also Margo, a friend who flew down with Yvonne from Los Angeles, demonstrated (in both Spanish and English) how to sprout and grow soybeans. She grows them in her back yard in Los Angeles. Then Yvonne passed out (free of charge) one

kg of soybeans to each of the 30 adults who took the class. The next day, at least four of these adults planted some of the soybeans in their back yards. "The ground is so fertile there that everything grows." They kept the rest for making tofu or cooking.

A number of important local people came to Yvonne's class. First was the mayor's wife. After the class "she wept with happiness–it was so beautiful." She knew what tofu was but she didn't know how to make it. She was so happy to learn that she could feed so many people for so little money using tofu made at their home or congregation. She and her family and many friends are vegetarian, so previously they had to drive 4 hours to the capital, San Jose, to buy their tofu. Of course they also had to pay for the gas and spend all that time.

Second was Carter, a Canadian man who owned the local health food store. Third was Michael, an advanced French chef who owned the local gourmet restaurant named Michael's–as well as a restaurant in Paris. These two businesses cater mostly to European and Canadian customers–who are predominantly vegetarian. These two men drive to San Jose, the capital, once every three weeks to buy tofu–and they often run out of it, as when the local electricity goes out. Fourth was a man who owns a Filipino-Chinese restaurant in town. He hadn't used tofu in any of his dishes because he didn't want to drive to San Jose to buy it. He bought a tofu kit from Yvonne and now he has started to make tofu.

Three people invented and prepared their own dishes at home and brought them to show Yvonne the day after the class. (1) A Costa Rican man of Jamaican descent made a delicious Jamaican hummus using cooked and blended whole soybeans rather than tofu. (2) Carter made his own soymilk, added finely grated coconut to it, then sold it as coconut soymilk shakes; it was delicious, without any added any sweetener. (3) Michael cooked and blended soybeans, then added some other ingredients to make a patty. He fried it then topped it with a creamy garlic sauce to make a "soy steak." He served it to Yvonne, along with other great food, at his restaurant.

Within one week, various people who attended Yvonne's class were selling organic soybeans and chocolate soymilk at the local farmers' market. Some men went to Earth, purchased 100 kg of organic soybeans, divided them up into 1-kg plastic bags, and began to sell them at the farmers' market. One of the ladies who took Yvonne's class (Rachel, an American who is a devotee of Ammachi and has lived in Puerto Viejo for 3 years) decided to make chocolate soymilk and sell it at the market.

In the capital, San Jose, organic soybeans retail for $1.30/kg and wholesale for $1.00. At least three companies make tofu there: Yohann, the well-known Japanese supermarket chain, makes it twice a week in their butcher shop. At least two Chinese markets in Chinatown make 10 kg maximum at least once a week. They sell some of at their markets (stored in cold water in a bucket) and the rest to local restaurants. People known which day each company makes tofu, so they can buy it fresh.

Many foreign tourists travel to Costa Rica. The Japanese go for the deep-sea fish and the bird watching. The most expensive establishments in the capital (restaurants, hotels, the country club) are all owned by Japanese. The Europeans and Canadians go to surf and to party. They fall in love with the country and its virgin natural beauty.

Sam Zaoui, who wants to start a tofu shop in Costa Rica, is a Frenchman presently living in Miami Beach, Florida. A year ago he visited Costa Rica, fell in love with the country, and decided to move there and try to earn his living making tofu. He recently purchased the book *Tofu & Soymilk Production* from Soyfoods Center. William Shurtleff gave Yvonne's phone number to Sam. Sam was unable to locate a source of soybeans; he especially wanted organic soybeans. So Sam called Yvonne after she returned from Costa Rica and was delighted to learn that Earth First grows organic soybeans on a large scale in Costa Rica. Sam also owns a record company in Miami and manages a very popular "roots reggae" band named Johnny Dred; the musicians are Rastafarians who do not eat meat. So when they travel, Sam has to try to find tofu and vegetarian meals for them.

Note: During the last two decades, soyfoods have made major strides in the United States. But they have not begun to realize their great potential in developing countries–such as Costa Rica. Address: 6029 LaPrada St., Los Angeles, California 90042. Phone: 213-254-1712.

8007. Alpro. 2001. Catch the great new taste coming out of Europe (Ad). *Natural Foods Merchandiser.* Oct. p. 62.
• ***Summary:*** This 8 by 11 inch color ad has a photo on the left and text on the right. "Introducing Belsoy–a new line of great-tasting soymilk products created for the whole family by Alpro Soja, a European company with over 20 years of experience in the soy business. Belsoy provides: Products produced with organic soybeans that are not derived through biotechnology. A high level of protein. Cholesterol-free, lactose-free and gluten-free products. 30 mg of naturally occurring soy isoflavones in soymilk. Exciting new products including delicious soy puddings. Strong appeal to baby boomers and the health-minded mass market.

"Our 32 fl. oz. [½ gallon] soymilk comes in original, unsweetened, vanilla, and chocolate. Our 8.45 fl. oz. soymilk comes in vanilla, chocolate, banana and strawberry. And our 4-pack of 4.4 oz. soy pudding comes in vanilla and chocolate. For more details visit us online at www.belsoy.com.

"Belsoy products are distributed by Liberty Richter, 400 Lyster Avenue, Saddlebrook, NJ [New Jersey] 07663-5910. www.libertyrichter.com. Visit us at the Natural Products Expo East, Booths 4028 and 4030, Hall D." The logo (blue,

white and green) reads: "Where great taste comes naturally."

A large color photo shows four aseptic soymilk packages in different flavors and two soy pudding packages in different flavors, floating against a sky blue background together with several strawberries, banana slices, and chocolate pieces.

Note: This is the earliest published ad seen for Belsoy. Alpro, headquartered in Belgium, is starting a soymilk factory in Jacksonville, Florida, and trying to break into the very competitive U.S. soymilk market. As of 23 Oct. 2001 the company has no phone listing in Jacksonville under Belsoy or Alpro.

8008. **Product Name:** Belsoy Soymilk [Great Tasting Unsweetened, Great Tasting Original, Great Tasting Vanilla, Great Tasting Chocolate].
Manufacturer's Name: Alpro.
Manufacturer's Address: Vlamingstraat 28, B-8560 Wevelgem, West Flanders, Belgium. Phone: +32 56 43 22 11.
Date of Introduction: 2001. October.
Ingredients: Original: Filtered water, organic soybeans*, organic raw cane sugar, tricalcium phosphate, natural flavors, sea salt, zinc gluconate, riboflavin (B-2), vitamin A acetate, vitamin D-2, vitamin B-12. Belsoy soybeans are third-party certified by ECOCERT-BE-1.
Wt/Vol., Packaging, Price: 32 fl oz (1 quart) or 8.45 fl oz. Tetra Brik Aseptic carton. Retails for $1.69 (2001/11, Lafayette, California).
How Stored: Refrigerate after opening.
Nutrition: Per 1 cup (240 ml): Calories 120, calories from fat 45, total fat 5 gm (8% daily value; saturated fat 1 gm), cholesterol 0 mg, sodium 180 mg (8%), total carbohydrate 9 gm (dietary fiber 3 gm [12%], sugars 7 gm), protein 9 gm. Vitamin A 6%, vitamin B-2 20%, vitamin B-12 15%, calcium 35%, iron 6%, vitamin C 0%, vitamin D 20%, riboflavin 20%, zinc 8%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Alpro is trying again to enter the U.S. market. Brochure (8½ by 11 inches, color, 4 p.) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2001. March 8-11. "Belsoy–The taste of Europe!" Page 1: "Our company: Belsoy products are produced at Alpro [in Belgium], a European company producing only vegetable products. At Alpro, our life is Soy. We have more than 20 years experience in the Soy business... Today, Alpro is the market leader in Europe for Soy products and one of the largest Soy manufacturers in the world. All our products are produced with organic soybeans and are GMO-free." Product range: Soymilk in quart and 8.45 oz sizes. Soypudding in 4.4 oz sizes. Website: www.belsoy.com. Sales and distribution: Belsoy products will be sold in the US through our partners American Natural Snacks (ANS; phone: 904-825-2039) for the natural food trade, and Liberty Richter (phone: 201-843-8900) for specialty food distributors and other channels of distribution. Timing: Belsoy will be available through your distributor from July 1st 2001. Color photos at the bottom of page 1 show four flavors of Belsoy soymilk in quart cartons. Pages 2-3 give ingredients and nutrition facts for 10 SKUs (8 soymilk and 2 soypudding). Page 4 contains barcodes, case and pallet information. Note: Both ANS and Liberty Richter are divisions of Tree of Life.

Trader Joe's Holiday Guide. 2001. Oct. 30–Dec. 31. p. 12. "More interesting new stuff... New! Soy milk fortified with calcium, vitamins and minerals. Original, vanilla, and Belgian chocolate." "Belsoy Soy Milks are made by one of the largest soy manufacturers in the world, with more than 20 years experience in the soy business... Belsoy Soy Milks are made entirely from organic soybeans... They contain nine grams of soy protein per serving... We were very impressed with the clean flavors of all the varieties, and thought the chocolate was terrific! Trader Joe's is the first company in the States to carry these Belgian soy milks. They come in quart (32 fl. oz) shelf stable boxes. $1.69.

Product (Original) with Label purchased at Trader Joe's in Lafayette, California. 2001. Nov. 1. 1 quart Tetra Brik. Light blue, dark blue, green, white and red. Front panel: A light blue photo in the upper right shows a mother holding two children. In the upper left is a green leaf with a drop of water on it. An illustration shows milk being poured into a glass. In a red heart at lower left is written: "Contains 9g soy Protein per serving. See side panel." The side panel states: "Diets low in saturated fat and cholesterol that include 25 grams of soy protein a day may reduce the risk of heart disease. One serving of Belsoy Soymilk provides 9 grams of soy protein... Product of France. Distributed by Liberty Richter, 400 Lyster Ave., Saddle Brook, New Jersey 07663-5910." Back panel: "Belsoy products are produced by Alpro, a European soy food manufacturer producing only vegetable products." Soyfoods Center taste test. Taste and consistency: 9. We like very much the richness, high natural protein content (9 gm/serving without using isolates), and smooth consistency of the Original soymilk. However, for us, the use of white sugar as a sweetener makes the product unacceptable. Price: Excellent. Package design: 8.

Talk with Liberty Richter (Customer Service). 2001. Nov. 5. They import, then sell to distributors. The first products arrived two weeks ago and are just now starting to appear in stores. They are not aware that the product will be produced in the USA.

8009. *Nutrition Business Journal* (*San Diego, California*). 2001. Functional Foods V. 6(10):1, 3-8. Oct.
• ***Summary:*** The U.S. retail food market in the year 2000, worth $495 billion dollars, is divided into the following eight categories, listed in descending order of size: Meat, fish and poultry $108.7 billion. Beverages $88.9 (not incl. milk or liquor). Fruit and vegetables $84.9. Bread and grains $59.7. Dairy $53.4. Packaged/prepared foods $51.7. Snack foods

$30.0. Condiments (incl. oils, dressings, spreads, sauces, spices, sweeteners) $17.6.

The top five U.S. functional food companies in terms of U.S. functional food sales ($ million) are Pepsico U.S. $3,530, General Mills $1,400, Kellogg $1,370, Kraft $780, and Coca-Cola $650. Smaller top companies include: Clif Bar $130, Stonyfield Farms $100, Imagine Foods $90, and White Wave $90. 90% of Imagine Foods' total sales come from functional foods, compared with 100% for White Wave. Imagine Foods launched a big campaign in 2001 to market Organic Power Dream Soy Energy drinks to athletes and fitness enthusiasts.

"Soy is the functional food star of the last two years with an estimated 300 soy products introduced in 2000 alone." Ingredient suppliers in the field of soy are now bearing heavy responsibility for functional food research. ADM, Cargill, Central Soya, and Protein Technologies International (PTI, owned by DuPont) are all investing in research, education, and consumer outreach–plus innovation in processing and new ingredients. One of the largest uses of soy protein is SlimFast, but the health benefits of soy are not the shopper's first consideration.

8010. **Product Name:** Trader Joe's Soy Milk [Original, Vanilla, or Coffee].
Manufacturer's Name: Trader Joe's (Marketer-Distributor).
Manufacturer's Address: Monrovia, CA 91016. Phone: 626-599-3700.
Date of Introduction: 2001. October.
Ingredients: Vanilla: Organic soymilk*, (filtered water, whole organic soybeans*), brown rice sweetener (filtered water, brown rice), natural vanilla flavor with other natural flavors, sea salt, carrageenan. * = Certified organically grown and processed in accordance with the Oregon Tilth standards and the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: ½ gallon (1.89 liters) Combibloc aseptic carton with reclosable cap. Original and Vanilla retail for $1.89; Coffee is $2.29 (2001/10, Lafayette, California).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 1 cup (8 fl oz or 240 ml): Calories 100, calories from fat 20, total fat 2 gm (3% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 140 mg (6%), total carbohydrate 15 gm (dietary fiber 2 gm [7%], sugars 11 gm), protein 5 gm. Vitamin A 0%, calcium 2%, vitamin C 0%, iron 6%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Product with Label purchased at Trader Joe's in Lafayette, California. 2001. Oct. 28. Label (Vanilla): Pink on white with purple and greenish yellow. Front panel: "Made with organic soybeans. 25 mg isoflavones per serving. Low fat. All natural. Non-dairy drink." Note the low price of these products.

Trader Joe's Holiday Guide. 2001. Oct. 30–Dec. 31. p. 16. "New! Trader Joe's Soy Milks. Half gallon $1.89." "Trader Joe is one of the leading retailers of non-dairy soy and rice beverages in the United States... Recently, we asked our suppliers to develop a new line of non-dairy soy milks that deliver great taste and an amazing value. From all the submissions we chose these... We have four great flavors: Original, Vanilla, Fat Free Original, and Fat Free Vanilla."

New cap: Talk with Corinne Streit of Tetra Pak / StirMarketing. 2005 July 3. The oblong "snap closure with a foil barrier" (a flip-up white cap with the piece of pull-off aluminum foil below it, that sometimes breaks when it is being pulled off), has just been replaced by a circular, white, "SlimCap" screw cap ("ReCap 3"; 2.8 cm in diameter and 0.8 cm high). The "SlimCap" was introduced in summer 2005. A tamper-proof feature requires a strong twist before the cap is broken from two tiny plastic prongs on one side. Below the screw cap is a circular white plastic "pull-tab barrier." When pulled (by inserting one's forefinger or thumb into the circle), it also pulls off an aluminum foil seal or barrier to the aseptic Brik Pak. This is a better design. Since about 2002 the package has been purple on white and the front panel text has read "35 mg isoflavones per serving."

New ½-gallon refrigerated package design. 2006. Jan. 22. Vanilla and Original flavors. Bill bought Vanilla. Retails for $2.99 per ½ gallon. Taste test: Flavor is excellent and color is very white, but contains "can sugar crystals" = sugar.

8011. **Product Name:** Trader Joe's Soy Milk [Fat Free Original, or Vanilla].
Manufacturer's Name: Trader Joe's (Marketer-Distributor).
Manufacturer's Address: Monrovia, CA 91016. Phone: 626-599-3700.
Date of Introduction: 2001. October.

8012. United Soybean Board. 2001. National report

2001-2002: Consumer attitudes about nutrition. Seattle, Washington. 8 p. Oct. 28 cm.
• ***Summary:*** This eighth annual nationwide survey, commissioned by USB, was conducted in July 2001 by an independent research firm in Seattle, Washington. Random telephone interviews were completed with 800 consumers. The study's margin of error is ±3.5 percent and has a confidence level of 95%.

Contents: Consumer perceptions of cooking oils. Nutritional concern and habits. Consumer awareness of nutrition terms and information. Consumers on soyfoods and health: Awareness that soy reduces risk of heart disease, where consumers get information on soy and health. Consumers consumption of soyfoods. Media sources and nutritional information. Consumer attitudes about *trans* fatty acids. Consumer perception and knowledge of organic foods. Consumer perceptions of genetically modified food, political and activist organizations, and price increases for labeled foods.

Awareness that soy reduces risk of heart disease: 28% in 1999, 35% in 2000, 39% in 2001.

Percentage of consumers who have tried various soyfoods in 2000/2001: Tofu 45%45%. Soy veggie burgers 41%/40%. Soymilk 25%/28%. Soy nuts 14%/20%. Soy protein bars 11%/18%.

Percentage of Americans that consume soyfoods weekly: 24% in 1999, 27% in 2000, and 27% in 2001. And 42% of Americans consume soyfoods once a month or more.

Note: As of Aug. 2008 this full survey is available gratis in PDF format at www.soyconnection.com /health_nutrition / pdf/.

8013. Wartinger, Lisa. 2001. School Feeding Program [in Belize]. *Plenty Bulletin* (*Summertown, Tennessee*) 17(3):4. Fall.
• ***Summary:*** "With funding provided by the Greenville Foundation, Plenty Belize is assisting parents, teachers and local and national representatives of Belize's School Feeding Program (SFP), in their mission to provide a nutritious lunch during the school day to undernourished children. Via processing workshops and presentations and distribution of printed information, Plenty is enabling SFP representatives to include soy foods such as soy milk, pinole (a soy & corn cereal), and fritter made of soy, flour and seasonings, with lunch meals. In the Toledo District, where Plenty Belize is located, malnutrition is a high risk for Mayan children. SFP meals are currently served to over 485 undernourished students at nine schools in the Toledo District. Each of the participating schools is responsible for financing its own SFP costs, and volunteer parents do the cooking. Part of Plenty's education work is to show how inexpensive it is to produce high-protein, nutritious soy foods. In Belize, 5 pounds of soybeans costs little over $1.50. Soy food products made from this amount of beans will provide each of fifty students with 15 grams of high quality protein and other essential nutrients."

A photo shows four Garifuna women as they learn how to make sot patties.

8014. *Bluebook Update* (*Bar Harbor, Maine*). 2001. Sunrich provides quality from start to finish. 8(2):6. Fall.
• ***Summary:*** The Sunrich Food Group, owned by Stake Technology, now has seven production facilities in Minnesota, Iowa, and Wyoming. Recently the company announced plans to double the capacity of its new soymilk plant in Afton, Wyoming.

8015. Fleming, Richard. 2001. Corporate profile: The roots of sustainability run deep for Sunrich. With farmers as shareholders, this Minnesota foods company has a deep regard for the land. *Natural Business LOHAS Journal* 2(4):45-46. Fall.
• ***Summary:*** The article begins: "It seems every time a physician or nutritionist urges Americans to eat healthier, soy is mentioned. Indeed, soy is a key ingredient in almost every health and fitness product on the shelf today, from energy bars to supplements for menopause symptoms. As western appreciation for the protein-packed soybean has grown, so has the success of the Sunrich Food Group, a whole grain and natural ingredients supplier that furnishes 40 percent of the soy milk in the U.S., sold under a variety of brand names. It's a market that the company says is growing at more than 30 percent annually." An estimated 60-70% of the company's revenues come from the soybean.

Sunrich was founded in Hope, Minnesota, in 1978. The company's shareholders are mainly Minnesota farmers. The company was founded on and specializes in identity-preserved (IP) grains. CEO Allan Routh notes that IP was the company's original capability, and that was how the company developed. Sunrich now also focuses on non-GMO, organic grains and grain products. An estimated 85% of the food ingredients the company produces are organically grown. From Japan, the destination of the company's first exports and still the source of about 25% of revenues, Sunrich borrowed edamame soybeans, which are marketed under Sunrich's Hearty and Healthy brand.

Sunrich was acquired in 1999 by Stake Technology (STKL) of Norval, Ontario, Canada. Stake recycles industrial materials and markets clean pulping technologies. It was a good marriage, since both companies have a deep regard for the planet. Sunrich now produces about two-thirds of its parent company's revenues. Sunrich projects sales for calendar 2001 at $75 million, up 50% from 2000, due in part to the acquisition of two companies last year: Nordic Aseptic, a packaging company focusing on private label manufacturing, and NFD, which specializes in technical food ingredient processing and R&D. Today Sunrich has about 250 employees.

Color photos show: (1) Portrait of Allan Routh. (2) A clean field of soybeans in long, straight lines over low rolling hills. (3) Two hands cupping yellow soybeans against a background of yellow soybeans.

Note: Talk with SunRich. 2001. Nov. 6. The company name should be written "SunRich" not "Sunrich"–as it is throughout this article.

8016. Golbitz, Peter. 2001. Soyfoods sales experience strong growth in 2000. *Bluebook Update* (*Bar Harbor, Maine*) 8(2):1-2. Fall.

• ***Summary:*** A new report, titled "Soyfoods: The U.S. Market 2001," by SPINS and Soyatech, Inc., in association with Arthur D. Little, Inc., gives data for the year 2000. It shows that the category grew by 21.1% to reach $2.77 billion during the year 2000; sales are projected to grow by 15-25% during the year 2001. Since 1995, dollar volume for the category has grown 250%, with double-digit increases every year. The top five soyfoods categories, accounting for 86.5% of total U.S. soyfoods sales, were: (1) Meal replacement beverages and powders. (2) Energy bars. (3) Soymilk. (4) Meat alternatives. (5) Tofu.

New trends: (1) Consumers are now buying more soyfoods products at supermarkets and other mass-market stores than at any other channel; sales here grew more than 30% in 2000. Refrigerated soymilk sales grew more than 500% during 2000, reflecting their new positioning in the dairy case next to dairy milk.

For more information on the report contact SPINS at phone 415-957-4410.

8017. Hain Celestial Group, Inc. (The). 2001. Annual report 2001. Melville, New York. 36 p. Nov. 28 cm.

• ***Summary:*** Net sales for the year ended 30 June 2001 were $412.880 million, up 2.3% from $403.543 million in 2000. Net income in 2001 was $23.589 million, way up from a loss of $17.097 million in 2000, and 74.5% higher than the previous net income high of $13.517 million reached in 1999.

The company now markets 26 brands with over 1,500 different products. "We continue to bring new organic products to market, as well as foods and snacks free of genetically engineered ingredients (GEIs).

In June 2001 the company acquired Yves Veggie Cuisine in Vancouver, BC, Canada. This gives Hain a strong base for growing its Canada operations. Yves has been extremely successful in Canada and the U.S. with its refrigerated meat and cheese alternatives. Hain will soon launch many of its U.S. products under the Yves brand in Canada, and also introduce many new product categories (p. 2).

"Soy beverages continue to be the largest natural food grocery category, and Westsoy has increased its #1 leadership position in aseptic products by growing 9.5% in the last 12 months in the grocery channel alone. This has been at the expense of both long-standing competitors and new entrants... Westsoy expanded to new beverage varieties including soy-based shakes and smoothies, and new refrigerated Westsoy is gaining in both distribution and sales velocity. We now also have the distribution network in place to aggressively support and merchandise the refrigerated section of natural food stores and supermarkets" (p. 3).

Photos show: (1) Westsoy, all natural soymilk beverages (p. 12-13). (2) Yves all natural soy protein products, incl. Veggie Bologna Slices, Veggie Ground Round, Good Slice (cheese alternative), Good Dog (hot dog alternatives), and Canadian Veggie Bacon. (p. 14-15). Yves "continues to lead the North American fresh meat alternative category with exceptional growth in both U.S. and Canadian fiscal markets in fiscal 2001. Yves led category growth with the introduction of new 'Great Tasting' products... Using Yves' strong brand name and distribution network in Canada, we will roll out over 70 new products in the Canadian market in fiscal 2002."

Accompanying the annual report is a "Notice of Annual Meeting of Stockholders and Proxy Statement" (17 p.). Irwin Simon, the founder and CEO, age 43, had the following annual compensation: Salary: $460,000. Bonus: NA. Other compensation: $5,400. Andrew Jacobson, president of the company's Natural Products Group, earned a salary of $247,500. A color photo (p. 2) shows Irwin Simon pushing a shopping cart filled with Hain-Celestial products. Address: 58 South Service Road, Melville, New York 11747. Phone: 516-237-6200.

8018. *SoyaScan Notes.* 2001. Chronology of major soy-related events and trends during 2001 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** April 12–Bill Bolduc, founder of Eden Foods and natural foods pioneer, dies in Southern California.

April 17–Martha Stewart, on her popular nationwide TV program *Living,* has a very positive segment on South River Miso Co.

April 18–Richard Rose, a soyfoods pioneer, sells Rella Good Cheese Co. to Tree of Life. He retains his company HempNut, Inc. in Santa Rosa, California. His Hempeh (hempseed tempeh) still contains soy.

May 11–The Kerry Group (of Wisconsin and Iowa) purchases Iowa Soy Specialties, LLC of Vinton, Iowa.

June 12–The Hain Celestial Group acquires Yves Veggie Cuisine (Vancouver, BC, Canada).

Aug. 24–Wildwood Natural Foods (Fairfax and Santa Cruz, California) and Midwest Harvest, Inc. (Grinnell, Iowa) merge to form Wildwood Harvest, Inc. Iowa Agricultural Finance Corporation (IAFC) invests $3.3 million in the new company, and the Iowa Farm Bureau Federation (IFBF) invests an additional $700,000. This investment will be used to build and equip a 20,000 square foot soyfoods plant in Grinnell and to remodel and equip another 20,000 square

foot soyfoods plant in Watsonville, California.

Aug. 3–Bunge, in its initial public offering (IPO), raises $278 million by floating 23% of its shares on the New York Stock Exchange. Bunge his been a private grain trading company since it was founded in 1818 in the Netherlands by Johann Peter Gottlieb Bunge.

Sept.–SunRich's new soymilk plant in Wyoming starts production. By Nov. the plant is at full capacity and expansion begins.

Oct.–The Coca-Cola Co. acquires Odwalla, Inc. of California for $181 million. Odwalla has annual sales of about $130 million, mostly in fresh, refrigerated juices plus some delectable soy beverages.

Oct. 21–The U.S. National Organic Program and its standards take effect.

Nov. 4-7–Fourth International Symposium on the Role of Soy in Preventing and Treating Chronic Disease held at San Diego, California. General chairpersons and proceedings editors: Stephen Barnes and Mark Messina.

Dec. 10–The Hain Celestial Group, Inc. acquires Lima NV, the leading Belgian natural and organic foods manufacturer and marketer, and its Biomarché operations. Hain appoints Lima's Chairman, Philippe Woitrin, as Managing Director of Hail Celestial Europe. Lima is also a European pioneer in macrobiotic foods and soyfoods.

Dec. 11–Ralston Purina Co. (St. Louis, Missouri, a soy pioneer) is acquired by Nestle SA for $10.1 billion cash; on this date the deal is approved by the U.S. Federal Trade Commission. The new company is named Nestlé Purina. The merger brings together such household names as Ralston's Dog and Cat Chow and Nestle's Friskies cat food and Mighty Dog brands.

Dec. 24–The Federal Trade Commission approves the merger of Dean Foods and Suiza Foods Corp. (which owns 14% of Horizon Organic Dairy). A federal judge throws out White Wave's lawsuit arguing that White Wave has the right to buy back its own stock at the market price before the merger.

In 2001, for the first time in modern history, the USA lost the distinction of supplying more soybeans and soybean products (oil and meal) than all other countries combined. This year it supplied about 46% of the world's soybean exports. South America (mainly Brazil and Argentina) now supply more than 50%. Devalued currencies in Brazil (the *real*) and Argentina (the *peso*), plus the strong U.S. dollar, make it difficult for U.S. exporters to compete based solely on price. To compete in the future, U.S. growers must find a new strategy, which will focus on soybean quality.

8019. *ADM Health & Nutrition Update* (*Decatur, Illinois*). 2001. Continued interest in soy products, according to a recent survey. 3(3):5. Dec. [1 ref]

• ***Summary:*** The following are results from a survey conducted for the United Soybean Board, based upon a nationwide telephone of 800 adults 18 years and older.

Consumers who believe soy oil is healthy 88%.

Consumers who are aware of tofu 82%.

Consumers who are aware of soymilk 78%.

Consumers who use soy products at least once a week 27%.

Consumers who believe soy products are healthy 69%.

Consumers who are aware of specific health benefits of soy 39%.

8020. Tale of tofu. 2001. Television broadcast. Canadian TV, Channel 1, The Body, Mind, and Spirit Channel. 1 hour. Dec. 2001.

• ***Summary:*** This is a unique color documentary about tofu in China, narrated by John Culkin (with a few English subtitles when Chinese are speaking), written by Zoe Siu Moi Yee and Lo Wing Yi, directed and executive produced by Tely Fung Wing Chuen, with photography by Ko Chiu Lem. Copyright 2000, it was broadcast in Canada in Dec. 2001. The cinematography is very well done, interesting, and often beautiful. Although the narrative contains many errors and much strange and condescending language, it also contains some new information, especially about unusual types of ethnic or regional tofu varieties. However tofu is presented as an ancient, exotic, foreign food, with no suggestion that it might become part of Western diets.

The story begins: In the "epic struggle for survival, one food has emerged the champion of the poor during the centuries of hardship. Inexpensive and yet nutritional, it is the humble bean curd–tofu." It is "rich in amino acids and anticarcinogens." "At once a much-needed protein supplement and a veritable health food for the poor, bean curd is an oddity in its own right. And if legend has it right, then maybe tofu is a manna from heaven for the Chinese.

"The mythology of tofu begins with the diminutive and unimpressive soya bean." In Guizhou province (in southwest China), despite the harsh weather and rough terrain, soybeans grow well. In the village of Shenlin "soyabean constitutes the staple food of the people." All the families in Shenlin know how to make tofu but only 4 make and sell it (for 1 yuan/catty) to earn a living. One "old woman has devoted her life to the art of tofu-making, not so much for the income as for the pleasure of keeping up an old tradition." As pasta is to the Italians, so where you find Chinese you will find tofu. Today most of the tofu in China is made from soybeans imported from the USA and South America.

The Chinese greatly enjoy cooking; more than 30 products are derived from tofu. For example, crispy bean curd is used in Chinese hot pots. Pressed tofu is eaten during Chinese New Year in Nanjing.

Two sisters of the Miao minority hill tribe make tofu starting at 8:00 each evening. The first step is to make soyamilk, which can provide a "valuable nutrition supplement to children in poverty-stricken areas." Soymilk

must first be boiled thoroughly (usually in a large wok-shaped container) before it is sold at the market. In rural communities, where central heating is a rare luxury, "many Chinese start the day by warming up with hot soymilk and Chinese-style fried doughnuts." The Miao sisters sell soymilk in plastic bags to make it easier to handle. They make 600 packs each night; it is ready for distribution to retailers at dawn.

When hot soymilk cools, a thin layer forms on its surface. This "looks like a pale wrinkled pancake" and is called "bean curd skin" [yuba]. It is one of the most expensive soya products and only a few good-quality (transparent) pieces can be obtained per batch of soymilk. The rest is considered a lower grade product due to color deterioration which causes the lower layers to gradually turn opaque. Though it is an extravagance, those who love its flavor and texture find it well worth the expense. Modern technology now makes it possible to mass-produce bean curd skin.

"In the half-forgotten village" of Kaili, in Guizhou province, the art of making pressed bean curd still thrives. "Plaster of Paris catalyzes the ingredients and coagulates the soyamilk. Surprisingly, the process has no adverse side-effects." Various local flavoring agents are added, resulting in a line of "dried of products." Regular flavors include marinated bean curd and pungent bean curd. Exotic varieties include cowhide bean curd and tea-flavored bean curd. These are sold as snacks in local markets.

Curing the tofu with woodsmoke enables it to be preserved for 7 more days. Since the smoking process is time consuming, it is fast becoming obsolete, and it costs an extra 4 cents per catty of tofu. Making pressed bean curd requires "back-breaking labor. Each day these girls must stand in the sweltering heat of the smokehouse for 13 hours in order to make 500 catties of pressed bean curd." No effort is spared in making these "edible little bricks of bean curd.

We can try to preserve tofu "or we can let it rot" to make fermented bean curd. The tofu is left to mold for several days is a process "not unlike that of making cheese. The workers spread a kind of mold onto the surface of the bean curd, which is then stored at a temperature of 25-30ºC for 3 days. A layer of thin white hair begins to sprout on top of the bean curd." This tofu is then stored in large jars for 3 months while fermentation takes place, breaking the protein in the tofu down into amino acids. "Sometimes the bean curd is wrapped in mustard leaves and stored for 12 months" to create a special product. In China "it is believed it was not human beings, but apes, that first discovered the joys of fermented food"–according to legends in ancient literature. Chinese greatly enjoy wine, as well as bean curd. "It adds a certain flavor to otherwise harsh rural lifestyles. Here, to make poverty bearable, the saying goes, 'All you need is one piece of fermented tofu for one meal and a bottle of fermented tofu to last the year.'"

In its heyday, a little village in Anhui province (eastern China) was home to about 200 families "solely engaged in making tofu." "It is famed for producing the best and most sought-after in China." Concerning the origin of tofu, "most Chinese generally subscribe to the legend of a certain feudal lord, Liu-An of Huai-Nan. Two thousand years ago, during the Han dynasty, Liu-An searched far and wide for the fountain of youth. He believed he could discover the secret of immortality and turn it into a magic pill. When his valiant efforts failed, he threw his half-finished potion into a river in disgust. Natural plaster in the river chemically reacted with the mythical ingredients. And so it was that the first block of bean curd was bestowed upon humanity." The legendary location of his famous experiment is where the "tofu village" stands today. The little stream of historic fame still runs through the village. In its water, the people "wash their clothes, clean their shoes, and prepare the beans that will be made into tofu." One catty of soybeans will yield as much as 3-5 catties of tofu. "The people of this village are content that theirs is the original and authentic recipe for tofu. They have inherited a gift from history." The myth of Liu-An has secured this obscure little village its place in Chinese history.

Many Chinese use bicycles or walk with a shoulder pole to carry their tofu to the nearest market. Some leave home as early as 5:00 in the morning and walk for 2 hours. Today, mass-produced tofu in China is driving village tofu makers out of business.

Freshness is tofu's strength, but also its weakness. "Tofu has a short shelf life and cannot be taken on longer journeys. Even the highly pungent preserved bean curd needs to be eaten fresh. This bean curd, with its forbidding coloring and pungent aroma, can only be found in Nanjing. This brown, smoked bean curd is a "dry" variety with a special, and no less enticing smell."

To make pungent black tofu, the beans are ground in a mechanical grinder, the soya mixture is first placed in a U-shaped rattan mold, immersed in a large pot, then marinated in a special sauce (made from a centuries-old recipe including anise, cinnamon, peppercorn, and black sesame seeds, in wide-mouth earthenware vats, 3 feet in diameter) to produce its unique color and flavor. This tofu is part of the famous Qinghai cuisine of Nanjing, named after the Qinghai River. To preserve its unique flavor, it must be steamed before it is rinsed. Aficionados of pungent black tofu "agree with most visitors that its bold smell evokes the odor of football [soccer] shirts after a tough game." Continued.

8021. Weed, Susun S. 2001. New menopausal years: The wise woman way. Woodstock, New York: Ash Tree Publishing. xxiii + 280 p. Dec. Illust. Index. 22 cm. [102* ref]

• ***Summary:*** Soy is discussed throughout this book but sources are rarely cited. When they are cited, we insert them below. For heavy bleeding (flooding) during the menopausal

years: To nourish and tonify, avoid tofu, soy drinks, and soy protein powders (p. 9-10). For uterine fibroids: Consume lignans, which are anti-estrogenic phytoestrogens, found in all whole grains and beans–including soy (p. 15). Building better bones: Exercise regularly, eat calcium-rich foods, and avoid calcium-leaching foods such as soy "milk," tofu, coffee, alcohol, and white flour products (p. 24). Calcium: Caution–"Unfermented soy (e.g. tofu) is especially detrimental to bone health being protein-rich, naturally deficient in calcium, and a calcium antagonist to boot (p. 28). Beware of calcium antagonists, foods that interfere with calcium utilization. Avoid consistent use of unfermented soy products, including tofu, soy beverages, and soy burgers (p. 29; see p. 163).

Phytosterolic, phytoestrogenic foods: Whole grains and beans are good sources. "Caution: Beans must be cooked or fermented to remove anti-nutritional substances. Tofu and soy 'milk' are not recommended" (p. 70).

Red clover has ten times more phytoestrogens than soy, as well as much more bone-building minerals, such as calcium and magnesium (p. 71). Sea vegetables are second only to flax in concentration of lignans. Seaweeds, not soy, are the real secret of health in the Japanese diet (p. 72). "The phytoestrogens in *dong quai,* like those in soy, promote the growth of cancer cells in petri dishes" (p. 73). Phytoestrogenic herbs: Fermented soy products (miso, tamari, tempeh), ground flax seeds, whole grains, etc. are rich in hormonal precursors and phytoestrogens. Use daily to ease menopausal symptoms, prevent cancer, and lower heart disease risk (p. 94). Lack of vitamin B-12 doubles the risk of severe depression for older women; tofu and soy beverages interfere with its absorption (Fallon 1999) (p. 114).

Preventing breast cancer: 75% of all breast cancers occur in women over age 50. Reduce use of seed oils, such as soy oil. For each 5 gm of polyunsaturated fat (from vegetable oils), risk of breast cancer rose by 70% (Wolk 1997 [sic, 1998]) (p. 145). Eat more beans: "There is a relationship between the large amount of *fermented* soy products (miso and tamari) in the Japanese diet and low incidence of breast cancer. But no relationship has ever been shown between the consumption of processed, fake, imitation soy foods, and breast cancer reduction. Soy beverage is used moderately, or not at all, depending on the specific Asian country" (p. 146).

Herbal allies: Red clover is everything you thought soy would be with none of soy's drawbacks. It contributes to bone health, normalizes the thyroid, and prevents and counters breast cancer. "So do miso and tamari, but not other soy foods. Red clover contains more active phytoestrogens in greater quantity than soy... Red clover contains all four of the major estrogenic isoflavones; soy has only two of them. A cup of red clover infusion (not tea) contains ten times more phytoestrogens than a cup of soy beverage, is richer in calcium, has less calories, and contains no added sugars" (p. 161).

The section titled "Soy" (p. 163-64) praises fermented soy foods (miso, tamari, tempeh, natto) but is quite critical of tofu, soy milk, and "fake soy foods" (burgers, hot dogs, soy cheese, etc.). Soy can reduce hot flashes and prevent heart disease; fermented soy foods can protect against breast cancer. Soy is not a good source of calcium and it is deficient in fats needed for healthy brain/memory functioning. "Soy protein isolate, textured vegetable protein, isolated isoflavones–processed soy foods come in more forms than I can list. I eat miso and tamari freely, tofu and tempeh occasionally, and other soy products not at all. Dosage: 50-200 grams of isoflavones per day, preferably from food. Caution: Excess soy can cause liver damage and is said to feminize men. Soy may be difficult to digest, may cause allergic reactions."

Interstitial cystitis: Tofu may cause problems (Ford 1999).

Heart healthy: Soy, whole grains, vitamin E (from foods), essential fatty acids, and seaweeds are helpful (p. 210).

Osteoporosis risk factors: Being a vegetarian or vegan who eats a lot of tofu or soy beverage (p. 218). "Eliminate soy products except tamari and miso. (Unfermented soy prevents you from utilizing calcium.)" (p. 220).

Aching joints: A tofu poultice may help (p. 229).

Vitamins and minerals for the menopausal years: Vitamin B-12, calcium, and iron are depleted by unfermented soy products (p. 248, 250-51).

Note: The author does not cite a single scientific publication to support her many criticisms of soyfoods. In fact, the scientific literature does not support her criticisms. It is well known that the author is an admirer of Sally Fallon. Address: P.O. Box 64, Woodstock, New York 12498-0064.

8022. Winter, Metta. 2001. The man behind soymilk's success: Winston Lo MS '67 a chairman of Vitasoy International, a food processing company that sells soymilk and soy foods in 26 countries. *Agriculture and Life Sciences News* (*Cornell University, Ithaca, NY*). Dec. p. 4.
• ***Summary:*** Keith Steinkraus, a microbiologist at Cornell Univ., recruited Winston Lo as a graduate student. Lo spent two years developing a novel, high-yielding process that produced soymilk with a more pleasing taste. Today in Hong Kong soymilk is popular as a substitute for milk but also as a soft drink, second only to Coca-Cola. Worldwide, 1.5 million individual containers of Vitasoy soymilk are sold in 26 countries each day.

The person who has most influenced Winston's life is his wife, Jeanette. Together they raised two daughters, both Cornell graduates (Joy '93 and May '97), who they hope will someday join the family business.

A sidebar describes how Winston Lo has helped Cornell. In 1994 he established the Vitasoy and Lo Fellowship in Food Science at the Geneva experiment station with a

generous endowment. The interest income from this fund provides support for a graduate student in the Dep. of Food Science and Technology at the experiment station. A photo shows Winston holding a cop of soymilk latte.

8023. Hutabarat, L.S.; Greenfield, H.; Mulholland, M. 2001. Isoflavones and coumestrol in soybeans and soybean products from Australia and Indonesia. *J. of Food Composition and Analysis* 14:43-58. *
• ***Summary:*** Gives levels of daidzein, genistein, and coumestrol for the following soybeans and commercial soyfood products: Soybeans (USA, Indonesia, Australia: McKenzie's, Bowyer Riverina NSW), Fresh soybeans [edamame] (Indonesia, Imported from China), Canned soybeans (Australia), Soymilk products Australia (So-Good, So-Good lite, Good Life, Soy drinks No Frills, Soy drink Sungold, Vitalife Natural foods, Vitasoy Vitasoy Int., Natures, So Natural, Soya drink, Instant soy powder), Soymilk from Indonesia (Susu Kedalai Mony, Soya bean milk, Susu Kedalai traditional), Tofu products from Australia (Hard, Silken, Smoked, Firm, with tempeh, Cutlets, Nigari, Organic), Tofu from Indonesia (Traditional, Silken, Tahu Tau Kwa, Skake).

8026. Davis, Brenda; Grogan, Bryanna Clark; Stepaniak, Joanne. 2001. Dairy-free & delicious. Summertown, Tennessee: The Book Publishing Co. 160 p. Index. 21 x 18 cm.
• ***Summary:*** Contains over 100 creative vegan recipes for managing milk allergy and lactose intolerance. Nutritional information by Brenda Davis, R.D. Recipes by Grogan and Stepaniak. Contents: Introduction. 1. Lactose intolerance. 2. Milk allergy. 3. Building strong, milk-free bodies. 4. Superb substitutes. 5. Dairy-free dining: Travel tips. Natural

foods for dairy-free cooking [glossary]: Agar, arrowroot, brown rice syrup, liquid smoke, mirin, miso, nutritional yeast, seitan, soy flour, soy protein isolate powder, soy sauce (tamari), tahini, tempeh, tofu. Dairy-free & delicious recipes: Homemade dairy-free spreads, uncheeses, and milk. Sauces. Breakfast. Salads and dressings. Soups. Main dishes. Desserts.

With this book, you can make any "dairy product" you can imagine without using dairy. The most widely used ingredients are: Tofu (used in more than 70 recipes!). Soymilk, rice milk, and other dairy-free milks. Nutritional yeast.

8027. Eden Foods, Inc. 2001. The history of Eden Foods. Clinton, Michigan. 3 p. Unpublished typescript. Undated.
• ***Summary:*** This chronology (1967-2001) begins as follows: "1967–Michael Potter and a small group of students on the Univ. of Michigan campus, begin making collective, small orders of natural foods from two of the largest wholesalers at the time.

"1968–Eden Foods Co-op is established in Ann Arbor, Michigan.

"1970–Eden Foods begins food processing, opening a bakery, cafeteria, and the 'Turtle Island' restaurant in Ann Arbor."

Note 1. The early entries in this chronology are deceptive and inaccurate. They make it appear as though Michael Potter founded Eden Foods since his is the only name mentioned in the chronology and since his name is mentioned just before the business was established. In fact, Potter did not join Eden Foods until Oct. 1971–a fact that is omitted in the chronology.

Note 2. Eden Foods was established in Nov. 1969–not in 1968. All of the founders (Bill Bolduc, Tim Redmond, etc.) and early publications agree on that date.

Note 3. The names of the founders of Eden Foods are, unfortunately, omitted from this chronology.

Note 4. One entry states: "1983–North America's 1st soymilk Edensoy is introduced." In fact, Miller's Soyalac Soya Milk had been made since 1940 in Mt. Vernon, Ohio, by International Nutrition Laboratory, founded by Dr. Harry Miller. It was on the market and sold well for more than 40 years.

The later entries are interesting and probably accurate: "1986–Eden opens a warehouse in San Francisco, California. 1987–Eden partners with the Hirzel family of Ohio to grow organic tomatoes, chilies & cabbage for Eden sauerkraut. 1989–Eden Organic Pasta Company becomes the first third party certified organic pasta facility in America.

"1991–The first Eden organic beans are canned in Eaton, Indiana. 1993–Eden expands its facilities in Clinton, Michigan. Eden first questions organic integrity under USDA/NOSB. Eden adopts a policy requiring affidavits from growers and suppliers guaranteeing that their food is GEO-free. 1994–Eden contracts with a cooperative of family orchards to secure organic tree fruit. 1997–Eden sponsors the first whole foods cooking show, 'Christina Cooks' nationally, on PBS. 1998–Eden introduces its first Biodynamic food, Whole Grain Rye Spirals and celebrates its 30th anniversary. 1999–Eden expands its warehouse facility for the eighth time.

"2000–AIB Certification, New Eden web site is launched and Edensoy Light is introduced. 2001–Eden purchases Sobaya, the Canadian producer of Eden Organic Traditional Japanese Pasta. Eden receives the prestigious 'Socially Responsible Business Award' for exemplary business practices. Over 400 vegetarian recipes are posted to Eden's renewed web site, along with detailed historical information, nutritional information and manufacturing descriptions for all of Eden's products." Address: 701 Tecumseh Rd., Clinton, Michigan 49236. Phone: 517-456-7424.

8028. Geiskopf-Hadler, Susan; Toomay, Mindy. 2001. The complete vegan cookbook: Over 200 tantalizing recipes plus plenty of kitchen wisdom for beginners and experienced cooks. Rocklin, California: Prima Publishing. xvi + 318 p. Illust. Index. 22 cm.
• ***Summary:*** Contains more than 200 vegan recipes, including many recipes for miso (3 recipes), soy cheese (9), tempeh (7), tofu (regular, 22), tofu (silken, 6), and soy yogurt (2). The "Glossary of special ingredients" contains definitions of miso, soy mayonnaise, soy milk, tempeh, and tofu. For nutritional information about soy foods, see p. 20-21. Tamari soy sauce is frequently used as a seasoning.

Contents: Acknowledgements. Introduction. 1. Cooking fundamentals. 2. Stocking the vegan pantry. 3. Menus for entertaining and everyday meals. 4. Appetizers. 5. Salads. 6. Soups and stews. 7. Vegetable side dishes. 8. Pasta dishes. 9. Grain and bean dishes. 10. Sautés and stir fries. 11. Baked and grilled entrées. 12. Sandwiches and wraps. 13. Morning meals. 14. Deserts. 15. Frequently used ingredients. Appendix: Nutrition fundamentals. Glossary of Specialty ingredients. Address: Northern California.

8029. Hepinstall, Hi So Shin. 2001. Growing up in a Korean kitchen: A cookbook. Berkeley, California: Ten Speed Press. 254 p. Illust. Index. 26 cm.
• ***Summary:*** The best book seen to date for information and recipes on soyfoods in Korea. The author grew up in Cheongju, South Korea, in her ancestral home. Families made sauces in earthenware crocks (p. 7). A list of ingredients with descriptions includes: Bean curd (Tubu [tofu]). Beans, dried (K'ong, incl. yellow and black soybeans, mung beans and red [azuki] beans). Koch'ujang (Korean hot red pepper paste [with soybeans]). Kudzu (Ch'ik). Meju (Korean fermented soybean paste block [soybean koji]). Piji (Bean curd dregs [okara]). Red

bean paste (P'at komul). Soy sauce (Kanjang). Soybean powder (K'ong karu; a yellow powder sold in 1-lb plastic bags). Soybean sprouts (K'ong namul). Toenjang (Korean fermented soybean paste).

Essential sauces and pastes: Recipe for: "Homemade soy sauce and fermented soybean paste: Kanjang and toenjang." It makes 10 gallons and takes about 2 months to prepare. Unusual ingredients include: 3 pieces oak wood charcoal, 1 gallon white grain syrup (choch'ung), 10 toasted jujubes, and 5 dried hot red peppers. For about 60 days, let the crock stand in the open without a lid; cover when it rains. At the end of 60 days the mash is filtered through a bamboo basket lined with a fine-mesh cloth into a crock to yield two products: The fermented soybean paste (toenjang) remains in the strainer, whereas the soy sauce filters through into the crock. Store the paste in a sterilized crock; sprinkle a thin layer of coarse salt on top. "Pour the soy sauce liquid into a caldron, bring to a boil, and allow to simmer over low heat until it is reduced to one-third of its original volume." Adjust saltiness. The paste and the sauce or now ready to be aged, but we are not told for how long.

Soy sauce at this stage (unaged) is called *ch'ongjang* (clear soy sauce) or *Choson* kanjang (Korean soy sauce). A plain and somewhat salty brown sauce, it is used mostly in base seasonings and clear soups. To make *chin kanjang,* a superior thin, syrupy, jet-black soy sauce, similar to the dark soy sauce sold in today's markets, submerge a large-mesh cloth pouch containing black soybeans, p'yogo mushrooms, and strips of kelp (*Miyok*) in the clear, unaged soy sauce and simmer over low heat for about an hour. The longer it is aged, the mellower it becomes, and the more intense the flavor.

Homemade hot red pepper paste (*Koch'ujang,* with 1 cup fine meju powder and ½ cup soy sauce). Instant fermented soybean paste (*Makjang;* uses 5 cups powdered meju and takes 10 days to mature). Vinegar soy sauce (*Ch'o kanjang*). T'ang soybean paste (*T'anggukjang;* "the best tasting soybean paste among all toenjang). Fermented soybean paste with garlic and bean curd (*Ssamjang;* "Probably the tastiest soybean paste made in the Korean kitchen," p. 32).

Main dishes: Five grain rice (*Ogkpap or Chapgokbap,* with ½ cup dried black soybeans, p. 41. Koreans traditionally eat this dish on the 15th day of the 1st month of the lunar year). Soybean sprouts with steamed rice (*K'ongnamulbap,* p. 44). Ceremonial soup (*T'ang,* with medium firm tofu, p. 62). Seaweed soup (*Miyokguk,* with tofu, p. 65). Kimchi soup (*Kimchiguk,* with tofu and soybean sprouts, p. 67). Soybean porridge (*K'ongjuk,* with 1 cup soybean powder, p. 78). Noodles in chilled soybean milk (*K'ong kuksu,* with 1 quart soy milk, p. 86). Stuffed dumplings (*Mandu,* with medium-firm tofu, p. 90-91). Soy sauce kimchi (*Chang kimchi,* p. 103).

Side dishes: Seasoned soybean sprouts (*K'ong namul,* p. 122, incl. Chilled soybean sprouts, and Soybean sprout soup). Sauteed cabbage kimchi with beancurd and pork (p. 130). Bean curd and vegetable stew with fermented soybean paste (*Tubu toenjang tchigae,* p. 138). Bean curd and vegetable hot pot (p. 152). Soybean pancakes (p. 163). Stuffed pan-fried bean curd (p. 167). Stuffed pan-fried p'yogo mushrooms (with bean curd, p. 168). Stuffed pan-fried peppers (with bean curd, p. 169).

More tofu recipes are on pages 170, 171, 172, 196-97, 199, 200, 204-05, 217. Many recipes call for kelp, kim (laver, nori) or seaweed (see index). Address: Washington, DC.

8030. Jaivin, Linda. 2001. The monkey and the dragon: a true story about friendship, music, politics and life on the edge. Melbourne, VIC, Australia: Text Publishing Co. 438 p. Illust. Index. 24 cm.
• ***Summary:*** About the author's friendship with Taiwanese rock star Hou Dejian. Page 398: "Some things about Taipei were exactly the same as when I'd lived there twenty years earlier: the smells wafting from the ubiquitous snack carts offering egg-wrapped pancakes with chilli sauce, the aptly named 'stinky beancurd' and betelnut wrapped in vine leaves. Open-fronted restaurants served up steaming bowls of soy milk, sweet or savoury, as well as bubbling soups of puffed beancurd [probably fried tofu squares] and stewed meats." Address: Sydney, Australia.

8031. Marcus, Erik. 2001. Vegan: The new ethics of eating. Revised ed. Ithaca, New York: McBooks Press. xi + 211 p. Illust. Index. 23 cm. [432 endnotes*]
• ***Summary:*** Very well researched and written. Widely considered to be the best current introduction to Veganism. Contents: Foreword, by Howard Lyman. Introduction. I. Part I: To your health. 1. The beat goes on. 2. Cutting your cancer risks. 3. Eat well to weigh less. 4. The perfect food isn't. 5. How now, mad cow. II. Part II: The truth about food animals. 6. Rescued! 7. Chickens and eggs. 8. Pigs. 9. Milk and beef. 10. The killing business. III. Part III: Beyond the dinner table. 11. World hunger. 12. American rangeland. 13. Awakening. Appendix A: The new four food groups.

The New Four Food Groups (p. 194-95) are vegetables, whole grains, fruit, and legumes. Legumes includes soy milk, tempeh, texturized vegetable protein, and tofu.

On the cover is written boldly: "Urgent. What we eat has devastating effects. Heal our planet and your body."

The chapter on mad cow disease gives a brief but good history of the problem. In Jan. 1997 the U.S. Foods and Drug Administration proposed regulations to prohibit the feeding of cattle parts back to food and dairy cattle. In June 1997, the proposal was passed into law. "If the resultant ban is seriously enforced, it could essentially eliminate the possibility of a British-style mad cow epidemic." However the new legislation still allows livestock producers to take

risks with America's food supply by feeding other animal by-products back to farm animals. Pig and chickens have been shown to have developed spongiform diseases. Yet the new law exempts rendered pigs, chickens, horses, milk, blood, and gelatin from the ban.

British BSE researcher Stephen Dealler has tried to calculate how many Britons may actually die from Creutzfeldt-Jakob disease–the human form of mad cow disease. He has calculated 21 scenarios, each of which he considers equally likely. Fifteen of these show at least 140,000 people at high risk of developing the disease, and the six worse predict that over 32 million people in Britain have already been exposed to a potentially fatal dose. The wide range of numbers results from several unknowns: (1) The rate of transmission from infected of beef to humans that eat it; the issue of crossing the species barrier. (2) The human body's resistance to BSE prions. (3) The incubation time and distribution of the infection in humans. A closely related question is how many humans will die from spongiform encephalopathies contracted from infected animals other than cattle–such as pigs, chicken, etc.

Eric Marcus was born in 1966. Address: Vegan.com, P.O. Box 432, Albion, California 95410.

8032. Northrup, Christiane. 2001. The wisdom of menopause: Creating physical and emotional health and healing during the change. New York, NY: Bantam Books. xi + 589 p. Illust. Index. 28 cm. Revised and expanded in 2006.
• ***Summary:*** "This book is dedicated to the pioneering spirit embodied in the women of the baby boom generation." The stories in this book reflect authentic situations in the lives of the thousands of perimenopausal women Dr. Northrup has seen in her practice. She has "integrated advanced medical techniques with the best natural remedies, offering readers specific guidance on choosing the right approach for themselves."

In this book "Dr. Northrup once again challenges convention. 'The change' is not simply a collection of physical problems to be 'fixed'–whether with hormones or herbs–but a body-mind revolution that brings the greatest opportunity for growth since adolescence... [This] book examines the connection between menopause and a woman's emotional and spiritual life And it stresses how the choices a woman makes now–from the quality of her relationships to the quality of her diet–either secure her health and well-being for the rest of her life, or put her at future risk."

Candid and reassuring, [this book] elucidates the changes women should expect from ages 40 to 55, and how these changes can be wonderfully life-affirming. Instead dreading menopause as a time of loss, women will hear the real message their bodies are sending–that this is a time of personal empowerment and positive energy... and a time for women to break free and thrive." Contains a very positive and accurate section on the ability of soyfoods to relieve menopausal symptoms. But the benefits are dose-dependent. Discusses: Soy and menopause (p. 125). Bone loss (p. 164). Soy capsules or pills (p. 173). Soy and menopausal symptoms, dose dependency, genetic engineering (p. 179-84). Vaginal resiliency / moisture (p. 286). Alzheimer's and dementia (p. 321). Skin and wrinkles (p. 345). Breast health (p. 422). Summary (p. 548-49).

About the author: "Christiane Northrup M.D., trained at Dartmouth Medical School and Tufts New England Medical Center before cofounding the Women to Women health care center in Yarmouth, Maine... Board certified in obstetrics and gynecology, she is past president of the American Holistic Medical Association." Address: M.D. (gynecologist), Women to Women, Yarmouth, Maine.

8035. Rodinson, Maxime; Arberry, A.J.; Perry, Charles. 2001. Medieval Arab cookery: Essays and translations. Totnes, Devon, England: Prospect Books. 527 p. Index of foreign words. General Index. 25 cm. [20+* ref]
• ***Summary:*** Contains information on the early history of almond milk and other nut- and seed milks. Also contains Arberry's translation of al-Baghdadi's 13th century book, some important essays by Maxime Rodinson from the 1940s and 1950s, Perry's translation of the 14th century book, which is an expanded edition of the 13th century book, and various other essays. The 14th century book contains information about almond milk, other nut milks and even milks from sesame seeds and safflower seeds.

In the essay titled "Venice, the spice trade and Eastern influences on European cooking" (first presented in 1967 in Venice), Maxime Rodinson notes (p. 209) that of the many parallels between western European and Muslim cooking, one that stands up best to examination is almond milk. Unknown to the Greeks and Romans, it was familiar to the Muslims and played a major role in their cuisine. It represents a clear example of borrowing.

In an essay titled "*Isfidhabaj,* blancmanger and no almonds" (p. 261-66, first published in *Petits Propos Culinaires,* No. 31, 1989), Charles Perry notes that in the 13th century Arabic work translated by Arberry as *A Baghdad Cookery Book,* there is a dish called *Isfidhabaj* which is very similar to the medieval European *blancmanger.* The name of each dish means (approximately) "white food" and both are made by stewing meat in almond milk. But can we prove that the European dish came from the Arabs. We know that almonds were a foreign ingredient in northern Europe. Yet every *blancmanger* recipe in the 14th and 15th century English books *Dieursa Servisa, Utilis Coquinario, The Forme of Cury, Ancient Cookery,* Harleian MS 279, Harleian MS 4016, Laude MS 553, and *A Noble Boke off Cookry* contains rice and either ground almonds or almond milk. Yet some of the best known continental European sources do as well. Yet a closer look reveals that, at this early date, almonds were not widely available on the continent. A very early French manuscript cookbook titled *Traite de cuisine écrit vers 1300,* from about the year 1300, in its recipe for *blanc mengier,* lists animal milk or almond milk as optional ingredients. However this same book gives a version of this recipe suitable for fast days in which the almond milk is not optional. Thus "one of the attractions of almond milk for the medieval Christian was that it was permitted on days of abstinence. It was a dream come true: a luxurious, high-status food that could lawfully be indulged during Lent [and other fast days]. To a great extent this must explain the popularity of almond milk in medieval European cookery books."

In "The Description of Familiar Foods," an Arabic cookbook manuscript (1373) translated (very well and colorfully) and introduced by Charles Perry (p. 273-465), almonds (in various forms) appear in many of the recipes, as peeled sweet almonds (e.g., p. 305, 312, 315, 325), blanched sweet almonds (p. 328), sweet almonds pounded to a paste (p. 306-07, 309, 311-14, 337, 339), sweet almonds pounded and milked with water (i.e., almond milk, p. 319, 322, 336), and sweet almond oil (p. 308, 332). See also marzipan in the index. Milk is also made from safflower seeds (p. 316, 318-19, 336), walnuts (p. 309), pistachios, hazelnuts, and sesame seeds (p. 285).

The ingredients, which sound both exotic and delicious, include apricots (p. 343), camphor (p. 308), Ceylon cinnamon (p. 319) and Chinese cinnamon (p. 311), a race of ginger (p. 326), jujubes (p. 306), kishk or dried yoghurt (p. 322-24), mastic (p. 327), mint (p. 316), noodles (p. 333-34), Persian yoghurt or *laban farsi* (p. 314), pistachios (p. 316), pomegranate seeds (p. 316). quince (p. 320, 344), rose water (p. 308, 316), rue (p. 314), saffron (p. 315), sesame oil (306, 308-13), sesame seeds (317), spikenard (p. 320), tahineh (tahini, p. 312), tiger nut, chufa or earth almond (*Cyperus esculentus,* a sedge with nut-flavored tubers, p. 310), verjuice (lit. "green juice," as the sour juice of crab apples or unripe fruit, p. 306).

Talk with Charles Perry. 2001. May 23. Recipe ingredients do not generally appear in the index. Most of the nut and seed milks will be found on pages 305-42 (stews), and 443-50 (vegetarian recipes–some of which were medicinal and some Christian) of the 14th century book. This is surprising because these milks are not used in recipes in the 13th century book, on which the 14th century book is based. There is reason to suspect that the 14th century book was compiled in Cairo, Egypt, whereas the better-known medieval Arabic cookbooks are from either Baghdad [presently capital of Iraq] or Damascus [presently capital of Syria]. To determine whether a recipe in *The Description of Familiar Foods* was being used as early as 1373, see the concordance of recipes (p. 289).

As late as the 18th century, quite a few European cookbooks have a separate section of recipes for fast days (*maigre* in French)–for recipes that contain no meat or meat juices. Almond milk was fairly widely used in Europe in the Middle Ages, but the English tradition was rather simple and single minded, using it mostly in Blancmanger. But in France, for example, it was used in many different dishes, such as stews (meat stewed with almond milk and cherries). Address: 1. French linguist, historian, and sociologist; 2. British arabist and linguist; 3. Los Angeles, California.

8036. Sabaté, Joan; Ratzin-Turner, Rosemary. ed. 2001. Vegetarian nutrition. Boca Raton, Florida: CRC Press. [xxiv] + 551 p. Index. 24 cm. CRC Series in Modern Nutrition. [1732 ref]
• ***Summary:*** The best scholarly book seen to date on this subject. Consists of a Prologue (by Mervyn Hardinge) plus

21 chapters, in five sections, by various authors.

This book contains extensive information on soyfoods as follows: Vitamin B-12, homocysteine, meat analogues and soya milks (p. 47). Summary of epidemiologic studies of soy / tofu intake and breast cancer risk (p. 80-81). Vegetarian diets and soy in the prevention of osteoporosis, diabetes, and neurological disorders (p. 120-21, 125). Iron and soy (p. 202-03). Guidelines to achieve an optimal ratio of essential fatty acids in the diet (p. 203; soy is rich in α-linolenic acid). Zinc, calcium and soy (p. 206). Women's reproductive function, menopausal symptoms, phytoestrogens and soy (p. 232-34, 244). Health advantages of a vegetarian diet for the elderly–and soy (p. 254-55). Vegan children, protein and soy (p. 302). Iron and soy (p. 304; "While the percentage of iron absorbed from soy may be low, the total amount of iron absorbed is adequate, because soy beans naturally contain relatively large amounts of iron" (p. 304-05)). Phytoestrogens and soy (p. 312-13). Macrobiotic diets (p. 313-15). Calcium and soy (p. 316). Vitamin B-12, miso and tempeh (p. 319-22). Iodine and soy (p. 323). Health-promoting phytochemicals beyond the traditional nutrients–soyfoods and isoflavones (p. 342-45; One table shows the isoflavone content (genistein, daidzein, and glycitein) of soybeans, roasted soyflour, roasted soynuts, TVP, tofu, tempeh, miso, and soy milk). Another shows the isoflavone content of commercial soy products by the weight of a typical serving, in descending order of isoflavone content (cooked soybeans, dry TVP, dry roasted soy nuts, tofu, soy flour, soy protein isolate, soymilk, SoyBoy Breakfast Links, soybean chips, tempeh, miso, soy cheese, Ice Bean, Green Giant Harvest Burger, soy noodles, Tofutti, soy sauce, soy oil). Protection against cancer and soy (p. 346-47). Help for menopause and bone loss (p. 347-48). Protective substances and soy foods (p. 397-98). Calcium fortified products such as soy (p. 421). Consuming a wide range of vegetable oils from intact plants–soy (p. 421). Developing a vegetarian food guide–Legumes, lentils and peas (p. 428-29; "Among legumes, the soybean possesses unique nutrient characteristics." Many food guides place soy beverages in the milk-dairy category). Table: Comparison criteria for evaluating soy and grain-based beverages (p. 430). The water efficiency of food production–and soy (p. 449; "The water intensity of animal production is much larger than the water intensity of crops. For instance, per gram dry weight, soybeans require about 0.75 liters of water" compared with about 20 liters for cattle). Note: Joan Sabaté is a man. The series editor is Ira Wolinsky, PhD, Univ. of Houston, Texas. Address: 1. Prof. of Chair, Dep. of Nutrition, and Prof. of Epidemiology, Loma Linda Univ., Loma Linda, California.

8038. Verkasalo, Pia K.; Appleby, Paul N.; Davey, Gwyneth K.; Key, Timothy K. 2001. Soy milk intake and plasma sex hormones: A cross-sectional study in pre- and postmenopausal women (EPIC-Oxford). *Nutrition and Cancer* 40(2):79-86. [33 ref]
• ***Summary:*** The effects of soy on serum estrogen levels and estrogen metabolism have been the subject of much research. Decreased serum estrogen levels and favorably altered estrogen metabolism have been proposed as two mechanisms by which soy reduces breast cancer risk. However in this, the most recent epidemiologic study to examine the issue, no support for the former mechanism was found. In this cross-sectional study, which included 636 premenopausal and 456 postmenopausal British women, soy intake was unrelated to circulating sex hormone levels. Yet serum hormone levels may not reflect changes in specific and cells. Address: Imperial Cancer Research Fund, Cancer Epidemiology Unit, Univ. of Oxford, Oxford OX2 6HE, UK. Phone: 301-898-5769.

• ***Summary:*** On the cover of this colorful brochure are red, green, and yellow stripes. Contents: Listen to your heart. Do you know the secret of Viana tofu? How does Viana make delicious meat alternatives from tofu? What does nutritional science say about plant-based products. Why are Viana products useful for you? Enjoy quick and easy with Viana: Products and wholesome recipes. Tofu. Smoked tofu. Tofu burrito wraps. Little sausages (*Würstchen,* incl. and hot dogs). Menu for the chancellor and children: Curried sausages. Main dishes (*Pfannengerichte*). Meatless minced meat. Lasagna–Dangerous Italian. Crisp breaded cutlets. Colorful spring salad, with roasted, tart chicken filets. Vital tips from Viana. Color photos of 6 packaged products: Tofu vegetable cutlets (*Tofu Gemüseschnitzel*), Tofu Crisp Sticks (*Tofu Knusperstäbchen*), Bonanza Hacksteaks, and 3 types of rice milk (plain, chocolate, vanilla). Address: D-54578 Wiesbaum / Vulkaneifel, Germany. Phone: +49 06593-9967-0.

8040. Willcox, Bradley J.; Willcox, D. Craig; Suzuki, Makoto. 2001. The Okinawa Program: How the world's longest-lived people achieve everlasting health–and how you can too. New York, NY: Clarkson Potter. x + 484 p. Index. 24 cm. Foreword by Andrew Weil, M.D. [41 + 474 endnotes]
• ***Summary:*** A remarkable book! Written by a team of internationally renowned experts, it is based on the landmark, scientifically documented 25-year Okinawa Centenarian Study. Okinawans have the world's longest

disability-free life expectancy. Their occurrence of heart disease is only one fifth that of Americans. Their rate of breast, ovarian, and prostate cancer is less than one quarter of American levels. And the number of centenarians per 100,000 is six times that of the USA. This is a book with plenty of solid, practical scientific advice.

If you have ever questioned the healthfulness of traditional soyfoods, read Chapter 4, "Eating the Okinawa way" (p. 114-45). A table (p. 116) lists "The top fifteen Okinawan healing foods." No. 1 is "Okinawan tofu." Its main active components are saponins and flavonoids (mostly isoflavones). No. 2 is Miso, which has the same active ingredients.

Step 3 in eating the Okinawan way is to "Eat three calcium foods daily." Calcium-fortified tofu is given as the single best source (p. 122)–containing 46% more usable calcium than the same volume of calcium-fortified orange juice! Calcium fortified soy milk is the 3rd best source. "Dairy products are also excellent sources of calcium, but they are best consumed in moderation–there is little support from interventional studies that they actually help reduce risk for osteoporosis [8]. In fact, osteoporosis rates are lower in societies where people eat few, if any, dairy products. This may be because they are high-protein foods, and *too much protein tends to leach calcium out of bones.* For every gram of protein that you eat, you lose 1 to 2 mg of calcium in your urine [9]. For postmenopausal women your protein to calcium ratio (how much protein you eat versus how much calcium) is actually a stronger predictor of your risk for bone fracture than your calcium. intake alone [10]. If you maintain a high-protein diet for an extended period with marginal calcium intake, you could be increasing your risk for osteoporotic fracture.

"The type of saturated fat in dairy products is also the worst offender for making cholesterol in the body."

Step 4 in eating the Okinawan way is to "Eat three flavonoid foods daily. Flavonoids–ubiquitous plant compounds found in large quantities in soy products and some other legumes (beans), and to a lesser extent in tea, onions, and apples–are powerful antioxidants. They provide a weak form of estrogen where the body needs it and block the body's own estrogen in locations where estrogen may induce cancer... two plants–soybeans and flaxseed–have pharmacological levels of these compounds, levels that exceed those in other plants by as much as 1,000 times [14]." "Soy has just been allowed the unprecedented honor of an official U.S. Food and Drug Administration (FDA) health claim [20]... Our prediction is that as the evidence mounts for soy consumption reducing the risks for breast cancer, prostate cancer, and possibly other cancers such as colon cancer, other USDA-approved health claims will follow."

"Tips for increasing your flavonoid intake: Learn about soy products." On pages 126-28 are substantial, accurate descriptions of the following soy products: Tofu, silken tofu, tempeh, miso, soy milk, soy flour, textured soy protein (TSP) or texturized vegetable protein (TVP), edamame, soy nuts.

The praise for soyfoods continues in the next chapter, "Okinawa's healing herbs and foods." There are two pages about Okinawa firm tofu (p. 158-59). Address: 1. M.D., Div. of Aging, Harvard Medical School; 2. PhD, medical anthropologist and gerontologist, Asst. Prof., Okinawa Prefectural Univ.–College of Nursing; 3. M.D., PhD, cardiologist and geriatrician, Prof. Emeritus of Community Medicine, Univ. of the Ryukyus, and Prof. and Chair, Dep. of Gerontology, Okinawa International Univ.

8041. **Product Name:** SoyGood (Powdered Soymilk).
Manufacturer's Name: Trader Joe's (Marketer-Distributor).
Manufacturer's Address: California.
Date of Introduction: 2001?
How Stored: Shelf stable.
New Product–Documentation: Product seen at Trader Joe's in Lafayette, California. 2002. Oct. 13. Cylindrical container makes 6 quarts for $6.99.
*

8042. Sugarman, Carole. 2002. Milk without the moo: A soy product gets a major makeover. *Washington Post.* Jan. 2. p. F1, F4.
• ***Summary:*** Sales of soy milk have take off in the USA, growing from $1.5 million in 1980 to almost $550 million in 2001. The most rapid growth has occurred in supermarkets, drug stores, and mass merchandisers, whose sales have more than tripled from $77 million in 1999 to $242 million in 2001–according to data compiled by SPINS.

Some consumers drink soy milk for its health benefits, while others see it as an alternative to dairy products. In the latter group are vegetarians who avoid dairy products (vegans), and those suffering from lactose intolerance. The National Digestive Diseases Information Clearinghouse estimates that 30-50 million Americans are unable to digest lactose, the major sugar in dairy milk.

There are so many different types of soymilk that consumers may be confused: (1) Fortified vs. non-fortified; (2) Nonfat, low-fat, and full fat; (3) Isoflavone content; (4) Carbohydrate content, and type and amount of sweetener; (5) Refrigerated vs. aseptic (shelf-stable). (6) Taste. Address: Staff writer.

8043. Sugarman, Carole. 2002. Beyond cow's milk: A dairy-free world. *Washington Post.* Jan. 2. p. F1, F4.
• ***Summary:*** Soy milk accounts for 80% of the non-dairy milk market, ahead of rice milk (17.5%), almond milk, oat milk, and even multi-grain milks (2.5% for the last three). In 1996 sales of rice milk accounted for 40% of the nondairy beverage market. But two events propelled soy milk ahead: First was the publication [on 3 Aug. 1995] of

a major article by Dr. James Anderson in the *New England Journal of Medicine* showing that soy protein lowered blood cholesterol. Second [in Jan. 1996] White Wave introduce Silk, America's first refrigerated soy milk.

Sales of rice milk have declined steadily since then. But Imagine Foods, makers of Rice Dream, the most popular rice beverage, have fought back by introducing two soy beverages: Soy Dream and Power Dream. Consumers who are allergic to soy protein continue to buy rice beverages. Address: Staff writer.

8044. Baker, Don. 2002. Re: The Home Nutritionist home soymilk maker made by Salton Manufacturing. Letter to William Shurtleff at Soyfoods Center, Jan. 27. 1 p. Typed, without signature. [Eng]
• ***Summary:*** This home soymilk maker was purchased at a local merchandise store. It produces 1 quart hot soymilk from 3/4 cup soaked soybeans in about 19 minutes. The electrical hot plate leaves some scum on the bottom of the stainless steel cooking pot in which the soymilk is cooked. Address: R.R. 1, Box 170, Greenview, Illinois 62642.

8045. Eden Foods. 2002. New Edensoy 6 pack: Customer friendly velocity and cash flow (Ad). *Natural Foods Merchandiser.* Jan. p. 26.
• ***Summary:*** This 8½ by 11 inch color ad shows 6-packs of various types of Edensoy. The outside packaging is new. "There is no finer soymilk."

8046. *Food Product Design.* 2002. Chocolate flavor delivers tasty soy beverage. 11(10):98. Jan.
• ***Summary:*** Wynn Starr Flavors, Inc. (5 Pearl Ct., Allendale, New Jersey 07401. Phone: 1-800-Wyn-Star. Web: www.wynnstarr.com) has developed a chocolate flavor system that gives soy beverages a flavor and mouthfeel similar to chocolate milk. Other applications include nutrition bars, but high-protein bars present a flavor-masking challenge. A color photo shows a glass of chocolate soy beverage.

8047. *Soy Connection* (*The*) (*Jefferson City, Missouri–United Soybean Board*). 2002. Fourth international soy symposium: Summary of findings–Osteoporosis. 10(1):4-5. Winter.
• ***Summary:*** Over the past six years, data on this subject have been quite conflicting. "Unfortunately, results presented at this Symposium did little to clarify this issue.

"Unarguably, Eva Lydeking-Olsen, from the Institute for Optimal Nutrition in Denmark presented the most encouraging results." She found, in a 2-year study, that postmenopausal women consuming a diet containing a high isoflavone soymilk (total isoflavone intake was about 100 mg/day) increased an increase in spinal bone mineral density (BMD) whereas the spinal BMD of women consuming a soymilk low in isoflavones decreased. No such benefits were noted at the hip, however."

"Previously published studies have suggested that the lower sulfur amino acid content of soy protein relative to animal protein leads to a decrease in calcium excretion.

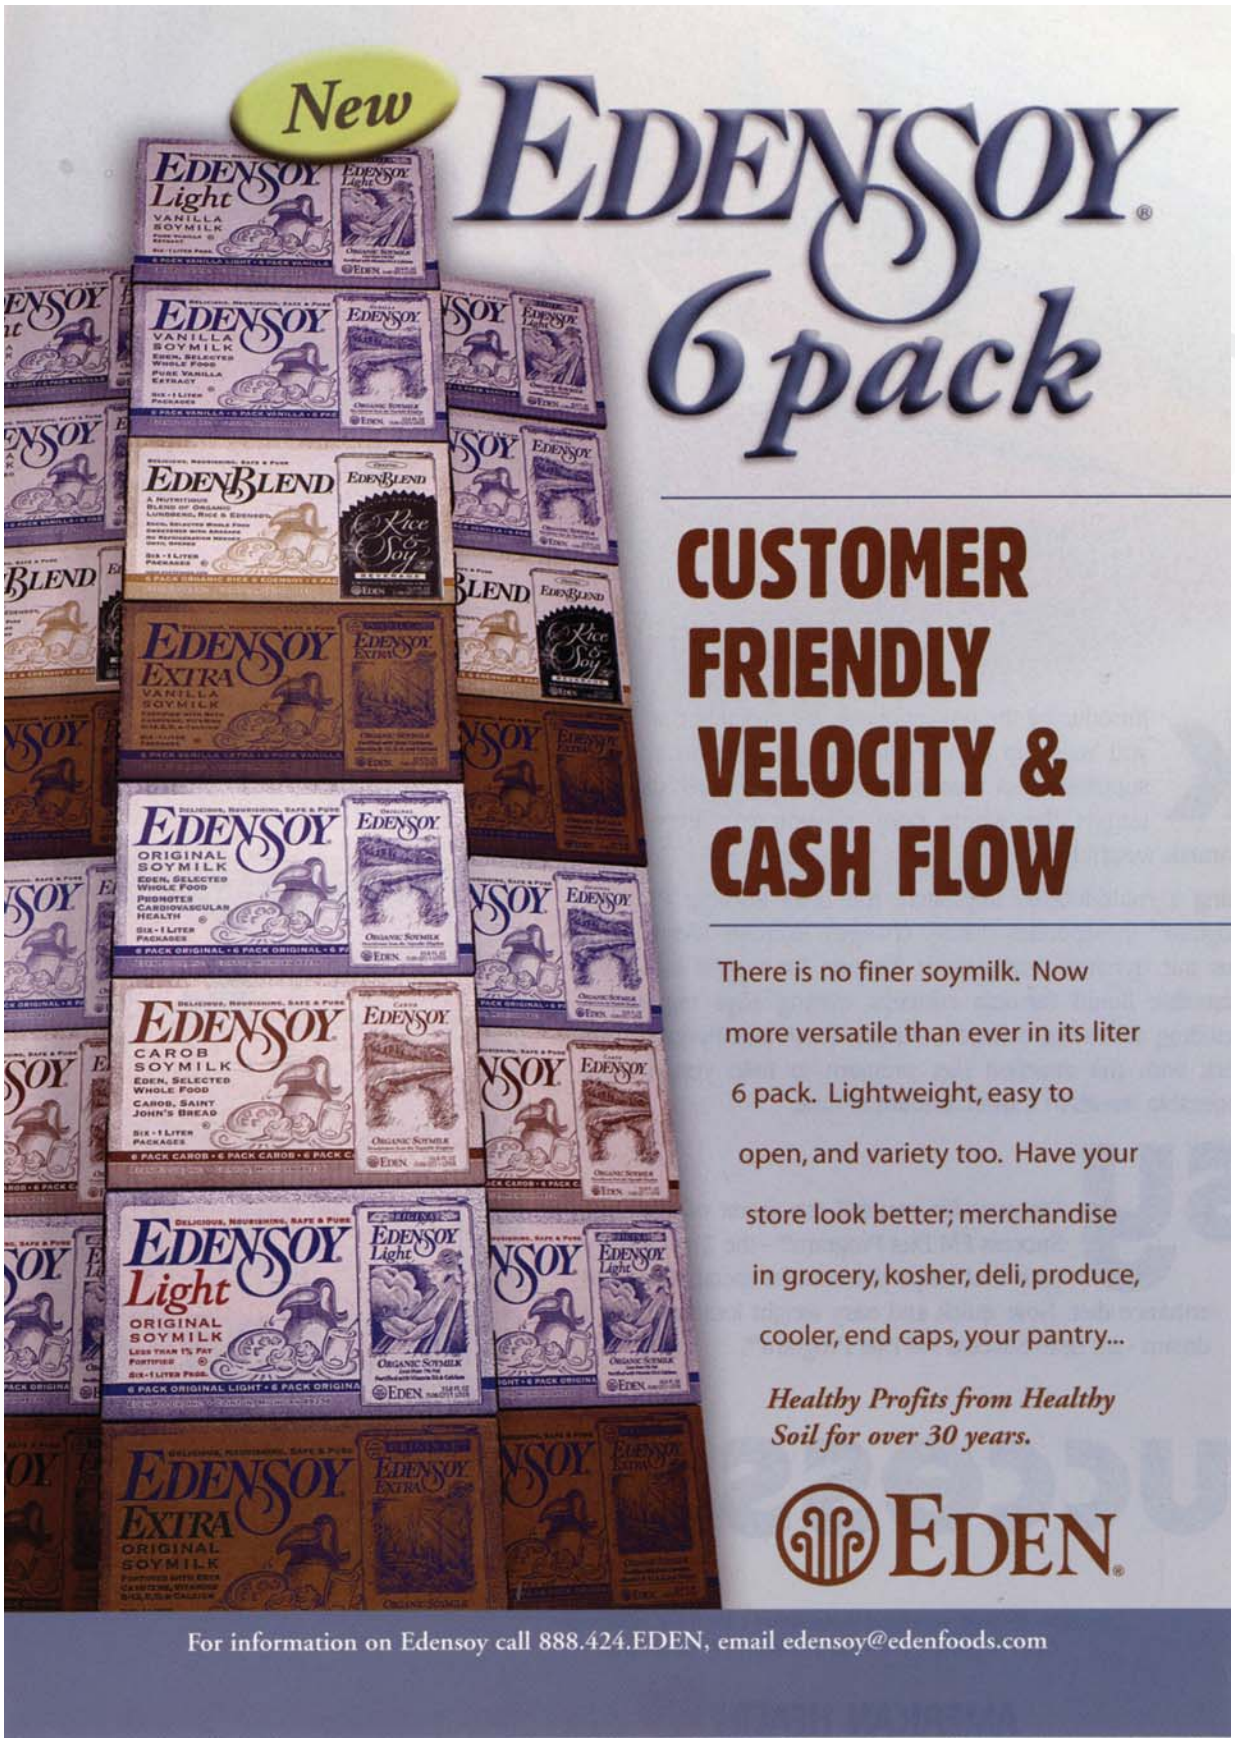
"Clearly, all other factors being similar, substituting soy protein for animal protein appears to favorably affect bone health although the precise role of isoflavones in this regard is yet to be determined. Recent epidemiologic studies do suggest that higher isoflavone intake is associated with greater BMD. Differences in experimental designs, such as the age of the women studied, likely contribute to the conflicting clinical data." Address: PhD.

8048. *Soyfoods Canada Newsletter.* 2002. 2001 annual meeting a great success. Jan. p. 1.
• ***Summary:*** Soyfoods Canada held its second annual meeting on 28 Sept. 2001 in Toronto at the Crowne Plaza Hotel. Speakers included Toby Davidson and Jeanne Cruikshank. A new board of directors was elected to serve during the coming year: Bill Hawes, President–President of Tofutti-Cholac Foods. Maheb Nathoo, Past-President–President and CEO of SoyaWorld. Eric Hart, Vice-President–Business Development Officer with Galaxy Nutritional Foods. Andrew McVittie,–Secretary–Soybean Sales Representative for W.G. Thompson & Sons and Sycamore Creek. Ron MacDougall, Treasurer–Soybean farmer representing the Ontario Soybean Growers. Paula Travado–OntarBio/Organic Meadows. Nick Feldman–Nutrisoya Foods. Peter Joe–Sunrise Soya Foods. Vivian Chiang–Momo's Kitchen. Garnet Pigden–PTI.

8049. The Mail Order Catalog for healthy eating. Winter 2002. 2002. P.O. Box 180, Summertown, TN 38483. 36 p.
• ***Summary:*** The book section of this mail order catalog contains listings for an excellent selection of vegetarian and vegan cookbooks, vegetarian soyfood cookbooks, plus books on food nutrition & health, alternative healthcare, women's healthcare, native Americans and their cultures, animal rights, and sustainability.

The vegetarian food products section offers TVP granules and chunks, Response textured soy protein concentrates (misleadingly called "Response TVP flakes"), miso soup mixes, wheat free soy pasta, soy & rice pudding mixes, soy & nondairy beverages and beverage mixes, soy protein powders & shake mixes, soynut butters, sea vegetables, vegetarian jerky, soynuts, plus foods from Worthington and Loma Linda, Jyoti India Cuisine, and Dr. John McDougall. Address: Summertown, Tennessee. Phone: 800-695-2241.

8050. White Wave, Inc. 2002. Silk: Put a bottle rocket in your dairy case. Silk singles will fly! (Ad). *Natural Foods Merchandiser.* Jan. p. 6.
• ***Summary:*** This full-page color ad shows a large bottle of Silk soymilk (a new form of Silk packaging), and three



small bottles of vanilla, chocolate, and organic plain flavors. Each flavor is calcium enriched and vitamin fortified. On each plastic bottle is written: "High energy soy! Shake well and buy often." On a red banner across the bottom of the ad: "The Number 1 selling soymilk in America."

8051. White Wave, Inc. 2002. Silk is the hottest selling name in soy (Ad). *Natural Foods Merchandiser.* Jan. p. 28.
• ***Summary:*** This 8½ by 11 inch color ad shows a large blue carton of Silk Cultured Soy (strawberry flavor) against a white background. "Smart new package graphics. Contains live and active cultures. Award winning favor. Made from organic non-GMO soy. Contains 50% daily requirement of calcium." To the left is a "2001 Gold Taste Award" medal from the American Tasting Institute. At the lower right is a carton of Silk Soymilk. www.SilkIsSoy.com.

A similar ad in Natural Foods Merchandiser, Jan. 2002 (p. 28), has a white background. Address: [Boulder, Colorado].

8052. Huang, Timothy; Krueger, Carol Ann. 2002. Chronology of work with soyfoods (1972-1980) (Interview). *SoyaScan Notes.* Feb. 15-24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** 1950 Dec. 25–Born in Detroit, Michigan. Growing up in a Chinese-American family, Tim naturally ate tofu (mostly at restaurants) and other soyfoods. At college in Michigan he started to prepare some of his own meals and began to cook with store-bought tofu.

1972–Tim leaves the University of Michigan (he studied architecture, then natural resources/ecology) to join "The Farm," an intentional community in Summertown, Tennessee, where he is exposed to vegetarianism and new uses of soybeans as food. Tim becomes a complete vegetarian (vegan). On The Farm, all of the soybeans were eaten as pressure cooked soybeans; a little oil was added to keep the hulls from clogging up the pressure valve. Stephen Gaskin, The Farm's teacher, expresses an interest in learning more about tofu.

1953 July 5–Carol Ann is born in Medford, Wisconsin. In the fall of 1973, at age 19 and after graduating from high school, she first visits The Farm in Tennessee. In Jan. 1974 she moves there to live.

1973–Tim researches how to make tofu for The Farm by interviewing family acquaintances. He built a forming box, got some cheesecloth, bought all the ingredients necessary to make tofu and made a batch in his family kitchen (West Bloomfield, Michigan–a suburb of Detroit) using soybeans from an Asian food store (in Royal Oak, Michigan), and lemon juice as a coagulant. His parents laughed. However neither Tim nor anyone at The Farm used this information to actually make tofu.

1974 spring–Tim and Carol Ann meet at The Farm in Tennessee. Approximately 600 people are living on The Farm at that time. Tim is a woodcutter and chain saw mechanic. Carol Ann works in the community kitchen and soy dairy–where she learns (briefly) how to make tofu and soymilk.

1974 fall–Tim and Carol Ann move to the "Wisconsin Farm," a sister community of The Farm. The Wisconsin Farm was smaller and better organized than the Tennessee Farm. James Taft is a key person there.

1975 March 9–Tim and Carol Ann are at the Wisconsin Farm; Stephen Gaskin comes up from the Tennessee Farm to marry six couples in one ceremony. Tim's parents are distraught; his father barely escaped from Communist China and now he was losing his son to a commune. Carol Ann (who is a good cook and likes to cook) works with the canning and freezing crew, and becomes involved in making soymilk and tofu regularly for that community; Tim, who is on the wood-cutting crew, helps her occasionally.

1976 Nov. 1–Ethan, the Huang's first child, is born on the Wisconsin Farm.

1977 fall–Tim and Carol Ann leave the Wisconsin Farm and move to Detroit, Michigan, to establish their own business. When they leave, Tim's parents give them some money with which they purchase a Dodge Caravan van. They move into a rented apartment. After several months (with financial help from Tim's parents), they buy and start to make payments on a house on the east side of Detroit.

1977 fall–Tim enrolls in an EMT (Emergency Medical Technician) training program associated with Wayne State University, at Detroit General Hospital; this would qualify him to drive an ambulance. Carol Ann wants to start a business making tofu and/or tempeh.

While looking for work on the side, Tim meets a Mr. James Coleman, a wheeler-dealer, who wants Tim to distribute his breads to Detroit from Ann Arbor. Tim begins distributing the bread but quickly realizes he needs a line of products if his route is to be profitable. He soon adds breads from Wildflour Community Bakery. One night at dinner Coleman tells Tim that he should meet Steve Fiering who is part of the 4th Avenue Food Co-op and who started (in about the spring of 1977) a worker's cooperative making tofu next door in the Wildflour Community Bakery in Ann Arbor.

1978 Feb. or March–Tim and Carol Ann meet Steve Fiering of The Soy Plant worker's cooperative making tofu in Ann Arbor, Michigan. Steve's co-op is now located in the small room in the basement of Eden Foods' restaurant in Ann Arbor. It is agreed that rather than create a competing soyfoods production business, that a cooperative business arrangement between the two companies be formed. The Yellow Bean Trading Co. is established by Tim and Carol Ann in Detroit to distribute soy products for The Soy Plant in the metropolitan Detroit area. In Chinese, *Huangdou* or "yellow bean" means soybean.

1978 July–Tim and Carol Ann attend the first meeting of the Soycrafters Association of North America in Ann Arbor,

Michigan, hosted by The Soy Plant. They sign the register as: Yellow Bean Trading Co., 4414 Buckingham, Detroit, Michigan 48224. The conference boosts their interest making a business out of soyfoods. Tim, who is now taking some science classes at Wayne State University, has to decide between two careers: A medical technician or doctor, or a soyfoods entrepreneur. He chooses the latter.

1978 Sept.–Tim starts to distribute refrigerated soy products (tofu, tempeh, soymilk, etc.) made by The Soy Plant in Ann Arbor. He would drive the 40 miles from Detroit to Ann Arbor, would pick up the soy products at about noon, drive them to his home in Detroit in his unrefrigerated van, pack them into a refrigerator in the garage for overnight storage, then deliver them to stores along a distribution route he created in Detroit the next morning. The lack of refrigerated storage space and of a refrigerated van becomes an immediate problem. So Tim soon buys an inexpensive second van, insulates the back, and installs a refrigeration unit. He gradually adds more natural-food products to his line.

1978 late–With Tim realizing the need for a walk-in cooler and Carol Ann wanting to start a soy deli, the Huangs begin to rent a storefront at 15309 Mack Ave. in Detroit–a former natural foods restaurant. Tim borrows some money from his parents to make the rental payments

1978 Nov. 17–The Huang's second child and first daughter, Eva, is born.

1979 March–The deli named Yellow Bean Vegetarian Foods opens at 15309 Mack Ave in Detroit. Yellow Bean also bought tofu from The Soy Plant and used it to create "secondary soy products" including tofu eggless salad, tofu cream pies, and vegetable-tofu pockets.

1980 July 19–The Huang's third child, Emma, is born.

1980–Tim helps The Soy Plant relocate to a larger plant on Airport Blvd. in Ann Arbor.

1981–The Huangs sell the distribution route and trucks to The Soy Plant and sell the store to a private party. Tim decides to finish his undergraduate degree, working in food science and technology. They move to Davis, California.

1982–They separate in California. Carol moves to a ranch in Pima, Arizona; their divorce is finalized. She continues living in Arizona and raises their kids. She starts making jewelry. Address: 1. 155 Ridge Grove Rd., Kerrville, Texas 78028; 2. 438 South Star Ave., Tucson, Arizona 85719. Phone: Tim–830-792-3797; Carol Ann–520-740-0393.

8053. Hirsch, J.M. 2002. Tofu not the only way to get benefits of soy; try using miso. *Advocate* (*Baton Rouge, Louisiana*). Feb. 21.
• ***Summary:*** "The vegetarian love affair with tofu has done as much harm as good for the reputation of the rather mild-mannered soybean." But tofu is not the only source of healthy soy protein. Miso is another tasty source, best known as the primary ingredient in Japanese miso soups. Contains a recipe for "Shish kebabs with miso sauce" from The Book of Miso, by Shurtleff and Aoyagi (Ten Speed Press).

Other soy products besides tofu include: Tempeh, toasted and salted soy nuts, soy milk, breakfast cereals and breads that contain soy, soy flours, soy protein powders, and edamame (fresh soybeans still in the pods; often served at Asian restaurants).

Also appeared in the Press (Ashbury Park, New Jersey). Address: Associated Press.

8054. Praskin, Laurie Sythe. 2002. How tofu came to The Farm in Tennessee, and how Laurie got interested in tofu and vegetarianism (Interview). *SoyaScan Notes.* Feb. 27. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** When The Farm was first settled in 1971, one of the really popular books was *Ten Talents,* by Frank and Rosalie Hurd (1968). They were Seventh-day Adventists and the book was a vegan cookbook that contained two recipes for homemade soybean curd (tofu, p. 195-96). The first used whole soybeans, with Epsom salt as a coagulant; the second used soy flour, with lemon juice as a coagulant. During the first 2-3 years of The Farm, before any tofu was made at a central location, people at home in their buses were using soy flour, with vinegar as a coagulant. The soymilk was never filtered so the okara remained in the tofu.

Alexander Lyon, because he had a PhD degree, was put in charge of learning more about soyfoods and developing soyfoods production at a central facility. In 1972 he started The Farm Soy Dairy.

In 1974 when Laurie arrived at The Farm, quite a bit of this tofu was being made by individuals. She recalls: "It was actually quite tasty. I liked it. It was a nice relief from eating whole soybeans all the time." However the Soy Dairy was making mostly soymilk; occasionally they made "soy cheese" by allowing soymilk to stand until it fermented; the resulting acid caused the separation of curds and whey. The curds were then hung in a sack until firm; the resulting product was quite similar to tofu, even though it was made without use of a coagulant or forming box.

In 1974 Laurie wrote Bill Shurtleff in Japan requesting information on making tofu, and sent him the book *Hey beatnik! This is The Farm book,* published in 1974. Bill sent Laurie pre-publication information on homemade tofu from *The Book of Tofu,* which was published in Dec. 1975. Laurie recalls: "That book was a great help, and a key turning point in The Farm's starting to manufacture tofu on a large scale. I remember just eatin' that book up, and saying 'We've got to do this. You don't need a lot to make it work.'" In early 1975, Alexander Left the soy dairy and Laurie took over managing production.

Laurie (whose maiden name was Sythe) grew up in Los Gatos, California, during the 1960s. She became a vegetarian when she was a teenager (age 15-16), living at home with her parents. The main influence came from her elder brother,

Dan Sythe, who was living on Haight Street in San Francisco and was a vegetarian–in fact a fruitarian. She did a lot of vegetarian cooking while in high school, and eventually had her whole family eating vegetarian before she went to The Farm. She recalls buying and cooking with tofu several times during this time–perhaps directly from small tofu makers in nearby San Jose. Dan had a bus, which he drove to Tennessee, arriving on The Farm in 1971 or 1972, shortly after the main caravan of buses arrived in May 1971 on the Martin Farm. He lived on that first Martin Farm. He started "Solar Electronics" on The Farm. Address: 17969 Oak Dr., Los Gatos, California 95030.

8055. Golbitz, Peter. 2002. White Wave's suit against Dean rejected: Merger could reshape soymilk market. *Bluebook Update* (*Bar Harbor, Maine*) 9(1):1, 7. Jan/March.
• ***Summary:*** Judge Richard Matsch of the U.S. District Court for the District of Colorado threw out White Wave's lawsuit against Dean Foods which claimed that Dean's proposed merger with Suiza Foods would allow an indirect transfer of the company's 36% share of White Wave. Shortly after the announcement of the $1.6 billion merger proposal in April 2001, White Wave sued Dean, claiming that Dean must sell its stake in White Wave back to the company if it merges with Suiza. Dean countered with a technicality: the merger was not a transfer of shares that could trigger the "right of first offer." Suiza, a major soymilk competitor, will now be able to purchase the rest of White Wave's stock by Sept. 2002 at fair market value. Demos, who was very disappointed with the legal decision, is not opposed to a Suiza/White Wave alliance, but only to the unauthorized transfer.

The U.S. soymilk market, which has grown dramatically in recent years, is projected to top $600 million in retail sales during 2001. Refrigerated soymilk has been the fastest growing type of soymilk, and White Wave's silk brand dominates that subcategory, followed by Suiza's Sunsoy–which has also grown rapidly. A small portrait photo shows Steve Demos.

8056. *NSRL Bulletin* (*National Soybean Research Laboratory, Urbana, Illinois*). 2002. Processing system provides new opportunities for soymilk research. 9(1):6. Feb.
• ***Summary:*** An Agrolactor soymilk system (developed by the Actni Company in France) has been installed at the Illinois Center for Soy Foods by BAR NA. The loan was arranged by Karl Weingartner, asst. director of technical training for the Center. Barbara Klein, co-director of the Center says the Center plans to open a soy foods store, where a variety of soy products can be test marketed to the public.

8057. *Ontario Soybean Growers Newsletter.* 2002. Profiles: ProSoya Inc. and the SoyaCow. Feb. p. 7.
• ***Summary:*** Contains a small photo of a SoyaCow. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

8058. *Soybean Digest.* 2002. Healthy growth in soyfoods. Mid-Feb. p. 34-35.
• ***Summary:*** This article is part of a special pull-out insert on "New Uses." Notes that soyfoods have reached a new level of acceptance during the past year with the purchase of Kashi Co. (a natural cereal manufacturer) by the Kellogg Co. Kashi already made lines of soy-enriched cereal and the company recently expanded its line to include GoLean soy-based diet drinks and cereals. Founded in 1984 by Philip and Gayle Tauber, Kashi grew by more than 100% during the fiscal year before Kellogg's purchase–for an estimated $30 to $50 million. In the year 2000 Kashi had sales of about $25 million, compared with $7 billion for Kellogg. But Kellogg sees a continuing trend toward healthier eating.

Color photos show: (1) Packages of Kashi GoLean and Westsoy Soy Smoothie. (2) Various unpackaged soy products including textured soy protein, soymilk, silken tofu, edamamé, soy cheese, soy hot dogs, breaded soy cutlets, and soy powder. (3) Tortillas filled with cooked whole soybeans and trimmings, a package of Soy Fusion (Berry), and a soy burger between buns. (4) Cover of the 2001 Soyfoods Guide.

8059. Branaugh, Matt. 2002. Smooth as Silk: White Wave projects huge growth, despite legal matter. *Daily Camera* (*Boulder, Colorado*). March 18. Business plus section. p. 10-11.
• ***Summary:*** In 1977, 25 years ago, entrepreneur Steve Demos founded White Wave in Boulder, Colorado, making tofu by hand in a bathtub. White Wave, for its 2001 fiscal year (ending March 31) expects sales of $136 million. The company has 150 employees and next year expects sales just under $200 million. But in 1996 the company's annual sales were only about $8 million. The growth in sales is largely due to Silk soymilk, which is now found in 94% of America's supermarkets. Yet only about 6% of Americans consistently buy Silk.

Last year Suiza Foods Corp. acquired Dean Foods for $2.5 billion, including $1 billion of debt. Suiza changed its name to Dean Foods and made its headquarters in Dallas, Texas. A color photo shows Steve Demos seated at his office desk. "William Shurtleff, whose 'Book of Tofu' inspired Demos nearly 30 years ago, said Silk created the refrigerated soy milk category... Grocery store officials tell Shurtleff, founder and president of the Soyfoods Center in Lafayette, California, that Silk may be the fastest growing new product in the last 50 years." Silk made its way into 30,000 supermarkets nationwide in only 30 months. Yet few consumers knew the new products was there. White Wave quickly lost $600,000 and came near bankruptcy. Address: Daily Camera business reporter. Phone: (303) 473-1363.

balance between soy protein and great taste (Ad). *Natural Foods Merchandiser.* March.
• ***Summary:*** This full-page color ad shows the packages of three flavors of Almond Breeze (original, chocolate, and vanilla) that are enriched with soy protein. Address: [California].

8061. Denny, Darrell. 2002. Jack's still jumping: LaLanne looks back at a healthy life. Natural legacy: The people who founded an industry. *Natural Foods Merchandiser.* March. p. 52, 54, 56, 58, 60.
• ***Summary:*** An excellent biography of Jack LaLanne, now age 87. He continues his daily regimen of exercise and vegetarian diet. For breakfast every morning, he has a blended soymilk and protein powder shake, multi-grain organic cereal with soymilk, and a host of vitamins and supplements. He was the first to: Open a modern health spa. Have a nationally syndicated TV show on exercise and nutrition. Introduce yogurt to America. Have athletes work out with weights. Have women work out with weights. Encourage the elderly to work out with weights. Have a combination health foods bar and gym. Develop a weight-loss instant-breakfast meal-replacement drink. Open a coed health club. Combine weight training with nutrition. Make an edible, nutritious snack bar. Sell vitamins and exercise equipment on TV. Encourage the physically challenged to exercise and work around their disabilities. Perform feats of strength and endurance to emphasize the benefits of exercise and good nutrition. For example: In 1954 (at age 40): Swam the length of the San Francisco Golden Gate bridge underwater with 140 pounds of equipment (incl. two air tanks)–an undisputed world record. Age 41: Swam handcuffed from Alcatraz to Fisherman's Wharf in San Francisco.

He was born in 1914 to French immigrants. When he was 15 the family lived in Berkeley, California, and his mother, a devout Christian, had become a Seventh-day Adventist years before. Jack was unhealthy and unruly. A lecture in Berkeley by health food pioneer Paul C. Bragg changed his life. Bragg told him that if he obeyed nature's laws he could be born again. Contains many good photos of LaLanne, and one cartoon illustration. Address: Executive VP/president Penton Lifestyle Media.

8064. Imagine Foods, Inc. 2002. 20–Imagine what's next (Ad). *Natural Foods Merchandiser.* March. p. 6.
• ***Summary:*** This creative and sometimes humorous full-page color ad celebrates Imagine Foods' 20th anniversary of developing and making alternatives to dairy and meat products. The text for most years is accompanied by a color photo of a product introduced that year–all on a jet-black background. Colorful arrows point the reader's way back and forth across the page to the next year.

1982–Imagine Foods is born in a log cabin in Jamestown. Missouri.

1983–Robert Nissenbaum and Bill Gates contemplate the future in slightly different ways.

1984–Rice Dream Frozen Desserts are introduced to Critical acclaim at the NNFA Show in Atlanta [Georgia]. Now how do we make thousands of gallons?

1985–World headquarters moved to Palo Alto.

1986–Rice Dream package is redesigned and seven flavors are added.

1987–World headquarters moves out of Robert's house and into real offices.

1988–Gone Bananas, frozen chocolate and carob covered banana bites, is introduced clearly ahead of its time.

1989–Imagine introduces the world's first organic crust, vegetarian pocket sandwich.

1990–Rice Dream beverage premiers after six years in development and two US patents.

1991–Rice Dream Bars and Pies reinvent natural frozen novelty desserts.

1992–Imagine creates Ken & Robert's Veggie Burger.

1993–Imagine shelf stable pudding cups are added to the non-dairy line of products.

1994–Original Rice Dream becomes the #1 [best-selling] product in the natural foods industry. The sky's the limit. And Rice Dream Enriched is launched offering the sale calcium and vitamins as milk.

1995–Robert goes fishing. Can't catch anything using rice for bait.

1998–Imagine Organic Soups and Broths revolutionize the category. And: Another Dream comes true. Soy Dream beverage is introduced in six flavors. And: Power Dream Soy Energy Drink is launched out of necessity to keep up with the staff's energy requirements.

1999–Soy Dream moves into the refrigerator in gable cartons to milk opportunity.

2000–Rice Dream follows Soy Dream into the

refrigerator. “Its gett’n crowded in here.”

2001–Soy Dream Frozen Dessert and novelties are introduced. Dreamheads rejoice.

2002–Visit us at booth #3757 to celebrate our 20th anniversary on Saturday from 1 to 3 pm for cake and Soy Dream Frozen Dessert. www.imaginefoods.com. Address: Palo Alto, California.

8065. **Product Name:** SoYummi: Soya Dessert [Chocolate, Raspberry, Lime, Banana-Coconut].
Foreign Name: SoYummi: Dessert de Soya.
Manufacturer’s Name: Les Aliments SoYummi.
Manufacturer’s Address: 3655 Redpath, Montreal, Quebec, Canada H3G 2W8.
Date of Introduction: 2002. March.
Ingredients: Soy drink (80%; not subjected to UHT), sugar, soy oil (later changed to high oleic sunflower oil), modified cornstarch, modified rice starch, lactic acid (to lower the pH for longer shelf life), modified vegetable gums, xanthan gum, salt, agar, natural flavors, yucca extract (rich in saponins).
Wt/Vol., Packaging, Price: 125 gm in a low plastic (polypropylene) cup, with flat lid and individual sleeve. Retails for Canadian $1.39.
How Stored: Refrigerated, 35-40 day shelf life.
New Product–Documentation: Cardwell, Mark. 2002. “As good as it gets.” Food in Canada. May, p. 38.

Talk with Joanne Hollander. 2008. May 29. They introduced the first four products on 8 March 2002 at a food festival in Montreal; they were available for sale in stores about 2 weeks later. She has product labels in front of her. The products have always been made at the Food Research and Development Center (CRDA) in Saint-Hyacinthe, and the main office has always been at 3655 Redpath in Montreal. She started the research using tofu, but later switched to soymilk. She is a purist, and spent years trying to find the right tofu. Then she found that soymilk sold in ESL gable-top cartons has been subjected to UHT sterilization (up to 123ºC), which destroys 80% of the isoflavones and all of the vitamins–it ends up being a dead, inert food. She has read “many, many papers by Asian scientists about this destruction of isoflavones” and Dr. Ming (who she visited) at the University of Vermont has written about the destruction of vitamins. The process also kills all the enzymes and the bad bacteria–but it also kills the good bacteria. “The whole point of consuming soymilk is to get the isoflavones, the phytoestrogens.” Her biggest obstacle to making healthy products is Health Canada; they won’t let her use natural sweeteners. Stevia sold off the shelf but not allowed in commercial products. They push Splenda, Aspartame, and all those things that end in the letters “tol” (such an mannitol, sorbitol, glycerol, arabitol, erythritol), all the sugar-alcohols that acidify the body. “It’s just a nightmare trying to develop a really healthy product in Canada.” Her products has a shelf life of 40 days without using UHT soymilk. Joanne regards sugar (organic or not, including “cane crystals”) as poison. “Its the worst thing; I don’t think there is a good sugar. They are all acid-forming and terrible.” “Soy oil is a omega-6 and it oxidizes quickly, so she doesn’t like it, which is why she took it out of her first product. Yucca extract is a good source of saponins, which adhere to cholesterol molecules in the intestines so they can’t get reabsorbed into the bloodstream, and are therefore excreted. Saponins are also foaming agents, so they help make a light mousse–which is the same consistency all the way through–no crust or topping. Its basically a pudding that is whipped and set. Her website is www.soyummi.ca. There is also a SoYummi (a different company) in New Jersey; URL: www.soyummi.com.

Because Joanne has done most of her research at the Center for Research and Development in Saint-Hyacinthe, she has access to many very smart food scientists and lots or reliable information about foods, food ingredients, and food processing.

Joanne’s original product still contains sugar, but Joanne wanted to develop a product with no sugar, which led to her 2nd product, SoYummi GoLite.

8069. **Product Name:** Silk (Soymilk Sold Refrigerated) [Coffee Soylatte, Spice Soylatte {Like Egg Nog}].
Manufacturer's Name: White Wave, Inc. (Product Developer-Distributor).
Manufacturer's Address: 6123 E. Arapahoe Rd., Boulder, CO 80303. Phone: 303-443-3470.
Date of Introduction: 2002. March.
Wt/Vol., Packaging, Price: Quart Pure-Pak Carton or 11 fl. oz. single serve plastic bottle.
How Stored: Refrigerated.
New Product–Documentation: Ad (full-page, color) in *Natural Foods Merchandiser.* 2002. March. p. 19. "Silk: The pick-me-up your customers won't put down. New Silk Coffee Soylatte." In the same issue (p. 119) is a full-page ad Silk Spice Soylatte.

A similar ad appeared in the June 2002 issue except that the tagline was "Two more reasons to make room on your shelf. The #1 selling soymilk in America." Each bottle is 11 fl. oz. (330 ml).

8070. White Wave, Inc. 2002. Silk: The pick-me-up your customers won't put down. New Silk Coffee Soylatte. Organic soymilk–protein with a kick (Ad). *Natural Foods Merchandiser.* March. p. 19.
• ***Summary:*** This full-page color ad shows a large carton of Silk Coffee Soylatte and a convenient single-serve bottle (11 fl. oz) of the same product. Both are calcium enriched. On a red banner across the bottom of the ad: "The #1 selling soymilk in America." www.SilkisSoy.com. Address: [Boulder, Colorado]. Phone: 1-800-488-9283 X-885.

8071. White Wave, Inc. 2002. Silk single serves are here. Like a bottle rocket of energy (Leaflet). Boulder, Colorado. 1 p. Front and back. 21.5 x 15 cm.
• ***Summary:*** Leaflet (glossy color) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2002. March. On the front: Three single-serve PET bottles (11 fl. oz) of Silk in plain, vanilla, and chocolate flavors–against a dark blue background. Written on each bottle: "High energy soy!" "Shake well and buy often." "Calcium enriched." "Vitamin fortified." Across the bottom, on a background of white bubbles: "Perfect for on-the-go!" "100% lactose free. 100% dairy free. 100% cholesterol free. Non GMO. Made with third-party certified organic soybeans. Visit us at www.SilkIsSoy.com."

On the rear: "Silk single serves: Like an energy bar in a bottle." "Put the power of Silk to work for you all day long." Also: Nutrition and packaging information. Address: 1990 N 57 Court, Boulder, Colorado 80301. Phone: 1-800-488-9283 X-885.

8072. Wildwood Harvest Foods, Inc. 2002. Wildwood–from the wildwoods of California & Midwest-Harvest–to the sea of soybeans of Iowa (Leaflet). Grinnell, Iowa; Watsonville, California. 3 panels each side. Each panel: 22 x 9.3 cm.
• ***Summary:*** Leaflet (glossy color) sent by Patricia Smith from Natural Products Expo West. 2002. March. "In 1980 Wildwood Natural Foods began producing organic soymilk and tofu."

"In 1988 an Iowa farmer's decision to make tofu from Midwestern soybeans resulted in the formation of a family business and the building of a factory on the farmer's third generation farm. Midwest-Harvest Tofu is now on natural food shelves throughout the Midwest."

"In the spring of 2000, a small tofu company located on a farm in Iowa contact a well established soyfood company in California. The resulting dialogue between the leaders of the two companies... culminated in the creation of Wildwood Harvest Foods in August 2001." Address: 1810 Blakely Circle, Grinnell, Iowa 50112; 416 E. Riverside Dr., Watsonville, California 95076. Phone: 1-800-499-8638.

8073. Vaidya, Achutananda. 2002. Re: Answers to questions on soyfoods in Nepal. Letter to William Shurtleff at Soyfoods Center, April 12. 3 p.
• ***Summary:*** On 19 Jan. 1993 William Shurtleff, founder of Soyfoods Center, wrote Mr. Vaidya a series of questions based Mr. Vaidya's last letter. Mr. Vaidya and his uncle seem to be the first people to make tofu in Nepal, so details of their work are very interesting from an historical point of view.

"First, questions about the work of your uncle, Raghubir Baidya. (1) Did he ever sell any of his tofu? Even a few cakes? He Must have sold a few cakes if he tried for several months?" Answer: "First he made Tofu for his own consumption only." He did not sell that tofu. At that time none of the Nepali people understood what tofu was, so he had no idea of selling it.

(2) "At what address did he make his tofu at his residence in Kathmandu?" Ans: The address of his residence

in Kathmandu was Tripureswar, Kathmandu, Nepal. Now his family address has changed.

(3) "Did your uncle ever mention that tofu was made commercially (= for sale) in Tibet? Have you ever heard that it is?" Ans: "No I never heard my uncle mentioning that Tofu was made commercially in Tibet. He had no idea about it." I heard he had only one Tibetan friend.

(4) "You said he started making tofu for 'domestic consumption.' Does that mean he made it, free of charge (of course) for members of his immediate family? How did they cook and serve it (what kind of recipes?). Did he also give it to members of his extended family such as brothers, nephews? Did you ever taste it? What did you think of it? How was it prepared when you tasted it?" Ans: Yes, at first when he started making Tofu he made it free of charge for members of his family. At first Tofu is fried in oil. And then it is used with vegetables as a delicious food," like pickles etc. "Yes he gave it to his extended family members. Yes, I've tasted it. I think Tofu is an excellent food for helping to solve world food crisis because it is a high quality nutrition food and the cost is very low. I tested it; I thought it was like a vegetable." I studied your book, *The Book of Tofu.*

(4a). "How often did you watch your uncle making tofu?" Ans: "Sometimes I watched him making tofu."

(5) "Did he do a special demonstration just for you to teach you the process or did you just watch him while he was making tofu as usual?" Ans: "He never did a special demonstration to teach me but I learned by watching him as usual."

"My uncle was not interested in Tofu because the Nepalese people were not interested because it was a new product for them." The Nepalese concept of the soybean is that it is very cheap and used only by low-class people. "But I was very interested because it was of high quality nutrition and the cost was very low.

"At first no one knew that Tofu was soybean cakes. My uncle's family also didn't know it. They just called it using the Nepali words *Bhatamass Ko Paneer."* But when my friend Mr. Akifumi Nakamura came to Nepal from Kobe, Japan, in 1972, he suggested to me that I call this product Tofu. "Mr. Nakamura was the one who saw my interest in Tofu and taught me to make tofu. He came to Nepal in 1972" to work with Japan Overseas Cooperation Volunteers (JOCV) for two years. He worked at the Central Food Research Laboratory in Kathmandu. During this time he taught me to make Tofu during his after office hours. Then I learned how to make tofu. I started making tofu commercially in Dec. 1974, first at my own residence to keep my expenses low. I started by selling it to small shops and many other places. Then I developed recipes and sold it to even more people. And slowly the people of my country came to understand it as well. At times Mr. Nakamura would help me and we imported some machines from Japan. Then I started commercially.

"Now I want to ask about your company, Nepal Soya Industries. I think you were a pioneer in Nepal not only with tofu, but also with other soyfoods! (7) In what month and year did you start to SELL each of the following soyfoods commercially in Nepal. And approximately what percentage of your total sales does each account for now? Ans: (7a) Shree Akita Miso = Akadashi Miso. Started Oct. 1986. I made miso and sold it in Japanese hotels and restaurants. Even now no Nepalese people know about miso. It accounted for 15% of total sales. Now it is named Akita Miso.

(7b) Soya sauce. Started in March 1982. When I started to make soy sauce nobody knew what it was. Nowadays some people in the cities know about it. And also some local restaurants used soya sauce. It accounted for about 25% of total sales.

(7c) Dry Tofu. I tried making it but never sold it commercially because there was no interest.

(7d) Soya Milk. At first the Nepalese people had not heard of soya milk, but after a few years one International company started it. They named it Indreni Soyamilk. But after some years they stopped selling it. (7e) Soya Curd. I started making it in 1985. It is a part of Yogurt we used. It is sold commercially. But now lots of dairy companies make it commercially, so I stopped producing it. During the period 1985-1990 it accounted for about 10% of sales.

(7f) Vita Tofu. It started making it Dec. 1974. I stopped making it during 1983-185 because at that time I went to Japan and could not manage my factory. My children could not do the work for me. From 1986 to 2000 we again made Vita Tofu, but last year our country had a crisis–the Royal Family accident. Nowadays Maoists are attacking most parts of our country. And now the Nepalese Government has issued an Emergency. Because of this, tourists have stopped visiting Nepal. My business fully depends on tourists. So last year I had to stop making tofu. It once accounted for 40%. "I am interested in working with soyfoods in any country. If you will arrange it I am always ready for it."

(8) "Please circle each product for which you were the first person in Nepal to make that product commercially." Ans: He is not sure, so he circles only Tofu in 1974.

(9) "Are you making all these products commercially now? Are you making any others? Is making soyfoods your main source of income now?" Ans: Nowadays I produce it on a very small scale and this is my main source of income. But now I am retired from my job also [on 15 March 2001 at the Central Food Research Laboratory in Kathmandu and as a food inspector].

(13) "You said that in Japan you learned to make moyashi. Were these soybean sprouts or sprouts from other kinds of seeds?" Ans: They were not soybean sprouts but rather sprouts from some kind of black seeds [probably black mappe].

Mr. Vaidya attaches his business card and a 2-page

curriculum vitae with a portrait photo attached. He was born on 28 Dec. 1947. Address: Founder and owner, Nepal Soya Industries, 9/374 Bhedashing, Jamaguthi, Kathmandu, Nepal.

8074. Booth, Greg. 2002. Working out the links: SoyLink producers plan to boost value of identity-preserved and food-quality soybeans. *Ag Innovation News* (*AURI–Agricultural Utilization Research Inst., Waseca, Minnesota*) 11(2):16. April.
• ***Summary:*** SoyLink, LLC, a subsidiary of the producer-owned cooperative FarmConnect and a partner with the investment group Soy Driven Enterprises, began an equity drive in February. SoyLink expects to sign up about 1,000 farmers with a total investment of $8 to $13 million, says FarmConnect CEO Brent Sorenson. SoyLink will provide ingredients for soy beverages. The co-op uses a processing plant in Oskaloosa, Iowa, where identity-preserved soybeans are made into powder for soy drinks and dairy replacement products.

8075. Dean Foods Co. 2002. Annual report 2001. Dallas, Texas. 82 p. 28 cm.
• ***Summary:*** Merger: On 21 Dec. 2001 Suiza Foods and Dean Foods merged, creating one of the leading food and beverage companies in the United States. The company's Dairy Group is America's largest processor and distributor of dairy products. The per-share price of New Dean Foods has risen from about $50 in Jan. 2001 to about $75 in April 2002. Gregg L. Engles is the new Chairman of the Board and CEO. Facing page 10 is a large color photo of 2 cartons of Sun Soy soymilk (Creamy Original, and Vanilla); Suiza launched Sun Soy refrigerated soymilk in 2001. The company's financial year now ends December 31. Net sales for 2001 were $6.230 billion. Gross profit was $1.480 billion.

Accompanying the annual report is a "Proxy statement and notice of annual meeting 2002" (24 p.). In 2001 Gregg L. Engles, Chairman of the Board and CEO had: Salary $880,000. Bonus $976,800. Other compensation $169,869. Options granted (in shares): 400,000. Address: 2515 McKinney Ave., Suite 1200, Dallas, Texas 75201. Phone: 214-303-3400.

8076. Ferrier, Grant; Lewandowski, Joseph P. 2002. No end seen to soy sales trend. *Natural Foods Merchandiser.* April. p. 24, 26.
• ***Summary:*** This article is about soy milk in the USA. The highly publicized endorsement of soy protein in late 1999 by the U.S. Food and Drug Administration got the attention of consumers. Market studies have shown phenomenal growth in the soy milk market in both natural products stores and in traditional supermarkets.

Reasons to expect this trend will continue: (1) More than half of the U.S. population has never tasted soymilk. (2) Soy milk consumption is still less than 1% of all milk consumption. (3) Consumer demand for organic foods is growing and the leading brands of soy milk are made with organic soybeans. (4) Lactose intolerance extends across all ethnic groups and appears to increase with age. The percentages of people older than 40 who are lactose intolerant are: African-Americans 70%; Asians 70%; Hispanics 60%; Caucasians 40%. (4) As women grow older, they will be buying more products, such as soy milk, to help them deal with both osteoporosis and menopause. (5) Environmental consciousness is growing and plant proteins are seen as having a small environmental footprint than animal proteins.

Growth rates for various soy products:
Nutrition bars 37%
Soy milk 34%
Cheese alternatives 27%
Food supplements 20%
Meat alternatives
Tofu 3%.
Six soymilk brands account for 80% of sales:
White Wave 21%
Hain Celestial Group / Westbrae 13%
Eden Foods Inc. 11%
Imagine Foods Inc. 10%
Vitasoy USA Inc. 10%.
Pacific Foods 8%
30-40 others 18%
Private label 10%.

Grocery chain growth is built on refrigerated soymilk brands; 63% is refrigerated and 37% is shelf stable. In natural products stores, 38% is refrigerated and 62% is shelf stable.

Top ten soy milk brands in natural products stores: 1. Silk. 2. Westbrae. 3. Edensoy. 4. Vitasoy. 5. Imagine. 6. Pacific. 7. Wildwood. 8. Better Than Milk (Fuller Life Inc.). 9. Odwalla (Coca-Cola). 10. Zen Don.

8077. **Product Name:** Natural Soy Mask Flavor (Liquid, Powder, or Natural & Artificial).
Manufacturer's Name: Mission Flavors & Fragrances, Inc.
Manufacturer's Address: 25882 Wright Circle, Foothill Ranch, CA 92610. Phone: (949) 461-3344.
Date of Introduction: 2002. April.
Ingredients: Natural flavor, maltodextrin carrier.
Wt/Vol., Packaging, Price: Powder: 25 lb, 50 lb, 100 lb, and 2000 lb. Liquid: 4 x 1 gallon cases.
How Stored: Shelf stable.
Nutrition: Per 100 gm: 360 calories (used at 0.2% level).
New Product–Documentation: Talk with Mike Hosler and Paul Loskutoff of Mission Flavors. 2001. May 1. This product neutralizes soy off-flavors such as bitterness, grassy/beany flavors, and soy aftertaste. It is an all natural product. The basic mechanism is that a natural masking agent "docks" at taste bud receptor sites on the human tongue

preventing that receptor from tasting the undesired flavors and fragrances. Paul and his partner founded this company in 1987. The work on this product was based on earlier work on masking the aftertaste and bitterness contributed by vitamins, especially B-vitamin complexes. All masking will also mask a small amount of the of the primary flavor system (such as vanilla). When most customers evaluate a soy mask product they look for the effectiveness in masking the soy off-flavors not considering the primary flavor (such as vanilla, strawberry, etc.). Most of Mission's work is ultimately development of soy masks customized to particular soy applications. Hundreds of finished product trials have lead to today's generation of effective masking flavors. Additional research has helped identify ways to adapt these flavors to more specific issues found in the use of soy proteins. Versions of these flavors have been created to not only mask the aftertaste of soy, but to compliment and enhance the positive features of the food or beverage items in which they are introduced. Soy milk, for instance, can benefit from a masking system enhanced with dairy notes recognizable by the consumer as being consistent with whole and low-fat cow's milk."

The product is used at the 0.2% to 0.3% level so 0.2 gm of soy mask per 100 gm of product. The product is "organic compatible" meaning that it is not itself organic but it contains nothing that would prohibit a product it is used it from being organic at, say, the 95% level.

There are presently 60-100 flavor companies in the USA; most of these have developed a soy mask, typically after the soy health claim was issued in late 1998.

8078. Treloar, Brigid. 2002. Tofu. Singapore: Periplus Editions (HK) Ltd. Printed in Singapore. 112 p. Illust. (color). Index. 25 x 24 cm. Series: The Essential Kitchen.
• ***Summary:*** This is a beautiful book, with stylish and informative full-page glossy color photos on every other page. It is well researched, comprehensive, and generally uses standard tofu and soyfoods terminology. It is also strange: We are not told in which country the publisher is located (perhaps Hong Kong or Singapore) or where the author lives. It is distributed in North America, Japan and Korea by Tuttle Publishing. On the inside rear dust jacket: www.tuttlepublishing.com. It is clearly targeted at a world market.

Contents: Introduction. Tofu glossary (introduction, firm and soft tofu, firm and regular tofu, fresh tofu, silken tofu, soft tofu, extra firm tofu, powdered tofu {or instant tofu or soy milk powder}, nigari tofu, flavored or dessert tofu, grilled tofu {yaki-dofu}, deep-fried tofu {age}, freeze-dried tofu {koya-dofu}, thin deep-fried tofu {aburaage or usuage}, thick deep-fried tofu {atsuage or namaage}, seasoned tofu pouches {for *inari-zushi*}, tempeh). Creating texture and flavor. How to use tofu: How to cut tofu, making a chrysanthemum flower, how to remove excess moisture, how to change soft tofu into firm, how to prepare tofu for cooking (marinating, grilling, pureeing or blending, parboiling / braising, panfrying / stir-frying, scrambling, steaming, deep-frying, smoking, how to reconstitute freeze-dried tofu, how to prepare deep-fried tofu for cooking, substituting tofu in recipes). Appetizers Snacks and light meals. Soups. Baked dishes. Stir-fries. Grilled dishes. Noodles, couscous and rice. Vegetables. Salads. Desserts. Glossary (of general ingredients, incl. soy sauce, Teriyaki sauce). Guide to weights and measures.

Note: This is not a vegetarian cookbook. Some recipes call for pork, chicken, fish (salmon, trout, tuna), etc.

Talk with representative of Tuttle Publishing, Vermont. 2004. May 8. Brigid lives in Australia. Periplus, created in 1997 by Tuttle, is located in Singapore and a sister company of Tuttle. Address: Food writer, stylist, consultant, and cooking instructor [Australia].

8079. Dean Foods Co.; White Wave, Inc. 2002. Dean Foods signs definitive agreement to purchase White Wave, maker of *Silk* soy products: Dean Foods becomes America's largest soymilk manufacturer. Boulder-based White Wave management committed to growing Silk brand. Pending litigation between Dean Foods and White Wave to be dismissed upon closing (News release). Dallas, Texas and Boulder, Colorado. 3 p. May 8.
• ***Summary:*** Dean Foods Company [formerly Suiza Foods] (NYSE: DF) announced today that it has signed a definitive to acquire the 64% equity interest in White Wave, Inc. it does not currently own. The price of this 64% was approximately $189 million, bringing Dean's total investment to approximately $204 million. White Wave had total sales of approximately $125 million during the 12 months ended 31 March 2002.

"We are extremely excited about this transaction," said Gregg Engles, Chairman and Chief Executive Officer of Dean Foods. "We believe that soymilk is one of the most promising branded growth opportunities in the food and beverage industry today. With its proven record of success in the soymilk category, we believe White Wave is well positioned to take advantage of the explosive growth potential that this category holds. Dean Foods is committed to investing and innovating in the functional beverage arena, and this transaction is another step toward delivering on that commitment."

"We are more committed than ever to our original mission of creatively leading the full integration of soy foods into the American Diet," said Steve Demos, Founder and President of White Wave. "By joining forces with Dean Foods, we will have more resources available to innovate, extend our brand and expand our distribution. Additionally, we believe that our principles rooted in sustainable, environmentally sensible practices have the opportunity to succeed on an even larger scale. We are anxious to move on

to the next phase of our growth cycle."

Note 1. This news release appeared verbatim as a PRNewswire–FirstCall on the morning of May 8.

Note 2. This news release also appeared as a brief part of an article in the *Wall Street Journal* (May 9, p. B-9) titled "Dean Foods says profit declined 64% amid write-downs." Address: Dallas, Texas and Boulder, Colorado. Phone: 303-449-2526.

8080. Demos, Steve. 2002. New developments at White Wave (Interview). *SoyaScan Notes.* May 8. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Today Dean Foods acquired White Wave for a total of about $295 million–$189 million of which was for the remaining shares not yet owned by Dean Foods.

The root for Steve's training in Right Livelihood came some years ago from a training session with Goenka, who is now age 78. He led a ten-day sitting retreat and course in Lennox, Massachusetts for CEOs to promote the "Spirit in Business" concept. At the end of the ten days, he took two hours of general business questions, not meditation technique and practice questions, from those who had participated in the retreat. Steve signed the contract with Dean Foods then sat on his "pillow" at the retreat for 10 days. Even though he has lost sight of it from time to time, "there has always been this thread running through: Here I am, eyes closed, looking at the breath, and everything else is irrelevant. Who cares about all that other stuff? Here we are, dealing with the real stuff again. It was beautiful."

The response to the deal with Dean Foods that Steve has been getting from everybody, including competitors and suppliers who you'd think would feel threatened, is just remarkable.

"The bottom line is that we started out trying to change the way people eat, and we have helped to do that, and now we are going to try to change the way the world makes its living. That's even more significant.

"I've signed up, the money is staggeringly large, and all those things are somewhat irrelevant at this point. They key question is: How can you really impact the business model out there? Gregg Engles announced the deal this morning on a Webcast which the people at White Wave listened to. He strongly endorsed the profit model, which is strong, but even more he endorsed the company culture and team. It was phenomenal. He said he didn't want to get in the way or disrupt what White Wave is doing, based on a certain culture and philosophy. I can't ask for a bigger and better opportunity than that. Hopefully our generation will have shown America the better business model.

Soy has always been the vehicle, but the goal, right from the beginning was 'I'm gonna out-profit the profiteers because that's the language they speak.' If you do it using a principle-based business, my God, you can really effect people. So when you combine the merit of working with soy products, which are so wonderful, with the merit of that business insight–that's while I'm on cloud nine!"

Steve and several marketing people are leaving tomorrow morning for New York to do a presentation at the Goldman-Sachs Global Consumer Products Conference. "That's where Wall Street presents itself. Dean Foods will present White Wave at that time, then Steve will give a slide-show presentation to the investment community on "Jack and the Beanstalk: A modern day fairy tale."

"I don't tell this to too many people, but after the deal with Dean Foods was signed, the five major stockholders (those who made more than $5 million each from the deal with Dean Foods) took 5% of all of their earnings (that 5% totaled a little more than $7 million), and gave it back to White Wave's employees. Specifically, prior to the closing, the shareholders gifted shares back to White Wave, which gifted those shares over to the employees–all who have worked for White Wave for 3 years or more will (more than 60 people) receive checks (money) on Monday. The amount of money is proportional to the number of years worked–about $12,500 for each year. For example, our truck driver who has been with White Wave for 25 years made $350,000. Those who had been with the company more than 6 months but less than 3 years received a fraction thereof. There is nothing I have ever experienced that made me happier than the look on those people's faces. Disbelief. That look is priceless. The announcement brought some people to tears.

"There was a man who loaned me $500 to start the company. I just saw him this morning. We gave him half a million dollars. Even better–I'm going to meet a man in 20 minutes who came up with the name "Silk." I paid him $10,000 for it at the time. I have a bottle of champagne here on my table, and I'm giving him that plus a million dollars. I've created a good-will model that is staggering. One lawyer said to me, 'I have never seen anything like that.' I replied, 'I'm so sorry to hear that.' People who make enormous amounts of money are not willing to share it with those who help them make it. We're not being that magnanimous. I'm keeping 95%. If we're true to the concept of creating wealth without guilt, how could we not do this? We have such a warped sense of reward and achievement in this culture. We had to spend a lot of money on the gift plan, legally, on documentation–because nobody had ever done such a thing before, so there was no precedent or no forms.

"Prior to this, we had awarded people stock options to our salaried employees. We have been very profitable for the last few years and we just handed out bonus checks. So some of our hourly employees are making about $400,000.

"To avoid disrupting or hurting the company, we designed the gift pack as follows: We took out all taxes at the beginning, then we will give each employee one-third of their gift at once, and we will hold the remaining one-third for two years at which time employees still with the company will receive the balance due.

I do this self-servingly. I keep saying 'My goal is to drag myself up the evolutionary ladder in this life, and the only way to do it is with these kinds of insights. It's a long path. There will be many opportunities and challenges. And if you're not consistent and apply yourself to them, you ain't gonna wake up any better off the next round than you are this round. That's my practice.

"As I was leaving the meditation retreat, ten days of no talking, no eye-contact, I was driving away and there, in the very early morning, walking down the path was the teacher, Goenka, by himself. I stop the car, get out, bow, and then say: 'I just have to thank you for the great influence you have had on my life.' That was my dessert."

"My lucky break was running into Right Livelihood and the Buddhist philosophy of living. Everything since than has been trying to make it come to life. I hope, now that we're in the 'Big Leagues,' we can genuinely influence the profit sector; that's what drives things out there. I constantly ask myself, 'Am I heading in the right direction.' I know that I am without guilt. I can't do anything more than feeling comfortable in my own skin. I credit our business success to an absolute unwavering commitment to the concept; this will not fail because its so well rooted in the right stuff."

Note: This is the earliest document seen (March 2005) in which Steve Demos mentions the word "model" or the term "business model." Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

8081. Mast, Carlotta. 2002. Dean Foods to acquire maker of soy milk in Boulder, Colorado. *Daily Camera* (*Boulder, Colorado*)**.** May 9. Business section. *

• ***Summary:*** On Wednesday, Dean Foods Co. of Texas, America's largest dairy processor, announced it would pay $189 million for the 64% equity interest in White Wave it doesn't already own. That brings Dean's total investment in White Wave to $204 million; the initial 36% was acquired in 1999. In 2001 Dean Foods was purchased by Suiza Foods Corp. for $2.5 billion. In 2001, White Wave sued Dean Foods, claiming the Suiza purchase went against its own acquisition deal with Dean Foods; the acquisition ends this lawsuit.

Steve Demos started White Wave in Boulder, Colorado, 25 years ago with a loan of $500. White Wave had sales of $136.5 million for the year ending March 31; Demos expects that number to double during the next year. White Wave's Silk controls more than 75% of the U.S. market for refrigerated soymilk. Demos and White Wave's four other major stockholders decided to share more than $6 million of the purchase price as cash gifts to the company's 130 employees. Those who have been with the company the longest will receive the most money. "There's no greater pleasure than giving a few hundred thousand dollars to a person who doesn't expect it," said Demos–who will remain president of White Wave and will report directly to Gregg Engles, chairman and CEO of Dean Foods.

Wednesday's acquisition "is a validation of the importance of soy foods to the food industry as well as of soy milk to the future of the dairy industry," said Peter Golbitz, president of Soyatech.

This "is the biggest news to hit the soy industry in 30 years," said William Shurtleff, founder and director of the Soyfoods Center. He added that CEOs like to back winners; this deal shows that a dairy company now wants soymilk to succeed–and believes it will.

8082. ACDI / VOCA–Bolivia. 2002. Prosoy Santa Fe, Ltda / CEDETI. "Soybean derivatives processing." Santa Cruz, Bolivia: CEDETI. 8 p. May 29.

• ***Summary:*** "Summary: Prosoy Santa Fe, Ltda. is a small enterprise run by a group of women. This enterprise is engaged in the production of soybean milk, producing approximately 120 lt. of soybean milk daily, which is mostly sold at the local markets of Santa Fe and Yapacaní. The efforts of this group of women attracted the attention of CERDETI, a local NGO that helped them channel a grant from FOMRENA to build and equip a small soybean processing plant. With this new equipment, PROSOY seeks to increase production volumes and diversify their products. However, using a new technology and increasing production lines will require new skills and improved management of technical matters such as preservation methods, ingredient dosage, as well as improved management of registries and control of inventories. The women comprising PROSOY are aware that the answers for many of their technical questions and applicable skills can be transferred via an experienced consultant, therefore PROSOY requests the support of an ACDI/VOCA "Farmer to Farmer" expert in soybean derivatives processing."

8083. Demos, Steve. 2002. White Wave's 25th anniversary: How Steve sold White Wave to Dean Foods for $189 million (Interview). *SoyaScan Notes***.** June 2. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Steve is at the farm. White Wave's 25th anniversary is coming up in September. At Goldman-Sachs Steve has given his presentation on Jack and the Beanstalk: A modern day fairy tale. "Depending on who I'm talking to, I bring 'Right Livelihood' into it. 'Right Livelihood,' to me, is at the root if it, but we don't always talk about it because we're not going to use that as the reason for the success in the business model. The business model has to be successful because it is a good business model, its based in Right Livelihood, but I don't want to become the Right Livelihood company, I want to become the business model that was very successful because it was based on Right Livelihood."

"Dean Foods is making a commitment to entering the branded foods business. And they've also chosen the healthy benefits foods to be part of that. This was somewhat of the

introduction of the investment they had made, by me just giving the 'street' (Wall Street), so to speak, an update on the soy industry and White Wave." Dean Foods has owned brands before, but they have all been relatively small and No. 2 or 3 in their category. Dean Foods has about $250 million a year in cash flow. This money is looking for a home. They need to invest their stockholder's money or give it back to them. Dean Foods is saying, hey, the way to use the money here is to invest in these value-added, branded foods. Where is the most growth coming from? The legitimate, natural, nutraceutical, healthy benefits, organic type of foods. We ring every one of those bells.

"Our business model is a series of very conscious choices going all the way back to the product itself. It's good for me, good for you, good for everybody who touches it. Right Livelihood is values-based business, or principal-based business.

"We ultimately gave away 10% of the company back to the employees. But we did it in two different ways. Round one came a few months ago; when we saw that this was very likely to occur, we awarded stock options (at the lowest possible price) back to the employees based on job responsibility and contribution to growth. That was 5% of the company. Everybody made 3-5 times what the price was of the option was. Nobody turned it down because it was absolutely free money. The option was something like $10 and the stock sold for $130; who is going to turn that down? The second round came from the five largest stock holders based only a years one had worked for the company. We have talked about this before so there is no need to go over it again."

Looking back over the past 25 years, what are the things that have been most important to White Wave success? "One is innovation. The willingness to constantly try until you find something that works. If you look at the number of attempts versus the number of successes, clearly we are in our own one in a hundred, or even five hundred. We've introduce a lot more failures over the years than we have Silks. In the process, by innovation, we taught ourselves key things. Now, I could tell you how to make a soy product is any factory, virtually for any type of soyfood, from burgers to ice creams, from fermented to curdled. That gives us a different perspective, and it gives us insights into how soy is going to get into the mainstream diet. All that experience and all that time we have come to understand how it is accepted, what is accepted, what they are looking for. In this industry, I think this is somewhat unparalleled. We've tried everything but miso.

Second, we made a business model that was highly profitable and we proved it by investing in all the right stuff. We made all the right decisions for this business model so that we could prove that we could finance growth on our own, without a bank. And over the past several years, since we initially took on Dean's money, we haven't received anything else, and yet we've probably tripled in size–and the numbers were quite large."

When do you think that business model was first clear in your head? "It was at least 5 years ago I saw the three levels of profit that are associated with the soymilk business: Extraction, packaging, and distribution. All are money-makers but two of those are owned by the dairies. So my whole business model was: Use the infrastructure that existed, because the dairies had it all in place, and basically tell them you'd pay them more than they were currently making from their normal cow juice stuff. Once we sat that that was, in fact, true, then we started getting more and more interest on our side in going to a vertical business model, because the profits that were present with packaging and distribution were so much bigger than manufacturing the extract. We're about to start that with Dean Foods; the next step is proving this business model. In the past, White Wave has not been packaging; we have only been extracting. But we got control of how we distributed the extract by where we located the extract. It's funny. You can pay Mother Nature to distribute for you–in other words use the water where you find it and need it–or you can pay truckers to distribute if you happen to ship a heavy water product all over the U.S. So we located our extraction systems located in different parts of the U.S.–more efficient for where Silk was being packaged. And then we bought our own extraction. We have not put in our own processing / formulation, which is one more profit level that we haven't even seen yet, and we're already a very handsome business model. White Wave presently has two different extraction locations, but the company draws off of four. We have an arrangement with another company [such as Sunrich] to supply us. White Wave makes about 50% of the Silk sold and the other company also makes 50%. White Wave does not necessarily want control of 100%; there are headaches that come with that. It is expensive to build a soymilk extraction facility. We are focusing our money on ramping up sales.

Anything else? "Over the past 25 years White Wave has stayed true to our principals–but those are things I take for granted. Some people seem to think that those are great achievements. I think they are normal, which is why I don't mention them. How else would I do it? But it's apparent that there are not a lot of people who walk their talk–at all; it's unfortunate. So, even through some very difficult times, we did not compromise our morals or ethics in running the business. We probably compromised our personal well beings [overwork, stress], which is not all that good. But hopefully, we'll be making up for that.

What was it like when White Wave began operations in 1977? Natural foods were bulk only. Organic was known, but there was no differentiation between organic and natural because nobody had yet deceived the public with a fake product. I had started a natural foods store in Pennsylvania based on no packaging, all bulk. So natural foods was a

lifestyle but had not been compromised by business yet. There were not a lot of natural foods stores in the U.S. in 1977 and they were mostly co-ops. The big natural foods stores came a few years later. The chains and supermarkets (such as Whole Foods and Wild Oats) came 10-15 years later."

Organically grown? "We used to go to Walnut Acres, one of the original organic meccas, to buy all our flours and grains for my natural food store named Touch the Earth in Pennsylvania. I have a clear memory of the bottom third of the bag being dirt. It was organic all-right. We always knew that we had to watch for stones and dirt in anything sold as organic. God knows why!

Soyfoods? "I don't think the word had been invented or was well known. 'Tofu' as a word was starting to be known, partly because of what you were doing at that time. My first experience of making tofu came through the Seventh-day Adventists–through the Bible we used to carry around–*Ten Talents.* It had a recipe for making bean curd. Of course soy sauce was well known. In 1977 there was no category of foods called 'soyfoods' and there were no companies that were soyfoods companies" (Continued). Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

8084. Demos, Steve. 2002. White Wave's 25th anniversary: How Steve sold White Wave to Dean Foods for $189 million (Interview). *SoyaScan Notes.* June 2. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued: Vegetarian? "You were either Indian (from India) or you could have been a left-over hippy from the 1960s, and then there were the Seventh-day Adventists. My father often talked about a couple of people that he was in business with that were into yoga and were vegetarians. I didn't know anybody who was not eating any animal products.

Non-dairy? "Rich Products and whipped toppings or coffee creamers were starting to come about, and maybe infant formula. I think that would be about it for non-dairy.

In the 1960s, Steve bought tofu from a store named Seeds of Life on Telegraph Avenue in Berkeley; it sold foods only in bulk–no packaging. "You weighed your food and priced it yourself. It was Utopian food shopping."

Meat alternatives? "That would have to be Worthington Foods with fake sausage. And they certainly weren't called 'meat alternatives.' They were called 'meat analogs.'"

The diet-health connection? "That idea came in in 1984 with a *Time* magazine cover story–'And now the bad news.' There were two fried eggs for eyes and a piece of bacon doing a downward grin. I use that in a lot of my talks. That was the beginning of the mainstream diet-health consciousness. Up until that point it was calories and calories only–which had to do with gaining weight; it was not yet about disease and diet and well being. Up until that time the cholesterol hypothesis–the theory that cholesterol caused heart disease–had not been proved. Francis Moore Lappe and *Diet for a Small Planet* arrived in the early 1970s–diet and the planet. Now we had diet and consciousness, and environment and consciousness. This whole idea that diet and health were related did not reach most Americans until the 1980s." When Steve started making tofu he saw it as a complete food low on the food chain. It seemed to him inevitable that such foods had a bright future. "To me, it was the environmental and the moral animal-rights issues that I was focusing on, far more than I was on diet and health issues. Yet we were looking at tofu as a healthier food–no question. But it was only in the mid-1980s that Americans started to get into the disease-related part of that. Remember, our generation organized the first Earth Day in April 1970, so there was already the realization 'Aren't we living a little too high on the hog?' From there people began asking 'How are we going to save the planet?' Many of us tried to apply ourselves to this question in some individual way. Lots of us ended up working with food."

Health benefits of soy in 1977? "Complete protein is the only thing I can think of. And most people didn't even think that soy was a complete protein. Many people still don't know that.

"The key thing about founding White Wave in 1977 was we had no experience, no money and no access to any. And those translate to no confidence. You don't need both experience and money, just one or the other–in order to have confidence. Now, we know this market. We helped to create it. So we have a high degree of confidence in what we think about it and where we're going with it. That's a big difference. I have all the faith in the world that I know how to think; the question was what I wanted to think about. Making tofu looked like a pretty good thing to think about. So I just paid attention and learned as I went along. I also know that I had some genetic tendencies that way because of my father, Anthony.

"He was a successful entrepreneur–and still is. He started his own company semi-processing minerals and alloys when he was in his 30s. He would crush and size, and then sell that material to the welding-rod or steel industry. His company now has sales of a few hundred million dollars and has a few hundred employees. When we sold White Wave to Dean Foods he was ecstatic. He was an investor in White Wave to boot. He made double digit millions on the deal. He didn't have much faith in his son when I started in 1977, but he does now! He first invested in about 1983-84 when White Wave was in deep financial trouble. Steve's mom, Lorraine, is still alive and her support for Steve has always been strong and positive. She always believed I was an OK person, and she let me know that–like any good mother. My actions had to be honorable; it didn't matter much what they were. My father, likewise, is a man of very high integrity–he just didn't believe in what I was doing. But

he started relating to me in a completely different way after we sold White Wave.

"I grew up outside of Philadelphia near Villanova and Bryn Mawr. One brother was a surgeon, the other an attorney. In the 1970s my family basically gave up on me. The joke was: Where's Steve? Oh, he's off in India, up some tree somewhere. We paid for his education; what a waste. But he who laughs last laughs hardest. There is a certain vindication when everybody in your family is capable of retiring because of what you've done.

"I remember going to visit Azumaya (I don't recall what year), and I was very impressed at how big it was– so industrial. It looked like such big equipment. And I remember that they were hand curding and hand ladling. I thought: It will take me decades to get near the money to buy equipment like this. I tried to get money many times, but no bank would lend money to a small tofu manufacturer. White Wave got almost all its money from my family–and Pat Calhoun's folks, but to a much smaller extent. White Wave's five major shareholders are: (1) My elder brother, Jack, who is a surgeon and who carried the investment for the company. (2) My father, Anthony. (3) Myself. (4) Pat Calhoun. (5) A man by the name of Michael Sutton–an attorney friend of ours, early in the game, who ended up investing a lot. He's the luckiest person on the planet right now. That was the only way White Wave was able to finance its growth over the years.

"The first bank loan came in about the mid- to late 1980s, and it was for equipment. At one point White Wave got an SBA (Small Business Administration) loan for several hundred thousand dollars; it ended up being a nightmare. That helped finance the expansion into two production facilities. Within the last 3 years White Wave issued industrial revenue bonds through a state & federal program and raised $13 million. We used the money to build two Silk extraction facilities and to rebuild the tofu factory.

"When Dean Foods made its first investment of $5 million in White Wave in Aug. 1999, all of the money was used for product placement and marketing of Silk. Half of that money went specifically to slotting allowances / fees to supermarkets. We almost never lost a slot, but in some cases we actually went back and paid twice. The rest the money was used for samples, PR (public relations) and advertising. In May 2000 we got a new PR agency that is still with us: Carmichael Lynch Spong, of Minneapolis, Minnesota. They have done a great job for us. We had already put in place all of the financing of the equipment for the capacity expansion. It's not too hard to raise money for equipment; the risk-takers can always take back the equipment and sell it."

Nine months later, having spent the initial $5 million, White Wave went back to Dean Foods. But things had changed for the better. Sales had now risen to $28 million. This time Dean invested $10 million.

Did White Wave have any important firsts? "(1) We took a deep look at foods and challenged how they were being presented. We didn't stop challenging until we found a way that worked and was accepted. We put Silk soymilk in gable-top cartons like milk and put it in the dairy case. When Silk took off, it was everything we could do just to hold on. Silk now has sales of $170 million a year; all of White Wave's other products might be $10-15 million. (2) We flavored tempeh and tofu, and basically created the 'flavored tofu' category. (3) We were the first to do shelf sets with soyfoods. We put up 'Vegetarian Cuisine' centers in Whole Foods markets in the San Francisco area. Ultimately we ended up organizing the entire case around vegetarian foods. (4) Use of the word 'vegetarian' boldly with our product line. It was just one more extension of our lifestyle. The Farm in Tennessee did much the same thing but on a much smaller scale. We need to get back to that idea" (Continued). Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

8085. Demos, Steve. 2002. White Wave's 25th anniversary: How Steve sold White Wave to Dean Foods for $189 million (Interview). *SoyaScan Notes.* June 2. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued: Let's look at the August 1999 agreement that White Wave signed with Dean Dip and Dressing Co. when they purchased about 36% of White Wave. Why did you give Dean the right to buy the remaining 70% of White Wave? "We started by selling them 25% of the company, then within 9 months we went back (since it happened so fast) and sold them more, which came to a total of 36.03%. We went in wanting to sell the entire company to Dean Foods. We did this for the reason I explained earlier: Extraction, packaging, and distribution, and giving them a bigger profit margin than they could find elsewhere. If the strategic investor in White Wave was the same person who owned what we needed, then my value to them and the value to themselves would be that much greater.

We gave Dean the option to buy the rest of the company when we took on the initial money; here's why. A large business is not in business to invest in small companies; that's a venture capitalist. A strategic partner wants to invest in something so that they can ultimately control it. We had no problem with that because we knew that if we sold them 25% now and used their money in a way that worked, we were going to use their money to make us more valuable and then sell it back to them at a fair market value. That seemed like a fair deal. You do your part. We'll do our part. And we'll all make a lot of money. At that time, it was my intention to retire when Dean purchased the remaining 64%. As of Sept. 7 this year, Dean had the right, at fair market value, to purchase the rest of White Wave. The design was quite brilliant, really. It got everybody what they expected in a very fair and equitable fashion. Everybody had incentives to do their best. In the end, Dean would acquire a major

significant brand–and that's very hard to come up with.

But the big problem was that, after they gave us the initial money, Dean Foods never showed up. We expected Dean Foods to do the processing (formulation), packaging, and distribution of Silk. For proprietary reasons, it was to our advantage to do the extraction; the cost efficiencies were huge. Huge! Staggeringly large. For the last 2½ years, all I've been doing, is making sure we have enough capacity to go forward.

To this day, Dean Foods has not done any of what they were expected to do. I don't know why? No idea! Maybe the CEO felt we were a lark. He certainly didn't have any faith in the soy business. I think he got caught up in business acquisition mania. It was stupidity that we were seeing, but we just didn't understand it. It was so frustrating! My board reports would be devoted 40% to attacking Dean and telling them how pissed off I was, because it was clearly unfair and inequitable.

Everybody thinks that Dean Foods is responsible for putting all our Silk products on supermarket shelves. Not true. Sheryl Lamb built a sales team that put those products on the shelf. Eric Bedar kept our distribution system running on time. Dean Foods had nothing to do, to this moment, with the success of White Wave Silk. Nothing whatsoever, other than the use of their money and we could have done that from any bank. After they put in the initial money in 1999, they did nothing to help us grow the company. And we told them constantly how we felt it was unfair and unreasonable. We eventually sued them and spent $1 million on the suit, but we lost. Yet in the process we finally got their attention. Then Suiza bought Dean Foods and the resulting company came to be named Dean Foods. In the process they sold White Wave.

Here's the irony of ironies. I just found out about all this. When Dean Foods was sold to Suiza, White Wave became a $50 million discount to the deal price because we weren't making any money and Dean Foods gave us no value. Yet less than 4 months after they closed in December, the CEO of Dean Foods has turned around and paid a value of $295 million for White Wave–which we believe was fair market value for White Wave. The $189 million in cash was only the stock that was not owned by Dean Foods at the time of the transaction. Dean Foods paid much more for White Wave than they were required to in order to win the morale of the management.

We told Dean's team that if they were so foolish as to pay less than fair market value, the management team would leave (they'd say 'The spirit's broken. The passion is gone') and Dean would never be able to replace it. That was our first ace; the management team *would* leave. My second ace was that my mission is done; I don't need a job any more. So here are our terms for staying: First, we want to be autonomous; we will make all our own decisions and Dean will stay out of our way, because I can't stand working for anybody. I will report to a CEO but I don't want to be inside anybody's division. Second, there will be no personnel changes. Third, you will pay us a fair market value for what White Wave is worth today. Finally, you will give us a no-cap incentive for the management team to stay with the business for the next several years. They gave the management team a $35 million incentive to stay for two years–in writing. So now Steve, Pat and other top managers at White Wave have an employment contract. Steve's income is fixed if White Wave achieves certain huge sales levels. They said, if you can deliver your plan, here's what we'll give you. I said, if we beat that plan, I don't want any caps on what management people can make.

"There are four ways to make money at White Wave now. (1) You have a base salary, which is above average. (2) Managers get a bonus on achievement of that year's plan; the company draws up its own plan. This is typically 5-30% of your base, depending on who you are and where you are in the company. (3) Profit sharing, which is when we beat the plan; everybody in the company, top to bottom, including hourly workers, participates in profit sharing. That is when all goals have been met and we produce more profit than our plan called for. Then White Wave gets one-third of that extra profit to be handed out to all employees. Profit sharing at White Wave has been going on for a few years. Before that, we had no profit to share! (4) The incentive plan to deliver a fixed amount of sales over the next two years. That money comes from Dean Foods and its over $30 million now–the base. After that, it's limitless–during the next 24 months.

Dean Foods met all of those conditions, so I thought wow! They really mean what they're saying about soy. Wouldn't it be fun to fly the rocket ship (run White Wave) for a little longer.

"Dean Foods wanted to acquire a cultural context company, whose never worked for anybody, to work inside somebody else's vision. So it better be a damned good vision if you're gonna get us involved. To date, all of that seems to be in place.

Finally, Dean Foods is doing what the old Dean Foods was supposed to do. So far so good, but its still very early to give a final judgment. I think its gonna get political. These dairy guys aren't going to like the fact that White Wave is getting so much capital; they will fight that–even though we think we can offer Dean the fastest return on capital. That's the way big business run; every division fights for the their part of the available capital.

"So one day I decided to call the CEO of Dean Foods, Gregg Engles. It was a friendly and conciliatory call since we would have to work together. He is a man of jets; he has a few. He flew up for dinner that night from Dallas, and we struck up an interesting relationship right away. He's a young man with a lot of vision. He's very hungry and sees soy as a tremendous opportunity for opening up his aspects of business. He doesn't care two hoots about our mission–but that's fine. I didn't need him to join the mission. I needed

him to give me factories. So he made money on both sides."

In short, over and over again for White Wave, something that looked out like it would turn out to be a disadvantage (or crisis or disaster), ending up turning out to be an advantage (or great boon or victory).

"It was sort of unbelievable. It was extraordinary to see something of such negativity at one point in terms of litigation and all the rest of it to end up in such a positive way. I'm in awe of it. That inner voice that said–'You're not gonna believe the way this turns out.' It's beyond comprehension. This acquisition would never have happened under Howard Dean. But the new Dean Foods is giving us everything we think we need to make the category succeed. And the CEO wants us to succeed–and there's the key. He's told me, 'As long as you deliver the numbers, I'll give you anything you want.'

"I've never been more excited about the soyfoods industry than I am today. The ability to put soy products into the American mainstream market is phenomenal. White Wave now makes 50 million gallons of Silk a year.

"I'm in it for the jazz, for the thrill, for the fun. I think Silk can change the beverage industry, especially the soft drink industry, which has a bad product.

"Here's a glimpse of the future and my goal now. Capacity is a key piece, and I think purity is going to be another key piece–that Silk is 100% free of dairy, for those who are allergic. So we hope to convince Dean to give us one of their big factories (in Jacksonville, Florida, near Publix Super Markets, Inc.), and we're going to run it vertically–all the way from extraction through processing, filling, packaging–and prove that our business model is more profitable than running dairy product through the same plant. When Publix puts Silk on sale they will take up to 35 truck loads, which is one-third of an entire train! But even more than that, I want to go after heat reclamation and no waste stream. Make it a truly sustainable factory and industry. One big challenge will be the okara. Maybe turning it into a product or decomposing it into a gas. The point is: if there's a green model, aren't we the likely candidate? That's huge! We've already done the analysis; we know we can do this. We have retired 30,500 cows! We've put that on our website. We're thinking about getting a retirement home in India for all the cows we retire.

"Right now we're in 11 to 15 factories for all our products. White Wave has regional plants manufacturing products and selling into those localities. But the location of some of our extraction plants still requires tankering the product (which is mostly water) to a plant 1,000 miles away. Silk is projected to have more sales this year than Ben and Jerry's will have in ice cream. Isn't that amazing. And Silk is not high in saturated fat. We're all in awe of what we've stepped into in terms of the business opportunity. We are no longer missionary zealots for soy. We're also affecting infrastructure of business on the Right Livelihood side–which is fabulous. This is much, much larger in potential cultural impact than we ever fantasized. So that's a neat responsibility. I want to be at the causal point–business and wealth without guilt.

"I figure that if its worth writing about, somebody will do that. I have kept some photographs. On August 24th we have rented the Boulder Theater for our 25th anniversary. The management team will all be in costume. We plan to tell the story of Jack and the Beanstalk." Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

• ***Summary:*** Models were developed to predict the yield and quality of soymilk The quality characteristics investigated were total solids, protein content and fat content. The processing parameters considered were: (1) Amount of water added during grinding per kg of dry soybeans; (2) Blanching time; and (3) Heating time. Address: Dep. of Mechanical Engineering, the Polytechnic, Ibadan Federal College of Agriculture, PMB 5029 Moor Plantation, Ibadan, Nigeria.

8087. *Bluebook Update* (*Bar Harbor, Maine*). 2002. Soymilk plant opens in Guatemala: MicroSoy Flakes fuel new project. 9(2):1, 7. April/June.

• ***Summary:*** Leyenda, S.A., a new plant making soymilk and soyfoods in Villa Nueva, Guatemala, now makes Soy! Soyaleche, according the president Alejandro Barrios. The plant opened in Nov. 2001. With the capacity to produce 40,000 liters/day, Leyenda uses processing equipment from Perfecta Curitiba of Brazil and non-GMO MicroSoy Flakes from MicroSoy Corporation of Jefferson, Iowa. A photo shows Barrios holding two large glass beakers of his soymilk; That made from MicroSoy Flakes is whiter than that made from whole soybeans.

8088. French, Steve. 2002. Top ten health and wellness trends to watch. *Natural Foods Merchandiser.* June. p. 52, 54.

• ***Summary:*** Trend No. 8 is "Soy, the ultimate health food." French writes: "Will consumers ever fully understand, use and trust soy foods? As household penetration of soy products across categories continues–and mainstream computer packaged-goods companies search for new brands and extensions–look for a range of soy foods beyond soy milk and soy burgers to enter mainstream consciousness. Soy use is growing in frozen entrees, packaged grocery and snacks."

A table (p. 54) shows that 24.1% of the U.S. general population indicates that they have used soyfoods during the past year. Source: The NMI [Natural Marketing Institute]

8089. Lewandowski, Joseph P. 2002. Dean buys White Wave for $189 M [million]. *Natural Foods Merchandiser.* June. p. 1, 7, 18.
• ***Summary:*** On May 8 Dean Foods, a dairy and beverage giant based in Dallas, Texas, purchased the remaining 64% interest in White Wave, maker of Silk soymilk, for $189 million.

Two days later White Wave founder Steve Demos stood before crowd in a New York City hotel ballroom (with standing room only) and delivered the message he'd been waiting nearly 30 years to pitch: "Operating a business dedicated to the principles of right livelihood and sustainable agriculture can deliver not only spiritual fulfillment, but big-time profits."

White Wave, which has been unable to keep up with consumer demand, will use the money to expand manufacturing and marketing.

8090. Nordquist, Ted. 2002. Soymilk vs. dairy milk plant: Operating costs. In: Soyfoods 2002. Bar Harbor, Maine: Soyatech. 200+ p. 2 p. Held 25-26 June 2002 at the Hyatt Regency O'Hare, Rosemont/Chicago, Illinois.
• ***Summary:*** Compares the operating costs for two different levels of production: 6 million gallons annually and 12 million gallons. At 6 million gallons, the total costs per gallon are $1.09 for soymilk and $1.12 for cow's milk. At 6 million gallons a year, this difference of 3 cents per gallon equals $180,000 per year.

At 50 million gallons, the total costs per gallon are $.92 for soymilk and $1.02 for cow's milk. At 50 million gallons a year, this difference of 12 cents per gallon equals $6 million per year. However this latter calculation does not include the initial cost of the dairy cows, at an estimated $1,500 per cow x 19,850 cows = $29.775 million. If added to the initial investment for the cow's milk plant, the difference becomes $1.61 per gallon, which amounts to $34.5 million per year.

Talk with Ted Nordquist. 2003. Jan. Two experienced dairy consultants who work with him on his Modesto Soy Plant project are Robert Purbeck and Robert Townsend. Both have previously been dairy plant managers at places like Knudsen Dairy, etc. They complied the cost figures for a dairy plant given above. The real issues are dairy costs for which statistics do not exist–such as replacement costs of dead cows, cost of water for washing the animals before milking, water pollution, subsidies for feed, water, spray drying, and storage of milk, butter and cheese, energy issues, etc. Raley's and Savemart own and run large dairy processing plants with an output of about 95 million gallons a year. Moreover, many dairy farmers get their water at agricultural rates ($10/acre foot) whereas the municipality next door pays $150/acre foot. In short, in a modern plant like Ted's, soymilk can be produced for significantly less than cow's milk. However supermarkets / grocery stores do not take much margin on the sale of cow's milk. In the 1930s the U.S. government decided that milk was part of national security. So in seasons when cow's produce more than consumers can drink, the government spray-dries and stores the surplus. So the farmer is guaranteed a certain price to deliver a certain quantity of milk; if it is not used fresh or made into dairy products they spray dry it, store it for a year, then try to sell it on the world market. If they can't sell it, taxpayer dollars pay to destroy it. Schools get free butter, paid for by taxpayers. Ted went to Cal-Davis and posed many of the above difficult questions about dairy costs and subsidies to Sharon Shoemaker, head of the food science department. She told Ted that for $1,500 she would have a student do the research and get Ted reliable answers. Ted paid her. The student came back and essentially said "There are no subsidies." Ted called Sharon and asked what she called the low water rates for farmers in California. She said that is California water law, part of a program that has been in place for 50 years. It is almost too complex to understand and it differs from state to state; so getting solid figures is a monumental task.

Robert and Robert concluded that the real problem for new dairies in today's world is not the costs but the permits. A modern dairy uses about 17,000 cows and is run by a corporation. Nowadays as soon as environmental groups and their attorneys hear of proposal for such a dairy, they begin legal actions. The city council members know it will become a huge issue, and even if they do grant a permit it will end up in the courts of 5-10 years. 8093. United Soybean Board. 2002. National report 2002-2003: Consumer attitudes about nutrition. Seattle, Washington. 8 p. June. 22 x 21 cm.
• ***Summary:*** This ninth annual nationwide survey, commissioned by USB, was conducted in early 2002 by an independent research firm in Seattle, Washington. Random telephone interviews were completed with 1,000 consumers. The study's margin of error is ±3.1 percent and has a confidence level of 95%.

Contents: Introduction and methodology. Nutrition concerns and habits. Consumer awareness of nutrition terms and information. Consumer perceptions of cooking oils. Consumer attitudes about fats. Consumers on soyfoods and health: Perceived healthfulness of soy products (74% healthy, 19% neutral, 7% unhealthy), awareness of health benefits of soy (heart health 39%, menopause relief 18%, cancer prevention 16%, osteoporosis prevention 4%, good source of protein 4%, other 19%), where consumers get information on soy and health (magazines 42%, TV news 22%, newspapers 20%, friends/family 20%, etc.). Soyfoods: Consumption and trial (42% of Americans report they consume soyfoods once a month or more, while 28% consume soyfoods weekly, up from 27% last year. 30% of consumers say they never use soyfoods, down from 35% in 2001). Consumer perceptions of genetically modified food. Consumer perceptions and knowledge of organic foods (42% of consumers buy organic food products either frequently or sometimes. On an unaided basis, 48% know that organic foods can't contain genetically modified ingredients and 64% know that organics must be grown without pesticides and herbicides).

Percentage of American consumers who have tried various soy products in 2000, 2001, and 2002: Tofu 45%, 45%, 48%. Soy veggie burgers 25%, 28%, 35%. Soymilk 25%, 28%, 35%. Soy nuts 14%, 20%, 26%.

Percentage of Americans who consume soyfoods weekly: 24% in 1999, 27% in 2000, 27% in 2001, and 28% in 2002.

Percentage of Americans who are aware of the term "genetically modified": 48% in 1998, 42% in 1999, 58% in 2000, 62% in 2001, and 68% in 2002.

Note: As of Aug. 2008 this full survey is available gratis in PDF format at www.soyconnection.com /health_nutrition / pdf/.

8094. 8th Continent L.L.C. 2002. Some things are hard to stick with. This one's easy. 8th Continent soymilk (Ad). *Newsweek.* July 15. p. 16.
• ***Summary:*** At the top of this full-page color ad is a photo of six videotapes on subjects like weight loss, developing a flat tummy, learning yoga, and advanced marathon techniques; these are hard to stick with. In the lower right is a huge plastic bottle of 8th Continent soymilk with drops of condensed moisture over its surface. "Not everything you do for yourself is easy to stick with. Fortunately there's 8th Continent soymilk. So rich. So creamy. So delicious. It's the only soymilk you'll want to drink every day. Look for it in the dairy case."

A photo in the lower left corner shows the face of a happy, fit, middle-aged woman holding a pint of 8th Continent. Across the bottom: "8th Continent: A better place of wellness. Original, Vanilla, Chocolate. www.8thcontinent.com."

8095. Rivas, M.; Garay, R.P.; Escanero, J.F.; Cia, P., Jr.; Cia, P.; Alda, J.O. 2002. Soy milk lowers blood pressure in men and women with mild to moderate essential hypertension. *J. of Nutrition* 132(7):1900-02. July. [19 ref]
• ***Summary:*** This research suggests that soymilk lowers blood pressure in men and women with essential hypertension. Subjects consumed either 500 ml of soymilk or an equivalent amount of cow's milk for 12 weeks. At the end of the study, systolic and diastolic blood pressure decreased by about 18 and 16 mm of mercury, respectively, in the soy group, but only about 1 and 4 mmHg in the cow's milk group. Differences between groups were statistically significant. The results are encouraging, but more research is needed. Address: 1. Dep. of Internal Medicine, School of Medicine of Zaragoza, Spain.

8096. White Wave, Inc. 2002. Beyond Tofutown (Card). Boulder, Colorado. 10 panels plus insert. 16 cm.
• ***Summary:*** On the cover of this printed, folded invitation card (each panel is 6¼ by 4½ inches) is a color illustration of the top front of the Boulder theater. On the next three front panels are written (on the Marquis of the theater against an orange background): "An evening in Tofutown," "Another evening in Tofutown," and "Yet another evening in Tofutown," referring to three past celebrations hosted by White Wave at the Boulder theater. On the fourth panel is the large number "25" against an orange background on a yellow field, representing White Wave's 25th anniversary. And on

the sixth front panel is "Beyond Tofutown" written in red on the marquis of the Boulder theater.

On the middle back panel we read: "Three things that make our hearts go thump: The ring of the grocery register. The smell of soymilk in the morning. The joy of bringing Texans to Tofutown." "An evening in TofuTown–August 24, 2002 is brought to you by White Wave. The party, like its host, is a testament to sheer persistence. Details from the Boulder Theater, an Art Deco Historic Landmark in downtown Boulder, Colorado. RSVP by August 2nd. 720-565-2301 or Swynegar@whitewave.com." The logo (with a blue and white breaking wave in an oval) reads: White Wave–TofuTown Cards. Illustrations copyright Spark, dutiful servants to the Bean Curd family since 1980.

An insert (black ink on translucent white paper) states: "You are heartily invited to join us in an all new White Wave adventure–A 25th anniversary evening–Beyond Tofutown. In recognition of a job well done and one whale of a ride. Saturday evening, 6:00 p.m. on the 24th of August 2002 at the historic Boulder Theater, on 14th & Pearl.

"The 4th and perhaps most outrageous event along the Silk Road–Indeed, a quantum wiggle in the tofu timeline–So come prepared to shake, rattle & roll to the stylings of Cabaret Diosa.

"Exemplary organic fare offered at 7:00 p.m. A grudging return to real life occurs at 1:00 a.m. No suit. No tie. No problem."

Note: This is to celebrate both the 25th anniversary and the purchase of White Wave by Dean Foods for $189 million. On August 23, the day before this celebration, Steve Demos and his long-time close friend, Sheryl Lamb, were married in Boulder. Tim Redmond (of American Soy Products), who attended the wedding, said it was a beautiful and joyous occasion. Address: 1990 North 57th Court, Boulder, Colorado 80301. Phone: (303) 443-3952.

8097. Kwok, Kin-Chor; Liang, H.H.; Niranjan, K. 2002. Optimizing conditions for thermal processes of soy milk. *J. of Agricultural and Food Chemistry* 50(17):4834-4838. Aug. 14. [17 ref]
Address: 1-2. Dep. of Applied Biology and Chemical Technology, The Hong Kong Polytechnic Univ., Hung Hom, Kowloon, Hong Kong, China; 3. Dep. of Food Science and Technology, The Univ. of Reading, Whiteknights, P.O. Box 226, Reading, RG6 2AP, United Kingdom.

8098. Huang, H.T. (Hsing-Tsung). 2002. Origin of the term for "soymilk" in China and the origin of soymilk as a widely consumed beverage in China (Interview). *SoyaScan Notes.* Aug. 15. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The earliest document Dr. Huang has been able to find that contains a specific term for soymilk is the book *Yiya yiyi* (Remnant notions from *I Ya*), by Han I (1350 AD). It states that the poppy seed extract should be cooked in a way similar to that for cooking *doufujiang* (soymilk). This is the earliest document Dr. Huang has seen in which the Chinese term *doujiang*, meaning soymilk, appears.

The second earliest document seen is *Hu Ya* [Lakeside Elegance], by Wang Rizhen, published in about 1850. It states that soymilk, before it is coagulated to make tofu, is called *doufu jiang* (literally tofu + thick liquid). This date seems surprisingly late, yet Dr. Huang is quite sure that it is about right.

Before the Qing dynasty (1644-1912), soymilk was not widely consumed in China; most of it was coagulated to make tofu. Then it was found that longer cooking of the soymilk than usual causes hydrolysis of the oligosaccharides–which ordinarily cause flatulence. Street vendors began to make soymilk early in the morning, to keep it warm over low heat for hours, and to sell it as a popular breakfast beverage–*tian doujiang* (sweet soymilk) served with fried crullers (*youtiao*). Note: In some parts of Taiwan and northern China it is also sold as a hot soymilk soup *xian doujaing* (salty soymilk), with various seasonings and garnishes (See *The Book of Tofu,* by Shurtleff & Aoyagi, p. 207).

As far as Dr. Huang knows, soymilk was not generally fed to infants or children in China before the 20th century. Address: Goodwin House, 4800 Fillmore Ave., Alexandria, Virginia 22311. Phone: 703-824-3652.

8099. Blue Diamond Growers' Co-op. 2002. Now the perfect balance between soy protein and great taste: Add Blue Diamond's new Soy Protein Enriched Almond Breeze to your Almond Breeze product line (Ad). *Natural Foods Merchandiser.* Aug.
• ***Summary:*** A full-page color ad. "With the nutritional benefits of soy in 3 delicious varieties: Original, Vanilla, Chocolate," Photos show: (1) A young woman, wearing short pants, in a yoga posture, balancing on her forearms. (2) Six packages of Almond Breeze–3 new with soy protein, 3 older without. (3) Pure white almond milk being poured into a tall glass. Address: www.bluediamond.com.

8100. **Product Name:** Soy Protein Enriched Almond Breeze (Almond Milk) [Original, Chocolate, Vanilla].
Manufacturer's Name: Blue Diamond Growers' Co-op.
Manufacturer's Address: 1082 C Street, Sacramento, CA 95814.
Date of Introduction: 2002. August.
Ingredients: Water, evaporated can juice, almonds, natural cocoa, tricalcium phosphate, sea salt, potassium citrate, soy lecithin, carrageenan, vanilla extract, vitamin E acetate, vitamin A palmitate, vitamin D-3.
Wt/Vol., Packaging, Price: 1 quart (946 ml) Aseptic carton. Retails for $2.48 (1999/04, Lafayette, California).
How Stored: Shelf stable; refrigerate after opening.

Nutrition: Per 8 fl. oz. (240 ml): Calories 120, calories from fat 25, total fat 3 gm (5% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 160 mg (7%), potassium 180 mg, total carbohydrate 21 gm (dietary fiber 1 gm [4%], sugars 20 gm), protein 1 gm. Vitamin A 10%, calcium 20%, iron 4%, vitamin D 25%, vitamin E 50%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Ad in *Natural Foods Merchandiser.* 2002. Aug. "New, the perfect between soy protein and great taste:..."

8101. *Natural Foods Merchandiser.* 2002. Organic trends. Aug. p. 7.
• ***Summary:*** Gives two tables from SPINS and AC Nielsen.

(1) Growth of top 10 categories: The top category is "Nondairy beverages." Dollar volume (natural and mainstream): $325,627,220. Year ago dollars: $252,275,334. Growth vs. year ago: 29.1%.

The 10th category is Tofu. Dollar volume (natural and mainstream): $46,381,125. Year ago dollars: $42,971,416. Growth vs. year ago: 7.9%.

Total organic sales: Dollar volume (natural and mainstream): $2,010,633,349. Year ago dollars: $1,637,033,305. Growth vs. year ago: 22.8%.

Table (2) % of dollar sales by channel. For nondairy beverages: Natural product supermarkets: 22.20% Mainstream food stores: 77.17%. Mainstream drug stores: 0.21%. Mass merchandisers: 0.42%.

For tofu: Natural product supermarkets: 44.04% Mainstream food stores: 55.94%. Mainstream drug stores: 0.00%. Mass merchandisers: 0.02%.

Total organic sales: Natural product supermarkets: 45.77% Mainstream food stores: 53.78%. Mainstream drug stores: 0.10%. Mass merchandisers: 0.30%.

Note 1. What about natural food stores that are not supermarkets?

Note 2. Each of the above dollar figures seems to us to be 1,000 times too large.

8102. **Product Name:** Silk (Soymilk Sold Refrigerated in One Quart ESL Gable Top Cartons) [Unsweetened Organic].
Manufacturer's Name: White Wave Foods Co. (Distributor).
Manufacturer's Address: Colorado.
Date of Introduction: 2002. August.
Ingredients: Organic soymilk (filtered water, whole organic soybeans), calcium carbonate, sea salt, natural flavors,...
Wt/Vol., Packaging, Price: One quart (946 ml) Tetra Pak ESL gable top carton.
How Stored: Refrigerated.
New Product–Documentation: 8½ by 11 inches. Ad in *Natural Foods Merchandiser.* 2002. Aug. p. 8. "Silk: Not your ordinary, everyday bean juice! New!" A color photo shows the front of a carton of this Silk soymilk. White letters on a green background. "Calcium enriched." The ad text continues: "Silk introduces the first great-tasting, unsweetened soymilk with no added sugar. Call 1-800-488-9283 ext. 885 to order. The #1 selling soymilk in America. www.SilkIsSoy.com."

8103. Arcot, Jayashree; Wong, S.; Shrestha, A.K. 2002. Comparison of folate losses in soybean during the preparation of tempeh and soymilk. *J. of the Science of Food and Agriculture* (*London*) 82(12):1365-68. Sept. 15. 8104. Schmit, Matthew. 2002. Notes on Tofu Shop, Arcata, California 1980 on. Overview. 65 Frank Martin Ct., Arcata, CA 95521. 2 p. Handwritten on lined paper.
• ***Summary:*** 1980-85: Tofu Shop "Soy Deli and Wholegrain Bakery." 768 18th St.

1980–Rented front half of address initially. 1981–Rented remainder of building, initially for storage.

1982–Subleased back portion to Tofu Shop's baker, Melanie Patrick, who started own business, "18th St. Bakery."

1983–Purchased used equipment from Surata Soyfoods (Eugene, Oregon) (Shivak).

1985-92: Tofu Shop "Special Grocery and Deli." 768 18th St.

1985–18th St. Bakery vacates and Tofu Shop moves tofu production and wholesale into entire back of building. 18th St. Bakery owner Melanie Patrick eventually buys "Sprouted Seed" restaurant and renames it "Wildflower Cafe and Bakery.

Purchased more used equipment from Surata and from Richard Rose (Petaluma, California).

Matthew visits Ashland Soy Works and Alvin Kunishi at Sacramento Tofu Co.

Tofu Shop remodels deli with limited "Bar" seating. Tofu equipment upgrade to include Bean Machines' (BMI) grinder and forming box table, Groen jacketed kettle, and custom made hydraulic soymilk press.

1992 July–Tofu Shop "Specialty Foods (manufacturing & wholesale) moves to new Foodworks Culinary Center at 100 Ericson Ct. (2,000 square feet). One of ten companies–and the largest!

Tofu Shop "Specialty Grocery and Deli" is then remodeled into a full sit-down restaurant (seating 50) with a full-service take-out deli counter. Still located at 768 18th St.

1993–Tofu Shop "Specialty Grocery and Deli" is closed and sold, emerging as Daybreak Cafe.

Tofu Shop "Specialty Foods" incorporates with Ronald Horn investing in company in exchange for 40% ownership of the company. In 1995 Ron sells shares to two Tofu Shop employees and moves to Oregon. These shares are eventually bought back by Matthew Schmit except for 10.25% owned

by Tim Payer, a supportive community member, brother of former employee, and computer instructor at Humboldt State University.

2001 June to December–Tofu Shop Specialty Food Inc. purchases property and builds own building. Relocated in Jan. 2002 to 65 Frank Martin Ct. (adjacent to Foodworks Culinary Center). Address: Arcata, California.

• ***Summary:*** ... in people with hypertension according to a study conducted by Miguel Rivas, M.D. and co-workers, of the Medical School of Zaragoza in Spain. The results were published in the *Journal of Nutrition,* July 2002, 132(7):1900-02.

8109. **Product Name:** Baby's Only Organic (Toddler Formula, Iron Fortified) [Soy, or Dairy Based].
Manufacturer's Name: Nature's One.
Manufacturer's Address: Columbus, Ohio.
Date of Introduction: 2002. September.
Wt/Vol., Packaging, Price: Metal can.
How Stored: Shelf stable.
New Product–Documentation: Ad in *Natural Foods Merchandiser* (8½ by 11 inches, color). 2002. Sept. "Your organic formula choice." "Conventional pediatric formulas are known to obtain highly processed and objectionable ingredients. Nature's One offers... the first and only organic pediatric formulas sold in the U.S." "QAI Certified Organic and Orthodox Union Certified Kosher-D." For more information phone 614-898-9758 or email retail@naturesone.com.

Note: We are not told what the main soy ingredient is–probably dry soymilk or soy protein isolates.

8110. Nordquist, Ted. 2002. Report to ACDI/VOCA on ProSoy Santa Fe, Ltd. / CEDETI, Project #153041 in Bolivia. San Francisco, California. 15 p. Sept. 13. 28 cm.
• ***Summary:*** Ted has just returned from three weeks (Aug. 12-Sept. 16) in Bolivia working with ProSoy Santa Fe, Ltda., a women's co-op that makes soymilk at Av. Melchor Pinto No. 211, Santa Fe, Bolivia. Phone: +591 3 334-1663. Fax: +591 3 334-078. email: cedeti@cotas.com.bo. Website: www.cedeti.org. Ted's counterpart at ProSoy was Mrs. Rosa Angulo, President. The project manager was Engineer Ana Cristina Betancourt, Executive Director of CEDETI. Interpreter: Jaime Ugrinovic.

Santa Fe is a small town of about 3,000 inhabitants located 120 km north of the city of Santa Cruz in western Bolivia. The town is strongly influenced by the commercial activity of Yapacani, a city of 15,000 situated km from Santa Fe. This is an agricultural area with soybeans as one of the main crops.

ProSoy presently makes 150 liters/day of soymilk using rustic processing techniques. They were grinding their soybeans in a 25 liter mixer that took 20 minutes to complete; Ted sent them a new Corenco M6 disintegrator. Ted showed them how to improve their soymilk process and to make drinkable soy yogurt, okara burgers, okara patties, okara bread, and soy ice cream.

This report is accompanied by a 3-page background report (with no title, author, or date) on ProSoy that CEDETI prepared for Ted at his request, for him to study before his trip. It discusses: Equipment. Bottling. Milk processing plant. Competition. The organization of the women's group. Business experience. System of production. Plans for the future. The women's language and culture. The women formed this project named "Production of Soy Milk" on 25 Jan. 1997 at 7:00 p.m. But they first began to sell their soy milk several years later. Address: TAN Industries, Inc., 49 Stevenson St., Suite 1075, San Francisco, California 94105-2975; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-495-2870. Fax: 415-495-3060, Email tedalan@sirius.com.

8111. Soy Luck Club. 2002. September. New soyfoods restaurant or deli. 115 Greenwich Ave. (not Street), at Jane St., New York City, NY 10014.
• ***Summary:*** Article: Sax, Irene. 2002. Eats: Soy Luck Club. *Daily News* (New York). Oct. 22. Now / Entertainment section. p. 28.

Menu sent by Denis Bolger of New York City. Contents: Steamed–iced drinks. Steeped drinks. Frosted drinks. Sandwiches. Plate. Salads. Soup.

Talk with partner Vivien Cheng. 2002. Oct. 25. The restaurant opened on 26 Sept. 2002. Her mission: "I want to make soy tasty and fun instead of a substitute. It seems like soy has been used as a milk substitute or a meat substitute. Where I'm from, Hong Kong, soy is a staple. We're still being discovered. People like the food."

Favorite drinks: Honey ginger soy latté, Green tea soy latté, and Almond soy latté, all the five Soyafrost drinks (mango, peach, kiwi, strawberry, pina colada, mixed berry) and the four Soyafrappe drinks–each with a real shot of espresso, blended with ice topped with organic whipped cream, chocolate sauce and soynuts (regular, mocha, white mocha, and caramel).

Favorite foods: Tuna crunch sandwich. Curried chicken sandwich. Summer salad. Address: New York City, NY. Phone: 212-229-9191. Fax: 212-229-9090.

8112. Soyfoods Council. 2002. Soy foods: Nothing but the facts. *Iowa Soybean Review* (*Iowa Soybean Association, Urbandale, Iowa*) 13(8):19. Summer.
• ***Summary:*** About 2,000 new soy products have been launched in the USA over the past 10 years, with sales now exceeding $3 billion per year.

Soymilk sales have grown from $100 million in 1995 to nearly $500 million in 2000. Soymilk has 80.2% of the nondairy beverage market.

Sales of soyfoods have climbed from $1.2 billion in 1996 to over $3.3 billion in 2002, according to a SPINS U.S. Soyfoods Market report.

In terms of soybean use in this market: 1,007,000 metric tons in 1999, projected to rise to 1,804,000 metric tons in 2005.

Only 2.7% of all protein from soybeans processed in the USA goes for human food.

8113. White Wave, Inc. 2002. Silk–Perfect for lunch boxes and snacks. Chocolate and Vanilla in 8-ounce shelf-stable packs (Ad). *Natural Foods Merchandiser.* Sept. p. 18.
• ***Summary:*** This 8½ by 11 inch color ad shows two 3-packs of Silk. The Vanilla Shake is white on blue. The Chocolate is white on brown. Both are calcium enriched and vitamin fortified. "The #1 selling soymilk in America. www.SilkisSoy.com. Product of USA."

Note: The soymilk is packaged in Tetra Prisma Aseptic cartons. Address: [Boulder, Colorado]. Phone: 1-800-488-9283 X-885.

8114. *Observer* (*London*). 2002. Om: Top ten tips to beat high cholesterol. Oct. 13. p. G64.
• ***Summary:*** Tip #3 is "Eat soya products. Studies suggest that soya helps to reduce low density lipoproteins (LDL) cholesterol. Try portions of tofu, tempeh (fermented tofu [sic]), and soya milk."

Note: Tempeh and fermented tofu are two completely different foods made from soybeans.

8115. Sax, Irene. 2002. Eats: Soy Luck Club. *Daily News* (*New York*). Oct. 22. Now / Entertainment section. p. 28.
• ***Summary:*** Soy Luck Club is a new market and cafe in Greenwich Village at 115 Greenwich Ave., at Jane St. Phone: (212) 229-9191. Partners Vivien Cheng and John Pi want to show how well all kinds of soyfoods fit into Western menus.

Talk with Denis Bolger of New York City. 2002. Oct. 20. He visited this cafe today. They have a "fabulous" location, were quite busy, and have lots of information on the walls concerning soy and health. He got three menus.

8116. Wu, Olivia. 2002. The hidden world of tofu: Local producers offer a boggling array–from delicate and custardlike to chewy and crisp. *San Francisco Chronicle.* Oct. 30. p. E1, E4. Food & Wine section.
• ***Summary:*** About Chinese tofu, with recipes. Color photos show: 1. Yuba. 2. Soymilk. 3. Moist yuba. 4. Vegetarian duck. 5. Pressed tofu. 6. Tofu threads. 7. Fermented tofu. 8. Tofu puffs. 9. Dried yuba sticks. 10. Deep-fried tofu triangles. 11. Fried tofu knots (bayie knots). 12. Sheets of fresh yuba hanging above pans of steaming soymilk at China Tofu factory in Hayward. 12. Fresh, hot soymilk pouring from a spigot into a barrel, where it will be made into tofu. 13. At China Tofu, Hayward, one worker unwraps cloths from a tray of freshly-pressed tofu which another pours steaming curds into a nearby cloth-lined tray. 14. Chef Nei Chia Ji, of restaurant Jai Yun (933 Pacific Ave. at Mason, San Francisco) offers 6-7 delicious tofu dishes.

A tofu glossary, gives for each of 16 entries: Chinese characters, pinyin transliteration, English term, how sold and used. Soymilk (doufu, doujiang), tofu flowers (doufu hua, douhua, doufu nao), silken tofu (nun doufu), soft tofu (ruan doufu), firm tofu (ying doufu), pressed tofu (doufu gan), five-spice pressed tofu (wuxiang doufu gan), pressed tofu sheets (baiye, qianzhang), pressed tofu loops (baiye jie), pressed tofu noodles (gansi, doufusi), yuba (doufu pi, fuye), fermented tofu (furu, doufuru), vegetarian chicken, cuck (suji, suyia), stinky tofu (cho doufu), tofu puffs {deep-fried} (you doufu), deep-fried tofu (zha doufu). Address: Staff writer.

8117. American Soybean Assoc. 2002. Bean beat: ASA activities increase market for soy products in India. *Soybean Digest.* Oct. p. 26.
• ***Summary:*** Suresh Itapu, ASA/India Technical Director of Soy Food Marketing, says that as a result of ASA promotion work, 55 Indian entrepreneurs are now making soymilk and tofu using the Canadian SoyaCow technology. Last year at this time only 31 such entrepreneurs were in business. In addition, with strong support from the ASA-managed World Initiative for Soy in Human Health (WISHH) program, three medium-sized SoyaCow units (53 gallons/hour capacity) have been installed in India alone. And Godrej, a major Indian food manufacturer which failed in the late 1980s in its efforts to launch soymilk, has entered the market again after extensive trials and test marketing.

As a result of all this activity, soymilk production in India during the past year has increased from 290,000

gallons to 924,000 gallons. And Itapu believes that the future looks bright. Soyfoods look like an idea whose time has finally come in South Asia.

8118. Battaglia, Evelyn. 2002. Cooking with soy products. *Martha Stewart Living.* Oct. p. 278, 280, 282, 284.
• ***Summary:*** Introduces fresh soybeans (edamame), tofu, soy milk, miso, soy sauce. Includes recipes for: Miso soup with tofu, spinach, and carrots. Sesame marinated tofu with vegetables. Chai tea with soy milk. Edamame succotash.

8119. Du Pont (E.I.) de Nemours and Company. 2002. The Solae promise (Ad). *Natural Foods Merchandiser.* Oct. p. 78.
• ***Summary:*** This full-page color ad is about Solae brand isolated soy protein. "Your customer seeks great-tasting, Better-for-her and her family products–and the Solae (TM) logo helps her find them."

Three large photos show happy, active family members. The young lady in the lower left is drinking a glass of soymilk. For more information visit www.solae.com or contact DuPont Protein Technologies.

8120. Imagine Foods. 2002. "This new packaging is creating quite a buzz around here" (Ad). *Natural Foods Merchandiser.* Oct.
• ***Summary:*** A full-page color ad. "Same great taste. Splashy new packaging. The #1 selling non-dairy beverage in natural supermarkets. Imagine Foods maintains a 30%+ share of the aseptic non-dairy beverage category. Visit us at Booth #1333 at Expo East."

Note: Does this "#1" refer to Rice Dream + Soy Dream combined?

A black-and-white photo shows an elderly bartender with the shelves behind him stocked full of color Rice Dream and Soy Dream cartons. Two large cartons are in the foreground. Address: 1245 San Carlos Ave., San Carlos, CA 94070.

8121. Lampe, Frank. 2002. The deal with Dean: Strong brand boosts soy company's fortunes. *LOHAS Journal* (*Colorado*) 3(3):33-37. Fall. Cover story.
• ***Summary:*** Steve Demos talks about Dean Foods' $189 million acquisition of White Wave. This is simply the best account of how Demos built Silk into America's leading soymilk brand, then went to Dean Foods to get crucial financing, and finally convinced Gregg Engles to pay big bucks for the company. Three excellent color photos show Steve Demos.

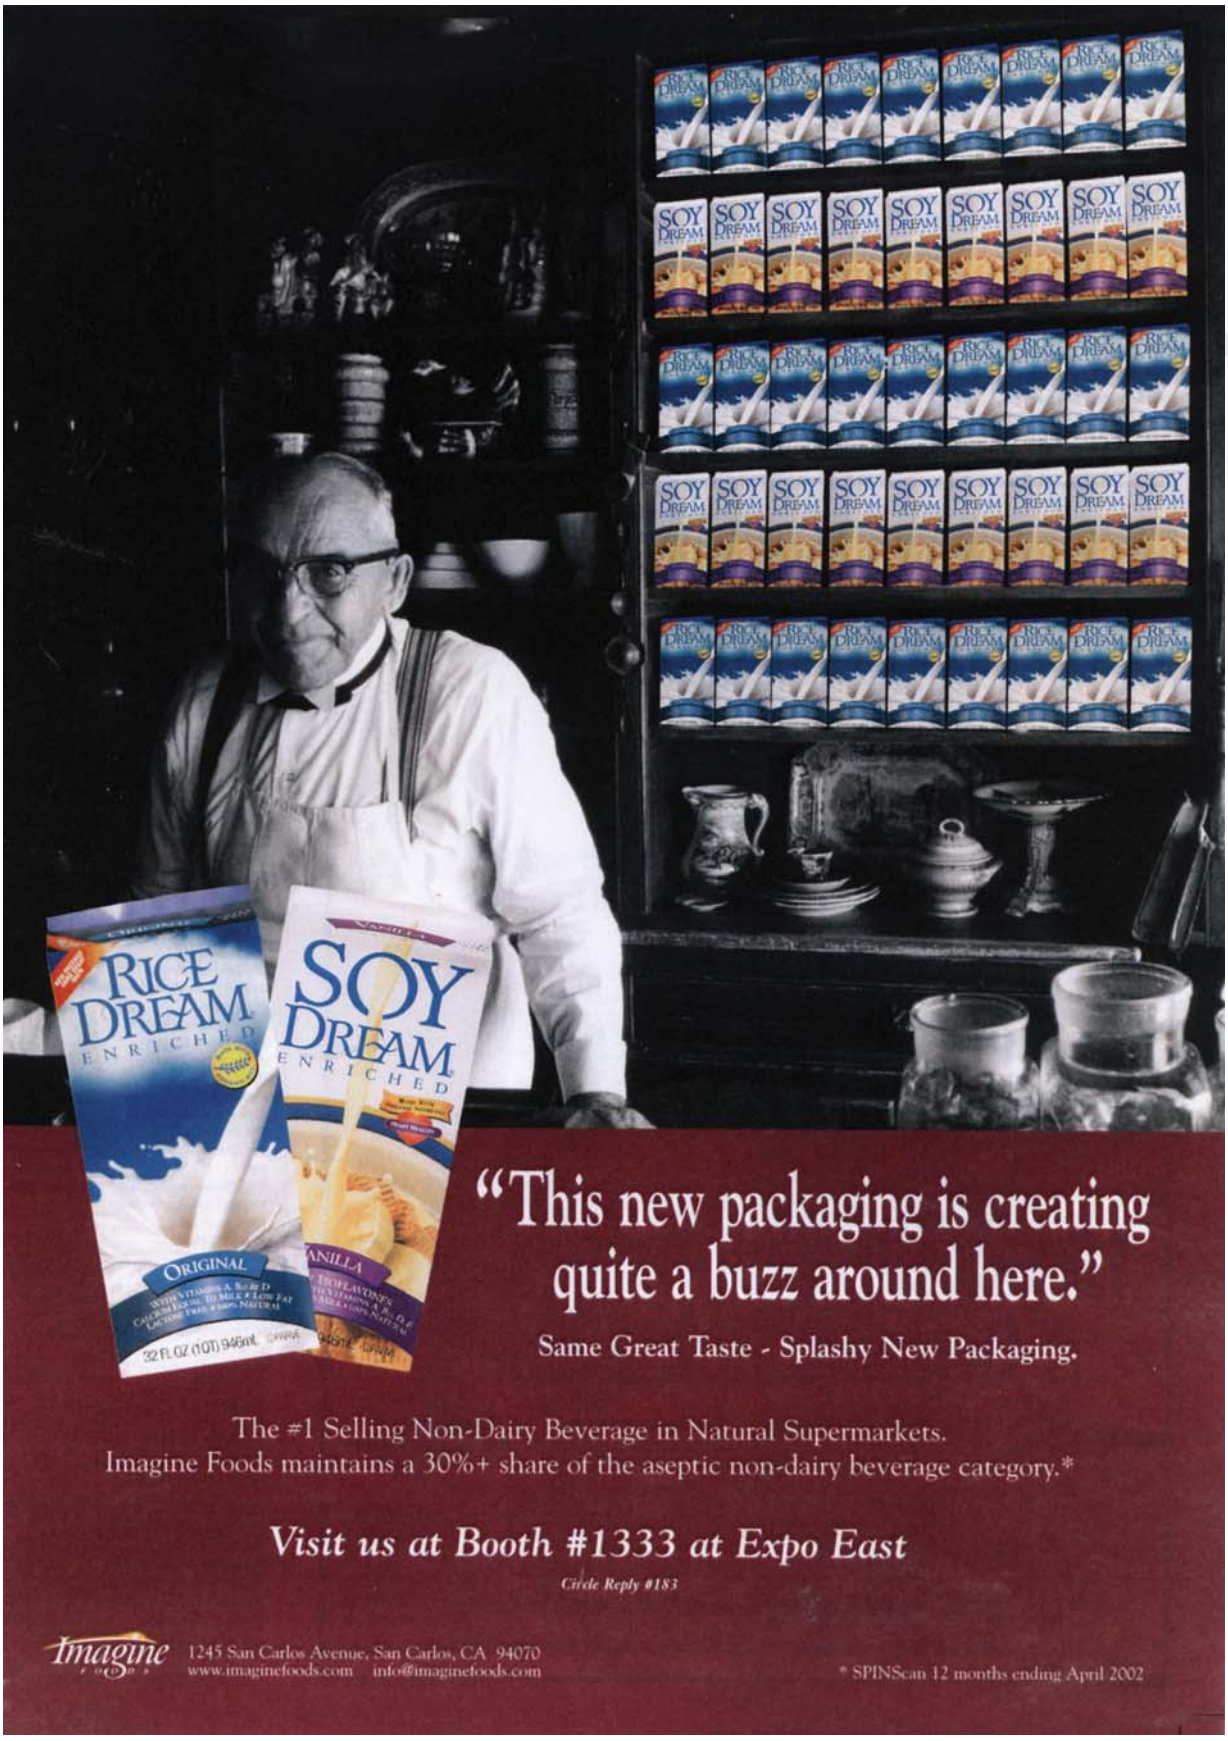
8122. *Natural Foods Merchandiser.* 2002. New product review: White Wave introduces Spice Soylatte and Coffee Soylatte, two additions to its line of Silk Single Serves. Oct. p. 111.
• ***Summary:*** Coffee Soylatte resembles a blended espresso beverage. Like all Silk products, the new products are made with organic soybeans. For details, visit www.SilkIsSoy.com.

8123. Stacey, Michelle. 2002. Weighing the health benefits of soy. *Martha Stewart Living.* Oct. p. 90, 92, 94, 96.
• ***Summary:*** Under "the good news" and "the bad news" discusses the benefits and possible (but unclear) disadvantages.

8124. Vitasoy (USA) Inc. 2002. Enjoy your health: Vitasoy (Ad). *Natural Foods Merchandiser.* Oct. p. 40.
• ***Summary:*** This 8½ by 11 inch color ad shows milk-white soymilk being poured into a glass. The background is dark blue at the top, changing to turquoise blue in the middle, then dark blue again at the top. Below the glass is the Vitasoy logo in bold red. On the glass, with white soymilk as a background, is printed: "Compelling new messaging. Exciting new packaging. New consumer awareness. All that plus unexpected great taste. There's a whole new vitality at Vitasoy USA. Booth I 453. Natural Products Expo East." Address: New England Way, Ayer, Massachusetts 01432.

8125. Nordquist, Ted. 2002. Modesto WholeSoy Co. to start new soybase plant in Modesto, California (Interview). *SoyaScan Notes.* Nov. 21. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Modesto WholeSoy Co. will soon begin making soybase in Modesto, California. The new company, which is independent of TAN Industries, is owned by Ted Nordquist, Henry Glasser, and two others. This is the plant Ted has been dreaming of for 20 years. In 1982 Ted worked with Alfa-Laval in Sweden to build his first soybase plant in one corner of their building in Sweden. He has signed a 20-year lease on the building. The plant has a capacity of four production lines for converting whole soybeans to soybase. The first line can make 1,000 gallons/hour of soybase. The soybase will be used to make soymilk, soy yogurt, cultured soy drinks, and soy ice cream. All packaging will be done at the Super Store Industry plant in Turlock, which is 15 minutes away by car. This plant can package soymilk in plastic bottles / jugs with screw-tops or cartons. This October, at the Natural Products Expo, Ted's company introduced a new soymilk product in a 96-ounce (6-quart) plastic bottle. After years of work, Ted has developed a new and very exciting way of using okara as a food source by processing it hot, when it is almost sterile, in a continuous process. Not long after the new plant begins operation, he expects to launch a new food product with okara as a (or *the*) major ingredient under the WholeSoy brand. He has no plans to try to patent the new process or product. Ted will keep his plant at the Soyfoods of America in Duarte, California, as a backup. Address of Modesto WholeSoy Co.: 1836 Lapham Dr., Modesto, California, 95354-3900. Phone: 209-253-5119. Fax: 209-523-5519.

Update: Talk with Ted Nordquist. 2003. Feb. 19. All



permits have been obtained and all is going well. The Modesto plant plans to begin testing equipment and boilers using water, in two days.

Update: Talk with Ted Nordquist. 2003. March 13. The first run of commercial soybase was produced at the Modesto plant on 6 March 2003. There is much room for expansion; three more lines, each with a capacity of 2,000 gallons/hour of soybase, could be added as demand grows. Working 3 shifts/day and 5 days/week, the plant (with four lines) has a capacity of 24-26 million gallons/year of soybase which converts to 54 million gallons/year of soymilk. Address: TAN Industries, Inc., 49 Stevenson St., Suite 1075, San Francisco, California 94105-2975; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-495-2870.

8126. Nordquist, Ted. 2002. Soyfoods are thriving in Bolivia (Interview). *SoyaScan Notes.* Nov. 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The oldest major company is Alimentos Alfa Ltda. in Cochabamba, Bolivia, run by Rene Mouton-Bluys (a native of Belgium). This company makes 36,000 gallons/week of soybase then converts it to Nordland soymilk, soy yogurt, and soy ice cream (including novelties on sticks). Rene has a fleet of 22 delivery trucks. He sells some of his products to school districts. Ted spent some time with him.

Rene has a friend–who was a nuclear scientist and worked in Washington, DC, for 22 years–who decided he wanted to find a means of "Right Livelihood" in Bolivia. So Rene helped him to start a company very similar to Rene's in Santa Cruz. Then Rene stopped shipping to Santa Cruz.

The third and newest company is ProSoy Santa Fe, Ltda., a women's cooperative in Santa Fe, Bolivia; it is run entirely by indigenous women (who are not of Spanish descent). Their native language is Quechua, but they all speak perfect Spanish as well. From Aug. 23 to Sept. 16, 2002 Ted and his wife, Anne-Marie, spent a month working with this Co-op, sponsored by ACDI-VOCA (an American company which paid Ted's travel expenses) and CEDETI (a Bolivian private development organization funded by many nonprofit organizations in several countries incl. Sweden, Switzerland, and Germany. Many of the workers are European volunteers). The co-op consists of 20 women who are very focused in what they are doing. In Bolivia, women do much of the work and have almost no rights. So they have decided to take their lives into their own hands. When they arrived, the co-op was making only soymilk in a building whose rent was paid by CEDETI. One member makes it late at night, so that it is ready at 4:00 each morning. They sold the soymilk hot (an excellent innovation) so they didn't have to refrigerate it. They poured it boiling hot into 10 liter, plastic jugs each with a 2-inch screw cap. When each jug was full and bulging (with 10.5 liters of soymilk), the rest of the women took two jugs each and would either bike or walk or take a motor taxi to a local market. There she would pour the hot soymilk into containers that each customer would bring. Each woman also carried special long, slender plastic bags for customers like taxi or truck drivers that wanted to buy soymilk but had no container. The woman would pour her hot soymilk into the plastic bag, insert a straw then a rubber band around the straw, then wrap a piece of paper around the neck of the hot bag so that the consumer could hold it. Each women then took income from sale of her soymilk back to the cooperative, which divided and managed it. The woman worked at night to make the soymilk was paid extra; they took turns at the night shift.

Each day Ted would teach the women how to make new products, such as soy yogurt, soy ice cream, okara burgers. Then they all ate the new products for lunch. The women loved the new products.

While Ted was there, CADETI was finishing a new building for the ProSoy women's cooperative, made with indigenous materials. Ted helped to design the building and floor plan, plus a soyplant that would produce–instead of the present 150 liters/day–about 400 liters/hour. Ted also sent them a new Corenco (cost $9,000) stainless steel mill–as a gift. Ted has finished writing his end-of-project report. They are making the new products on a small scale but the new plant will not be up and running until the mill is installed. Ted and Anne-Marie plan to return to Bolivia next September to visit their two "children."

Ted and Anne-Marie adopted an 11-year-old orphaned and homeless boy, Armando, who had only one year of schooling and would hang around the soy co-op. They invited him to lunches for a month, then found a person at CADETI who agreed to use money that Ted and Anne-Marie now send each month to pay for his food, shelter, and schooling. Address: TAN Industries, Inc., 49 Stevenson St., Suite 1075, San Francisco, California 94105-2975; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-495-2870.

8127. Nordquist, Ted. 2002. In Bolivia all the soymilk and most of the dairy milk is packaged in inexpensive plastic bags (Interview). *SoyaScan Notes.* Nov. 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** These polyethylene bags are used with two types of machines: (1) An inexpensive semi-automatic (and labor intensive) machine used and modified by Rene Mouton and his father in Cochabamba; (2) A fairly expensive ($33,000 in USA, but $5,000 in China) but fully automated machine that requires only one skilled attendant. Called a "form, fill, seal" machine, it uses polyethylene film stock and is manufactured worldwide, stock whereas the first machine uses tubular stock and is made only in Bolivia. Address: TAN Industries, Inc., 49 Stevenson St., Suite 1075, San Francisco, California 94105-2975; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-495-2870.

8128. Mouton-Bluys, Rene. 2002. Recent developments

at Alimentos Alfa Ltda. in Bolivia (Interview). *SoyaScan Notes.* Nov. 22. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Rene now makes 30,000 kg/day of soy products: 70% soymilk, 20% soy ice cream, and 10% soy yogurt. He has finally paid off the large loans needed to start his business, and is making a real profit for the first time. All of his products are sold under the Productos Nordland brand. His soymilk is sold in banana, strawberry, chocolate, vanilla, and chirimoya / cherimoya flavors, in 1 liter, ½ liter, and 200 ml plastic pouches.

In 1992 Rene and his father developed three systems for adapting an existing machine to soymilk in thin plastic tubes. Previously the machine had been used only for packaging *bolo,* an inexpensive refreshment consumed by poor people in Bolivia. The three are: (1) Reduce the pressure of the liquid on the place to be sealed; (2) Move a horizontal plate into place; (3) Heat seal. This machine is inexpensive, but the three special steps are done by hand and foot, for which Rene employs 30 women laborers.

Rene recently helped his friend, Mario Bonino, to start a company named Ideal that makes only soymilk. Location: Industrial Park PI-29-B, Santa Cruz, Bolivia. Phone: +591 3-553-564or +591 708-15100. Address: Cochabamba, Bolivia. Phone: +591 (042) 70094.

8129. Coffield, Dana. 2002. Is bigger necessarily badder? Organic vs. organic. *Natural Foods Merchandiser.* Nov. p. 12, 18.
• ***Summary:*** While scouting new business opportunities for The Minute Maid Co. division of The Coca-Cola Co., Shawn Sugarman stumbled upon Odwalla and reported to his superiors that this was "a space" where the company was completely underrepresented.

Coke's management bought the idea and in Oct. 2001 "paid $181 million for Odwalla, the funky Half Moon Bay, Calif., maker of fresh juices, health bars and soy milk." The company was founded in 1980 in a shed in Santa Cruz, California.

8130. *Nutrition Business Journal* (*San Diego, California*). 2002. Top U.S. natural & organic food companies, 2001. 8(11):5. Nov.
• ***Summary:*** For each of 43 companies gives the ranking by sales, the natural / organic sales in 2001 ($ million), the percentage of natural & organic that are organic, and the organic sales in 2001 ($ million).

The following companies make soyfood products: 1. The Hain Celestial Group $360. 2. Kellogg (Worthington, Kashi) $255. 4. Coca-Cola (Odwalla, Mad River Traders) $160. 5. Dean Foods (White Wave, Alta Dena) $150. 8. General Mills (Sunrise, Cascadian Farms, Muir Glen) $125. 11. Stonyfield Farm $85. 13. Amy's Kitchen $76. 14. Vitasoy USA Inc. $75. 15. Imagine Foods Inc. $70. 19. Pacific Foods $63. 20. Kraft Foods (Boca Burger) $60. 23. Eden Foods Inc. $57. 25. Gardenburger $55. 29. Galaxy Nutritional Foods $42. 33. Conagra (Lightlife Foods) $35.

Sum of sales of top 43: $3.28 billion. Sum of organic sales of top 43: $1.63 billion.

8131. *SoyaScan Notes.* 2002. Cow's milk prices at Safeway supermarket in Lafayette, California (Overview). Dec. 12. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Since Dec. 1983, approximately every other year, Soyfoods Center has conducted a survey of the prices of soymilk and cow's milk in California.

Safeway: Cow's milk (fortified with vitamins A and D) sells for the following prices at the Safeway supermarket in Lafayette, California: (1) Fat free: $1.07/quart or $1.99/half gallon or $3.09/gallon; (2) Low fat (1% fat, protein fortified): $1.18/quart or $2.35/half gallon or $3.22/gallon; (3) Reduced fat (2% fat, protein fortified): $1.18/quart or $2.35/half gallon or $3.12/gallon; (4) Whole (homogenized, fortified with vitamin D only): $1.24/quart or $2.19/half gallon or No gallon. (5) Acidophilus Plus Bifidus–Low Fat (1% fat): No quart or $2.39/half gallon. (6) Horizon Organic $3.69/half gallon. (7) Lactaid: $1.89/quart or $3.35 per half gallon. The best-seller among these is Fat free in gallons.

8132. Abiatte, Mabel. 2002. Cocinando soja y adelgazando [Cooking soya and slimming]. Argentina: Acquatint. 52 p. Illust. No index. 22 x 17 cm. [Spa]
• ***Summary:*** Contents: Prologue. Thanks and acknowledgments. Notes and advice. Especially for sportsmen and women. Recipes. Something sweet / sweets. Diets. Basic recipes: Soymilk, soymilk from soy flour, white sauce with soymilk, soy yogurt, tofu or *queso de soja* (like ricota / ricotta cheese), tofu mayonnaise, bread with soy bran (*salvado de soja*). If you don't have balance. About the author. Farewell and contact information.

The author received her degree in soil science (*Edafologia*) from the Catholic University of Santa Fe, Argentina. Address: Argentina.

8133. Golbitz, Peter. 2002. Soyfoods are a rising star in organic market. *Bluebook Update* (*Bar Harbor, Maine*) 9(4):1. Dec.
• ***Summary:*** According to the SPINS Organic Marketplace Report, covering the 52 weeks ending 10 Aug. 2002, White Wave's Silk soymilk is the best-selling organic consumer packaged brand in the USA, with over $200 million in sales for the combines mainstream and natural food channels.

In addition, 79% of U.S. soyfoods manufacturers use some or all organic soybeans in their products, according to a 2000 survey conducted by Soyatech, Inc.

8134. Huang, H.T. (Hsing-Tsung). 2002. Hypolactasia and the Chinese diet. *Current Anthropology* 43(5):809-19. Dec.

[72 ref]
• ***Summary:*** Hypolactasia is the scientific term for lactose intolerance. Gives a good history of the uncommon use of animal milk throughout Chinese history. As early as 400 B.C. Hippocrates is reported to have observed that milk was bad for patients with fever whole bellies were "distended and full of rumbling." In A.D. 200 Galen noted that milk should be consumed only by those who digest it well. It was only in the 1960s that the reason that humans had problems digesting cow's milk was understood; many adults lacked the enzyme lactase needed to digest lactose, the main sugar in milk.

"It is now known that the occurrence of hypolactasia is genetically controlled. It cannot be reversed or ameliorated by adaptation; if an individual is lacking in the lactase-persistence gene, he will lose the ability to produce lactase as an adult no matter how vigorously and for how long he continues to drink milk after weaning."

Extensive population studies have shown that hypolactasia is lowest in Northwest Europe, Australia and New Zealand.

It turns out that that main barrier to the adoption on milk and dairy products in the Chinese diet was economic; land was too scarce to raise dairy cows. With the rise in the standard of living in China during the past 20 years, production and consumption of dairy foods has increased dramatically. "In 1979 the total production of milk was 100,000 tons. In 2,000 in was nearly 7 million tons" or about 6.9 kg per capita per year.

Understanding hypolactasia may help to solve another puzzle in food history in China. Soybeans have been made into soymilk since the astern Han Dynasty (AD 25 to 220) and tofu has been widely made from it since the late Tang (ended in AD 906), "yet nowhere in the Chinese literature before 1800 is there any mention of the consumption of soymilk itself. The reason is now clear." The soybean contains two complex sugars (the oligosaccharides raffinose and stachyose) and the human digestive system lacks enzymes capable of hydrolyzing / breaking down either of these. The effect of consuming these sugars would be similar to consuming lactose! The Chinese soon discovered, no doubt, that whereas soymilk was hard to digest, tofu (pressed curds made from soymilk) was not. Not until the late Qing dynasty (ended in 1912) did Chinese find that prolonged heating of soymilk improved its digestibility; it soon became an accepted item in the food system (Huang 2000, p. 322-23) and is now widely consumed as a breakfast food throughout China. Address: 4800 Fillmore Ave., Alexandria, Virginia 22311.

8135. Jenkins, D.J.; Kendall, C.W.; Faulkner, D.; et al. 2002. A dietary portfolio approach to cholesterol reduction: Combined effects of plant sterols, vegetable proteins, and viscous fibers in hypercholesterolemia. *Metabolism* 51(12):1596-604. Dec. *
• ***Summary:*** Plant sterols, soy proteins, and viscous fibers are known to reduce cholesterol, but their combined effect has never been tested. In this study, 13 subjects were provided with pre-measured quantities of foods and were told what and when to eat for a one-month period. The diet, composed of a variety of foods each known to be moderately effective in combating cholesterol levels, cut bad cholesterol by close to 30% among study participants.

Soy products used in the study included soymilk, margarine, soy deli meats, and tofu. Address: Clinical Nutrition and Risk Factor Modification Center, Division of Endocrinology and Metabolism, St. Michael's Hospital, Toronto, Ontario, Canada..

8136. Jordan, Joe. 2002. U.S. Food & Agribusiness Exhibition shows opportunities for oilseed industry. *Bluebook Update* (*Bar Harbor, Maine*) 9(4):2. Dec.
• ***Summary:*** In late September, 290 U.S. companies took the rare opportunity to present their products to over 16,000 visitors in Havana, Cuba, at the U.S. Food & Agribusiness Exhibition. The trade show was organized by PWN Exhibicon, a Connecticut-based company that applied for the permit in Nov. 1999. U.S. companies can now sell goods to Cuba on a cash-only bases thanks to revised trade sanctions, which became law in Oct. 2000. Companies first took advantage of the new law after Cuba appealed for permission to buy food from the USA following the devastating Hurricane Michelle in Nov. 2001.

ADM, the primary sponsor of the event, signed $19.05 million in contracts for soy, corn, and rice products. Cargill, Inc. signed contracts worth $17.1 million. A photo shows Paul Lang, President of Natural Products, Inc. discussing soyfoods with Cuban president Fidel Castro. As part of the Iowa delegation, he attended a dinner with Fidel Castro. Lang notes about two years after the USSR dissolved, Cuba had no feeds for their dairy herds; the cows stopped producing and many died [or were slaughtered for meat]. Since then, that Cuba has converted 18 or their 19 dairy plants so they make soymilk and/or dairy alternatives. Also, Cuba is working to incorporate 50% textured soy into most of the countries meat; in the past they succeeded in incorporating 30% soy. Lang said that Castro has an excellent understanding of soyfoods and of the economics of using soy protein to feed Cuba.

PWN Exhibicon has already applied for the permit to organize a follow-up exhibition in Jan. 2004.

8137. Kaplan, J. Kim. 2002. For you, the consumer. *Agricultural Research* 50(12):4-9. Dec.
• ***Summary:*** A color photo on the top half of the first page shows many soy products, both foods and Industrial products, including: Kaukauna Nacho Cheese, Yves Veggie Tofu Wieners, ProSobee soy formula, NutriGrain energy bars, Betty Crocker Creamy deluxe, Wish-Bone salad

dressing, Edensoy soymilk, Mori-Nu Tofu, Ken & Robert's Veggie Burgers, SoyGold industrial solvent, Natural Touch Okara Pattie, soy ink and a newspaper printed with it.

Many "products that people use every day could justifiably carry the stamp 'Courtesy of ARS Research.'" Omaha Steaks began offering irradiated hamburger patties and ground beef in November 2000–to be sure it is free of *Escherichia coli* O157:H7, bacteria that can cause serious, even life-threatening illness. Today all the 6.5 million pounds of ground beef they sell is irradiated, which means it is treated with "ionizing radiation produced by cobalt and cesium atoms, machine-produced X-rays, or electron beams. Treated meat in no way becomes radioactive." Final FDA approval for irradiation treatment of meat came in Feb. 2000.

Nutrim, a product similar to Oatrim developed by USDA's Agricultural Research Service (ARS), is now being used to make vegan, organic chocolate truffles. Mrs. Mudd's Inc. (Oceanside, California) makes the delicious products; Nutrim flows like heavy dairy cream or coconut cream.

Tifsport is a variety of bermuda grass developed for football and soccer fields, and golf courses. Address: USDA-ARS Information Staff, 55601 Sunnyside Ave., Beltsville, Maryland 20705-5128. Phone: 301-504-1637.

8138. Mescher, Kelly. 2002. Soy beautiful: Increasing number of skin products made with soy hit store shelves. *Iowa Soybean Review* (*Iowa Soybean Association, Urbandale, Iowa*) 14(3):28-29. Dec. Cover story.
• ***Summary:*** On the cover of this issue an attractive, a smiling lady is seated at a table on which are various skincare and beauty products made with soy in plastic bottles and a soy candle. The story notes: "Wander through the bath and body section and you'll find facial cleansers, scrubs, bath gels and lotions–all made with soy." Johnson & Johnson uses soy in their Aveeno line of skincare products. Research has found that many soy constituents (oil, protein, etc.) are good for the skin. Jeanette Graf, M.D., clinical researcher and assistant clinical professor of dermatology at New York University says: "Soy has been able to help a number of conditions that we've had a very difficult time treating in the past. Skin discoloration is one of the most difficult problems that dermatologists treat. We found that soy is able to reduce the appearance of redness caused by acne and the appearance of brown spots caused by sun exposure."

Henneberry Marketing (El Paso, Illinois) sells the Harvestdance line of bath gel and soap, plus Soft Day moisturizing lotion. In their nationwide chain, Target Stores carry the exclusive Mossimo brand Soy Milk Lotion. Avon has introduced soy into their Wellness product line. Avon's Soy Milk products include Soy Milk Body Cream and Edamame Body Cream.

8139. Ruff, Michael D. 2002. Tech transfer: From ARS to a store near you. *Agricultural Research* 50(12):2. Dec.
• ***Summary:*** Since the 1920s USDA's Agricultural Research Service (ARS) has been developing consumer products–described in this issue–including vegan chocolates and "an all-natural biodegradable sunscreen made from rice and oat bran mixed with soybean oil. This new sunscreen could be an additional use for some of the 18 billion pounds of soybean oil produced each year in the USA. A color cover photo shows a package of Edensoy soymilk in a shopping basket.

The Technology Transfer Act of 1986 placed a new emphasis on commercializing federal research. Since this legislation, ARS has become a leader in the federal government, credited with more than 600 new patents and 1,100 cooperative research and development agreements (CRADA's), which are formal arrangements enabling ARS scientists to cooperate with companies on research project of mutual importance. Such agreements often go a long way to ensuring that our research does not end up existing only in the pages of a scientific journal. Address: ARS Asst. Administrator for Technology Transfer, Washington, DC.

8140. Woods, David. 2002. Magic soy desserts: 125 delicious and healthy recipes. Lincoln, Nebraska: iUniverse, Inc. Writer's Club Press imprint. xxix + 153 p. Recipe index. 23 cm.
• ***Summary:*** The author is an experienced African-American cook, who has written two other cookbooks. Contents: About the author. Introduction. Dessert ingredients (Soybeans, dried soybeans, soy flakes cereal, soyflour, soybean margarine, soymilk, soynuts, soynut butter, Soymage sour cream, tempeh, tofu, soybean oil, soy yogurt). The soy food alternatives: A basic guide to substituting with traditional soy products (incl. soy milk, soy flour, silken tofu). Ingredients and techniques (incl. many fruits, coconut milk, craisin [sweet dried cranberries], tahini). Breakfast. Breads and muffins. Puddings. Pies. Soups. Cookies and bars. Ice creams and frozen desserts. Beverages. Side dish desserts. Address: 2501-D Cobble Hill Court, Woodbury, Minnesota 55125. Phone: 651-734-0379.

8141. Jackson, C.J.C.; Dini, J.P.; Lavandier, C.; Rupasinghe, H.P.; Faulkner, H.; Poysa, V.; Buzzell, D.; DeGrandis, S. 2002. Effect of processing on the content and composition of isoflavones during manufacturing of soy beverage and tofu. *Process Biochemistry* 37:1117-23. *

8142. **Product Name:** SoyaSun soymilk.
Manufacturer's Name: SoyaSun Co.
Manufacturer's Address: No. 1, Sohrevardi St., Tehran, Iran. Phone: +98 21 752-7965 or 7979.
Date of Introduction: 2002.
New Product–Documentation: Letter (fax) from Alireza. 2002. Nov. 4. SoyaSun Co. is a newly established company producing soymilk in Iran.

8143. Batmanglij, Najmieh. 2002. Silk Road cooking: A vegetarian journey. Washington, DC: Mage Publishers. 336 p. Illust. (color). 30 cm.
• ***Summary:*** This vegetarian cookbook contains beautiful color photos and an extensive glossary. The Glossary includes entries for agar-agar, almond milk, almonds–sweet, hoisin sauce ("made from fermented soybean paste"), soy sauce (Chinese), sprouts (alfalfa, wheat, mung bean, or lentil; no soy), tahini paste, tempeh, tofu. Yet the Index shows the soyfoods appearing only in the Glossary, not in the recipes or elsewhere.

However the soybean, bean curd and soy sauce are mentioned on page 41. On page 43 is a magnificent full-page color photo of a Chinese bean-curd seller displaying her wares on a Shanghai street; many different varieties of doufu are shown.

The remarkable story of the Silk Road pioneer, Zhang Qian, is told on pages 24-28. The Han dynasty court (under Emperor Wu Di) dispatched Zhang Qian, a military officer who was familiar with the Xiongnu, to the Western Regions in 138 BCE with a group of ninety-nine members to make contact and build an alliance with the Yuezhi against the Xiongnu. He was accompanied by a guide named Ganfu, a Xiongnu who had been captured in war. The objective of Zhang Qian's first mission was to seek a military alliance with the Yuezhi, in modern Tajikistan. No one knows what route Zhang followed. However to get to the territory of the Yuezhi he was forced to pass through land controlled by the Xiongnu who captured him (as well as Ganfu) and enslaved him for ten years. During this time he married a Xiongnu wife, who bore him a son, and gained the trust of the Xiongnu leader.

On the inside front cover and facing page is a 2-page map of the Silk Road region from Shanghai, China, to Genoa, Italy. The author, a woman, has a brief biography and large color photo on the inside rear dust jacket. Born and raised in Iran, "she received her master's degree in education and art in the United States and France. During the past 25 years she has traveled across much of the ancient Silk Road region, working with regional chefs and home cooks along the way. She is a leading authority on Persian cuisine and the author of the best-selling *New Food of Life*, described by the *Los Angeles Times* as the definitive Iranian cookbook..." Address: Washington, DC.

8144. Batt, Eva. 2002. Eva Batt's vegan cookery. London: Thorsons. An imprint of HarperCollins Publishers Ltd. 144 p. Illust. (55 line drawings). Index. 22 cm.
• ***Summary:*** This book, which is deceptively marketed / promoted, is actually identical to Eva Batt's vegan cookery (1985) except that the title has been changed slightly and the design of the front and back cover are different, and with a different photograph. The copyright page states: "First published by Thorsons 1985. This edition published by Thorsons 2002."

Note: We believe there ought to be a law against this sort of deceptive practice. Address: UK.

8145. Challem, Jack; Toews, Victoria Dolby; Knittel, Linda. 2002. The soy sensation: How this incredible food protects against cancer, heart disease, osteoporosis, and other health conditions. Chicago, Illinois: Contemporary Books. A division of The McGraw Hill Companies. xi + 132 p. Foreword by Marcus Laux, M.D. Index. 23 cm. [155 ref]
• ***Summary:*** Contents: Foreword. Introduction. 1. The soy story: The history of the soybean, a look inside the soybean, isoflavones, other phytonutrients, soy antioxidants, estrogen, phytoestrogens and health. 2. How soy prevents cancer. 3. How soy promotes women's health. 4. How soy prevents osteoporosis. 5. How soy fights heart disease.

6. Other health benefits of soy: Soy and diabetes, soy and kidney disorders, soy and gallstones, soy and hearing problems, soy and obesity and fatigue.

7. Does soy have a dark side? Excess estrogen in soy-based infant formula, soy allergy, soy and hormone dependent cancers, soy and the thyroid gland, soy and the brain, soy and digestion, soy and copper / zinc balance, genetically modified soybeans.

Note: The authors show that most or all of these "dark side" problems are of little or no practical importance.

8. Recommendations and guidelines: Whole soybeans, tofu, soymilk, tempeh, soy flour, soy protein powder, textured vegetable protein, meat analogs, soy cheese, soy yogurt, and soy sour cream, soy nuts, okara, miso, soy sauce, natto, soy supplements versus soy foods.

9. Recipes (14 recipes using mostly tofu, miso, tempeh). Resources and readings. Address: 1. Writer and publisher of *The Nutrition Reporter* newsletter; 2. M.P.H.; 3. M.A.

8146. Dragonwagon, Crescent. 2002. Passionate vegetarian. New York, NY: Workman Publishing. x + 1110 p. Illust. (by Robbin Gourley). Index. 23 cm. [10 ref]
• ***Summary:*** A superb, massive book, "with more than 1,000 robust recipes with notes on cooking, eating, loving, and living fearlessly"–as the cover proclaims. Very nicely designed, with many delicious recipes. The author is an outstanding writer with a deep knowledge of ingredients–including soyfoods.

Chapter 10, "Celebrating soyfoods" (p. 623-78) begins: "As a soy-loving girl from way back I invite you to enter an ever-expanding universe of foods: not merely extraordinarily healthful, but delectable and diverse–great ingredients for a passionate cook." This chapter's contents: Introduction. Innecdote. Whole soybeans. Green soybeans (edamame). Canned soybeans. Cooked dry soybeans. Milled soybeans (soy flour and soy grits). Soynuts and soynut butter. Tempeh. Miso. Natto. Okara. Soy protein isolates. Textured soy protein (TSP or TVP). Soy sauces. Soy milk & soy milk

products (soy yogurt, soy cheeses). Tofu & tofu products (fresh perishable tofus, classic traditional, seasoned tofus {savory baked tofu, other seasoned baked tofus}, ready-made tofu dips and spreads, ready ground tofu). Dry or packaged tofus (cupboard, like silken tofu). Other miscellaneous tofus (tofu burgers and sausages, deep-fried tofu, freeze-dried tofu [dried frozen tofu], tofu hot dogs, yuba).

Concerning yuba the author writes (p. 656): "I believe this traditional Asian product will explode onto the American soy-scene soon because it is so versatile and delicious and has a long and honorable history as a meat alternative. It is the unique thin-chewy texture of yuba sheets, when layered with seasonings and shaped, stacked, cut, and prepared in certain ways, that gives such a convincingly 'meaty' feeling to such dishes."

The word "tofu" appears on 100 pages in this book, "tamari" on 100 pages (she uses the phrase "tamari or shoyu soy sauce"), "soy sauce" on 100 pages, "shoyu" on 98 pages, "tempeh" on 88 pages, "seitan" on 72 pages, "miso" on 58 pages, "soy milk" on 47 pages, "tofu sour cream" on 40 pages, "silken tofu" on 30 pages, "soybeans" on 25 pages, "baked tofu" on 22 pages, "savory baked tofu" on 16 pages, "firm tofu" on 10 pages, "green soybeans" and "edamame" each on 8 pages, "soy flour" on 6 pages, "soy ice cream" and "TVP" each on 5 pages, "dairy free" on 4 pages, "firm silken tofu," "teriyaki," "textured vegetable protein," "yuba" and "whole soybeans" each on 2 pages, "Silk Soymilk Creamer" and "meat alternatives" each on 1 page.

8147. **Product Name:** Edensoy (Soymilk) [Unsweetened].
Manufacturer's Name: Eden Foods, Inc.
Manufacturer's Address: 701 Tecumseh, Clinton, MI 49236.
Date of Introduction: 2002. January.
Wt/Vol., Packaging, Price: 1 liter (1.06 qt) Tetra Brik Aseptic Carton.
How Stored: Shelf stable.
New Product–Documentation: Ad in *Natural Foods Merchandiser* (8½ by 11 inches, color). 2002 (dated). "Pure and Simple. Unsweetened Edensoy. New." A color photo shows the front of the carton on which is a large round color illustration of a seashore. "12 g protein. Naturally occurring efa" [essential fatty acids]. In front of a chair on a table is very white Edensoy in a glass. "Heart Healthy per FDA... Authentic. Simple. Only Eden selected whole soybeans and water."

8148. Grant, Amanda. 2002. Fresh & fast vegan pleasures: More than 140 delicious, creative recipes to nourish aspiring and devoted vegans. New York, NY: Marlowe & Company. ix + 230 p. Index. 23 cm.
• ***Summary:*** This vegan cookbook from the UK uses much less soyfoods than its typical counterpart from the USA. The index contains 1 entry each for soy milk/cream and tofu. Soy sauce appears in the title of one recipe. In the headnote to the tofu recipe (p. 114-15) we read: "There are many health benefits to eating this soybean product, not the least of which is its high percentage of protein. It is eaten in vast quantities in Japan, along with other products of the bean such as shoyu and miso." Address: Author and food editor, London.

8149. Katzen, Mollie. 2002. Mollie Katzen's sunlight cafe: breakfast served all day. New York, NY: Hyperion. xvii + 302 p. Illust. (by Mollie Katzen, color). Index. 27 cm.
• ***Summary:*** Offers over 350 easy recipes for vegetarian breakfasts. The index contains 9 entries for soy (incl. soy nuts {p. 67}, soy protein powder {p. 98}, pressed tofu or smoked tofu or savory baked tofu {p. 147}, soy milk {p. 11, 229}), 6 for tofu, 6 for tempeh, and 2 for miso. Address: California.

8150. Nguyen, Chi; Monroe, Judy. 2002. Cooking the Vietnamese way. Revised and expanded to include new low-fat and vegetarian recipes. Minneapolis, Minnesota: Lerner Publications. 72 p. Illust. Index. 23 x 20 cm. Series: Easy Menu Ethnic Cookbooks.
• ***Summary:*** This thin hardcover book is an introduction to Vietnamese cooking, but not a vegetarian cookbook–though it contains some vegetarian recipes. Contains many color photos. The section titled "Special ingredients" includes cellophane noodles (made from mung beans), coconut milk, fish sauce (nuoc mam), ginger root, lumpia, mung beans, sesame seeds, soy sauce, and tofu. The Vietnamese use nuoc cham (p. 33) the way diners in many countries use salt: The main ingredients are fish sauce, garlic, red pepper flakes, sugar, vinegar and water. Soy sauce is also widely used as a seasoning–as in fried rice, grilled lemon-grass beef Soy-related recipes include: Steamed tofu (Dau hui hap, p. 59).

8151. Reddy, Kavitha. 2002. The Indian soy cookbook. New Delhi, India: Rupa & Co. xiii + 106 p. Illust. color). No index. 28 cm. [11 ref]
• ***Summary:*** A beautiful hardcover book with glossy color photos and superb food styling throughout. Contents: Acknowledgements. Contents. Foreword, by Virgil Miedema, Regional Director, American Soybean Association, Asia Subcontinent. Introduction: Soybeans in India, health benefits of soybeans (lactose intolerance, cholesterol and heart disease, cancer, menopausal symptoms, osteoporosis, diabetes). Soybeans: Introduction, composition of the soybean, soybean oil, soy flour, texturised soy protein (TSP, soy chunks & granules), soymilk, tofu. 1. Appetizers. 2. Soups and salads. 3. Rice and paranthas. 4. Chunks and granules. 5. Tofu treasures. 6. A few more. 7. Delicious drinks. 8. Dessert selection. Weights and measures. Glossary.

Near the front of the book is a full-page color photo of some soy products (46) available on the Indian market. The product names are: Rasoya blended besan. Rasoya blended

jowar atta. Gensoy protein plus atta. Gensoy premium soya flour. Mealmaker protein shake. KPFM paushtika atta. Vigor new protein rich soyabean flour. Vital pure refined soya oil. SoyaLife soya bean atta. Soy-flour. MisTura hi-proteen. Golden Harvest 99% fat free high protein soya flour. Allegro defatted soya flour. Soyfit. Elpro. Rasoya nuggets–granular. Kailora: The big tasty soybean. Rangoli nuggets. Alegro Nutri Nuggets. MDH Soyatein. Ruchi's Nutrela (chunks, granules). Mealmaker. Rasoya nuggets. Jeeo veg meat. A-1 protein. Elpro soyabean. Giant value standard. Allegro soya granules. Soya Sakthi. Soya Bite flakes. Soya oil (in plastic bottle with Hindi name). Soyfresh tofu. Mahakosh refined soyabean oil (in a plastic bag). Sweekar. Mealmaker refined cooking oil (in a plastic bag). Ruchi's Soyumn. Fortune refined soybean oil (in a plastic bag). Priya refined vegetable oil (in a plastic bag). Mahakosh refined soyabean oil (in a plastic bottle).

Note: The American Soybean Association (ASA) office in India is now dedicated to teaching Indians about the various soyfoods mentioned above, how to use them in Indian-style recipes, how to start small businesses making soyfoods in India, the health benefits of soyfoods, etc. It invests significantly in these projects using soybean checkoff dollars paid by U.S. soybean farmers.

But why is ASA doing this? First, to grow the demand for soybeans inside India, so that India will eventually become a customer for U.S. soybeans. ASA did the same thing in China starting in about 1982 and today China is the world's biggest and fastest growing customer for U.S. soybeans. Second, ASA would like to keep as much Indian soybean meal (made by crushing soybeans grown in India into oil and meal) off the international market–where it competes with U.S. soybean meal and depresses the price of both. Address: PhD, New Delhi, India.

8152. Sugimoto, Takashi; Iwatate, Marcia. 2002. Shunju: new Japanese cuisine. Sensational recipes from Tokyo's most famous restaurant. Singapore: Periplus Editions. 271 p. Foreword by Charlie Trotter. Illust. (chiefly color, by Masano Kawana). Index. 26 x 23 cm.

• ***Summary:*** Contents: Foreword. The Shunju way: The Shunju philosophy (history, architecture, bar, lighting, *zashiki* {dining room floor}, *chashitsu* {tea room}, hospitality {*motenashi*}). The seasonal kitchen. Spring. Summer. Autumn. Winter. Appendixes: Step by step preparation techniques (incl. Fresh soymilk, Green bean soymilk yuba {*Ryokuto nama yuba*}). Chefs (profile of head chef at each restaurant). Glossary of ingredients. Mail-order sources of ingredients. Acknowledgments.

"The history of Shunju began in 1986 in Mishuku, Tokyo." Today, Shunju has five different outlets in Tokyo–Mishuki, Hiroo, Torizaka, Bunkamura Dori, and Tameiki Sanno (p. 14).

"The most important element in Shunju's cuisine is to be able to truly appreciate the four seasons and the abundant blessings which mother nature has bestowed upon us...–Marcia Iwatate" (p. 24).

At the recipe for Green and lavender tofu squares (*Masu-dofu*) we read (p. 53): Tofu is undoubtedly one of the most representative dishes of Shunju. Our tofu is made daily–soymilk is curdled with *nigari* (bittern)–in different ware unique to each of our five restaurants; in this case in *masu* (traditional square, wooden measuring boxes)." To make green soymilk, see p. 255.

The glossary of ingredients (p. 258+) includes azuki (*koshi an, ogura an*), edamame, miso (many types), okara, sake (incl. koji {molded steamed rice}), shoyu (incl. koikuchi shoyu, usukuchi shoyu, shiro shoyu, tamari shoyu), tofu, ume, umeboshi, wasabi, yuba (famous as a Kyoto delicacy).

Tamari is mentioned on 98 pages of this book, miso on 67 pages, soy sauce on 54 pages, shoyu on 51 pages (incl. "koikuchi shoyu" on 34 pages, "usukuchi shoyu" on 13 pages and "shiro shoyu" and "tamari shoyu" on 2 pages each), tofu on 18 pages, soymilk on 14 pages, yuba on 7 pages, koji on 5 pages, nigari and edamame on 4 pages each, black soybeans on 2 pages (p. 53 and 84).

Natto and kinako are not mentioned. Address: Creators and founders, Shunju restaurants, Japan.

8153. Treloar, Brigid; Inge, Karen. 2002. Healthy soy: Cooking with soybeans for health and vitality. Hong Kong: Periplus Editions (HK) Ltd. Printed in Singapore. 112 p. Illust. (color). Index. 24 x 22 cm.

• ***Summary:*** This is a beautiful book, with stylish and informative full-page glossy color photos on every other page. It is well researched, comprehensive, and generally uses standard soyfoods terminology. It is also strange: We are not told in which country the publisher is located (perhaps Hong Kong or Singapore) or where the authors live. It is distributed in North America, Japan and Korea by Tuttle Publishing. On the inside rear dust jacket: www.tuttlepublishing.com. It is clearly targeted at a world market.

Contents: Introduction. The health benefits of soy: The heart, cancer, menopause, osteoporosis, weight control, allergies, lactose intolerance, the nutritional value of soy, protein, phytoestrogens, fats, calcium, soluble fiber, vitamins and minerals, energy, carbohydrates, how much soy do we need? (as an exchange for meat), how to use the nutrition table. Nutrition table (for various soyfoods). Soybeans: Green soybeans–fresh and frozen, dried soybeans, how to buy and prepare soybeans (selecting and storing dried soybeans, preparing dried soybeans, soaking, pan-roasting, boiling, pressure cooking, canned). Soy foods: Tofu (selecting and using, storing, freezing), bean curd sheets (yuba), deep-fried tofu (age; seasoned tofu), miso, tempeh, soya sauce (shoyu; regular, low-salt, light, tamari, ketjap manis), soy milk, soy flour, soy nuts, soy germ powder,

soy oil, soybean sprouts, soybean paste (fermented), natto, soy dairy products (soy butter, soy spread {margarine}, soy cheese {plain or flavored}, cream cheese, yogurt, mayonnaise), soy meats (meat alternatives), others (soy breads, cereals, pasta, chocolate, chips, health bars, desserts, tofu ice creams), soy grits, tips (tofu, soy dairy products). Compatible soy flavors. Preparation and cooking techniques: Draining and pressing tofu, cutting tofu, deep-frying tofu, how to reconstitute yuba, how to use deep-fried tofu pouches, how to use miso, miso tips. Soups. Appetizers and dips. Light meals and snacks. Main dishes. Seafood. Vegetables. Salads. Desserts. Soy drinks. Glossary. Guide to weights and measures.

Note: This is not a vegetarian cookbook. Some recipes call for chicken, fish (swordfish, tuna, salmon), shrimp, etc. Address: 1. Food writer, stylist, consultant, and cooking instructor [Australia]; 2. Nutritionist and nutrition correspondent for *Good Morning Australia*.

8154. Weil, Andrew; Daley, Rosie. 2002. The healthy kitchen: Recipes for a better body, life, and spirit. New York: Alfred A. Knopf; London: Ebury. xxviii + 325 p. Illust. (color photos by Sang An, Amy Haskell, and Eric Studer). Ports. Index. 24 cm.
• ***Summary:*** Lifelong good health starts in the kitchen. Includes 135 recipes; none require red meat, but not vegetarian. Rosie's introduction encourages: "Don't be afraid to work with new ingredients, such as... using tofu,..." The section on "Nutrition and health" contains useful information on the glycemic index (p. xx-xxi), the main sources of fat (p. xxi) and protein (p. xxiv) in the American diet. Eat more vegetable protein, especially from soybeans, "and less animal protein, especially from fish and reduced-fat dairy products. The section on "Stocking the pantry" includes Asian foods– soy sauce or tamari, and "miso paste "Made from soybeans" (p. xxxiii-iv).

Soy related recipes include: "A soy shake," with silken tofu (p. 3, for breakfast). The section "Got (too much) milk?" (p. 34-35) recommends soymilk as a healthful alternative. And in the "Poultry" section (p. 54), Weil suggests substituting baked tofu. Weil has a full page (p. 58) about "Soy sauce: Shoyu and tamari," which also mentions "rice starter (koji)." There are recipes for: "Vegetable nori rolls" with natural soy sauce (p. 72-73). Miso pâté (p. 80). Miso soup (p. 125). Meat and meat substitutes (incl. tofu and gluten) (p. 149-50). Greens with tangy miso dressing (p. 244-45). Address: 1. M.D., Clinical Prof. of Medicine, Univ. of Arizona and Director of its Program of Integrative Medicine; 2. Chef trained at the Cal-a-Vie spa near San Diego, former Oprah Winfrey chef.

8155. Praestiin, Julie. 2003. Sanitarium buys out Soyaworld. *Record* (*SDA, Victoria, Australia*) 108(2):3. Jan. 18.
• ***Summary:*** Kevin Jackson, CEO of Sanitarium Foods (Australia), recently announced the company successful purchase of SoyaWorld in Canada. "'On entering the initial agreement [about 2 years ago] we purchased half of the business and also negotiated an option to buy the remaining part of the company. We have now exercised our option to purchase the remaining 53% of SoyaWorld, and, as such, we now own 100 per cent of the Canadian company' said Mr Jackson on announcing the takeover."

SoyaWorld, which produces So Good soymilk, now has a 60% share of the soymilk market in Canada. Its current annual sales is about $A46 million (Australian). A photo shows Kevin Jackson. Address: Berkeley Vale, NSW, Australia.

8156. IQPC. 2003. Canadian Soyfood Congress 2003: Exploring opportunities in the national and global soyfood industry (Brochure). Toronto, ON, Canada. 8 p. + 1 p. insert. 28 cm.
• ***Summary:*** This two-day conference will be held on 28-29 April at the Holiday Inn on King [St.], Toronto, Ontario, Canada. A detailed presentation of speakers and their subjects is given. Conference chair: Dr. Gregory Penner: Project Director, soy 20/20. Incl: Peter Joe, President, Soyfoods Canada. Dr. Rajesh Gupta, President, ProSoya Inc. Photos show: (1) Peter Golbitz, President, Soyatech. (2) Peter Joe. Address: International Quality and Productivity Centre, 415 Yonge St., Suite 1600, Toronto, ON M5B 2E7. Phone: 1-800-882-8684.

8157. Mescher, Kelly. 2003. Japanese expand minds and menus to new soyfoods: The Japanese are known for observing tradition. *Iowa Soybean Review* (*Iowa Soybean Association, Urbandale, Iowa*) 14(4):6. Jan.
• ***Summary:*** Discusses the "Japan Food Soybean Mission, in which the Iowa Soybean Promotion Board (ISPB) staff, board members, and Iowa food grade soybean exporters traveled to meet with soybean processors in Japan and to talk with them about market opportunities."

"The soyfoods seminar provided cooking demonstrations for professional chefs, manufacturers, and food media in Japan." An American chef, Michael Foley, prepared various dishes (whose names are given) using soy ingredients. "They ate everything. There was not a morsel left, and they wanted the recipes," said Linda Funk, executive director of the Soyfoods Council. The Japanese are already fans of soy in its traditional forms, says Foley, "but these recipes were outside the box for them. To finish soups with soymilk, soy yogurt, and soy sauce is new to them... They were surprised at how good it tasted."

One of the highlights was the first Soyfoods Foodservice Seminar. A color photo shows Linda Funk and Jim Stillman (ISPB director) in a downtown market in Tokyo.

8158. *Natural Foods Merchandiser.* 2003. Imagine Foods in

Hain portfolio. Jan. p. 18.
• ***Summary:*** In Dec. 2002 the Hail Celestial Group acquired Imagine Foods Inc. which makes leading brands of aseptic and refrigerated soymilks and rice milks, organic soups and broths, and nondairy frozen desserts.

8159. Robertson, Robin. 2003. Vegan planet: 400 irresistible recipes with fantastic flavors from home and around the world. Boston, Massachusetts: Harvard Common Press. xvi + 576 p. Illust. Index. 23 cm. [15 ref]
• ***Summary:*** An outstanding, hefty vegan cookbook by an author who knows her ingredients well and uses a rich and pleasing variety of them. She is also an expert on soyfoods, and the book contains many useful insights about them.

We find the graphic design of the book to be weak to poor; the typeface in the recipe titles is hard to read, the ingredients in the recipes printed in gold on white are hard to read, and the many pages of white ink on a gold or other such background are hard to read.

The word "tofu" appears on 91 pages in this book, "tamari" on 67 pages (she uses the phrase "tamari or other soy sauce"), "soy sauce" on 62 pages, "soy milk" on 56 pages, "dairy-free" on 55 pages, "seitan" on 47 pages, "tempeh" on 46 pages, "silken tofu" on 33 pages, "firm tofu" on 29 pages, "miso" on 28 pages, "soft silken tofu" on 23 pages, "extra-firm tofu on 13 pages, "teriyaki" on 6 pages, "soybeans" on 13 pages, "soy ice cream" and "meat alternatives" each on 10 pages, "TVP" on 8 pages, "baked tofu" on 7 pages, "textured vegetable protein" on 6 pages, "firm silken tofu" on 5 pages, "soy flour" on 4 pages, "soy nuts" and "soft tofu" and "dairy alternatives" each on 3 pages, "edamame" ("fresh soybeans in the pod") on 2 pages, "soy yogurt" and "frozen tofu" each on 1 page (p. 72),

Yuba is mentioned on pages 182, 350-51 (definition and description), 389, 410-11, 414.

Page 29 states that soy flour is "Made from finely ground roasted soybeans" [i.e., kinako].

"Humans are the only animals that drink the milk of another species and the only animals that drink milk after childhood" (p. 9). Address: Virginia Beach, Virginia.

8160. Abiatte, Mabel. 2003. Cocinando soja [Cooking soya]. Argentina: Acquatint. 49 p. Illust. No index. 22 x 17 cm. [Spa]
• ***Summary:*** Contents: Prologue. Generalities. Soymilk & recipes. Soy butter (from fermented soymilk). Tofu & recipes. Okara (*salvado de soja* {soy bran}) & recipes. Whole boiled soybeans (*porotos hervidos enteros*) & recipes. Ground boiled soybeans (*porotos hervidos molidos*) & recipes. Soy flour (*harina de soja*) & recipes. Soaked soybeans (*porotos remojados*) & recipes. Soy sprouts (*brotes de soja*) and recipes. Address: Argentina.

8161. Abiatte, Mabel. 2003. Cocinando soja en la cocina vegetariana [Cooking soya in the vegetarian kitchen]. Argentina: Acquatint. 52 p. Illust. No index. 22 x 17 cm. [Spa]
• ***Summary:*** Contents: Prologue. Miscellaneous. Some recipes (only samples). Why vegetarianism. Ricota and yogurt (from cow's milk and soymilk). Sweet bread fritters. Recipes with bread dough. Recipes with sprouts (incl. soy sprouts). Tortillas. Souffles. Recipes with potatoes (*papas*). Dressings, seasonings, and condiments (*Aderezos*). Recipes with whole soybeans (*con porotos enteros*). Basic recipes. Some useful advice. Address: Argentina.

8162. Gottlieb, Bill. 2003. Truffles and flourishes. *Via* (*American Automobile Association*). Jan/Feb. p. 61-62.
• ***Summary:*** In San Francisco, Jean-Marc Gorce of XOX Truffles, Inc. makes a low-fat truffle using soy milk instead of cream. *Choclatier Magazine* declared him one of the 10 best choclatiers in America.

8163. **Product Name:** SoyQuick Automatic Soymilk Maker.
Manufacturer's Name: Kitchen's Best Manufacturing Group Limited.
Manufacturer's Address: P.O. Box 3944 Station Main, Vancouver, BC V6B 2Z4, Canada.
Date of Introduction: 2003. February.
New Product–Documentation: *The Veggie Platter* (Vancouver Island Vegetarian Association). 2003. Winter. p. 1-2. "Product review: Soymilk machines." "We tested the SoyQuick, SoyaJoy, SoyToy, Soy Wonder, and Nutritionist by Salton."

"Summary:

"SoyQuick–the clear winner: good price, great quality, easy to clean, lots of tips in the manual, includes tofu press and coagulator (we loved the fresh tofu and wouldn't have gotten around to trying it if not included).

"SoyaJoy–machine is the same as SoyQuick but it costs more, has no extras, the manual is not as good, and we got no response from customer service. It is included in the review only for completeness.

"SoyToy–the best machine for using dry soybeans although we recommend soaked. Compared to the SoyQuick it costs more, takes longer to cook and clean, leaves more okara in the milk, and needs a kitchen setup where the steam venting will not be a hazard.

"Soy Wonder–a good machine only if seeing the milk while it is being made is more important than quality construction (the container is clear plastic). Also called Eagle.

"Nutritionist by Salton–only consider this machine if you collect kitchen appliances; this is the cheapest brand. It is too finicky to even use, and the lowest quality in many respects. Also sold as Salton Fresh Food Center and Salton Fresh Soy Food Center."

Three leaflets (8½ by 11 inch, color, front and back) sent

by Patricia Smith from Natural Products Expo West. 2005. March. Each leaflet praises a different aspect of the product. www.SoyMilkQuick.com. "Order now! Toll free 1-888-769-5433. The two models & benefit packages are SDZ-4 (1 year warranty, no tofu kit) and SDZ-5 (2 year warranty, with tofu kit and Gold Warranty Support). Recommended by natural foods experts (for each person a color photo of the person is shown and a long paragraph gives the endorsement): Bryanna Clark Grogan, Jan London, Vickilynn Haycraft, Marie Oser, Susan Smith Jones.

Note: As of July 2013 this soymilk maker had no website, but it was still sold on eBay.

8164. Sosland, Josh. 2003. Matching grain-based foods and specialty proteins. *Baking & Snack.* Feb. 1. *
• ***Summary:*** "Incorporating specialty proteins into the diet represents a red hot health trend." This idea was reinforced by the creation last month of Solae L.L.C., a joint venture between DuPont and Bunge–based in St. Louis [Missouri], the home of Protein Technologies International. "While agricultural biotechnology and farmer services will be part of Solae, it is the specialty protein business that is at the heart of the venture." The first product introduced under the Solae brand was 8th Continent soy milk, developed in another joint venture between DuPont and General Mills, Inc. (Minneapolis, Minnesota).

Gives a detailed description of ADM's work with and market segmentation for soy proteins. Anthony DeLio of ADM says that "a lack of familiarity and wariness about taste stand as two central challenges facing the category... Perception problems have been and will be a challenge. It can be difficult to convince consumers to even give soy-based products a try." "Texture and flavor continue to be the focal areas for formulators," says Phil Gentlesk.

"Nutriant [Cedar Falls, Iowa] is the two-year-old nutritional division of Kerry Ingredients, the global ingredient company headquartered in Ireland."

8165. *Soyfoods Canada Newsletter.* 2003. Soyfoods Canada member profile–Nutrisoya Foods. Winter. p. 3.
• ***Summary:*** "Nutrisoya Foods Inc. first commenced operations in 1988 as a manufacturer of pasteurized, high protein tofu for sale in supermarkets under the Nutrisoya brand. Its production facilities are ideally located in St. Hyacinthe, Quebec, 30 miles east of Montreal, in the agricultural heartland of Eastern Canada, and is immediately adjacent to the most advanced food research centre in North America.

"In 1992 Nutrisoya Foods made its first foray into the aseptically packaged, dairy alternative beverage market with the launching of its *natur-a* brand of soy beverages.

"Today Nutrisoya Foods operates out of an altra-modern, fully automated, computer driven plant..."

Contact: Nick Feldman, President, Nutrisoya Foods Inc., 4050 Pinard, Saint-Hyacinthe, QC J25 8K4, Canada. www.nutrisoya.com.

8166. White Wave, Inc. 2003. "Trendsetter." "Iconoclast." "Trailblazer." Try Silk Soymilk and one of these cool adjectives could be yours (Ad). *Utne.* Jan/Feb.

8167. Nordquist, Ted. 2003. New products made from soybase in Modesto, California (Interview). *SoyaScan Notes.* March 14. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Last week, at the Natural Products Expo, Ted's company introduced two new flavors of cultured beverages–Lemon and Orange. They have stopped making their standard soy-based frozen dessert and converted all of their flavors (they now have 9 SKUs) to soy-based frozen yogurt–which is a more delicious product and for which there is a huge demand.

Ted missed the strong presence of Imagine Foods at the show; they used to have three large booths and lots of delicious foods. Recently they were purchased by Hain-Celestial Food Co.; so this year they had 3 feet inside the Hain both. It was sad.

Ted does not know why Robert Nissenbaum sold his company (Imagine Foods) to Hain. He believes that Imagine Foods soymilk plant was in Lathrop, California. Cheryl Mitchell and her husband (of California Natural Products) were divorced. Address: TAN Industries, Inc., 49 Stevenson St., Suite 1075, San Francisco, California 94105-2975; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-495-2870.

8168. ElBoghdady, Dina. 2003. Soy milk spilling into the mainstream: The nondairy product is showing up in TV shows, coupons–even on pizza. *Washington Post.* March 15. p. E1, E3.
• ***Summary:*** A bar chart shows that soy milk sales have grown from about $100 million in 1997 to $749.1 million in 2002–based on IRI / Mintel data–which does not include sales at Wal-Mart. Address: Staff writer.

8169. Richmond, Akasha. 2003. Serving soymilk to the stars (Interview). *SoyaScan Notes.* March 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Akasha has been working with White Wave. She served soymilk cappuccino at the following places and events: (1) At a Soy Cappuccino Bar at the Sundance Film Festival in Colorado. (2) At a party for the Grammies in New York City. (3) At a party for the Oscars. Dean Foods is now supplying 4,000 Starbucks stores with aseptically packaged Silk soymilk.

Akasha has been invited to give a talk on the history of soyfoods to the L.A. Culinary Historians on June 14 (Saturday morning). Address: Los Angeles, California.

8170. **Product Name:** SoyQuick Soymilk Powders [UltraFine, Nutraceutical, Superfine 1000, Fine 400].
Manufacturer's Name: American Health and Nutrition, Inc.
Manufacturer's Address: 3990 Varsity Dr., Ann Arbor, MI 48108. Phone: (734) 677-5570.
Date of Introduction: 2003. March.
Wt/Vol., Packaging, Price: 25 lb bulk.
How Stored: Shelf stable.
New Product–Documentation: Spot in Bluebook Update. 2003. April/June. p. 3. "AHN introduces SoyQuick."

Talk with Cindy Maynard, director of marketing and public relations at AHN. 2003. May 28. These four products were first sold in March 2003. They are available in bulk as an ingredient to food and beverage manufacturers–especially for use in bars, drinks, and mixes. UltraFine is spray dried, which makes it more soluble; especially good for beverages. Nutraceutical is enzymatically hydrolized for additional solubility, spray-dried, and homogenized. SuperFine 1000 passes through a 1000 mesh screen, but is not as fine as the first two products. Fine 400 is 400 mesh; the most economical.

8171. Archer Daniels Midland Company. 2003. Turns out, raiding the fridge can be good for a broken heart: NutriSoy–It's all about a strong beat (Ad). *Vegetarian Times.* March. p. 7.
• ***Summary:*** This full-page color ad shows a woman raiding the refrigerator. The ad is about NutriSoy, the "all-natural soy protein ingredient that's helping to fortify some of your favorite foods, like breads, pastas, drinks, desserts, entrées, and more. The FDA has approved the claim that including 25 grams of soy protein per day as part of a diet low in saturated fat and cholesterol may reduce the risk of heart disease... So look for the NutriSoy logo." For more information visit www.nutrisoy.com.

8172. *ASA Today* (*St. Louis, Missouri*). 2003. ASA leads soymilk coalition in work with committees. 9(5):1. March.
• ***Summary:*** "ASA [American Soybean Association] is leading a soymilk coalition in meetings with committee staff from the Senate Agriculture Committee and the House Education and the Workforce Committee. These are the staffers who will draft the legislation reauthorizing child nutrition programs. The coalition continues to find 'Hill' staff receptive to including soymilk as part of the reimbursable school lunch program. Questions being raised include the possible cost of adding soymilk, number of children affected, position of the Bush Administration, and position of the dairy industry."

8173. Du Pont (E.I.) de Nemours and Company. 2003. The Solae promise–Better-for-you foods, great taste you and your family will love! (Ad). *Vegetarian Times.* March. p. 22-23.
• ***Summary:*** This full-page color ad is about Solae brand soy protein. Three large photos show happy, active family members. The young lady in the lower left is drinking a glass of soymilk. For more information visit solae.com or contact Protein Technologies (a DuPont business) at 800.325.7108.

8174. SunRich Food Group Inc. 2003. Sunrich (Portfolio). Toronto, Ontario. 9 inserts. 31 cm.
• ***Summary:*** The cover of this portfolio is a composite color photo on a tan background. The photo shows (L-R) whole soybeans, a glass of soymilk, green edamame (in the pods), a farmer in a field examining heads of wheat, a wooden scoop of corn flour and grits, whole kernels of corn. Below it is the SunRich logo, the name in red, a stylized yellow sun background, and the tag line below: "Your direct link to Nature." On the inside front cover are six oval color photos, each explaining Sunrich's mission.

Inserts: (1) Identity preserved grain program. (2) SunRich: Your direct link to nature–Quality, integrity, expertise. (3) Maltodextrins & sweeteners. (4) Fours, meals & grains. (5) Vegetable oil. (6) Premium whole soybeans. (7) Soy ingredients (incl. soymilk, oatmilk, multigrain beverages, soymilk powders, soy flour, textured soy protein). (8) One company: One mission–Unlimited organic snack solutions! The SunRich Food Group Inc. is a Stake Technology Company. (9) Shelled edamame recipe ideas. Address: Toronto, Ontario.

8175. University of California, Berkeley WellnessLetter. 2003. Healthy eating: How to tell the latest news from the old news (Leaflet). Berkeley, California. 1 p. Single sided. 56 x 21 cm.
• ***Summary:*** This glossy color leaflet has a section on "Soy futures." "Latest news: Soy is a good food, well worth adding to your diet–as soybeans, tofu, soy flour, or soy milk. Soy protein may help lower cholesterol and have anti-cancer effects... But while it's a good food, it's not a magic bullet. Like all plants, soybeans are a mixture of complex substances with many potential effects in the body, some beneficial, some not."

8176. *New York Times.* 2003. World briefing–China: Milk kills 3 children. April 9. p. A6. International section.
• ***Summary:*** Soya milk has caused the death of 3 children at schools in northern Liaoning Province, and 3,000 have fallen ill–according to the *Beijing Times.* Eight schools were involved in the mass poisoning on March 19 and it was made public only after more than 100 outraged parents had sought help for their children; they said it was an inadequate local response to the crisis. (Source: Agence France-Press).

8177. *ASA Today* (*St. Louis, Missouri*). 2003. Soyfoods enjoy growing popularity. 9(6):4-page insert after p. 2. April.
• ***Summary:*** Attractive (with 5 color photos), interesting, and

original. This is the first such insert in this 4-page newsletter, and the first time this newsletter has contained a significant amount of information about soyfoods. Below the title is printed: "A special publication from the American Soybean Association." On the back page we read: "ASA thanks the sponsors of this publication...: Solae [DuPont & Bunge], Soyatech, and White Wave. Below the logo of each company is 4½-inch-long column describing the company, its history and activities.

Contents of the insert: Introduction. Soyfoods become mainstream. The most common [widely used] soyfoods. U.S. consumers more aware of soyfoods. The push for soymilk in schools. Soyfoods for the future. Export demand for food ingredient beans.

It begins: "No longer are soyfoods considered unusual or hard to find. No longer are they considered the kind of foods only eaten by so-called 'granola-crunchers' or 'health fanatics'... The menu at the recent American Soybean Association (ASA) awards banquet featured a serving of delicious edamame (sweet green soybeans) that soybean growers and guests alike enjoyed with enthusiasm."

8178. Hobbs, Suzanne Havala. 2003. Nutrition hotline: Alternate Protein Products (vegetarian) in the government's Child & Adult Care Food Program. *Vegetarian Journal* (*Baltimore, Maryland*) 22(2):2, 5.
• ***Summary:*** Federal funding of the Child & Adult Care Food Program (CACFP) supports daily meals and snacks for 2.6 million children and 74,000 adults at home day care programs, day care centers, after-school care programs, and shelters. USDA's Food and Nutrition Service (FNS) administers the program at the federal level; at the state level it is administered by state education and health departments. Modifications to the "Vegetable Protein Products" requirements were finalized in March 2000. With the latest group of changes, "Vegetable Protein Products" were renamed "Alternate Protein Products" (APP). The cap on the amount of APPs that can be used in menus was removed, and the new regulations no longer require that APPs be fortified. Tofu and tempeh don't qualify as APPs because they don't meet the requirement in Appendix A that APPs must contain at least 18% protein by weight when fully hydrated or formulated. Soymilk and soy yogurt don't count as APPs either–even though dairy yogurt does.

8179. *Natural Foods Merchandiser.* 2003. Starbucks' soy is Silk. April. p. 14.
• ***Summary:*** "White Wave has developed a special organic, non-GMO, kosher Silk soymilk formula to complement Starbucks coffee and Tazo chai beverages sold in 4,000 North American locations."

8180. White Wave, Inc. 2003. Unsweetened soymilk. Wow. Hardcore (Ad). *Vegetarian Times.* April. p. 7. Address: Boulder, Colorado.

8181. Dean Foods Co. 2003. Dean Foods means business: Annual report 2002. Dallas, Texas. 88 p. 28 cm.
• ***Summary:*** The "Dear fellow shareholders" statement at the beginning of this report (p. 2-3), by Chairman and CEO Gregg Engles includes a section titled "Achieving strategic objectives" which begins: "We also achieved several important strategic objectives during the year, beginning with the May 2002 purchase of White Wave, maker of *Silk* soymilk and other soy products. Prior to the May transaction, we owned a minority interest in White Wave that we acquired as part of our acquisition of legacy Dean Foods. Recognizing the enormous potential of the soymilk category and *Silk* in particular, we began working toward bringing White Wave fully into the Dean Foods family early in 2002. We are so pleased to welcome Steve Demos, founder of White Wave, and his team to our company. They are an extraordinarily talented and motivated group, and I am now more convinced than ever that *Silk* will be an important source of future growth for our company." "We have identified our core set of 'strategic brands' to include *Silk* and *Sun Soy* soy products..."

A full-page graph shows that the value of Dean Foods stock has risen from about 20 in March 1999 to about 42 in March 2003, apparently more than doubling in value. However this seems incorrect: A $450 investment in Old Dean Foods in Aug. 1999 was worth only $297 on 31 Dec. 20002–for a net loss of about 34%.

The section titled "Dean means new ideas, healthy thinking" has the bold headline: "The power of soy: Refrigerated soymilk is blasting into the American mainstream. Consumers are looking at soymilk in a whole new light–and Silk is largely responsible." Retail sales of all refrigerated soymilk "increased by more than 30% in 2002 to over $440 million, and Silk accounted for more than 80% of those sales. In 2003 Dean Foods expects retail sales of Silk to exceed $450 million. Steve Demos, founder of White Wave and creator of Silk, has a passion for soy. When we acquired White Wave, Steve agreed to continue as President. As part of Dean Foods, Steve and his team of visionaries now have the resources and infrastructure they need to take Silk to the next level... We believe a key to the continued growth of Silk is to stimulate consumer trial. Through sampling, coupon programs, advertising, sponsorships and TV and movie placements, you will be seeing more and more of Silk in 2003 and beyond. A photo shows Steve Demos, smiling, in blue blazer, blue shirt, and no necktie. Founder and President of White Wave, Steve's mission, "to creatively lead the integration of soy into the American diet virtually created the refrigerated soymilk category."

Color photos show four different Silk packages and a Starbucks logo. On the facing page is a full-page color photo of a young man and woman in rollerblades skating

past a huge billboard of Silk Organic Soymilk. "Beginning this summer Silk will become the exclusive soymilk used in handcrafted beverages sold at all Starbucks locations throughout North America. Silk will be identified Starbucks' menu boards, and Starbucks will conduct in-store promotions of Silk products. This partnership furthers our goal of increasing trial by making Silk available to millions of Starbucks customers everyday."

Net sales in 2002 were $8.991 billion, up 50% over the previous year. Gross profit was $2.348 billion, up 67.7%.

Pages 24-25 discuss the acquisition of White Wave, an incentive bonus plan, and new Silk products. During the 3rd quarter of 2002 aseptic Silk soymilk was introduced to better serve dry grocery and foodservice channels, and two new Silk flavors were added: coffee and unsweetened. In Feb. 2003 White Wave entered into an agreement with Starbucks (see above) which will take effect in June 2003. Single-serve bottles of Silk will also be sold separately at certain Starbucks stores.

Note: On 21 July 2003 at the Starbucks location in Lafayette, in the far lower left corner of their wall menu we read (in letters smaller than those used for regular menu offerings): "Silk soy and organic milk available upon request. Add $0.40." After "Silk" is the "registered trademark" symbol. The word "SoyaLatte" does not appear on the menu.

Accompanying the annual report is a "Proxy statement and notice of annual meeting 2002" (32 p.). In 2002 Gregg L. Engles, Chairman of the Board and CEO had: Salary $1,000,000. Bonus $2,200,000. Other compensation $492,984. Options granted in shares: 700,000. Steve Demos, age 54, joined Dean Foods in May 2002 when Dean bought the remaining interests in White Wave, Inc. Demos is not on the Board. Address: 2515 McKinney Ave., Suite 1200, Dallas, Texas 75201. Phone: 214-303-3400.

8182. **Product Name:** La Fe Soy Milk [Plain, Vanilla].
Manufacturer's Name: La Fe Foods (Importer / Marketer). Made in Argentina.
Manufacturer's Address: Plant: Via Mercedes, San Luis, San Luis Province, Argentina. Importer: 230 Moonachie Ave., Moonachie, New Jersey 07074. Phone: 1-866-BUY-LAFE.
Date of Introduction: 2003. May.
Ingredients: Organic soymilk (filtered water, choice of organic soybeans), cane juice (dried), tricalcium phosphate, microcrystalline cellulose / carboximethylcellulose, artificial flavor, lecithin, beta-carotene, carrageenan, salt, di-alpha-tocopherol, vitamin A acetate, vitamin D3.
Wt/Vol., Packaging, Price: 1 liter aseptic carton. Retails for $1.00.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Talk with Denis Bolger of New York. 2005. May 12. This is now his favorite soymilk. It is imported from Argentina in 1 liter Tetra Packs. He bought it for $1.00 at Econo, a discount store in New York City. On the bottom of the carton is written: "Product of Via Mercedes, San Luis, Argentina. Imported by La Fe Foods, 230 Moonachie Ave., Moonachie, New Jersey 07074." When he ordered 12 cases from the importer and paid in case, it cost him $1.00/liter and was delivered free of charge.

Talk with representative of La Fe Foods. 2005. May 12. These two products, which are private labeled for La Fe, were introduced in May 2003. The name of the manufacturer is confidential. His company (pronounced LA-fay) imports foods that they market mainly to the Hispanic market in the USA. Note: AdeS soymilk is made in a different province of Argentina.

Product with Label sent by Denis Bolger. 2005. Oct. 22. 1 liter Tetra Brik Aseptic pack. Vanilla. Beige, green, blue, white and yellow on tan. Illustration of soymilk being poured into a glass against a field of green soybeans extending to the horizon and a blue sky with clouds above. "Made from 100% organic soy. Le Fe–Quality since 1968. High source of calcium and vitamin D." "Non-GMO: Contains no genetically modified soybeans."

8183. Lampe, Frank. 2003. Life after the Dean deal: White Wave president Steve Demos outlines his plans for reaching $1 billion in sales and for expanding his sustainable business philosophy. *LOHAS Journal* (*Colorado*) 4(1):44-46, 53. Spring.
• ***Summary:*** Contents: Introduction. The billion-dollar brand. Health. The environment. Aging. Demographics. The business model of the future. Two color photos show Steve Demos.

8184. White Wave, Inc. 2003. Silk: Now shelf stable as well as refrigerated. Solving the age old question of how to be in two places at once (Ad). *Natural Foods Merchandiser.* May. p. 52.
• ***Summary:*** This 8½ by 11 inch color ad shows organic plain Silk and organic vanilla Silk in shelf stable quarts. Address: [Boulder, Colorado].

8185. Richmond, Akasha. 2003. The man who coined the name "Silk" for soymilk (Interview). *SoyaScan Notes.* June 12. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Akasha has heard this story from three different reliable people. The man who came up with the name "Silk" once worked for White Wave. Years later he was fired, but he continue to live in Boulder. After Steve Demos sold White Wave to Dean Foods he invited this man out to lunch, then said to him "What do you think the name "Silk" is worth?" The guy had no idea what to say, and he wasn't expecting anything. Steve handed the guy a check for a million dollars. Address: Los Angeles, California.

8186. Ness, Carol. 2003. Best of fresh soy milks: Taster's choice. *San Francisco Chronicle.* June 18. p. E2. Food section.
• ***Summary:*** Five brands were tasted and rated in descending order of preference as follows: 1. Sun Soy Creamy Original (79 points, $1.99/qt). 2. Silk Organic (76 points, $2.29/qt). 3. 365 Organic Original (67, $2.99/half gallon at Whole Foods). 4. 8th Continent (61, $4.49/half gallon). 5. Wildwood Certified Organic (49 points, $1.99/qt at Safeway). Address: Staff writer.

8187. Yamamoto, Seiichiro; Sobue, T.; Kobayashi, M.; Sasaki, S.; Tsugane, S. 2003. Soy, isoflavones, and breast cancer risk in Japan. *J. of the National Cancer Institute* 95(12):906-13. June 18. [44 ref]
• ***Summary:*** Breast cancer risk was reduced by one half in Japanese women who ate three or more bowls of miso soup on an almost daily basis. The report monitored 21,852 women from 1990 to 2000. Post-menopausal women showed the greatest reduction of risk.

"In Japan, soy is consumed in various forms, including dried or green soybeans, tofu (soybean curd), natto (fermented soybeans), miso (fermented soybean paste), okara (tofu lees), soybean sprouts, soymilk, yuba (soy milk skin), kinako (soy flour), and soy sauce." Address: Cancer Information and Epidemiology Div., National Cancer Center Research Institute, Tokyo, Japan.

8188. Terman, James. 2003. New developments at White Wave (Interview). *SoyaScan Notes.* June 19. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** During the year since Dean Foods purchased White Wave things have been going well. Soymilk has become a mainstream beverage. 8-10% of America's 107 million households purchase Silk at least once a year–and many purchase it once a week. Dean has been smart enough to leave White Wave alone, to operate independently. They are financially independent, and never go to Dean for money. White Wave now makes Sun Soy; the soybase is the same as that for Silk, but it is a little sweeter than Silk, and some people prefer this sweeter taste.

The deal with Starbucks has been one of the biggest developments of the past year. They get 2.3 servings of their Soy Latte (Espresso Latte with Soymilk) from one quart of aseptic Silk–so the drink is largely soymilk. White Wave is also working to reach more kids. They have gotten into some schools with open-minded food-service directors. Kids who are lactose intolerant must forego milk for a beverage that is mostly water and contains no protein; soymilk would be the ideal option. White Wave is conducting tests to see what products kids prefer; presently it's 60% to 40% chocolate over vanilla. Kids may prefer a sweeter product. They are giving away lots of soymilk and selling some in schools in vending machines.

They are making some of their soymilk in Dean's factories and are designing the "perfect green factory." They are getting into clubs such as Costco and Sam's Club. They plan no changes in Silk's price or sweetener (organic white sugar). Address: Director of Words and Pictures, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

8189. *ASA Today* (*St. Louis, Missouri*). 2003. ASA/India spurs major growth in soy consumption. 9(8):6. June.
• ***Summary:*** In March, the American Soybean Association had a booth at the premier food and beverage trade show in India, the 18th International Food Exhibition, called AAHAR 2003, in New Delhi. "Aahar" means food in Hindi. Eight companies participated in ASA's Soy Pavilion: (1) General Food Ltd. (maker of soy nuts, soy oil, soy flour). (2) M.P. State Oilfed (soy biscuits, soy nuggets [TVP]). (3) Protein Technologies International (soy protein isolates). (4) Ruchi Soya Industries (soy flour, soy chunks, soy oil). (5) Soy Appetite (Soy milk, soy rusk, tofu). (6) Sonic Biochem Indore (Full fat soy flour, defatted soy flour). (7) S.S. Agro Industries (fermented black soybeans, soy chunks, soy granules). (8) S.S.P. Ltd. (SSP, soy milk equipment / machinery).

8190. *Bluebook Update* (*Bar Harbor, Maine*). 2003. AHN introduces SoyQuick. 10(2):3. April/June.
• ***Summary:*** American Health & Nutrition Inc. has announced a new line of the SoyQuick soymilk powders, sold as both non-GE and organic: (1) SoyQuick UltraFine has good functionality for beverage manufacturers. (2) SoyQuick Nutraceutical has been hydrolyzed. (3) SoyQuick Superfine 1000 is for use in all non-beverage dairy alternatives.

8191. General Mills. 2003. 8th Continent soymilk: Try the better tasting soymilk. Consumer prefer 8th Continent Vanilla Soymilk 2 to 1 versus Silk Vanilla (Leaflet–Ad). New York City. 1 p. Single sided. 18 x 13 cm.
• ***Summary:*** This color ad is part of a mailer inserted into the *New York Post* (daily newspaper). The main photo shows a plastic quart bottle of 8th Continent Vanilla with a quart of Silk Vanilla in the background. In the lower right are three small photos of 8th Continent half gallons in original, vanilla, and chocolate flavors. In the lower left: "8th Continent Taste beats Silk." In the lower right is a manufacturer's coupon: "Save 50¢ when you buy one quart or half gallon only any flavor 8th Continent soymilk." Expires 10 Aug. 2003.

8192. Jordan, Joe. 2003. Soymilk in school lunch: The leading edge of a soyfoods wave. *Bluebook Update* (*Bar Harbor, Maine*) 10(2):2. April/June.
• ***Summary:*** The regulations that govern the federal school lunch program, enacted during the 1940s, "essentially

prohibit any drink but cow's milk from accompanying school meals." Moreover, a school cannot be reimbursed for a meal that contains soymilk unless the student provides a doctor's note stating a medical need, such as lactose intolerance.

Yet many believe these rules are outdated. Lactose intolerance is known to affect over 50% of Hispanics, Asians, and African-Americans. The USDA has reported that 16% of children served school meals do not drink the accompanying milk. SANA and other soymilk advocates are working to change the National School Lunch Act, to establish a standard protein content for soymilk, and to require that soymilk used in the school lunch program be fortified with calcium (300 mg per 8 oz) and vitamins A and D (500 IU of vitamin A and 100 IU of vitamin D per 8 oz).

The U.S. Senate has already held two hearings on the matter and a bill is expected to be introduced by late May. The House is expected to begin hearings on the subject around mid-June. Photos show: (1) Two small cartons of Silk soymilk. (2) Students holding trays in a school lunch line.

8193. Callewaert, Danilo. 2003. Recent history of Alpro, Europe's largest soymilk manufacturer (Interview). *SoyaScan Notes.* July 18. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** 1975–Philippe Vandemoortele and Danilo Callewaert visit the University of Illinois to learn about their new soymilk process.

1980 May 27–Alpro is founded at Izegem.

1989–Alpro plant at Wevelgem begins commercial production of soymilk.

1995 March 1–Guy Huybrechts starts as general manager of Alpro.

1995 Nov.–Alpro begins commercial production of Yofu soymilk yogurt. It is fermented with living cultures and has a 4-week refrigerated shelf life.

1996 April 22–Alpro acquires Sojinal, with their one plant in Issenheim (near Colmar), France. 1999–Alpro builds a new factory in England.

2000 Feb. 22–Guy Huybrechts finishes as general manager of Alpro. 2000 Aug. 17–Alpro soymilk plant begins commercial production in the UK. 2001 April–Alpro begins commercial production of soymilk in ESL cartons.

2001 Sept.–Bernard Deryckere begins as general manager of Alpro. Address: Alpro, Wevelgem, Belgium.

8194. Callewaert, Danilo. 2003. The soymilk industry and market in Europe (Interview). *SoyaScan Notes.* July 18. Conducted by William Shurtleff of Soyfoods Center. Address: Alpro, Wevelgem, Belgium.

8195. Demos, Steve. 2003. Developments at White Wave during the past year since sale of the company to Dean Foods (Interview). *SoyaScan Notes.* July 18. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The most important thing is that "we have successfully gotten ourselves into serious corporate America, and we have the opportunity to influence not the consumer world, but now we can also influence the business world. The mission on the consumer is really a matter of momentum now; any corporation could push Silk and keep it going as a pure product. The question is: Can you establish a business model that is socially responsible, environmentally responsible, consumer responsible, and fiscally responsible (make a handsome profit)–all at the same time. That is the opportunity that is being handed to us. This alignment with Dean Foods, and in particular with CEO Gregg Engles, has been remarkable.

"About two weeks ago Dean Foods announced the purchase of Horizon Organic, another company in Boulder, Colorado. The world's largest commodity dairy processor just sent a very clear signal to Wall Street: 'We are going to invest in wellness, health, and environmental businesses.' They paid about $250 million for Horizon, so they have put almost $500 million on the table for these two soy and organic milk businesses. This is all about Wall Street and large profits. It is not about saving the planet–even though they may well do that. The joke between me and Gregg Engles is 'My green is gonna meet your green on Wall Street!' Gregg has really endorsed this. This is not just an arm's length relationship. White Wave is the focus of Dean Foods' strategy going forward."

Steve has created what he calls the "Wellness Division" of Dean Foods–but he would not be surprised if this concept appears in the Dean's next annual report. Dean's price-to-earnings (P/E) ratio has been up. When Dean acquired White Wave, Dean was trading at a P/E of 16. They are now trading at 18–not because of better earnings but because of the sex appeal and opportunities of this wellness. Gregg told me he will give me anything I want if I focus on his P/E ratio–because that's what his stockholders want to see. If we position the company as a commodity business that is now invested in wellness consumer packaged goods, Dean could become the latest and greatest Procter & Gamble–if you will. There hasn't been the emergence of a serious branded company in the U.S. for quite a while. This is an unusual opportunity for Engles and Dean.

"Dean Foods is remarkably supportive of White Wave. They never interfere with anything that we're doing. Why would they? We're more profitable than any of their other divisions.

"We are now building three new extraction factories in the U.S. White Wave is producing Silk in Jacksonville, Florida, now. We invested the money in the processors and the fillers. The extraction part of that will be up and operational by mid-September of this year. We're putting in spin flash-dryers for our okara to turn it into further eco-products. Remember, now that we have an organic dairy inside Dean Foods, the okara goes to Horizon's cows

producing organic milk–a nice fit and inexpensive solution, because drying okara does not cost that much. But we're going to go further than that, by turning it into an actual eco-value product, mixing it with other ingredients so that the Silk story is complete–even our waste stream. So everything is used.

"In Mt. Crawford, Virginia, we are putting in another extractor as we speak. It won't be open until Jan. 2004. Then we are installing a second extractor that will start producing later. So we will have two extraction lines in the same building. That is the major investment center for Dean on the East Coast, where all the plastic bottles are run, etc. Soon we will have facilities up and down the East Coast from Buffalo down to Jacksonville. Presently White Wave extracts soymilk for Silk from whole soybeans in two plants, in New Jersey and Utah. Soymilk for tofu, not Silk, is made in Boulder, Colorado. The dairy White Wave works with in New Jersey put up a $12 million facility next door to White Wave's extraction facility, with a pipe right through the wall; it takes up the entire capacity for this factory, about 16 million gallons a year.

In New York City, Silk soymilk has 4.2% of the dollar share of the entire milk market (including dairy milk), and in Miami 4.3%. Those are White Wave's top markets. In the entire U.S., Silk has from 3.2 to 4.4% of the milk market. One year ago, Silk had about 40% less of those markets–remarkable growth. No wonder Dean Foods likes us so much. We took their factory [in Jacksonville] and increased its value.

"It's a great game out there. It's heating up because we now have some giants gorillas that are chasing us. We figure 8th Continent has spent $40 million chasing us and they don't have much business to show for it. They are planning to spend another $40 million because DuPont owns a patent on a soybean [Synchrony resistant] and if then can establish an American market for products which use that bean, they can expand it into a worldwide market over the next few decades."

Steve has been trying to make an issue out of hexane solvent and extraction but nobody will talk with him about it. Steve refuses to use soy protein isolates in his products because they are currently made using hexane [a petroleum derivative]. He is looking for isolates or isolate-like products that are made using a more natural solvent, ideally from organic soybeans.

A new motto is being used within the company: "A brand that covers you from diaper to diaper." White Wave is developing new Silk products that fit the tastes and nutritional (especially protein) needs of different age groups–such as children, school kids / teens, soccer moms, and geriatrics. "This is the diaper to diaper approach and the direction we are going to try to take Silk. A person needs much different nutrients at age 8 than at age 70. If Silk is organic and natural soy, we can begin to act like the orange juice and the milk people and enhance that delivery, only we can customize more than they ever thought about."

Steve always used to tell people "I'm working for my grandkids." He thought things in the soyfoods industry would eventually turn out the way they have–but not in his lifetime. "That was okay. It has been very exciting to watch things accelerate in the direction we always hoped they would go." Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

8196. **Product Name:** Edensoy (Soymilk) [Organic Chocolate].
Manufacturer's Name: Eden Foods, Inc.
Manufacturer's Address: 701 Tecumseh, Clinton, MI 49236.
Date of Introduction: 2003. July.
Wt/Vol., Packaging, Price: 8.45 fluid oz (250 ml) and 1 liter (1.06 qt) Tetra Brik Aseptic Carton.
How Stored: Shelf stable.
New Product–Documentation: Ad in *Natural Foods Merchandiser* (8½ by 11 inches, color). 2003. July. p. 8. "Organic Chocolate Edensoy. New." A color photo shows the two cartons and a full glass with a straw. It "is made with family farm organically grown whole soybeans combined with Eden selected organically fair-trade cocoa, naturally malted non-GEO organic barley and corn, with organic maple syrup for a naturally smooth finish. Our cocoa is grown in the Dominican Republic and milled in Holland. Eden Cocoa is rich in polyphenol antioxidants. There is five and a half times more antioxidant power in Cocoa than in the same amount of Blueberries; 10.4 times more than in spinach."

8197. *Plenty Bulletin* (*Summertown, Tennessee*). 2003. Soy Huichol [in Mexico]. 19(2):1-3. Summer.
• ***Summary:*** "Louise Hagler, culinary educator whose expertise is cooking with soyfoods, author of seven cookbooks, and Plenty advisor, recently returned from a six week technical assistance and training visit to the Huichol Center for Cultural Survival and Traditional Arts. The Center is located in the town of Huejuquilla, Jalisco, a frontier town in the Sierra Madre Occidental mountain range, which extends along the Pacific side of Mexico. Since Louise's research visit last July, (see Plenty Bulletin: Fall 2002), Plenty staff and Susana Valadez, founder and director of the Huichol Center, have developed a collaborative project called, Huichol Nutrition Education & Food Supplementation Project. Phase I of the project was funded by Onaway Trust and the AMB Foundation. Plenty is working in partnership with the Huichol Center, the regional DIF, (Departamento Infantes y Familias-a Mexican government Social Welfare Agency), and Chapingo University (the largest and oldest agricultural university in Mexico) to develop and maintain a sustainable program

of nutrition education and soy food supplementation for Huichol families."

"Louise worked with Huichol Center staff to develop recipes utilizing soybeans, soymilk, tofu and texturized vegetable protein (*soya seca*) that local Huichol and urban and rural Mexican families would readily integrate into their traditional meals. Malnutrition is a serious problem in rural Mexico, especially among indigenous populations like the Huichols. Soybeans are noteworthy for producing a high-quality protein from limited tillable acreage–ten times more usable protein from an acre than if that same acre were used to raise livestock."

Photos show: (1) A DIF soyfoods class. Louise Hagler (center), with Susana Valadez to her right and Yolanda Ramirez Cordoba to Susana's right. (2) Mexican women squeezing out the soymilk at the soy processing demonstration at the Huicol village of Nueva Colonia.

8198. *SoyaScan Notes.* 2003. History of feeding soymilk to infants or children, worldwide (Overview). Aug. 1. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** We know of no evidence or documentation showing that soymilk was fed to infants in Asia or anywhere else before the 20th century. The early research on the subject was done by medical doctors in the United States and published in scientific journals.

In 1909, John Ruhräh, an American pediatrician in Baltimore, Maryland, published the first research on the subject. It showed that infants for whom mother's milk was not available and who could not tolerate dairy milk, accepted and thrived on soymilk or a smooth gruel of dehulled soybeans (See: Ruhräh, John. 1909. "The soy bean in infant feeding; Preliminary report." *Archives of Pediatrics* 26:496-501. July).

Ruhräh followed his initial, preliminary report with two more detailed articles on the subject in 1910 and 1915, each showing that soymilk was a valuable food for infants: *J. of the American Medical Assoc.* 1916. 54(21):1664-65. May 21; *American J. of Medical Sciences* 150(4):502-12. Oct.

The next investigation, in 1916 by Sinclair, a physician in Philadelphia, Pennsylvania, came to the same positive conclusion: Sinclair, John F. 1916 "Recent observations in the use of soy bean in infant feeding." *New York State J. of Medicine* 16(2):83-88. Feb.

The next study was conducted in the Dep. of Pediatrics, Cornell Univ. Medical College, Ithaca, New York. The author observed 53 infants under 16 months of age who suffered from eczema. "Thirty-six of the patients reacted to cow's milk, which was assumed to be the cause of their eczema. Six of these were given a mixture including protein free milk (lactose and mineral salts), washed butter and soy bean protein, "In all cases the eczema improved markedly in twenty-four hours and practically disappeared in three days. This mixture, however, caused diarrhea and vomiting in four of the patients and for this reason further observations were not made" (Schloss, Oscar M. 1920. "Allergy in infants and children." *American J. of Diseases of Children* 19(6):433-54. June).

In 1921 Muggia and Gasca, pediatricians in Italy, did similar research and concluded: "What is most important from our point of view, is that the soy-bean milk, in the cases observed by us, shows itself to be more easily tolerated than the milk of animals, and sometimes more easily than human milk" (Muggia, Alberto; Gasca, Enrico. 1921. *Il latte vegetale di soia nell'alimentazione e nella terapia delle malattie gastro-enteriche dei bambini* [Soymilk for feeding and treating infants with gastro-enteric illnesses]. *Gazzetta degli Ospedali e delle Cliniche* 42(30):356-58. April 14).

8199. Vandemoortele. 2003. [History of Vandemoortele: Centennial (Website printout–part)]. www.vandemoortele.com/nl/honderdjaar/frameset/timebody.html Printed Aug. 5. [Dut]

• ***Summary:*** 1899–Factory in Izegem is established.

1921–"NV Huileries Vandemoortele" is established. 1936–Consumer oils first produced. 1947–Oils in bottles are launched. 1951–Acquisition of the firm Albers uit Lier. 1955–The firm Metro is established. 1957–Oilseed extraction plant is constructed in Merksem. 1958–A margarine factory is established in Oudenbosch (Netherlands).

1962-67. Further introduction of a line of products. 1969–Acquisition of Meyer Lippinghausen (Meylip). 1974–Vamo Mills established. 1978–NV Vamix established. 1978–Acquire the consumer oils and fats activities of Oleofina.

1980–NV Alpro is established. Construction of a soymilk extraction factory at Gent. 1981-1989–Extension of market positioning into France and Germany. 1989–Acquisition of NV Vleminckx. 1990-1991–Expansion into Eastern Europe. 1991–Construct a new factory for baked goods in the UK. 1992–Joint venture with Fuji Oil Co. 1993–Further expansion of margarine into freezers. 1996-1997–Acquisition of Sojinal in Issenheim, France. Further expansion into southern and eastern Europe. 1998–Divestiture of bulk industry. Joint venture with Cargill. Acquisition of the packaged fat activities of Cargill Europe. Expansion of freezer activities. 1999–Alpro builds a new factory in England.

2000–Vandemoortele Dough Products gets a new logo and a new name: Vandemoortele Bakery Products Division. Vandemoortele Bakery Products opens a new factory for frozen goods in Eeklo, Belgium. Acquisition of the Italian baking specialist Star SpA. Acquisition of Alain Sobrie S.A. Vandemoortele becomes a shareholder of *Cuisine de France* (CdF). Group Vandemoortele sells its share of NV Vamo-Fuji to Fuji Oil.

2001–Vandemoortele acquires Alimas in Italy. 2002–Acquisition of Lasem of Spain. Sale of shares in aOP to Cargill. Address: Netherlands.

8200. White Wave, Inc. 2003. Silk: Perfect for lunch boxes and snacks (Ad). *Natural Foods Merchandiser.* Aug.
• ***Summary:*** This 8½ by 11 inch color ad shows 3-packs of organic chocolate and vanilla Silk in shelf-stable packs (new Tetra Prisma cartons). Each flavor is fortified with calcium and vitamins. Address: [Boulder, Colorado].

8201. Song, Sora. 2003. Going soy crazy. *Time.* Sept. 1.
• ***Summary:*** If even half the claims being made on behalf of the soybean are true, "it may be the closest thing on earth to a magic bean." "'I think eating soy foods–tofu, soy milk or miso–in moderation, a couple of times a week, should be fine,'" says Anna Wu, professor of preventive medicine at USC's medical school.

8202. Chapman, Nancy. 2003. Celebrating the Soyfoods Association's 25th anniversary and other recent developments (Interview). *SoyaScan Notes.* Sept. 12 and Dec. 19. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Nancy's organization manages the Soyfoods Association, whose 25th anniversary was celebrated on Sept. 4, 2003, as part of a reception from 6-8 p.m. during the Natural Products Expo East in Washington, DC. About 60-70 people attended. Tina Nelson of Sunrich (formerly with Galaxy Foods) gave a brief talk, followed by Steve Demos and Lester Karplus who shared their recollections of the foundation meeting of the Soycrafters Association of North America (as it was originally named) on 30 June 1978 in Ann Arbor, Michigan. Numerous photographs of and documents from that meeting (provided by the Soyfoods Center Library) were on display. Some people were unable to attend because the National Football League (NFL) had a party on the Mall which created a terrible traffic jam. The reception followed an Executive Committee meeting at which soymilk standards were discussed, specifically the requirement of 7 gm of protein per 100 gm of soymilk.

The Soyfoods Association has a number of allies in Congress in supporting the bill to get soymilk into school lunch programs and making it reimbursable: Senators Check Grassley (R-Iowa), Tom Harkin (D-Iowa), Richard Luger (R-Indiana), Blanche Lincoln (D-Arkansas), Peter Fitzgerald (R-Illinois), and Ben Knighthorse Campbell (R-Colorado). Representatives Michael Castle (R-Delaware), and Robert Andrews (D-NJ).

United Soybean Board (USB) (Steve Poole), American Soybean Assoc. (Jim Hershey and the WISHH program), and seven state soybean boards (Illinois, Indiana, Iowa & Soyfoods Council, Kentucky, Michigan, Nebraska, and Ohio) are now members of SANA. Each state board pays $500 a year as an Allied Member, and many help pay for additional projects. Illinois and Indiana both sponsored (paid all expenses for) speakers for a SANA symposium. They have contributed almost every year for SANA's April Soy Month promotion. USB paid for a big SANA promotion at the Boston Marathon, and they sent out a big crew to do all the publicity. In addition, the South Dakota Soybean Board has sponsored individual projects (such as video new releases).

About 4 years ago the Iowa Soybean Promotion Board (and Linda Funk and her Soyfoods Council, created Sept. 2000 by the Iowa Soybean Promotion Board) tried unsuccessfully to "take over SANA." There was considerable debate, but in the end the SANA board voted *not* to put SANA under new management, in part because their source of funding looked like it would dry up after 3 years. Now the Iowa board, SANA's Iowa members, Linda Funk and her Soyfoods Council, and the Iowa Economic Development Group all work well together as members of SANA.

A new potential conflict is developing as SANA plans to revise the soymilk standards. Some people want to increase the allowed water content, while others want to prohibit the use of soy protein isolates. Address: Founder, N. Chapman Associates, 1723 U. Street, N.W., Washington, DC 20009. Phone: 202-986-5600.

8203. *D-brief* (*e-newsletter*). 2003. Customer clips: Saputo Inc. Sept. 17. p. 3.
• ***Summary:*** "Saputo Inc. plans to close two Canadian Milk Division plants and will sell a third, leaving it with 10 fluid milk processing plants in Canada."

SoyaWorld, a soy beverage company in British Columbia, will purchase Saputo's Annacis Island, B.C., facility in a deal expected to close by Feb. 2004. Saputo presently co-packs SoyaWorld products in that facility.

Note: D-brief is a weekly dairy business e-newsletter produced by DairyField at www.idfa.org.

8204. White Wave. 2003. Now latte drinkers and chai drinkers have something else in common (Ad). *New York Times Magazine.* Sept. 21. p. SM14.
• ***Summary:*** On the top half of this full-page color ad we read: "There's a new soymilk at Starbucks, and it's Silk. Try it in your latte or Tazo Chai." On the bottom half, a hand is reaching for a cup of Starbucks latte with foam on top. To its right on a table are packages of Tazo Chai and Silk Soymilk (Organic, Vanilla). Across the top of the Silk carton is the Starbucks logo and "Exclusively formulated for Starbucks Lattes and Tazo Chai."

8205. Meyer, Lucas. 2003. Recent work with soymilk (Interview). *SoyaScan Notes.* Sept. 22. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** After selling the family company, Lucas Meyer GmbH, Lucas started a company named Biovalor AG in Hamburg. He and his two coworkers have developed (over the past 10 years) a soymilk with better, more bland flavor

than any he has ever tasted. Their process does not use any masking agents. They have changed the "processing parameters" and also added some ingredients. There is a strong demand in Europe for an alternative to Alpro as a soymilk supplier. The powder made from this soymilk is especially good and reconstitutes very well. It can also be used to make a wider range of products than typical soymilk. Since the solids content in the soymilk is nearly twice that of normal soymilk, it can be used to make a hard cheese, or fermented soymilk, or soy quark. His coworkers have a relatively new patent on the process, and he has access to that if he pays a royalty. Address: Biovalor AG, Heilwigstrasse 50, D-20249 Hamburg, Germany. Phone: +49 700 2469 2567.

8206. Welters, Sjon. 2003. Re: Soyfoods in Russia. Letter to William Shurtleff at Soyfoods Center, Sept. 25. 1 p. Typed, with signature.
• ***Summary:*** Sjon found tofu in only one store in Russia, in a supermarket in Moscow, in the dairy case. He encloses the label. "We ate it. It tasted rather salty, and was like an extra-firm calcium chloride tofu, I would say. Not bad... The only other soyfoods (not counting Maggi by Nestle) we saw were an Alpro (who else!) soymilk carton in the dairy section of a Moscow supermarket. This particular aseptic one-liter pack was made in Austria. The price was about 60 rubles (30 rubles = $1). The other soyfood was Kikkoman soy sauce, a sweetened and an unsweetened variety, in small 12 fl. oz bottles. The price was 90 rubles each. That we saw on the way to Samara."

In Russia, the situation concerning soy is "definitely at ground level. Soy is getting bad press in Russia, according to my hostess, as being bad for you. Specifics they could not give me, but it came up whenever they were promoting soy. Genetically engineered soybeans are not liked. That is a plus in my opinion."

Sjon encloses a number of articles and the title pages of several books related to soy; he found them in the ACDI/VOCA office in Moscow.

8207. *ASA Today* (*St. Louis, Missouri*). 2003. Americans buy more soy. 9(10):3. Sept.
• ***Summary:*** "According to the latest in a series of studies on the soyfoods category, retail sales of soyfoods grew by 12.8% overall in 2002, to reach an estimated $3,650 million.

"According to a Soyatech study, this is the seventh year in a row that the category has grown by more than 10% overall. Growth was driven by storing increases in sales of energy bars, meat alternatives, soymilk beverages and cold cereals with soy. Energy bars with soy protein grew at over 30% and accounted for nearly 25% of the total dollar gain for the category. Sales of soy-based products were growing more quickly in mainstream food channels than in natural product stores, according to 'Soyfoods: The U.S. Market 2003.'

"'The trend towards mainstream growth has been consistent over the past five years,' says report author Peter Golbitz, Soyatech Publisher. 'Not only are sales increasing more quickly in the mainstream channel, but mainstream shoppers now buy nearly half of all soyfood products in the U.S. It's not just a new age food anymore.'"

8208. *Bluebook Update* (*Bar Harbor, Maine*). 2003. U.S. soyfoods sales hit $3.65 billion, says new study. 10(3):1, 4. July/Sept.
• ***Summary:*** In 2002, retail sales of soyfoods grew by 12.8%. The main contributors to growth were energy bars containing soy protein (accounting for nearly 25% of the total dollar gain), meat alternatives, soymilk beverages, and cold cereals that contain soy.

8209. **Product Name:** Kikkoman Pearl Organic Soymilk (In Aseptic Quart Cartons) [Original, Creamy Vanilla, Green Tea], or Pearl Soymilk (Made with Organic Soybeans) [Tropical Delight with 7 Juices].
Manufacturer's Name: Kikkoman International, Inc. (Importer-Distributor). Made in Japan.
Manufacturer's Address: 50 California St., Suite 3600, San Francisco, CA 94111. Phone: 415-956-7750.
Date of Introduction: 2003. September.
Ingredients: Filtered water, whole organic soybeans, organic evaporated cane juice, organic green tea powder, tricalcium phosphate, organic natural flavors (lemon and vanilla), sea salt, carrageenan, vitamin A palmitate, vitamin D2. Certified organic by QAI.
Wt/Vol., Packaging, Price: 32 fl oz (1 quart) Tetra Brik Aseptic Carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Ad in *Vegetarian Times.* 2003. Sept. p. 11. Also: During late 2003 and early 2004 this product is advertised by Kikkoman on Japanese language TV is the USA; an Asian-American young person is showing drinking it.

Product with Label sent by Martine Liguori. 2007. Feb. Purchased at Grocery Outlet in Oakland, California. Paid $0.59 for 1 quart of Green Tea. Regular retail price is $2.29 to $3.29/quart.

8210. Kikkoman. 2003. Soymilk for the purist (Ad). *Vegetarian Times.* Sept. p. 11.
• ***Summary:*** Shows five varieties of "Kikkoman Pearl" organic soymilk in 1 quart Aseptic cartons against a pearl-colored background. In the foreground is a glass of soymilk. The organic flavors are Original, Creamy Vanilla, and Green Tea. The Tropical Delight (With 7 Juices) is made with organic soybeans.

8211. *The Non-GMO Source* (*Fairfield, Iowa*). 2003.

Monsanto, FDA cracking down on hormone-free milk claims. 3(9):1. Sept.
• ***Summary:*** Concerns Monsanto's recombinant bovine growth hormone (rBGH or rBST) and Oakhurst Dairy in Portland, Maine.

8212. United Soybean Board. 2003. National report 2003-2004: Consumer attitudes about nutrition–Insights into nutrition, health & soyfoods. Seattle, Washington. 6 p. Sept. 22 x 21 cm.
• ***Summary:*** This tenth annual nationwide survey, commissioned by USB, was conducted in early 2003 by an independent research firm in Seattle, Washington. Random telephone interviews were completed with 1,000 consumers. The study's margin of error is ±3.1 percent and has a confidence level of 95%.

Contents: Introduction and methodology. Consumer nutritional habits and concerns. Healthy food decisions. Consumer knowledge of cooking oils. Consumer attitudes about fats. Awareness, usage, and trial of soy products. Soyfoods and health: Perceived healthfulness of soy products (74% healthy, 21% neutral, 5% unhealthy), awareness of health benefits of soy (heart health 29%, menopause relief 19%, prevent obesity / promote weight loss 14%, cancer prevention 10%, good protein source 5%, reduced risk of osteoporosis 3%, prevent arthritis 2%, other 14%). Consumer perceptions of biotech [genetically engineered] food. Consumer awareness and usage organic products (45% of consumers regularly purchase organic food products. Unaided basis, 47% know that organic foods can't contain genetically modified ingredients and 60% know that organics must be grown without pesticides and herbicides).

Percentage of American consumers who have tried various soy products in 2001, 2002, and 2003: Tofu 45%, 48%, 48%. Soy [veggie] burgers 40%, 43%, 44%. Soymilk 28%, 35%, 39%. Soy nuts 20%, 26%, 26%. Soy protein bars 18%, 20%, 22%.

Awareness of soyfoods: "Overall consumer awareness of soy products increased significantly this year. Soymilk achieved an 89% awareness rating. One in six [16.7%] Americans consume soyfoods or soy beverages once a week or more. Among those who do not, 47% report that nothing in particular prevents them from including soy in their diet."

Genetically modified foods: Consumer awareness dropped to 60%, an 8% decrease from 2002. Awareness is higher among men (66%) than women (57%). Those aged 35-54 had the highest awareness (66%) compared to those 18-34% (57%), and those 55 and older (57%). Negative attitude: 20%, down from 24% last year. Positive attitude: 13%. But 67% feel neutral or don't known enough about biotech foods to form positive or negative feelings. 23% of consumers are willing to pay a premium for foods without biotech ingredients, down sharply from 32% last year.

Note: As of Aug. 2008 this full survey is available gratis in PDF format at www.soyconnection.com /health_nutrition / pdf/.

8213. Welters, Sjon. 2003. Final report for Project RUS 211: Malakhova Sole Proprietorship (MSP), a soyfoods manufacturer in Russia. Cabot: Vermont. 8 p. 28 cm.
• ***Summary:*** Sjon served as a consultant to this small company from 10-16 Sept. 2003 for ACDI/VOCA and Winrock International. He submitted this report to Winrock International Inst. for Agricultural Development. (Morrilton, Arkansas 72110-9370). Contents: 1. Scope of work. 2. About Malakhova sole proprietorship. 3. Project approach. 4. Activities completed. 5. Recommendations to MSP. 6. General observations on business, marketing, processing and product improvement, and new products. 7. Notes for ACDI/VOCA and recommended follow-up survey.

Irina Malakhova and a friend started this company in Sept. 2001 in Chapayevsk, Samara Region, Russia. The company presently makes soymilk using a Russian-made SoyaCow capable of producing up to 20 liters/hour.

8214. Bjerklie, David. 2003. What you need to know about... fruits & vegetables. *Time* (*Asia*). Oct. 20.
• ***Summary:*** Fruits and vegetables are so good for you they could save your life. "Don't like tofu? Soybeans–roasted–make a good snack. Or try cooking green soybeans (edamame) like lima beans. Soy milk makes a delicious milk shake."

8215. **Product Name:** SoyMoon (Gourmet Soy Cheese, sold in Chunks or Shreds) [Soy Gouda, Soy Provolone–Smokehouse Style, Soy Mozzarella with Italian Herbs, Soy Mozzarella, Queso Blanco–Mexican Picante Style].
Manufacturer's Name: Blue Moon Brands.
Manufacturer's Address: P.O. Box 1220, Monroe, New York 10950. Phone: 845-782-0178.
Date of Introduction: 2003. October.
Ingredients: Soy Gouda: Soy beverage (water, organic soy protein), organic expeller-pressed soy oil, casein, natural flavors, organic corn starch, sea salt, sodium phosphates, lactic acid, sodium citrate, annatto (for color).
Wt/Vol., Packaging, Price: 8 oz.
How Stored: Refrigerated.
New Product–Documentation: Leaflet (8½ by 11 inch, color) sent by Patricia Smith from Natural Products Expo East. 2003. Oct. "Introducing SoyMoon, real gourmet soy cheese." "Naturally cholesterol and lactose free. The only one that deserves to be called Gourmet!" In the lower right: "Makers & Purveyors of SoyMoon and WholeMoon." The latter is "Fine Organic Dutch Cheese"–a dairy product. Attached to the leaflet is the business card of Dean Soicher Vice President.

On the rear are the ingredients and nutrition facts for each of the five soy cheeses. No information is given about

the weight of each package.

Spot in Vegetarian Times. 2005. Feb. "Edible Nirvana." p. 5. "Our taster couldn't believe it when she tried this cheese–its a soy cheese that tastes gourmet and melts well. Her hands-down favorite: soy gouda from SoyMoon, $4/8 oz. 877.282.5400; www.bluemoonbrands.com."

8216. Klein, Barbara P.; Cadwallader, Keith R.; Chen, Dejun; Khanna, Pradeep; Sullivan, Cheryl L.; Weingartner, Karl E. 2003. Baking with soy in the American kitchen. Champaign-Urbana, Illinois: Illinois Center for Soy Foods. 63 p. Illust. No index. 24 cm. Series: Soy in the American Kitchen.
• ***Summary:*** Contents: Illinois Center for Soy Foods. Bringing soy foods to the American table. Why eat soy? Baking with soy. Soy flour. Soy protein isolate. Soymilk. Tofu. Textured vegetable protein. Soy nuts. Soy analogs (soy sour cream, soy cream cheese). Nutrient information,

Recipes (42 recipes). Every right-hand page contains an elegant full-page color photo of the recipe to its left. All of the recipes are meatless.

On page 5 we read: "Soy analogs: Soy products that have been made to look and taste like meat or dairy products are known as soy analogs."

Note: This is the earliest English-language publication seen (Dec. 2007) that uses the term "soy analogs" to refer to both meat analogs and dairy analogs. Yet this term is almost never used! The typical terms were "meat analogs" and "dairy analogs"–terms that are probably best avoided in the state of Illinois. Address: 1. PhD, editor, Director, Illinois Center for Soy Foods, 170 National Soybean Research Center, 1101 Peabody Dr., Univ. of Illinois, Urbana, IL 61801. Phone: (212) 244-1706 or www.soyfoodsillinois.uiuc.edu.

8217. Jalsevac, Philip. 2003. So far soy good for brothers: Cambridge food-processing venture follows family tradition. *Record* (*The*) (*Kitchener, Ontario, Canada*). Nov. 5. p. F1-F2.
• ***Summary:*** The company extracts soymilk (from soybeans grown in southwestern Ontario), which they make into natural, soy-based products named Yoso Spreadables which are similar to cream cheese spreads. They come in five flavors: plain, jalapeno, garlic and onion, key lime, and sun-dried tomato and basil, and are sold by retailers in 230 gm containers for between $3.99 to $4.99.

After about two years of developing the products and working on a business plan, in Dec. 2001 the Lo brothers leased a 9,000 square foot building in Cambridge, Ontario at 1070 Fountain St. North.

Most of the next year was spent doing renovations and leasehold improvements, installing the many pieces of stainless steel equipment, and conducting production trials.

Last November the Yoso Spreadables product line was launched. It is presently carried by about 150 retailers, mostly in southwestern Ontario.

"The company has six full-time and four part-time employees." Sales are now about $15,000 to $20,000 a month.

A large color photo shows brothers Erik (age 32, the CEO and food scientist) and Francis Lo (age 29, in charge of sales and marketing).

8218. Myre, Greg. 2003. With a common thread, Israelis unravel infants' illness: Petah Tikva journal. *New York Times.* Nov. 17. p. A4. International section.
• ***Summary:*** Many sick babies, some near death, began to arrive at Israeli hospitals in early November with nearly identical symptoms: persistent vomiting, eyes that could not focus, spasms, and listlessness. Researchers quickly found the connecting thread. All the children had been fed Remedia Super Soya 1, a soy-based, kosher, nondairy infant formula made by the German company Humana Milchunion, and distributed by an Israeli company. Some 5,000 babies in Israel drank the formula. At least two children have died. It was soon found that the formula lacked vitamin B1.

A brief note by Victor Homola in the next day's issue of the *New York Times* (p. A13) states that the Humana Milchunion in Germany dismissed four senior executives in its development, chemical laboratory, and quality control departments.

8219. *SoyaScan Notes.* 2003. What is titanium dioxide and how is it used with soy products? (Overview). Nov. 26. Compiled by William Shurtleff.
• ***Summary:*** According to the *Encyclopedia Britannica* (2002), titanium is a chemical element–a lightweight, high-strength, low-corrosion, structural metal. Titanium dioxide, a nontoxic, pure white powder, is extensively used as a pigment in paints, enamels, and lacquers.

The SoyaScan database presently contains 20 records that mention "titanium dioxide." From 1936 to 1961 (3 records) it is used as a pigment to whiten paints. In 1953 The Glidden Company, in a joint venture, started a large plant in Japan to manufacture titanium dioxide. From 1965 to 1981 (4 records) it is used as a tracer or tag, mixed with isolated soy proteins (ISP) or textured soy protein products, so that their presence could be detected when used in meat products. One label read: "0.1% titanium incorporated as food grade titanium dioxide in accordance with USDA regulations." In 1984, during the Reagan administration, the USDA eliminated the requirement that titanium dioxide be added to soy protein products as a tracer.

In 1993 it was used as a whitener in Mocha Mix Fat Free Non-Dairy Creamer (made by Presto Food Products). In 1997 it was used as a whitener in Rice Moo (Non Dairy Beverage Mix) (Original and Vanilla flavors, made by Sovex Foods). Also in 1997 it was used as a whitener in SoySoft Deep Treatment Penetrating Cream (made by SoySoft, Inc.)

In 1988 its use as a whitening pigment for paper coatings was discussed. According to Ted Nordquist (Dec. 2003), he saw it on the label of 8th Continent Soymilk (Vanilla and Original flavors, made by General Mills) in which it was presumably used as a whitener when the product was first launched in about 2001, however (Dec. 2003) it presently no longer appears on the label.

8220. Brown, Reg. 2003. Back to the beginnings: 3. *Record* (*SDA, Victoria, Australia*) 108(47):8-9. Nov. 29.
• ***Summary:*** "This article continues a series on the history of the Adventist Church in the South Pacific." In 1897, Edward Halsey, one of Dr. John Harvey Kellogg's bakers at the Battle Creek Sanitarium, Michigan, arrived in Melbourne, Australia, and began manufacturing Granola, caramel cereal (a coffee substitute), and peanut butter. "The Sanitarium Health Food Company was registered as a business on April 27, 1898." On the advice of Ellen G. White, the health food factory was moved to Cooranbong, NSW, to be near the newly established school at Avondale.

Sanitarium Foods is the soymilk market leader in Australia. Its flagship product, So Good, enjoys almost 50% of the market share, and is also the leading brand in New Zealand, the UK, and Canada. So Good was developed at Sanitarium's laboratory at Cooranbong. "In 2002 Sanitarium purchased a Canadian company, SoyaWorld, which gives it 60 per cent of the Canadian [soymilk] market." Address: Australia.

8221. Aguilar, John. 2003. Dairies churn as Monsanto goes on offensive. *Natural Foods Merchandiser.* Nov. p. 1.
• ***Summary:*** In September four U.S. dairies received letters from the FDA that use of the terms "no hormones" or "hormone-free" on their packages is false because all milk products contain naturally occurring hormones and that milk cannot be processed in a way to remove all the hormones it contains. Two of the dairies acknowledged the inaccuracy of their labels and have agreed to comply–but changing the wording could cost more than $20,000 each. Most of the dairies interviewed for this story believe agricultural giant Monsanto is a primary reason for the FDA action. Monsanto makes Posilac bovine somatatrophin, its brand name for recombinant bovine growth hormone (rbST), which causes cows to produce more milk.

8222. Bloch, Benjamin. 2003. All the trimmings. *Los Angeles Confidential.* Nov. p. 254-56.
• ***Summary:*** About Chef Akasha and Chef Beth Ginsberg–color photos show each (with Akasha wearing a White Wave "Silk" cap). Akasha is the national spokesperson for White Wave's Silk soymilk. Her favorite experiences include: Traveling the world as Michael Jackson's private chef, catering Pierce Brosnan's 50th birthday party–a luau on Malibu beach, and cooking for Billy Bob Thornton and Barbara Streisand. She likes to shop for organic produce at Santa Monica Farmers Market, Hollywood Farmers Market, and Whole Foods–which has a remarkable selection of organic artisan cheeses. She is typically booked 4-6 weeks in advance. For details: Chefakasha.com.

Beth has written two cookbooks: *The Taste for Living* and *The Taste for Living World Cookbook.* In 1990 she was a chef in a restaurant on Fairfax named "442." The health food cuisine included many tofu dishes. They developed a big celebrity clientele. Now she works for Michael Milken and does all of his events, plus those of some business professionals. Funny stories: She had to cook tofu products for the ABC staff for Barbara Walters *20/20* special. They weren't told what it was. Some said they tasted great, others said they were terrible.

8223. Hain Celestial Group, Inc. (The). 2003. Annual report 2003: 10 years of changing the way the world eats. Melville, New York. 32 p. Nov. 28 cm.
• ***Summary:*** A nice chronology at the front of the report marks the company's 10th anniversary. At the top of each year is the logo of each brand acquired that year.

"1993. Irwin Simon forms 21 Century Foods with the Farm Foods brand. We acquire Kineret Foods, a specialty kosher brand. Our name becomes Kineret Acquisition Corp. and we sell 1 million shares and warrants in an initial public offering at $3.25 per unit. We are listed on NASDAQ under the ticker symbol NOSH. The FDA issues its Nutrition Labeling and Education Act (NLEA), regulations establishing general requirements for health claims and food labeling.

"1994. We acquire the Hain Pure Food Co. and Hollywood cooking oils from PET Inc. We change our name to The Hain Food Group, Inc. Our ticker symbol is changed to HAIN. Sales in our first full year are $14 million."

"1995. We acquire the Estee sugar-free brand and the Featherweight low-sodium brand. We establish our medically directed business. Our sales reach $58 million.

"1996. We enter the snacks business with the acquisition of Harry's Premium Snacks. We acquire a license to the Weight Watchers line of dry grocery products. Our sales reach $69 million.

"1997. We acquire publicly held Westbrae Natural and enter the nondairy business with the Westsoy brand, the leading soy milk in the aseptic shelf-stable category. We expand our grocery business with Westbrae Natural, the #1 brand of shelf-stable vegetables and beans. We expand our snacks business with the Bearitos and Little Bear brands.

"1998. We open the year with the acquisition of four leading brands. (1) Terra, the #1 specialty all-natural snack food brand with its Terra Original Exotic Vegetable Chips. (2) Garden of Eatin', a leading maker of organic tortilla chips. (3) Arrowhead Mills, the pioneer and leader in organic baking mixes and grains. (4) DeBoles, a premium pasta

company known for its organic and Jerusalem artichoke pastas. Later in the year we acquire Nile Spice, a leading meal cup and dry soup brand. We issue 2.5 million additional shares of our stock to the public in a secondary offering. Our sales reach $174 million.

"1999. We acquire the Natural Nutrition Group, bringing us: (1) Health Valley, the #1 brand in natural soups and snack bars, and a strong player in the natural cereals and cookie categories. (2) Breadshop, maker of natural, ready-to-eat granola cereals. (3) Casbah, providing versatile and great-tasting vegetarian prepared mixes and side dishes. The FDA authorizes the health claim that soy-based foods help to lower cholesterol. Our sales reach $270 million."

Hain acquired Earth's Best and Celestial Seasonings in 2000, Yves Veggie Cuisine in 2001, Lima and Biomarché (both in Europe) in 2002, and Imagine Foods (with its premium Rice Dream and Soy Dream brands), Grains Noirs, and Walnut Acres Certified Organic brand in 2003.

Net sales for the year ended 30 June 2003 were $466.459 million, up 18% from $395.954 million in 2002. Net income in 2003 was $27.492 million, way up from $2.971 million in 2002. Many new products containing soy in the product name are pictured and described incl. Imagine Organic Broth [California Miso or Soy Ginger], Westsoy Soy Slender. Lima Soya Drink.

At the top of this chronology (p. 1) is a list of "10 relevant FDA authorized health claims" from 1993 to 2000. For example: "(1) Calcium reduces osteoporosis risk (1993). (2) Sodium increases high blood pressure risk (1993). (3) Dietary saturated fat and cholesterol increase coronary heart disease and cancer risk (1993). Soluble fiber (fruits, vegetables, whole grains, psyllium seed husk) reduces coronary heart disease risk (1993)..."

Page 2: The Hain-Celestial Group is "one of the largest specialty food companies in the United States." "We now market almost 1,700 products under 28 different brand names." This report contains many fine color photos.

Accompanying the annual report is a "Notice of Annual Meeting of Stockholders and Proxy Statement" (33 p.). Irwin Simon, the founder and CEO, age 45, had the following annual compensation: Salary: $643,077. Bonus: More than $175,000. Other compensation: $16,000. Stock options: 600,000 shares. Note: The value of the company's stock has decreased for the last 3 years in a row. Address: 58 South Service Road, Melville, New York 11747. Phone: 516-237-6200.

8224. Holzapfel, Cynthia; Holzapfel, Laurel. 2003. Coconut oil: for health and beauty. Summertown, Tennessee: Healthy Living Publications, a division of Book Publishing Company. 128 p. Illust. Index. 23 cm. [13 + 28 endnotes]
• ***Summary:*** Contents: 1. The chemistry of fats. 2. The role of fats in the body. 3. Nutritive benefits of coconut oil. 4. Antimicrobial benefits of coconut oil. 5. Beauty tips using coconut oil. 6. Facts and practical tips. 7. Recipes using coconut oil. Glossary. Sources for edible coconut oil, organic dried coconut, and graters for fresh coconut.

The chapter on the chemistry of fats is very well researched and written; it makes a complex subject easy to understand. The book makes a convincing case that coconut oil and coconut milk are as good for one's health as they are delicious. Address: The Book Publishing Co., P.O. Box 99, 156 Drakes Lane, Summertown, Tennessee 38483. Phone: 615-964-3571.

8225. Jenkins, D.J.; Kendall, C.W.; et al. 2003. The effects of combining plant sterols, soy protein, viscous fibers, and almonds in treating hypercholesterolemia. *Metabolism* 52(11):1478-83. Nov. *
• ***Summary:*** Jenkins' team has found new ways of achieving dramatic cholesterol-lowering effects through diet. In this study, 25 healthy hyperlipidemic individuals were put on a dietary plan (Portfolio eating plan) which included 30 gm of almonds, 2 gm of plant sterols (from enriched margarine), 15 gm of viscous fibre (from foods such as oats, barley, eggplant, or okra), and 35 gm of soy protein (from foods such as tofu, soymilk, or soy meat alternatives). The diet reduced their LDL cholesterol by 35% in two weeks. Address: Univ. of Toronto, Canada.

8226. Elliott, Stuart. 2003. Advertising: A soymilk maker hopes a creator of the 'Got Milk?' campaign can do for soy what he did for dairy. *New York Times.* Dec. 5. p. C5.
• ***Summary:*** The White Wave division of Dean Foods Co., maker of Silk organic soymilk, is expected to announce today that it has chosen Berlin Cameron, part of the Red Cell division of the WPP Group, as its new creative agency.

Jon Steel, who (in September) joined Berlin Cameron / Red Cell in New York, developed the "Got milk?" campaign, launched in 1993 for the California Milk Processor Board, when he was senior executive at Goodby, Silverstein & Partners in San Francisco. Steel's experience was a big reason White Wave chose Berlin Cameron and a rigorous 2-month review.

White Wave had been spending about $15 million a year on ad campaigns for Silk from its previous agency, Arnold Worldwide in Boston, Massachusetts. But in 2004 that number is expected to at least double as TV ads are added to the media mix–now made up mainly of print and outdoor advertising.

The "Got milk?" theme was so popular that it was eventually adopted by the national dairy industry, which licenses the rights from the Californians and uses it together with the long-running "milk mustache" campaign.

White Wave hopes to target a broader, mainstream audience for Silk by playing down the premise of its present campaign is "overcoming the hurdle of taste," in favor of talking about Silk's benefits as a better alternative to milk.

Whereas the former campaign is apologetic, things have changed and the new one will convey a more confident attitude.

Silk is the dominant brand in refrigerated soymilk; its competitors are 8th Continent, Sun Soy, and Vitasoy. Its market share is 79% in supermarkets (IRI data) and 85% in natural-food stores (Spence data). And Silk sales are booming, with estimated revenues of $277 million in 2003, up 51.4% from $183 million last year.

8227. Jacobi, Dana. 2003. Serving soyfoods on Capitol Hill (Interview). *SoyaScan Notes.* Dec. 20. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Each year the American Soybean Assoc. (ASA) has a board meeting in Washington, DC. At that time they have an event for Congress. This year ASA decided to "host its first Soyfoods Luncheon," which they announced in a 2-page news release. Representative Jo Ann Emerson (R-MO) served as the Congressional host of the event. White Wave, Solae, Soyatech, and SANA sponsored the event but it (incl. Dana and her food) was paid for by ASA.

Apparently Nancy Chapman of the Soyfoods Association told ASA that Dana was a professional chef with expertise in soyfoods. So Dana got a call from Anna Pavolva of ASA inviting her take responsibility for catering this event. Dana ended up hiring a local caterer, because she lives in New York City and could not make all the preparations at such a long distance. Dana supplied the recipes and supervised the food preparation.

The event took place at lunchtime on Tuesday, 1 April 2003 at the Rayburn Building in Washington, DC. Dana was told to prepare for 200 people, but about 250-350 showed up–most of them staffers, but there were a few members of Congress. The room (29 by 52 feet, or 1,508 square feet) was packed, with standing room only. Food was served on four draped tables, buffet style like a real catered party, with real China plates (no paper plates), and spoons and forks. The attendees ate *all* the food. Dana's meatless recipes (the majority of which came out of her latest cookbook), all on one long table were: Sweet & sour meatballs. Beans and franks (Using Bratos for the franks). Macaroni salad (using ADM's Soy-7 macaroni). Honey mustard with tofu (served 3 kinds of donated soyburgers from Boca and Morningstar Farms). Chocolate velvet mousse. Edamamé. Finger sandwiches with soynut butter and jelly.

ASA hired a chef (Tod Schiller) from one of Washington, DC's premier restaurants, Kinkead's, and he conducted a cooking demonstration at the luncheon; at a second table he served a very elegant soyfoods recipe that included edamamé.

White Wave / Dean Foods had a 3rd table at which they served Silk Cappuccino soymilk out of a cooling machine. On a 4th table at the end of the room was Solae 8th Continent soymilk and Luna Bars (cut into pieces for finger foods). ASA and United Soybean Board had a 5th long table on which was information (leaflet, pamphlets) and exhibits about soybeans and soyfoods.

Dana mingled anonymously and talked with many of the staffers. "They were astounded by all the good food. This sort of event helps greatly to dispel the negative image that soy still has in terms of how it tastes and looks." Dana notes: "My interest in not in preaching to the converted, it is in introducing soyfoods to the rest of the people." Address: New York City.

8228. FBX. 2003. Soyfoods Summit: February 18-20, 2004. Hyatt Regency La Jolla, San Diego, California. www.foodbevx.com (Brochure). Little Falls, New Jersey: IQPC. 12 p. 28 cm.

• ***Summary:*** This brochure begins: "The Food & Beverage Exchange is proud to present its 7th Annual Soyfoods Summit." In association with Soyatech. Media partners: Nutrition Business Journal, The Soy Daily, Nutraceuticals World. The conference, which is being organized by The Food & Beverage Xchange, a division of IQPC (London, England), will have two separate tracks of presentations: (A) Technology & applications, and (A) Health benefits of soy. Summit chairs: Peter Golbitz, president, Soyatech, is chair of track A. Geri Berdak, Director, Public Affairs, The Solae Company, is chair of track B.

The facts: (1) "The US Soyfoods market has grown at an average annual rate of 14% per year for the past ten years and hit $3.65 billion in 2002." (2) "Per capita soy consumption will rise by 50% in the next 5 years." The main speakers, with their organization, track, an outline of their talk, and a small photo are given. Track A: Dr. Jonathan F. Gordon, Firmenich Inc. Hiraoki Iwamoto, Tendre Corp., Japan (frozen tofu). Phil Fass, ADM. Dr. Michael Shemer, Tivall Corp., Israel. Motohiko Hirotsuka, Fuji Oil Co Ltd, Japan. Brad Strohm, Wenger Manufacturing Inc. Mian Riaz, Texas A&M University. KeShun Liu, Univ. of Missouri at Columbia. Victor Braverman, Braverman & Associates, Mexico. Jorge Arturo Canas Diaz, Central Heledra Diaz, Costa Rica.

Track B: Milagros Virginia C. Lim, Nestle Philippines Inc, Philippines. Mark Messina, Nutrition Matters Inc. John L. Williams PhD, Univ. of South Dakota. Prof. Fujian Yang Zhenhua 851 Bio-Science Co Ltd, China. Omer Kucuk M.D., FACN, Wayne State Univ., Karmanos Cancer Inst. Helen Kim PhD, Univ. of Alabama at Birmingham. Prof. Mindy S. Kurzer, Univ. of Minnesota. Dr. Ari Babaknia, DrSoy. Wendy Barrett, Eat Smart. Deborah Miller, The Solae Group.

Day 1–General session at end of day: John A. Schillinger, PhD, Heartland Fields, LLC. Peter Hannam, First Line Seeds.

Day 2–General session running all day: Paul Lang, Natural Products Inc. Seth Tibbott, Turtle Island Foods. Tom Woodward, Tetra Pak, Singapore. Ted Nordquist, WholeSoy

Co. Hsien-Hsin Chang, Lightlife Foods. Gerard Klen Essink, Prosoy Research & Strategy, The Netherlands. Frank Daller, Soyadairy, Canada. Daniel Burke, Pacific Soybean & Grain. Garnet Pigden, The Solae Company. Gerry Amantea, Hain Celestial Group Inc. Johanna McCoy, Soy Happy. Kim C. Kristoff, Gemtek.

Post-conference interactive workshops: Tim Redmond, formerly with American Soy Products. Patricia Godfrey & Danielle Karleskind, Cargill Soy Protein Solutions. Peter Golbitz, Soyatech.

For those who register and pay in full by Dec. 5, the Gold Package of conference plus three workshops the price is $2,999. By Dec. 31 it rises to $3,099. By Jan. 9 it rises to $3,199. After Jan. 9 the full price is $3,299. This does not include lodging and food. The price is $1,299 for those who register by Aug. 1, but $1,599 after Sept. 15.

Note: Talk with two people who will speak at this conference. They are paid no honorarium for speaking, and they must pay their own transportation both ways and all room and board expenses while at the conference. Why do they go? Both say this gives them an opportunity to attend the conference free of charge, to have a nice vacation in a warm and beautiful part of California, and to meet now people and promote their ideas and (informally) their products.

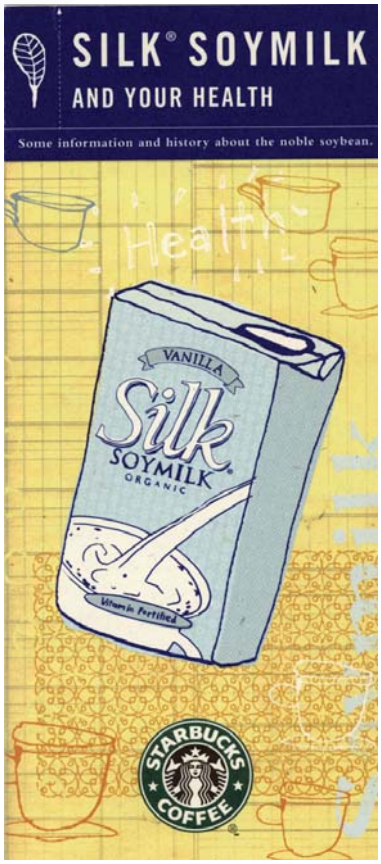
8229. **Product Name:** Soyatoo Soy Whip: Whippable Soy Topping (in aseptic carton).
Manufacturer's Name: Ceres Organics, St. Paul, Minnesota (Importer / Marketer). Made in Germany by Tofutown.com.
Manufacturer's Address: St. Paul, Minnesota 55108. Phone: www.ceresorganic.com.
Date of Introduction: 2003.
Ingredients: Organic soymilk (water, organic soybeans), coconut oil, organic sugar-beet syrup, organic maltodextrin (from corn or rice), fractionated palm oil, Contains less that 2% of: natural vanilla extract, tartaric acid, carrageenan, sea salt, fractionated palm kernel oil.
Wt/Vol., Packaging, Price: 10.14 fl oz (300 ml).
How Stored: Refrigerate after opening.
New Product–Documentation: Ceres Sales sheet and business card sent by Jon Kessler, Sales and Marketing Director, Tofutown North America. 2012. July 30. The sales sheet shows the front panel: "Vegan. Dairy-free. No cholesterol. Best soy on planet earth."

Letter (e-mail) from Jon Kessler. 2012. Aug. 10. Gives the date each product was first sold commercially. The labels were changed to the present more American and less European labels in April 2012.

8230. **Product Name:** WestSoy Lite: Soymilk Drink [Plain].
Manufacturer's Name: Hain Celestial Group, Inc. (Product Developer-Distributor).
Manufacturer's Address: Melville, New York 11747.
Date of Introduction: 2003.
Ingredients: Filtered water, organic soymilk (filtered water, whole organic soybeans), organic brown rice syrup, organic dehydrated cane juice, tricalcium phosphate, sea salt, carrageenan, vitamin A palmitate, vitamin D2, riboflavin (vitamin B2).
Wt/Vol., Packaging, Price: 64 fluid oz (1.89 liter) Tetra Brik Aseptic carton. Retails for $1.89 (2006/06, Oakland, California).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Product with Label (Plain) purchased by Martine Liguori at Grocery Outlet in Oakland, California. 2006. June. Dark blue, white, yellow, red and black on bluish green. Front panel: "70% less fat than unfortified brands. Excellent source of calcium, vitamin D and riboflavin... 18 mg isoflavones per serving. Lactose & dairy free." Martine's taste test: Tastes like sugared water; not good.

8231. Inram, N. 2003. Soya handbook. Singapore: Tetra Pak. *

8232. Starbucks Coffee Co. 2003. Silk soymilk and your health: Some information and history about the noble soybean (Leaflet). Seattle, Washington. 3 panels each side. Each panel: 22 x 9.5 cm.



• ***Summary:*** On the front panel is an illustration of a blue and white carton of Silk soymilk. Contents: Soy and nutrition. Soy and health (FDA heart-health claim, isoflavones, lactose-free). A brief history of the noble soybean (full of misinformation). Silk is now the soymilk of choice at Starbucks (especially popular in Starbucks Espresso or Tazo Chai). Go online for more about Silk soymilk (for more about the health benefits of soy, or for recipes using Silk–just point and click your way to www.SilkisSoy.com or starbucks.com/silksoy). Address: 2401 Utah Ave. South, Seattle, Washington 98124.

8233. **Product Name:** ShopRite Organic Soy Milk [Vanilla].
Manufacturer's Name: Wakefern Food Group (Distributor).
Manufacturer's Address: Elizabeth, New Jersey 07207.
Date of Introduction: 2003.
Ingredients: Filtered water, whole organic soybeans, evaporated organic cane juice, natural flavors, calcium carbonate, sodium citrate, potassium citrate, sea salt, vanilla extract, carrageenan, vitamin A palmitate, vitamin D-2, vitamin E, vitamin B2, vitamin B12, zinc sulfate.
Wt/Vol., Packaging, Price: 1 quart plastic bottle.
How Stored: Refrigerated.
New Product–Documentation: Product with Label purchased by Martine Liguori in Oakland, California. 2006. June. Plastic bottle shaped like a bowling pin. 9.5 inches tall. Front panel: Purple, red, black yellow and white on light blue. "Certified organic by Quality Assurance International (QAI). Delivers all the nutrition of milk and more! Lactose free. Gluten free. No cholesterol. Good source of potassium."

8234. Ellen, Peter T. 2003. Sander Christensen: Entrepreneurial spirit, community building, and the rice industry in California's northern Sacramento Valley. Chico, California: Assoc. of the Northern California Records and Research. 72 p. *
• ***Summary:*** Three libraries own this book, but it does not circulate at any. CU-A, CU-BANC, Cal State Chico. Address: PhD.

8235. Harper, Judson E. 2003. World Book Encyclopedia: Soybean. Chicago, Illinois: World Book, Inc. A Scott Fetzer Co. 22 volumes. See Vol. 18, p. 689-93.
• ***Summary:*** Contents: Introduction. The soybean plant. How soybeans are used: Soy meal (incl. livestock feed, soy flour, soy grits, soy protein concentrate, isolated soy protein, textured vegetable protein {TVP}, extruded soy protein, spun soy protein, products that resemble meat, soy derivatives {food flavorings, soy milk, soy sauce, fertilizer, fire extinguisher fluid, insect sprays, paint}), soy oil. How soybeans are grown: Soybean farming in the USA, diseases and pests. How soybeans are processed. History. Scientific classification.

Crude soybean oil is made into three basic products: (1) technical refined oil used for industrial purposes, (2) edible refined oil, made by deodorizing technical refined oil, and (3) lecithin.

History: "Soybeans are one of the oldest crops raised by human beings. Historians believe the plant first grew in Eastern Asia and was cultivated about 5,000 years ago. The ancient Chinese considered soybeans their most important crop, and one of the five sacred grains necessary for life." Note: Each of the previous statements about early soybean history is incorrect.

See also: Julian, Percy L.; Tofu. Note: What arbitrary choices! How about William Morse, USDA, Henry Ford, miso, soymilk, tempeh? Address: Chicago, Illinois.

8236. Jamieson, Kay Franzen. 2003. World Book Encyclopedia: Margarine. Chicago, Illinois: World Book, Inc. A Scott Fetzer Co. 22 volumes. See Vol. 13, p. 198.
• ***Summary:*** Contents: Introduction. How margarine is made. History.

U.S. government standards require that margarine contain at least 80% fat. This fat must be emulsified in milk, water, or soymilk. Margarine must be fortified with vitamin A at a level equal to that in butter. Most margarine also contains butterlike flavoring, salt, vitamin D, yellow coloring, and preservatives. Soybean oil provides the fat content of most margarine, but other vegetable oils (or even animal fats) may also be used. Address: Chicago, Illinois.

8237. McEachern, Leslie. 2003. The Angelica Home Kitchen: recipes and rabble rousings from an organic vegan restaurant. Berkeley, California: Ten Speed Press. xix + 268 p. Illust. Index. 23 x 18 cm. [23 ref]
• ***Summary:*** Founded in 1976, Angelica Kitchen is located at 300 East 12th St., New York City 10003–between 1st Ave. and 2nd Ave. This is a wise and very warm-hearted book that bridges the gap between farmers and a restaurant. The index contains 22 entries for tofu, 19 for tempeh, 9 for seitan, 4 for miso, and 1 each for soy milk and soy sauce.

The books shows a strong influence from macrobiotics through the use of sea vegetables, aduki [azuki] beans, umeboshi, etc. Address: New York.

8238. **Product Name:** Pathmark Soymilk (Half Gallon Gable-Top Carton) [Vanilla].
Manufacturer's Name: Pathmark Stores, Inc. (Marketer-Distributor).
Manufacturer's Address: Carteret, New Jersey.
Date of Introduction: 2003. January.
Ingredients: Organic soymilk (filtered water, whole organic soybeans), organic cane sugar, calcium carbonate, natural vanilla extract, salt (sea salt), carrageenan, vitamin A palmitate, vitamin D-2, riboflavin (vitamin B-2), vitamin

B-12.
Wt/Vol., Packaging, Price: 64 fl oz (2 qts, 1.89 liters) Dairy Pak ESL carton with screw-on cap.
How Stored: Refrigerated.
Nutrition: Per cup (240 ml): Calories 100, total fat 3.5 gm, sugars 8 gm, protein 7 gm.
New Product–Documentation: Carton with Label sent by Denis Bolger of New York, NY. 2004. April. Red and white on blue. Front panel and both side panels show a stream of soymilk being poured into the top of a glass. "Certified organic soybeans. Non dairy. Soymilk is a cholesterol free and lactose free beverage. Enriched with vitamins A, B-2, B-12, D-2 and calcium" USDA organic logo.
*

8239. Somerville, Annie. 2003. Everyday Greens: Home cooking from Greens, the celebrated vegetarian restaurant. New York, London, Toronto, Sydney, Singapore: Scribner / Simon & Schuster. xix + 395 p. Illust. by Mayumi Oda. Index. 24 x 19 cm. [30+ ref]
• ***Summary:*** A delightful and lovely vegetarian cookbook, filled with the spirit of Greens and Zen Center in San Francisco, California. Soy-related recipes: Crispy spring rolls with spicy dipping sauce (with ½ lb firm tofu brushed with tamari or soy sauce. The refreshing dipping sauce contains ¼ cup tamari or soy sauce, p. 5-6). Vietnamese spring rolls with peanut-hoisin sauce (with 14 oz firm tofu, p. 7-9). Tai's Vietnamese tofu sandwich (with 1 package regular tofu, 14 to 16 oz, fried, p. 129-30. "This warm, braised tofu sandwich is reminiscent of sandwiches sold by street vendors in the cities of Vietnam"). Spring stir-fry with peanut sauce and Thai basil (with ½ lb firm tofu, p. 210-11. For the sauce: "Be sure to use high-quality nonhydrogenated peanut butter; it makes all the difference here"). Udon with miso, shiitake mushrooms, and bok choy (with ½ lb firm tofu, p. 246-48).

"The Asian pantry" (p. 358-60) includes entries for ginger, and "tofu or bean curd" (including silken tofu). "Condiments and seasonings" (p. 360-62) includes coconut milk, hoisin sauce ("This dark, intensely flavored sauce has a perfect balance of sweet and salt; that's what makes it so deliciously addictive"), miso, mushroom soy sauce, tamari, and toasted sesame oil. "The dessert pantry" (p. 363-66) includes various types of chocolate, soy milk ("For desserts and pastries, we prefer vanilla soy milk to plain soy milk; with its smooth vanilla flavor, it's especially good with chocolate"), almond paste ("just plain almonds ground with sugar"). Address: USA.

8240. Nordquist, Ted. 2004. Looking back: Overview of work with soymilk in America (Interview). *SoyaScan Notes.* Jan. 29. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jeremiah Ridenour was the first person in the USA to have the idea of selling soymilk in extended shelf life (ESL) gable-top cartons. That was a huge breakthrough. Ted wanted to build a soyplant to produce his soy base in America–ideally in California. Ted met Jeremiah, and Jeremiah told Ted about his idea for using gable-top cartons. Jeremiah took Ted to Gustine, the plant where Ted developed a soymilk product for Jeremiah using Ted's proprietary formulation. He sent many samples to Jeremiah, on the understanding that Jeremiah would use his distribution to sell the new product. After the product was developed, Ted did a feasibility analysis, which showed that he had to produce about 4,000 cases (at 3 gallons per case) to make this a competitive, viable product. Jeremiah said he was unable to buy and sell that much volume–including the big initial cost of buying and printing the cartons. Then Ted took the idea to Westbrae (to Myron Cooper–who said "sorry"), and then to Steve Demos of White Wave; Steve had refrigerated distribution, saw the product's potential, and was very interested. "You have to give Steve all the credit for selling the product." Ted still did not have a plant that could make his soybase. So Ted bought ProSoya's soybase made at the ProSoya plant in British Columbia, had it shipped by tanker trucks to Gustine, where Ted formulated it, had it packaged in White Wave's ESL cartons, then shipped the finished cartons in cases to White Wave. White Wave paid for the carton's plates and developed the graphics, but Ted had to pay to print the packaging on the ESL stock. White Wave paid for the product (incl. the package) after he received it. Ted make Silk soymilk for Steve for two years. At the end, Steve ordered $320,000 worth of product and refused to pay for it. Ted thinks that he used that money to move to Utah.

Gary Stein was making tofu for Trader Joe's. Trader Joe's was also buying soymilk in fresh (not ESL) cartons from Rockview Farms–Trader Joe's distributor. Rockview bought its soymilk in bulk from a guy in Los Angeles, who set up his own Alfa-Laval plant to produce soybase and to formulate it for Rockview. Ted does not remember the guy's name but he was only up and running for several years. One day Gary called Ted and explained that Rockview Farms was having all kinds of problems with their soymilk, and that Trader Joe's had called Gary and asked him if he could produce soymilk for Trader Joe's. At this time, Ted was still selling Silk soymilk to White Wave–but he was feeling tension in the relationship. Ted's contract with White Wave said that Ted could not sell soymilk packaged in gable-top cartons out of Gustine. Ted adhered to the contract. But by this time Ted had his first soybase plant up and running at Soyfoods of America in Duarte, near Los Angeles, California. So instead of buying soybase from ProSoya, Ted was now making his own in California. Gustine bought the packaging, Gary Stein formulated Ted's soybase to make soymilk, Ted packaged it in Gustine, then Gary sold it to Trader Joe's; they split the profits 50:50.

In April 1999, Ted's WholeSoy Co. launched WholeSoy: Creamy Cultured Soy, a Swiss-style soy yogurt in four flavors; he sold it to Trader Joe's through Gary Stein; Ted

and Gary split the profits 50:50. Ted did not sell his yogurt direct to Trader Joe's because he is friends with Gary. "I don't do things like that. Our relationship with Trader Joe's was through Gary Stein. So I honored that." Gary got Ted's yogurt into Trader Joe's. But a year or so later, Ted and Gary agreed that the arrangement was getting too complicated, and that Gary would take the soymilk (packed in Gustine) and Ted would take the yogurt. So Ted now sells his soy yogurt and a 96-ounce soymilk directly to Trader Joe's. Gary Stein is still making soy products for Trader Joe's. Gary no longer works much at his soy plant, which is run by his employees; he is often at Lake Tahoe or skin diving. "More power to him."

Jeremiah did not start selling soymilk in ESL packages until after Steve stopped buying soymilk from Ted. Address: TAN Industries, Inc., 49 Stevenson St., Suite 1075, San Francisco, California 94105-2975; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-495-2870.

8241. Alireza. 2004. Re: History of soybeans, soyfoods, and SoyaSun in Iran. Letter (e-mail) to William Shurtleff at Soyfoods Center, Jan. 31. 1 p. [Eng]
• ***Summary:*** Alireza is busy installing new equipment for soymilk production. He is interested in trading information about soya, but he does not have much. The following is short history of soy in Iran:

In 1938, for the first time, food grade soybean seeds were imported to Gilan province [in northwest Iran, bordering the southwest Caspian Sea], and a small amount to the town of Karaj for cattle feed, but its planting was unsuccessful.

Later in 1962 the Behshar industrial group imported some soybean seeds from Japan and started to contract with farmers in order to grow soybeans in Gorgan province in order to expand the acreage. Gradually, by 1975, there were about 20 acres of soybeans in Iran, increasing to 60 acres in 1977–when the production was 100,000 metric tons.

Regarding soymilk production in Iran, Alireza has heard that a very small workshop started to produce soymilk powder in Firooz Kooh province near Tehran using Chinese equipment, but the product had a flavor that was too beany and the company was unsuccessful.

SoyaSun is the first company in the Middle East (excluding Israel) to produce soymilk without a beany flavor from whole soybeans. The plants capacity is 8,000 liters/hour.

In Iran, soybeans are used mainly for oil extraction, but recently the government is switching to planting rapeseed (canola) for oil extraction, and plans to gradually introduce soy as a protein source in the Iranian diet.

For its second phase, SoyaSun is looking to produce TSP [textured soy protein] out of mechanically extracted soy residue [soybean meal]. Address: Iran.

8242. Jacobs, Alexandra. 2004. Dharma dining: In Los Angeles, socialite and yoga teacher Anna Getty and caterer Akasha have teamed up to teach young Hollywood the finer points of warrior pose and pan-fried potato samosas. *Food & Wine.* Jan. p. 94-100, 102.
• ***Summary:*** About how to cater the perfect yoga party in Los Angeles. Ann Getty is the daughter of John Paul Getty III, oil-fortune heir and victim of one of the most notorious kidnappings of the 20th century. Akasha is a caterer and personal chef who has worked for Michael Jackson and Barbara Streisand. They met about 7 years ago and, on Akasha's recommendation, Getty attended a yoga class taught by Gurmukh–guru to Madonna and Cindy Crawford. She spent the session in tears from the emotional release–and realized that should become her lifestyle. Akasha, on the other hand, had been practicing yoga for 25 years. In 2003 Getty and Akasha joined to form a company named Pure Style to throw parties–Getty's yoga classes followed by Akasha's organic food. A trial party during last year's Oscars was a success. Pure Style has gotten lots of calls to do wedding and baby showers. Akasha's specialty is giving Indian vegetarian dishes a healthy (lower-fat) American makeover; she likes to substitute soymilk and yogurt for cream and butter. This article contains a recipe for Gingery Soymilk Chai. Color photos show: (1) People sitting around Nancy Stoddart's swimming pool. (2) Anna teaching yoga. (3) Akasha serving food.

8243. **Product Name:** Silk Soymilk (Fortified for Kids) [Chocolate, Very Vanilla].
Manufacturer's Name: White Wave, Inc.
Manufacturer's Address: 6123 E. Arapahoe Rd., Boulder, CO 80303. Phone: 303-443-3470.
Date of Introduction: 2004. January.
Ingredients: Very Vanilla: Filtered water, whole organic soybeans, naturally milled organic evaporated cane juice, natural vanilla flavor, sea salt, carrageenan. Vitamins and minerals: Calcium carbonate, sodium ascorbate (vitamin C), tricalcium phosphate, alpha-tocopherol (vitamin E), zinc gluconate, vitamin A palmitate, vitamin B6, riboflavin (vitamin B2), vitamin D2, vitamin B-12.
Wt/Vol., Packaging, Price: 8.25 fl oz (244 ml) metallic Tetra Prisma Aseptic carton. Retails for $0.89 to $1.00 (2004/04).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Product (1 case of each) sent by James Terman of White Wave. 2004. March 7. The text on each carton is very creative. On the Very Vanilla is short description of what each of the added vitamins do (e.g., "Vitamin A. Keeps your eyes sharp. Helps you grow tall and strong. Protects against disease"). On both cartons: "Its free! Silk Soymilk is free of lactose, dairy, cholesterol, gluten, eggs, peanuts, casein, MSG and worries. You still have to pay for it, though." The Very Vanilla was designed for kids.

Talk with James Terman of White Wave. 2004. April 15. The first product was shipped on 19 Jan. 2004.

8244. Deutsch, Claudia. 2004. Advertising: A dish of protein with a side of comedy is being use to promote foods with a soy additive. *New York Times.* Feb. 27. p. C2.
• ***Summary:*** Most people believe protein is good. But should they get it from steak and eggs, or from soy? The Solae Company, a joint venture formed last year between DuPont and Bunge, is already racking up $1 billion in annual sales of Solae–its soy protein additive. It is being used to turn drinks and other products into high-protein foods. Now Solae is promoting the phrase "Solae inside"–but its not easy. The TV ads must convince consumers to look for the Solae logo on foods and drinks, and to think of this soy protein isolate as tasting good and being a healthy protein source.

The approach: To make viewers laugh at absurd ads. A series of four 15-second commercials, titled "Protein in unexpected places" show classic blind taste tests. In each a chef with a white toque and a dark-suited host waylay unsuspecting passersby, blindfold them, then subject them to the Solae Protein Quiz, a taste test between a popular protein source and a food or beverage enriched with Solae (such as Snapple). On learning that Snapple contains protein, the victim says "Cool." The tag line: "Proof of protein," near the Solae logo. Among the 40 foods and drinks that include Solae are 8th Continent soy milk and Gardenburger. Many more are in the pipeline. Mainstream consumers now connect food choices not just with health (as before), but with lifestyles and taste. People already love the foods that now contain Solae.

Todd Sutton, Solae's global marketing director, says "consumers buy more than $3 billion worth of soy products per year." In the USA? Worldwide?

8245. *Nutrition Business Journal* (*San Diego, California*). 2004. Thirsty market for kid's beverages: Stonyfield, Silk and Tropicana drink to the success of children's products. 9(2):27-28. Feb.
• ***Summary:*** Healthy beverages and yogurts for children have recently grown into a large market. Stonyfield Farm Inc. (Londonderry, New Hampshire) has annual sales of $37.5 million in this market. Stonyfield sold $26.0 million of its organic YoBaby drinks and multi-packs (launched in 1999), $5.7 million in kids multi-pack yogurts, and $5 million in Squeezers (drinkable organic yogurts in single-serve tubes). The new category, which has "gone through the roof" is called "Dairy beverage meal replacements." Stonyfield's first product in this category was YoBaby.

White Wave (a Dean Foods company) has taken a different approach to the children's market by focusing on Silk non-dairy products. Silk is the market leader in refrigerated soymilks. Their approach to the market is: (1) Appeal to parents; (2) Offer free samples for children to try–especially in schools. With products such as Silk Chocolate or Silk Very Vanilla results have been favorable. When they get a response from a school district, they look for a champion in that district who will shepherd Silk through the system and make sure it is in stock. It is a pull (not a push).

In January White Wave launched Silk Very Vanilla, its first real attempt to appeal to children. It is advertised to moms as a healthy, nutritious drink–low in sugar and fortified with calcium.

8246. Shida, Yasuyo. 2004. Soymilk desserts: Quick & easy. Tokyo: Joie, Inc. 92 p. Feb. Illust. (color). No index. 26 cm.
• ***Summary:*** A handsome book loaded with glossy color photos. Contents: About the author. Baked desserts. Steamed / fried desserts. Fruit desserts. Chilled desserts. Drinks & shakes. Nutrition and health benefits of soybean products. Kitchen utensils for making sweets. Glossary: Meringue, mousse, okara, parchment, puree, sesame seeds, sieve, skimmed milk, souffle, syrup, tofu, *tonyu* (the Japanese word for soymilk), whisk, *yuzu* (a sour and fragrant citrus fruit from Japan).

The author has studied confectionary art at both L'Ecole Lenotre in Paris, France, and at Richmond Bakery School in Luzern (Lucerne), Switzerland. A portrait photo shows the author.

8247. *Soyfoods Canada Newsletter.* 2004. Soyfoods Canada member profile: SunOpta. Winter. p. 3.
• ***Summary:*** "The Sunrich Foods Group is a global supplier of Identity Preserved and Organic soy, corn and rice products. From ingredients to consumer packaged products, we help out customers create great tasting foods, naturally. The Sunrich Food Group is made up of four operating divisions–Sunrich, Nordic Aseptic, Northern Foods and Dairy and Hearty and Natural.

"Founded in 1978, the Sunrich grain division is a fully integrated producer, supplier and ingredient developer for the food industry. Based in Minnesota, Michigan and Ontario, we are in the best position to both produce and supply Identity Preserved (IP), Non Genetically Modified (Non-GMO) and organic grain based food ingredients.

"Nordic Aseptic is an aseptic packaging facility with a focus in private label manufacturing. The facility specializes in Tetra Pak slim, square, wedge and Combi Bloc packages, with a variety of opening types. The extended shelf life and logistical benefits of aseptic packaging make it one of the fastest growing delivery vehicles for liquid products."

"Hearty and Natural is the consumer products division of the Sunrich Food Group. Consumer products edamame, veggie burgers, frozen soy vegetables and functional foods.

"The Sunrich Food Group is a wholly owned subsidiary of SunOpta (formerly Stake Technology). SunOpta owns and operates high-growth ethical businesses, focused on environmental responsibility and the health and well-being

of its communities. SunOpta's Food Group is well positioned in the rapidly growing natural and organic foods sectors through its vertically integrated operations throughout North America."

8248. *The Non-GMO Source* (*Fairfield, Iowa*). 2004. More global competition seen in organic soybean market. 4(2):1-2. Feb.
• ***Summary:*** "Demand for organic soybeans remains strong, increasing 20% per year, driven by the growing consumer demand for soyfood products such as soymilk, tofu, and meat alternatives.

In the USA organic soybeans are grown on nearly 200,000 acres, making them the most widely grown organic crop in the country; their acreage has increased 112% since 1997, according to USDA statistics. The leading states producing organic soybeans are Minnesota, Iowa, and Wisconsin; together they produce almost 45% of the total crop. Yet organic soybeans accounted for only 0.24% of the total U.S. crop in 2001.

Last year the crop of organic soybeans in the US was 25-50% smaller than anticipated, so today there is a huge shortage of organic soybeans in the USA.

Brazil and China are starting to compete with the USA as growers of organic soybeans.

A sidebar is titled "Difficult to gauge market for organic soybeans." There are many players but no reporting requirements, so everything is done in secret.

8249. *The Non-GMO Source* (*Fairfield, Iowa*). 2004. Taiwan's demand for non-GM and organic soybeans increasing. 4(2):3. Feb.
• ***Summary:*** Taiwan has a large market for soybeans for food use, estimated at 225,000 tons. Most of the soybeans are used to make tofu and soymilk. In 2002/03 about 7,500 tonnes (metric tons) of the food-use soybeans came as identity preserved, non-GM "food grade," and organic. Of this total the USA supplied an estimated 4,500 tonnes, Australia 2,000 tonnes, Canada 500 tonnes, and all other countries combined 500 tonnes.

8250. Richmond, Akasha. 2004. Impressions of the Natural Products Expo at Anaheim (Interview). *SoyaScan Notes.* March 8. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Akasha just returned from the Expo where she catered a dinner for 900 guests, catered a smaller party for White Wave, and sat on two panels. Exhausted, she is taking the day off. The show had a record attendance of 34,000 people registered. At the Modern-Fearn (Minnesota) booth, she met Gayelord G. ("Gigi") Palermo, who lives in West Palm Beach, Florida, and thus must be quite wealthy. He is about the same age as Akasha. His father is Anthony "Tony" Palermo of Modern-Fearn and (Gigi said) the adopted son of Gayelord Hauser. Gigi told her a remarkable story she had never heard before about how Gayelord Hauser's career started. Hauser went to a dinner at the Hearst Castle in California. There he met a woman who had been blind for about 20 years. She took a walk with Hauser and told him that she had watched her infant son drown, and had been blind since that moment. After the walk (apparently because of something Hauser told her), her eyesight returned. Because of that, Hearst gave Hauser a column on health and put it in every newspaper he owned. That put Hauser on the map–and changed his whole life. Gigi has a rich archive of Hauser documents, photos, and memorabilia. He owns the rights to it all. Gigi gave Akasha his phone number; he doesn't do e-mail. However, in *Diet Digest* in 1951, in a letter to his readers, Hauser announces that he is getting a column in the Hearst newspapers. Akasha has never seen a Hauser column in a Hearst Newspaper–such as the *Herald Examiner.*

At the show she met Patricia Bragg at her booth; she is tiny but looks very healthy, with fine skin. She, too, is quite wealthy. In 1959 she and Paul Bragg had a black-and-white TV show titled "Health and Happiness Show" in Hollywood. Clips from it are on the huge Bragg website. Gypsy Boots (age 93) was at her booth and Gigi got a fine photo of all of them. Note: Gypsy died on 8 Aug. 2004. Also at her booth was the founder of the Good Earth chain of restaurants named William Gaet (see www.goodearth.com). He founded them in the mid-1970s, and one was in Berkeley. Eventually the chain was purchased by General Mills. William, now in his mid-70s, lives in Cabo, Mexico and looks very healthy; his skin is clear and he has a full head of hair–a tall, good looking man. He told Akasha the story of how Colonel Sanders got him (William) into natural foods. He first worked for Lowrey's, the big beef restaurant chain, then he went to work for Kentucky Fried Chicken. There he learned how to run a restaurant. He told the story of how Colonel Sanders got him into eating healthy food. After Col. Sanders sold his chain of restaurants, William walked in to have a meeting with the Colonel and brought a bucket of the chicken. Col. Sanders looked at him and said, "Son–Don't eat that shit. It'll kill ya!" Col. Sanders traveled with Shaklee Vitamins and he was a complete health fanatic. William Gaet and his daughter are now developing a prototype of a chain of healthy, fast-food, drive-through restaurants in America–like Burger King.

At the show White Wave introduced and demoed a liquid drinkable yogurt named Alive Sweet. She also met a famous African-American named Isaac Hayes, who starred in the movie *Shaft.* He has been into natural foods since the 1970s and is now working to introduce them to other African Americans.

She sat next to Barry Sears, PhD, on one panel; afterwards he predicted to her: "I'll give this low-carb thing a year."

Akasha is an admirer of Dr. Andrew Weil.

Efrem Zimbalist II, the son of the famous violinist, has just purchased *Vegetarian Times* magazine–for which Akasha writes a column. She went to a focus group to which he invited her, but found that most readers want more vegetarian recipes. Address: Los Angeles, California.

8251. Drosihn, Bernd. 2004. Update on soyfoods in Europe. Part I (Interview). *SoyaScan Notes.* March 15. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** This interview was conducted during Bernd's visit to Soyfoods Center. The biggest development for soyfoods in Europe during the past 5-7 years is that soymilk has entered the mainstream market in several countries, driven mainly by Alpro (whose brand was changed to AlproSoya from Alpro 2-3 years ago), the main soymilk maker in Europe. AlproSoya is spending lots of money promoting soymilk and educating consumers about the health benefits of soyfoods. And although there are no health claims in Europe (there is sort of one in the UK) and no FDA, there is a great deal of information available about the health benefits of soy. Women, especially those in their 40s and 50s near the age of menopause, are the target of much advertising and educational material. AlproSoya uses brochures, Internet and TV advertising to educate these people. However Bernd feels that Alpro's style is a little old-fashioned.

Meat alternatives and dairy alternatives are also growing rapidly, but they are still niche products. The organic movement in Europe has long been bigger and stronger than its American counterpart, and it continues to grow at a healthy rate. In Germany, the government greatly helps the organic movement–which is also strong in France, Italy, and Spain in both mainstream and health food sectors. The organic and soyfoods movements have generally worked closely together to help one another, although not all soyfoods companies (especially those based in the Asian market) use organic ingredients. Sojaxa, the former European soyfoods association, is now named Ensa. Ensa is still based in France and it gets some money from the department of agriculture in France because some soybeans are grown in southern France. Since soybeans are not an important European crop (most are imported), they are not promoted by European governments.

The discovery of mad cow disease in about the year 2000 in many European countries outside of the UK had a very positive effect on soyfoods. It was a rising tide that lifted all ships (soyfoods companies). From that time on soyfoods gradually started to be recognized in mainstream markets.

Bernd buys all his soybeans (specific desired varieties at a specified price) under a "Fair Trade" contract from a specific organization in southern Brazil; all are certified non-GE (genetically engineered).

Many European companies now state in their brochures that the FDA has given a heart-healthy claim for soy protein in the USA. But American food has a bad reputation in Europe, being strongly linked with McDonalds, Coca-Cola, Burger King, etc. So Europeans tend to be skeptical of American claims related to food. Instead European companies prefer to cite the original research articles and summarize their findings.

Bernd is not aware of any negative information about soy on the Internet–probably because most of it is in English.

The three largest soyfoods markets in Europe (in total sales) are probably the UK, France, and Germany–in that order. But in terms of per capita consumption, the largest are probably the UK, Netherlands, Belgium, France, and Germany–in that order.

Alpro, which has a very close connection to France, has done a great deal to develop the market there. Bernard Storup's company, Nutrition et Soja S.A., now owned by Novartis, is doing well and is also strong in France. Bernd just saw Bernard (and his business partner Jean de Preneuf) at the Nuremberg show in Germany. Bernard would like to get out of his relationship with Novartis (formerly Sandoz), because they no longer get funding and Novartis has no interest in Nutrition et Soja. Note: Sandoz AG (Basel, Switzerland) merged with Ciba-Geigy in March 1996 to become Novartis. Jean is "the Steve Demos of Europe"–very creative and very crazy. He has an old farmhouse in the south of France and he also has another business that makes sunglasses.

The creation of the EU (European Union) and the euro as a currency has helped Viana and most other soyfoods companies in Europe by greatly facilitating exports and imports across country borders. As a result of its move to a new and larger factory, the creation of the EU, and the advent of mad cow disease, Viana's exports now 35-40% of total sales, and are growing faster than sales in Germany. Viana exports outside the EU (to Croatia, Czechoslovakia, Israel, Morocco, Bahrain, etc.) account for about 1.5% of sales. The economies of eastern Europe are developing very slowly. Bernd knows of 2-3 tofu makers in Poland (incl. Polsoja; tofu is sold in supermarkets) and at least 2 in Czechoslovakia (one employs 60-80 people). In Austria, Guenter Ebner works for Viana, sells Viana products, knows the eastern European market very well, provides much information to Bernd about this market. The founder of Sojarei Vollwertkost GmbH, Guenter had his company taken over by the major shareholder in an unfriendly way; they kicked Guenter out.

The boundaries between eastern and western Europe are slowly breaking down. The move toward a unified greater Europe will be accelerated on May 1 of this year when 10 eastern European countries are scheduled to join the EU: Cyprus, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovakia, and Slovenia.

Bernd estimates that only about 10% of Germans consume soyfoods at least once a month; this figure is

much lower than in the USA. Viana's exports have grown. Continued. Address: Founder and president, Viana Naturkost GmbH, 54578 Wiesbaum / Vulkaneifel, Germany. Phone: +49 06593-99670.

8252. Drosihn, Bernd. 2004. Update on soyfoods in Europe. Part II (Interview). *SoyaScan Notes.* March 15. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Soymilk: A major new soymilk maker in Europe is named Wild (www.wild.de), an old German food company that specializes in fruits and ingredients; their retail soymilk is named Soy and Joy. Their most famous brand is Caprisun, a non-soy drink in a foil pouch, well known in the USA. They and So Good, the Australian soymilk now made with Solae, are both strong competitors of Alpro.

Several weeks ago Hain-Celestial of New York purchased two German soymilk makers, both owned by Bruno Fischer, Jr.: Natumi and Gut Honneroth. He sold both companies at a low price–probably because he had to. Bruno had gotten his soymilk into Aldi, the mother company of Trader Joe's and the No. 1 discounter in Germany–and maybe in all of Europe, and he developed a large soymilk business with Aldi–perhaps so large he could no longer handle it himself. Bruno also made a lot of private label soymilk. With Hain, Bruno found a large German dairy to make soymilk for Aldi under a new Aldi brand. The new European CEO of Hain-Celestial is Philippe Woitrin, who was CEO of Lima Foods when Hain acquired it.

Triballat makes the best soy yogurts (Sojasun brand) in the world–in Bernd's opinion. They have a new brand, Sojadé, which are delicious creamy yogurt drinks–maybe organic. The Japanese Yakult concept of drinking live beneficial probiotic bacteria each morning has now caught on in a big way in Europe. Yakult is one of the best entries into the European food market in years. Bernd just saw White Wave's Silk Alive [the name was soon changed; it was sold commercially only under the name "Silk Live"], a similar product, at the Anaheim Natural Products Expo. But he liked the Wildwood smoothie even better, and the WholeSoy fermented soymilk best of all American products.

In France a small company named Sojami (pronounced so-zha-MEE), which started about 10 years ago, makes very creative, unique, and interesting soy cheeses and cultured soy yogurts. The founder has a university research background and is a very nice guy.

Tofu: Tofu consumption in Europe has expanded steadily over the past 5-7 years, but it is still a very small product. The largest maker of the tofu and tofu products sold in Germany is Life Food GmbH / Taifun Produkte, run by Wolfgang Heck and Guenter Klein. Heuschen-Schrouff B.V. (Landgraaf, Netherlands) and Viana are tied for second place. About 10 years ago, Heuschen-Schrouff started selling their tofu under the organic So Fine brand (www.sofine.nl). An Indian-run company in Kerkrade, Netherlands, run by the brothers Singh (both Sikhs), makes tofu mostly for the Asian (Indonesian) market. In 2001 Viana started selling its tofu to the mainstream market under the Veggie Life brand; this English-language brand name communicates well to people speaking many different languages throughout the EU (European Union)–though distribution is still limited to Germany and Austria. Soto Tofu, formerly run by Rolf Barthof has been sold to a very large dairy company, Algäuland. Viana's main products are tofu and tofu products–such as meat and cheese alternatives. Viana is #1 in Germany in meat alternatives. Germans buy soyfoods for three main reasons: They are good for one's health, they taste good, and good for the environment. Bernd is a vegan, but about 90% of Viana's products are sold to non-vegetarians.

Early tofu companies still active in Europe include Sojafarm (founded and still run by Lothar Stassen), Albert's Tofuhaus (Albert Hess; exports lots of his products to France). A basic problem with the smaller, early tofumakers in Germany is that they didn't have the creativity or power to put a brand on the market. So both these companies produce a lot of tofu under private labels. Lothar bought the Svadesha brand (Svadesha was the first German tofu company) and produces tofu under the Svadesha brand. About 2-3 years ago he also purchased the Nagel's Tofu brand from Christian Nagel, who now markets the tofu under his former brand. So Lothar makes tofu under 3 brands. Berief Feinkost (in Beckum, northern Germany), started 10-15 years ago, tries to cover the mainstream tofu market, but not very successfully. Kassel Tofu Kato (started by Gyoergy / Yuri Debrecini, who was at Soyastern). Thomas Karas is no longer involved with soyfoods; he tried to enter the computer business but Bernd does not know what he is doing now. In Spain, the market leader is Natursoy near Barcelona. Nearby is Salvador Sala of Vegetalia. In Spain, there is a lot of interest in and rapid growth of soyfoods and organic foods. In Italy the Ki Group (Schenker) owns a tofu company–fairly old but not very creative.

In the United States, Pulmuone now has three U.S. factories; their first one in Southgate, southern California, a new one at Fullerton, California, and a 3rd one in New York. The Fullerton factory is the most modern Bernd has ever seen. There they make Gourmet Tofu, introduced in about Jan. 2004, which is presliced and marinated, in 4 flavors / styles: Baked, Sliced, and Marinated.

Meat alternatives: Nestle now owns Osem which owns Tivall, the Israeli maker of meat alternatives. Since all of Tivall's products are held together by eggs or egg whites, none of them are vegan–and none are organic. Quorn, which also contains lots of egg protein, is owned by AstraZeneca [Marlow Foods]–which wants to sell the company because growth and profits have been lower than expected. DE-VAU-GE in Germany is a very big company, they make large amounts of meat alternatives (incl. burgers), and they do a lot of business with Aldi in breakfast cereals–not in

soyfoods. Bernd thinks they are good, and very economical manufacturers, but they are not very creative and they have no USP (unique sales point); moreover, many of their products contain egg protein, but their quality is lower than that of Tivall. Bernd believes his meat alternatives are as good as Tivall's, but more expensive, in part because of organic ingredients. Tivall makes its raw materials in Israel, then exports these to Europe for cutting and flavoring.

Klaus Gaiser owns Topas which sells Viti brand meat alternatives based on wheat gluten, with no soy; he owns the brand and markets the products, but he has meat companies manufacture them. However, when his typically 3-year contract with the manufacturer expires, he has to find a new manufacturer, but the previous one keeps making his products under their own brand. In the USA: At Turtle Island Foods (Hood River, Oregon), Bernd met Hans Wrobel, a German who does product development. Note: Hans and Rhonda Wrobel of The Higher Taste developed Tofurky in Portland, Oregon. Bernd makes Pizzarella, a tofu-based cheese alternative. Address: Founder and president, Viana Naturkost GmbH, 54578 Wiesbaum / Vulkaneifel, Germany. Phone: +49 06593-99670.

8253. Lifeway Foods, Inc. 2004. Lifeway organic soy treat: Cultured Soy Milk Smoothie (Ad). *Natural Foods Merchandiser.* March. p. 132.
• ***Summary:*** This 8½ by 11 inch color ad shows quart plastic bottles of different flavors of Lifeway Organic Soy Treat: Cultured Soy Milk Smoothie. It is available in 6 flavors–but only the first three are shown here: Coffee Latte, Peach, Strawberry, Apple, Dulce de Leche, and Coconut. www.kefir.com.

This ad also appeared in the Sept. 2003 issue, p. 106, however the background color was more orange than the original yellow. A single-sided color leaflet was also distributed at the Natural Products Expo in Oct. 2003 and March 2004. Address: 6431 W. Oakton St., Morton Grove, IL 60503. Phone: 847-967-1010..

8254. *Nutrition Business Journal* (*San Diego, California*). 2004. Eden Foods maintains independence in a consolidating industry. 9(3):18. March.
• ***Summary:*** A good interview with Michael Potter about the history and organic philosophy of Eden Foods. The company, "founded in 1969 as a retail food cooperative," is the last significant organic food manufacturer in the USA, according to Potter, the company's sole owner. Walnut Acres used to be the oldest independent, until they were purchased and eliminated by Acirca.

Refrigerated soymilk has hurt sales of aseptically packaged soymilks, and Eden's soymilk sales have been down 8.6%/year for each of the past 4 years. But Potter is optimistic about sales of Eden's other products. In 2003 Eden's sales were about $45 million.

Eden's sales are 98% from organically grown products. Potter estimates that Eden supports about 300 family farms with 40,000 acres of organically managed farmland in the USA and Canada. The advent of USDA organic regulations [NOP] in 2002 brought major changes to Eden, from adding new organic ingredients to having to redesign all labels. Potter is critical of NOP for lax enforcement of organic standards, but he does not agree with those who think that the industry should work to make organic prices closer to those of conventional foods. "The percentage of income that Americans spend on food is the smallest in the world. Food is undervalued, and when you think 'cheap, cheap, cheap' what you end up with is conventional American food, the laughing-stock of planet Earth." Instead of using lower prices to attract new customers, Potter believes that educating consumers about organic and conventional food should drive future growth.

8255. SunOpta Inc. 2004. Sunrich (Portfolio). Toronto, Ontario, Canada. 12 inserts. 31 cm.
• ***Summary:*** The cover of this portfolio is a composite color photo on a tan background. The photo shows (L-R) whole soybeans, a glass of soymilk, green edamame (in the pods), a farmer in a field examining heads of wheat, a wooden scoop of corn flour and grits, whole kernels of corn. Below it is the SunRich logo, the name in red, a stylized yellow sun background, and the tag line below: "Your direct link to Nature." On the inside front cover are six oval color photos, each explaining Sunrich's mission.

Inserts: (1) The SunRich Food Group: Unique vertically integrated soymilk business model. Identity preserved non-genetically modified soy foods ingredients. Five photos show from seed producer to third party distribution.

(2) SunRich company fact sheet (on letterhead). Sunrich (a Sun-Opta company) was founded in 1978. In Aug. 1999 Sunrich, led by SEO Allan Routh, was acquired by Stake Technology Ltd. The Sunrich Food Group, composed of four companies (Sunrich, Nordic Aseptic, Northern Food and Dairy, and Hearty and Natural) now has $150 million in sales.

(3) Reprint of an article: Fleming, Richard. 2001. "The roots of sustainability run deep for Sunrich." *Natural Business LOHAS Journal* 2(4):45-46. Fall.

(4) SunRich Food Group product and services. (5) Soy and organic food trends. Soymilk sales nationwide have grown from $100 million in 1995 to $550 million in 2001. (6) William Fenske: Vice president of technical services for Sunrich Food Group (Bio). (7) Allan Routh: President of the Grains and Soy Products Group of Sunrich Food Group (Bio). "Mr. Routh has been involved with Sunrich since it was established in 1978, originally to develop export markets for waxy corn growers. A graduate of the University of Minnesota and the University of St. Thomas (Minnesota)." Mr. Routh is also involved in the production of high

quality Berkshire Pork for export to Japan, and continues to be active in his family's farming operations in southern Minnesota. (8) Unlimited soy solutions! Color, glossy, back to back. (9) Unlimited Organic Solutions! (10) Cooking with SunRich Naturals brand edamame and shelled edamame (9 p. of recipes). (11) SunRich Food Group patents low fat, high protein organic soymilk formulation–Soy Lite (Feb. 2003). (12). SunRich Food Group executive named new president of Soyfoods Association of North America (Tina Nelson, Feb. 2003). (13) SunRich Food Group introduces new SunRich Naturals line of frozen edamame and fully organic, gluten-free veggie burgers (Sept. 2003, expected to hit stores by Jan. 2004). (14) SunRich to co-sponsor soy tasting event, hosted by Soyfoods Association of North America (on March 6 during 2004 Expo West). (13) Edamame and shelled edamame: New food service item. Address: Toronto, Ontario.

8256. Forgrieve, Janet. 2004. Cream of the crop: Ex-Coloradan molds business into dean of dairy. *Rocky Mountain News* (*Denver, Colorado*)**.** April 10. p. 1C. Business section.
• ***Summary:*** The offices of Dean Foods Co. take up 12 floors of a downtown Dallas, Texas, skyscraper. In 2003 the company had $9.2 billion in sales and 28,000 employees, and 120 facilities. Yet the company is not as well known as the many brands it owns. The Chairman and CEO, Gregg Engles, grew up in Denver, Colorado, graduating from high school in 1975. He later earned degrees from Dartmouth College and Yale Law School. After joining a law firm, he realized that law wasn't his thing, so in 1983 he moved to Dallas to work for a small investment firm. But he realized that he wanted to work for himself. In 1993 he started Suiza Foods Corp after his company had purchased Suiza Dairies in Puerto Rico. Then he began acquiring American dairy companies. Dean's first soymilk company was White Wave, started in 1977 by Steve Demos in Boulder, Colorado–after he returned from a 3-year trip to India, where he became a soy convert. In 1996 White Wave introduced Silk soymilk. By 2001 Dean Foods owned about one-third of the privately held White Wave and had an option to acquire the rest of the company the following year. Demos and Engles met over the lawsuit that White Wave filed against Suiza, which owned Sun Soy, a competing soymilk brand. Dean Foods was planning to merge with Suiza, and Demos was concerned that this merge might cause him problems; so he argued in court that the option didn't apply should the merger proceed.

Eventually the two sides came to a friendly settlement. The Dean-Suiza merger was completed in late 2001 and in 2002 the new Dean Foods acquired the remaining two-thirds of White Wave that it didn't already own. Demos and Engles have become friends, and both are happy about the present arrangement. Dean has allowed White Wave (which has 180 employees) to continue to operate autonomously.

8257. Friedman, Amanda Mosle. 2004. Soy: Ancient legume grows into modern sensation in U.K., U.S. diets. *Nation's Restaurant News* 38(15):100. April 12.
• ***Summary:*** "Soymilk increasingly is heralded as being more healthful than dairy, and even Starbucks put soy alternatives on the menu, a sign that soy products fit into current health trends." "The popularity of soy is on the rise."

This is not new. "The use of soy was first documented in China in 1100 B.C...," says Bill Shurtleff, founder and director of the Soyfoods Center, which has the world's largest database on soy.

8258. Abate, Tom. 2004. Milk expected to go up by about 50¢ a gallon: Higher pay ordered for state's dairies. *San Francisco Chronicle***.** April 24. p. A1, A13.
• ***Summary:*** "The California Department of Food and Agriculture has ordered milk processors to start paying dairy farmers in Northern California an additional 47 cents per gallon beginning May 1, an increase that is likely to be passed to consumers." A graph shows U.S. milk prices per gallon (fresh, whole, and fortified) from 1995 to the present. The peak price was $3.00 in Feb. 1999–according to the U.S. Bureau of Labor Statistics. Address: Chronicle staff writer.

8259. Ness, Carol. 2004. Kikkoman voted top vanilla soy milk: Taster's choice. *San Francisco Chronicle***.** April 28. p. F2. Food section.
• ***Summary:*** Five brands of organic soymilk were tasted and rated in descending order of preference as follows: 1. Kikkoman Pearl (73 points, $2.29/qt at Rainbow). 2. Silk fresh (70 points, $1.99/qt). 3. Pacific Select Low Fat (68, $1.89/qt). 4. Vitasoy Smooth (66, $2.09/qt). 5. Vitasoy Vanilla Delight (58 points, $2.09/qt).

"Also tasted but unranked were Safeway Select Organic, WestSoy Plus, Soy Dream, Silk (boxed), Clover Stornetta, Trader Joe's, Pacific Ultra, Wildwood, 8th Continent, Edensoy, and 365." Address: Staff writer.

8260. Dean Foods Co. 2004. Reach for Dean: 2003 annual report. Dallas, Texas. 96 p. 28 cm.
• ***Summary:*** Dean's Dairy Group is the "largest processor and distributor of milk various other dairy products in the United States. Our Branded Products Group markets and sells a variety of well-known dairy and dairy-related products, such as Silk soymilk, Horizon Organic dairy products,..."

The long and very positive section titled "Reach for Silk" (p. 8-11) contains lovely graphics–smiling moms and their kids, or bike racers, with Silk. Silk revenues were up by more than 40% in 2003. Dean sponsors "The Susan G. Komen Breast Cancer Foundation Race for the Cure, the world's largest 5 km race series. "By making Silk a part of your diet, you're supporting the fight against breast cancer."

New products include Silk Enhanced, Very Vanilla, and Unsweetened–each in ½-gallon ESL cartons. Aseptic 3-packs (8¼ oz) in Very Vanilla and Chocolate flavors.

Accompanying the annual report is an innovative "2004 proxy statement and notice of annual meeting" (24 p.). In 2003 Gregg L. Engles, age 46, Chairman of the Board and CEO had: Salary $1,000,000. Bonus $1,151,822. Other compensation $111,078. Value of deferred units awarded: $5,942,000. Number of stock options granted: 609,000. In 2003 Engles acquired 450,000 shares in exercise, worth $9,253,563. Address: 2515 McKinney Ave., Suite 1200, Dallas, Texas 75201. Phone: 214-303-3400.

8261. **Product Name:** Silk Soymilk (Fortified for Kids) [Very Vanilla].
Manufacturer's Name: White Wave, Inc. (Product Developer-Distributor)
Manufacturer's Address: 6123 E. Arapahoe Rd., Boulder, CO 80303. Phone: 303-443-3470.
Date of Introduction: 2004. April.
Ingredients: Very Vanilla: Filtered water, whole organic soybeans, naturally milled organic evaporated cane juice, natural vanilla flavor, sea salt, carrageenan. Vitamins and minerals: Calcium carbonate, sodium ascorbate (vitamin C), tricalcium phosphate, alpha-tocopherol (vitamin E), zinc gluconate, vitamin A palmitate, vitamin B6, riboflavin (vitamin B2), vitamin D2, vitamin B-12.
Wt/Vol., Packaging, Price: Half gallon (1.89 liters). Gable-top carton with reclosable cap.
How Stored: Refrigerated, 7-10 day shelf life.
Nutrition: Per 1 cup (240 ml): Calories 130, calories from fat 30, total fat 3.5 gm (5% daily value; saturated fat 0.5 gm), trans fat 0 mg, cholesterol 0 mg, sodium 140 mg (6%), total carbohydrate 19 gm (dietary fiber 1 gm [4%], sugars 16 gm), protein 6 gm. Potassium 300 mg. Vitamin A 20%, calcium 35%, vitamin D 30%, vitamin C 35%, iron 6%, riboflavin 30%, phosphorus 10%, vitamin K 15%, vitamin B6 30%, vitamin B12 50%, magnesium 10%, vitamin E 20%, folate 6%, zinc 10%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Product with Label purchased at Safeway in Lafayette, California. 2004. Dec. 28. Front panel: "The taste kids love. Lactose free. With vitamin C. 6.25 grams soy protein per serving. Powerful good flavor! Made with organic soybeans. Calcium enriched. Kids fortified with vitamins A, B, C, D & E." Side panel #1. "Fortify your family. Not to be used as an infant formula. Silk soymilk is third-party certified organic by QAI. This soymilk is made from soybeans that were not genetically engineered. 100% vegan–The ingredients (including the vitamins and minerals) do not contain animal products. Satisfaction guaranteed. We bet you'll like our soymilk. Try it. If you don't like it, we'll give you your money back, no questions asked."

Back panel: "Shake well and buy often. Provides 15 essential nutrients. Demand authenticity. Mozart composed his first music at age 5. Did you know? Soy plants have the power to make the soil better." FDA heart-healthy claim. "Dem bones." Silk is calcium fortified. Pig Latin.

Side panel #2. "Of the five species of tiger, Siberian tigers have the least number of stripes. Knowing your ABCs." Explains in simple language the function of vitamins A, B, C, and D, and what percent of the RDA is provided by one serving of this soymilk. "Learn more about soy. You'll be amazed." www.silkissoy.com.

8262. Xu, Wang Hong; Zheng, W.; Xiang, Y.B.; Ruan, Z.Y.; et al. 2004. Soya food intake and risk of endometrial cancer among Chinese women in Shanghai: population based case-control study. *BMJ* 328(7451):1285-91. May 29. [24 ref]
• ***Summary:*** Regular consumption of soya foods, a rich source of phytoestrogens, is associated with a reduced risk of endometrial cancer. Table 2 lists various soya foods including soya milk, tofu, dry soya bean seeds, fresh soya beans, soya bean sprouts, plus soya protein, and isoflavones from these foods. Address: Dep. of Epidemiology, Shanghai Cancer Institute, 2200 Xie Tu Road #25, Shanghai 200032, China.

8263. **Product Name:** Whole Soymilk, Tofu Blocks, Soy Custard, Braised Tofu, Tofu Puffs, Tofu Noodles, Soy Omelette (with Yuba), Yuba (Tofu Skin), Poached Yuba Loaf.
Manufacturer's Name: Basic Soy Beanery (renamed Hodo Soy Beanery in Sept. 2005).
Manufacturer's Address: 1600 S. De Anza Blvd., San Jose, CA 95106. Phone: 408-517-8958.
Date of Introduction: 2004. May.
Ingredients: See below.
Wt/Vol., Packaging, Price: -
How Stored: Refrigerated.
New Product–Documentation: Labels by brought to Soyinfo Center by Minh Tsai on 2009. Sept. 16. Ingredients:

Whole Soymilk: Soybeans, filtered water (cane sugar is added to our sweetened soymilk).

Tofu Blocks: Soybeans, filtered water, calcium sulfate.

Soy Custard: Soybeans filtered water, calcium sulfate. Ginger syrup: Filtered water, rock sugar, fresh ginger.

Braised Tofu: Soybeans, filtered water, soy sauce, cinnamon, anise, calcium sulfate.

Tofu Puffs: Soybeans, filtered water, soybean oil, calcium sulfate.

Tofu Noodles: Soybeans, filtered water, calcium sulfate.

Soy Omelette: Soybeans [made into yuba], filtered water, soy sauce, sugar, soybean oil.

Yuba (Tofu Skin): Soybeans, filtered water.

Poached Yuba Loaf: Soybeans [made into yuba], filtered water, soy sauce, white pepper, anise.

8264. Budgar, Laurie; Melville, Nancy; Uhland, Vicky. 2004. 25 who championed a cleaner plate: As we celebrate the inroads natural and organic food has made into consumer consciousness during the last 25 years, we often forget the pioneers who made it possible–the men and women... who educated consumers when the concepts were strange and new, and who persisted in the face of adversity. This month NFM profiles 25 people who have been influential in the natural foods industry. *Natural Foods Merchandiser.* April. p. 22, 24, 26, 28-31.

• ***Summary:*** To mark its 25th anniversary, *Natural Foods Merchandiser* pays homage to the following pioneers and visionaries (with a color portrait photo of most) who brought natural and organic foods into consumer consciousness; listed alphabetically by last name. For each person is given: A summary introduction, plus the person's answers to 7 questions: No. of years in the industry. What motivated you in the beginning? What motivates you now? What is been your biggest obstacle? What has been your biggest obstacle? When did you finally realize you'd made it? When did you know the industry would survive? What predictions do you have for the future of the industry? If you had to write your own epitaph, what would it say?

Tony Bedard of Frontier Natural Products Co-op. Andy and Rachel Berliner of Magic Mountain Herb Teas. Neil Blomquist of Cup of Sun natural foods store and Spectrum Organic Products. Annie Christopher of Annie's Naturals. Ben Cohen of Ben & Jerry's Ice Cream (the company was sold to Unilever in 2000). Mel Coleman Jr. of Coleman Natural Meats. Joel Dee of Edward & Sons Trading Co.

Steve Demos: In 1974 He founded Touch the Earth natural foods store in New Hope, Pennsylvania. In 1977 he founded White Wave (now the maker of Silk soymilk) in Boulder, Colorado.

Frank Ford, who founded Arrowhead Mills in 1960. By 1990 it had 220 SKUs. In 1999 Ford sold the company to The Hain Celestial Group. His early inspirations: Paul Keene of Walnut Acres, and Warren Clough of Shiloh Farms.

Michael Funk, founder of Peoples Mountain Warehouse in 1976, who went on to become founder of United Naturals Inc. Lynn Gordon, founder of French Meadows Bakery in 1985. Haas Hassan who founded Alfalfa's Market in 1974, then sold it in 1996 to Wild Oats Markets. Bill Knudsen who worked in his family's juice-processing business, R.W. Knudsen, founded in 1961 and was named president in 1977. In 1984 he sold the business to J.M. Smucker. Bob and Charlee Moore, founder of Bob's Red Mill. Robert Nissenbaum, who launched Morning Dew Food Markets in 1971, an organic and natural food store in St. Louis, Missouri. In 1974 he opened Sunshine Inn natural foods restaurant. In 1982 he co-founded Imagine Foods, which he sold in 2002 to The Hain Celestial Group. Michael Potter, who says he founded Eden Foods in 1968 (but who actually joined the company in Jan. 1971–he was hired by Bill Bolduc, who had founded Eden Foods in Nov. 1969). Barry Sears, author of *The Zone Diet* and a researcher at MIT (Massachusetts), where he found that the cause of most chronic diseases is inflammation. "You can put together diets with natural foods to control inflammation much better than you can with drugs. The Zone Diet is not about losing weight but about controlling the hormones that affect inflammation. He wants to use foods to change health care.

Bill Shurtleff and Akiko Aoyagi founded the Soyfoods Center in 1976.

Mo Siegel, founder of Celestial Seasonings in about 1969. Charles Stahler and Debra Wasserman co-founded the Vegetarian Resource Group, an outgrowth of Baltimore Vegetarians (Maryland) which the pair established in 1982. Arran Stephens founded Nature's Path in 1985; he has been in the industry for 37 years [i.e., since 1967]. Bob Stiller founded Green Mountain Coffee Roasters in 1981. Albert Straus, of Straus Family Creamery. In 1993 he converted his family-owned dairy farm in Marin County, California, into the first certified organic dairy west of the Mississippi. Cyd Syzmanski founded Colorado Natural Eggs in 1991–a cage-free business. Annie Withey created Smartfood popcorn in 1984.

8265. **Product Name:** La Fe Soy Milk [Tropical Punch, Pineapple].
Manufacturer's Name: La Fe Foods (Importer / Marketer). Made in Argentina.
Manufacturer's Address: Plant: Via Mercedes, San Luis, San Luis Province, Argentina. Importer: 230 Moonachie Ave., Moonachie, New Jersey 07074. Phone: 1-866-BUY-LAFE.
Date of Introduction: 2004. May.
Ingredients: Organic soy milk (filtered water, choice of organic soybeans), cane juice (dried).
Wt/Vol., Packaging, Price: 1 liter aseptic carton. Retails for $1.00.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Talk with representative of La Fe Foods. 2005. May 12. These two products, which are private labeled for La Fe, were introduced in May 2003. The name of the manufacturer is confidential. His company (pronounced LA-fay) imports foods that they market mainly to the Hispanic market in the USA.

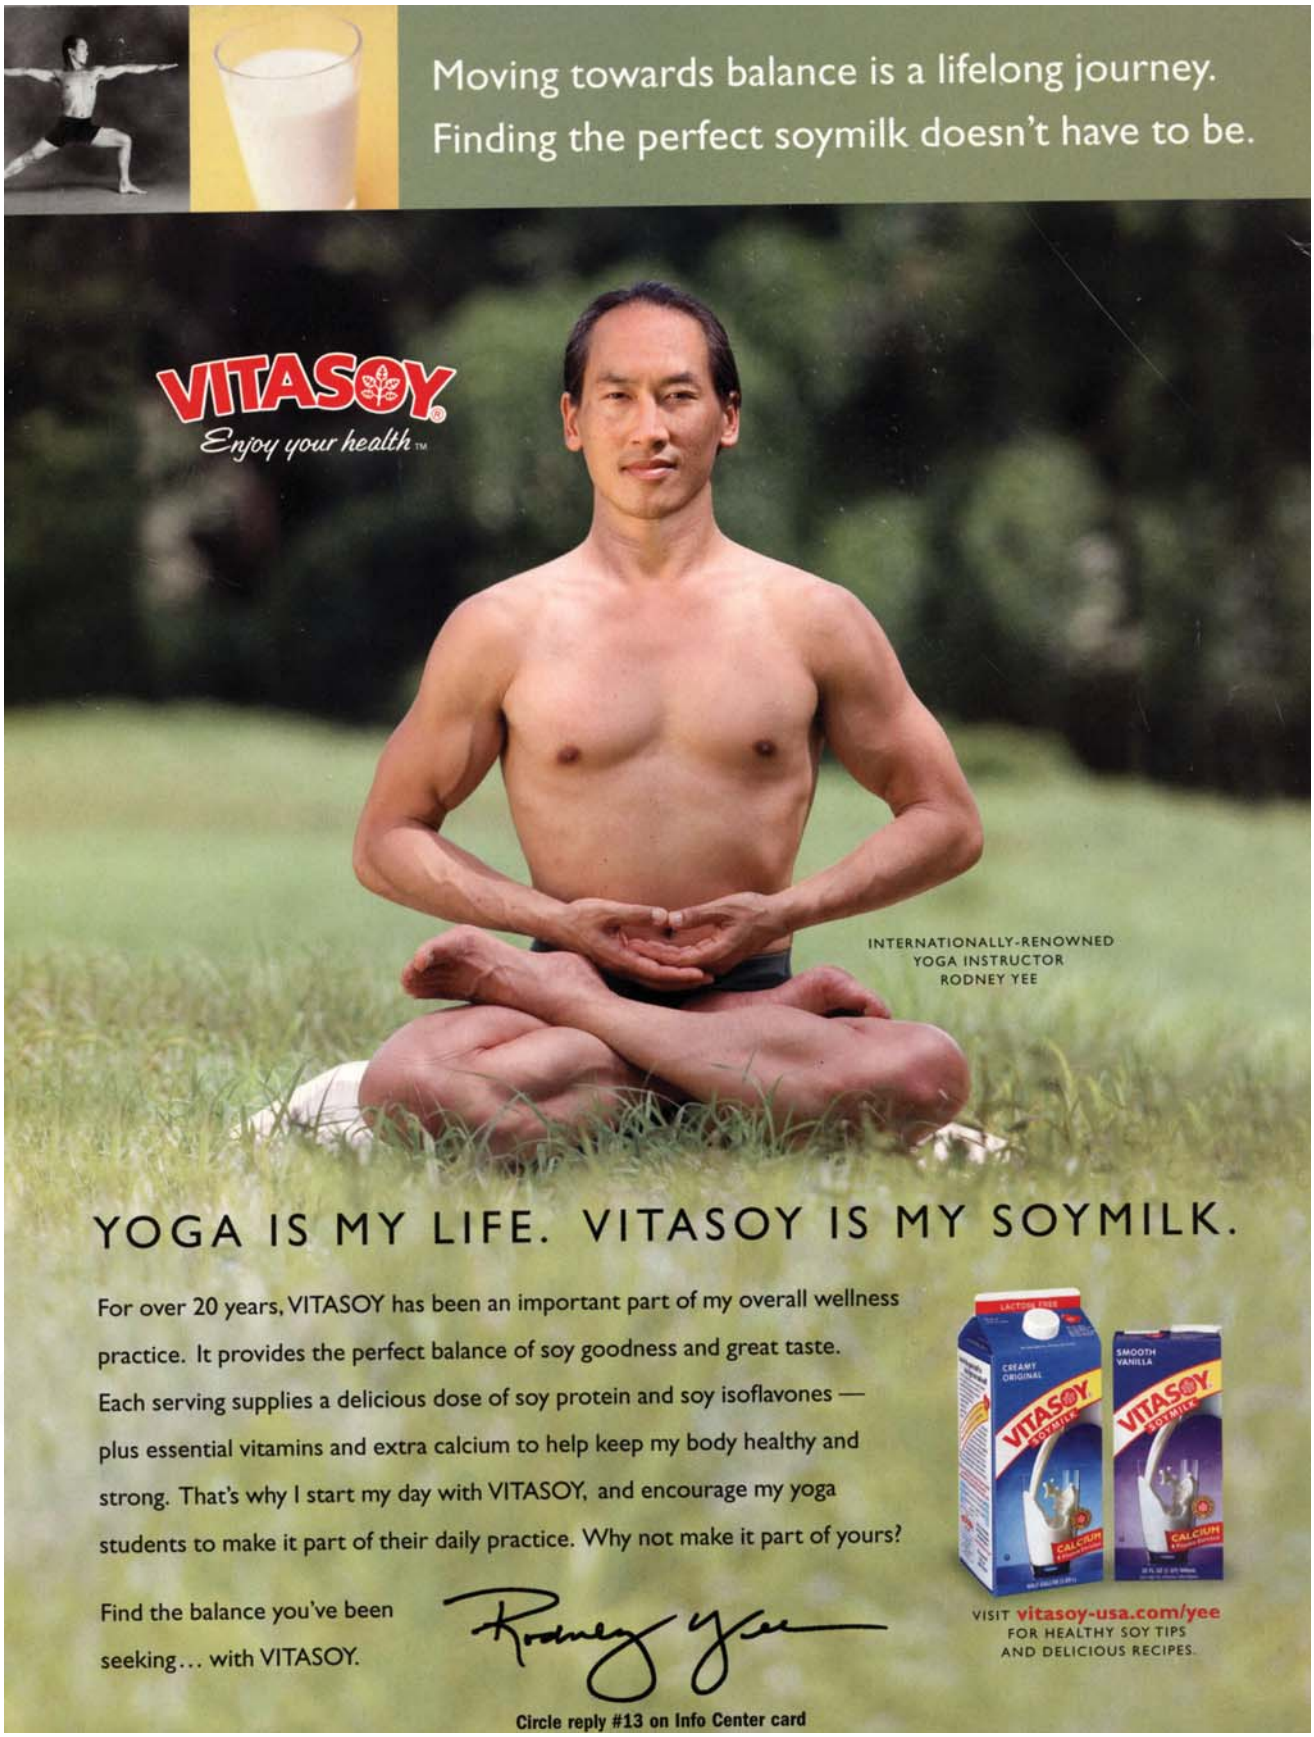
8266. Vitasoy (USA) Inc. 2004. Yoga is my life. Vitasoy is my soymilk. Moving toward balance is a lifelong journey. Finding the perfect soymilk doesn't have to be (Ad). *Vegetarian Times.* May. Rear cover.

• ***Summary:*** This fill-page color ad shows Rodney Yee, internationally renowned yoga instructor, seated in full lotus position green grass with a dark green forest background. To his upper right, against the dark green is the red logo:



"Vitasoy: Enjoy your health."

In the lower right corner are two cartons of Vitasoy soymilk. (1) Half-gallon gable-top ESL carton of Vitasoy creamy original. (2) Quart Aseptic brick pack of Vitasoy Smooth Vanilla.

Below the title of the ad, which is below Rodney Yee, we read: "For over 20 years Vitasoy has been an important part of my overall wellness practice. It provides the perfect balance of soy goodness and great taste. Each serving supplies a delicious dose of soy protein and soy isoflavones–plus essential vitamins and extra calcium to help keep my body healthy and strong... Find the balance you've been seeking–with Vitasoy." Address: San Francisco, California 94107.

8267. Gupta, Rajendra ("Raj") P. 2004. New developments at ProSoya in the USA, India, and Canada (Interview). *SoyaScan Notes.* June 8. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** ProSoya has just acquired a former dairy cheese plant (41,000 square feet) in Heuvelton, New York state (about 10 minutes drive from the Canadian border) and is now setting up a soymilk extraction plant. He hopes to begin shipping products in early Sept. 2004. ProSoya will sell soy extract to third parties, just as SunRich now does.

Raj estimates (based on statistics from SoyaWorld) that total soymilk sales in Canada from all manufacturers is about 75 million liters, which is about 2.5% of the dairy milk market. The soymilk market is growing rapidly, and ProSoya is also doing well. ProSoya has decided not to license its process to other manufacturers, but to make the soymilk itself–in part because ProSoya has developed an improved technology (by adding an additional step to their previous airless cold grind process) which gives soymilk with a much better flavor. Raj will never apply for another soymilk patent. This process is largely independent of the quality of the soybeans used. The contract between SoyaWorld and ProSoya has changed; starting last month they began a non-exclusive license, compensations have been changed from royalties to other types from them, and other new terms have been added to the agreement. Therefore ProSoya can now produce soymilk and soyabase in Canada and the USA and compete with them.

Concerning Dean Foods and White Wave: Who could ever have imagined that America's biggest dairy company (Dean) would become a major manufacturer and promoter of soymilk? Dean is the right company; they saw the opportunity and took it–while other dairy companies wished that soymilk would somehow go away. Raj is proud of the fact that, even though his competitors do not acknowledge it, his airless cold grind process has become the basis of making good-tasting modern soymilk. All the major soymilks taste the same these days. Yet Raj believes that there is a long way to go in improving the taste of soymilk.

ProSoya recently established its own soymilk plant in India; in Jan. 2004 the products were first sold in stores. The head office is in Bombay and the soymilk is made only from whole soybeans grown in India. In both India and the USA its soymilk will be sold in aseptic cartons and will be brand named Staeta–but the word "soy" (in "soy milk") appears on the front panel in even larger letters than the word "Staeta." Soy is no longer a "dirty word" in India; it now has a positive connotation. For details see www.staeta.com. Click India. This is a different website from ProSoya.com. Last time ProSoya entered the Indian market, they tried to go from the "bottom up," targeting their products to the lowest income people. This time they will go from the "top down," by establishing the fact that soymilk is being consumed by affluent people. As in North America, the soymilk will be more expensive at retail than dairy milk, not because of the cost of the soymilk but because of the cost of packaging and a smaller distribution system. The product has been very well accepted in India. Flavors include natural (unformulated), original (slightly sweetened), malt, chocolate (with real cocoa), and kesar-pista. Even the hundreds of smaller SoyaCows made by ProSoya are making soymilk consumed mostly by wealthier people, and not by the poor.

In the next phase, ProSoya will start to make powdered soymilk (already developed), sold in plastic pouches, which will be less expensive. This product has an excellent flavor and texture, after it is reconstituted; people can't tell the difference. They say this is the only powdered soymilk that doesn't taste like "paper pulp." Raj's goal in India is to sell soymilk for one-half to one-third the price of dairy milk. The problem with selling liquid soymilk in plastic pouches is the high cost of shipping water, the shorter shelf life, and the need to protect the pouches with secondary packaging. Address: President and CEO, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

8268. Schweitzer, Peter. 2004. Re: Soybeans and soyfoods in Nicaragua, at the Huichol Center in Mexico, and in Iraq. Letter sent to *Plenty Bulletin* subscribers, June 21. 2 p. Typed, with signature on letterhead.

• ***Summary:*** "We're not doing a full Bulletin this time, just an update about what's happening with Plenty." After 30 years, "I have come to recognize that what we do together might be described, very simply, as ordinary magic. Where people are connected by their love for each other, miracles are commonplace."

"As you know from the most recent Bulletins, we are working on a new project involving four different organizations–two in Guatemala, one in Managua, Nicaragua and the Huichol Center in Mexico, which have requested Plenty's assistance for their soyfoods and nutrition education efforts. We call it CAFSI (Centra American Food Security Initiative). Through CAFSI we will be purchasing soy

processing equipment, and we will help the groups install it, and do trainings in the use and maintenance of the equipment and different ways of preparing soyfoods and making soyfood products for sale. Two of the organizations will be growing soybeans, so seed variety trials have to happen and growing and harvesting techniques learned."

"Thanks to another grant from the Better World Fund, we were able to help the Mayan Soy Dairy operated by ADIBE in San Bartolo near Solola, Guatemala open a shop in a near-by town where they can sell their products. Remember, the ADIBE Soy Dairy is the original Mayan Soy Dairy built by Plenty and the Cakchiquel Maya of San Bartolo in 1979. That Mayan Soy Dairy is 25 years old this year, and they're still making soymilk, tofu, soy ice cream and tempeh using mostly the same equipment we took down in '79. Using your individual donations to Plenty, we were able to provide the funding to upgrade the dairy floor and roof. Now we're raising money to upgrade the equipment."

"The purpose of the Iraq Soy Food Group (ISFG) is to assist economically disenfranchised families improve their access to good planting seed and high nutrient, low cost foods. Plenty is acting as the fiscal sponsor for ISFG. Long-time Plenty soy technician, Charles Haren, is overseeing the project, and Lou Morgan, a Plenty donor for 25 years, has been providing start-up funding. ISFG is working to help families and communities in Iraq improve nutrition intake and financial income by increasing local production, processing, marketing and consumption of soybeans, other dry legumes. Beginning in March ISFG representatives Martin Edwards and Salam Onibi started working with a few farming families and agriculture scientists to re-establish soybean production capabilities (most planting seed has been lost due to the war). The Iraq Soy Foods Group is now seeking funding to establish a Soy Foods Center that will help address immediate and long-term food needs for impoverished populations in Iraq." Address: Executive Director, Plenty, P.O. Box 394, Summertown, Tennessee 38483. Phone: (931) 964-4864.

8269. *SoyaScan Notes.* 2004. Vitamin E: Forms, best sources, function, and value of supplements (Overview). June 23. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Forms: Vitamin E comes in many forms. Various foods contain the alpha-tocopherol, gamma-tocopherol, and delta-tocopherol forms.

Best sources: Foods such as nuts, vegetable oils, whole grains, tomatoes and tomato products, and leafy green vegetables. Soy oil and traditional soy products (such as tofu, soymilk, edamame) made from whole soybeans are excellent sources.

Vitamin E is a powerful antioxidant. Research suggests that the natural forms found in foods may reduce the risk of cardiovascular disease (heart disease, stroke, etc.) and certain types of cancer.

Are supplements as beneficial as foods: Alpha-tocopherol is the form of vitamin E typically found in supplements. Studies have *not* consistently shown that these supplements provide the same risk reducing effects (such as prevention of heart disease and cancer) as does vitamin E found in foods. The high amounts of alpha-tocopherol in supplements may actually reduce levels of the beneficial forms of vitamin E. However supplements containing natural mixed tocopherols (see the 3 forms above) may provide better health benefits. Read the label to determine what a supplement contains.

An additional benefit of dietary vitamin E is that certain foods rich in vitamin E are also rich sources of other compounds that can protect against disease. Unfortunately, many Americans don't get enough vitamin E.

8270. Uhland, Vicky. 2004. Silk ad push is industry's biggest ever. *Natural Foods Merchandiser.* June. p. 20.
• ***Summary:*** A $23.3 million TV advertising campaign has been launched–the most expensive in the history of the natural foods industry, and part of an effort to move Silk into the mainstream. ACNeilsen surveys show that 11% of American households currently purchase Silk–which is the only soymilk ever advertised on television. The four ads feature female actresses of various ages and are "designed to appeal to empowered women." They "focus on Silk as part of a healthy breakfast."

8271. Raine, George. 2004. Bay area charged higher prices for milk: Consumers pay 29% more than U.S. average in study. *San Francisco Chronicle.* July 29. p. A1, A9.
• ***Summary:*** A national consumer survey showed that the average price per gallon in the Bay Area was $4.71, compared with $3.66 nationwide. And the largest grocery chains in the region continue to charge the most. Address: Chronicle staff writer.

8272. *Consumer Reports.* 2004. Soy: Cutting through the confusion. July. p. 28-31.
• ***Summary:*** An excellent, very helpful article. Growing evidence suggests that soy protein and isoflavones may provide health benefits to most people. However, it is often impossible to tell how much of these are in a given product. *Consumer Reports* analyzed 42 foods for the content per serving of aglycone isoflavones, soy protein, and calories. Cost (per serving), organic or not, non-GMO or not is also indicated. Only 6 of these labeled the isoflavone content, but various definitions of "isoflavones" were used–which is very confusing for consumers. A table shows the results of the analysis with the foods grouped in the following categories: Cereals and snacks. Energy bars. Other drinks. Tofu. Non-dairy desserts (soy ice cream). Cultured soy (yogurt). Veggie burgers. Supplements. Soymilk.

Should you limit your intake of soy? (sidebar): Infants,

breast-cancer patients, people on thyroid medication, people with a history of kidney stones, people allergic to soy.

Health benefits: Soy and heart health, soy and menopause, soy and bones, soy and cancer. Behind the labels. How to choose. Photos show many soyfood products.

8273. Takahama, Motohide; Shiraishi, Atsushi. 2004. Mudage o nakusu tônyû rooshon. Bihada o tsukuru nattô rooshon [Soymilk lotion that helps to get rid of unwanted body hair. Natto lotion that makes beautiful skin]. Tokyo: Besto Serazu. 207 p. 15 cm. [Jap]*

8274. Vitasoy International Holdings Ltd. 2004. Annual report 2003/04. New Territories, Hong Kong. 128 p. July. 30 cm. [Eng; Chi]
• ***Summary:*** "At Vitasoy, promoting consumer well-being is our number one priority. This is achieved through the provision of high-quality, nutritious food and beverages. Vitasoy is an innovative company, a reliable employer, a responsible corporate citizen and is dedicated to creating value for our shareholders" (p. 1).

Turnover (sales) rose 1.8% to HK$2,269 million. Gross profit rose 3.5% to HK$1,288 million. EBITDA (earnings before minority interest, interest expense, income taxes, depreciation, and amortization) fell 6.1% to HK$261 million. Basic earnings per share fell 17.5% to 11.8 Hong Kong cents (p. 4).

Sales analysis by product categories: Soymilk 39%. Tea 25%. Tofu 9%. Lunch boxes and snacks 7%. Water 6%. Milk [dairy] 6%. Juice drinks 4%. Others 4%.

Sales analysis by location of customers: Hong Kong 64%. North America 22%. Mainland China 6%. Australia and New Zealand 5%. Others 3%.

A five-year financial summary (from 2000 to 2004), expressed in Hong Kong dollars, appears on page 127. Address: No. 1, Kin Wong Street, Tuen Mun, New Territories, Hong Kong. Phone: 466 0333.

8275. **Product Name:** Vitasoy Complete (Soymilk in Aseptic Quart Cartons) [Vanilla or Original].
Manufacturer's Name: Vitasoy USA Inc.
Manufacturer's Address: One New England Way, Ayer, MA 01432. Phone: 1-800-462-7692.
Date of Introduction: 2004. July.
Wt/Vol., Packaging, Price: 1 quart Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Leaflet (color) sent by Patricia Smith from Natural Products Expo East. 2005. Sept. (but dated July 2004). Two panels each side. Each panel: 28 x 21.5 cm. "Introducing the great-tasting soymilk–That has it all!" On the front panel is a color photo of each carton with a yellow measuring tape around them. Atop the inside two panels: "The first Fiber-Smart, Calcium-Smart, Calorie-Smart, and Carb-Smart soymilk!" A color photo shows a pretty blonde lady holding out the front of her trousers to show how much weight she has lost.

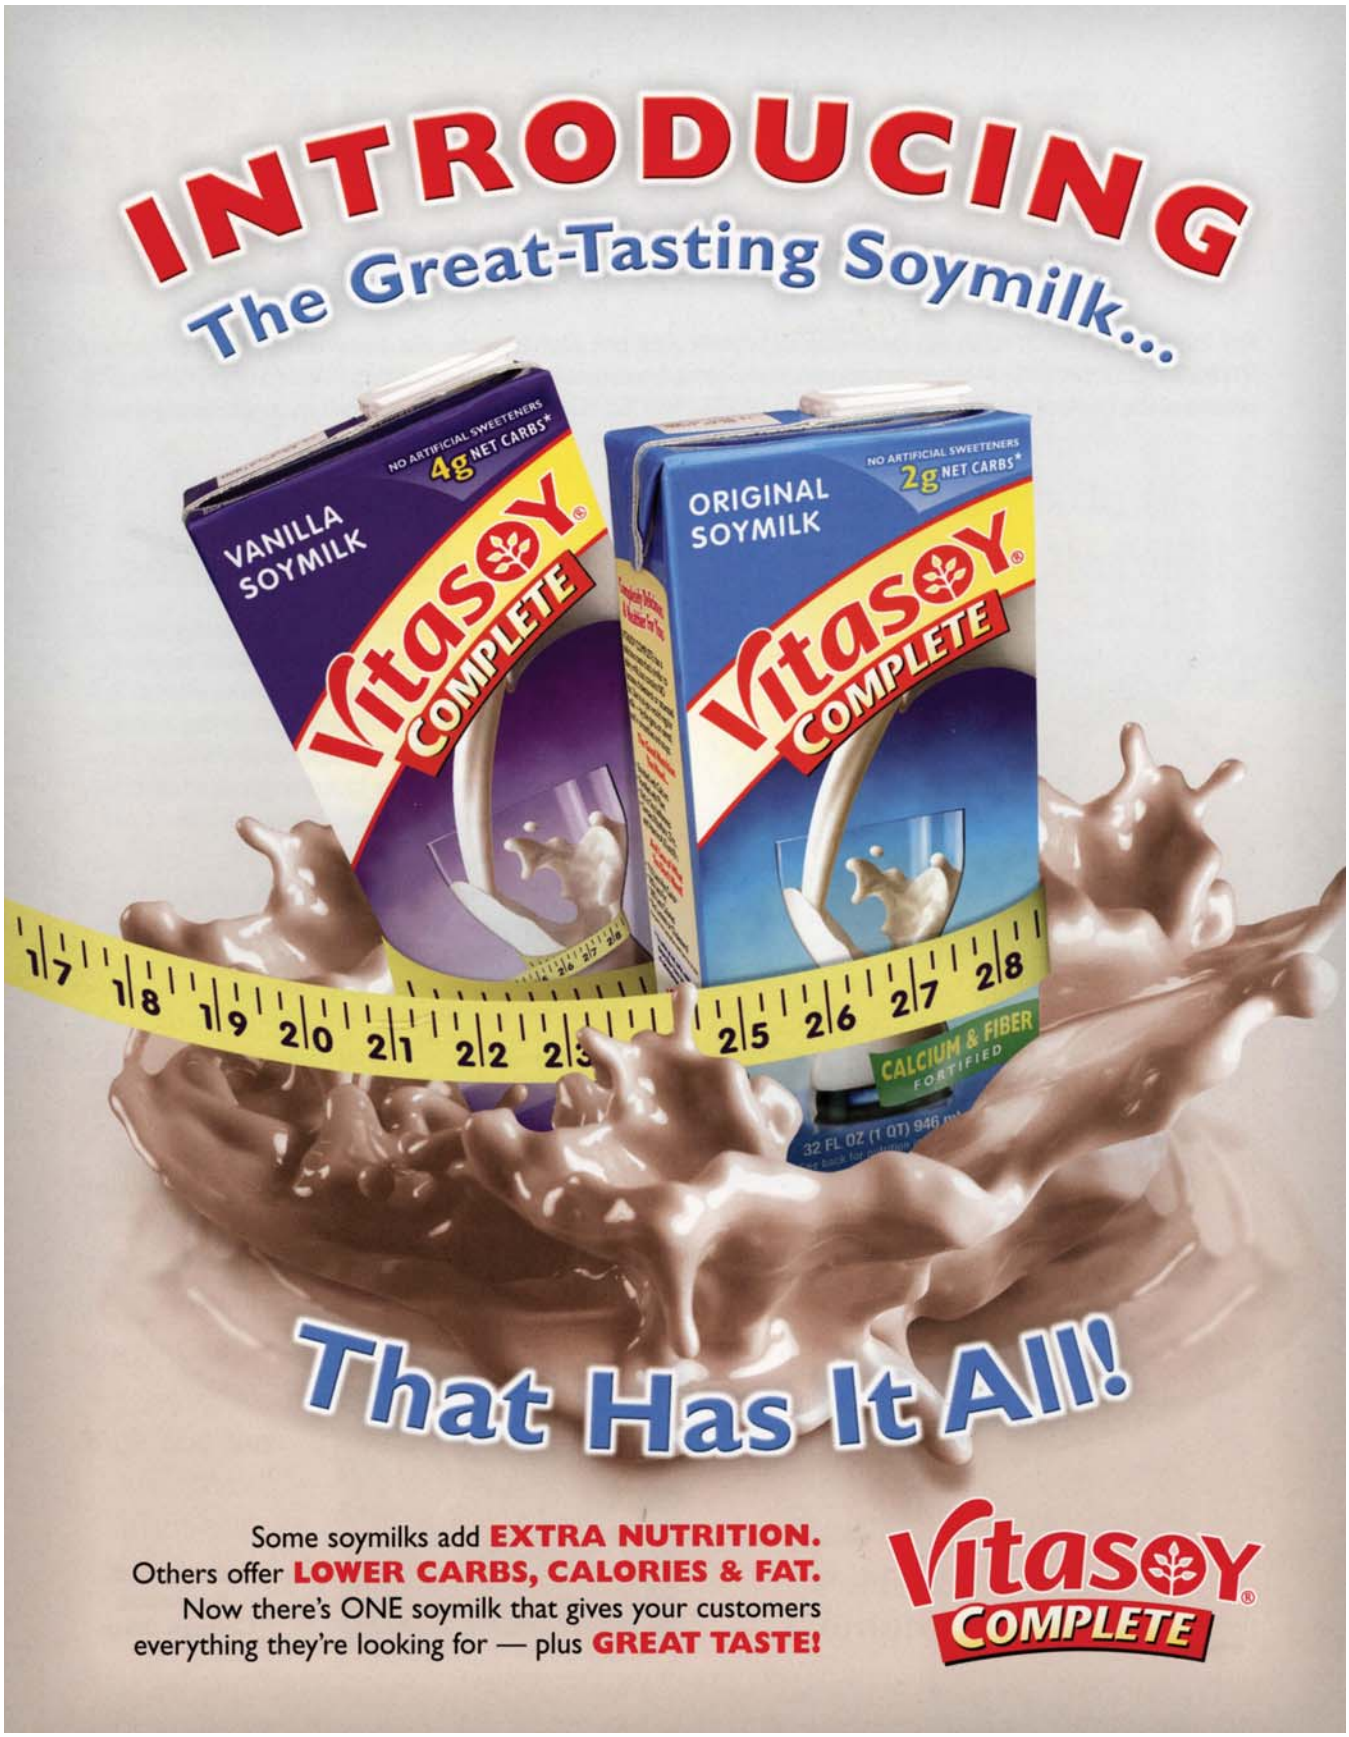
8276. McLaughlin, Lisa. 2004. Eat, drink and be (sort of) healthy. *Time.* Aug. 2.
• ***Summary:*** There are some new cocktails on the bar scene. "And for the soy conscious, Fly Bar in San Francisco serves the 5-0–a mix of sake, soy milk, and pineapple juice."

8277. White Wave, Inc. 2004. Silk–Rise and shine: May today bring more potential boyfriends and less potential annoyances. More job opportunities and less "call again in a few months." More future and less saturated fat (Ad). *Time.* Aug. 2. p. 79.
• ***Summary:*** "A better breakfast starts with no cholesterol, more determination, less sugar and more possibilities." The small print: "Vanilla Silk is compared to 2% dairy milk. Web: www.SilkIsSoy.com. Rise and Shine is a registered trademark of White Wave Inc." Address: Boulder, Colorado.

8278. ProSoya launches soya milk, eyes Rs. 4-crore turnover in first year (Web article). 2004. http:// www.thehindubusinessline.com/ 2004/08/05/ stories/ 2004080502000900 .htm. 1 p. Printed 21 Oct. 2010.
• ***Summary:*** The promoter of the product is Canada-based Mr. Rajendra Gupta, founder of ProSoya Inc. Its subsidiary, ProSoya Foods India (Pvt.) Ltd., has set up a soya milk extraction plant, based on patented technology, in Madhya Pradesh. The product, named Staeta, was test-launched in January of this year in five flavours and has received a good response. Godrej has also recently relaunched soyamilk after its unsuccessful venture in the late 1980s.

8279. Kanner, Ellen. 2004. Final verdict is still not in on the benefits of soy. *Contra Costa Times.* Aug. 11. p. G7.
• ***Summary:*** Some of the suggested health benefits of soy include relief of the unpleasant symptoms of menopause and improved bone mass in older women. However, a year-long study published on July 7 in the *Journal of the American Medical Association* found that soy powder did not "increase bone density, lower cholesterol or improve memory in 175 post-menopausal women."

The article suggests that the conditions of the study may not have been optimal; a longer study on younger women might have different results. Additionally, whole soy foods provide a better dose of isoflavones than soy pills or powder. The author seconds Andrew Weil's recommendation of a daily helping of whole soy foods such as tofu, edamame, soy milk, miso, or soy nuts. Even if the isoflavones in soy don't have miraculous health benefits, soy is still an excellent low-fat, affordable source of protein. Soy can also lower cholesterol and thus reduce the risk of heart disease. Address: Knight Ridder Newspapers.



8280. Newman, Jacqueline M. 2004. Food culture in China. Westport, Connecticut: Greenwood Press. xviii + 230 p. Illust. (color). Index. 24 cm. Series: Food Culture Around the World. [80* ref]
• ***Summary:*** Contents: Series foreword. Introduction. Timeline. Historical overview. Major foods and ingredients. Cooking. Regional and provincial foods. Meals. Eating Out Special occasions. Diet and health. Glossary. Bibliography Resource guide.

Dr. Newman was born in 1932. The following soyfoods are mentioned in the Glossary: dadao [sic, dadou]: Soybeans, which she says were domesticated in north China about 3000 B.C.E. doufu. fuyu. hoisin. mapo doufu.

Concerning doufu [tofu]. Its popularity increased during the Tang dynasty (618-907 C.E.), especially among Buddhists and other vegetarians. Yet it had been known before Tang times (p. 17). It is not known when bean curd was first made. One legend has it that Prince Liu An (lived 179 to 122 B.C.E., during the Western Han, invented bean curd). The Chinese word for soy sauce first appeared in print around the Song dynasty (p. 30-32). Fuyu is fermented bean curd (p. 34). Bean sprouts include those grown from the mung bean and the soybean (p. 52). Hakka-style stuffed bean curd is filled with meat (p. 100). "Dried bean curd wishes personal fulfillment" (p. 161).

Concerning soybeans: The *Qimin Yaoshu* describes how to make "black bean mash," which may have been the earliest known soybean-related condiment (p. 16). Soy sauce, its varieties and bean sauces are described in detail (p. 40-43). A "mother sauce" is a soy sauce mixture used and reused from one similar meat to another (p. 59). Boiling in soy sauce is called *chiang;* it is known in English as red cooking (p. 70). The word "wok" is Cantonese (p. 72-73). Soy milk (p. 52, 99). Steamed sea bass with black bean sauce (p. 151). Address: Food historian and scholar, Former prof., Dep. of Home Economics, Queens College of the City Univ. of New York, 65-30 Kissena Blvd., Flushing, NY 11367.

8281. Calvert, John B. 2004. Soymilk microenterprise: A treatise on small-scale soymilk production. Santa Barbara, California: Published by the author. 82 p. Illust. Index. 28 cm. [10 endnotes]
• ***Summary:*** Contents: Preface. 1. Introduction: What is soymilk microenterprise?, one path of many, history of Gaia Soy, sustainability. 2. Development of recipes. 3. Recipes. 4. The soymilk dairy. 5. Process equipment. 6. Process tools and utensils. 7. Preparing for a batch. 8. Process. 9. Running the business. 10. Running the business. 11. Nutritional info. 11. Suppliers. 12. Research information. Acknowledgments. Appendix A–Weights and measures. Notes.

This is a case study of Gaia Soy, a small soy dairy started by the author which was in operation from December 1997 to late June 1998, supplying fresh bottled organic soymilk to natural food stores in Eugene, Oregon. Actually, the company delivered its first fresh soymilk on 28 March 1996 in half gallon containers to the Growers Market Co-op. Contains many informative photos.

E-mail: jcalvert@rain.org. Address: P.O. Box 143, Santa Barbara, California 93102. Phone: 805-683-5763.

8282. Lydeking-Olsen, Eva; Beck-Jensen, Jens-Erik; Setchell, K.D.R.; Holm-Jensen, Trine. 2004. Soymilk or progesterone for prevention of bone-loss: a 2-year randomized, placebo-controlled trial. *European J. of Nutrition* 43(4):246-57. Aug. Epub 14 April 2004. [47 ref]
• ***Summary:*** "Daily intake of two glasses of soymilk containing 76 mg of isoflavones prevents lumbar spine bone loss in postmenopausal women." Address: 1. Inst. for Optimum Nutrition, Copenhagen, Denmark.

8283. Tofutown.com. 2004. Brief portrait (Website printout–part). www.tofutown.com Printed in August.
• ***Summary:*** At the top of the page in orange: Network of activities. To do list for a sustainable world. Contents: Introduction. Brand names and marketing. Youth researches. Quality. Customer relations. Animal welfare, environmental protection, health. Sustainability. Very big numbers.

Introduction: "The company Tofutown.com GmbH was founded in 1988 in Cologne under the name Viana Naturkost by a group of experienced food producers, brave tofu makers and young musicians. Since then the company has practised 'Business without Guilt" (e.g. the use of purely vegetable organic raw materials, in part from Fair Trade). Even after 15 years the company sees itself as a dynamic "Veggie Start Up Company." Tofutown.com has grown to become a renowned producer of entirely vegetable foods such as meat alternatives and dairy free milk and cream products within Europe. It is part of the Tofutown.com philosophy to produce using one's one know how and not simply "bring into circulation" (i.e. have others produce), which is commonplace in such marketplace niches as organic foodstuffs.

"More than 60 vegetarian products are made in the middle of the beautiful natural countryside of the Volcanic Eifel region, in the town Wiesbaum, which has earned itself the description 'Tofutown.' Tofutown.com is known for its excellent, tasty 'Viana Real Smoked Tofu,' the vegetable drinks 'SoActiv' and ReisActiv, the meat alternatives 'Velami,' 'Vegetarian Kebab' or '½ Pound Veggie Mince,' the dairy free cheese 'Pizzarella,' and the 'Viana Soya Coffee Creamer.' The exquisitely fine 'Country Mild Smoked' from the product range 'Classic Veggie Carpaccio' won the German Vegetarian Union's Trend Prize 2004. The export share of turnover is about 30%. Tofutown products can be found throughout Europe and even in the Kingdom of Bahrain.

"Brand names and marketing: The company produces some 60 items for the European organic market under the

traditional label 'Viana' as well as a soy drink under the quality label 'demeter' (Tofutown.com is a licensed demeter producer).

"In 2003 Tofutown.com was able to introduce a new brand name into German foods retail (supermarkets, warehouses, Cash&Carry, discounters, etc.). This new label is called VeggieLife (slogan: 'happy without meat'), encompasses at present some 15 products and has made its way into 500 supermarkets within just 9 months."

As many as 15,000 users visit the company's websites each week. "We believe in Food Democracy. The Tofutown.com philosophy is that every human should have the opportunity to get an entirely vegetarian product whenever and wherever he or she is hungry or thirsty. If it comes from Tofutown, it's much more delicious and far healthier than something similar containing meat or dairy products. Today's consumers know that they shape their own future with their purchases."

Tofutown.com makes "500,000 tofu burgers and 1,000,000 real vegetarian sausages per year." There are "500,000 faithful and enthusiastic Viana customers... and approximately 35 employees." Address: Wiesbaum, Germany.

8284. **Product Name:** Organic Valley Soy (Soymilk Sold Refrigerated in Half Gallon Pure-Pak / Gable Top Cartons) [Original, Vanilla, or Chocolate].
Manufacturer's Name: Organic Valley (Marketer-Distributor).
Manufacturer's Address: La Farge, Wisconsin 54639.
Date of Introduction: 2004. September.
Ingredients: Filtered water, organic naturally milled cane juice, organic whole soybeans, organic cocoa (Dutch process), calcium carbonate, sea salt, vitamin A palmitate, carrageenan, organic flavor, riboflavin (B2), vitamin D2, vitamin B12.
Wt/Vol., Packaging, Price: Half-gallon Pure-Pak Carton. Retails for $4.99 (2007/06, Lafayette, California).
How Stored: Refrigerated.
Nutrition: Per 1 cup (240 ml): Calories 120, calories from fat 20, total fat 2.5 gm (3% daily value; saturated fat 0.5 gm; *trans* fat 0.5 gm), cholesterol 0 mg, sodium 140 mg (6%), potassium 280 mg (8%), total carbohydrate 19 gm (dietary fiber 3 gm [11%], sugars 16 gm), protein 5 gm. Vitamin A 10%, calcium 30%, vitamin D 30%, vitamin C 0%, iron 6%, riboflavin 30%, vitamin B-12 50%, folate 6%, zinc 4%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Ad (8½ by 11 inch, color) in Natural Foods Merchandiser. 2004. Sept. "New: Organic Valley Soy is making a big splash." A photo shows half-gallon gable-top SL cartons of chocolate, original and vanilla.

Product with Label purchased at Open Sesame in Lafayette, California. 2007. June. 3.75 by 3.75 inches by 10 inches. Front panel: Brown, red, white and green on light blue. Color photo of a stream of chocolate milk with little squares of chocolate in it, against an unfocused forest. "Vitamin and calcium fortified. Family of farms. USDA Organic" logo. One side panel, title "Who birthed my bean," states: "We've introduced organic identity preserved soybeans. Whizz to www.organicvalley.coop/soy. Enter the expiration date on your carton and prepare to meet your bean's maker. You'll be virtually transported to the exact form that your beans originated from." An Iowa soy farmer, Wayne Wangness, says: "Our family is now part of Organic Valley, the largest organic-farmer owned cooperative in America." "Oregon Tilth Certified Organic." This soymilk is made using the entire bean; the fiber is not removed. "Are you aware that other leading brands of soymilk use chemical masking agents to hide unpleasant beaniness? Not us!"

8285. Soymilk and tofu: A healthy delight (Leaflet). 2004. New Delhi, India: American Soybean Association (ASA) / United Soybean Board. 2 p. Front and back. 28 cm.
• ***Summary:*** Contents: Introduction. Soymilk. Tofu (soy paneer). Health benefits of using soymilk and tofu. Lactose intolerance. Heart disease. Osteoporosis and menopause. Cancer. Now soymilk and tofu is available in your city. Try this wonderful food and feel the difference.

This leaflet is printed in black ink on glassy green paper. Two color photos show soymilk and tofu. Ten thousand copies were printed in Sept. 2004. An additional 10,000 copies were printed in Hindi in Jan. 2007. Address: American Soybean Assoc., Asia Subcontinent, 149 Jor Bagh, New Delhi–110 003, India. Phone: (91) (11) 2465-1611.

8286. United Soybean Board. 2004. Consumer attitudes about nutrition–Insights into nutrition, health & soyfoods: National report 2004-2005. Seattle, Washington. 8 p. Sept.
• ***Summary:*** This 11th annual nationwide survey, commissioned by USB, was conducted in early 2004 by an independent research firm in Seattle, Washington. Random telephone interviews were completed with 1,000 consumers, "providing a sample that is consistent with the total American population. The study's margin of error is ±1.9 to 3.1 percentage points and has a confidence level of 95%."

Contents: Introduction and methodology. Nutritional habits and obesity concerns. Healthy food decisions. Cooking oil impressions. Consumer attitudes about fats. Awareness, usage, and trial of soy products. Soyfoods and health: Perceived healthfulness of soy products (74% say healthy, 19% neutral, 7% unhealthy), awareness of health benefits of soy (heart health 29%, prevent obesity / promote weight loss 17%, menopause relief 16%, cancer prevention 8%, good protein source 6%, reduced risk of osteoporosis 2%). Consumer perceptions of biotech [genetically engineered] food. Soy meets beef? Note: This section replaced the section on Consumer awareness and usage

organic products.

Awareness of soyfoods: "Overall consumer awareness of soy products increased this year. Soymilks awareness rating stepped up to 90%, while regular use of soymilk held fairly steady at 16%. "One-quarter [25%] of Americans consume soyfoods or soy beverages once a week or more." However 38% of respondents never consume soy, up 5 points since last year. Among these non-consumers of soy, 37% (down 10 points since last year) report that that nothing in particular prevents them from including soy in their diet, and another 18% say that taste prevents them from incorporating soy in their diet.

Genetically modified foods: The focus of these questions has changed from food to agriculture. 39% "of consumers consider themselves at least somewhat familiar with biotechnology and, of this group, 65% carry a positive perception of its role in agriculture." Awareness is slightly higher among men (66%) than women (64%). Of this group: 34% believe biotech improves the nutritional make-up of crops, 24% don't know enough about biotech to say what role it plays, 13% think that biotech enables farmers to use fewer pesticides, herbicides, and toxins. Other: 29%.

Note: As of Aug. 2008 this full survey is available gratis in PDF format at www.soyconnection.com /health_nutrition / pdf/.

8287. Cui, Zhanglin; James, A.T.; Miyazaki, Shoji; Wilson, Richard F.; Carter, Thomas E., Jr. 2004. Breeding specialty soybeans for traditional and new soyfoods. In: KeShun Liu, ed. 2004. Soybeans as Functional Foods and Ingredients. Champaign, Illinois: AOCS Press. xii + 331 p. See p. 264-322. [217 ref]

• ***Summary:*** Contents: Introduction. Soybean and soyfoods in China: Domestication of soybean, ancient utilization and processing, traditional soyfoods cultivars, current soyfoods markets, modern soyfoods cultivars (cultivars for bean curd {tofu} and soymilk, cultivars for small-seeded soybeans {sprouts, natto}, cultivars for vegetable soybeans {*maodou*}, cultivars for soy sauce, *doujiang, douchi,* and medicine, cultivars with improved seed composition).

Soybean and soyfoods in North America: Introduction of soybean, current soyfoods markets, modern soyfoods cultivars, genetic base and diversity of soyfoods cultivars. Soybean and soyfoods in Japan: Introduction of soybean to Japan, traditional soyfoods in Japan, current soyfoods markets, modern soyfoods cultivars (cultivars for tofu {bean curd} and soymilk, cultivars for *miso* {soybean paste}, cultivars for natto {fermented soybean; Japanese cultivars registered with the Ministry of Agriculture, Forestry and Fisheries (MAFF) include Suzumaru, Kosuzu, Natto-shoryu = Natto-Kotsubu}, cultivars for *nimame* {boiled soybean}, cultivars with low allergenic properties).

Soybean and soyfoods in Australia: Current soyfoods markets, modern soyfoods cultivars. Breeding for the soyfoods market: Tofu (environmental influences on tofu yield and solubility of seed dry matter, genotypic effects on tofu yield, seed protein and gelling properties of tofu, seed color, sugar content, undesirable flavors in tofu), natto, *edamame* or *maodou,* soymilk. Designing future soyfoods cultivars: Increasing protein and oil concentration, soybean protein composition (potential for altering protein composition, mutations in 7S storage-protein genes, mutations in 11S storage protein genes, influence of nutrition on storage protein gene expression, association with protein functionality), soybean carbohydrate composition (genetic regulation of oligosaccharide content), soybean fatty acid composition (genetic modification to reduce saturated fatty acid composition, genetic modification to alter unsaturated fatty acid composition, influence of multiple gene combinations on oil composition), Tocopherols and isoflavones in soybean seed (tocopherols, isoflavones). Summary. Acknowledgments.

Figures: (1) Diagram of two-dimensional representation of genetic relationships among 89 soyfood cultivars derived from a two-dimensional multidimensional scaling (MDS) analysis based on coefficient of parentage. (7) Photo of natto, a fermented Japanese soyfood. (8) Flow chart of natto production outline. (9) Photo of soy protein products. (10) Photo of meat analog made by high-moisture extrusion of soybean protein. (11) Photo of new generation of soyfoods in the market. (12) Photo of soy-enriched bakery products. (13) Photo of concentrated soy isoflavone product.

Tables: (1) Classification of various edible soy products in the current market. Address: Univ. of Missouri, Columbia, Missouri.

8290. **Product Name:** Select Organic Plain Soymilk.
Manufacturer's Name: Safeway, Inc. (Marketer-Distributor).
Manufacturer's Address: P.O. Box 99, Pleasanton, CA 94566-0009.
Date of Introduction: 2004. October.
Ingredients: Filtered water, organic whole soybeans, organic cane sugar, tricalcium phosphate, sea salt, natural flavor, carrageenan, zinc gluconate, ascorbic acid (vitamin C), niacin, pantothenic acid, riboflavin (vitamin B-2), vitamin B-6, vitamin A palmitate, thiamine mononitrate (vitamin B-1), folate, vitamin D-2, vitamin B-12.
Wt/Vol., Packaging, Price: Half-gallon Pure-Pak carton. Retails for $3.69 (2004/12, Lafayette, California).
How Stored: Refrigerated.
New Product–Documentation: Product with Label purchased at Safeway supermarket in Lafayette, California. 2004. Dec. 28. 3.75 by 10 by 3.75 inches. Orange, white, and black on light yellow. Front panel: "Nourish your body and mind. Cholesterol free. Vitamin fortified. Calcium enriched. Contains 40 mg of isoflavones per serving." USDA Organic logo near bottom. On one side is a recipe for Blueberry Pie Smoothie, and "Certified organic by Quality Assurance International." On the opposite side we read: "Ancient food enjoys a comeback. More than ever, soy is part of the healthy lifestyles of people from all walks of life. A staple in the diets of some cultures for thousands of years, soy is being discovered by new generations as one of nature's most versatile foods. Scientific studies have shown the health benefits of soy. And Safeway Select Organic Soymilk is a convenient and delicious way to add soy to your diet. Your body–especially your tastebuds–will thank you!" This is followed by three paragraphs with bullet-style logos: "Our soybeans are certified organic. Heart health. Good, and good for you."

Talk with Peggy in customer service at Lafayette, Safeway. 2004. Jan. 20. The product was introduced in Oct. 2004.

8291. **Product Name:** Trader Joe's Organic Unsweetened Soy Milk.
Manufacturer's Name: Trader Joe's (Marketer-Distributor).

Manufacturer's Address: Monrovia, CA 91016.
Date of Introduction: 2004. October.
Ingredients: Filtered water, organic whole soybeans. Certified organic by Quality Assurance International.
Wt/Vol., Packaging, Price: 1 quart (946 ml) Tetra Brik aseptic carton with reclosable cap. Retails for $1.19 (2005/01, Lafayette, California).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 1 cup (8 fl oz): Calories 90, calories from fat 40, total fat 4.5 gm (7% daily value; saturated fat 0.5 gm), cholesterol 0 mg, sodium 15 mg (1%), total carbohydrate 4 gm (dietary fiber 2 gm [8%], sugars 2 gm), protein 9 gm. Vitamin A 2%, calcium 2%, iron 8%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Product with Label purchased at Trader Joe's in Lafayette, California. 2005. Jan. 9. This is plain soymilk, with nothing added. Top 1/3 of carton has black letters on a pea-green background. Lower 2/3 has green vegetable soybeans and their pods on a slightly pinkish-beige background. Front panel (lower right) has USDA Organic and QAI logos. Back panel states that this soy milk "has several health benefits. An added plus to the great flavor! 70 mg of isoflavones per serving. Lactose free. Gluten free. 9 grams of soy protein per serving." Followed by the FDA heart-health claim.

8292. **Product Name:** Wildwood Soyogurt Smoothie [Wildly Berry, Mango Apricot Tango, Orange Orange, Kickin' Key Lime, or Vivacious Vanilla].
Manufacturer's Name: Wildwood Harvest Foods, Inc.
Manufacturer's Address: 810 Blakely Circle, Grinnell, Iowa 50012 & 416 E. Riverside Dr., Watsonville, CA 95076. Phone: 1-800-459-TOFU or 813-728-4448.
Date of Introduction: 2004. October.
Ingredients: Kickin' Key Lime: Organic soymilk (filtered water, soybeans*), evaporated cane juice*, water, lime*, tricalcium phosphate, pectin, natural flavors, locust bean gum, sodium citrate, turmeric (for color), active cultures (L. acidophilus, B. lactis, B. longum, S, thermophilus). * = organic.
Wt/Vol., Packaging, Price: 10 fluid oz. in white plastic bottle.
How Stored: Refrigerated.
New Product–Documentation: Spot in *Natural Foods Merchandiser.* 2004. Oct. p. 142.

Leaflet (8½ by 11 inch, single sided, color photocopy) sent by Patricia Smith from Natural Products Expo West. 2005. March. "Wildly delicious SoYogurt Smoothie!" "Less carbs." A color photo in the top half of the front shows the 5 flavors in bottles. The bottom half gives nutrition facts, ingredients, case specifications, and pallet configuration.

8293. **Product Name:** Spicy Braised Tofu, Kung Pao Tofu Salad, Spicy Yuba Strips.
Manufacturer's Name: Basic Soy Beanery (renamed Hodo Soy Beanery in Sept. 2005).
Manufacturer's Address: 1600 S. De Anza Blvd., San Jose, CA 95106. Phone: 408-517-8958.
Date of Introduction: 2004. December.
Ingredients: See below.
Wt/Vol., Packaging, Price: -
How Stored: Refrigerated.
New Product–Documentation: Labels by brought to Soyinfo Center by Minh Tsai on 2009. Sept. 16. Ingredients:

Spicy Braised Tofu: Soybeans, water, calcium sulfate, star anise, teriyaki sauce, vinegar, chili oil.

Kung Pao Tofu Salad: Soybeans, water, calcium sulfate, soy sauce, tea infusion (loaf is smoked over tea leaves), teriyaki sauce, chili oil, vinegar, peanut, cilantro.

Spicy Yuba Strips: Soybeans water, soy sauce, sugar, soybean oil, teriyaki sauce, vinegar, chili oil.

8294. Iowa Soybean Promotion Board. 2004. Simply soy: Recipes celebrating nature's perfect bean. Urbandale, Iowa: Iowa Soybean Promotion Board. 151 p. Illust. Index. 23 cm. • ***Summary:*** A gorgeous book, filled with elegant, mouth-watering full-page color photos of prepared recipes. Contents: Introduction, by Linda Funk, Executive Director, The Soyfoods Council. 1. The magical bean: Soy to the world, soy and health, the soyfoods pantry (glossary incl. soybean oil, soymilk, tofu, tempeh, edamame, soynuts, soy flour, textured soy protein, canned soybeans, miso, soy protein powder {soy protein isolates}, dried soy flakes {MicroSoy}, soy yogurt and smoothies, soy pasta {ADM}). Soyfood nutrient chart. 2. Start it up with soy: Appetizers and nibbles. 3. On the sidelines: Sides and salads. 4. Spoon fed: Comforting soups and stews. 5. Vegetarian anyone? 6. Teamwork: Pork, beef, chicken, seafood and soy. 7. The bread box: Breads and muffins. 8. Desserts: Soy and spice and everything nice. 9. Cooking with kids. Resources (Directory of members of The Soyfoods Council and their soy products; Directory of state and national soybean boards).

A smoothie (p. 133) is made at home by combining 1 cup soymilk (plain or vanilla), ½ medium banana (may be frozen, if desired), and optional nondairy ingredients, such as chocolate syrup, peanut butter, fruit juice concentrate, or frozen fruits (alone or in combinations–pineapple, orange, cranberry, raspberry, etc.). "Many of the soy smoothies and soy yogurts on the market today are probiotic, meaning they contain active, live cultures that are beneficial to intestinal health." Address: 4554 N.W. 114th Street, Urbandale, Iowa 50322-5410. Phone: 866-431-9814.

& 416 E. RIVERSIDE DR., WATSONVILLE, CA 95076 www.wildwoodnaturalfoods.com

Productivity Center. 8 p. 28 cm.
• ***Summary:*** This glossy brochure (green and yellow on white) states: "Food & Beverage is proud to present its 8th annual soyfoods conference. Two-day conference: March 1-2, 2005. Pre-conference workshops: February 28, 2005. Rasisson Hotel Miami, Miami, Florida. This brochure gives details on the conference agenda, with the names of the speakers, presenters or workshop leaders, the title of the presentation, and the date and time. Pre-conference workshops (Monday): (A) New strategies and techniques for product innovation, led by Mattson & Co. (B) Think big: Redefining the competition to expand your market, led by Garnet Pigden, The Solae Co. (Solae has come up with a campaign pitting soy products directly against the dairy industry). (C) Understanding your consumer–Soyfoods focus group workshop, led by Primary Insights.

Day 1 includes: "Understanding the soyfood trends of today and tomorrow," by: Tina Nelson of SunRich (the U.S. soyfoods market hit nearly $4 billion in 2003, up 7.2% over 2002). "Kraft's health and wellness initiatives: Evolving with today's consumers," by Kevin Scott, Boca Foods, a div; of Kraft Foods, Inc. "Out of the box: Designing the soy products of tomorrow," by Robert C. Jones, President and CEO of Vitasoy USA. "Partnering with the soy protein ingredient supplier to develop functional products for the future," by Deborah Schultz of Cargill Health and Food Technology. "The soymilk revolution: Marketing for mainstream appeal," by Mary Adams of White Wave. "Understanding the vegetarian, 'flexitarian' and omnivore market for soyfoods," Terry Gieseke of Nutriant, a Kerry Company (Flexitarians are people who usually eat vegetarian but occasionally dine out on meat). "Creating a winning soy snack food," by Tim Walter of Peanotz, Inc. Dominic Dyer, of Soya Protein Assoc., UK.

Day 2 includes: "Making sense of soy health research," by Mark Messina of Nutrition Matters. "Soy and menopause: A clinicians view," by Dr. Ari Babaknia, MD of DrSoy. "Can soyfoods play a role in reducing obesity?" by Barbara Klein of Illinois Center for Soy Foods. "Lessons learned from the US FDA cancer claim petition," by Garnet Pigden of Solae (cites 58 studies as evidence that soy reduces the risk of cancer of the breast, prostate, and colon). "Improving product flavoring to meet consumer preferences," by Mary T. Nash of TIAX LLC. "Research meets commerce: Using new Non-GMO technology to create highly marketable new products," by Daniel Facciotti of Davis Lab, Anawah (Tilling = Targeting Induced Local Lesions in Genomes, a new technology to manipulate gene traits and generate novel ingredients). "Lowering trans fat content with new low linolenic soybeans," by Prof. Walter Fehr of Iowa State Univ.

The price is very expensive: Gold package–$3,186 for the conference plus 3 workshops (save $300) or $1,899 for the conference only. Address: 555 Route 1 South, Iselin, New Jersey 08830. Phone: 1-800-882-8684.

8296. Kao, T.H.; Lu, Y.F.; Hsieh, H.C.; Chen, B.H. 2004. Stability of isoflavone glucosides during processing of soymilk and tofu. *Food Research International* 37:891-900.
*

8297. **Product Name:** SoYummi [Coffee].
Manufacturer's Name: Les Aliments SoYummi.
Manufacturer's Address: 3655 Redpath, Montreal, Quebec, Canada H3G 2W8.
Date of Introduction: 2004.
Wt/Vol., Packaging, Price: 125 gm in a low plastic (polypropylene) cup, with flat lid and individual sleeve. Retails for Canadian $1.39.
How Stored: Refrigerated, 35-40 day shelf life.
New Product–Documentation: Talk with Joanne Hollander. 2008. May 29. In 2004 the company added a 5th flavor, coffee, to their "Classic" line. She doesn't recall which month. This is a dessert made with real coffee that uses soymilk instead of dairy milk.

In 2003 the company won an award–the Grand Prix–for the best new dessert product in Canada. That included non-organic products, so she was competing against Pillsbury and Big Food. The prizes are organized and sponsored by the Canadian Grocers Association.
*

8298. **Product Name:** Westsoy Unsweetened Chocolate Soymilk.
Manufacturer's Name: The Hain Celestial Group (Product Developer-Marketer).
Manufacturer's Address: Melville, New York 11747.
Date of Introduction: 2004.
Ingredients: Organic soymilk (filtered water, whole organic soybeans), filtered water, natural flavors, cocoa powder (treated with alkali), carrageenan.
Wt/Vol., Packaging, Price: 1 quart (32 fl. oz., 946 ml) aseptic Tetra Pak carton. Retails for $0.99.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Product with Label sent by Martine Liguori. 2006. June. Purchased at Grocery Outlet, Pleasant Hill, California. Front panel: Color photo shows chocolate soymilk being poured from a pitcher into a clear glass, against a background of stripes of green and yellow vanishing toward purple mountains. "Made with organic soymilk. 1 g net carbs. 46 mg isoflavones per serving. Lactose and dairy free." Taste test: Nice flavor. Chocolate taste pleasant. User can add sweetener, if desired, to taste. Nice idea. Chocolate taste is pleasant.

8299. Atlas, Nava. 2004. The vegetarian family cookbook. New York, NY: Broadway Books. 339 p. Illust. Index. 23 x 21 cm. [15 ref]
• ***Summary:*** Contains 275 vegetarian recipes, many of which

are vegan; a vegan option is provided for almost all of the recipes that are vegetarian.

The index contains 47 entries for tofu (incl. silken, soft, firm, extra firm), 13 for seitan, 4 each for tempeh, soy mayonnaise, and soy milk, 3 for soy yogurt, 2 each for edamame and miso, 2 each for soy nut butter, soy allergy, soy products, and 1 each for soy Canadian bacon, soy cheese, soy cream cheese, soy hot dogs, and soy pasta.

About the author: Nava Atlas is the author of eight previous vegetarian cookbooks. Her website, www.vegankitchen.com, is one of the most widely visited culinary websites on the Internet. She lives in the Hudson Valley with her husband of 25 years (Chaim "Rocky" Tabak) and their two sons, Adam and Evan. A photo (p. 339) shows Nava Atlas. Address: Author and illustrator, New Paltz, New York.

8300. Elliot, Rose. 2004. New vegetarian cooking: 120 fast, fresh, and fabulous recipes. New York, London, Toronto, Sydney: Simon & Schuster. 192 p. Illust. (color). 28 cm. Index.

• ***Summary:*** Contains many full-page color photos, mostly of dishes prepared from recipes. Chapter 1: Why I'm a vegetarian: Being a healthy vegetarian or vegan, get slim and stay slim, eating for two, nurturing the next generation, look younger, live longer. Chapter 6 is titled "Tofu, tempeh, and seitan" (p. 138-61). Other soy-related recipes and info include: Soy milk (p. 13, 20, 21, 23, 188). Green soybeans [frozen edamame] (with soba, p. 60, 61). Tofu mayonnaise (p. 66). Breakfast smoothie (p. 118, with soy milk, rice milk, or almond milk). Soy yogurt (p. 119, 188). Soy sauce (p. 153, 188). Soy creamer (p. 169, 188). Also discusses: Sea vegetables (arame, hijiki). Quinoa.

8301. Grimaldi, Polly. 2004. Quick and easy soy and tofu recipes. Hayward, California: Bristol Publishing Enterprises. (A Nitty Gritty book). iv + 155 p. Illust. Index. 14 x 21 cm.

• ***Summary:*** Contents: 1. An introduction to tofu and soy. 2. Breakfast. 3. Entrees. 4. Side dishes. 5. Salads. 6. Soups. 7. Sauces, spreads, dips and snacks. 8. Breads. 9. Drinks. 10. Desserts. Address: Hayward, California.

8302. Hottinger, Greg. 2004. The best natural foods on the market today: A yuppie's guide to hippie food. Vol. I. Asheville, North Carolina: Huckleberry Mountain Press. 223 p. Index. 23 cm. [94 ref]

• ***Summary:*** This book looks very commercial because it mentions many natural products by brand name. We wonder if companies paid to be mentioned. Contains scattered recipes for branded products, and scattered sidebars titled "Hippie wisdom." Discusses: Almonds, almond butter, almond milk, American Miso Co., antibiotics (used in agriculture in 4 different ways; prevention, treatment, and control of disease, and growth promotion. In 1998 the European Union banned the use of antibiotics to promote growth in livestock. In Oct. 2000 the FDA proposed a ban on two antibiotics also used to treat humans), antioxidants, Bifidobacterium (bifidus), bovine growth hormone, bovine somatotropin (BST), Bragg Live Foods, Bragg Liquid Aminos, breast cancer, calcium, canola oil, celiac disease, cereal & Kellogg Brothers, cheese alternatives, dulse, edamame, Eden Foods (says "Eden Foods opened shop in 1968. By 1969 they were grinding their own flours and bottling their own oils and nut butters"), FDA, flaxseed oil, Galaxy Foods (says they "started in 1972 when founder Angelo Morini invented a new way to make a cheese product free of saturated fat, cholesterol, and the milk sugar, lactose"), genetically engineered foods, ghee, ginger, gluten sensitivity, glycemic index, GMO [genetically engineered] crops, Graham–Sylvester, heart disease, hippie foods, Horizon Organic, hormones, Lactobacillus, lactose intolerance, Lappe–Francis Moore, Lightlife Foods, magnesium, Maine Coast Sea Vegetables, Messina–Mark, milk–problems with, miso, Miso Master brand, nutritional yeast, oils, olive oil, omega-3 and omega-6 fatty acids, organic farming, palm oil, phytochemicals, phytoestrogens, prostate cancer, protein, Red Star nutritional yeast, quinoa, saturated fat, sodium, soymilk, soy products, soy sauce, soy supplements and concerns, soy yogurts, spelt, Stonyfield Farm, tahini, tamari, tempeh, trans fats (hydrogenated oils), WholeSoy Company. Near the back are many color coupons for the companies mentioned in the book by name. Address: MPH, RD, Asheville, North Carolina.

8303. Petrovna, Tanya. 2004. The Native Foods Restaurant cookbook. Boston, Massachusetts: Shambhala Publications, Inc. xxiv + 328 p. Foreword by Deborah Madison. Illust. by Stephen Brogdon. Index. 23 x 19 cm.

• ***Summary:*** The author is co-owner of this chain of four restaurant in southern California. All the recipes are vegan. The index contains 22 entries for soy, 18 for tofu, 17 for tempeh, 16 for seitan, 7 for cheese–nondairy, 6 for soybeans, 5 each for edamame and soy cream cheese, 4 each for meat alternatives and miso, 2 each for soy milk, soy protein textured, soy sour cream, and textured soy protein, 1 each for milk–soy and soy sauce.

On the color cover is a fine photo of Tanya holding out a shallow basket of vegetables. Address: Co-owner and head chef, four Native Foods Restaurants in southern California (in Los Angeles, Palm Springs, Desert Springs, and Costa Mesa).

8304. Takagi, Junko. 2004. The best of tofu. Translated from the Japanese by Kazuko Nagai and Karen Sandness. Tokyo: Japan Publications Trading. Distributed by Kodansha America through Oxford University Press. 112 p. Illust. (color). Index. 26 cm.

• ***Summary:*** Contents: Cooking regular tofu (Simmered tofu. Chilled tofu. Mapo tofu). Hiya-yakko and salad-

yakko. Homemade tofu. Okara recipes. Tofu as a main dish. Varieties of tofu (momen tofu, soft tofu, juten tofu, yose tofu, oboro tofu, zaru tofu, silken tofu). A brief history of tofu. The nutritional value of tofu. Homemade aburage and atsuage. Simple accompaniments to drinks. Preserved tofu. Draining tofu. Preserving tofu. Cutting techniques. Homemade frozen tofu. Soup and one-pot dishes. Homemade yuba. Desserts (incl. soymilk pudding).

The section titled "Preserved tofu" includes: Tofu preserved in soy sauce with garlic (p. 82). Tofu preserved in miso (p. 82). Tofu preserved in herb oil (p. 83). Tofu preserved in kochujang (p. 82).

A small portrait photo shows Junko Takagi. Address: Japan.

8305. Herring, Sandy. 2005. The Solae Branded Products program (Interview). *SoyaScan Notes.* Jan. 5. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** For a product to become part of the Solae Branded Partners program, the manufacturer must agree to two things: (1) To put the Solae logo (of at least a minimum size) on the product. (2) To include a minimum amount of Solae brand isolated soy protein (ISP) in the product. Usually Solae's advertising program ("Protein in Unexpected Places") promotes some of the Branded Partners' products. The makers of some products that do contain Solae might decide not be part of the Branded Partners program because (for example), the package might be too small to include the logo, the amount of protein that gives the maximum acceptability and profitability might be less than Solae requires.

In the past, many products contained ISP for its functional properties, such as being a good binder or emulsifier. The new program is designed to add value to consumer products by making Solae a "characterizing ingredient" and by advertising that the product contains Solae. Before Solae approaches a potential new customer about "a co-branding opportunity," they do a great deal of consumer research and market research about the concept of a product that contains Solae–its acceptability and how the new product or product concept "would resonate with their consumers." Solae presents their ideas of how the ad might look, the packaging might look, etc.

A media release (faxed by Sandy to Soyfoods Center) lists the following 16 branded products: 8th Continent Soymilk (www.8thcontinent.com), Snapple-A-Day Meal Replacement Beverages (www.snappleaday.com), V8 Splash Smoothies (www.v8juice.com), Gardenburger Meat Alternatives (www.gardenburger.com), Mori-Nu Tofu (www.morinu.com), Yves Veggie Cuisine (www.yvesveggie.com), NuGo Bars (www.nugonutrition.com), DelightFull Meal Replacement & Snack Bars (www.affinta.com), DelightFull Smart Snax (www.delight-full.com), Hormel Health Labs Great Shake & Great Shake Plus (www.hormelhealthlabs.com), Perky's 100% Natural Nutty Grains & Soy Cereal (www.pacgrain.com), Natural Harmony Foods SoyLean (www.soylean.com), So Good Soymilk (available in Canada) (www.so-good.com), Linda McCartney Spicy Peanut Pasta with Vegetarian Chicken (www.linda-mccartney.com), Body Choice Premium High Protein Cookies (www.bodychoicenutrition.com), El Burrito Meat Alternatives (www.elburrito.com).

Note: The Solae Company Logo and Solae* are trademarks or registered trademarks of Solae LLC. Address: The Solae Co., P.O. Box 88940, St. Louis, Missouri 63102. Phone: 314-982-2680.

8306. Cadwallader, Keith R.; Klein, Barbara P.; Sullivan, Cheryl L.; Nash, Marilyn; Khanna, Pradeep; Weingartner, Karl E. 2005. Soy for the last minute chef. Champaign-Urbana, Illinois: Illinois Center for Soy Foods. 63 p. Illust. No index. 24 cm. Series: Soy in the American Kitchen.

• ***Summary:*** Contents: Illinois Center for Soy Foods. Bringing soy foods to the American table, the international way. Why eat soy? Soy foods: Soy flour, soy protein isolate, soymilk, tofu (sidebar: What can you do with half a carton of tofu?), textured vegetable protein, edamame, black soybeans, soy nuts, tempeh, miso, soy analogs. Nutrient information. Purchasing soy foods. Recipes. One recipe per page. Contains many excellent full-page color photos (by David Riecks) of prepared dishes. Photos (p. 57) show: Marilyn Nash, Barbara Klein, Cheryl Sullivan, Megan Puzey, and David Riecks. Address: 1. PhD, Director, Illinois Center for Soy Foods, 170 National Soybean Research Center, 1101 Peabody Dr., Univ. of Illinois, Urbana, IL 61801. Phone: (212) 244-1706 or www.soyfoodsillinois.uiuc.edu.

8307. Adamy, Janet. 2005. Behind a food giant's success: An unlikely soy-milk alliance. At Dean Foods CEO, Buddhist team up to sell Silk brand, and gain clout in organics. Mr. Engles's on 'Sukha.' Nature's way. *Wall Street Journal.* Feb. 1. p. A1, A8.

• ***Summary:*** About Steve Demos, White Wave and Silk soymilk. "Mr. Engles, a Yale-educated lawyer, built Dean Foods Co. into a giant in the dairy business by rolling up little players and slashing costs."

A graph shows the price of Dean Foods' share price from 1998-2005; it has more than tripled in value. A bar chart shows Dean Foods' annual revenue from 1998 to 2004 (projected); it has increased significantly every year. A portrait illustration (dot-style) shows Gregg Engles.

8308. Ridenour, Jeremiah. 2005. Pulmuone first invests in Wildwood Natural Foods in April 2004 (Interview). *SoyaScan Notes.* Feb. 13. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Jeremiah met Tom Lacina and his partner / brother-in-law one day when they showed up at the

Wildwood plant in Santa Cruz. Jeremiah took them on a tour of the plant, then they went out to lunch. Tom was one of those rare people who was both an attorney and a farmer. He owned a farm and had built a small tofu shop on his land. He was selling about $50,000/year worth of soy products at the most. They said they were struggling in Iowa trying to make their tofu plant work, and they were losing tons of money. Somebody (Shurtleff) told Lacina that if he wanted to be successful, he should model his company after Wildwood. After visiting Wildwood, they visited San Diego Soy Dairy and Luke Lukoskie. He then called Jeremiah and said that if he was ever in the Midwest, he was welcome to stop by for a visit. On a trip to the East, Jeremiah stopped in to see Tom, who introduced him to venture capitalists (VCs) in Des Moines who scouted for companies potentially suited for Iowa state money. The VCs grilled Jeremiah about his business. To get money from the state of Iowa, a company had to have more than $5 million/year in sales. Jeremiah really liked Tom and the Soy Sisters (Tom's wife and sister). Wildwood had run out of capacity, working around the clock 7 days a week, so it was "grow or else." Wildwood and Midwest Harvest Corp. (Tom's company) ended up merging, becoming an Iowa corporation and getting money from the state of Iowa for job creation in Iowa and value-added products made in Iowa from Iowa farm crops. A certain percentage of that money had to be spent in Iowa, but Jeremiah was able to get enough to buy a used meat-packing plant in Watsonville, about 25 miles southeast of Santa Cruz. First the new corporation bought 10 acres of land in Grinnell, Iowa, 1½ miles down the road from Tom Lacina's farm and in 2001 built a state-of-the art plant (22,000 square feet) where only soymilk and cultured foods (such as soy yogurt) were made–the only such plant in the USA. Jeremiah has long had a strong commitment to organic farming and the use of organic ingredients wherever possible in his products. On his 320-acre farm, Tom Lacina grows some of the organic soybeans that Wildwood makes into cultured soyfoods in Iowa. This is the type of vertical integration that Jeremiah had long sought. Jeremiah used to contract with various organic farmers, but he gradually found problems keeping the protein levels of his two select varieties high enough and ensuring the cleanliness of the soybeans he wanted. So 5-6 years ago he started to buy his soybeans through a broker, and giving very clear specifications–such as at least 43% protein in the soybeans to be used in making tofu. That system has proven to be much better.

While building his first factory in Iowa, Jeremiah bought an old meat-packing plant in Watsonville, California and began to renovate it for food processing. Building two plants at once turned out to be a big mistake. The usual cost overruns occurred. After building plans had been approved by the inspectors and the meat-packing plant renovation was almost finished, inspectors came back in and said that about $1 million worth of earthquake retrofitting would have to be done. Jeremiah did the work and finished the plant. But now he needed the last million dollars of marketing money that he had been promised by Iowa. But Iowa refused to pay that money, arguing that it would take more than that amount for the company to reach the break-even point. What Wildwood couldn't see, was that politics was at work behind the scenes; Iowa wanted to get out. The money guys told Jeremiah he would have to find a strategic partner. Jeremiah suddenly found himself short of cash and in a financial crisis.

So he made a short list of potential partners who might invest money. House Foods America Corporation (Los Angeles) showed some interest then backed off. Jeremiah had first met Pulmuone in the spring of 2003 at the Natural Products Expo West in Anaheim; their booths happened to be across the aisle from one another. They had a smoothie product and Wildwood had introduced a smoothie the year before; Jeremiah thought that Pulmuone's wasn't very good. Some people from the Pulmuone booth came over to visit. They said that their CEO was coming from Korea and invited Jeremiah to meet him. But for some reason it never happened. So Jeremiah never thought of putting Pulmuone on his short list of potential partners.

Meanwhile, the Iowa cultured products plant was not doing well. "This discipline required to make cultured soyfoods is like that in an operating room." Jeremiah's basic concept was to make these cultured soy products probiotic, which would give them functional value. At his first meeting with the employees he asked how many people had heard of "probiotics," Nobody. Woops. How many had heard of "antibiotic." Everybody. He knew from that moment he would have marketing problems. Jeremiah and a PhD in microbiology had traveled to the plant, established the sanitation protocols, and trained the workers. But soon after he left, the quality control problems returned. Tom Lacina was more interested in having the paperwork done well than in enforcing the sanitation rules. This led to a loss of business and of money.

There was another factor. Jeremiah has come to believe that many, if not most, Midwesterners see anyone from California as a hippie. Hippies don't know how to run businesses and don't understand most Midwesterners. At one point the VCs put their foot down and told Jeremiah, "Too much travel. We don't want you to come here anymore." At that point things got out of control.

Stonyfield Farms was planning to have their soy yogurt made at Wildwood's Iowa plant–a huge potential account. But the people in Iowa could not produce the quality that was required. They missed a huge opportunity to make the Iowa plant successful. Jeremiah's wishes he had waited until the Iowa plant was making good quality products before bringing in Stonyfield.

Today, the Iowa plant is doing very well in every way; sales grew 400% last year. Pulmuone sent their R&D experts there and turned things around in short order. (8) In April

2004 Wildwood sold a controlling interest to Pulmuone. It was a matter of economic survival. So Wildwood has become an international company, with Korean partners. To celebrate the deal, Jeremiah went on a tour of Pulmuone's facilities in Korea. (9) Origins of Pulmuone in 1955 in Korea as a Christian Farming Cooperative. Their mission is "Love Thy Neighbor" and they are deeply committed to pure foods, organic agriculture, and no artificial ingredients. The saintly Mr. Won. Alex Nam went to college with Mr. Won's son. Pulmuone now has 12 organic food products.

In the early days, the Soyfoods Association was unable to attract any Asian soyfoods companies. Today both Asian companies, huge American food processors (Kellogg, ADM, DuPont, Kraft), and even state soybean boards are members. Address: 412 E. Riverside Drive., Watsonville, California 95076.

8309. Wildwood Natural Foods. 2005. Wildwood Natural Foods (Website printout–part). www.wildwoodnaturalfoods.com Printed Feb. 13.

• ***Summary:*** Contents: Home page. 1. Our products. 2. Wildly healthy! 3. About Wildwood. Atop the home page is a new Wildwood logo: "Organic since 1978." "Our mission is to nourish health & well being through supporting dietary & agricultural change." "Founded in 1978 on the edge of Marin County's wild watershed, Wildwood Natural Foods' first goal was to provide fresh vegetarian food to local communities. Today, Wildwood is famous for producing the best tasting, freshest organic tofu, vegetarian products, and soy milk you can buy. Ask a tofu eater which tofu is best. We're confident that they will say 'Wildwood!' because we've heard that response for over 2 decades.

"In shepherding the products from the farmers' fields to your table, we've discovered a variety of non-GMO higher-protein low-fat soybeans. We contract directly with organic family farmers to grow these beans. Wildwood further ensures the freshness of our products by delivering to your store several times per week. Our commitment is to your health and well-being, while emphasizing great taste, because our reputation is in your next bite."

2. About Wildwood. One page gives 5 Wildwood locations (addresses but no phone numbers or e-mails). Another gives a ½-page company history, starting in 1978. "2001–Focusing on unique products that nourish the body & protect the environment, Wildwood builds two new state-of-the-art certified organic plants–one in Watsonville, California, and one in Grinnell, Iowa. Under Tom Lacina's guidance, the Iowa plant becomes the first dedicated cultured soy plant in the US.

"2004–Wildwood teams up with Pulmuone, a respected leader and innovator in the organic and soy food industry. A fourth team member, Paul Kang, joins Billy, Jeremiah & Tom to continue the wildwood mission born over 25 years earlier; to bring Wildwood's wildly delicious and healthful products to every table in America." Address: 412 E. Riverside Dr., Watsonville, California 95076.

8310. Chajuss, Daniel. 2005. Brief biography and history of his work with soy in the USA and Israel. Part I (Interview). *SoyaScan Notes.* Feb. 19. Followed by numerous e-mails through Dec. 2007. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Daniel was born on 23 Sept. 1936 in Jerusalem, Palestine, the son of Elijah Mathew Chajuss (a flour miller, born on 12 April 1903 in Jerusalem) and Dvora Margaliot, born on 4 April 1908 in Tiberias, a town on the western shore of the Sea of Galilee (which today is in northeast Israel). Both his parents were born before World War I when Palestine was still part of the Ottoman Empire; Turkish (written in Arabic script) was the official language, but Hebrew was the main language of the Jewish population.

The family name was pronounced "Chayes" (or "Hayes") but was written "Chajuss." Within the family and among close friends it was pronounced "Khatuth" or "Khayooth," where the initial "ch" is pronounced like the non-initial German *ch* as in *Bach.* Daniel's mother's family had lived in Palestine for at least 9 generations and his father's family for 5 generations. He was the second of three children, with an elder sister and a younger brother.

In 1953, at age 16, he went to the United States to study at Kansas State University (Manhattan, Kansas), focusing on the milling industry and cereal chemistry. In 1956 he began what became a lifelong interest in soy when he learned of the effects of soy flour components on wheat flour; he did some research on soy protein utilization in food systems. He finished his studies in 1956 and graduated in 1957 with a B.S. degree in milling technology. While an undergraduate in the USA, Daniel received lots of help and support from his father and family, but he worked to earn most of his living expenses. After graduation, he returned to Israel, where (in the late 1950s) he worked in the Israel Army Quartermaster Corps. doing food research and development for military purposes.

Eliahu Navot was the first real pioneer of soybean utilization and production in Israel. He devoted much of his life to this work. Daniel met him once or twice in the late 1950s, and was aware of his work. "He impressed me as a person totally devoted to soy and his aim was that the soybean should be grown and used in Israel for many good reasons."

In 1956, the same year his son became interested in soy, Elijah M. Chajuss incorporated a company named "E.M. Chajuss, Ltd." It was a small commercial and trading company, established mainly to trade in grains and foods. Elijah owned 80% of the shares and Daniel owned the remaining 20%. The firm was not very active and it ceased to exist in about 1988.

In 1958 Daniel returned to the United States to do

graduate work at Washington State University (at Pullman). He was not yet married. In 1960 he received an MSc degree in food technology; his dissertation was titled "Post mortem tenderization of chicken muscle."

In early 1961 Daniel went to work at the Northern Regional Research Lab. (NRRL) at Peoria, Illinois, as an employee under A.K. Smith; other coworkers included Joseph Rackis, Walter Wolf, Clifford Hesseltine, and Gus Mustakas. His research included work on soy proteins, and specifically work on making soy protein concentrates (SPC) by the aqueous alcohol wash process, which had been developed by Mustakas and coworkers in about 1960 and published in the *Journal of the American Oil Chemists' Society* in 1962. Yet Daniel was most interested in the biologically active soy compounds which were found in the non-SPC solubles, a by-product of this new aqueous alcohol wash process; he would soon call these solubles "soy molasses." Daniel has a sister in the U.S. Their father came to visit them at this time and Daniel showed him around the USDA laboratory at Peoria and explained the work he was doing there.

In 1962, after about a year at NRRL, he decided to return to Israel, where he got registered and certified Chemical Engineering certification.

In 1962 Daniel and his father, Elijah, incorporated Hayes Ashdod Ltd. (Industrial Zone P.O. Box 2230, Ashdod, Israel); all the shares were owned by their family. At the same time they established Hayes General Technology (HGT) Company Ltd. as the first company's R&D arm or division, and an agro-industrial engineering firm; it was not a separate company and was not incorporated at this time. Daniel's father was chairman of the company and a firm believer that proteins were in short supply and that soy proteins with good acceptability would offer an affordable solution to many. Elijah also handled commercial operations. Daniel dealt mainly with the technology, research, product development, and plant operation. Thus, Daniel spent much of his time with HGT, which was located in a separate building on the Hayes Ashdod site. HGT's goal was to do basic research and develop new technologies and know-how in areas not necessarily related to soy protein concentrates.

Ashdod is a city about 3 miles inland from the Mediterranean Sea, 35 miles due west of Jerusalem and about 15 miles north of the northernmost part of the Gaza Strip. Important harbor facilities have been constructed on the coast near Ashdod; in 1990 its population was about 76,600.

But as with all pioneering ventures by entrepreneurs, starting a new business was risky and the future was unknown. Daniel recalls: "When we started the plant in Ashdod my uncle (father's brother) came to me and said (in a teasing, friendly way), 'Daniel, you are doing a criminal thing. You take your money and your father's money and the bankers' money and big loans to make soy protein concentrate. Who needs it?'"

In 1962 Daniel and Hayes Ashdod began an ongoing, long-term collaboration with Israel's leading center for research on the composition and biologically active components of soybeans–the Hebrew University's Faculty of Agriculture at Rehovot [pronounced rei-HO-vot], located only about 13 miles north of Hayes. Daniel worked very closely with Yehudith ("Judith") Birk, co-discoverer of the Bowman-Birk trypsin inhibitor, who also did work on isoflavones, saponins, etc. She was a great pioneer in the field of soy research; she is still [2005] active at about age 75 and a very able and very nice person. Dr. Michael Naim was a pioneer in the field of soy molasses. Other researchers at Rehovot included Bondi, Gertler, Gestetner, Tagiri, and others.

This collaboration was based on mutual interest in the nutritional value of soybeans, unknown growth factors in soybeans, etc. No money changed hands, no contracts were entered into, Daniel did not assign the researchers any specific projects to work on, and no research was done specifically for Daniel or Hayes. Rather, Daniel and the researchers at Rehovot collaborated on research projects of mutual interest. Daniel sometimes went to Rehovot when needed and did research there, however most of his research was done in the Hayes' laboratories in Ashdod. His work in Ashdod was mainly to fractionate soy components and evaluate the same at the request or understandings with the workers from the faculty. His visits to Rehovot were mainly to discuss the various ongoing research projects with the people involved, and to visit the large library there. Occasionally researchers from Rehovot visited Daniel and Hayes in Ashdod. Daniel spent the most hours in Rehovot during the 1980s, when for about a year he visited the faculty once a week and stayed all day. After 2004 he went there seldom. No one from Hayes did research at Rehovot on a regular basis.

In addition to his own work, Daniel contributed soy products his company had made at Ashdod, e.g., soy protein concentrates (processed in various ways), soy fibers, hulls, soy molasses and various fractions thereof, etc.

Together they worked, for example, on nutritional aspects of soy molasses components, of the soy protein concentrate in human and calves milk replacers, on antigenic components of the soy and their elimination, on the soy dietetic fibers ("Sobit"), etc.

Many research papers were published in leading scientific journals, and PhD and MSc degrees were obtained because of their mutual work. Daniel believes that grants for the research were provided by the USDA under the P.L. 480 (Food for Peace) program. All of them enjoyed the mutual work very much. This fruitful collaboration continued until a few years ago.

In 1963 Hayes Ashdod began operations. Daniel recalls the general situation with soy in Israel at that time:

In 1962 there were several makers of soy food products in Israel. Soybean crushing factories made soy oil for human consumption and toasted soybean meal for animal feeds. However, some of the toasted soybean meal was milled to soy flour for use in households, in the meat processing industry, and in the baking industry. There were also some small cottage industries making various Oriental soy products, such as soy sauce, simply-made toasted and non-toasted full-fat soya flours, roasted soybean coffee, etc.; Daniel does not remember the names of these companies. Continued. Address: Managing Director, Hayes General Technology Company Ltd., Misgav Dov 19, Mobile Post Emek Sorek, 76867 Israel. Phone: (972) 8 592925.

8311. Chajuss, Daniel. 2005. Brief biography and history of his work with soy in the USA and Israel. Part II (Interview). *SoyaScan Notes.* Feb. 19. Followed by numerous e-mails. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Continued: Let us now return to the early, pioneering products introduced by Hayes Ashdod during the 1960s. Hayes Ashdod was one of Israel's first company to make foods from soybeans, and Israel's first manufacturer of modern soy protein products.

In 1963 the company launched its first product, a soy protein concentrate named Haypro. This product was also the first commercial soy protein concentrate manufactured outside the United States.

The main applications for Haypro were as a meat extender, and in hypoallergenic formulas (especially for babies and children allergic to cow's milk). Most of the product was sold outside Israel, mainly in Europe.

Hayes Ashdod was the world's first commercial plant to make "traditional" soy protein concentrate (SPC) and soy molasses by a counter-current aqueous alcohol wash system; that system was developed by Daniel. The plant's initial capacity was about 5,000 metric tons of soy protein concentrate and about 2,500 metric tons of soy protein concentrate per year (each on an as-is wet basis).

Who should get the credit for developing this important new process using alcohol? In Dec. 2007 Daniel wrote: "The credit for developing the process for SPC by aqueous alcohol wash should go to Mustakas and coworkers [at NRRL] in Peoria [1960-62].

"In the early 1960s, aqueous alcohol washed SPC was introduced on a commercial scale by the Central Soya Company's Chemurgy Division in the USA; they developed a immersion aqueous alcohol extraction system to make SPC. At about the same time we introduced in Israel a continuous counter current aqueous alcohol wash system to make SPC. The producers of the 'traditional' alcohol washed SPC generally use the continuous counter current aqueous alcohol wash system today."

Also in 1963 Hayes Ashdod introduced "Soy molasses, a concentrated soy solubles extract, obtained during the production of soy protein concentrate." This product is used in animal feeds and as a source of oligosugars [oligosaccharides] for elderly people to maintain proper [digestive-tract] flora and regularity (mainly in Japan). Note: Daniel Chajuss wrote the above quoted words and date on 14 Jan. 1993 in a letter to William Shurtleff, in response to a question from Shurtleff. On 9 Sept. 1995 he again wrote Shurtleff: "The name 'soy molasses' was coined by me in 1963. It is generally manufactured today in accordance with the contents of my Israeli Patent No. 19168." He recalled in Feb. 2005: "When we got soy molasses, it was a dark, sweet, bitter, viscous, strong-smelling product. It looked very much like molasses. I decided to sell it to the feed mills, which at that time were using beet sugar molasses. So I decided to call it 'soy molasses.' But from my research in Peoria, I knew it contained many very interesting compounds–such as isoflavones and those that prevent perosis in chickens. In 1963 I made an application to the Israeli government to do research on soy molasses. I believed in it very much because of the many interesting components it contained. Now, most of the patents concerning soy isoflavones are about 'soy molasses,' as are most of the scientific articles. So this term has become accepted, probably because it is so descriptive. Soy molasses is more like beet sugar molasses than cane sugar molasses.

In 1964 the company introduced Haysoy brand soy flours in full fat and defatted, toasted and untoasted forms, mainly for the baking and fermentation industries.

In 1966 Hayes Ashdod Ltd. introduced texturized soya protein concentrates under the brand names Hayprotex and Contex. Hayprotex was designed for use mainly as a minced meat extender, while Contex was designed mainly for vegetarian analogs.

Hayes Ashdod started making texturized [textured] soy protein concentrate in large part because they were very familiar and friendly with the Katzin family–Sol and Sid Katzin, two brothers, who came to Israel from the USA and who built the Shefa Protein Industries plant in Arat, Israel. They were idealists who made the first textured soy flour in Israel. Sometimes they would buy (from Hayes Ashdod) the fines of the white flakes to texturize. Daniel asked Sol why he didn't texturize soy protein concentrate. Sol replied: "We don't sell taste, we sell nutrition." Sol was a really nice fellow, a nutritionist at heart and in his profession. They were real pioneers, but they had such a difficult time and were often disappointed.

In the early days, after he saw Sol Katzin's extruder, Daniel first did some trials with a Wenger single-screw extruder. With assistance from Oak Smith, Hayes bought a small Wenger extruder. Since Daniel didn't want to compete with his friend, Sol, he decided to extrude soy protein concentrate–but the product was not very successful, and definitely not as successful as Shefa's textured soy flour products. Daniel's product failed largely because of its high

price whereas the Katzin's product failed because of its flavor–although its shape was excellent. Daniel is not aware of any company that made textured soy protein concentrates before he did. He knows that another similar product was Response, made by Central Soya.

Note: Concerning early textured soy protein concentrates: Hayes Ashdod introduced Hayprotex and Contex in 1966, Griffith Laboratories introduced GL-219 and GL-9921 in 1974, and Central Soya introduced Response in 1975.

"Hayes Ashdod Ltd. Research and Development Department has developed many soy analogs in various forms ('vegetarian sausages', 'fish-less fish fingers', 'vegetarian sea food analogs', 'vegetarian schnitzels', 'vegetarian nuggets', 'vegetarian gulash', etc.) based on texturized soy protein concentrates (Contex) mainly to promote Hayes Ashdod Ltd. markets and to find customers for its products. These vegetarian analog products were never sold directly to the consumers but were sold to institutions or to various manufacturers / distributors mainly in dry rehydratable forms. They started to appear in the market in about 1966 and still exist today. The usual name was the product name as appears above. Soy protein isolates were made on a pilot plant scale and were never manufactured or sold by Hayes Ashdod Ltd. in any significant quantities."

Also in 1966 Hayes introduced Hyprovit and Promolac, two powdered hypoallergenic soy formulas which were designed to replace milk powder formulas for infants and children allergic to cow's milk.

In 1968 Hayes started producing Haypro-T, a special soy protein concentrate, free of trypsin inhibition and free of antigenicity, for use in calf milk replacers as a substitute of milk proteins.

In 1969 Hayes started to produce Primepro, a more functional and soluble soy protein concentrate, by further treatment of the aqueous alcohol extracted soy protein concentrate (Haypro), for use as substitutes for soy protein isolates and for caseinates in various food systems, especially in the meat processing industries.

Also in 1969 Hayes introduced So-Bit (also spelled Sobit), a fiber product which was removed from the soy protein concentrate by a tail-end dehulling system containing both aqueous alcohol washed hulls and fibers obtained from soybean cotyledons. This product has proven to be beneficial as a source of dietary fiber, especially for diabetic patients. Address: Managing Director, Hayes General Technology Company Ltd., Misgav Dov 19, Mobile Post Emek Sorek, 76867 Israel. Phone: (972) 8 592925.

8312. Chajuss, Daniel. 2005. Brief biography and history of his work with soy in the USA and Israel. Part III (Interview). *SoyaScan Notes.* Feb. 19. Followed by numerous e-mails. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Continued: In 1972 Hayes General Technology signed a contract to sell the engineering designs and know-how it had developed for a soy protein concentrate plant to Aarhus Oliefabrik A/S in Aarhus, Denmark. This was HGT's first major contract.

In 1973 Daniel Chajuss sold know-how and complete engineering designs to Aarhus Oliefabrik A/S, Aarhus, Denmark (renamed Central Soya Aarhus A/S in Nov. 1992), to manufacture powdered and textured soy protein concentrates for human consumption, pet foods and calves milk replacers; they were sold under various Danpro brands.

On 19 June 1973 Daniel married Talma E. Hirsch in Rehovot, Israel. They had four sons: Ron, born on 18 Dec. 1973 in Tel Aviv; he is now (2005) a computer scientist and electrical engineer. Amir and Shi (twins) born on 17 Dec. 1976 in Rehovot; Amir is a graduate student in physics and philosophy. Shai is a graduate student in business administration and political science. Ori, born on 2 Feb. 1983 in Rehovot, is finishing his military service duties and going to study at a university.

All the soy protein concentrate facilities worldwide, which were established since 1973 and which are still in operation today (including ADM, USA, SOGIP-Bunge, France, etc., with the exception of Central Soya's USA plants) employ Chajuss' technology and/or engineering designs, and are mainly based on the know-how and technology developed by Chajuss. About 90% of the total world production of soy protein concentrates today is made by aqueous alcohol extraction. Most of the protein concentrates are used in the form of powder or grits, some are further texturized, and some are further treated to provide various "functionalities."

In 1974 the Aarhus concentrate plant began regular full-scale operation. It was later bought by Central Soya.

Also in 1974 Daniel, Prof. Birk and the other researchers at the Hebrew University at Rehovot did much collaborative research on soy phytochemicals, such as soy saponins, soy isoflavones, other soy phenolics, etc., which were obtained from alcohol-extracted soy molasses. They found that soy molasses had many interesting and useful applications–even for stabilizing sandy soil and eventually enabling it to be productive for agriculture. Later they developed a technology to remove the isoflavones (very bitter and beany) and saponins from the soy molasses. They found that the isoflavones in the soy germ are not bitter.

Daniel recalls: At [the NRRL in] Peoria, Illinois, they had tried to breed soybeans that had little or no bitter, beany flavor. Essentially they were trying to breed out the isoflavones; fortunately they were not successful. Yet the isoflavone content of both soybeans and soy molasses covers a wide range; for soy molasses it is about 0.5% to 2%.

During 1974 Daniel told researchers at Central Soya and Aarhus Oliefabrik about these compounds found in soy molasses. Then Unimills started a plant and called it 'soy volasses.' The *2004 Soya & Oilseed Bluebook* has a section

titled 'Definitions and Glossary,' however it does not yet have an entry for 'soy molasses' (p. 367). But there is an entry for 'soy solubles,

During this time Hayes General Technology also did development work on many different modern soy protein products functional soy protein concentrates, textured soy proteins, soy flours (full-fat, medium-fat, and defatted; enzyme active or toasted); also on the extraction of specialty oils and cold press systems; on specific extraction plants, as for jojoba oil, primrose oil, argan oil (from the nuts of the argan tree, *Argania spinosa,* of southwest Morocco), etc.; flash desolventizing systems for non-polar and polar solvents; unique, bland and novel "no waste" (fiber included) soymilk products; precooked "instant" cereal plants; complete low-cost food formulae plants; micro-milling systems; production of vegetarian meat alternatives, incl. vegetarian sausages, schnitzels, patties, and "fried fish"; non-soy based protein products; lupine seed processing incl. lupine protein, lupine oil, and lupine alkalozidone alkaloids production systems. Much work was also devoted to the development of low-cost cottage industries.

In 1980 Hayes started to sell soy lecithin commercially; it was separated from the soy oil obtained during the production of "white" flakes by hexane extraction.

Also in 1980 Daniel's father, Elijah M. Chajuss, began to reduce his full active daily work with Hayes Ashdod Ltd. At this time, the two men began thinking about selling that part of their company. Daniel thought it would be better if he focused on research, development, and engineering work. None of his sons was interested in carrying on the family business.

Until 1981, all the shares of Hayes Ashdod Ltd. were held by the Chajuss family.

1984 Sept. 27-28–Daniel attended the First European Soyfoods Workshop held in Amsterdam, Netherlands, as a delegate of E.M. Chajuss Ltd., which was interested in establishing a simple soy cottage industry; at about that time they had developed some simple appropriate processing technologies for soyfoods and soymilk and were thinking about making those in a company other than Hayes Ashdod Ltd.

1984–The Chajuss family began to sell some of the shares in Hayes Ashdod Ltd. (fully owned by the Chajuss family) to Koor Foods Ltd. (headquartered in Tel Aviv), which was a holding company that owned shares and ownership in various food firms and was a part of Koor Industries Ltd., which had been established by labor unions. Hayes Ashdod Ltd. sold crude soybean oil to firms owned by Koor Foods Ltd. Koor has approached the Chajuss family, asking if all or part of Hayes Ashdod might be for sale.

In Dec. 1984 the majority of the shares in Hates Ashdod Ltd. were sold by the Chajuss family to Koor Foods Ltd. Address: Managing Director, Hayes General Technology Company Ltd., Misgav Dov 19, Mobile Post Emek Sorek, 76867 Israel. Phone: (972) 8 592925.

8313. Chajuss, Daniel. 2005. Brief biography and history of his work with soy in the USA and Israel. Part IV (Interview). *SoyaScan Notes.* Feb. 19. Followed by numerous e-mails. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** 1985–4th of 4 recs. Hayes General Technology (HGT) Co. Ltd. is incorporated as a separate and independent company, still owned by the Chajuss family, especially to develop engineering, process know how and new technologies, mainly in the field of soy proteins.

1986–The Chajuss family sold the remainder of the shares in Hayes Ashdod Ltd. to Koor Foods Ltd. One of Koor's directors was Mrs. Shefi of Kibbutz Hatzor. She was the link connecting her kibbutz with Koor Foods and Hayes Ashdod Ltd.

1987 Feb. 18–Elijah Mathew Chajuss, Daniel's father and co-founder of Hayes Ashdod Ltd., passed away in Rehovot at age 84.

In March 1987 all the shares of Hayes Ashdod Ltd. were purchased from Koor Foods by Kibutz Hatzor. A few months later, in about Sept. 1987, the company name was changed from "Hayes Ashdod Ltd." to "Solbar Hatzor Ltd."

In 1988 Soya Mainz (of Mainz, Germany) bought from Hayes General Technology engineering designs to set up a soy protein concentrate plant in Germany. The plant was not built and instead in early 1991, Soya Mainz bought 25% of Solbar's shares.

In 1989 (a year later) Soya Mainz bought an additional 24% of the shares in Solbar, so that they now owned a total of 49% equity in Solbar Hatzor; Kibbutz Hatzor owned the remaining 51% equity of this joint venture between Israeli and German companies.

Note: The proprietary rights of Hayes Ashdod Ltd. know-how and technology remained, however, Chajuss' proprietary possession. Koor Foods ceased operations in about 1987.

Today HGT does mainly research engineering and designs systems, but it also manufactures special, nonstandardized equipment, and installs complete systems. HGT engineers, including Daniel when warranted, also work as field engineers and consultants on site when the systems they have designed are installed in other countries. They have done that since 1973-74 when their first system was installed outside in Aarhus, Denmark. Systems for manufacturing soy protein concentrates and soy molasses, designed and developed by HGT, have been installed in Israel, Denmark, The Netherlands, France, USA, China, and Brazil. All these plants include texturizing facilities, which although recommended by HGT are designed and made by firms such as Wenger, Extru-Tech, and Clextral. Today HGT is known and often referred to as 'Hayes Ltd.'. Hayes General Technology Company Ltd. is thus thinking about making 'Hayes Ltd.' its official company name. Also

today (2005) this company is owned and managed by Daniel Chajuss.

Note: Hayes Ashdod Ltd., although it was sometimes referred to as "Hayes Ltd." was never officially named "Hayes Ltd."

In early 1991 the German soy processor, Soya Mainz GmbH and Co. bought a 25% equity interest in Solbar Hatzor Ltd. (formerly Hayes Ashdod Ltd.), soya protein manufacturers of Ashdod, Israel. The company has also contracted with Hayes General Technology Co. Ltd. of Israel to set up a soya protein concentrate production facility in Germany.

By 1999 Solbar had started a sister company or division named Solbar Plant Extracts to market its nutraceutical products (such as isoflavones) extracted from soy molasses.

Today (Feb. 2005) the makers of traditional type concentrate generally use the systems developed by Daniel Chajuss. These systems are purchased from Hayes General Technology and are presently used by all the leading makers of traditional and functional soy protein concentrates. Today over 95% of the soy protein concentrates manufactured worldwide are made using systems developed by Hayes. Included among Hayes General Technology clients for traditional or functional soy protein concentrates (SPC) have been: (1) Hayes Ashdod Ltd., Ashdod, Israel (later renamed Solbar Hatzor Ltd.), 1962 to 2005 (complete engineering designs and services). (2) Aarhus Oliefabrik A/S, Aarhus, Denmark (alter renamed Central and presently Solae), 1972 to 1974 and later periodically upon request. (3) Bunge Sogip, Bordeaux, France, 1988 to 1996 (later renamed Central Soya Aarhus and presently Solae). (4) Soya Mainz, Mainz, Germany, 1988 (now part of ADM group). (5) ADM, Decatur, Illinois, 1989-1999. Intended to be used for SPC in the Decatur plant. The knowledge was later also utilized by ADM in plants in the Netherlands (Europort) and China. (6) Finnsoypro Oy, Uusikaupunki, Finland, 1995. Textured soy protein concentrate plant. (7) Cargill, Minneapolis, Minnesota, 2000 to 2003. SPC technology licensing and transfer of know-how and engineering designs. Also consultations. (8) Shemen Industry–Soyprotec Advanced Protein Technology, Haifa, Israel, 1999 to present. SPC technological transfer and licensing agreement and consultation services. (9) China–In China HGT is involved directly and or through Wuhan Crown Friendship and provide Hayes know-how, licensing, engineering designs and services to manufacture SPC to firms such as Shandong Sanwei Oil Enterprise (Group) Co. Ltd., Linyin City, to Crown Proteins, to Gushen in Shandong province and to YiQing Group in Tianjin. (10) Brazil–The transfer of know-how and engineering designs is and was made to such firms as IMCOPA (2006) and others through Crown Iron Works. Cargill, Shemen Industries (Soyprotec), Shandong San Wei, etc.

Daniel has retired largely from the commercial side of his business. But he still (2005) has a small company that makes isoflavone products; he likes very much to do research is this company's laboratories. "Business can be god or bad, profitable or not profitable, but when you do research, you may get good or bad results, but it's always interesting. That's what I like to do." From time to time Daniel goes to the Hebrew University of Jerusalem at Rehovot to do research; he still works occasionally with Dr. Yehudith Birk.

Daniel has become interested in a remarkable plant and its seed, pearl lupin (*Lupinus mutabilis*), a species of lupin that is grown in the Andes of South America for its edible bean. He has done research on the bitter compounds in this underutilized bean, and believes this seed has a very bright future, including as a human food (see separate record).

Daniel's wife is well (Dec. 2007) and works as information librarian in Tel Aviv University Faculty of Medicine.

The year 2007 marks the 45th anniversary of Daniel's pioneering work with soy products in Israel. Today Hayes makes about 450 to 500 metric tons per year. Address: Managing Director, Hayes General Technology Company Ltd., Misgav Dov 19, Mobile Post Emek Sorek, 76867 Israel. Phone: (972) 8 592925.

• ***Summary:*** Contents: Acknowledgments. Introduction, by Sally Fallon. Part I: A short history of soy. 1. Soy in the East. 2. Soy goes West. 3. The ploy of soy.

Part II: Types of soy. 4. Green pods, yellow beans and black eyes. 5. The good old soys–Soybeans with culture. 6. Not milk and uncheese–The udder alternatives. 7. All American soy–First generation soy products. 8. All American soy–Second generation soy products. 9. Soy oil and margarine–Fat of the land. 10. Soy lecithin–Sludge to profit. 11. Not trusting the process. 12. Formula for disaster.

Part III: Macronutrients in soy. 13. Soy protein–The inside scoop. 14. Soy fat–Shortening life. 15. Soy carbohydrate–The flatulence factor.

Part IV: Antinutrients in soybeans. 16. Protease inhibitors–Tryping on soy. 17. Phytates–Ties that bind. 18. Lectins–Glutins for punishment. 19. Saponins–Soap in your mouth. 20. Oxalates–Casting stones.

Part V: Heavy metals. 21. Manganese toxicity–ADD-ing it up. 22. Fluoride toxicity–Dental and mental fluorosis. 23. Aluminum toxicity–Foil-ing health.

Part VI: Allergens: Shock of the new. 24. The rise in soy allergies. 25. The soy-free challenge. Part VII: Soy Estrogens: Hormone Havoc. 26. Phytoestrogens–Food's fifth column. 27. Soy and the thyroid–A pain in the neck. 28. Soy infant formula–Birth control for baby? 29. Soy and the reproductive system–Breeding discontent. 30. Soy and

cancer–High hopes and hype. End notes. Address: PhD, CCN (certified clinical nutritionist), 2162 Candelero, Santa Fe, New Mexico 87505.

8315. Pueppke, Steven. 2005. From the director's desk. *NSRL Bulletin* (*National Soybean Research Laboratory, Urbana, Illinois*) 12(1):7. Feb.
• ***Summary:*** Pueppke likes to put plenty of soy milk on his granola. And he loves edamame served in the pods, unshelled. He likes tofu too, all kinds, but especially the textured kind that can be fried and served under a dollop of sauce.

"Through the Illinois Center for Soy Foods, we at NSRL continue to explore the potential of our growers in Illinois to take better advantage of what some think is a real trend–healthy, good-tasty soy in human nutrition." A portrait photo shows Pueppke. Address: Director, NSRL, Univ. of Illinois, Urbana.

8316. Vitasoy USA. 2005. Introducing Vitasoy Complete: The first fiber-smart, calcium-smart, carb-smart soymilk (Ad). *Yoga Journal.* Feb. p. 43.
• ***Summary:*** Across the top left of the ad: "The perfect balance of body, mind & spirit." Below that, a color photo of yoga instructor Rodney Yee standing on his right leg, with the bottom of his left foot pressed against his inside right thigh, palms folded above his chest. Below that, in small letters, he says: "Moving toward balance is a lifelong journey. Finding the perfect soymilk doesn't have to be."

Across the top right of the ad: "The perfect balance of fiber, calcium & carbs." below that a color photo of the front panel of a quart carton of Vitasoy Complete.

At the bottom left a table compares four nutrients in Vitasoy Complete with those of the leading brand [probably Silk]: Net carbs: 2 vs. 7 gm. Calories: 70 vs. 100. Fat: 2 vs. 4 gm. Fiber: 4 vs. 1 gm.

Visit www.vitasoy-USA.com.

8317. Ladouceur, Andre. 2005. Installing a soymilk plant in Iran (Interview). *SoyaScan Notes.* March 10. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** André has just returned from Iran, where (from Feb. 18 to March 8, 2005) he installed and commissioned a $16 million soymilk plant (VS4000), made by ProSoya, with a capacity of 4,000 liters/hour of soybase, plus mixing stations. Next to that plant he installed a Tetra Pak aseptic packaging line. The plant, located near the capital city of Tehran, expects to start making soymilk commercially (i.e. launch their first products) in 1-2 months. They are now developing flavors and products suited to Iranian consumers. The soybeans used to make the soymilk will be imported from Canada. The plant is owned by a corporation named Soya Sun; the majority of the shares are owned by Iranians, but ProSoya, and he, and other Canadians also own shares. ProSoya contracted with him to do this work in Iran.

For the past 10 years, Andre has lived in Ontario, where he worked for ProSoya doing R&D and commissioning their larger soymilk plants worldwide, and especially in Russia. He also installed a 2,000 liter/hour soymilk plant in Israel. He is now starting a consulting company in Toronto, Canada named MaxSoy Canada Inc.; he is a soy operation specialist, and now lives on Vancouver Island in British Columbia. His second company is Soy Joy Health Products Development, Inc.; he develops products from soy, such as soy kefir.

Talk with Andre. 2005. June 6. He does not know whether or not this company has started to sell soymilk in Iran. They owe him $3,000, and they have broken two contracts with him to do further work. Address: Founder, I&PS, 305b Dogwood Dr. Ladysmith, BC, Canada V9G 1T5. Phone: (250) 616 1714.

8318. Johnson, Kimberly S.; Arellano, Kristi. 2005. White Wave founder departs: Tofu visionary plans to travel, may start a new company upon his return. *Denver Post* (*Colorado*). March 15. p. 1C, 4C.
• ***Summary:*** A small color photo shows Steve Demos. Address: Staff writers.

8319. Ladouceur, Andre. 2005. Industry and Production Systems Consulting Inc. Business introductory. Ladysmith, BC, Canada. 7 p. Unpublished typescript. March 16.
• ***Summary:*** Contents: Executive summary. Services to be offered. Management. Summary of qualifications. Relevant skills. Achieved travel history and experience (1997-2004). Service (rates and fees). Marketing strategy: "Soy Operations Specialist." Address: Founder, I&PS, 305b Dogwood Dr. Ladysmith, BC, Canada V9G 1T5. Phone: 250 616 1714.

8320. White Wave, Inc. 2005. Foodservice catalog: America's soyfood company since 1977. Boulder, Colorado. 20 p. 28 cm.
• ***Summary:*** Catalog (glossy color) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2007. March. Bound with a black comb. ach page is printed, single sided, in color. Each page is devoted to basics and details about one subject or line of products. At the top of each page is the word "Silk" in white on a blue background. On the cover, a photo shows diced baked tofu on a cutting board and in a skillet against a black background. Below the photo is the White Wave logo.

Contents: When it comes to good food, we use our beans! Soyfoods are good for your health (with 6 scientific references). How does organic labeling work? (And: What is the organic status of White Wave products?) What does Kosher mean? (Scroll-K Kosher DE products and Star-K Kosher products). Silk half pints (4 flavors). Silk Soymilk (8.25 oz aseptic, 2 flavors, with straw attached; good for kids K-12). Silk Soymilk single serves (11 oz PET bottles,

5 flavors). Silk Aseptic Soymilk (shelf-stable quarts, 5 flavors). Silk Soymilk Quarts (7 flavors). Silk Soymilk Half Gallons (6 flavors). Silk Bag-in-a-Box (5 gallon capacity, for foodservice or vending machines, 1 flavor). Silk Creamer (3 flavors–1 quart and 3 pints; to smooth out your coffee). Silk Cultured Soy (Just like yogurt, without the dairy; 7 flavors–2 quart and 5 x 6 oz). Silk Live (The drinkable cultured soy smoothie, 4 flavors, 10 oz). TofuTown Tofu Tenders (4 flavors, 9 oz). TofuTown bulk tofu (1 flavor, 5 lb). White Wave block tofu (5 lb or 16 oz). White Wave Baked Tofu (4 flavors, 8 oz). White Wave Seitan and Tempeh (2 seitan in 5-6 lb; 4 tempeh in 5 lb or 8 oz). Nutritional information: Current White Wave products. Address: 1990 N. 57 Court, Boulder, Colorado 80301. Phone: 1-800-488-9283 X-885.

8321. Demos, Steve. 2005. The latest chapter at White Wave. And looking back (Interview). *SoyaScan Notes.* April 10. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Discusses: The famous cave in India where Steve lived. How Dean Foods sent White Wave the $189 million. The origins and importance of Steve's interest in business models. Why Steve accepted the offer to lead Dean Foods' National Brand Group. What he liked most and least about the job after 3-4 months. Experience with Horizon Organic cows. His relationship with Gregg Engles after Dean Foods bought White Wave. The two-year contract and the $11 million bonus.

Details of Steve's termination, without cause, against his will. Why, where, and how Gregg Engles terminated him, Steve's first reaction, and his reaction now. What Steve hoped to accomplish at White Wave, and his evaluation of how successfully he did that. Predictions (market share, sales, profits) in 1 year, 5 years, and 10 years from now.

Steve and Cheryl plan two trips. What he may do after that. Address: Ex-President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

8322. Chajuss, Daniel. 2005. History of his work with soy in Israel (Interview). *SoyaScan Notes.* April 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** ADM made acid-wash soy protein concentrate, which cannot be texturized. Daniel thinks they did this after they bought Central Soya's soy protein isolate plant in Chicago, and brought it to Decatur, Illinois. This inability to texturize was one of the reasons ADM asked for Daniel's assistance in establishing a plant to make aqueous alcohol wash soy protein concentrate.

Central Soya made very good soy products–such as Response [textured soy protein concentrate, launched in July 1975]. Daniel has always had very good personal and business relations with Central Soya.

Hayes Ashdod was sold in 1987 and is now named Solbar. It is still in the same location as before, with much of the equipment. After the sale, Daniel; used to work there almost every day, but he no longer works with that company.

Daniel helped Finnsoypro Oy (Finnsoy) in Finland to start a plant by giving them know-how; however they bought equipment from a company that is the daughter company of Wenger. Finnsoypro is a small factory that makes about 300 kg/hour of textured soy protein concentrate. The owner (who is very smart) is a neighbor and friend of Daniel is Israel.

Daniel really loves his work at Hayes General Technology (HGT), which he still owns; he is the managing director. He works to install new plants around the world based on the unique technology that the and HGT have developed. He sold Hayes Ashdod Ltd. in part so that he could focus more on his work at HGT. He is now working on a plant in Haifa for a company named Soyprotec; it belongs to Shemen Industries, which is also making soy protein concentrate.

Daniel drinks Alpro soymilk. "Now in Israel tofu and soymilk and other soy products are very, very popular." Israel's largest producer of dairy milk, Tnuva, now makes soymilk. They generate a lot of okara, which is transformed into a health food product by another company. It contains about 30% protein, 60% fiber, plus some oil, minerals, etc. Address: Managing Director, Hayes General Technology Company Ltd., Misgav Dov 19, Mobile Post Emek Sorek, 76867 Israel. Phone: (972) 8 592925.

8323. Jacobi, Dana. 2005. 12 best foods cookbook: Over 200 delicious recipes featuring the 12 healthiest foods. Emmaus, Pennsylvania: Rodale Press. xv + 336 p. April. Illust. (color photos). Index. 23 cm. [2 soy ref]
• ***Summary:*** Among these 12 foods rich in nutrients and phytonutrients, the author considers soy the best of all. 28 of the 200 recipes include soyfoods.

In Chapter 1 is a section on Soy (p. 17-24) which includes: Introduction. Everyday ways ("Soy is the easiest Best Food to enjoy every day..."). Benefits at a glance. Soy protein in selected foods (Tofu, miso, edamame, soybeans, soynuts, tempeh, soymilk, cultured soy yogurt, soynut butter, soy flour, soy pasta, soy protein powder, soy drink mixes). Guide to soy products: Soymilk, soymilk cooking secrets, more soy dairy (soy cream cheese, soy sour cream, soy cheese, frozen dessert), terrific tofu (regular tofu, silken tofu, baked or smoked tofu), tofu cooking secrets, other soyfoods (black and yellow soybeans, edamame, meat analogs, miso, soy flour, soynuts, soynut butter, soy protein powder and soy drink mixes, soy sauce and tamari, tempeh), baking with soy, cooking with soy.

Chapter 8, titled "Eggs, beans, and soy," contains recipes (p. 196-203). for: Black soybean and butternut squash stew. Black soybeans. Braised black beans with red wine. Braised tofu with kohlrabi and pears. Broccoli, black mushrooms, and edamame with black bean sauce. Asparagus, red pepper, and curried tofu.

Other soy-related recipes: Finger lickin' edamame (p.

50-51). Black bean hummus (with tofu, p. 57). Mushroom crostini (with tempeh, p. 61). Black bean soup (with dried black soybeans, p. 79). Mushroom consommé with sake (and tofu, p. 88). Double miso soup (p. 89). Nine a day salad (with soynuts, p. 100). Southwestern three bean salad (with canned black soybeans, p. 107). Curry dressing (with silken tofu, p. 115-16). Pepper ranch dressing (with soft silken or regular tofu, p. 116-17). Creamy herb dressing (with tofu, p. 118-19). Blue cheese dressing (with tofu, p. 118). Cracked mustard dressing (with tofu, p. 119). Citrus miso splash (p. 119). Soy and honey drizzle (with reduced-sodium soy sauce, p. 151). Whole wheat linguine with arugula and edamame (p. 164-65). Dirty rice (with tempeh, p. 194). Tempeh, lettuce, and tomato sandwich on rye (p. 207). Honey soynut butter sandwich (p. 208). Grilled pizza (with tofu, p. 210). Soycotash (with shelled edamame, p. 238-39). BBQ collard greens with edamame (p. 240). Miso mashed potatoes (p. 241). Key lime tartlets (with tofu, p. 250-51). Blueberry-lemon trifle (with lemon soy yogurt and soy cream cheese, p. 252-53). Brown rice crisp treats (with salted, roasted soynuts, p. 282). Wild blueberry trail mix (with salted soynuts, p. 283).

On the rear cover is a photo of the author and a brief bio. "After apprenticing at three-star restaurants in France, Dana Jacobi opened a catering business and marketed her own line of gourmet sauces. She has since authored five cookbooks..." Address: Food writer, New York, NY.

8324. Lehrman, Sally. 2005. Drop milk? The dairy industry portrays milk as an essential part of a good diet and our best bet for staving off osteoporosis. *Alternative Medicine.* April. p. 68-73, 94.

• ***Summary:*** This year Americans consumed 594 pounds of dairy products per person. And the chorus of voices urging us to consume still more just grew louder. "The federal government's new food pyramid for 2005 pumps up recommended dairy intake to three cups a day, compared with two in the earlier version."

But there is growing evidence that milk and milk products may not be the wholesome, ideal foods we are told they are. This article documents that evidence. Yet with so many clear risks and unanswered questions, why does the government continue to urge us to consume ever more?

One full-page sidebar (p. 72) titled "Life without dairy" discusses: Where to get calcium. Where to get vitamin D. What to drink (alternatives include soy, rice, and almond milks). When you must have milk (proteins in goat milk are smaller than those in cow's milk). What to spread on your bread.

8325. Stewart, Kimberly Lord. 2005. Soy good for you: It could be the perfect plant-based protein. *Better Nutrition* 67(4):24-26. April.

• ***Summary:*** Soy "is perhaps one of nature's most perfect foods." Food and health journalists rarely use the word "perfect"–except with soy.

"Despite the perfect nutrient profile of soy, the one flaw has been taste. Soy used to taste, well, too soy-like, too bean-like. Now, however, farmers are growing new varieties that taste much better than the beans of the past."

A table shows the amount of protein contained in various "soy foods."

Four ounces of firm tofu–13 grams.
One soy "sausage" link–6 grams.
One soy "burger"–10-12 grams.
One 8-ounce glass of plain soymilk–10 grams.
One soy protein bar–14 grams.
½ cup of tempeh–19.5 grams
½ cup of roasted soy nuts–19 grams.
½ cup of edamame–10 grams.

8326. Wenger, Greg. 2005. Spring surprise: Healthful and delicious soy dishes. *Better Nutrition* 67(4):28, 30-31. April.

• ***Summary:*** "Soy got a new burst of life in 1999 when the US Food and Drug Administration (FDA) approved a health claim that can be used on labels for soy-based foods."

Recipes include: Corn chowder (with "32 oz. Mori-Nu creamy corn chowder soup"). Edamame spread with browned garlic. Golden sautéed tofu with yogurt dill sauce (with "1 lb extra-firm tofu, 1 cup soy yogurt"). Tofu chocolate chip pine nuts muffins (with "12 oz. silken tofu"). Super smoothie (with "½ cup soymilk" plus apple juice, pomegranate juice, banana, kiwi, frozen mango chunks, and frozen cranberries).

A portrait photo shows Greg Weaver, who is "a Certified Executive Chef with the American Culinary Federation." He "hails from Chicago and is a graduate of the prestigious Culinary Institute of America (CIA) in New York State." Address: Chef, Catalina Island, California.

8327. Wolf, Miriam. 2005. Meatless: Soy basically. *San Francisco Bay Guardian.* May 4-10. Vol. 39, No. 31.

• ***Summary:*** "At the Ferry Plaza and Berkeley Farmers Markets, you'll find Basic Soy, a local company that has been bringing its products to market for about a year. It sells some of the freshest soy milk around, along with toothsome savory tofu and creamy soy custard. All of its foods are made with organic, non-GMO soybeans.

"The soy custard is delicate enough to dissolve on the tongue. It comes in a small container of sweet ginger syrup to drizzle over the top, making for a light-tasting dessert or snack. In the next few weeks Basic Soy will ad a densely delicious chocolate soy custard to the lineup. The spicy tofu is firm and meaty, accented with just the right amount of hot oil and sesame seeds. Braised tofu is good enough to eat on its own or in a sandwich but would be the perfect ingredient to slice up and throw into a stir-fry.

"At $5 to $6 a container (at Ferry Plaza) these products

aren't cheap. But the freshness and quality trump the prices–people seem to be eating the stuff up. There's always a buzz around Basic Soy's booth." Basic Soy's "soy layer omelette" features yuba.

"Basic Soy is a young company–all of the people behind it are in their early 30s. It has a hip design sensibility and a mission to bring soy foods to a wider audience." There follows an interview with Minh Tsai, head of Basic Soy. He said that their products are presently sold only at farmers markets. Fresh tofu and soy milk taste better. Go to www.basicsoy.com for more information.

Minh Tsai: "In the United States, soy has been somewhat stigmatized as the 'white block' of tofu that nobody knows what to do with and only a very small segment of the people consume. Basic Soy was formed with the mission of making soy accessible to the public. We wanted to showcase a line of delicious fresh and ready-to-eat soy products that change people's mind about soy." "Most of our recipes are traditional Chinese recipes. The soy custard with ginger syrup, for example..." "Based on our research, the trend of interest in soy is growing." "I believe our customer base is quite mixed [not mostly vegetarians]; we have plenty of carnivores who normally wouldn't touch soy but love our products... We are not vegetarians. But we do eat soy quite a bit."

"Basic Soy is at the San Francisco Ferry Plaza Farmers Market, Embarcadero and Market, Sat., 8 a.m.–2 p.m.; and the Berkeley Farmers Markets: Derby at MLK Jr. Way, Tues., 2-7 p.m.; Shattuck at Rose, Thurs., 3-7 p.m.; and Center at MLK Jr. Way, Sat. 10 a.m.–3 p.m. (beginning mid-May)."

8328. Camps, Lisa. 2005. Re: History of work with soyfoods in Goa, India. Letter (e-mail) to William Shurtleff at Soyfoods Center, May 15. 2 p.

• ***Summary:*** 1984–Lisa came to Goa to nurse a friend back to health; he was a vegetarian. While in India she discovered so many alternative styles of life, so many people from all over the world with a similar consciousness related to healthy body, mind, and spirituality. All "seemed to care about the planet, nature, peace, yoga, natural healing, vegetarianism, etc. India is a whole country of vegetarians, but in Goa, a former Portuguese colony, the inhabitants are mostly Christians who eat meat." That year, Lisa became a vegetarian.

She returned to America, only to yearn to come back to India. So she spent 7-8 years coming and going, whenever finances permitted. When in the USA, she worked with food, in restaurants, hotels, night clubs, made good money, then left again. She took many courses in the health and nutrition at community colleges. She had seen many unhealthy vegetarians and wanted to learn how to be a healthy, vigorous vegetarian. Having helped to deliver 4 children by natural child birth in Goa, she was interested vegetarian diets for children and natural healing.

1982–While in Goa, Lisa met an Australian woman, Diane [Froggatt], who was making her own tofu, because it was not available, and all were tired of Dal (lentils). "I asked her to teach me, and she did... I happily made it for myself to fill the protein gap. Along with Tofu also comes Soy Milk and Okara! A bonus! Made soysausage, soya burgers, etc., but only at home at that time."

1986-87–Lisa attended a Michio Kushi Institute in Switzerland; she learned macrobiotics and shiatsu, which she practiced for about a year, then decided that macrobiotics was "excellent for healing purposes, but not for daily life, simply because any diet so extreme and tasteless is doomed to opposite extremes." She observed that most people who regularly ate a macrobiotic diet "craved massive amounts of Chocolate, or some other form of 'naughtiness.'"

1989-90. Lisa decided to settle in Goa. It had really become her home and it was too expensive to fly back and forth. But how to make money in India? Her many Indian women friends adored lingerie. So she did all the necessary paperwork and started a business named Ooh-La-La-Lingerie Pvt. Ltd., importing undergarments from Europe and traveling all over India to sell them to major department stores. The business went well for 2-3 years until the suppliers and buyers connected–leaving her out.

At the same time, Lisa was selling soya burgers, hummus brown bread, and 4 flavors of soy milk in the Flea market [in Anjuna], where she had a food stall; she made these in her home kitchen. "Then a few people started asking me if I could make them some Tofu! So, I thought why not, since I'm doing it for myself anyway." "All our production started in a small room (in my house), which I converted into a special tofu room, with ventilation above a false ceiling, a sink, stainless steel tables, and extreme hygiene. It was about 3 meters on a side with white tiles. We used (and still use) Aqua Guard water filter systems for all production and packing. So I started by making 2-3 kg at a time, squeezing the milk through a cloth by hand, actually burning my hands on a regular basis, until I decided to build a press. Made some wooden tofu boxes, and did the grinding on a grinding stone. Ouch, too much time and labor! We were selling only to shops and Five-Star hotels.

"As time passed and orders got bigger, my friend and now partner, Richard Chabin, helped me get some machinery, Then, I wanted to learn about Tempeh, and how to make it. There was an American fellow named Joseph Papa who had a book and an interest, so I traded him my shiatsu massages for the method on how to make Tempeh. My interest in Tempeh was the vitamin B's only found in Tempeh. Important if you don't eat beef liver.

"So now I knew many soy foods, and was happily cooking for many friends daily. I enjoy cooking, and they enjoyed eating.

"Then I tried to market the tofu to the local market

and restaurants, but as they were not familiar with it, they were afraid, even after I gave them many recipes" and even showed them how to prepare it Indian style–like paneer. "That's when I decided to open a small sandwich shop."

1999–The sandwich shop, named Bean Me Up, Soya Station, Salad Bar, was a "raging success from the beginning." It became too big for the original premises, and there were long lines at peak season. Note: The restaurant name derives from a famous catchphrase from the movie *Star Trek,* "Beam Me Up, Scotty!"

2004 Oct. 31–Lisa took on large premises with 14 rooms to rent and a small health food shop and restaurant. The commercial foods (tofu, tempeh, soymilk, etc.) are made in a separate building (a small factory) on the compound. It opened on Halloween with a costume party. The "real point is the restaurant" (which kept the same name); it is a unit of Ooh-La-La Ling. When people discover that they can get fresh safe salads, Tofu, Tempeh, Seitan, soya ice cream, Tofunaise, etc. after traveling in India, they are so Appreciative. That is a reward in itself! I truly believe that to introduce people to a more healthy diet, and to given up meat, the alternative must taste good, or why would they consider changing? Hence, our theme is 'The Tasty Alternative.' Lisa, now an established businesswoman, has a new source of income from her 14-room hotel!

Two months later, on 24 Dec. 2004 (Christmas eve), a mob of 150 people, escorted by two policemen (for the mob's protection!) went to the Anjuna-Chopra beach belt and rudely demanded that certain restaurants and shops close down. Why? Because their owners were of foreign origin. No matter that Lisa, of American origin with an Indian passport, had lived in Goa for 23 years and had all the legal papers required to run her business. The agitation was probably initiated by indigenous restaurant / shop owners who resented the foreigners' success and had the blessings of local politicians–a familiar theme worldwide. Fortunately, Lisa had some friends with the National Press, *Times of India,* so she and her fellow foreigners showed no fear, followed the procedures, and made a big noise; the actions of the mob were clearly illegal. Her restaurant was never shut down and the problem appears to have gone away.

Lisa is a member of the Vegetarian Society of India, and occasionally they call on her to give seminars for the members.

Note: Diane Frogatt died a few years ago from cancer.

Photos sent by Ratan Sharma in 2010 and taken by him in Jan. 2005 show the entrance to and the inside of this remarkable soy restaurant and salad bar. They serve only soy-based recipes. They also have a branch in Hyderabad. Note: Lisa does not own a SoyaCow. Address: Owner, Bean Me Up, 1629 Deulvaddo, Anjuna / Vagator, Goa, India 403-509. Phone: 0091-(0)832-227349.

8329. Bean Me Up, Soya Station, Salad Bar. 2005. Welcome to the Soya Station (Menu). Anjuna/Vagator, Goa, India. 10 p.

• ***Summary:*** Contents: Welcome. Starters: Side dishes (incl. Spiced tofu {deep fried} with peanut or chilly sauce. Tofu or tempeh {pan fried} with peanut or tahini. Baked potato with sour cream, butter, or tofu cream cheese). Just for kids: 12 years and under (incl. Tofu bolognese, served over spaghetti. Tempeh sandwich with tortilla chips). New York Pizza (incl. Indonesian special {tempeh & pineapple}. Veg. special {tofu, onion, capsicum, mushroom & olives}, Additional toppings–tofu, tempeh). Salad bar (Tofu salad–Beet root, carrots, onions, cucumber, tofu cubes & tofunaise {vegan}, Side order of tofu or tempeh, with choice of tahini, peanut, or tomato sauce).

Good morning–Breakfast (incl. Tofu {scrambled w/ onion capsicum or butter fried w/soya sauce}, Soysage {4 pieces}, Add 10 rupees for soymilk with any breakfast dish). Desserts: Vegan (non-dairy) or dairy. Vegan includes: Soya ice cream in coconut, chocolate, banana, coffee, or berry (seasonal) flavors. Tofu brownie. All desserts served with soya whipped cream. Beverages (incl. soy milk {hot or cold}–Plain unsweetened, vanilla, chocolate, cardamom). Sandwiches (incl. Soya burger, Tofu burger, Tofu (butter fried), Tofu cream cheese {made with garlic & Herbes de Provence}, Tofu scrambled, Tofulafel. Tempeh {fried} in sesame oil & soy sauce. Seitan fried in onion). Dinner menu: All dinners are served with choice of brown rice, baked potato, or spaghetti, and vegetables of the day. Three broad choices (each with one or more of three symbols by it–vegan, dairy, hot 'n' spicy): (1) Tofu–Khadi tofu, Tofu bolognaise, Tofu lasagne, Tofu nori roll, Vegetable tofu quiche. (2) Tempeh–Tempeh potato patties, Thai style tempeh with cashew nuts, Indonesian sampler. (3) Seitan–Seitan scallopini in cream sauce (served over spaghetti). Address: 1629 Deulvaddo, Anjuna / Vagator, Goa, India 403-509. Phone: 0091-(0)832-227349.

8330. Brewster, Elizabeth. 2005. Beans to go: adding soy to the deli case. *Iowa Soybean Review* (*Iowa Soybean Association, Urbandale, Iowa*) 16(7):12k of 12-page insert after p. 14. Spring.

8331. Dean Foods Co. 2005. Enhancing, enriching, sustaining–Dean's place at the table: 2004 annual report. Dallas, Texas. 88 p. 28 cm.

• ***Summary:*** This annual report is structured to make it very difficult to find the company's financials, and net income (profit). Dig enough and you will find the numbers on p. 49. For the year ended 31 Dec. 2004. Net sales were $10,822 million, up 17.8% from 2003. New income (profit) was $285.4 million, down 19.8% from 2003. "First, our Branded Products Group, which we have renamed WhiteWave Foods, had an outstanding year. WhiteWave Foods' sales increased to $1.2 billion for the year, with operating margins more than

doubling to 10%" (p. 2).

New developments: On 2 Jan. 2004 Dean Foods acquired Horizon Organic. In March 2004 they acquired a license to use the Land O'Lakes name on certain dairy products sold in the eastern United States. Now they have an exclusive right to use the Land O'Lakes brand on most dairy products (excluding cheese and butter) sold anywhere in the country. In Aug. 2004 Dean Foods its decision to consolidate White Wave, Horizon Organic, and Dean National Brand Group into White Wave Foods, a stand-alone operating unit.

"Outstanding brand performance:... Silk continued to perform well, with sales up 33% compared to 2003. Silk market share in the retail grocery channel held steady at 78%, indicating that Silk remains the clear market leader." Horizon Organic's sales increased 24% and sales of Dean's entire portfolio of Land O'Lakes products increased by 34% over 2003.

The section titled "White Wave Foods: Enhancing health, enriching lives, sustaining our environment" (p. 8-13) states that "WhiteWave Foods Company is the largest organic food company in the country." The two colorful pages on Silk note: "We estimate that Silk has been enjoyed in close to 19 million American homes." In 2004 Silk introduced 5 new items that generated $50 million in sales: Very Vanilla, Enhanced, Unsweetened, Kids Silk, and Silk Live. Also the new Silk Twin Pack, which includes two half-gallon cartons in an easy-to-carry box. Silk Kids packs come vanilla, chocolate and strawberry. "Each pack contains eight, 6.5 ounce cartons featuring kid-friendly animal artwork." Many Silk products bear the USDA Organic seal of approval. "Silk and Horizon Organic are proud sponsors of Farm Aid, an annual concert that raises funds to help farmers keep their land. We are the largest purchaser of organic soybeans and organic milk in the country."

Page 20-21 state: "In addition, effective March 11, 2005, Mr. Steve Demos, President of WhiteWave Foods Company resigned his position." Note: Demos was terminated by Engles without cause or explanation. On 5 April 2004, White Wave "acquired [for $25.7 million] a soy processing and packaging facility in Bridgeton, New Jersey. Prior to the acquisition, the previous owner of the facility co-packed Silk products for us at the facility."

Accompanying the annual report is an innovative "2004 proxy statement and notice of annual meeting" (24 p.). In 2004 Gregg L. Engles, age 47, Chairman of the Board and CEO had: Salary $1,000,000. Bonus zero. Other annual compensation $238,767. Value of stock units awarded: $3,148,170. Number of stock options granted: 324,000. Address: 2515 McKinney Ave., Suite 1200, Dallas, Texas 75201. Phone: 214-303-3400 www.deanfoods.com.

8332. Holleran, Joan. 2005. Soy, the next level of new: According to Information Resources Inc. in Chicago, soymilk was essentially nonexistent a few decades ago. Today, the healthful, non-dairy drink has reached critical mass with 10 percent of households purchasing it. In 1999, IRI reported the industry was worth $29 million. In 2003, it was worth $203 million. *Iowa Soybean Review* (*Iowa Soybean Association, Urbandale, Iowa*) 16(7):12c-12d of 12-page insert after p. 14. Spring.

• ***Summary:*** A "Letter from Linda" Funk (Executive Editor, The Soyfoods Council) on the facing page (12B) states that this is the 2nd soyfoods insert. "Soyfoods sales continue to grow with the development of new and delicious products. Joan Holleran, editor of Stagnito's New Products Magazine, developed another soyfoods insert this past winter to be delivered with their monthly magazine. About 37,000 retailers and foodservice professionals receive this magazine so the reach and circulation is fabulous for the soyfoods industry. Kollin Stagnito, vice president and group publisher, graciously agreed again this year to let us send this insert to you... And there's no better time to share with you than April, Soyfoods Month.

In 1999 Information Resources Inc. (IRI) reported that the soymilk industry in the USA was worth $29 million. In 2003 it was worth $203 million. Color photos show: (1) Containers of four flavors of Silk Live!–a live-cultured soymilk smoothie. The product will be entering the mainstream market early next year. (2) Packages of four flavors of Soy Delicious Organic Li'l Buddie's ice cream sandwiches (made by Turtle Mountain, Eugene, Oregon). (3) Front panel of Simply Asia Soy Noodle Soup Bowl (Berkeley, California). These microwaveable meals come in Mushroom & Ginger, Savory Onion, and Szechwan Garlic. (4) Joelle's Choice Chocolate Pudding (based on soymilk, from Joel Health Industries Inc., Fairfield, Iowa). (5) Hershey's 1 Gram Sugar Carb Bar (Chocolate Candy with Soy Crisps flavor).

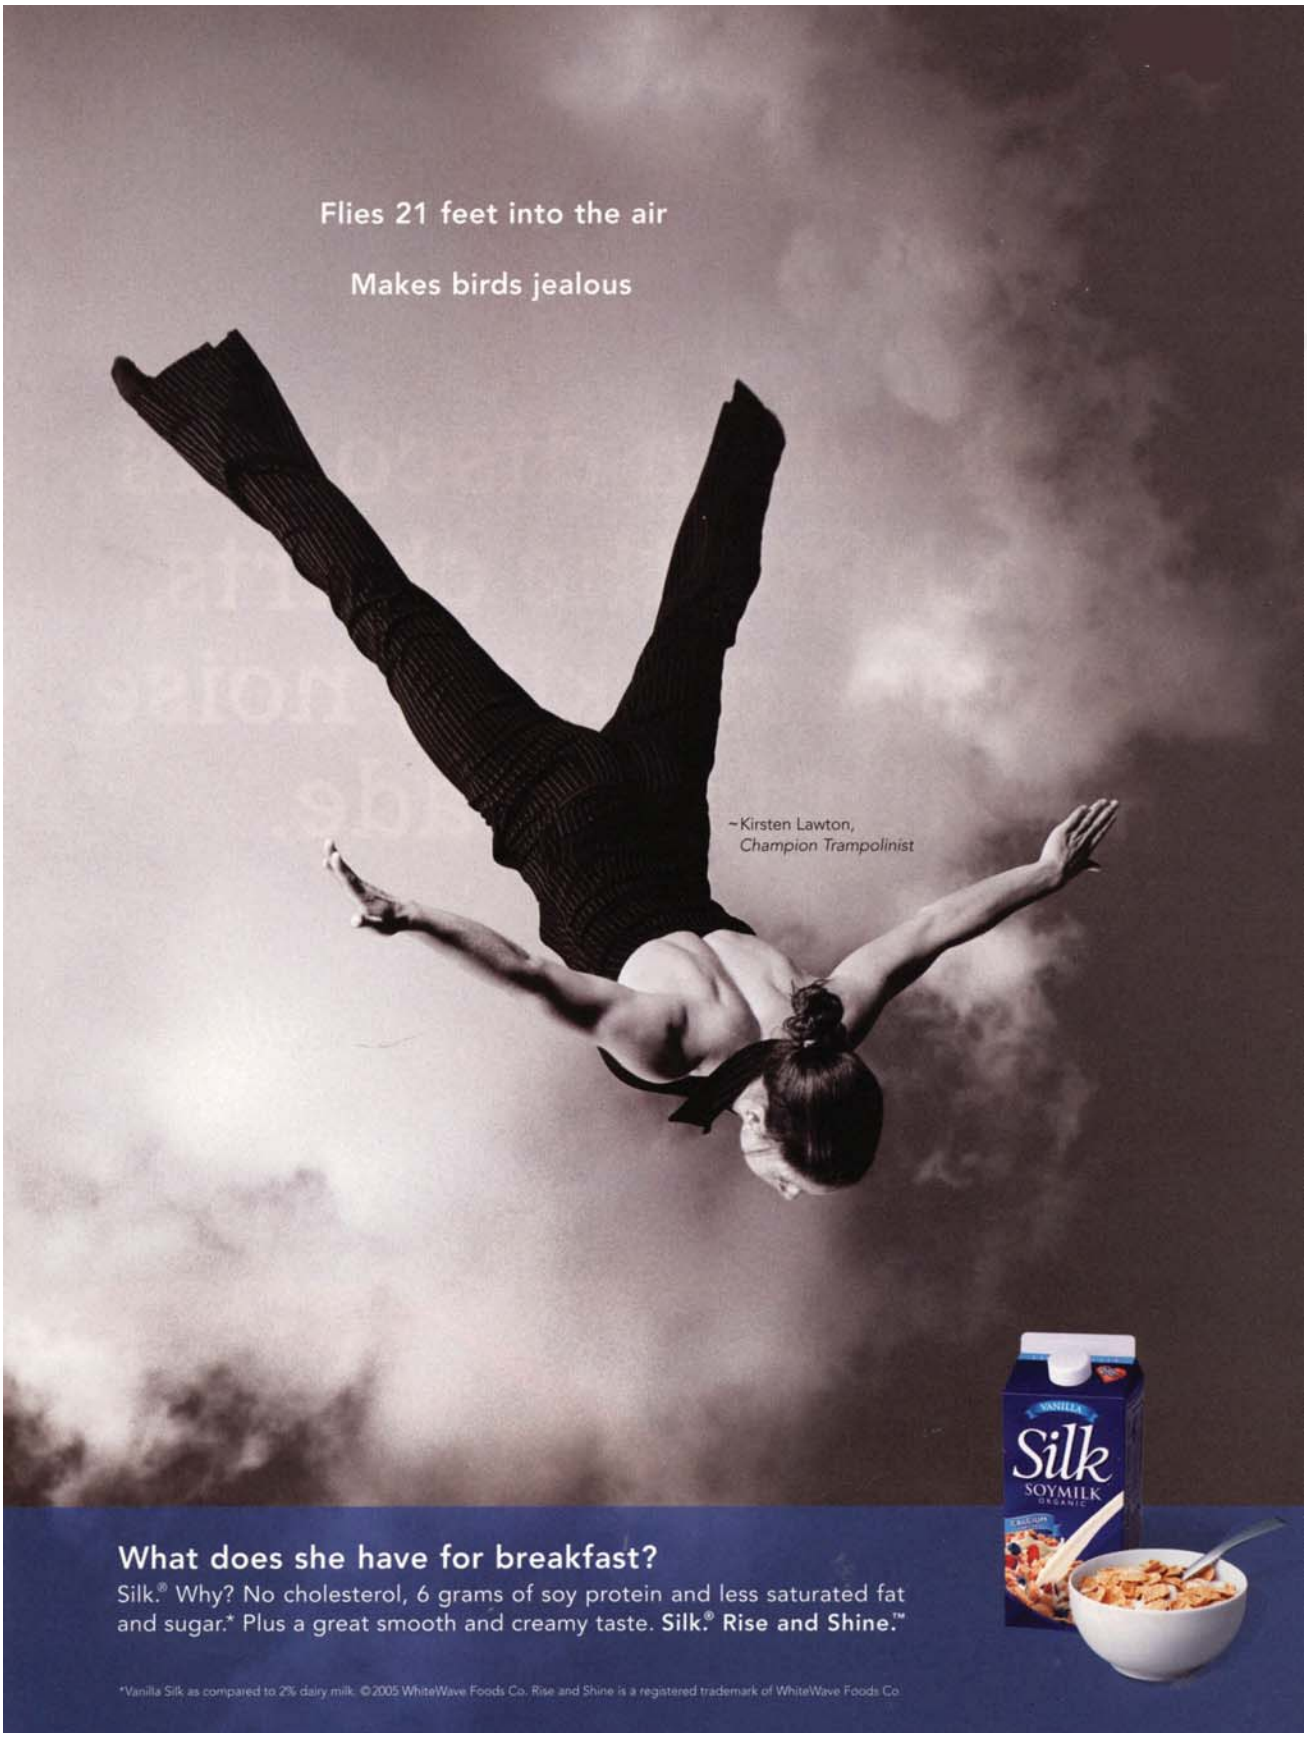
8333. House Foods America Corporation. 2005. House Foods: Tofu and other soy products (Leaflet). Garden Grove, California. 2 panels each side. Each panel: 28 x 21.5 cm. Dated May 2005.

• ***Summary:*** Glossy color and dated. Appears to show a photo of the front of the package of all the different types of House-brand soy products made at this time.

(1) Tofu: 12 types / SKUs. (2) Organic tofu: 4 types. (3) Seasoned tofu (tofu steak): 2 types. (4) Soy snack (Tofulicious): 3 types. (5) Soy milk: 6 types. (6) Age [Fried tofu]: 11 types. (7) Natto: 3 types. (8) Konnyaku (8 types, 2 of which contain tofu). Address: 7351 Orangewood Ave., Garden Grove, CA 92841.

8334. White Wave, Inc. 2005. Flies 21 feet into the air, Makes birds jealous (Ad). *Vegetarian Times.* June. p. 34.

• ***Summary:*** A full-page color ad dated 2005. In the top 7/8 of the ad a black-and-white photo shows a young women wearing long black pants, with both arms extended,



apparently flying. She is: "Kristen Lawton, Champion Trampolinist."

In the bottom 1/8 is a color half-gallon carton of Silk soymilk next to a bowl of breakfast cereal–on a blue. The color carton protrudes into the black-and-white area where it finds a dark gray background.

The white text across the bottom reads: "What does she have for breakfast? Silk. Why? No cholesterol, 6 grams of soy protein and less saturated fat and sugar.* Plus a great smooth and creamy taste. Silk, Rise and shine. * = Vanilla silk as compared to 2% dairy milk." Address: Boulder, Colorado.

8335. Brown, Samantha. 2005. Cambodia's first soya milk factory aims to nourish nation's children (News release). Agence France-Presse English Wire via NewsEdge Corporation. 2 p. July 8.
• ***Summary:*** In 1998–the year peace finally arrived in Cambodia–Pierre Tami established Hagar Soya, a micro-enterprise making fresh soy milk in Cambodia. The small business started out selling about 500 liters of soya milk and tofu locally; this gave both work and hope to dozens of poor local women. But Tami, the executive director, wanted to do more. He was successful in raising $1.3 in investment capital from an array of sources, including the World Bank's Mekong Private Sector Development Facility. He used the funds to build a state-of-the art long-life [aseptically packed] soymilk plant in Phnom Penh, Cambodia's capital.

By 2003 the expanded plant began commercial production and today it has a daily production capacity of 12,000 liters (more than 3,000 U.S. gallons). It employs 50 people, mostly poor women, who earn a decent salary. The company's flagship product, So! Soya, is now sold to more than 500 wholesalers and retailers. Plans are for 8 new soymilk products to be introduced next year.

8336. Asociacion Soya de Nicaragua (La). 2005. [Soynica (Website printout–part)]. www.sdnicc.ni/soynica Printed July 12. [Spa]
• ***Summary:*** Home: Inicio (Introduction). Sobre Soynica (About Soynica, incl. a list of commercial products, a history of the company, and a mission statement). Programas (Programs). Boletin (Bulletin). Contacto (Contact information). Enlaces (links).

Soynica is a small company that makes foods derived from soymilk and other sources that it sells under the Nutrem brand. It was established on 16 October 1994.

Nutrem products: 11 fresh, incl. 4 flavors of soymilk and 4 types of tofu; 11 dry, incl. Soyavena and soy flour; and 11 alternative meals–incl. tempeh.

History of Soynica: In Nov. 1979 Dr. Arturo Aldama and his wife, Dulce, representative of the organization Friends of the Earth (*Amigos de la Tierra*) in Mexico, and Luci Morren, a Belgian woman, organized a group of 8 volunteers who arrive in Nicaragua with the only mission of sharing their knowledge of home preparation of soyfoods. They brought with them only 20 kg of soybeans, because they had been told that soybeans were widely grown in Nicaragua.

But it was not so. So the engineer Alexander Fernandez helped to find about 60 quintals of soybeans with a producer in Esteli, and demonstration plots were started. And so it began. Address: Managua, Nicaragua.

8337. Plamil Foods Ltd. 2005. Plamil (Website printout–part). www.plamilfoods.co.uk Printed July 18.
• ***Summary:*** Home: About us. Products. News. Shopping. Specials. F.A.Q. The home page shows close-up of 12 product labels. Plamil sells 27 consumer and 11 catering / foodservice products. The Products and the Shopping pages show these products and their labels in more detail: Chocolate (100 gm)–Plain, Mint, Roasted Hazelnut, Orange, Martello. Organic chocolate (95-100 gm–Dark, Cayenne, Expressions, Ginger, Plain, Mint, Orange). Organic Chocolate Spread (275 gm)–Plain, Orange, Hazelnut. Carob (95 gm)–Plain, Orange, Hazelnuts, No Sugar Added. Milk Alternatives (1 litre)–Organic Soya Milk (plain), White Sun (contains no soya). Egg Free Mayonnaise (315 gm)–Plain, Garlic, Chili, Tarragon, Organic Plain, Organic Lemongrass. Catering packs (1.5 to 10.5 kg)–Mayonnaise, Chocolate Drops, Baking Chocolate, Carob Drops.

About us: "Plamil is a private company making top quality tasty food for all, supplying customers, retailers, wholesalers and food catering / manufacturing facilities worldwide. Our specialty is making food products free from any animal origin. This means we make great tasting products ideal for those who follow a vegan diet and for all those with allergies to ingredients like dairy milk, eggs, etc. Many products in our range are organic and we are against the use of genetically modified ingredients."

"Our history: Plamil (then Plantmilk Ltd.) was created to manufacture a 'milk' from vegetable source, and made UK history by pioneering British made soy milk in 1965. This was formulated by nutritionists and fortified to cater for the average vegan requirement. Gradually from those early years Plamil has diversified to manufacture a whole range of foods that you see today.

"Where we make our products: We manufacture products in our own factory, where no animal ingredient is ever used. We are also wheat / gluten free site and strictly control purchase of all our ingredients to ensure that none are genetically modified... Also there are no hidden ingredients or processing aids with our products. The ingredients on the label are what you get, nothing more."

"Latest news: Arthur Ling 1919-2005. It is with great sadness we have to report that our founding Director Arthur Ling passed away on the 18th of January. Since the early 1960s his dedication to this company was renowned. He will be sadly missed by all Directors, staff and all that knew

him." A color photo shows Arthur Ling.

Click on the link for Arthur Ling to get a full biography. Veganism was his religion, which he spent a lifetime promoting. He had three children: Julie, Trevor, and Adrian Ling (who now runs Plamil). He had unwavering and uncompromising views on many subjects related to a vegan lifestyle. He was anti-war, egalitarian, and a supporter of "the common man." "A Lover of the outdoors, we was an active Naturist [nudist]. In 1898 England's first health food store was established by "Henry James Cook, who named his store Pitman Health Food Store, in honor of the vegetarian Sir Isaac Pitman, the inventor of shorthand. In 2001 Arthur was awarded the newly created Henry James Cook Award for 'his life's work in the development and production of vegan foods especially for the introduction of the first plant-derived vegan milk in the United Kingdom.' This was Arthur's most cherished award." In 1926, at age 7, he became a vegan when he witnessed a fish being killed at the seaside. "He kept notes of a lecture given in 1938 titled 'Health without dairy produce,' which influenced him greatly. Arthur worked at the London Vegetarian Society, and after the Second World War became an active member of the new Vegan Society, created by Donald Watson in late 1944. For a few years Arthur had his own health food store, and also served on the council of the National Association of Health Food Stores. An accountant by profession, Arthur was involved in his first commercial project in the post war years. A company called Solflower Ltd., based in Wales, was created to produce biodiesel from sunflowers. Unfortunately this project was 50 years ahead of its time and did not enjoy commercial success.

"Arthur is known by most for his work at Plamil and the Vegan Society. From his association with the Vegan Society in the 1950s he joined a group interested in producing a non-dairy milk. Later Arthur attended a meeting called for by Leslie Cross, who later gave it the name, the Plantmilk Society." He worked tirelessly on its behalf. Address: Folkestone, Kent, England CT19 6PQ. Phone: 01303 850588.

8338. Cadwallader, Keith R.; Klein, Barbara P.; Khanna, Pradeep; Chen, Dejun; Nash, Marilyn; Puzey, Megan; Sullivan, Cheryl L. 2005. Around the world with soy. Champaign-Urbana, Illinois: Illinois Center for Soy Foods. 62 p. Illust. No index. 24 cm. Series: Soy in the American Kitchen.

• ***Summary:*** Contents: Illinois Center for Soy Foods. Bringing soy foods to the American table, the international way. Why eat soy? Soy foods: Soy flour, soy protein isolate, soymilk, tofu, textured vegetable protein, edamame, black soybeans, soy nuts, tempeh, miso, soy analogs. Nutrient information. Purchasing soy foods. Recipes. One recipe per page. Contains many excellent full-page color photos (by David Riecks) of prepared dishes.

Photos (p. 61) show: Marilyn Nash, Dejun Chen, Megan Puzey, and David Riecks. Address: 1. PhD, Director, Illinois Center for Soy Foods, 170 National Soybean Research Center, 1101 Peabody Dr., Univ. of Illinois, Urbana, IL 61801. Phone: (217) 244-1706 or www.soyfoodsillinois.uiuc.edu.

8339. Haren, Chuck. 2005. Sustainable community food production: Central American Food Security Initiative (CAFSI). *Plenty Bulletin* (*Summertown, Tennessee*) 21(2):1-2. Summer.

• ***Summary:*** On the cover (p. 1) of this issue are large photos showing people and modern sanitary equipment producing soymilk at four locations in Latin America: (1) ADIBE, Molino Belen, Solola, Guatemala. Agostin Xoquic. (2) UPAVIM, Guatemala City, Guatemala. (3) Huichol Center, Huejuquilla, Mexico. (4) Soynica, Managua, Nicaragua.

Molino Belen is a Mayan village near Solola. "Soynica has become widely known for its work with mothers and children and for promoting use of locally produced soy foods to help address nutrition and economic development issues. During March and April of this year Plenty representatives worked for five weeks helping staff managing Casa Nutrem (Soynica's food processing facility) to purchase, install, and learn to use new cooking, packaging, and refrigeration equipment." A photo (p. 2) shows Elena Xoqic pouring soymilk into a bottle. She and her husband, Agostin, both Cakchiquel Maya, "have been managing the Mayan 'Soyaria' near Solola, Guatemala since Plenty set it up in 1980."

A cover letter from Peter Schweitzer, executive director of Plenty International, notes that Louise Hagler has been working with the Huichol people of Mexico, helping them integrate soy-based foods into their diet. The "Soyaria" near Solola, Guatemala, makes "soymilk, tofu, tempeh and soy ice cream using the very same stainless steel equipment we brought down in an old school bus in 1980! Plenty is helping them renovate the original building and upgrade the equipment. Profits from the Soyaria have been used to fund community development projects such as a new water system and an outdoor basketball court for the school."

Note from Chuck Haren (via Lisa Wartinger, Programs Manager, Plenty International). 2005. Oct. 1. Average weekly sales for the Soyaria at Molino Belen are: Soymilk 400 half-liters. Tofu 260 lb. Tempeh 70 lb. Pinole (dry corn and soy drink mix) 50 lb. Soy ice cream cones 300. Okara 200 lb.

"Plenty has stepped up its technical support to the four CAFSI partner organizations in 2005, and that support will continue in 2006." Address: CAFSI Program Director.

8340. Vitasoy International Holdings Ltd. 2005. Annual report 2004/05. Go natural. New Territories, Hong Kong. 124 p. July. 30 cm. [Eng; Chi]

• ***Summary:*** Turnover (sales) rose 4.9% to HK$2,380 million. Gross profit rose 6.2% to HK$1,368 million.

EBITDA (earnings before minority interest, interest expense, income taxes, depreciation, and amortization) rose 8.8% to HK$284 million. Basic earnings per share rose 5.9% to 12.5 Hong Kong cents (p. 4).

A five-year financial summary (from 2001 to 2005), expressed in Hong Kong dollars, appears on page 123. Address: No. 1, Kin Wong Street, Tuen Mun, New Territories, Hong Kong. Phone: 466 0333.

8341. *Dallas Morning News.* 2005. Dean Foods, White Wave beats estimates. Aug. 5.
• ***Summary:*** Dallas-based Dean Foods Co. announced that 2nd quarter profits rose 12% "on stronger milk and organic product sales and cost savings from plant closings."

Sales at the company's White Wave Foods unit, which includes market-leading soymilk and organic brands, rose 12% to $284 million and operating income jumped 160% to 28,7 million.

The White Wave Foods unit, the company's growth leader, has been without its own permanent leader since March of this year when Steve Demos, the founder of White Wave, "stepped down unexpectedly."

Note: Steve Demos has said that he did not step down; he was fired by the CEO of Dean Foods for reasons that are not clear to him.

8342. Soyatech.com. 2005. U.S. soyfoods market shows signs of maturity with slow growth in 2004, says new report. http://www.soyatech.com/bluebook/news/viewarticle.ldml?a=20050829-1. 3 p. Posted 29 Aug. 2005. [6 ref]
• ***Summary:*** *Soyfoods: The U.S. market 2005,* a new market study, shows that total sales of soyfoods hit $4.0 billion in 2004, but "showed the slowest year-over-year growth (2.1%) for the industry as a whole since the early 1980s, when the category began its climb."–according to Peter Golbitz, president of Soyatech, Inc. In 2004, 4 of the 5 top soyfoods categories (meat alternatives, tofu, energy bars, and meal replacements) showed decreased sales; only soymilk posted increased–but modest gains. Up and coming categories include snack foods and other dairy replacements.

In recent years, a number of articles and reports have questioned the health benefits of consuming soyfoods and products containing soy ingredients. "If you look at the top 10 companies in the soyfoods market today, virtually all of the original founders and visionaries are gone," observes Golbitz. During the boom years of the late 1990s and early 2000s, they were bought out by bigger food companies, such as Dean Foods, Kraft, Kellogg, General Mills, ConAgra and Hain-Celestial. These are solid companies but are less willing to take risks and are driven more by "market data than by vision."

The report, the 5th in a series by information partners Soyatech, Inc. and SPINS, is sold in parts. The "macro section" [80-page executive summary] costs $2,900. The more specialized sections are available for about $1,500 each. You can download the prospectus at: http://www.soyatech.com/ pdf/soyfoods05.pds. Soyatech was founded in 1985 and SPINS in 1995. Address: Bar Harbor, Maine.

8343. White Wave, Inc. 2005. Fight every day. Get along perfectly (Ad). *Vegetarian Times.* July/Aug. p. 32.
• ***Summary:*** A full-page color ad dated 2005. In the top 7/8 of the ad a black-and-white photo shows two people fencing. They are: "Keeth & Erinn Smart, Gold Medalists, brother and sister."

In the bottom 1/8 is a color half-gallon carton of Silk soymilk next to a bowl of breakfast cereal–on a light purple background. The color carton protrudes into the black-and white area where it finds a white background.

The white text across the bottom reads: "What do they have for breakfast? Silk. Why? No cholesterol, 6 grams of soy protein and less saturated fat and sugar.* Plus a great smooth and creamy taste. Silk, Rise and shine. * = Vanilla silk as compared to 2% dairy milk." Address: Boulder, Colorado.

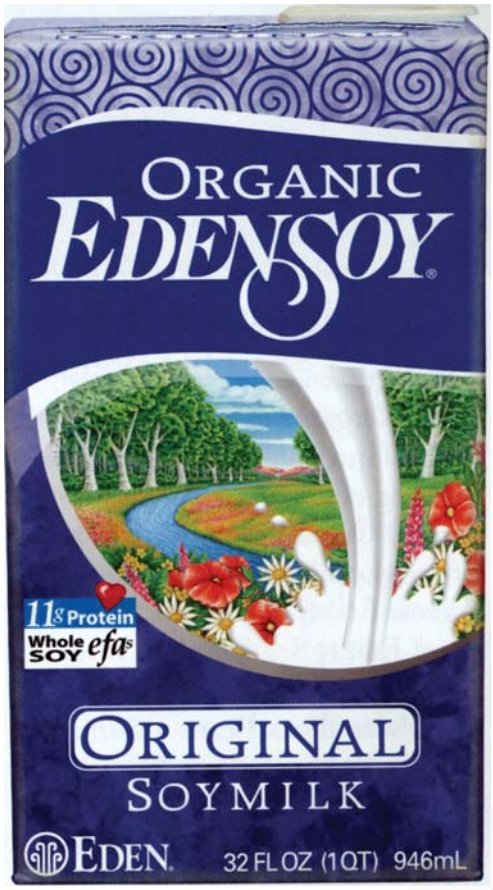
8344. Southern African Soyfood Association (SASFA). 2005. Home page and links (Website printout–part). www.soyfood.co.za Printed Sept. 22.
• ***Summary:*** Links: (1) Home page. (2) Executive. (3) Membership. (4) Constitution. (5) Quality mark. (6) Minutes of meetings. (7) Conferences. (8) Publications. (9) Weekly ASA report. (10) Recipes. (11) Useful information. (12) Useful links.

The 7th International Soyfood Conference will be held on 28 Sept. 2005 at Farm Inn, Pretoria, South Africa. A preliminary program and registration form are given. The program is sponsored by the American Soybean Association (ASA) and WISHH. Speakers from the USA include Peter Golbitz, Frank Daller, Paul Lang, Jim Hershey (Director, WISHH), Rep. of Solae Company.

Some papers from the 2002, 2003, and 2004 conferences are available on the site. Also "Minutes of executive committee meeting held by telephone conference on 18 Nov. 2003. "The web site has been upgraded with the financial support of the American Soybean Association... The recipe book was updated and expanded by 20 pages. A thousand copies were printed with the financial support of the ASA. 170 people attended the soy food conference on 17 July 2002.

The constitution of the SASFA, dated 28 Oct. 1999 (11 pages), is filed with the above materials.

8345. Eden Foods, Inc. 2005. New Edensoy: Now better than ever. *Edenews.* p. 1.
• ***Summary:*** "Creation and maintenance of purity in food." "GEO free whole soybeans & grain." "... no genetically engineered ingredients,..." www.edenfoods.com.



Color photos show Organic Edensoy in Vanilla, Original, Original Fortified, and Unsweetened flavors. Address: 701 Tecumseh Rd., Clinton, Michigan 49236. Phone: 888-424-EDEN.

8346. Eden Foods, Inc. 2005. Organic Edensoy: Better than ever (Leaflet). Clinton, Michigan. 2 panels each side. Each panel: 28 x 21.5 cm.
• ***Summary:*** A glossy color leaflet (8½ by 11 inch) sent by Patricia Smith from Natural Products Expo East. 2005. Sept. On the front panel: "Improved taste. Smoother, cleaner pour. The only soymilk in America made with 100% real vanilla extract... No refined sugars. Gluten free offerings. USA family farm organic grown GEO free whole soybeans and grain." Circle K parve.

The inside two panels give details on the following soymilk products (all are organic) now made and sold by Eden Foods. EdenSoy Unsweetened. EdenSoy Chocolate. EdenSoy Original. EdenSoy Vanilla. EdenSoy Carob. EdenSoy Extra Original. EdenSoy Extra Vanilla. EdenSoy Light Original. EdenSoy Light Vanilla. EdenBlend (Rice & Soy). A color photo shows the front of each carton No product contains refined sugars.

The rear panel highlights four of these soymilk products. First: "EdenSoy Original was America's first soymilk, introduced by Eden in 1983."

Note: Eden Foods knows very well that this was not America's first soymilk. Soymilk was made in America in the 1920s, and many brands were made and sold before 1983. Address: 701 Tecumseh Rd., Clinton, Michigan 49236.

8347. Eden Foods, Inc. 2005. New Edensoy: Now better than ever (Leaflet). Clinton, Michigan. 2 panels each side. Each panel: 28 x 21.5 cm.
• ***Summary:*** A glossy color leaflet. On the front panel: "Improved taste. Smoother, cleaner pour. The only soymilk in America made with 100% real vanilla extract... No refined sugars. Gluten free offerings. USA family farm organic grown GEO free whole soybeans and grain. Circle K parve.

The other panels describe "22 new Eden certified organic foods." Address: 701 Tecumseh Rd., Clinton, Michigan 49236.

8348. **Product Name:** Soy Time (Fiber Enriched Organic Soymilk) [Vanilla, Original, Banana].
Manufacturer's Name: House Foods America Corporation.
Manufacturer's Address: 7351 Orangewood Ave., Garden Grove, CA 92841. Phone: 714-901-4350.
Date of Introduction: 2005. September.
Wt/Vol., Packaging, Price: 1 quart or 2 quart Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Leaflet (glossy color, front and back, 28 cm) sent by Patricia Smith from Natural Products Expo East. 2005. Sept. "Soy Time: Fiber enriched. Organic soymilk. On the front color photos show the front panels of the three flavors in half gallon (2 quart, 1.89 liter) aseptic cartons. "One 8 oz cup of House Soy Time contains: Natural dietary fiber: 3 gm. Isoflavones: 53 mg. Soy protein: 7 gm.

On the rear panel, no ingredients are given. However the UPC codes and case information are given. www.soytime.com. www.house-foods.com.

Patricia also sent a glossy color leaflet (3 panels each side; each panel 21.8 x 9.4 cm). "Soy Time. The key to good health."

8349. **Product Name:** Kikkoman Pearl Organic Soymilk (In Aseptic Quart Cartons) [Tropical Delight, Chocolate, Unsweetened].
Manufacturer's Name: Kikkoman International, Inc. (Importer-Distributor). Made in Japan.
Manufacturer's Address: 50 California St., Suite 3600, San Francisco, CA 94111. Phone: 415-956-7750.
Date of Introduction: 2005. September.
Ingredients: Chocolate: Filtered water, whole organic soybeans, organic evaporated cane juice, organic cocoa powder, organic dutch processed cocoa powder, tricalcium phosphate, sodium citrate, sea salt, carrageenan, organic natural vanilla flavor. Organic–95% or more and less than

100%. Certified organic by QAI.
Wt/Vol., Packaging, Price: 32 fl oz (1 quart) Tetra Brik Aseptic Carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Color photocopied leaflet sent by Patricia Smith from Natural Products Expo East. 2005. Sept. Two panels each side. Each panel: 28 x 21.5 cm. For each of Kikkoman's six soymilk products is given: A photo of the front panel. Ingredients. Nutrition facts. A photo of a recipe suggestion.

8350. Nature Soy, Inc. 2005. Healthier living, healthier life (Brochure and Portfolio). 713 North 10th St., Philadelphia, PA 19123. 10 p. + 3 inserts. 28 cm.

• ***Summary:*** Brochure (glossy color) sent by Patricia Smith from Natural Products Expo East (Baltimore, Maryland). 2005. Sept. Contents: Nature's Soy: Healthy, convenient, Our company. Our facilities (Large and very modern). Our R&D. Our philosophy (We take soy products seriously!). Our products.

"Based in Philadelphia, Pennsylvania, Nature Soy, Inc. is a major supplier of healthy soy and vegetarian products on the East coast. We have been manufacturing fresh soy products since l99l and have well established our brand name among our customers. As one of the largest Chinese-owned and operated soy food companies in the USA, Nature Soy, Inc. was featured in a television documentary about successful overseas Chinese entrepreneurs by a Chinese television station.

"Our Nature's Soy brand of tofu and soymilk products is in almost all major Asian grocery stores and supermarkets from New Jersey to North Carolina, reaching as far south as Georgia and Florida."

This company specializes in soy products. The two basic types are organic and conventional. The two basic types of organic are plain and flavored.

There are four organic plain products: (1) Silken tofu, 20 oz. (2) Soft tofu, 20 oz. (3) Firm tofu, 16 oz. (4) Extra firm tofu, 12 oz. "Using a cheese or deli slicer, this extra firm tofu can be sliced to about 1/16 inch thin slices, yet still maintains its integrity."

There are four organic flavored products: (1) Five spice flavored tofu, 12 oz. (2) 5 minute tofu, 11.5 oz. (3) Tofu-Deli, pre-diced, 12 oz. (4) Tofu-Deli, pre-sliced, 12 oz.

There are four conventional plain products: (1) Silken tofu, 20 oz. (2) Soft tofu, 20 oz. (3) Firm tofu, 16 oz. (4) Extra firm tofu, 10 oz.

There are four conventional flavored products: (1) Flavored tofu, 12 oz. (2) Hot & spicy flavored tofu, 8 oz. (3) Curry flavored tofu, 10 oz. (4) Oriental sauce tofu, 10 oz.

There are 3 types of soymilk: (1) Plain, ½ gallon. (2) Sweetened, 16 oz. (3) Sweetened, ½ gallon.

There are two other products: (1) Soy puffs (deep-fried tofu), 14 pieces per pack of about 4 oz. (2) Fried tofu, 8 oz.

In addition the company makes two gluten-based products (somewhat like seitan) called "Protein Wise Meat Substitutes." They come in Chicken Style and Beef Style, 8 oz per pack.

They also make Cantonese rice noodles and rice noodle rolls.

The business card of Fenjin (Gee) He, PhD, is attached to the cut-out space in the portfolio. Mr. He designed this brochure. Address: Philadelphia, Pennsylvania. Phone: 215-.

• ***Summary:*** A very attractive, complex character, Chinese-language edition of *The Book of Tofu* (2nd ed. Ten Speed Press). A slightly revised edition (different color cover) was published in mid-2012. Address: 1. Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

8352. Soyatech, Inc. 2005. Soya & Oilseed Bluebook 2006: The annual directory of the world oilseed industry. Bar Harbor, Maine: Soyatech. 416 p. Sept. Comprehensive index. Brand name index. Advertiser index. Statistical conversions. 28 cm.
• ***Summary:*** On the cover is color photo of two cupped hands holding a very small soybean plant rooted in soil–against a greenish black background. On the inside front cover is a color ad from Natural Products Inc. (Grinnell, Iowa) titled "Always unique, always innovative, always natural." Color photos show ready to eat products made with Scotsman's Mill whole egg extender, egg white extender, and enzyme active low fat soy flour, plus roasted soy grits, bakery ingredients, and soymilk powders. On the first page is a full page color ad from Bunge North America (St. Louis, Missouri) titled "The shortest distance from harvest to market." On the rear cover is a full page color ADM ad ADM showing a Chinese teenager eating tofu from a plate, using chopsticks. The text is the same as that of one of ADM's current TV ads: "Somewhere west of Shenyang, a teenager is stopping for dinner... A dinner rich in soy protein.

As one of the world's largest soy processors, we like the idea that there will be no stopping him now."

On the title page of the book is a bright green self-adhesive label containing "Your access code," which expires in a year.

In the Foreword, Peter Golbitz of Soyatech compares the world of today with that of 1947, when the *Soybean Bluebook* was first published. The year 1947 marked a dramatic turning point; "it was the last year that China led the world in soybean production... The U.S. produced 183.6 million bushels (5 million metric tons) [of soybeans] that year, around 34% of the world's total. And the price for a bushel of U.S. soybeans averaged $3.34." In 1948, the U.S. passed China to become the world's leading producer of soybeans. Today, it looks like Brazil will soon pass the USA as the world's largest producer of soybeans. Note: In 2005/06 the U.S. produced 78.789 million metric tons of soybeans, followed by Brazil which produced 62.000 million. Address: 1369 State Hwy 102, P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207.288.4969.

8353. Sunrich. 2005. Soy ingredients–Soymilk: Liquid and powdered products (Leaflet). Hope, Minnesota. 1 p. Front and back. 28 cm.
• ***Summary:*** A glossy color leaflet sent by Patricia Smith from Natural Products Expo East. 2005. Sept. On the front is an overview and six small color photos. On the rear are two large tables titled "Product specifications" and "Application chart." The two liquid beverage bases are: Soy-Um Soy Base and Light Soy Base. both available in Aseptic or ESL (Extended Shelf Life) refrigerated packaging. The four spray-dried soymilk products are: Soy Supreme Base. Soy Supreme Fiber Reduced. Soy Supreme Light. Soy Supreme Kreme.

Sunrich is a SunOpta company. Address: P.O. Box 128, 3824 S.W. 93rd St., Hope, Minnesota 56046. Phone: 800-297-5997.

8354. Sunrich. 2005. Whole grains–Soy, corn & sunflower (Leaflet). Hope, Minnesota. 1 p. Front and back. 28 cm.
• ***Summary:*** A glossy color leaflet sent by Patricia Smith from Natural Products Expo East. 2005. Sept. On the front is an overview and six small color photos. On the rear are three large tables titled "Product specifications." For soy, the soybean five varieties are: High protein Vinton type. Clear hilum. Low lipoxygenase. Non-GMO blend. Dehulled soybeans. For each of the five is given: Protein (dry basis), oil, moisture, seed size, hilum color, application (tofu, soymilk, soy sauce, miso, roasting, other).

Sunrich is a SunOpta company. Address: P.O. Box 128, 3824 S.W. 93rd St., Hope, Minnesota 56046. Phone: 800-297-5997.

8355. United Soybean Board. 2005. Consumer attitudes about nutrition–Insights into nutrition, health and soyfoods: 12th annual national report. Seattle, Washington. 8 p. Sept.
• ***Summary:*** This 12th annual nationwide survey, commissioned by USB, was conducted in early 2005 by an independent research firm in Seattle, Washington. Random telephone interviews were completed with 1,000 consumers, "providing a sample that is consistent with the total American population. The study's margin of error is ±1.9 to 3.1 percentage points and has a confidence interval of 95%."

Contents: Introduction and methodology. Nutritional habits and obesity concerns. Healthy food decisions. Cooking oil impressions. Consumer attitudes about fats. Awareness, usage, and trial of soy products. Occasion preferences for consuming soy (Of consumers who use soy products at least once a month: Dinner 40%, breakfast 27%, lunch 23%, other times 10%). Soyfoods and health: Perceived healthfulness of soy products (78% say healthy, 17% neutral, 5% unhealthy), unaided awareness of health benefits of soy (prevent obesity / promote weight loss 17%, heart health 14%, menopause relief 12%, good protein source 11%, cancer prevention 10%, reduced risk of osteoporosis 2%). Biotechnology [genetic engineering] in food and agriculture. Restaurants and soy products.

Perceptions of biotech and food: 46% (up from 39% last year) of consumers consider themselves at least somewhat familiar with biotechnology." Of this group, 62% "report a positive perception of its role in food production."

Perceptions of biotech in agriculture: Of that 46% who are at least somewhat familiar with biotechnology: 33% feel that its role within agriculture is to improve the nutritional make-up of crops, 25% don't know enough about biotech to say what role it plays, 13% think that biotech enables farmers to use fewer pesticides, herbicides, and toxins, 13% have a negative perception, other 4%.

Restaurants and soy: A new question added to the survey this year shows that 20% of consumers would order soy products in restaurants if they were available. Types of soy actually ordered in restaurants: Plain white tofu 37%, veggie burger 28%, soymilk 11%, miso 11%, edamame 10%, other products 19%.

Note 1. As of Aug. 2008 this full survey is available gratis in PDF format at www.soyconnection.com /health_ nutrition /pdf/.

Note 2. This is the earliest English-language document seen (April 2013) that contains the term "Plain white tofu."

8356. West, M.C.; Anderson, L.; McClure, N.; Lewis, S.E. 2005. Dietary oestrogens and male fertility potential. *Human Fertility* (*Cambridge, England*) 8(3):197-207. Sept. * Address: Obstetrics & Gynaecology, School of Medicine, Inst. of Clinical Science, Queen's Univ. Belfast, UK.

8357. **Product Name:** Light Silk Soymilk [Chocolate, Plain, Vanilla].

Manufacturer's Name: WhiteWave Foods Company (Product Developer-Distributor)
Manufacturer's Address: 1990 N. 57th Court, Boulder, CO 80301. Phone: 800-448-9823.
Date of Introduction: 2005. September.
Ingredients: Vanilla: Filtered water, soy flour, organic evaporated cane juice, calcium carbonate, natural vanilla flavor, sea salt, carrageenan vitamin A palmitate, vitamin B6, riboflavin (vitamin B2), vitamin D2, vitamin B-12.
Wt/Vol., Packaging, Price: Half gallon (1.89 liters). Gable-top carton with reclosable cap.
How Stored: Refrigerated.
New Product–Documentation: Glossy color leaflet (front and back, 8½ by 11 inch) sent by Patricia Smith from Natural Products Expo East. 2005. Sept. (dated 2005). "Silk Light half gallons. Half the fat, fewer calories." On the front: A color photo shows an aseptic carton of each of the three different flavors.

On the rear are nutrition facts, ingredients, barcodes and UPC codes, and case information. The product names are written as: Silk Plain Light. Silk Vanilla Light. Silk Chocolate Light (New!).

Note: The word "New" suggests an earlier introduction date for the other two flavors.

8358. **Product Name:** Silk Single Serve Soymilk (11 oz plastic chugs) [Organic Plain, Vanilla, Chocolate, Coffee Soyalatte, Spice Soyalatte].
Manufacturer's Name: WhiteWave Foods Company (Product Developer-Distributor)
Manufacturer's Address: 1990 N. 57th Court, Boulder, CO 80301. Phone: 800-448-9823.
Date of Introduction: 2005. September.
Wt/Vol., Packaging, Price: 11 oz plastic chugs with tamper-proof screw-on lid.
How Stored: Refrigerated.
New Product–Documentation: Glossy color leaflet (front and back, 8½ by 11 inch) sent by Patricia Smith from Natural Products Expo East. 2005. Sept. (dated 2005). "Silk 11 oz Single Serve. The on-the-go snack that delivers great taste and nutrition." On the front: A color photo shows a plastic bottle of each of the five different flavors.

On the rear are UPC codes, and case information. Note: There are no nutrition facts, no ingredients, and no barcodes. The product names are written as: Silk Organic Plain. Silk Vanilla. Silk Chocolate, etc.

8359. **Product Name:** Soy Milk (Organic) [Plain, Vanilla, Chocolate, Cappuccino].
Manufacturer's Name: ZenSoy.
Manufacturer's Address: 21 Empire Blvd., S. Hackensack, NJ 07606. Phone: 201-229-0500.
Date of Introduction: 2005. September.
Ingredients: Plain: Filtered water, organic whole soybeans, organic granulated cane juice, natural flavors, calcium carbonate, sea salt, carrageenan, vitamin A palmitate, vitamin D2, riboflavin (B2), vitamin B12.
Wt/Vol., Packaging, Price: 1 quart or 2 quart Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Leaflet (glossy color, front and back, 28 cm) sent by Patricia Smith from Natural Products Expo East. 2005. Sept. "Certified organic & delicious. New look!" On the front one large photo shows three flavors of ZenSoy soy milk in half gallon aseptic cartons (not including cappuccino), four flavors in 1 quart aseptic cartons, and four flavors of ZenSoy Soy Pudding in aseptic sleeves (4 x 4 oz. cups per sleeve).

On the rear are given ingredients, barcodes, UPC numbers, and case/pallet information, plus four logos: USDA Organic. Certified vegan (vegan.org). NONY Certified Organic LLC. Non-GMO. www.zensoy.com.

Note: The words "New look!" suggest an earlier date of introduction.

Leaflet (glossy color, front and back, 28 cm) sent by Patricia Smith from Natural Products Expo East. 2007. Oct. "The soy you enjoy." On the front panel a photo shows a carton of ZenSoy Soy Milk (Vanilla) being poured, against a background of sky and clouds, into a glass held by a cartoon figure of a giant panda (black and white). In the lower right corner are photos of the front of 3 half-gallon cartons of 3 the company's 4 flavors of soymilk. Cappuccino is sold only in quart cartons. On the rear are ingredients, UPC and barcodes, and case information. Note: The company apparently no longer sells soy puddings. Across the bottom are three logos as in the 2005 leaflet as well as OU Parve.

8360. **Product Name:** Soy Pudding (Organic) [Chocolate, Vanilla, Banana, Chocolate / Vanilla Swirl].
Manufacturer's Name: ZenSoy.
Manufacturer's Address: 21 Empire Blvd., S. Hackensack, NJ 07606. Phone: 201-229-0500.
Date of Introduction: 2005. September.
Ingredients: Vanilla: Filtered water, certified organic whole soybeans, certified organic granulated cane juice, certified organic corn starch, certified organic flavors, natural flavors, calcium carbonate, carrageenan, locust bean gum, sea salt, lecithin, vitamin A palmitate, vitamin D2, vitamin B2, vitamin B12.
Wt/Vol., Packaging, Price: 4 x 4 oz cups in Aseptic sleeve.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Leaflet (glossy color, front and back, 28 cm) sent by Patricia Smith from Natural Products Expo East. 2005. Sept. "Certified organic & delicious. New look!" On the front one large photo shows three flavors of ZenSoy soy milk in half gallon aseptic cartons (not including cappuccino), four flavors in 1 quart aseptic cartons, and four flavors of ZenSoy Soy Pudding in

aseptic sleeves (4 x 4 oz. cups per sleeve).

On the rear are given ingredients, barcodes, UPC numbers, and case/pallet information, plus four logos: USDA Organic. Certified vegan (vegan.org). NONY Certified Organic LLC. Non-GMO. www.zensoy.com.

Note: The words "New look!" suggest an earlier date of introduction.

8361. **Product Name:** O Organics Organic Soymilk [Plain, Vanilla, Chocolate].
Manufacturer's Name: Lucerne Foods, Inc. (Safeway) (Distributor). Made in Canada.
Manufacturer's Address: P.O. Box 99, Pleasanton, CA 94566-0009.
Date of Introduction: 2005. October.
Ingredients: Chocolate: Filtered water, organic whole soybeans, organic cane sugar, organic cocoa, tricalcium phosphate, sea salt, carrageenan, zinc gluconate, niacin, pantothenic acid, riboflavin (vitamin B-2), vitamin B-6, vitamin A palmitate, thiamine mononitrate (vitamin B-1), folate, vitamin D-2, vitamin B-12.
Wt/Vol., Packaging, Price: Half-gallon Tetra Pak ESL gable-top carton. Retails for $3.79 (2006/07, Lafayette, California).
How Stored: Refrigerated.
New Product–Documentation: Product with Label purchased at Safeway supermarket in Lafayette, California. 2006. July 31. 3.75 by 3.75 by 9½ inches. Brown, blue, yellow, light green, on white. Front panel: "Cholesterol free. Vitamin fortified. Calcium enriched." A color photo shows chocolate soymilk being poured into a glass. Top front: "Lactose free. Contains 40 mg of isoflavones per serving." Sometimes on sale for $2.49. Nice flavor.

Talk with Sherry at Safeway Corporate Brands. 2006. Aug. 2. This line of 3 flavors was introduced in the USA in Oct. 2005 and in Canada in Dec. 2005.

8362. Ta Ti Hsing Machinery Co., Ltd. 2005. Soyfood processing machinery and equipment (Catalog). No. 8, Alley 13, Lane 183, Yu San St., Taoyuan, Taiwan, R.O.C. 6 panels. 30 cm. [Eng; Chi]
• ***Summary:*** The full color catalog of tofu and soymilk equipment contains 3 panels of photos and name (in English and Chinese) of different production systems. One panels shows an elaborate flow chart for making filled lactone silken tofu, firm / soft / or silken tofu, spiced tofu (tokan), Long life soymilk, and fresh soymilk. The last panel gives a company profile. This company, established by Mr. Cho in 1961, specializes in the development of soybean processing equipment and technology. For details: www.tati.com.tw.

Brief chronology: 1961–Ta Ti Hsing Machinery Co., Ltd. founded by Cong-Qian Cho at No. 27 Chung San North Road, Taoyuan, Taiwan. He develops the No. 1 Grinder and a replacement for traditional hand-turned stone mills. He soon develops the semi-automatic steam boiler, cooker, filter machine, and manual press.

1980–The company moves to No. 8, Alley 13, Lane 183, Yu San St., Taoyuan, Taiwan. Mr. Cho is still the owner, president and general managing.

1990–Mr. Cho retires and his son, Chien-Wang Cho takes his place as president and general manager.

2005–Mr. Cho is starting to research an automatic production line with PLC human touch system to improve equipment for the international market. Since the company has the reputation of being No. 1 in Taiwan, they are going to focus on the international market. Address: Taoyuan, Taiwan. Phone: 866-3-362-1848.

8363. **Product Name:** Trader Joe's Organic Rice Milk [Vanilla].
Manufacturer's Name: Trader Joe's (Marketer-Distributor).
Manufacturer's Address: Monrovia, CA 91016.
Date of Introduction: 2005. October.
Ingredients: Filtered water, organic rice, organic expeller pressed canola oil, natural vanilla flavor with other natural flavors... Certified organic by Quality Assurance International.
Wt/Vol., Packaging, Price: 1 quart (946 ml) Tetra Brik aseptic carton with reclosable cap.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 1 cup (8 fl oz): Calories 110, calories from fat 20, total fat 2 gm (3% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 70 mg (3%), total carbohydrate 22 gm (dietary fiber 0 gm, sugars 17 gm), protein 2 gm. Vitamin A 10%, calcium 30%, vitamin D 25%, vitamin B-6 25%, phosphorus 20%, vitamin B-12 25%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Product with Label purchased at Trader Joe's in Lafayette, California. 2005. Oct. Red, yellow, blue, and light green on white.

8364. **Product Name:** Mogami Soymilk [Sweetened, Sweetened–Calcium Enriched].
Manufacturer's Name: Walong Marketing Inc. (Marketer / Distributor). Made in USA.
Manufacturer's Address: Walong: Buena Park, California 90620.
Date of Introduction: 2005. October.
Ingredients: Sweetened–enriched: Filtered water, whole non-genetically modified soybean, sugar, tricalcium phosphate, salt, zinc oxide, riboflavin (B-2), vitamin A acetate, vitamin B-12, vitamin D-2.
Wt/Vol., Packaging, Price: 1 quart aseptic carton. Retails for $0.99 in New York City.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Talk with Denis Bolger of New York. 2005. Oct. 20. This is a new soymilk which

he likes very much, although it is quite sweet. He bought it for 99 cents a quart at A & Singh Project 99¢ Store, 983 Amsterdam Ave. at 106th St. in New York City.

Products with Labels sent by Denis Bolger. 2005. Oct. 22. 1 liter Tetra Brik Aseptic pack. Sweetened, and Sweetened–Calcium enriched. Beige, dark green, white, yellow, and red on green and beige. Photo of soymilk being poured into a brandy glass. "Choose the best–Mogami. Rich & pure. Cholesterol free. Lactose free." One front panel is English, the other in Chinese. The "Nutrition facts" on one side are in English only. On the other side, the top half of the text is in English, the bottom in Chinese. "Soymilk gives you a healthier diet."

8365. *SoyaScan Notes.* 2005. How the word "soyfoods" came to be misspelled as two words–"soy foods" (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** Starting in the mid-1970s, the soyfoods industry, the Soyfoods Association of North America, Soyfoods Center, the U.S. Soyfoods Directory, the Soyfoods Council, many companies that had "Soyfoods" in their company name, and (in general) the media all spelled the word "soyfoods" as one word.

Why? (1) Everyone seemed to agree that this was the best way to spell the word. (2) Historically, compound words (such as soy beans) tend to become one word to save time (an extra keystroke) and space when writing them. (3) A single word is much easier to search electronically than a compound word. (4) The word "soyfoods" was one of a group of words with parallel structure as one word–soybeans, soymilk, soyfoods, etc. (5) Our appeal to the U.S. Food and Drug Administration to be able to use the word "soymilk" was based, in part, on the fact that it cannot be easily confused with the word "milk." Note that, from this viewpoint, the term "soy milk" is somewhat ambiguous–and could be a mixture.

For some unknown reason, and without consulting our industry or trade association, in about the year 2000, the Microsoft electronic online dictionary started spelling the word as "soy foods" (along with "soy milk"). These spellings soon spread to Wikipedia, to Google's preferred spellings, etc. Our industry tried many times, unsuccessfully, to reach the compilers of the dictionary. It seemed to be a faceless entity. Then the word "soy foods" began to appear more frequently on Wikipedia and on the web. For example a Google search for "soyfoods" on 12 Sept. 2010 got about 70,200 hits / results compared with 114,000 for "soy foods." Likewise a search for "soymilk" got 478,000 hits compared with 1,090,000 for "soy milk." Address: Soyfoods Center.

8366. Haren, Chuck. 2005. Central American Food Security Initiative (CAFSI) news and updates. *Plenty Bulletin* (*Summertown, Tennessee*) 20(4):4. Winter.

• ***Summary:*** Nicaragua: In Nov. 2004 Chuck again worked with the folks who manage Soynica's soy and green leaf foods processing and marketing business, Casa Nutrem. In March 2004 they had done an assessment of equipment that was needed to help this woman-led nonprofit organization improve and increase production of soymilk and related products. SOYNICA sent $30,000 of their own funds to Plenty and Chuck located and purchased the equipment

including an additional cooker, a hydraulic milk extractor, three sanitary milk pumps with connecting tubing, a plate heat exchanger for quickly cooling the soymilk, a refrigerated bulk soymilk tank, a semi-automatic filling machine and a walk-in cooler. The equipment was shipped to Managua (capital of Nicaragua) from Houston, Texas.

After the equipment arrived, Chuck traveled to Managua where he worked with the Casa Nutrem staff and local technicians in setting up the new soymilk processing line, which enables them to increase production by 1,000 to 2,000 packages of soymilk per shift; each package is ½ liter.

"In 2005 Plenty representatives will return to support SOYNICA's efforts to complete a second phase of upgrading the equipment line at Casa Nutrem and begin to set up a second, smaller soy food processing and marketing business in another town." A photo shows the inside of the soymilk processing line at Casa Nutrem with a worker standing next to a stainless steel cooker.

With the Huichols in Mexico: Louise Hagler and Celena McIntyre are "taking part in phase two of the Huichol Soyfoods and Nutrition Project; funding has been provided by the Onaway Trust, AMB Foundation, and individual Plenty donors.

Guatemala: "Over the past year Plenty has provided more than $8,000 to ADIBE (the Cakchiquel Mayan Soyfoods production facility in Guatemala) to upgrade their San Bartolo facility (new roof and floor), to purchase soybeans and to open a soyfoods retail outlet in the near-by town of Panajachel on the shores of Lake Atitlan. Plans are in place to provide ADIBE with some new equipment and continuing technical support by visiting soy technicians in 2005. Technical assistance will also be provided to UPAVIM, the women's cooperative in Guatemala City, for their soyfoods production operation sometime in the next two months."

8367. Richmond, Akasha. 2005. Hollywood dish: More than 150 delicious, healthy recipes from Hollywood's Chef to the Stars. New York, NY: Avery–A member of the Penguin Group (USA) Inc. xi + 310 p. Illust. Index. 25 x 20 cm. [125 ref]

• ***Summary:*** One of the most original and interesting cookbooks seen in decades. This book, originally titled *Healthy Hollywood,* is much more than just a collection of superb recipes and stories about Hollywood celebrities and glitterati. In carefully researched and well-written sidebars, it documents the history of health foods in Hollywood and southern California. The introduction to each chapter tells the history of that type of food, and every recipe has a long and interesting historical headnote. The acknowledgments show vividly Chef Akasha's high and wide circle of Hollywood friends. The introduction–"The Road to Hollywood" tells the story of how Akasha got interested in and researched this subject. History is woven into every page of this book–in the most palatable way. In short, this is a cookbook with a remarkable tale to tell–one to read and study–as well as one to cook from.

Sidebars and illustrations: (1): "The stars and the Hollywood Diet"–Sue Carol (lovely future wife of Alan Ladd) on the cover of *Motion Picture* magazine, Oct. 1929. (2) Mildred Lager (1908-1960). (3) Harry Chandler (1864-1944). (4) Granola (Layton Gentry, Adelle Davis, Dorothea Van Gundy Jones). (5) Photo of silent film star Anita King eating Sun Maid Raisin Pie, 1916. (6) Adelle Davis (1904-1974). (7) Clarke Irvine, 1892-1975. (8) Photo of Radiant Radish health food store, owned by Beach Boy Brian Wilson, Los Angeles, 1969. (9) Otto Carque, 1867-1935, with a photo of his health wagon, around 1912. (10) Gayelord Hauser (1895-1984). (11) "Nature Boy"–Bill Pester and the 1948 hit song by Eden Ahbez. (12) The Ashram–Hollywood restaurant founded by Anne-Marie Bennstrom. (13) The Hollywood diet, with a photo of page 1 of the "18-Day Diet" from *Motion Picture* magazine, Oct. 1929. The sidebar begins: "The first best-selling diet book in America, *Diet and Health, with a Key to the Calories,* was written by Los Angeles-based Dr. Lulu Hunt Peters in 1918, and sold over 2 million copies. The book introduced the concept of counting calories." (14) Alan Hooker (1902-1993). The grandfather of California cuisine, he opened the Ranch House restaurant in 1956 in Ojai, California. (15) Gloria Swanson–Hollywood's Green Goddess. She "was the highest paid and most popular, influential star of the 1920s." (16) Jim Baker (1922-1975). A pioneering organic restaurateur, he Opened the Aware Inn in 1957, then the Source restaurant in 1969. (17) Raw, raw, raw (Arnold Ehret, Vera and John Richter, and raw foods). (18) Photo of silent film star Mary Pickford drinking orange juice made with Sunkist fruit and juicer. (19) The godfather of fitness–Jack LaLanne. Master chef Danny Kaye (1913-1987). (20) The Farmer's Market in Los Angeles, started in 1934. (21) Paul Bragg (1881-1976), with photo of Rita Hayworth on the cover of his *Health Builder* magazine. (22) Books and cooks–"150 Recipes of the Stars (1928), Helen Evans Brown. (23) Health foods–Dr. John Harvey Kellogg, the rise of health food sections in the late 1800s in L.A. department stores, the rise of health food stores, Sandy Gooch. (24) Mae West (1893-1980). Gypsy Boots (1914-2004). Photo of Boots and Paul Bragg. (25) Food and film. (25) Photo of Donna Reed and Paul Bragg, sometime in the 1950s. (26) Bernarr Macfadden (1868-1955). (27) Celebrity stew and Leo Pearlstein. (28) Vegetables, fruits, and nuts (incl. Frieda Caplan, Albert's Organics). (28) Rancho La Puerta and the Golden Door. Photo of young Burt Lancaster baking bread at La Puerta. (29) Fred Waring (1900-1984), the blender, and smoothies. (30) Hain Pure Foods. "Harold Hain opened his first health food store in downtown Los Angeles on October 17, 1926." (31) Swamis and yogis. Paramahansa Yogananda arrived in L.A. in 1925; he advocated a healthy vegetarian diet, including in his magazine *East West,* first

issued in 1926. On 8 April 1951 he opened SRF India Café at his India House compound on Sunset Boulevard. "Yogi Bhajan (1930-2004) came to Los Angeles in 1969, bringing the teachings of Kundalini Yoga and his own unique style of Indian and Ayurvedic cooking. In 1974 his students opened Golden Temple Conscious Cookery in Los Angeles. I [Akasha] was a cook there from 1979 to 1984..."

Soyfoods are used in recipes (and recipe titles) throughout this book: Edamame or fresh green soybeans (used in 2 recipes), miso (1 recipe), soymilk (many, especially in place of milk in desserts, incl. "Chocolate Jack Daniel's soy gelato" and "Soya chocolate" milk), soy flour (1, Bill Baker's bread), soybeans (whole, 1, "Soybean casserole"), tofu (10), and tempeh (4).

Also discusses: Sophie and Harry Cubbison (p. 47), El Molino Mills (p. 106). Early veggie burgers (p. 106). Silk soymilk and Steve Demos (of White Wave, p. 266).

The recipes in this book are largely vegetarian (including 17 vegetarian main dishes), all call for organically grown ingredients, and many are dairy-free (using soymilk instead of cow's milk). However: Beef (used in 2 recipes, incl. "Fillet mignon Japanese"). Pork (used in 1 recipe, "Citrus roasted pork chops with rosemary potatoes"). Chicken (used in 6 recipes, incl. "Endive petals with curried chicken salad"). Turkey and duck (3 recipes). Fish (many recipes as for cod, halibut, salmon, whitefish). Shellfish (crab, scallops, shrimp).

Talk with Akasha Richmond, who calls. 2005. Dec. 7. Her favorite parts of the book are: The smoothie story (p. 275-80, both dairy and nondairy). Otto Carque. Gloria Swanson. Yogis and Swamis, Granola. She is very happy with everything about the way the book and its promotion turned out ("It looks great")–except she wishes she could have included more photos. Address: Los Angeles, California.

8368. **Product Name:** President's Choice, Too Good to Be True Non-Dairy Soy Beverage [Vanilla, or Original].
Manufacturer's Name: Sunfresh LLC (Marketer-Distributor).
Manufacturer's Address: 2821 Emerywood Parkway, Suite 210, Richmond, Virginia 23294-3727.
Date of Introduction: 2005.
Ingredients: Vanilla: Filtered water, whole organic soybeans, evaporated organic cane juice, natural flavors, calcium carbonate, sodium citrate, potassium citrate, sea salt, vanilla extract, carrageenan, vitamin A palmitate, vitamin D2, vitamin E, vitamin B2, vitamin B12, zinc sulfate.
Wt/Vol., Packaging, Price: 1 quart Tetra Brik Aseptic carton. Retails for $0.99 (2006/06, Oakland, California).
How Stored: Refrigerated.
Nutrition: Vanilla: Per 1 cup (240 ml): Calories 90, calories from fat 30, total fat 3.5 gm (5% daily value; saturated fat 0.5 gm), cholesterol 0 mg, sodium 160 mg (7%), potassium 560 mg (16%), total carbohydrate 10 gm (dietary fiber 2 gm [7%], sugars 5 gm), protein 6 gm. Vitamin A 10%, calcium 30%, vitamin D 30%, thiamin 6%, vitamin B6 4%, vitamin B-12 50%, magnesium 20%, copper 25%, vitamin C 0%, iron 8%, vitamin E 25%, riboflavin 40%, folate 15%, phosphorus 8%, zinc 10%, manganese 20%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Product with Label (vanilla and original) purchased by Martine Liguori at Grocery Outlet, Oakland, California. 2006. June. Green and black on flecked white. Front panel: Color photo shows beige soymilk being poured into a clear glass, against a field of green and a blue sky with many clouds. "Lactose free. Cholesterol free. Made with organic soybeans. Contains 6.62 g soy protein per serving. Contains 31 mg isoflavones per serving. Low in saturated fat. Excellent source of calcium, vitamin D riboflavin, and vitamin B12... A source of dietary fiber." Taste test: Muddy flavor–Too sweet. Thickness OK for hot tea.

8369. **Product Name:** 8th Continent Premium Soymilk [Vanilla, Chocolate, Original].
Manufacturer's Name: 8th Continent, L.L.C. [General Mills] (Distributor).
Manufacturer's Address: Box 200, Minneapolis, MN 55440. Phone: 1-800-247-6458.
Date of Introduction: 2005. January.
Ingredients: Soymilk (water, soy protein [isolate], soybean oil, calcium phosphate), sugar, fructose, potassium citrate, sodium polyphosphate, dipotassium phosphate, soy lecithin, salt, natural and artificial flavor, xanthan gum, carrageenan, riboflavin (vitamin B-2), vitamin A (palmitate), vitamin D-2, vitamin B-12. Contains soy ingredients.
Wt/Vol., Packaging, Price: Half gallon (1.89 L) square plastic bottle with screw-on cap. Retails for $4.39 (2006/07, Lafayette, California).
How Stored: Refrigerated, 10 day shelf life after opening.
Nutrition: Per 8 fl oz.: Calories 100, calories from fat 25, total fat 3 gm (4% daily value; saturated fat 0 gm, trans fat 0 gm), cholesterol 0 mg, sodium 170 mg (7%), total carbohydrate 11 gm (dietary fiber 0 gm [3%], sugars 10 gm), protein 6 gm. Vitamin A 10%, vitamin C 0%, calcium 30%, iron 4%, vitamin D 25%, riboflavin 25%, vitamin B-12 15%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Product with Label purchased in dairy case at Safeway supermarket in Lafayette, California. 2006. Oct. 31. White plastic bottle. Dated 2005. Text on wrap-around paper label in yellowish orange, white, light blue and red on dark blue. On the front panel: "New look. Same great taste. Vanilla–Naturally and artificially flavored. Helps lower cholesterol." Illustration of a glass overflowing with splashing, very white soymilk. Solae logo [DuPont]. Right panel: Nutrition facts. Ingredients. "Not for use as an infant formula. Lactose free. Please recycle.

ME 5¢ DEP [deposit].” UPC. Back side: “Send the red dress for heart health. The Heart Truth is that heart disease is the #1 killer of American women. 1 in every 3 women dies of heart disease. Help us raise $200,000 for women with heart disease! $50,000 guaranteed donation plus $0.50 per red dress foil lid redeemed through January 2007 up to another $150,000.” Left side: “8th Continent is where taste matters. www.8thcontinent.com. 8th Continent is the one-of-a-kind place that combines great taste with the heart health benefits of soymilk.” Soyfoods Center taste test: Flavor–poor, artificial, much too sweet (like a soft drink). Color: Surprisingly tan for soymilk. Made from highly refined soy protein isolates (not revealed on the label) rather than from natural whole soybeans. The price per quart ($2.20) is almost *twice* as high as Trader Joe’s delicious natural soymilk ($1.19) which is also free of sugar. The white plastic bottle with blue screw-on cap looks somewhat like a bottle of Clorox, but the paper label is attractive.

8370. **Product Name:** 8th Continent Light Soymilk.
Manufacturer’s Name: 8th Continent, L.L.C. [General Mills] (Distributor).
Manufacturer’s Address: Minneapolis, Minnesota 55440. Phone: 1-800-247-6458.
Date of Introduction: 2005. January.
Ingredients: Soymilk (water, soy protein [isolate], soybean oil, calcium phosphate), sugar, potassium citrate, sodium polyphosphate, dipotassium phosphate, soy lecithin, salt, carrageenan, xanthan gum, natural and artificial flavor, sucralose, riboflavin (vitamin B-2), vitamin A (palmitate), vitamin D-2, vitamin B-12. Contains soy ingredients.
Wt/Vol., Packaging, Price: Half gallon (1.89 L) square plastic bottle with screw-on cap. Retails for $1.99 (on sale) (2006/09, Berkeley, California).
How Stored: Refrigerated.
Nutrition: Per 1 cup (240 ml): Calories 50, calories from fat 20, total fat 2 gm (3% daily value; saturated fat 0 gm), saturated fat 0 gm, trans fat 0 gm, cholesterol 0 mg, sodium 160 mg (7%), total carbohydrate 2 gm (dietary fiber 0 gm, sugars 2 gm), protein 6 gm. Vitamin A 10%, calcium 30%, vitamin D 25%, vitamin C 0%, iron 4%, riboflavin 25%, vitamin B-12 15%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Product with Label purchased by Martine Liguori in Oakland, California. 2006. June. 10 inches tall. Front panel: White, dark blue, yellow and red on light blue. Illustration of a stream of white soymilk streaming into a clear glass. “50% fewer calories than the leading original soymilk.” Solae logo. Note: Light soymilks are generally made by mixing equal parts of regular soymilk and water.

8371. Bennett, Beverly Lynn; Sammartano, Ray. 2005. The complete idiot’s guide to vegan living. New York, NY: Alpha. 360 p.
• ***Summary:*** “It’s not a diet–it’s a lifestyle.” The vegan lifestyle means compassion for all living things. It means eliminating animal foods and animal products from one’s diet. True vegans avoid the use of honey, and don’t wear animal skin (leather, suede) or fur. Many avoid silk, made by suffocating silkworms inside their cocoons.

Contents: Part 1: Compassion for all. 1. Why be vegan? 2. Vegan 101 (incl. famous vegetarians and vegans, the Vegetarian Society of the UK, the Vegan Society emerges, Donald Watson, coming to America–Dr. Catherine Nimmo and Rubin Abramowitz, Jay Dinshah, ahimsa). 3. Key to good health. 4. Starting your vegan transition. Part 2: Clearing up misconceptions. 5. But you need meat for protein. 6. But you need dairy for calcium. 7. But carbohydrates make you fat. 8. Vegans are all weak and sickly.

Part 3: A vegan survival guide. 9. Nourishing yourself. 10. Seeking supplementation. 11. Raw foodists: Raw and uncut. 12. Oh baby! Bringing up baby. Part 4: Veggin’ it; Tips for maintaining a vegan lifestyle. 13. Handling family and friends. 14. Dining, vegan style. 15. Supporting your ideals. 16. Buying your vegan eats.

Part 5: Substitution is the mother of invention. 17. Using protein alternatives (incl. Demistifying soy products: soy sauce, the incredible tofu, tempting with tempeh, playing tricks with TVP). 18. Doing without dairy and cheese. 19. Vegan baking substitutions. Part 6: Vegan food for the soul. 20. Breakfast ideas. 21. Lunch and lighter fare. 22. Main and side dishes. 23. Baked goods and desserts.

Part 7: Vegan lifestyle choices. 24. Body care and personal items. 25. Dressing to impress. 26. Other things to consider. Appendixes: Glossary, resources.

The index contains 17 entries for tofu, 16 for soybeans, 7 for tempeh, 3 for seitan, 2 for TVP, and 1 each for edamame, nondairy milk substitutes, shoyu, soy milk, tahini, tamari, and tofurky.

“This book offers a vegan food pyramid, fifty vegan recipes, tips on finding animal-free products and hints for reading ingredient lists and other labels to find ‘hidden’ animal ingredients or byproducts” (publisher’s statement). Address: 1. Vegan chef and author, Eugene, Oregon; 2. Musician, web developer, and Beverly’s life partner.

8372. Brand-Miller, Jennie; Wolever, Thomas M.S.; Colagiuri, Stephen; Foster-Powell, Kate. 2005. The new glucose revolution: The authoritative guide to the Glycemic Index–The dietary solution for permanent weight loss. Emmaus, Pennsylvania: Rodale Press. xvii + 382 p. Subject index. Recipe index. 24 cm. [32 ref]
• ***Summary:*** Contents: Introduction. Part I: What is the glycemic index? 1. What’s wrong with today’s diet? 2. Why we all need carbohydrate? 3. All about the glycemic index. 4. Fats: Facts and fallacies. 5. The most frequently asked

questions–Answered. Part II: Your guide to low-GI eating. 6. Making the change to a low-GI diet. 7. Cooking the low-GI way. 8. Recipes–Breakfasts, light meals, main meals, desserts, snacks.

Part III: The glycemic index and you. 9. The glycemic index and weight control. 10. The glycemic index and diabetes. 11. The glycemic index and hypoglycemia. 12. The glycemic index and heart health: The insulin resistance syndrome. 13. Children and the glycemic index. 14. The glycemic index and peak sports performance. Part IV: The glycemic index tables. The tables: An introduction and how to use them. Condensed tables. Comprehensive tables. Further reading: Sources and references. Glossary. Acknowledgments. About the authors.

Carbohydrates are digested and absorbed into the bloodstream as glucose, sometimes called blood sugar. When glucose levels rise, the hormone insulin is released into the blood. Insulin helps cells absorb fat and glucose from the blood, allowing the cells to use the nutrients for energy. Some carbohydrates are converted to glucose more gradually than others. The glycemic index (GI) is a measure of how quickly carbohydrates are broken down and absorbed into the blood. A meal with high a GI causes a surge in the release of insulin, which is associated with increased risk for CVD, diabetes, and possible cancer.

"The right kind of carbohydrate can make an important contribution to the quality of your life." That is the essential message of this book, which is about the glycemic index, a physiologically based measure of carbohydrate quality, and the degree to which the carbohydrates in different foods will raise blood glucose levels. The newer idea of glycemic load is also relevant for everyone. The first book about the glycemic index (GI), titled *The Glucose Revolution* (1996) was written by these same authors. Carbohydrates that break down quickly during digestion have high GI values, and they raise blood glucose rapidly to a high level. Carbohydrates that break down slowly, releasing glucose slowly into the blood stream, have low GI values. Glucose is blood sugar. Low fat diets are automatically high in carbohydrate, But not all carbohydrates are the same. Are all starches good for health? Are all sugars bad? We all must look at carbohydrates in a whole new way!

A healthy diet leads to neither too much nor too little blood sugar. Extreme #1: Too much blood sugar. The typical American diet, which is high in refined carbohydrates (such as table sugar and white flour), results in too much blood sugar. This causes your pancreas to flood your body with the hormone insulin and makes it difficult for your body's cells to burn fat.

Extreme #2. Too little blood sugar. Diets low in carbohydrates cause blood sugars to plunge, which also makes your body stop burning fat. Instead it begins burning muscle tissue and converting it into blood sugar. You quickly begin to crave carbohydrates.

Low GI is less than or equal to 55. Moderate GI is 56-69. High GI is 70+.

Prevention says that "high-GI foods" (those with a GI of 70 or above) are bad. "Forget total carbs; its total GI that matters." There are good carbs (low-GI) and bad carbs. A low-GI diet is generally a healthy diet, a weight loss diet, and a diet with low risk of diabetes. A large and growing body of research now reveals that the real issue isn't how much fat or carbohydrate you are eating, but how that food affects your blood sugar. Eating high-GI foods causes sharp spikes in blood sugar. Since blood sugar is a readily available energy source, your body chooses to burn it as fuel, in place of fat. This means you are not burning fat, no matter how hard you exercise.

The Glycemic Index (GI) is a precise scientific ranking of foods based on how much they increase blood sugar levels during a 2-hour period after eating. Current methods of measuring GI use glucose (blood sugar) as the reference food, giving it a GI value of 100 by definition. The GI was first created as an aid to diabetics.

Low-GI foods: Fruits: Apples 40, banana 51, blueberries 40, cherries 22, grapefruit 25, orange 51. Vegetables: Asparagus, beans (all), broccoli, cabbage, lettuce, mushrooms, onions. Breads: Pumpernickel, rye, sourdough, whole wheat. Dairy products. Eggs. Nuts. Seeds.

Soyfoods are not discussed much in this book since they are low in carbohydrates. However: Recommendation 3 (p. 112-13): "Eat more legumes (beans, peas, and lentils) and use nuts (in small amounts) more frequently." Legumes, including soybeans, are inexpensive, low in calories, free of unsaturated fat and cholesterol, filling. "Soybeans are particularly rich in ALA [alpha-linolenic acid, the plant form of polyunsaturated omega-3 fat] (the plant precursor of omega-3s) and also contain genistein–an anti-cancer phytochemical. Tofu (soy bean curd) is an easy way of using soy. It has a mild flavor itself but absorbs the flavors of other foods, making it delicious when its been marinated in soy sauce, ginger and garlic and tossed in a stir-fry."

The section on the GI values of different food types states, under legumes (p. 129): "Soy beans (GI value of 14-20). These have one of the lowest GI values, possibly due to their higher protein and fat content. Their viscous [soluble] fiber, as in other legumes, reduces physical availability of starch to digestive enzymes."

On p. 329 is a table showing the GI value and glucose load per serving of various soy milks and soy yogurts (mostly from Australia). Similar values are given for soy beans (p. 337).

Concerning ALA (p. 115): "Our bodies can convert this plant-based omega-3 fat to EPA [eicosapentanoic acid, an essential omega-3 fatty acid found in fatty fish and shellfish] and DHA [docosahexanoic acid, another essential omega-3 fatty acid found in fatty fish], but it takes about 10 grams of ALA to yield 1 gram of DHA and EPA."

Is this a weight-loss book that does not mention calories? No, although calories and energy are considered less important than GI (see p. 133, 202, 205). Address: PhD, Prof. of Nutrition, Univ. of Sydney, Australia; 2. M.D., PhD, Prof., Dep. of Nutritional Sciences, Univ. of Toronto, Canada.

8373. Feral, Priscilla; Hall, Lee. 2005. Dining with friends: The art of North American vegan cuisine. Darien, Connecticut: Friends of Animals, Inc. iii + 164 p. Foreword by John Robbins. Illust. (some color). No index. 21 x 23 cm.
• ***Summary:*** The Foreword, by John Robbins, contains this lovely prayer from the Buddhist teacher Thich Nhat Hanh.

"Let us fill our hearts with compassion
"towards ourselves and towards all living beings.
"Let us pray that all living beings realize
"that they are brothers and sisters,
"all nourished from the same source of life.
"Let us pray the we ourselves cease to be
"the cause of suffering to each other.
"Let us plead with ourselves to live in a way
"which will not deprive other beings
"of air, water, food, shelter, or the chance to live.
"With humility,
"with awareness of the existence of life,
"and of the sufferings that are going on around us,
"let us pray for the establishment of peace
"in our hearts and on the earth."

This vegan cookbook contains many soy recipes, for example: Scrambled tofu. Believable bacon (with "8 ounces firm tofu, drained, p. 12). Spinach dip for raw vegetables (with "1 cup Tofutti brand Imitation Sour Cream, p. 19). Veggiessoise (with "1 cup soy creamer {such as White Wave's 'Silk' creamer}," p. 36). Tofu spinach lasagne (p. 60). Tofu hummos with toasted cumin seed (with "12 ounces soft tofu," p. 109). Sweet dessert cream (with "1 package {12.3 ounces} Mori-Nu Silken Firm Tofu," p. 126). Key lime pie (with "1 package {12.3 ounces} Mori-Nu Silken Lite Firm Tofu," p. 130). Soy milk is called for in many recipes.

The Glossary (p. 153-61) includes: Antioxidants (steaming causes minimal loss of antioxidants; microwaving causes much loss). Brown rice syrup. Butter substitutes: See vegan margarine. Cheese (Added casein makes most commercial cheese alternative non-vegan; presently, however, Tofutti, Vegan-Rella, and Soymage Grated Soy Parmesan are vegan). Chocolate ("Both Ecco Bella and Paul Newman's brands offer vegan chocolate"). Cholesterol. Egg replacers (Ener-G Egg Replacer). Fruitarian. Gelatin. Genetically modified organisms ("GMO"); genetic engineering ("GE"). Lightlife. Linolenic acid. Miso. Nama shoyu. Nayonaise. Nutritional yeasts. Organics. Ovo-lacto vegetarian. Pareve (parve). Pesco-vegetarian. Protein. Soy milk. Stevia. Tamari. Tempeh. Tofu. Tofutti. Vegan (VEE-gun). Vegan society (www.vegansociety.com).

The Shopping guide" (p. 161-63) describes companies that make or sell vegan products,

On the rear cover we read: "Friends of Animals is an international, non-profit, animal advocacy organization, incorporated in the State of New York in 1957. We work to cultivate a respectful view of nonhuman animals, free-living and domestic. Our goal is to free animals from cruelty and institutionalized exploitation around the world."

On the inside rear cover are portrait photos and biographical sketches of Priscilla Feral, president of Friends of Animals, and Lee Hall, legal director for Friends of Animals. Address: 1. President; 2. Legal director. Both: Friends of Animals, New York.

8374. Fujii, Mari. 2005. The enlightened kitchen: fresh vegetable dishes from the temples of Japan. Translated by Richard Jeffrey. Tokyo, New York, London: Kodansha International. 107 p. Illust. (photos by Tae Hamamura). Index. 26 cm.
• ***Summary:*** This is a lovely Japanese vegan (and vegetarian) cookbook filled with the spirit of kindness and of Zen–and with color photos on almost every page. It discusses and describes the ancient tradition of *shojin ryori,* the plant-based diet which originated in Japan's Buddhist temples. The author, who is the wife of a Buddhist monk, has taught temple cuisine for over 20 years. Her husband, Sotetsu, lived as a monk for ten years in various Buddhist temples; he also trained as the tenzo (head cook).

In this book she presents 60 beautiful, delicious, health-giving, and heart-warming recipes, many adapted to Western kitchens but all true to their roots. A majority of the recipes contain soyfoods in one form or another.

The helpful glossary includes descriptions of edamame beans, hijiki, karashi mustard, konbu, Koyadofu ("freeze-dried tofu"), miso, natto, nori seaweed, pickled plum paste, saké, sesame paste, sesame seeds, shiso (perilla), soy sauce, soybeans, sukikonbu, tofu, umeboshi pickled plum, usu-age tofu, wakame seaweed, wasabi, yuba, yuzu.

The index contains 20 entries for miso, 15 for tofu (p. 15, 24, 29, 32, 39, 41, 42, 48, 51, 53, 56, 62, 71, 100, 104), 6 for soymilk (p. 17, 45, 47, 94, 99, 104) 4 for edamame (p. 16, 35, 68, 99), 3 for deep-fried tofu (p. 32, 42, 71, 104), 3 for natto (p. 44, 50, 100), 2 for teriyaki (p. 48, 62), 2 for Koyadofu (p. 48, 100), 2 for usa-age (thin slices of deep-fried tofu; p. 32, 104). 2 for yuba (p. 47, 104). A small color photo on the inside rear dust jacket shows Mari Fujii. Address: Cooking teacher, Kamakura, Japan.

8375. Hellmiss, Margot. 2005. Mit Soja durch die Wechseljahre [Using soy through the menopause years]. Munich, Germany: Suedwest Verlag. 96 p. Illust. (color). Index. 20 x 18 cm. [Ger]
• ***Summary:*** An attractive book, with many fine color photos on glossy paper. Contents: Soybeans–Tradition and history

(Healing plant from China): Productive source of protein, tofu–quark with a longer tradition, triumphal procession around the world, great economic significance, soya and genetic engineering. Fundamental changes of the menopause years (What happens during these years?): Hormonal changes, the right attitude helps, the new understanding of women, many hormones influence the body, men also experience menopause, questionable preparations, Hormone Replacement Therapy–Pros and cons. Natural help from soy isoflavones (remarkable phytoestrogens): The active agent of plant hormones, the effectiveness of isoflavones, natural SERMs, safeguard against osteoporosis, estrogen protects the circulatory system, soy hormones as free-radical catchers, the end of hot flashes, strong powers of resistance and smooth skin, isoflavones will take good care of you.

Soyfoods that contain isoflavones (A great variety): Whole dry soybeans, soymilk, tofu, soy oil, soy flour (*Sojamehl*), soy flakes (*Sojaflocken*), soy bran (*Sojakleie*), tempeh, natto, soy granules, soy sauce, shoyu and tamari, miso, lignans. Soybeans: A powerful package for your health (Plant protein as an alternative): Indispensable protein, lecithin, minerals, B vitamins for strong nerves, vitamin E–the fountain of youth. Recipes for enjoying soya (Basic recipes): Hors d'oeuvres and salads, soups, pasta, main dishes, sauces, dips, and bread spreads, mueslis, desserts, and baked goods, beverages.

8376. Hu, Shiu-ying. 2005. Nonfermented foods: Bean curd and whole soybeans (Document part). In: Shiu-ying Hu. 2005. Food Plants of China. Hong Kong: Chinese University Press. xvi + 844 p.

• ***Summary:*** This is a truly remarkable, original and comprehensive book. Basic bean curd (dou-fu [tofu]) is mentioned on 21 different pages.

A recipe for "Bean curd with Swatow mustard" calls for "1 pkg (supermarket style) bean curd" (p. 55).

A recipe for "Farmers' mustard salad" calls for "½ cup soybean (cleaned, soaked overnight)" (p. 56).

A recipe for "Huo-guo (Fire pot)" calls for "3 squares bean curd (sliced 5 x 3 by 1 cm..."), "9 Tbsp soy sauce" and "3 Tbsp hot soybean sauce, *la-dou-ban-jiang* (Sichuan style)" (optional) (p. 64-65).

"A recipe for "Buddha disciples' delight (*Luo-han-zai*)" calls for "3 pieces of bean curd (sliced into 4 cm square..."), 1 can wheat gluten (cut into 3 cm square by 1 cm pieces), "2 oz Laminaria [kombu] (revived [reconstituted], cut into 4 by 3 cm pieces, washed)," and "1 lb fried bean curd squares (cut lengthwise once)," and "4 oz bean curd bamboo (soaked in cold water to revive it, cut into 4 cm sections." This is a vegetarian dish, often served in Buddhist temples. In the Chinese tradition, it is often said that Buddha had 18 close disciples called *Shi-ba-luo-han,* p. 69).

A recipe for "Hot and sour soup" calls for "1 piece bean curd (sliced into 3 cm x 5 mm x 5 mm shreds)" and "1 Tbsp soy sauce" (p. 71).

A recipe for "Vegetarians' delight (*Su-shi-jin*)" calls for "6-8 pieces fried bean curd cubes (diagonally quartered, available in Chinese groceries)" and "four young fruits of luffa" (p. 90).

A recipe for "Bean curd fish (*Dou-fu yu*)" (p. 120) calls for "1 box of bean curd" and "3 Tbsp *dou-chi* (fermented black soybean)." This recipe is a modification of a dish called "Earthenware fish-head bean curd (*Sha-guo you-tou dou-fu*)" popular at sidewalk cafes and food stalls of Guangzhou [Canton] and Hong Kong. Most Chinese recipes for cooking fish call for frying the fish first, which gives a fish smell throughout the house, more so in an apartment" (p. 120-21).

"Bean curd is solidified protein with hardly any taste of its own. One of the important principles of cooking a good bean curd dish is to cook it for a long time with meat, fish, or poultry. Recently, with the introduction of the Sichuan food, *Ma-po dou-fu* (4 Cc = Chinese characters given) ('pockmarked wife's bean curd'), cooked with very hot pepper and powdered zanthoxylum [Sichuan peppercorns; fagara pepper] (much of both), has become increasingly popular among graduate students, for example, Harvard Biology doctoral candidates. Not all people can tolerate hot dishes" (p. 121).

There follows a recipe for "Soybean sprout soup (*Dou-ya-tang*)" which calls for "2 lbs fresh soybean sprouts" (p. 121-22).

"soybean sprouts and bean curd are the salvation of the Chinese people, as they are the most common and widespread foods for all, particularly for farmers, working people, and young students of boarding schools. In a boarding school at Xuzhou (Map 16) in the 1920s, soybean sprouts alternating with bean curd were the daily main dish during the school year."

There follows a recipe for "Soybean sprouts with bacon (*Dou-ya shao-rou*)" which calls for 5 lbs soybean sprouts (p. 122).

Following that is a recipe for "Bean curd hors d'oeuvre (*dou-fu-gan jiu-yao*)" which calls for "10 pieces of *dou-fu-gan* (firm bean curd squares, available in Chinese stores" and "1 cup soy sauce," p. 122-23).

Note: This is the earliest English-language document seen (Aug. 2011) that contains the term "firm bean curd squares" or the term "spiced bean curd squares (see below), or that uses those terms to refer to Chinese-style pressed tofu.

"Bean curd squares are a more refined product made in small molds and drained under heavy pressure, as compared with bean curd in supermarkets which is prepared in large molds and drained under little pressure. The squares of the former are much firmer. This recipe is a modification is a modification of hors d'oeuvres served in Chinese bars or taverns. In taverns, large numbers of spiced bean curd

squares are prepared ready for people with tight purse-strings, who may enjoy their drinks with *dou-fu-gan* (spicy bean curd) and peanuts," while the more affluent customers may savor spicy pork liver and chicken or duck gizzards as hors d'oeuvre.

There follows a recipe for "Bean curd sheet pork (*Qian-zang-pi chao-ru*)" which calls for "3 pieces of *Qian-zang-pi* (3 Cc, 'thousand sheets skin' = bean curd in the form of sheets [pressed tofu sheets]; cut into 5 cm strips and then slice into 3 mm shreds; or use one can of the material, available at American Chinese stores) (p. 123-24).

The next recipe is for "Black soybean oxtail soup" (*Hei dou hui Niu wei*) which calls for "1½ cups black soybeans (the larger the bean, the better)." "This is a special Cantonese dish. Like yellow soybean, the black soybean is rich in protein, CHO [carbohydrates], fats, carotene, vitamins... flavones which become daizin [daidzin] and genisten [genistein] on hydrolyzation, soyasapogenol A, B, C, D, E, choline, and organic acids... The broth is especially good for senior citizens who suffer from dizziness and swollen ankles" (p. 123).

A recipe for "Vegetarians' three treasures" (*Su-san-xian*)" calls for "1 lb firm bean curd (1 box, available in supermarkets)." "Luo-bo [giant white radish; daikon], celery cabbage [Chinese cabbage], and bean curd [tofu] are the most common vegetables of the Chinese people. They have been praised by a leading Chinese Buddhist monk, Tai-xu Fa-shi (4 Cc) as the three treasures that keep the Chinese people alive" (p. 135).

Chapter 4, "Spices and flavoring materials" (p. 147+) begins: "All good food depends on the proper use of spices and flavoring materials... 'Plants and Human Affairs' has always been a popular course in the department of Biology at Harvard University. In the late 1940s, while Professor Paul C. Mangelsdorf was teaching the subject, a classmate asked for my help to complete her required term paper. Her project was on the Chinese invention of using pure plant protein precipitated from the soybean. At the time relatively few Americans knew the term *dou-fu* (2 Cc) ('bean curd')... For the project we went together to Chinatown [in Boston] where I showed her the only production center of dou-fu available at the time. It was a dim one-room area of a basement. There we watched the simple procedure of precipitating solid protein from soaked soybean. She recorded her observations and brought some samples, both *dou-fu* and *dou-fu-zha* (3 Cc) ('bean curd residue' [okara]). Returning to the laboratory, I cooked a few dishes with the product and the by-product" (p. 147).

A recipe for "Fire pot with broomrape stock" calls for "2 oz dried laminaria (2 Cc) (*hai-dai*)," "2 boxes bean curd (doufu, 2 Cc); cut lengthwise once, then slice into 1 cm thick pieces of ca. 3-5-cm square," "2 tsp fermented soybean hot sauce (la-dou ban-jiang, optional) with ¼ of the sesame oil placed in a separate dish, for people who like spicy taste" (p. 203-04). *Huang-dou-ya* (W.-G. *Huang-tou-ya*). (3 Cc) ('soybean sprout'). "Soaked, sprouted under cover with daily wash, prepared at home in villages or as a simple industry in cities; available in American Chinese groceries, used as a vegetable or for making soup with bone and onion" (p. 474).

Dou-fu (W.-G. *Tou-fu*). (2 Cc) ('bean curd'). *Dou-jiang* (W.-G. *Tou-chiang*). (2 Cc) ('soybean milk'). *Dou-fu-nao* (W.-G. *Tou-fu-nao*). (3 Cc) ('soft soybean curd' [curds made from soymilk]). *Dou-fu-gan* (W.-G. *Tou-fu-kan*). (3 Cc) ('dry bean curd,' 5 cm firm squares). *Qian-zhang-pi* (W.-G. *Ch'ien-chang-p'i*). (3 Cc) ('thousand sheet' thin sheets of firm bean curd). (p. 474).

Gardenia angusta (L.) Merrill. Common gardenia. *Huang-zhi* (W.-G. *Huang-chih*) (2 Cc) ('yellow gardenia'). "Fruit, from which an orange dye is obtained for coloring bean curd in Guangzhou [Canton]; animal assay indicating that the dyed yellow bean curd enhances the life span of mice; tea for people suffering from hepatitis" (p. 680-81). Address: Botanist, Arnold Arboretum, Harvard Univ.; Honorary Prof. of Chinese Medicine, The Chinese Univ. of Hong Kong.

8377. Lund, JoAnna M.; Alpert, Barbara. 2005. Cooking healthy with soy. New York, NY: Perigee. Published by the Penguin Group. viii + 368 p. Index. 21 cm. Series: A Healthy Exchanges (R) Cookbook.

• ***Summary:*** Contains 220 recipes. On the cover: "No trouble and no tofu." The author admits in the Acknowledgments (p. vii): When I first started this project, almost all my helpers were a bit hesitant. After all, they really hadn't tried soy products before–even though they had lived all their lives here in eastern Iowa (a state where, no matter which direction you look, you'll see soybean fields everywhere). But after our first 'taste-testing lunch, they all agreed that these soy recipes sure tasted good!

This comb-bound book, which is not vegetarian, calls a commercial branded product (usually available nationwide in supermarkets) in every recipe. These are grouped into five categories: Dairy alternatives (milk-, cheese-, sour cream-, margarine-, yogurt- and ice cream- alternatives), meat alternatives, nut alternatives, pasta alternatives, and miscellaneous (such as Eden Organic Black Soy Beans, or GeniSoy Mountain Medley Soy Nut Trail Mix).

For example: Milk alternatives: Silk Light Plain Soymilk. Silk French Vanilla Soymilk Creamer. 8th Continent Light Original Soymilk. 8th Continent Light Chocolate Soymilk.

This unusual approach raises several questions: Did the author request a kickback for promoting these products? Why does one need recipes for soymilk? Or for Tofutti Mozzarella Soy-Cheese Slices? Or Tofutti America Soy-Cheese Slices? Or for Boca Meatless Cheeseburgers? Or Morningstar Farms Veggie Breakfast Bacon Strips? How about all the people who don't shop at supermarkets?

In the first section, titled "Main street American is cooking with soy–because its good for your health," the author states: "If you are a health-food store 'purist,' then this book probably isn't for you. But if you are willing to try new recipes that taste the same as your old favorites but feature soy products, then I think you'll be mighty pleased with the results. I want to 'bring to the table' all those men, women, and children who aren't necessarily vegetarians or already consuming lots of soy foods and food products." Address: Author and speaker, DeWitt, Iowa.

8380. Low, Dennis. 2006. Re: Tofu in Trinidad and Tobago: History of Pacific Food Co. Letter (e-mail) to William Shurtleff at Soyfoods Center, Jan. 17 and 18. 2 p.
• ***Summary:*** "Stephen Low was born in 1937 in Kwangtung (Guangdong), southern China. His father was an established businessman in Trinidad and Tobago. Stephen remained in China until 1960, when he decided to move to Trinidad to do business with his father. He arrived in Trinidad in 1962. Theresa Low, his wife, was born in 1946 in Hong Kong and arrived in Trinidad in 1965. In 1965 the Stephen Low Watch Company was born.

"After 30 years in the watch business, Stephen and his wife Theresa's business was established and they were looking for new opportunities to explore. They belonged to a local Chinese club and they would gather weekly to socialize, eat, and play majong.

"One day a friend of theirs brought in a traditional Chinese dessert, "Tofu fah [soymilk curds]," better known as silken tofu. Theresa has always enjoyed this dessert growing up and was very impressed with the way her friend had made it. She asked her friend for the recipe and started making it at home almost on a daily basis. Cooking for a family of 5 kids, cooking was one of Theresa's favorite hobbies. One day she decided that she wanted to make tofu at home. She used the same recipe as the silken tofu and began to press it. Using a variety of methods, whether it was to use hot or cold water, how much beans to water ratio, even types of cloth to wrap it in, how much weight to press it with, and how long to press it for. It took them about 1 month of trial and error to perfect the art of making tofu.

"They then told their friends about her success and having a business background naturally started talking about selling it. They talked about great health benefits from tofu, soy milk and knew this would be a great opportunity. After some initial research, they realized that all tofu sold within Trinidad was imported. They felt that she can make tofu at a fraction of the cost of the competitor. This was their opportunity, so they jumped on it. In 1998 the Pacific Food Company was born. Their hobby officially has turned into a career. They bought beans locally, and soaked them. They invested in some grinding machines, pressing equipment, designed their own label and packaging equipment. Now in 2006 Pacific foods tofu is sold everywhere to major supermarkets, restaurants and local merchants. Fresh tofu is now widely accepted across Trinidad. Currently we are doing homework on soy products to expand our business. This year we will be launching firm tofu, flavored tofu and tofu puffs.

"One of our goals this year is to educate more people on what tofu is and what great benefits it has towards your health and feel that this "What is Tofu" pamphlet that we talked about will help dramatically.

"Your book has provided us with a wealth of information and we look forward to working with you to develop more soy products in the near future."

Note: Letter (e-mail) from Dennis Low, Manager, Pacific Trading Co., Uptown Excellent Mall, Corner of Park and Frederick Street, Port of Spain, Trinidad, West Indies. 2006. Jan. 18. Dennis is the son of Stephen and Theresa Low. He interviewed his parents just before writing this story. Their company's only product is "Fresh Tofu." Address: Manager, Pacific Food Co., Uptown Excellent Mall, Corner of Park and Frederick St., Port of Spain, Trinidad and

Tobago, West Indies.

8381. Soyfoods Association of North America. 2006. Soyfoods sales and trends (Website printout–all). www.soyfoods.org/press/FAQ_sales.htm 2 p. Printed Jan. 19.
• ***Summary:*** Contents: What are the recent trends in soy consumption in the U.S.? Soy sales by category: Introduction, soy-based energy bars, soymilk sales, meat alternative sales, tofu sales, other soyfoods sales. 2003 Consumer Trends Report. Sources.

"The number of new soy-based products has increased 13.2% per year for the past 3 years. In 2000, approximately 2,295 soy-based SKU's were offered; by 2002 the number hit 3,399. In 2002 there were: 580 soy-based energy bars, with 24.1% of sales [i.e. accounting for 24.1% of sales of soyfoods from all categories]. 366 soy-based meal replacements & powders with 18.5% of sales. 328 soymilk beverages with 16.3% of sales. 318 meat alternatives with 14.5% of sales. 236 tofu products with 6.8% of sales. [Other: 19.8% of total sales].

Soy-based energy bars: Sales reached $880 million in 2002.

"Soymilk sales have grown from $100 million in 1995 to nearly $600 million in 2002. Soymilk has 87.3% of the nondairy beverage sales in mainstream markets. Sales of refrigerated soymilk grew over 100% per year for the past three years.

"Meat alternative sales have grown from $114 million in 1992 to over $530 million in 2002.

"Tofu sales have grown from 108 million in 1992 to $250 million in 2002.

Other soyfoods sales: Soy [fortified] breakfast cereals grew to over $150 million in 2001. Soy yogurt sales grew by 66.9% in 2001 to reach $23.7 million. Soy-based cheese alternatives grew at 11.6% in 2001 to reach $57.6 million. Sales of soy-based frozen desserts rose 39.9% in 2001 to reach $42.2 million. Address: 1001 Connecticut Ave., NW, Suite 1120, Washington, DC 20036. Phone: 202-659-3520.

8383. Global Industry Analysts, Inc. (GIA). 2006. Soy foods–Global strategic business report. 5645 Silver Creek Valley Rd., San Jose, California. 302 p. Jan. *
• ***Summary:*** Publisher description: This report analyzes the worldwide markets for Soy Foods in millions of US$. The specific product segments analyzed are Soy Ingredients, and Soy Oil. The report provides separate comprehensive analytics for the US, Canada, Japan, Europe, Asia-Pacific (excluding Japan), Latin America, and Rest of World. Annual forecasts are provided for each region for the period of 2000 through 2010. The report profiles 151 companies including many key and niche players worldwide such as Archer Daniels Midland Company, Dean Foods Company, White Wave, Eden Foods, Inc., Galaxy Nutritional Foods, Inc., Gardenburger, General Mills, Glenn Foods, Greet Spot (Thailand), Griffith Laboratories (UK), H.J. Heinz Co. Hain Celestial Group, Hartz International (Australia), Hazlewood Grocery (UK), Heartland Fields (USA), Hermans Foods (Australia), High Mark Foods (New Zealand), Imagine Foods, Inc., Kerry Group PLC (Ireland), Kerry Ingredients (Australia), Kikkoman (Japan, Australia, USA, Singapore), Kimlan Foods Co. (Taiwan), Kuhne Nederland BV (Netherlands), SoyaWorld, Inc., Turtle Island Foods, Inc., and Vitasoy USA, Inc.

Price: Electronic or hard copy 3,496 euros. Please note: Reports are sold as single-site single-user licenses. The delivery time for hard copies is between 3-5 business days, as each hard copy is custom printed for the organization ordering it. Electronic versions require 24-48 hours as each copy is customized to the client with digital controls and custom watermarks. Address: San Jose, California. Phone: 408-528-9966.

8384. **Product Name:** Re: Ethnic Koreans growing soybeans in Tajikistan or Turkmenistan, and her work introducing soyfoods to these countries.
Manufacturer's Address: Letter (e-mail) to William Shurtleff at Soyfoods Center, Feb. 18.
Date of Introduction: 2006. February.
New Product–Documentation: In Tajikistan she met a couple who lived near Dushanbe. The husband, Victor, was planning to grow soybeans. She gave him some seed grade soybeans to grow, although she had the impression that he hadn't grown soybeans before. She sensed that he wanted to grow them because of increased interest in soybeans–for reasons she does not understand. She gave him the seeds that Walter Barrett had given her, because the soybeans she had found in Tajikistan were not of good quality.

Victor led her to a Korean tofu maker, a woman who didn't speak Korean. She supplied tofu to a Chinese restaurant in Dushanbe. She told Helen that she bought her soybeans from Uzbekistan, and said they were expensive. Helen did not ask the woman when she had started to make

tofu commercially or what the name of her small business was. Helen does not recall exactly where it was located.

Vera, Victor's wife, sold Korean salads at a green bazaar in Dushanbe. She and other Korean salad vendors at the green markets sold a type of dish made from Chinese TVP, which is white in color and imported from China.

At an import supermarket called Holland Market in Dushanbe, Helen found several Russian-made TVP products and soymilk powder. She also saw soymilk sold in Tetra Pak cartons.

In Ashgabat, Turkmenistan, two Korean men came to talk with Helen at the Winrock office about a soymilk machine.

In the Dashoguz region of Turkmenistan, Helen met two different groups of Koreans (a least 30 people total) who wanted to see her presentation and demonstration of soymilk and tofu production using a SoyJoy machine, along with a display of soy products such as tofu (in a Tetra Pak carton), TVP, soynuts, soy flour, soy protein isolates, energy bars, soy sauce, etc. In some presentations at farms or for women's groups (including the Korean groups), she also prepared soyfoods or Turkmen foods that included whole soybeans.

In Tajikistan, she gave 3 presentations / demonstrations: One at "Salsa Restaurant" in downtown Dushanbe, and two at a cafeteria and at the meat processing lab of the Khujand branch of the Technical College of Tajikistan. She usually ended her presentations with a meal with the participants. Her menu included Pulov [pilaf] (rice with some meat, soybeans, carrots, and onions), soup, salad, and a crepe (using a mixture of wheat flour, soy flour, and some type of local jam).

At the Agricultural University of Tajikistan in Dushanbe, and at the Khujand branch of the Technical College of Tajikistan, she gave technical presentations using an overhead projector with PowerPoint slides showing the nutritional composition of soybeans, and techniques for the preparation of traditional soyfoods and commercial products such as soy oil, soy protein, lecithin, etc.

In Turkmenistan: She gave food preparation presentations: (1) At a farm in the Mary district. (2) At apartment style homes in the cities (Mary district, and Dashoguz). (3) At the Winrock office in Dashoguz for different groups of women. (4) For 2 groups of Peace Corps volunteers in Dashoguz. "Peace Corps was interested in soyfoods because it was suspected that the protein intake of PCVs in that country was not sufficient."

While in Tajikistan and Turkmenistan, Helen did not see any soybeans being cultivated, nor any bundles of soybean plants harvested for green vegetable soybeans.

After her visit: (1) Her soy recipes were translated into the Turkmen language by Winrock staff, but (as far as she knows) they were not printed or reproduced. (2) A 30-page Russian-language brochure on soybeans was created (using desktop publishing) by a group of Peace Corps volunteers in the Dashoguz area. It included planting information and recipes, with colorful pictures and diagrams; about 200 to 300 copies were printed. The produced was funded by the Peace Corps and Helen, however Helen does not have a copy with her in Mexico. (3) Helen prepared a trip report, which is now the property of Winrock International. She did not write much about Koreans in that report.

She includes a Russian-language article on soya from the newspaper *Asia-Plus* (23 Sept. 2004, p. 4).

Note: This document mentions the earliest known commercial soy products in both Tajikistan and Turkmenistan.

8385. **Product Name:** Soyatoo Soy Whip: Whipped Soy Topping (Non-Dairy, Vegan).
Manufacturer's Name: Ceres Organics (Importer / Marketer). Made in Germany by Viana.
Manufacturer's Address: 2121 30th St., Boulder, Colorado 80301. Phone: 303-442-1559.
Date of Introduction: 2006. February.
Ingredients: Organic soymilk (water, soymilk), organic coconut oil, organic fractionated palm kernel oil, organic sugar-beet syrup, organic maltodextrin, tartaric acid, carrageenan, sea salt, natural vanilla extract. Propellant: nitrous oxide (laughing gas).
Wt/Vol., Packaging, Price: 7 oz (198 gm) net weight. Pressurized metal container, 8½ inches tall (incl. cap) and 2¼ inches in diameter.
How Stored: Refrigerated.
New Product–Documentation: Two Samples (products with Labels) with sales sheet and business card sent by Dale Kamibayashi, Sales and Marketing Director, Ceres Organics. 2006. Feb. 10. Has a white fluted plastic cap, and a red and white body. Front panel below the product name: "Vegan. Lactose-free. No cholesterol." A color photo shows a swirl of the snow-white whipped topping atop an assortment of strawberries, raspberries, blueberries, and mint leaves–against a red background. Soyfoods Center product evaluation: Superb taste, texture, color, and whippability. Not too sweet. 10+. A remarkable product, with excellent package design.

Leaflet sent by Ceres Organics. 2006. Feb. 10. 8½ by 11 inches. "Introducing a new dairy-free whipped dessert topping. 100% vegan and no cholesterol. 0% trans fat per serving and heart healthy. 40% less fat than classic whipped cream. Perfect with fruit, desserts & beverages. Incredible flavor and texture. No soy bean aftertaste. GMO free." A color photo shows the front of the product.

New leaflet sent by Ceres Organics. 2007. Oct. "SoyaToo! Soy Whip–Whipped Soy Topping." "100% vegan and no cholesterol." Ceres is now in St. Paul, Minnesota 55108.

8386. Eden Foods. Inc. 2006. Edensoy: Prepared as if it were

for our children (Ad). *Utne Reader.* Jan/Feb. p. 31.
• ***Summary:*** This ad (full page, color) shows a boy (son of Eden's production manager) drinking soymilk through a straw from a carton of Original Edensoy. "At Eden this means: no irradiation, no preservatives, no chemical additives, no food colorings, no refined sugars, no genetically engineered ingredients–the safest, most nutritious, certified organically grown food that can be found. More than 200 Eden Foods are available at discerning retailers in the USA and Canada. Pure food is our passion. Great taste is our joy." Copyright 2002. Address: Clinton, Michigan 49236. Phone: 1-888-424-EDEN.

8387. Gandhi, A.P. 2006. The 'greater bean': Scientists continue to find new food and industrial uses for soybeans. *World Grain* 24(2):59-62. Feb.
• ***Summary:*** About 70% of world soybean production is crushed to make oil and meal, 20% is used directly for food, and the rest for seeds. Soybean meal used for human food "must be devoid of residual solvents that may cause various psychological disorders in humans. The International Standard Organization (ISO) recommends a maximum level of 50 parts per million (ppm) of residual hexane, which is used in the solvent extraction process."

A pie chart shows world soybean production in 2004.

8388. Setchell, Kenneth D.R. 2006. Re: The safety of soy infant formulas. Letter to Michael D. Shelby, PhD, NIEHS EC-32, P.O. Box 12233, Research Triangle Park, North Carolina 27709, March 1. 9 p. Typed, without signature on letterhead. [19 ref]
• ***Summary:*** NIEHS stands for the National Institute of Environmental Health Studies; it is part of the National Institutes of Health (NIH), which is under the U.S. Department of Health and Human Services. The mission of the NIEHS is to reduce the burden of human illness and disability by understanding how the environment influences the development and progression of human disease. Address: Dep. of Pediatrics, Children's Hospital Medical Center, Cincinnati, Ohio.

8389. Illinois Center for Soy Foods. 2006. U of I center sponsors events to celebrate Soy Foods Month (News release). Urbana, Illinois. 1 p. March 22.
• ***Summary:*** "The Illinois Center for Soy Foods at the University of Illinois has scheduled several events to help celebrate National Soy Foods Month this April. A free cooking demonstration and taste test to help consumers become familiar with tofu, soy flour, soy milk, and textured vegetable protein (TVP) will be held on Saturday, April 22, from 9 to 11 a.m. in the test kitchen at the National Soybean Research Center [NSCR] in Urbana." Participants "will return home with recipes that they can try in their own kitchens." Space is limited and pre-registration is required.

"The center will also provide free soy-enhanced cookies on campus during the lunch hour each Tuesday in April. The cookies will be available at" 4 convenient locations on campus. The 5 soyfoods cookbooks published by the center will also be on sale for 50% off.

"In addition, the Center will host a soy-tasting event with the theme "Around the World with Soy" on Wednesday, April 19. The tasting will feature international cuisine with a soy twist." Address: Urbana, Illinois.

8390. Huang, Huihua; Liang, Hanhua; Kwok, Kin-Chor. 2006. Effect of thermal processing on genistein, daidzein and glycitein content in soymilk. *J. of the Science of Food and Agriculture* (*London*) 86(7):1110-14. March. [16 ref]
• ***Summary:*** Investigated the effect of heat degradation on three isoflavones–genistein, daidzein and glycitein–in soymilk processed over a range of temperatures (95, 121, 121, and 140ºC) and times. Reported that both pasteurization and UHT processing can decrease the amount of isoflavones in the soymilk. Genistein showed greater stability during heating than daidzein and glycitein. The content of both daidzein and glycitein decreased rapidly during the early stage of heating, but upon continued heating the rates of decrease became much slower. Address: 1. Dep. of Food Science, South China Univ. of Technology, Guangzhou, China; 2. Dep. of Applied Biology and Chemical Technology, Hong Kong Polytechnic Univ., Hung Hom, Kowloon, Hong Kong, China.

8391. INTSOY. 2006. Processing and marketing soybeans: Meat, dairy and baking applications, May 1-5, 2006 (Leaflet). Urbana, Illinois. 4 panels each side. Each panel: 22 x 9 cm.
• ***Summary:*** This glossy leaflet (green and black on white) announces a 5-day course ($1,800) plus the course and an extended workshop schedule ($2,400). The program now has 15 corporate sponsors: The Solae Co., Staeta, Insta-Pro, Proviant, BAR, N.A., Inc., SOI, ADM, Assoy, Wenger, Microsoy Corporation, US Soy, Silk, Kikkoman, Cargill, and Buehler. Course schedule: Welcome, international soymilk processing, success stories, soymilk, and soy products, marketing, soy flour, soy and meat, hot topics (soy infant formula, soy and reduction of chronic disease, soy allergies, quality and stability of soybean oil, specialty soybean varieties, biotechnology of soybeans). A list of featured speakers are given; many are from the corporate sponsors!

Talk with INTSOY employee. 2005. The "short course" has been discontinued; it was established through a grant, has come to an end. The course is now under the aegis of NSRL. In the year 2000 the 4-day course attracted 28-30 people. Address: National Soybean Research Lab. (NSRL), 1101 W. Peabody Dr., Urbana, Illinois 61801. Phone: (217) 244-1706.

8392. **Product Name:** SoYummi GoLite Soy Mousse

[Black Cherry, Dark Chocolate, California Peach, Bavarian Cream].
Foreign Name: Soyummi Golite Mousse de Soya.
Manufacturer's Name: Les Aliments SoYummi.
Manufacturer's Address: 3655 Redpath, Montreal, Quebec, Canada H3G 2W8.
Date of Introduction: 2006. April.
Ingredients: Organic soy drink, chicory syrup (sweetener), soy oil, modified cornstarch, modified rice starch, natural flavors, modified vegetable gums, salt, agar, xanthan gum, lactic acid, yucca extract.
Wt/Vol., Packaging, Price: 100 gm in a low plastic (polypropylene) cup, with flat lid and individual sleeve. Retails for Canadian $1.39.
How Stored: Refrigerated, 30 day shelf life.
New Product–Documentation: Cardwell, Mark. 2002. "As good as it gets." Food in Canada. May, p. 38. Talk with Joanne Hollander. 2008. May 29. She wanted to develop a product that contained no sugar and fewer calories. She started developing this product in 2004 using basically the same formula and finally launched it in April 2006. The company got a new CEO at the end of 2004. The label was equally French and English, but in Quebec they always write the French first. "Chicory syrup is a great alternative to sugar but it is expensive." She wanted a product that diabetics could eat–and they are allowed 15 gm of carbs per serving. Another great sweetener is the Chinese fruit *lohan guo* (*Siraitia grosvenorii;* literally "arhat's fruit" or monk's fruit), from which a natural sweetener is extracted. Wikipedia says: "The fruit extract is nearly 300 times sweeter than sugar and has been used as a natural sweetener in China for nearly a millennium due to its flavor and lack of food energy, only 2.3 kcal/g [calories per gram] (9.6 kJ/g). It has also been used in traditional Chinese medicine."

"I could go 100% organic but nobody would be able to buy the product." This product contained about 1/3 fewer calories than the original SoYummi. They were trying to compete with yogurt, so the Bavarian Cream is 86 calories per 100 gm.
*

8393. Soybean, a miracle bean (Leaflet). 2006. New Delhi, India: American Soybean Association (ASA) / United Soybean Board. 2 p. Front and back. 28 cm. [7 ref]
• ***Summary:*** Contents: Soybean a miracle bean. Soybean and health benefits. How to use soy daily: Soybeans ("...can be used like lobia. They can also be added up to 20% in dosas, pesarutta, dahi bhalla and vadas etc. where whole legumes are used... can be added up to 20% in recipes such as chole, rajma and dal makhani"), defatted soy flour (contains 50% protein), wheat-soy flour (1 kg defatted soy flour mixed with 10 kg wheat flour), besan-soy flour ("Add 20% defatted soy flour to besan [chickpea flour] and use to make products such as pakora, chilla, kadhi, etc.") nuggets and granules (soy bari), soymilk, soy paneer (tofu), soy papad, soy nuts (whole soybeans that have been soaked in water and then baked until browned), soybean oil.

Note: Printed in four colors on glossy white paper with a green border. Ten thousand copies were printed in April 2006. A color illustration shows a cute cartoon of a soybean character seated next to a meal tray with "thumbs up." Address: American Soybean Assoc., Asia Subcontinent, 149 Jor Bagh, New Delhi–110 003, India. Phone: (91) (11) 2465-1611.

8394. Nordquist, Ted; Webster, Robin. 2006. New developments making dairylike soyfoods in America (Interview). *SoyaScan Notes.* May 9. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** WholeSoy & Co. is a wholly-owned subsidiary of TAN Industries; Ted now prefers to used the former name instead of the latter. Modesto WholeSoy Co. is its own entity. Ted and his business partner, Henry, now own 85% of the stock.

Silk soymilk was launched in Jan. 1996. Ted was having a lot of problems with the soy base made by Pacific ProSoya in British Columbia. About a year later [probably in about March 1997] Ted installed a soy base plant at Soyfoods of America in Duarte, California. He did this together with Wally Rogers, owner of Bean Machine Inc. (BMI–using a stainless steel grinder / disintegrator made for BMI by Corenco, owned by Chris Cory). Wally took Ted to Chris and together they designed the grinders to be installed at Soyfoods of America. In about Sept. 1997 Ted started producing soy base for Silk soymilk at the plant in Duarte. This soy base was sent in tankers from Duarte to Gustine, where Ted and coworkers formulated the Silk soymilk.

Ted's next product was made together with Gary Stein. Gary (of San Diego) called Ted and said that Trader Joe's wanted a soymilk. Ted said to Gary, "That's fine, but I have a contract with Steve Demos, so I can't do that." So Ted set up Gary. He told Gary that Ann Shaw and Laura Tewnion knew how to formulate soymilk. He and Gary talked a lot about it but he told Gary, "I can't touch it with a ten foot pole, but I'm happy to ship the soy base to you." So Ted shipped the soy base from Duarte to Gustine, then Gary Stein formulated the soymilk for Trader Joe's and sold it to Trader Joe's.

Ted's next product was Certified Organic Soymilk, made for Wildwood Natural Foods and launched in July 1998.

Next, in 1999, Ted and Henry came up with the WholeSoy name. So they had cups designed for WholeSoy but, of course, they had no sales volume, so they sent that idea to Trader Joe's, which agreed for Ted to private label the product for Trader Joe's. So Ted launched both the WholeSoy and the Trader Joe's private label at exactly the same time. They were exactly the same products but in different cups.

In about May 2004 changed the name of his company

to WholeSoy & Co. from TAN Industries, and his brand to WholeSoy & Co. from The WholeSoy Co. The words "WholeSoy & Co." first appeared on their Lite Smoothies in September 2004. Ted did a focus group in which he put out packaging from products made by Silk [White Wave], Stonyfield, Wildwood, and TAN Industries. The members of the focus group were asked to describe what they understood by looking at the different packages. "They thought that WholeSoy was a generic name, that companies like Safeway and Albertsons were making. They thought WholeSoy was a really big corporation, and that therefore its products should sell for the lowest price." Ted recalls: "It was unbelievable. I was just speechless. I wanted to go in there and tell them how wrong they were!" They knew the Stonyfield brand and thought that product was worth the money. The Wildwood product attracted them because it had a real good appearance."

In about Jan. 2006 Ted started printing "Soy Yogurt" in large letters on the front of his yogurt cups–which previously said only "Cultured Soy." It happened like this. Ted's soy yogurt is made by SSI (Super Store Industries), which is owned by Raley's and Save Mart (both supermarket chains). Ted was going into new packaging and he asked them: "Do you have any problem using the terms "Soy Yogurt" or "Soy Frozen Yogurt" on the cups? They said they would check. They checked all of their contacts then told Ted that there was no objection to using those terms.

In Jan. 2006 Ted started using the term "Soy Yogurt" in large letter at the top front panel of his yogurt cups. He gradually phased it in to all flavors as new cups had to be printed.

In Sweden, Ted had only one plant in the county of Enkoeping (pronounced en-CHUR-ping) where he made soyfoods. He built (together with Mark Jungstrum of Trensusms Musteri) a soybase plant in the commune and city of Tingsryd near Karlshamn; it produced 3,000 to 3,500 liters/hour of soybase. And he had a test plant at Alfa-Laval in Lund.

WholeSoy's Soy Cream Cheese was introduced in Feb. 2005 in two flavors: Original and Garlic & Herb. It had a 90-day shelf life with 12 packs per case. Both are still on the market but Ted is in the process of discontinuing the product by letting them "sell through" until they are all off the shelves. He got them into all the natural food stores, but the total market for this product category is too small, so sales were too slow.

In about Sept. 2004 Ted also launched a WholeSoy Smoothie Light, but discontinued it in about Nov. 2005. it. It contained very little sugar and used Lo Han fruit concentrate as the natural sweetener. Address: WholeSoy & Co., 49 Stevenson St., Suite 1075, San Francisco, California 94105-2975; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-495-2870.

8395. Gupta, Rajendra ("Raj") P. 2006. New developments at ProSoya in the USA and Canada (Interview). *SoyaScan Notes.* May 30. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** "ProSoya" is the popular name of Raj's company. ProSoya Corporation in Heuvelton, New York state is not a new entity. ProSoya Corporation has long existed as a holding / parent company, based in St. Louis, Missouri. The one in New York is a branch of that. The ProSoya UK Ltd. in Livingston, Scotland, which was a separate entity under license from ProSoya Inc., no longer exists. ProSoya Foods India Pty. Ltd. is now active in India.

ProSoya Corp. in Heuvelton is now shipping "soy extract" [soybase / soya base] to a company in Canada. They have also developed a delicious "creamy orange" soymilk with a thick consistency like a smoothie–but it is not yet for sale. Supermarkets that have their own brand of soymilk do not buy soyabase; they want a finished product delivered to their door in their package. Last year Raj could not find a co-packer; but now he has found one in Toronto that packs about 3 truckloads a day for him. He is still looking for one in the USA. If he had been able to find one a year ago, he would be in almost every store by now.

SoyaWorld is now very strong everywhere except in the USA; they have the best-selling soymilk brands in Canada. Since about 2001-2002 they have been owned by Sanitarium Foods of Australia. Originally SoyaWorld was owned by Dairyworld, which was sold to Saputo, then Saputo sold the soymilk business to Sanitarium Foods. Sanitarium kept "SoyaWorld" as a name for both the business and the brand. They don't want to call it Sanitarium, which is sort of an outdated, old-fashioned funny name. SoyaWorld no longer has royalty or exclusivity agreements with ProSoya (they expired in May 2004), which is why ProSoya can now make and sell soybase, soymilk, and soymilk products.

Raj's soybase is now made by an improved process. It is still made by the basic airless cold-grind process, so that change is more in the art than in the science–it is not a breakthrough, but a fiddling with details. He has not licensed his process to anyone. It is better for formulation, is more bland, and is unique in that it has no soy taste. Raj likes to say that his soybase has "no soy taste" and "no beany taste." Most good manufacturers have be able to get rid of the "beany taste, which is normally associated with rancid oil-like flavors, chalkiness, and astringency," but Raj believes that only his company has been able to also get rid of the "soy taste," which is more subtle yet still a big obstacle to widespread acceptance of soyfoods and soy beverages. When Raj talks to big distributors, they say that all the soyfoods manufacturers claim to have gotten rid of the "beany taste," yet the taste still leaves something to be desired–"it still tastes like soy." So Raj speaks of "no soy taste" to distinguish his products from the others. Raj has found that the people of India "hate soy taste." But they love

his products, which have no soy taste. Certain flavors go very, very well with his soybase. If a company uses strong flavors or heavy masking, consumers say the product tastes like medicine.

One interesting phenomenon is that the flavor of soybase or soymilk improves as it is allowed to age for 4-5 days.

Raj is not sure whether or not he should put the word "soy" on the package or not. Address: President and CEO, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

8396. Bakhshandeh, Ehsan. 2006. Soya health benefits underlined. *Iran Daily.* May 31.

• ***Summary:*** Tehran, May 30. A man who distributes equipment for making soyfoods stressed their health benefits and the role they can play in the prevention of cancer and in reducing the risk of heart disease.

At the 13th International Food, Drink and Packaging Technology Trade Fair in Tehran, Firouz Zanjani, managing director of Assoy (Middle East Div.) said that in Iran, soybeans are classified as vegetables. From them, using his equipment, soyfoods such as soymilk, tofu, soyyogurt, and soycheese can be made. All have important health benefits. Soymilk, from which the other soy products are made, contains no lactose, cholesterol, or side effects, and therefore can be consumed by people of all ages.

Soybeans have been cultivated in Iran for the past three years. They are grown only in the north, in Gorgan, Golestan province. The climate in other parts of Iran is not suited for soybean cultivation. In 2007, according to Zanjani, 240,000 tons of soybeans will be produced in Iran, "while 130,000 hectares will be brought under soybean cultivation in the next two years."

Zanjani said there is only one large factory in Iran that processes soybeans. It was established 9 years ago, however its products began to be marked only 18 months ago. Yet the high price of these products is the main reason for their low per-capita consumption in Iran. Zanjani further blamed poor dissemination of information about the health benefits of soy products. Despite the publicity campaign, using advertisements in newspapers and on billboards, only 5-10% of Iranians know what soymilk is. He added that two other soyfoods factories equipped with the state-of-the-art technology will be launched in 2007 in Tehran and Mashhad.

A color photo shows Firouz Zanjani.

8397. Cardwell, Mark. 2006. Top ten: As good as it gets–Les Aliments SoYummi, Montreal, Quebec. *Food in Canada.* May. p. 38.

• ***Summary:*** Joanne Hollander was born in New Jersey, but raised in a tony [aristocratic, stylish] Montreal neighborhood in the 1960s. She was educated in francophone French schools, then returned to the USA for college. In 1982 she developed a nutritious soy mousse for your young son, Aaron, who was completely lactose intolerant; dairy products gave him bad headaches and eczema. The mousse "was an instant hit with her son, as well as everyone else who tried it. Her friends urged her to commercialize it. So in 1987 she paid a McGill University professor of food science $2,000 to help her stabilize it, to increase the shelf life. But when she took samples to dairy and wholesale food distributors in the Montreal area, they all loved the flavor and texture, but said there was no market for a soy product. "'No one was doing anything with soy back then,' says Hollander."

In 1997 soy milk hit Quebec grocery shelves; Holland decided to try again. This time, with $35,000 in private funds, she went to the Food Research and Development Center in Saint-Hyacinthe, Quebec. "Located a half-hour's drive southeast of Montreal, the federally funded facility offers technical assistance and the use of processing equipment to food companies trying to develop new products."

In 2002 She founded Les Aliments SoYummi, a partnership with Roland Degani and Max Druker (who had offered advice and financial support) and that year she launched SoYummi in four flavors, which "first appeared on shelves in Metro and IGA grocery chains across Quebec." The business has continued to grow from a weekly output of 3,000 cups a week to about 48,000 cups a week today. In April 2006 she launched SoYummi GoLite–a low-calorie version.

A photo shows Joanne Hollander.

8398. Dean Foods Co. 2006. Simple truths–Focusing on what matters most: 2005 annual report. Dallas, Texas. 84 p. 28 cm.

• ***Summary:*** On page 13 we read: "Silk: The leading soymilk brand. Silk celebrates its 10th birthday in 2006. Since its introduction, it has become one of the best-selling natural food brands in the nation, growing 20 percent [in sales] in 2005 to $337 million." Silk Light hit the market in 2005, in vanilla, plain, and chocolate flavors. Note: It is made by adding an equal amount of water to regular silk. "Silk Light offers 50% less fat and fewer calories than regular soymilk." Each cup contains 30% of the RDV of calcium.

"We also refreshed the packaging on Silk Live!, our delicious entry into the thriving yogurt smoothie category. Silk Live is packed with 19 vitamins and minerals, seven grams of soy protein and six live and active cultures, which help promote a healthy immune system.

Consumer "research shows that household penetration is still low, with only 7% of U.S. households accounting for 80% of soymilk volume. This same research also tells us that at least another 30% are interested in trying or purchasing soymilk." Color photos show 3 packages each of Silk Light and Silk Live!

On p. 47: On 5 April 2004 WhiteWave Foods Company acquired a soy processing and packaging plant in Bridgeton,

New Jersey.

Accompanying the annual report is an innovative "2006 proxy statement and notice of annual meeting" (32 p.). A stockholder proposal (p. 7-9) asks that the company disclose its social, environmental, and sustainability practices. The Board of Directors recommends that stockholders vote against this proposal. In 2005 Gregg L. Engles, age 48, Chairman of the Board and CEO had total compensation of $9.48 million, including salary of $1,070,000 (p. 22). Address: 2515 McKinney Ave., Suite 1200, Dallas, Texas 75201. Phone: 214-303-3400 www.deanfoods.com.

8399. **Product Name:** So Natural Soy Milk [Plain].
Manufacturer's Name: NIZA S.A. Made in Argentina.
Manufacturer's Address: Ruta Prov. 2B Km 8 (5730) Villa Mercedes, San Luis, San Luis Province, Argentina.
Date of Introduction: 2006. May.
Ingredients: Soymilk (filtered water, organic soybeans), sugar, tricalcium phosphate, microcrystalline cellulose / sodium carboxymethylcellulose, lecithin, carrageenan, salt, di-alpha tocopherol, artificial flavor, vitamin A acetate, vitamin D3.
Wt/Vol., Packaging, Price: 1 liter aseptic Tetra Pak carton. Retails for $0.99 (Concord, California 2006/05)..
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Product with Label purchased by Martine Liguori. 2006. May 7. At 99cent store, Clayton Road, Concord, California. Green, blue, black, and beige on white.
*

8400. **Product Name:** Laura Lynn Original Enriched Soymilk.
Manufacturer's Name: Ingles Markets, Inc. (Marketer-Distributor).
Manufacturer's Address: Asheville, North Carolina 28816.
Date of Introduction: 2006. June.
Ingredients: Filtered water, whole organic soybeans, evaporated organic cane juice, natural flavors, calcium carbonate, sodium citrate, potassium citrate, sea salt, carrageenan, vitamin A palmitate, vitamin D2, vitamin E, vitamin B2, vitamin B12, zinc sulfate.
Wt/Vol., Packaging, Price: 1 quart plastic bottle. Retails for $1.29 (2006/06, Oakland, California).
How Stored: Refrigerated.
Nutrition: Per 1 cup (240 ml): Calories 90, calories from fat 30, total fat 3.5 gm (5% daily value; saturated fat 0.5 gm), cholesterol 0 mg, sodium 160 mg (7%), potassium 560 mg (16%), total carbohydrate 10 gm (dietary fiber 2 gm [7%], sugars 5 gm), protein 6 gm. Vitamin A 10%, calcium 30%, vitamin D 30%, thiamin 6%, vitamin B6 4%, vitamin B-12 50%, magnesium 20%, copper 25%, vitamin C 0%, iron 8%, vitamin E 25%, riboflavin 40%, folate 15%, phosphorus 8%, zinc 10%, manganese 20%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Product with Label purchased by Martine Liguori in Oakland, California. 2006. June. Plastic bottle shaped like a bowling pin. 9.5 inches tall. Red, black and gold on white. Front panel: Black and white photo of a stream of white soymilk streaming into a clear glass. "Lactose free. No cholesterol... Vitamins... Calcium enriched. 31 mg isoflavones." Back panel: "We use the whole bean." Taste test: Tastes good, not great. Good to dilute in warm tea.

8401. Muhammad, B.F.; Abubakar, M.M. 2006. Physico-chemical, microbial and sensory properties of cow milk yoghurt produced with different levels of soymilk. *Savannah J. of Agriculture* 1(1):56-56. June. [15 ref]
• ***Summary:*** Adding 25% or less soymilk to cow's milk in making yogurt can lower the cost without decreasing the acceptability. Address: Animal Production Programme, Abubakar Tafawa Balewa Univ., P.M.B. 0248, Bauchi, Nigeria.

8402. **Product Name:** Quality Chekd Organic Soymilk [Original].
Manufacturer's Name: Super Store Industries (Distributor).
Manufacturer's Address: Lathrop, California 95330.
Date of Introduction: 2006. June.
Ingredients: Filtered water, whole organic soybeans, organic cane crystals, calcium carbonate, natural flavors, sea salt, xanthan gum, carrageenan, vitamin A palmitate, riboflavin (B2), vitamin D2, vitamin B12. Contains soy.
Wt/Vol., Packaging, Price: Half gallon gable-top Pure Pak carton. Retails for $1.29 (2006/06, Pleasant Hill, California).
How Stored: Refrigerated.
Nutrition: Per 1 cup (240 ml): Calories 90, calories from fat 30, total fat 3.5 gm (5% daily value; saturated fat 0.5 gm), cholesterol 0 mg, sodium 160 mg (7%), potassium 560 mg (16%), total carbohydrate 10 gm (dietary fiber 2 gm [7%], sugars 5 gm), protein 6 gm. Vitamin A 10%, calcium 30%, vitamin D 30%, thiamin 6%, vitamin B6 4%, vitamin B-12 50%, magnesium 20%, copper 25%, vitamin C 0%, iron 8%, vitamin E 25%, riboflavin 40%, folate 15%, phosphorus 8%, zinc 10%, manganese 20%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Product with Label purchased by Martine Liguori in Pleasant Hill, California. 2006. June. Blue, white and black on red. Front panel: "Calcium fortified. Lactose free." USDA Organic logo. Martine's taste test: Very pleasant. "Whole milk" (rich dairy) taste.

8403. **Product Name:** Trader Joe's Soy Milk (½-gallon Gable-Top carton) [Lowfat Vanilla].
Manufacturer's Name: Trader Joe's (Marketer-

Distributor).
Manufacturer's Address: Monrovia, CA 91016.
Date of Introduction: 2006. June.
Ingredients: Water, organic soybeans, brown rice syrup, raw cane crystals, calcium carbonate, vanilla extract, sea salt, carrageenan, vitamin A palmitate, vitamin D2.
Wt/Vol., Packaging, Price: Half gallon (1.89 liters). Retails for $3.29 (California 2006/01).
How Stored: Refrigerated.
Nutrition: Per 8 fl oz (240 ml): Calories 130, calories from fat 25, total fat 2.5 gm (4% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 80 mg (3%), total carbohydrate 22 gm (dietary fiber 0 gm, sugars 11 gm), protein 9 gm. Vitamin A 10%, calcium 30%, vitamin D 25%, vitamin C 0%, iron 6%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Product with Label purchased at Trader Joe's in Lafayette, California. 2006. May 21. Blue, brown, black and green on white. Illustration of a small white flower with green leaves. Front and back panels: "35 mg isoflavones per serving. Ultra-pasteurized. Fortified with calcium & vitamins A & D. Lactose & dairy free. On one side is a recipe for Berry banana shake." On the other, nutrition facts and ingredients. SKU 0042 4677 Processed at plant 06-446. Contains 5 gm of protein, 100 calories, and 2.5 gm total fat per cup Note: The soybeans are organic, but there is no USDA organic seal and no organic claims.

8404. **Product Name:** Silk Soymilk (For Starbucks; Organic) [Vanilla].
Manufacturer's Name: White Wave, Inc. (Product Developer-Distributor).
Manufacturer's Address: 6123 E. Arapahoe Rd., Boulder, CO 80303. Phone: 303-443-3470.
Date of Introduction: 2006. June.
Ingredients: Filtered water, whole organic soybeans, organic evaporated cane juice, tricalcium phosphate, natural vanilla flavor, sea salt, carrageenan, calcium carbonate, vitamin A palmitate, vitamin D-2, vitamin B-12.
Wt/Vol., Packaging, Price: Quart Tetra Brik Aseptic Carton (946 ml). Retails for $2.49
How Stored: Refrigerated.
New Product–Documentation: Label brought by Akiko Aoyagi. 2006. June. Purchased at Starbucks in Lafayette, California. 7.75 by 3.5 by 2.25 inches. White, green, and coffee brown on cerulean blue. Front panel: "Exclusively formulated for Starbucks Lattes and Tazo Chai. Calcium enriched. USDA Organic logo. Vitamin fortified. Cholesterol free. Lactose free." Right panel: Nutrition facts and ingredients. Left panel: "White Wave is putting wind to work." Back: Cute stuff.

8405. *Soy Connection.* 2006. Expert panel reports on genistein & soy formula. 14(3):1-2, 4. Summer. [1 ref]
• ***Summary:*** Contents: Introduction. Genistein. Soy formula.

"Soy infant formula has been commercially available in its present form (with only slight modifications over time) for approximately 40 years, and during this period, approximately 20 million infants have used the formula at some point in their development. All evidence indicates soy formula produces normal growth and development as assessed by common measures such as height and weight. Nevertheless, in recent years the use of soy formula has become somewhat controversial and the subject of scientific debate. At issue is the high exposure to soybean isoflavones, especially genistein.

"On Jan. 16, 2006 the National Toxicology Program Center for the Evaluation of Risks to Human Reproduction (NTP-CERHR) issued two draft reports entitled 'NTP-CERHR Expert Panel on the Reproductive and Developmental Toxicity of Soy Formula' and 'NTP-CERHR Expert Panel on the Reproductive and Developmental Toxicity of Genistein.'"

"On March 15-17, the 14-member panel met to discuss the reports and to form conclusions. The public had an opportunity to comment on the reports in written form between Jan. 16 and March 1, to present oral testimony on March 15, and to participate in the 2½ day meeting."

Conclusions: The expert panel expressed negligible concern over genistein. And: "There are insufficient human or experimental data available to permit a determination of the developmental or reproductive toxicity of soy infant formula."

"Finally, considerably more developmental data on the use of soy formula will be available in the not too distant future as ongoing USDA-funded research is comparing the health status of infants fed breast milk, cow milk formula, and soy formula over a several year period."

"Final expert panel reports are available at http://cerhr.niehs.nih.gov and are available in the printed text from CERHR."

8406. Vitasoy International Holdings Ltd. 2006. Annual report 2005/06: Forever natural, forever healthy. New Territories, Hong Kong. 168 p. July. 30 cm. [Eng; Chi]
• ***Summary:*** Turnover (sales) rose 5.9% to HK$2,520 million. Gross profit rose 8.3% to HK$1,481 million. EBITDA (earnings before minority interest, interest expense, income taxes, depreciation, and amortization) rose 18.5% to HK$333 million. Basic earnings per share rose 41.0% to 17.2 Hong Kong cents (p. 4).

A five-year financial summary (from 2001 to 2005), expressed in Hong Kong dollars, appears on page 167. Address: No. 1, Kin Wong Street, Tuen Mun, New Territories, Hong Kong. Phone: 466 0333.

8407. **Product Name:** Silk (Soymilk Sold Refrigerated in Half Gallon ESL Gable Top Cartons) [Unsweetened Organic].

Manufacturer's Name: White Wave Foods Co. (Distributor).
Manufacturer's Address: Broomfield, CO 80021.
Date of Introduction: 2006. July.
Ingredients: Organic soymilk (filtered water, whole organic soybeans), calcium carbonate, sea salt, natural flavors, carrageenan, vitamin A palmitate, vitamin D2, riboflavin (B2), vitamin B12. No more, no less.
Wt/Vol., Packaging, Price: Half gallon (1.89 liter) Tetra Pak ESL gable top Carton. Retails for $4.49 (2006/07, Lafayette, California).
How Stored: Refrigerated.
New Product–Documentation: Product with Label purchased at Safeway supermarket in Lafayette, California. 2006. July 31. 3.75 by 3.75 by 9½ inches. White, blue, and light purple on bluish green. Front panel: Color photo of soymilk being poured into a bowl of breakfast cereal with blueberries and sliced strawberries. "Calcium enriched. 4g carbs per serving. Vitamin fortified." Back panel: "Demand authenticity. Check out our new website www.SilkSoymilk.com. We're looking good in green! ("Our wind energy purchase exceeds 24,000 megawatt hours per year–that's the global warming equivalent of taking more than 3,000 cars off the road."). Akasha's corner–Chef to the stars." Recipe for Crustless corn and pepper quiche, adapted from her book *Hollywood Dish.* Note: ALA stands for "alpha-linolenic acid," a polyunsaturated omega-3 fatty acid. It is called an "essential fatty acid" because it is essential in the diet of all mammals.

8408. Sunopta Inc. 2006. SunOpta announces new organic soy milk production (News release). Aug. 7.
• ***Summary:*** SunOpta (headquartered in Toronto, Canada), announced that has begun production of a new aseptically packaged organic soy milk for a major U.S. retailer. "This product will be produced as part of a previously announced global contract and is expected to add an incremental $20 million in revenue over the next three years..."

8409. *Non-GMO Report* (*The*) (*Fairfield, Iowa*). 2006. Report says major food companies want rBGH-free milk. 6(8):3. Aug.
• ***Summary:*** "On June 9, *The Dairy & Food Market Analyst* reported that Dean Foods, Wal-Mart and Kroger, and possibly others are on a nationwide search for milk that hasn't been derived from cows treated with the genetically engineered hormone, rGBH." During the past year, a number of dairies have stopped using rGBH, the price of which Monsanto is now lowering to try to cling to a dwindling market. Montana's two largest milk processors "are now requiring farmers to sign affidavits saying they are rBGH-free."

8410. United Soybean Board (USB). 2006. Consumer attitudes about nutrition: Insights into nutrition, health, and soyfoods. 13th annual national report. Seattle, Washington. 8 p. Oct. 28 cm.
• ***Summary:*** The methodology used in this survey changed significantly in 2006. Previously, random telephone interviews were completed with 1,000 consumers. This year an online self-administered survey was used. "Conducted by an independent research firm [in Seattle, Washington] in February and March 2006, the study includes 1,000 random surveys, providing a sample that is consistent with the total American population. The study's margin of error remains ± 1.9 to 3.1%, with a confidence interval of 95 percent."

Contents: Introduction. Methodology. About USB. Nutritional habits and obesity concerns. Healthy food decisions. Cooking oil impressions. Consumer attitudes about fats. Awareness and usage of soy products. Occasion preferences for consuming soy. Restaurants and soy products. Soyfoods in health.

Awareness and usage: 30% of Americans consume soyfoods or soy beverages once a month or more. A table shows the "Top 20 soy products by awareness." Soymilk 87%. Soybean oil 61%. Soy veggie burger 60%. Plain white tofu 59%. Soy infant formula 44%. Soy nuts 43%. Soy latte 35% (Soymilk in espresso coffee drinks [as at Starbucks]). Soy protein bars 32%. Soy hot dogs 30%. Soy yogurt 29%. Dried or canned soybeans 29%. Soy flour 28%. Soy ice cream / cheese 28%. Cereal bar / Energy bar 28%. Flavored / Marinated tofu 26%. Miso 24%. Soy supplements 23%. Soy breakfast cereal 23%. Textured soy protein. Edamame 17%. All others mentioned 12% or less.

Occasion preferences for consuming soy (in descending order of preference): dinner 40%, breakfast 29%, lunch 22%, mid-morning snack 16%, mid-afternoon snack 16%, etc.

Soy products ordered in restaurants: Soy veggie burger 29%. Tofu 29%. Soymilk 28%. Miso 14%. Edamame 8%. Tofu (prepared) 6%, etc.

"In 2006, 82% of consumers rate soy products as healthy, significantly more than in previous years" (78% in 2005, 74% in 2004, 67% in 1998). Why? Low-fat profile 20%. Protein content 15%. Heart health 15%. Cholesterol-lowering properties 12%. "Being good for you" 10%. "A lactose-free option 10%."

Note: As of Aug. 2008 this full survey is available gratis in PDF format at www.soyconnection.com /health_nutrition / pdf/.

8411. Hymowitz, Ted. 2006. Why did the West (Europe and the Middle East) know so little about China in the 12th and 13th centuries? (Interview). *SoyaScan Notes.* Sept. 1. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Because the Arabs blocked most European travel over the Silk Road / Route from about the 7th century until the 12th or 13th century. The Arab conquest blocked the overland route, in part to control the trade. There were

actually two phases in the history of the Silk Road. The first phase ended in about the 6th or 7th century, before the origin of Islam.

Note: Both of these "Silk Roads" was actually a series of interconnected routes that ran from about Xian (Chang'an) in eastern China, along the northern part of China, branching into today's Central Asia, south of the Caspian Sea, through today's Turkmenistan, Iran (formerly Persia), and Iraq, to Damascus (today's Syria) and Antioch (in today's Turkey). The first famous and documented Chinese traveler, Zhang Qian (W.-G. Chang Ch'ien) led two expeditions to the Western Regions in the 2nd century BC, during the Former / Western Han dynasty.

As early as the 1st century AD, there were already some oceanic routes that were part of the "Silk Road." They hugged the coast from central China, around India, into the Persian Gulf and the Red Sea, then on to Italy!

This Arab blockade was one of the reasons for the search for a water route to China. The blockade began to fail as sea routes were developed. For example, in May 1498, Vasco da Gama was the first European to discover a sea route to India.

Another reason it took so long for information about the soybean to reach Europe from China was that the soybean is unlike rice, wheat, and maize / corn, where the product of the crop is associated very closely with what is growing in the field; everyone knows what rice, wheat and corn look like because they are so widely consumed as food. The main products of the soybean, especially those in commerce (such as soy sauce), bear no resemblance to the seed or plant from which they are made. It took a long time before Europeans realized that soy sauce (for example), which was known in Europe by the late 1600s, was made from the soybean–which did not arrive in Europe until the late 1730s. Even in Asia, the various names of the soybean were very different from the names of its major products. For example in China: Soybean is *dadou* or *huangdou,* soy sauce is *jiangyou,* tofu is *doufu,* and soymilk is *dounai* or *doujiang.* In Japan: Soybean is *daizu,* soy sauce is shoyu, tofu is tofu, soymilk is *tonyu,* miso is miso, natto is natto, and green vegetable soybeans are edamamé. In Indonesia, tempé is tempeh. Even in the Western World today, many of these traditional foods and condiments do not have "soy" as part of their name. Moreover, the foods look totally different from the seed / bean from which they are made.

The first European to understand the connection between the soybean and its products was Engelbert Kaempfer; he made this clear in his book *Amoenitatum exoticarum...* vol. 5. Yet most Westerners did not understand this connection until more than a century later, and quite a few even today don't realize that tofu (for example) is made from soybeans.

Ted is convinced that Marco Polo and the various early Western missionaries who traveled to China probably tasted soyfoods over and over again–but they didn't realize they were made from soybeans. A good example is milk. The early Western travelers in China often mentioned that Chinese drank milk; in some cases they were probably drinking soymilk. Address: Prof. of Plant Genetics (retired), Dep. of Crop Sciences, Univ. of Illinois, Urbana, Illinois.

Address: P.O. Box 9452, Minneapolis, Minnesota 55440. Phone: 1-800-247-6458.

8413. Pacific Foods of Oregon, Inc. 2006. Pacific Natural Foods: The delicious taste of nature (Website printout–part). www.pacificfoods.com Printed Sept. 8.
• ***Summary:*** Contents: About us. Our products. Our commitment. Recipes. Where to buy. New products. Down the left: Events & promotions. Frequent questions. Special diets. Contact us.

Across the bottom: Press room. Broker site. Foodservice. Contact us. Privacy policy. Address: 19480 SW 97th Avenue, Tualatin, OR 97062. Phone: 503-692-9666.

8414. Tisdale, Kevin. 2006. Has Pacific Foods of Oregon, Inc. (Tualatin, Oregon) changed its name to Pacific Natural Foods (Interview). *SoyaScan Notes.* Sept. 18. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** This question arose because, on the company's website, the space at the top of each page where the company name usually appears, bears the prominent name "Pacific Natural Foods: The Delicious Taste of Nature." Only at the very bottom of each page, in very small, almost inconspicuous letters, do we read: Copyright 2006, Pacific Foods of Oregon, Inc.

On the "Contact us" page, is the company's address, phone number and fax number, but no company name above those–as usual.

Under "About us," the page titled "History" begins: "Pacific Natural Foods was founded in 1987. When the co-founders began building the company, their idea was to start by making tofu."

Kevin says that Pacific Foods of Oregon, Inc. is still the company's legal name. The company's main brand used to be "Pacific Foods," but about 1½ years ago that was changed to "Pacific Natural Foods."

The company is doing well. Since it does not have refrigerated distribution, its soymilk line has been hurt by the trend (started by White Wave's Silk) toward refrigerated

sales in the dairy case. The company's Almond Milk and Oat Milk now sell almost as well as the soymilk, although there are many more SKU's of soymilk. Address: Pacific Foods of Oregon.

8415. Roonnaphai, Nareenat. 2006. Pathways out of poverty through cassava, maize and soybean in Thailand. *Palawija News* (*Bogor, Indonesia*) 23(3):1-4. Sept.
• ***Summary:*** "Maize, cassava and soybean are not staples in Thailand, they are food supplements and ingredients... Locally produced soybean is not large scale." Large amounts of soybeans and soy meal are imported because of booming livestock production.

"Soybean farmers in Sukhothai: In any given year, soybean can be grown three times: the early rainy season crop, late rainy season crop and the dry season crop with irrigation. Most farmers hold many farm plots and they combine paddy [rice], mung bean, morning glory [*Ipomoea aquatica; phak bung,* also called water spinach, water morning glory, water convolvulus] and chili with soybeans in their cropping pattern. Net family cash income from soybean and other crops grown in the irrigated zone is higher than multiple cropping in rainfed areas and also higher than farmers who practice soybean mono-cropping in both [either] irrigated or rainfed areas. Soybean enriches the soil and therefore there is no need to use fertilizers for crops grown after soybean reducing farm costs... Locally produced soybean is suitable for making soy milk due to its freshness and high protein content. Potential exists for simple processing of traditionally fermented Chinese soybean by farm housewife groups to expand production as well as marketing." Address: Director, Div. of Field Crop Economics Research, Bureau of Agricultural Economic Research, Office of Agricultural Economics (OAE), Bangkok, Thailand.

8416. Soyatech, Inc. 2006. Soya & Oilseed Bluebook 2007: The annual directory of the world oilseed industry. Bar Harbor, Maine: Soyatech. 448 p. Sept. Comprehensive index. Brand name index. Advertiser index. Statistical conversions. 28 cm.
• ***Summary:*** This is the first year in recent decades that the Bluebook (a $95 value) has been sent free of charge to qualified industry members. On the stylish cover is color photo of a lovely Asian woman holding the nozzle while fueling a vehicle with ethanol fuel (as the lid to the gas tank specifies) within an oval outline. Behind her is a large glass of soymilk base against a background of yellow soybeans.

On the inside front cover is a color ad from Natural Products Inc. (Grinnell, Iowa) titled "Always unique, always innovative, always natural." On the first page is a full page color ad from Bunge North America (St. Louis, Missouri) titled "The shortest distance from harvest to market." On the rear cover is a full page color ADM ad titled "Trailblazing" showing a young man riding his mountain bike through deep muddy water. The tag line is "Resourceful by nature" and the NutriSoy logo is shown. The oilseeds covered in this book are (alphabetically): Canola / rapeseed, coconut, corn, cottonseed, palm, peanut, soya, and sunflowerseed. Note: This list is unchanged from the previous year.

There is no longer a self-adhesive label containing "Your access code" on the title page.

The Introduction states that 3,400 companies offering 450 specific products or services are listed in this book. In the Foreword, Peter Golbitz writes: "What a difference one year can make. During the past 12 months, the commodities market, including soybeans, oilseeds and corn, has been pulled into the limelight and asked to play a new leading role in the world's energy industry... Enter biofuels. Renewable energy created from vegetable oils (for biodiesel) and for carbohydrate-based crops such as corn or sugar cane (for ethanol)..." Are these "perhaps, a gateway to a broader realization of the need to create sustainable solutions for humankind?" Address: 1369 State Hwy 102, P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207.288.4969.

8417. **Product Name:** Vitasoy Organic Soy Beverage [Holly Nog, or Peppermint Chocolate].
Manufacturer's Name: Vitasoy USA, Inc.
Manufacturer's Address: One New England Way, Ayer, MA 01432. Phone: 1-800-462-7692.
Date of Introduction: 2006. September.
Wt/Vol., Packaging, Price: 1 quart (32 fl oz). Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Glossy color leaflet (front and back, 8½ by 11 inch) sent by Patricia Smith from Natural Products Expo East. 2006. Sept. "Two new ways to boost holiday sales this season. New!" On the front: A large photo shows one carton of each of the two new flavors, with a red ribbon around the bottom of both. Dairy free. In the lower left corner, the USDA Organic logo. On the rear: Nutritional information and products specifications (UPC Codes and barcodes). No ingredients are given.

8418. Dee, Joel. 2006. History and present status of Edward & Sons Trading Co. (his company) and of his work with miso and tamari (Interview). *SoyaScan Notes.* Oct. 23. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** A far-ranging interview on his many important innovations and success. Joel appears to have been the first person in the Western world to add flavor to soy sauce, with Lemon Tamari (Aug. 1985), Ginger Tamari (Feb. 1988), and many other related products.

Joel developed the Premier Japan line because he believed the two main importers from Japan (Eden Foods and Westbrae) both defined their market too narrowly–as macrobiotic. He soon came up with the tagline "Traditional Gourmet," just as the specialty foods market was taking off

in the USA. But the macrobiotics criticized this line as not being "medicinal quality" so it never took off in the macro or natural foods markets.

Joel does not supply Trader Joe's with their Instant Miso Soup; he is not at liberty to reveal the name of the supplier. The TJ product contains dextrose, clam extract, and bonito powder (all for flavor) which Joel's Miso Cup does not contain.

The main segments of his company are now: Soy seasonings (miso and tamari), rice crackers, organic canned foods (coconut milk, pineapple, etc.), candy, and baked goods. Address: President, P.O. Box 1326, Carpinteria, California 93014-1326. Phone: 805-684-8500.

8419. Gupta, Rajendra ("Raj") P. 2006. Re: An improved process for making soymilk has been developed. Letter (e-mail) to William Shurtleff at Soyfoods Center, Oct. 25. 1 p.

• ***Summary:*** "We have been working on a major process improvement for some time now. Only now we are in a position to share with you our excitement of this greatly improved process we have developed that has the following advantages:

"(a) up to 25% higher yield for each kg of soybeans used, (b) reduction in residual particle size in soymilk to submicron size, (c) flavor profile improvement–further reduced beany flavour, (d) reduced viscosity, (e) soymilk base can now be cost effectively produced at higher than 10% concentration

"Fortunately, these huge process improvements do not increase the cost of our equipment to the buyer.

"Our new juice-soy beverages–Creamy Orange (that you had tasted during your visit), Peach-Mango, and Pineapple Banana were a hit at the Natural Products Expo in Baltimore in early October. They are seen as truly mainstream, loved even by the most soy-phobic people. Adez and Ades soy drinks of Unilever do not come even close to them in taste and nutrition (7g protein per 250 ml serving). A color .pdf file of our new package design is attached.

"As we discussed before we can build a soymilk system for you to fit almost any budget. We are able to trade automation with increased labor input and dramatically reduce equipment cost without compromising soymilk base quality.

"We recently sold a VS1000BB system to a party in Bolivia for US$200,000 whereas a standard VS1000 system is priced at US$600,000.

"With best regards, Raj."

Note: Talk with Raj Gupta. 2010. Oct. 14. This new, improved process is not patented. When you patent a process such as this, you make all of your secrets public. Address: Founder, ProSoya Corp., 26 Annette St., Huevelton, New York 13654. Phone: 315-244-7030.

8420. Barios, Alejandro. 2006. Norma Tecnica Guatemalteca COAGUANOR NTG 34 031 leche de soya natural fluida [Natural fluid soymilk standards for Guatemala]. Guatemala. 10 p. 28 cm. [6 ref. Spa]
Address: Presidente Comité de Trabajo de Leche de Soya de COAGUANOR.

8421. Weil, Andrew. 2006. How foods can affect cancer. *Time.* Nov. 20.

• ***Summary:*** The article begins: "What do steak, tofu and sushi have to do with cancer? Plenty, it seems, if several" new studies are to be believed. One study found a disturbing association between red meat consumption and cancer. A epidemiological study showed that Asian women consuming diets rich in soy have significantly lower rates of breast cancer than Western women have.

The report that interested Dr. Weil most examined the association between breast cancer and "soy-based foods" [soyfoods]. This has become a controversial subject because "soy contains isoflavones;" some of these, in an "isolated form, can stimulate the growth of estrogen-receptor-positive breast-cancer cells. That's why many Western doctors warn women against eating soy." Yet the epidemiological evidence looks promising: Asian women who consume "diets rich in soy have significantly lower rates of breast cancer than Western women have."

Dr. Weil was particularly pleased to see a new study of Asian-American women done by the National Cancer Institute. It studied women who ate a lot of soy-based foods as children, adolescents and adults. "The strongest and most consistent association was among women who ate the most soy-based foods from ages 5 to 11." Their risk of developing hormone-fueled breast cancer was only 58% as much as the women who ate the least soy-based foods. Women who ate a lot of soy as adolescents or adults reduced their risk by 25%. "Regular, moderate consumption of whole-soy foods (such as soynuts, edamame, soymilk, tofu and tempeh) probably affects the development of breast tissue in young females, possibly making it more resistant to carcinogens, including estrogenic agents in the environment."

Dr. Weil believes that women who have a history of breast cancer should be introducing their kids to soy foods at as early an age as possible. "Substituting soy milk for cow's milk is one way to start." He believes the same thing will be shown to hold true for boys; a diet that includes soy foods may reduce their future risk of prostate cancer.

A large color photo shows a white bowl filled with edamamé (green vegetable soybeans in the pods). A sidebar across bottom of article, titled "What we eat," states: (1) In 2004, U.S. per capita consumption of red meat was nearly 120 lbs. (2) In 2005 Americans ate, on average, 5 oz. of soy protein (equivalent to 12 oz. of soybeans), including ½ gallon of soy milk and 7 oz. of tofu. (3) In 2004 the average American ate 16½ lbs. of fish and shellfish.

Note: This is the 2nd earliest known article in *Time* magazine that mentions tempeh. Address: M.D.

8422. Northrup, Christiane. 2006. The wisdom of menopause: Creating physical and emotional health and healing during the change. Revised ed. New York, NY: Bantam Books. xvii + 631 p. Illust. Index. 24 cm. [36 soy ref]

• ***Summary:*** This revised edition contains a very positive and accurate section on the ability of soyfoods to relieve menopausal symptoms. But the benefits are dose-dependent. Discusses: Soy and menopause (p. 188-93; "Each of the following servings contains approximately 35-50 mg of soy isoflavones: 1 cup soy milk, ½ cup tofu, ½ cup tempeh, ½ cup green soybeans (edamame), available fresh or frozen, 3 handfuls roasted soy nuts"). Brain foods: Omega-3 fats [fatty acids], and DHA, soy and Japan (p. 337-38). Beautiful skin and soy (p. 364-66). Bone building and soy (p. 407-08). Eating for breast health and soy; Why soy is safe for breast tissue (p. 450-53). Heart health and soy (p. 524-25). Resources–Soy (incl. Revival Soy, p. 549).

At least 36 scientific studies on soy and women's health are cited, each with a full bibliographic record in the notes, chapter by chapter.

"Is there a soy-thyroid connection?" (p. 189-90). "Here's the bottom line: there is no convincing evidence that soy intake increases the risk of hypothyroidism during perimenopause. However, women often begin increasing their intake of soy during perimenopause, a time when they often get their thyroid function checked for the first time as well. And given that fully 25 percent of perimenopausal women have a thyroid problem, many believe that soy is responsible. If you have any doubt about your thyroid function, get it tested. Make sure you test for TSH (thyroid-stimulating hormone) along with T3 and T4, the two thyroid hormones. Its a simple blood test, and it will put your mind at ease." Address: M.D. (gynecologist), Women to Women, Yarmouth, Maine.

8423. Vitasoy International Holdings Ltd. 2006. Interim report 2006. New Territories, Hong Kong. 40 p. Nov. 30 cm. [Eng; Chi]

• ***Summary:*** For the six months ended 30 Sept. 2006, group turnover (sales) was HK$1,326 million, up 5.1% over the same period last year. Gross profit was HK$779 million, up 5.0% over the same period last year. "In view of the Group's strong balance sheet, the Board of Directors has declared an interim dividend of HK$2.8 cents per share." Sales performance was very encouraging in Mainland China (53.8%) and Australia and New Zealand (12.5%); it was steady in Hong Kong (5.9%), but lacklustre in North America (0.5%).

Market performance in North America: After years of rapid growth, the U.S. soyfoods market overall has begun to shrink. For the first 6 months of fiscal 2006/07 the tofu category decreased by 2.2% and aseptic soymilk by 1.8%. Address: No. 1, Kin Wong Street, Tuen Mun, New Territories, Hong Kong. Phone: 466 0333.

8424. *SoyaScan Notes.* 2006. Soymilk and non-dairy beverage prices at Trader Joe's in Lafayette, California (Overview). Dec. 12. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Since Dec. 1983, approximately every other year, Soyfoods Center has conducted a survey of the prices of soymilk and cow's milk in California. (Note: oz = fluid ounces; 32 fl oz = 1 quart; 33.8 fl oz = 1 liter. 2 quarts = one half gallon).

Shelf-stable / Aseptic soymilks: Trader Joe's organic original, vanilla, and chocolate $2.49/half gallon. Trader Joe's non-organic original, unsweetened, or vanilla $1.29/quart, or chocolate $1.49/quart. Trader Joe's non-organic chocolate 4 x 8 oz packs $2.49. Westsoy organic unsweetened $1.69/quart. Westsoy non-organic plain non-fat $2.49/quart. Westsoy Plus organic plain or vanilla $2.49/half gallon. Soy Dream soymilk original or vanilla $2.69/half gallon.

Refrigerated / fresh soymilks (in gable-top cartons): Trader Joe's non-organic low fat original or vanilla $2.99/half gallon. Trader Joe's organic low fat original or vanilla $3.29/half gallon. Trader Joe's organic unsweetened $3.49/half gallon.

Non-soy non-dairy beverages–Pacific Foods almond original or vanilla $1.69/quart. Blue Diamond Almond Breeze chocolate or vanilla $1.99/quart.

Soy Dream [rice beverage] vanilla or original $1.69/quart. Soy Dream enriched [rice beverage] vanilla or original $2.49/half gallon.

8425. *SoyaScan Notes.* 2006. Soymilk, non-dairy beverages, and cow's milk prices at The Natural Grocery Co., Berkeley, California (Overview). Dec. 14. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Since Dec. 1983, approximately every other year, Soyfoods Center has conducted a survey of the prices of soymilk and cow's milk in California. Cindy La reports the following retail prices. (Note: oz = fluid ounces; 32 fl oz = 1 quart; 33.8 fl oz = 1 liter. 2 quarts = one half gallon). All soymilk products at Berkeley Natural Grocery Co. are now organic or largely organic = Org. MOS = Made with organic soybeans. NON ORG = Non Organic.

Shelf-stable / Aseptic soymilks: Westsoy Light and Plus all flavors (MOS) $2.39/quart. Westsoy Nonfat (MOS) $1.99/quart. Westsoy original creamy (95% Org) $2.29/quart or $1.79 on special. Westsoy shakes (MOS) $2.49/quart.

Edensoy Original (95% Org) $2.79/liter. Edensoy Enriched (95% Org) $2.89/liter. Eden Blend Rice & Soy (95% Org) $2.65/liter. Edensoy Dream 3-pack (75-95% Org)

$2.89/3 x 8 oz.

Vitasoy Original (75-95% Org) $2.65/quart or $2.09 on special. Vitasoy Light (75-95% Org) $2.65/quart or $2.09 on special. Vitasoy Enriched (75-95% Org) $2.65/quart or $2.09 on special. Vitasoy Holiday Drinks (95% Org) $2.99/quart or $2.19 on special.

Soy Dream Regular or Enriched (Hain) (75-95% Org) $2.65/quart. Soy Dream 3-pack (75-95% Org) $3.09/3 x 8 oz. Pacific Foods (95% Org) $2.89. Kikkoman Pearl (75-95% Org) $2.59. White Wave Silk (95% Org) $2.49. Silk 3-pack (75-95% Org) $3.39/3 x 8 oz.

Refrigerated / Fresh soymilks (in gable-top cartons): Wildwood (95% Org) $2.39/quart or $3.99/half gallon. White Wave Silk Plain (95% Org) $1.99/quart or $3.69/half gallon. White Wave Silk Vanilla (75-95% Org) $3.69/half gallon. Soy Dream Enriched (75-95% Org) $3.89/half gallon.

Rice drinks: Rice Dream (75-95% Org) $2.59/quart. Lundberg (75-95% Org) $2.69/quart. Pacific Foods (75-95% Org) $2.19/quart.

Refrigerated cow's milk. Clover Stornetta $1.29/quart. or $2.19/half gallon or $3.99/gallon. Clover Stornetta 100% Organic $1.99/quart. or $3.49/half gallon or $6.39/gallon. Straus 100% Organic in glass bottle $2.49/quart or $3.99/half gallon. Claravale Raw Milk non-organic $3.99/quart. Organic Valley 100% Organic $1.99/quart or $3.99/half gallon. Meyenber Goat Milk non-organic $3.49/quart. Lactaid Milk non-organic $2.19//quart.

8426. *SoyaScan Notes.* 2006. Soymilk and cow's milk prices at Safeway supermarket in Lafayette, California (Overview). Dec. 30. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Since Dec. 1983, approximately every other year, Soyfoods Center has conducted a survey of the prices of soymilk and cow's milk in California.

Soymilk: Silk organic vanilla or plain: $2.98/quart. Silk non-organic lite chocolate, lite plain, or lite vanilla (lite means diluted with water): $4.49/half gallon–or 2 for $7. Silk non-organic calcium fortified plain, vanilla, or unsweetened: $4.49/half gallon–or 2 for $7. Silk "made with organic soybeans" Very Vanilla or chocolate: $4.49/half gallon–or 2 for $7.

Safeway O Organics soymilk: Chocolate, vanilla, or plain: $4.49/half gallon–or 2 for $6.

Safeway: Cow's milk (fortified with vitamins A and D) sells for the following prices at the Safeway supermarket in Lafayette, California: (1) Fat free: $1.49/quart or $1.99/half gallon or $3.79/gallon; (2) Low fat (1% fat, protein fortified): $1.49/quart or $1.99/half gallon or $3.49/gallon; (3) Reduced fat (2% fat, protein fortified): $1.49/quart or $1.99/half gallon or $3.49/gallon; (4) Whole (homogenized, fortified with vitamin D only): $1.49/quart or $1.99/half gallon or $3.49/gallon. (5) Acidophilus Plus Bifidus–Low Fat (1% fat): $2.69/half gallon. (6) Horizon Organic. (7) Lactaid: $3.99/half gallon. Lucerne 100% lactose free, fat free $3.69/gallon. (9) Safeway O Organics Fat free, low fat or reduced fat: $4.19/half gallon or $5.99 per gallon. The best-seller among these is Fat free in gallons.

8427. Hoie, Lars H.; Sjohlm, A.; Gulstrand, M.; Zumft, H-J. et al. 2006. Ultra heat treatment destroys cholesterol-lowering effect of soy protein. *International J. of Food Sciences and Nutrition* 57(7-8):512-19. Nov/Dec. *
• ***Summary:*** This randomised, placebo-controlled, double-blind study, with the lead researcher being from Norway's NutriPharma, in cooperation with researchers from the Karolinska Institute in Stockholm, reports that consumption of UHT soymilk led to increases in LDL (bad) cholesterol levels of up to 20%. Address: 1. NutriPharma, Norway.

8428. McKee, David. 2006. Focus on Israel: Surge in imported wheat from Black Sea region in recent years has made life complicated for Israeli bakers. *World Grain* 24(12):18, 20, 21-22. Dec.
• ***Summary:*** Imports of soybeans to Israel in recent years are as follows (in 1,000 tonnes = metric tons): 600 in 2000-01. 735 in 2001-02. 500 in 2002-03. 494 in 2003-04. 543 in 2004-05. 450 in 2005-06. And 600 in 2006-07 (estimate).

The oilseed crushing industry also depends on imports. Of the estimated 650,000 tonnes of soybeans to be imported in 2006, less than 25% of these will come from the USA, despite a 90% share as late as 2002. Imports of soybean meal, which come mainly from Argentina, have doubled to over 200,000 tonnes over the past few years. Israel has three soybean crushers: Solbar Industries, Shemen Industries, and Teth-Beth; their combined yearly crush is about 660,000 tonnes.

Solbar industries has focused heavily on producing value-added products such as soy proteins, soy isoflavones, and soy flour. Solbar now exports 90% of its soy food products and has global market share for about 5% certain soy food categories. Israel has proven to be a good place to develop these food products. "Over 50% of the population is said to regularly consume soy-based foods including meat substitutes and soy milk." Address: Grain industry consultant; davidmckee59@msn.com.

8429. **Product Name:** Soyabella (Non-dairy Carob [like Chocolate] Bar).
Foreign Name: MolenAartje Soyabella.
Manufacturer's Name: Natudis B.V.
Manufacturer's Address: P.O. Box 376, 3840 AJ Harderwijk, Netherlands.
Date of Introduction: 2006.
Ingredients: -
Wt/Vol., Packaging, Price: 100 gm.
How Stored: Refrigerated.
New Product–Documentation: Label sent to Soyinfo Center by Chico Leroux of Lyon, France. 2012. Feb. 8. Red,

brown, light blue and black on yellow. "Natural. No milk added."

8430. Basu, Debashis; Kulirani, B. Francis; Datta-Ray, B. 2006. Agriculture, food security, nutrition and health in North-East India. New Delhi, India: Mittal Publications. xxvi + 422 p. See p. 299-300. 23 cm.
• ***Summary:*** Chapter 28 (p. 295-307) is titled "Opportunities for processing and utilization of soybean to increase nutritional security in north-east India, by R.K.P. Singh and K.K. Satapathy. Contents: Introduction. Nutritional profile of soybean. Soybean cultivation in north-east India. Present status of soybean utilization in north-east. Technologies for the soybean utilization as food uses: Soy milk, soy paneer (tofu), full fat soy flour, soy fortified biscuits. By-product utilization of soybean: Okara, soya pulp. Conclusion.

In India, the area under soybean cultivation has increased from about 32,000 ha in 1970-71 to about 6.00 million ha today. During this same time period, soybean production has risen from about 140,000 tonnes to approximately 6,000,000 tonnes, and soybean yield has increased from 438 kg/ha to about 1,000 kg/ha.

Madhya Pradesh is by far India's leading soybean producing state, accounting for 72-80% of total production, followed by Maharashtra, Rajasthan, and Uttar Pradesh.

In India's seven north-eastern states, although soybean area and production are very low, soybean yields are higher than the average for all of India–especially in Arunachal Pradesh, Mizoram and Sikkim. This shows that expansion of soybean production has promise in these states.

In the late 1960s and 1970s, soybean was introduced into India primarily as a source of food protein, but this goal has not been met. Today soybean is used primarily as a source of oil for domestic use and protein for export.

In the north-eastern states, however, soybean is used mainly as a pulse crop and as a source of indigenous fermented foods, such as *tungrymbai* (in Meghalaya; it is consumed mainly in the form of chutney along with rice and vegetable curry) and *kinema* (in Sikkim, eaten with boiled rice). Other soybean food products eaten in north-east India are *hawaijar* (Manipur), *bekang-um* (Mizoram), and *akhoni* [*aakhone, akhuni*] (Nagaland), etc.

These soybean foods are all prepared in approximately the same way. Rinse the soybeans then soak overnight in water. Drain, then cook in excess water in an open vessel until each soybean is soft enough to be crushed when pressed between the thumb and one finger. Wrap the warm soybeans in a lamet leaf, place in a bamboo basket, and set the basket above an earthen oven in the kitchen. Leave the soybeans to ferment for 2-3 days until the resulting product shows long, stringy threads when beans are pulled apart, has a sticky texture and the typical strong flavor. To make *tungrymbai* (for example), add green chili, garlic, sesamum / sesame, ginger and salt, then cook in mustard-seed oil for 15-20 minutes.

In May 1984 the Soybean Processing and Utilization Center was established at Central Institute of Agricultural Engineering, at Bhopal. After steady efforts for the past 17 years, the Center has developed equipment and processes for preparing homemade soymilk, soypaneer (tofu), full fat soy flour, soy fortified biscuits, soy dal, etc. (p. 300-01). A detailed discussion each of these products is then given, including its cultural background in Asia, how to make it at home, its nutritional benefits, and ways of adding it to one's daily meals (p. 301-06). A similar discussion is given for the by-products okara and soya pulp.

On page 307 are 4 interesting references.

8431. Chia, Chew-Ling. 2006. The influence of radiation encountered on Mars missions on the yield and quality of soymilk and tofu from bulk soybeans. Thesis (M.S.), Iowa State University. 131 leaves. Illust. 29 cm. *
Address: Iowa State Univ., Ames, Iowa.

8432. Chiarello, Marileusa D.; Guerroue, J.L.; Chagas, C.M.S.; Franco, O.L.; Bianchini, E.; Joao, M.J. 2006. Influence of heat treatment and grain germination on the isoflavone profile of soy milk. *J. of Food Biochemistry* 30:234-47. [34 ref]
• ***Summary:*** Twelve forms of isoflavones have been identified in soybeans and soyfood products. "Heat treatment by autoclaving for 5 minutes did not affect the total isoflavones content, but led to a 90% decrease in malonyl forms, whereas Beta-glycosides increased by 70%... Germination for three days did not change the total isoflavone content, but changed the distribution profile (15% increase in malonyl forms and 30% decrease in Beta-glycosides). Germination for 7 days increased the bioavailability of aglycone isoflavones in soy milk by seven times." Address: Laboratorio de Ciencia e Tecnologia de Alimentos, Universidade Catolica de Brasilia, 70790-160, Brasilia, DF, Brazil.

8433. Davidson, Alan; Jaine, Tom. 2006. The Oxford companion to food. New York, NY and Oxford, England: Oxford University Press. xxviii + 907 p. Illust. by Soun Vannithone. Index. 29 cm. [1500+* ref]
• ***Summary:*** The first edition of this remarkable book (1999) is already a "classic." "Alan Davidson famously wrote eighty percent of the first edition, which was praised for its wit as well as its wisdom. Tom Jaine, editor of the second edition, worked closely with Jane Davidson and Helen Saberi to ensure that new contributions continue in the same style... The text has been updated where necessary" and there are many new entries. The front matter, which is 10 pages longer, begins with "Alan Davidson: A tribute" (p. vii; he died in 2003) followed by a "Preface to the Second edition" by Tom Jaine. Entries in the 1st edition are generally on a

different page in this edition. Tofu, for example, formerly on pages 798-99, is now on pages 801-02; however the information is the same. The marvelous illustrations in both editions are by the same artist. The last page of this edition is page 907 compared with page 902 in the 1st edition. Address: World's End, Chelsea, London, England.

8434. Debruyne, Ignace. 2006. Soy base extract: Soymilk and dairy alternatives. In: Mian A. Riaz, ed. 2006. Soy Applications in Food. Boca Raton, Florida, London, New York: CRC Press (Taylor & Francis Group). [x] + 288 p. See p. 111-33. [15 ref]

• ***Summary:*** Contents: Introduction. Dry and semidry processing. Soy base extraction process: Flavor characterization of soy dairy products, off-flavor development and how to control it, soybean selection, soybean preparation, soybean dehulling, soybean soaking and blanching, soybean wet grinding, flash deodorization, okara and soy base separation, okara washing, cooling, storage and production of dairy alternatives, okara byproduct valorization, yield calculation, soy base extraction equipment suppliers, stabilization and packaging. Reconstituted soymilk. Soy dairy alternatives.

Photos show: (1) A Buhler Ultramill. (2) A ProSoya VS200C.

Figures: (1) Critical sensory attributes of soymilk. (2) Causes of sensory characteristics. (3) A full soy base extraction process. (4) A soy base decanter. (5) Mass balance for the ProSoya VS 1000 soymilk plant. (6) Temperature profile for stabilization process.

Tables: (1) Solids and proteins on wet basis (averaged data). (2) Soy solids and protein yield calculations in soymilk production. Address: Ignace Debruyne & Associates, Izegem, Belgium.

8435. Fromartz, Samuel. 2006. Organic, Inc.: Natural foods and how they grew. New York, NY: Harcourt, Inc. xx + 294 p. No illust. No index. 24 cm. [270 ref]

• ***Summary:*** Contents: Introduction (the case of Arthur Harvey, a small organic blueberry farmer from Maine). 1. Humus worshippers: The origins of organic food. 2. The organic method: Strawberries in two versions. 3. A Local initiative: From farm to market. 4. A spring mix: Growing organic salad. 5. Mythic manufacturing: Health, spirituality, and breakfast (very interesting, largely about Steve Demos, White Wave Silk soymilk and Dean Foods / Suiza, plus Sylvester Graham, Dr. James Caleb Jackson, Dr. John Harvey Kellogg and his brother Will K. Kellogg, Jeremiah Ridenour, Ted Nordquist, *The Book of Tofu* by Shurtleff and Aoyagi, *Diet for a Small Planet* by Frances Moore Lappe). 6. Backlash: The meaning of organic. 7. Consuming organic: Why we buy. Acknowledgments. Notes.

A history (sort of) of the organic food industry in the United States, and how the movement has gone from fringe, to commercial, to mainstream. This is a niche or underdog food culture involving many issues of morality– the relationship of humans to agriculture and nature, and specifically how a principled person or business can thrive in the modern world without compromising ideals.

The author, a business writer, says in the introduction: "I was particularly interested in the people who sought to manifest their values in business... The intersection of idealism and business was not an easy place to stand, since one usually trumped the other."

"Sales of organic food had shot up about 20% per year since 1990, reaching $11 billion by 2003." This industry, which has its roots in utopian ideologies, will surely have an interesting future.

A great deal of the book is devoted to the recent history, and the early history of the organic food industry in the United States is (unfortunately) extremely weak. The book is hurt first by the lack of an index, second by the lack of endnote reference numbers in the text (the 254 endnotes themselves are excellent), and third by the lack of complete references to key books cited in the endnotes (he gives the author and title, but no year of publication or publisher; so one who wishes to cite these books must take the time to look up the missing information). Address: Business writer, Washington, DC.

8436. Golbitz, Peter; Jordan, Joe. 2006. Soyfoods: Market and products. In: Mian A. Riaz, ed. 2006. Soy Applications in Food. Boca Raton, Florida, London, New York: CRC Press (Taylor & Francis Group). [x] + 288 p. See p. 1-21.

• ***Summary:*** Contents: History of soyfoods: Growth and development in the Western world, soybean industry blossoms in the United States, soybeans grow around the world. Soybean production and utilization for food: Soyfoods in Asia, soyfoods in Europe, soyfoods in Africa, soyfoods in the United States: Development of the U.S. soyfoods industry, Americanization of soyfoods. Soybean nutritional components: Soy protein, soy oil, carbohydrates and fiber, vitamins and minerals, isoflavones. Soyfoods and protein ingredients: Whole dry soybeans, tofu, soymilk, tempeh, soymilk yogurt, miso, soy sauce, okara, natto, soynuts, meat alternatives, cheese alternatives, nondairy frozen desserts, green vegetable soybeans (edamame), soy sprouts, full-fat soy flour, defatted soy flour, textured soy flour, soy protein concentrate, soy protein isolate. Conclusions.

Tables: (1) World soybean production by major producers. (2) Annual per capita consumption (2001) of soybeans for direct food. (3) U.S. soyfoods market (1996 to 2005).

This chapter suffers from a lack of references, and contains several basic errors concerning the early history of the soybean. Contrary to what Mr. Golbitz says: (1) The Chinese have not considered the soybean a basic source of nutrition for almost 5000 years (see Hymowitz 1970, "On

the domestication of the soybean"). For "a little more than 3000 years" would be much more accurate. (2) The first reference to soybeans in Chinese literature does not date back to 2853 B.C. (see Hymowitz 1970, and Hymowitz and Shurtleff 2005, "Debunking soybean myths and legends in the historical and popular literature"). It dates back to about 1100 B.C. (3) Natto was not developed at least 3000 years ago in Japan (the earliest known document that mentions natto dates from 1450 CE–or about 560 years ago). Address: Soyatech, Inc., Bar Harbor, Maine.

8437. Lund, JoAnna M. 2006. Cooking healthy with soy. New York, NY: Penguin Group. 369 p. *
• ***Summary:*** A strange book. Tofu, for example, is not mentioned, while most of the recipes call for specific brands, such as "4 Boca Meatless Original Chik'n Patties," or "Tofutti Sour Supreme," or "Silk Light Plain Soymilk," or "Boca Meatless Ground Burger." Makes you wonder if these companies paid the author or publisher for this "free" advertising.

8438. Moskowitz, Isa Chandra; Romero, Terry Hope. 2006. Vegan cupcakes take over the world: 75 dairy-free recipes for cupcakes that rule. Cambridge, Massachusetts: Da Capo Press (A member of Perseus Books Group). Distributed by Publishers Group West. viii + 168 p. Foreword by Sara of Tegan & Sara. Illust. (color). 18 x 17 cm.
• ***Summary:*** Both authors are young women; their photo together is on the inside rear cover. A cupcake is composed of the cake plus the topping. "Plain old soymilk plays a big role in these cupcakes, providing the main source of liquid." "We adore soy yogurt in baking and it helps make some really light, fluffy and moist cupcakes. Rice yogurt will pretty much do the same thing" (p. 11). These cupcakes contain no milk, no eggs, no butter, no honey, etc.–But also no tofu. Soy milk powder appears on page 68.

Contents: Part I: Introduction: How to make kick-ass cupcakes, ingredients, tools for taking over the world, troubleshooting: when bad things happen to good cupcakes, decorating your cupcakes.

Part II: The recipes. Basic cupcakes. Classic cupcakes. Fancy cupcakes. Frostin's and fillin's.

About the authors (provided by the publisher): "Isa Chandra Moskowitz has been cooking up trouble in New York City since the eighties, when she discovered punk rock and vegetarianism. Her public access cooking show, the Post Punk Kitchen, filmed in her small Brooklyn apartment, has been a smash hit since it hit the airwaves in 2003. She has been inspiring fans of vegan food and loud music ever since. The Post Punk Kitchen won *VegNews'* Veggies award for Best Cooking DVD and has been featured in media from *Bust to Herbivore* to Gothamist.com. Isa also hosts cooking demonstrations and can be found online at www.theppk.com.

Note: If they had used tofu as an ingredient, they could have omitted some or all of the baking powder and baking soda. Address: Brooklyn, New York.

8439. Null, Gary. 2006. Gary Null's power foods: the 15 best foods for your health. New York, NY: New American Library. 327 p. Plus 8 unnumbered pages of color plates. Illust. No index. 24 cm.
• ***Summary:*** A vegan cookbook. Gary has eaten a vegan diet for more than 30 years. He owns a juice bar named Gary Null's Uptown Whole Foods in New York City. He advocates eating soybeans and soy products; because of their "extensive and well researched health benefits" and because they come in such a wide variety of forms, from "tofu and tempeh, to nondairy products like milks, cottage cheese, cheese, yogurt and ice creams. No other legume can be used in so many delicious ways" (p. 10, 24-25). One of his 15 "power foods" is soy (p. 13). He likes juicing and raw foods; in the chapter on beverages he sometimes adds 1-2 tablespoons soy protein powder, or a cup or so of soymilk or rice milk, or soy yogurt. For dips, he likes silken tofu. The chapter on "Entrees" (p. 240-88) includes 13 recipes that call for tofu, and 8 that call for tempeh. Edamame, whole soybeans, tamari, and soy cheese are included. His daughter, Shelly Null, is a gourmet chef. The book has no index. Address: Author of more than 70 books, New York City.

8440. **Product Name:** Soy Smart [Chai, Vanilla, or Chocolate].
Manufacturer's Name: Odwalla, Inc.
Manufacturer's Address: Dinuba, CA 93618. Phone: 1-800-odwalla.
Date of Introduction: 2006. January.
Ingredients: Chai: Organic soymilk (water and organic soybeans), pure filtered water, banana purée, organic evaporated cane juice, soy lecithin, tricalcium phosphate, vanilla extract, natural flavors, green tea extract, DHA algal oil, sea salt.
Wt/Vol., Packaging, Price: 450 ml (15.2 fl oz) HDPE plastic bottle.
How Stored: Refrigerated.
New Product–Documentation: The Soy Daily. 2007. May 17. "Quick–Who is Ken Jennings?" Odwalla's latest beverage line is Soy Smart, a nourishing soymilk drink brimming with nutrients. Product with Label purchased for $3.99 at Safeway supermarket in Lafayette, California. 2007. June 26. Self adhesive label in many colors: purple, green and yellow on white. Illustration of the head of a man with an arrow pointing toward his green brain. "Nutritional. Soymilk drink. A good source of protein. 32 mg of Omega-3 DHA an important component of the brain." Label copyright 2006. On the back panel is text and little illustrations. On one side panel: Nutrition mission. Every day better. Soyfoods Center taste test: This is thick, rich, rather sweet soymilk. Not nearly as tasty as Odwalla's chai in 1999 (before

Odwalla was purchased by Coca-Cola Co.) and much, much too expensive.

8441. Oseland, James. 2006. Cradle of flavor: home cooking from the spice islands of Indonesia, Malaysia, and Singapore. New York and London: W.W. Norton & Co. 384 p. + 16 unnumbered pages of plates. Illust. (some color). Maps. Index. 26 x 21 cm. [41 ref]
• ***Summary:*** Lavishly praised. "James Beard Foundation Book Award Winner: Asian Cooking."

In Chapter 3, "At the market, ingredients" (which has many fine color photos) is a long, interesting entry for "Indonesian sweet soy sauce (*kecap manis,* p. 72). "Sweet soy sauce is hugely popular in the cooking of Indonesia and, to a lesser extent, Malaysia and Singapore. (The word *kecap,* by the way, is derived from the Cantonese *koe-chiap,* or 'sauce,' from which we get the word *ketchup.* It was probably handed over by traders from southern China who long ago traveled extensively to the Indonesian islands.)" Its main use is as a table condiment or dipping sauce, although cooks also use it in marinades and to flavor stews. When Indonesian sweet soy sauce is mixed with sliced red chiles and lime juice, it becomes the widely used *sos kecap rawit.* In the U.S., the two most widely available brands, both imported from Indonesia, are Cap Bango (which the author prefers) and ABC.

There are also entries for "Soy sauce (*kecap,* p. 87. Of the two types, the first is called simply soy sauce, whereas the second "is double-black soy sauce, which has been aged longer and mixed with a small quantity of molasses." It has a more robust flavor than regular soy sauce). Sweet soybean paste (*tauco* or *taucheo,* p. 88-89, a Hokkien word. A "thick, golden brown, misolike condiment made of fermented soybeans, rice flour, sugar, and salt). Tempeh (p. 90-91, "one of Indonesia's great gifts to the culinary world"). Tofu (*tahu,* p. 91-92).

Chapter 13 (p. 318-35), titled: "Tempeh, tofu, eggs," has a long and very interesting introduction about the author's visit to Rahmat, a traditional tempeh maker and his shop in Yogyakarta, Java; he wanted to learn how tempeh is made. Recipes: Garlic-marinated tempeh (*Tempe goreng, Indonesia*). Tempeh sambal with lemon basil (*Sambal tempe, Bali, Indonesia*). Caramelized tempeh with chiles (*Tempe kering, Central Java, Indonesia*). Tofu and summer vegetables in coconut milk (*Sayur lodeh, Malaysia*). Twice cooked tofu with coriander (*Tahu goreng bacem, Central Java, Indonesia*).

Tempeh, tofu, soy sauce, and sweet soy sauce are also discussed in many places throughout the book. Address: Executive editor of *Saveur,* New York City.

8442. Paulson, Paul V.; Welsby, David; Huang, Xiaolin L. 2006. Ready-to-drink soy protein nutritional beverages. In: Mian A. Riaz, ed. 2006. Soy Applications in Food. Boca Raton, Florida, London, New York: CRC Press (Taylor & Francis Group). [x] + 288 p. See p. 199-226. [45 ref]
• ***Summary:*** Contents: Introduction: Markets for soy protein nutritional beverages, nutritional and functional demands, soy protein health benefits, categories of ready-to-drink soy protein nutritional beverages. Soy proteins: Soy protein classification, soy protein product manufacture and chemical composition (soy flour, soy protein concentrates, soy protein isolates), physical properties and functionality. Key factors for beverage quality: Dispersion and hydration of dry protein products, factors affecting hydration, recommended temperatures. Formulation and selection of ingredients: Protein attributes, effect of sugars on browning, hydrocolloid stabilizers, emulsifiers, selection of a buffering system, flavoring, colorants, fat sources. Processing: Beverage makeup, thermal treatment, handling (foaming). Beverage applications for soy protein: Ready-to-drink neutral pH (beverages containing dairy proteins, all-soy-protein nutritional beverages, high-fat beverages), ready-to-drink acid (stabilization, protein selection criteria, flavors and colors, thermal treatments, formulation). Parting comments.

Revenues from soymilk sales in the United States today are over $600 million, and soymilk products are sold in a wide variety of retail outlets.

Tables: (1) Human requirements for essential amino acids. (2) Composition of some commercial products derived from soybeans. (3) Relationships between physical properties of proteins and beverage attributes. (4) Examples of heat process conditions for beverages. (5) Formulas for ready-to-drink neutral beverages. (6) Formula for acidic beverage.

Figures: (1) Soybean processing pathways. (2) Nitrogen solubility index (%) of various soy protein isolates. (3) Physiochemical properties of protein hydration. (4) Maillard reaction of milk proteins or isolated soy proteins with fructose. (5) Process flow for typical RTD beverage. (6) pH/solubility curve for the main soy proteins. Address: The Solae Company LLC, St. Louis, Missouri.

8443. Planck, Nina. 2006. Real food: What to eat and why. New York and London: Bloomsbury Publishing. [viii] + 343 p. Index. 22 cm. [30+ ref]
• ***Summary:*** This book is carefully researched and very well, thoughtfully and fairly written; the author has written for *Time* magazine and comes with very good credentials for this book. Born in 1971 in Buffalo, New York. "She was a speechwriter to the U.S. ambassador to Britain when she opened the first farmers' market in London on June 6, 1999. Six months later she quit her job to open ten more markets, write *The Farmers' Market Cookbook,* and host a British television series on local food. In 2003 Nina created the Mount Pleasant Local Food Market in Washington, D.C. In New York City she ran Greenmarket, the largest network of farmers' markets in the United States. Nina's new company, Real Food, runs markets for farmers and purveyors of

regional and traditional foods" ("About the author," p. 344).

The author advocates the following: (1) Eat real, traditional foods rather than more modern "industrial foods." These real foods include plenty of meat, fish, poultry, eggs, and dairy products made from whole raw (unpasteurized) milk from cows grazed outdoors on grass (rather than corn and soybeans, which cows were not designed to eat by nature) without synthetic hormones–plus real, organically grown fruits, vegetables, whole grains and legumes (including traditional soy foods), real salt, and dark chocolate.

(2) Eat real fats–including butter, beef fat, coconut oil, lard, and extra-virgin olive oil, including saturated fats and cholesterol. Avoid industrial fats–such as margarine, polyunsaturated vegetable oils (including soybean, corn, and sunflower oil), and shortening. (3) Go beyond and disregard the cholesterol myth; the evidence supporting it is weak. (4) Stop eating a vegetarian diet, and especially a vegan diet (which no traditional society has ever practiced).

To start with the section on soy foods: In the Chapter 8, titled "Other real foods," the section on soy foods is titled "Traditional and industrial soy are different" (p. 225-34). Traditional soy foods are those that have a long history in the diet, and are still made in pretty much the way they used to be. Her information on the early history of the soybean and soy foods (p. 225-26) contains many errors, as well as some interesting observations. Some of the earliest soyfoods were fermented (starting with fermented black soybeans and jiang in China). She lists five health benefits of fermentation. Fermentation (along with cooking) helps to reduce the phytic acid in soybeans. Soy foods do not contain reliable vitamin B-12. The author states several times that soy protein is not complete protein. Most nutritionists for the past 50 years have correctly avoided this "is" vs. "is not" labeling and instead have listed all foods along a continuum from high quality to low quality. By the latest measures of protein quality, soy protein (by itself, without supplementation by cereal grains) has about the same quality as beef, but lower than that of eggs or milk. While noting that about 85% of all soybeans are genetically engineered, she fails to mention that most traditional soyfoods in the USA are made from organic, non-GE soybeans. She discusses the important part that soy plays in the Okinawan diet, where the people have the highest longevity in the world. Yet soy "should be viewed as part of a diverse diet, not as a nutritional silver bullet." We heartily agree. She lists the many traditional soyfoods (p. 231-32), made in basically the traditional way, including: Bean sauce (jiang), miso, natto, soy milk (non-industrial), soy sauce. sufu (fermented tofu, incl. Filipino tahuri), tofuyo (fermented tofu from Okinawa), tamari (liquid left after miso is made), tempeh, tofu, and edamame. She recommends that we avoid modern soy protein products made from defatted soybean meal (typically extracted with hexane solvent), including soy protein isolate, "industrial soy milk," soy based infant formula, and soy sauce which uses defatted soybean meal instead of whole soybeans. But what would she do with all the oil left over after using whole soybeans?

Concerning a diet rich in fish, meat, and poultry. She partly ignores the ethical issues involved in killing billions of those animals each year and the environmental issues involved in raising them. These are both huge issues. Several complex issues that she addresses head-on and in a fair, interesting way: (1) Is milk good for humans (p. 39-86).

One of the basic hopes / agendas behind this book is that people will start to leave cities, buy a piece of land (as the author's own family did when she was age 2), grow their own food and raise their own animals for milk, meat, and eggs. There is a steadily growing number of books advocating this traditional way of life.

The Glossary (p. 306-15) contains many good definitions that most people will be able to understand. The bibliography (p. 316-21) is substantial, and there are also endnotes (p. 290-303) but the book would be better if more of its controversial or historical statements cited authoritative sources. Address: USA.

8444. Prabhakaran, Molamma P.; Perera, Conrad O. 2006. Effect of extraction methods and UHT treatment conditions on the level of isoflavones during soymilk manufacture. *Food Chemistry* 99:231-37. [24 ref]

• ***Summary:*** Found "that hot grinding caused an improvement in the extraction of isoflavones into the soymilk compared to cold grinding." There "was no apparent difference in the loss of isoflavones due to direct UHT heating compared to indirect UHT heating. A significant percentage of the isoflavones end up in the okara–so it should be used in human food products." Address: Food Science and Technology Programme, Dep. of Chemistry, National Univ. of Singapore, Science Drive 4, Singapore 117543, Singapore.

11. Ready-to-drink soy protein nutritional beverages, by Paul V. Paulsen, David Welsby, and Xiaolin L. Huang. 12. Soy Product off-flavor generating, masking, and flavor creating, by Rongrong Li. 13. Selecting soybeans for food application, by Lynn Clarksons. 14. World Initiative for Soy in Human Health [WISHH], by Jim Hershey. Address: PhD, Head, Extrusion Technology Program, Food Protein Research and Development Center, Texas A&M Univ., College Station, Texas.

8446. Rozman, Karl K.; Bhatia, J.; Calafat, A.M.; et al. 2006. NTP-CERHR Expert Panel report on the reproductive and developmental toxicity of soy formula. *Birth Defects Research* (*Part B*) 77:280-397. [234 ref]

• ***Summary:*** Preface: In June 1998 the National Toxicology Program (NTP) and the National Institute of Environmental Health Sciences (NIEHS) established the NTP Center for the Evaluation of Risks to Human Reproduction (CERHR).

"This report is a product of the expert panel and is intended to (1) interpret the strength of scientific evidence that soy formula is a reproductive or developmental toxicant based on data from in vitro, animal, or human studies, (2) assess the extent of human exposures to include the general public, occupational groups, and other sub-populations, (3) provide objective and scientifically thorough assessments of the scientific evidence that adverse reproductive/developmental health effects may be associated with such exposures, and (4) identify knowledge gaps to help establish research and testing priorities to reduce uncertainties and increase confidence in future evaluations."

Overall conclusions (p. 391): "There are insufficient human or experimental animal data available to permit determination of developmental or reproductive toxicity of soy infant formula."

Note: After the panel finishes its review, the report has to be approved by the board of advisors to the NTP, which is a formal process completely different from the actual scientific review conducted by the independent scientists on behalf of the NTP. That formal adoption never occurred for this report. Address: 1. Dep. of Pharmacology and Toxicology, Univ. of Kansas Medical Center, Kansas City, KS.

8447. Schwarz, Richard W. 2006. John Harvey Kellogg, M.D.: Pioneering health reformer. Hagerstown, Maryland: Review & Herald Publishing. 240 p. Illust. Index. 24 cm. *

• ***Summary:*** This is a new revised and updated edition of the original classic 1970 edition. Address: Andrews Univ., Berrien Springs, Michigan.

8448. Sugano, Michihiro. 2006. Nutritional implications of soy. In: Michihiro Sugano, ed. 2006. Soy in Health and Disease Prevention. Boca Raton, Florida: Taylor & Francis. [xii] + 313 p. See p. 1-16. [10 ref]

• ***Summary:*** Contents: Introduction. Structure of soybean. Components of soybean: Proteins, oil, carbohydrates, minerals, vitamins. Composition of soy products. Nutritional aspects of soy products: Protein, peptide, oil, oligosaccharide, vitamins, other components. From "A Meat in the Field" to "A Treasure Box of Functionality."

Tables: (1) Major soybean components and their health effects. Two columns: Components and functions. (2) Nutrient contents of dried soybean (incl. minerals and vitamins). (3) Nutrient contents of soybean products (gm per 100 gm): Kinako (parched soybean flour, full-fat). Tofu (bean curd). Abura-age (fried bean curd). Kori-tofu (frozen bean curd). Natto (fermented soybean). Okara (Tofu refuse). Tonyu (soymilk). Yuba (Soymilk skin). Tempe. Miso (bean paste). Shoyu (soy sauce). Soy protein isolate. (4) Mineral contents of soybean products (sodium, potassium, calcium, magnesium, phosphorus, iron, zinc, copper, manganese; same products as in Table 3). (5) Vitamin contents of soybean products (retinol, carotene, D, E, K, B-1, B-2, niacin, B-6, B-12, folic, pantothenic, C; same products as in Table 3). (6) Amino acid and protein composition of Japanese soybean products. (7) Proposed patterns for essential amino acid requirements and composition of soybean proteins (soy protein concentrates and isolates). (8) Fatty acid composition of soybean oils (% of total fatty acids) (Products: Refined soybean oil, genetically modified oils, low linolenic, high oleic, low palmitic, low saturated fatty acid, high palmitic, high stearic).

Figures: (1) Pie chart of intake of soybean and its products in Japan (gm per day of tofu {38.2 gm}, fried tofu {7.9 gm}, natto {6.9 gm}, whole soybeans {2.0 gm}, other {2.3 gm}; Total 57.3 gm per day). (2) Bar chart: Amino acid score of dietary proteins in humans (casein 1.0, egg white 1.0, soy protein concentrate 9.9, soy protein isolate 9.5, beef 9.5). (3) Graph and bar chart: Soybean protein lowers liver delta-6 desaturase activity and liver phospholipid delta-6 desaturation index in rats–relative to casein. Address: Director, Fuji Foundation for Protein Research, Japan; Prof. Emeritus Kyushu Univer. and President, Prefectural Univ. of Kumamoto, Japan.

8449. **Product Name:** Silk Creamer (Plain Non-Dairy, Liquid).
Manufacturer's Name: WhiteWave Foods Co. (Marketer-Distributor).
Manufacturer's Address: Broomfield, CO 80021.
Date of Introduction: 2006. January.
Ingredients: Organic soymilk (filtered water, organic whole soybeans), palm oil, maltodextrin (from corn), organic evaporated cane juice, soy lecithin, potassium phosphate, sodium citrate, tapioca starch, natural flavors, carrageenan.
Wt/Vol., Packaging, Price: Pint gable-top carton. Retails for $0.99 (2007/01, Pleasant Hill, California).

How Stored: Refrigerated.
Nutrition: Per 1 tablespoon (15 ml): Calories 15, calories from fat 10, total fat 1 gm (2% daily value; saturated fat 0 gm, trans fat 0 gm), cholesterol 0 mg, sodium 10 mg, total carbohydrate 1 gm (dietary fiber 0, sugars less than 1 gm), protein 0 gm. Vitamin A 0%, vitamin C 0%, calcium 0%, iron 0%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Product with Label purchased by Martine Liguori at Grocery Outlet in Pleasant Hill, California. 2007. Jan. Paid $0.99 but retail value is $2.79. Front panel: Pink, white, blue, brown and white on purple. "Now smoother & creamier." An illustration shows Silk Creamer being poured into a coffee cup. Left panel: "Coffee for folks who use their beans." "Akasha's Corner: Chef Akasha's Chocolate Truffles." Back panel: "We're looking good in green. EPA green power partner." "Our wind power switcheroo eliminates 16,000 tons of greenhouse gases. That's like parking 3,200 cars for a whole year." Back panel: "This soy creamer is made from soybeans that were not genetically engineered." "100% Vegan."

Note: This carton was introduced after White Wave was purchased by Dean Foods. Notice that the word "soymilk" no longer appears in the product name.

8450. Ramirez, Anthony. 2007. Where there's a plant, this librarian has an answer. *New York Times.* Jan. 16. p. A27.
• ***Summary:*** About the library of the Horticultural Society of New York (in midtown Manhattan), and its librarian Katherine Powis. States that "the Vietnamese use *Pandanus amarylifolius,* a tropical plant in the screw pine genus, to flavor soy milk."

8451. Yuan, Shaohong; Chang, Sam K.C. 2007. Selected odor compounds in soymilk as affected by chemical composition and lipoxygenases in five soybean materials. *J. of Agricultural and Food Chemistry* 55(2):426-31. Jan. 24. [41 ref]
Address: Dep. of Cereal and Food Sciences, IACC 322, North Dakota State Univ., Fargo, ND 58105.

8452. **Product Name:** Coffee-mate Soy Creamer (The Original).
Manufacturer's Name: Nestlé USA. (Marketer-Distributor).
Manufacturer's Address: Glendale, California 91203.
Date of Introduction: 2007. January.
Ingredients: Water, soymilk (water, soy powder), partially hydrogenated soybean and/or cottonseed oil, sugar and less than 2% of dipotassium phosphate, sodium tripolyphosphate, sodium stearoyl lactylate, polysorbate 60, gellan gum, sodium citrate, natural and artificial flavor, beta carotene color.
Wt/Vol., Packaging, Price: 1 pint plastic bottle. Retails for $0.99 (2007/01, Pleasant Hill, California).
How Stored: Refrigerated.
New Product–Documentation: Product with Label purchased by Martine Liguori at Grocery Outlet in Pleasant Hill, California. 2007. Jan. Red, green, blue, brown and white on yellow. Plastic bottle with tight shrink sleeve and amazing green plastic molded cap. Front panel: "Made with wholesome soy." The word "soy" is written on a green leaf. An illustration shows a coffee cup. "Trans fat–Zero grams."

8453. [Soymilk and tofu: A healthy delight (Leaflet)]. 2007. New Delhi, India: American Soybean Association (ASA) / United Soybean Board. 2 p. Front and back. 28 cm.
• ***Summary:*** Contents: Introduction. Soymilk. Tofu (soy paneer). Health benefits of using soymilk and tofu. Lactose intolerance. Heart disease. Osteoporosis and menopause. Cancer. Now soymilk and tofu is available in your city. Try this wonderful food and feel the difference.

This leaflet is printed in black ink on glassy green paper. Two color photos show soymilk and tofu. Ten thousand copies were printed in Jan. 2007. Address: American Soybean Assoc. (ASA-International Marketing), Asia Subcontinent, 149 Jor Bagh, New Delhi–110 003, India. Phone: (91) (11) 2465-1611.

8454. Babb, Michelle. 2007. Soyfoods in a low GI [Glycemic Index] diet. *Soy Connection* 15(1):2, 4. Winter.
• ***Summary:*** After the low-carb craze, Americans are starting [again] to examine the types of carbohydrates they are eating rather than avoiding them altogether. The GI [glycemic index] is a measure of how fast 50 gm of a given carbohydrate raises blood glucose levels as it is digested. Researchers from Harvard University [Massachusetts] developed the glycemic load (GL), based on an actual serving or meal, given by the formula GI x carbohydrate per serving + 100 = GL. "For example, soymilk has a GI of 44 and a GL of only 8 per 8 oz serving. (These figures will vary slightly among brands)."

"Recent research suggests that following a low-glycemic index diet not only helps facilitate weight loss, but may also have a significant impact on disease reduction" [incl. type II diabetes and CVD, cardio-vascular disease]. Soyfoods with a low GI include soybeans, soymilk, soy yogurt, and soy smoothie. Foods with a high GI include cornflakes, white rice, baked potato, and white bagel. Address: M.S.

8455. 7th international soy symposium: Role of soy in health and disease prevention. Program and abstracts. 2007. Singapore: Printed for Boon Yee Yeong. 100 p. Held 7-9 March 2007 at Shangri-La Hotel, Bangkok, Thailand. Illust. No index. 30 cm.
• ***Summary:*** This is the first time the International Symposium of the Role of Soy in Health and Disease Prevention is being held in Asia. It will take place in

conjunction with the 5th Southeast Asia Soyfoods Seminar and Trade Show–Science to Market Opportunities in Asia, which will be held at the same location March 6-8. This document was compiled and organized by Boon Yee Yeong, who owns her own company in Singapore; her clients include ASA.

Contents: Scientific and organizing committee: Chair (Dr. Mark Messina), Panel of Advisors, Secretariat. About the organizers: Institute of Nutrition, Mahidol University (INMU, Thailand), ASA International Marketing (ASA IM; the overseas arm of the United States Soybean Export Council), The Soy Food Forum (SFF; a network of organizations in Asia with particular interest in soy).

Acknowledgements: Platinum and gold level sponsors: Otsuka Pharmaceutical Co., Ltd. (own SoyJoy brand), Tetra Pak Asia Pte Ld.–Soy Knowledge Centre. Silver and bronze level sponsors: The Solae Company, Solbar Plant Extracts Ltd., Green Spot Co. Ltd. (Thailand's pioneer and leading soymilk maker with over 45 years of experience. Produces a wide range of soymilk products under the Vitamilk, Vitamilk Champ, and V-soy trademarks). Media sponsor: Be Media Focus (Thailand) Co. Ltd. (Publisher of *Food Focus Thailand* a trade magazine). Exhibitors: 13 companies are listed, about half from the USA.

Symposium program. Post-Symposium seminar program. Speaker profiles. Symposium abstracts: Opening session: Soy and health–An overview. Session 1: Soy and cardiovascular diseases. Session 2: Soy and cancer prevention. Session 3: Soy and bone health. Session 4: Soy and menopause. Session 5: Soy and other health aspects.

Post-Symposium seminar abstracts: Soy complementary food & soy milk programs. Micronutrient fortification programs.

Poster presentation abstracts.

8456. Chow, Cheryl; Chow, James. 2007. Hypoglycemia for dummies. 2nd ed. Hoboken, New Jersey: John Wiley & Sons. xii + 274 p. Illust. Index. 24 cm.
• ***Summary:*** Hypoglycemia (low blood sugar) is difficult to diagnose and to treat; it may be linked to or confused with other health problems.

Soyfoods are a good source of protein in the diets of those suffering from hypoglycemia (low blood sugar). Soy is mentioned on pages 37 (Soy is one of 8 foods to which people are most often allergic), 38 (if you have a food reaction, try eliminating one of these 8 potential allergens from your diet. Go on an elimination diet for 2 weeks and keep a food journal), 41 (If you think you have candidiasis, try going on a hypoglycemic diet. In addition, avoid fermented foods or those that contain yeast, including soy sauce), 91 (MSG is also called hydrolyzed protein, soy extract, meat tenderizer, Accent, Ajinomoto), 104, 106 (milk substitutes, including soy milk, should not contain added sweetener), 107 (Foods such as tofu {bean curd}, tempeh and natto are good sources of protein, but intake should be limited to 2-3 servings of whole soy foods a day), 196, (unsweetened soy milk is good to drink), 250 (soy products make good meat substitutes), and 258 ("Noshing on nourishment": Vegetables such as edamame make excellent, nutrient-packed snacks).

Concerning natto (p. 250): "These sticky, fermented [soy] beans are a great vegetarian source of protein... In Japan natto is often eaten over rice for breakfast." However natto has a strong odor which takes some time to get used to. Address: 1. Writer and editor; 2. MD, Practicing physician, Director, Nihon Clinic [with branches in Manhattan, New York, Atlanta, Chicago and San Diego].

8457. Lozano, Patricio R.; Drake, Maryanne; Benitez, D.; Cadwallader, K.R. 2007. Instrumental and sensory characterization of heat-induced odorants in aseptically packaged soy milk. *J. of Agricultural and Food Chemistry* 55(8):3018-26. April 18. [43 ref]
Address: 1. Dep. of Food Science and Human Nutrition, Univ. of Illinois, 1392 West Pennsylvania Ave., Urbana, IL 81801.

8458. Dean Foods Co. 2007. What makes Dean, Dean: 2006 annual report. Dallas, Texas. 92 p. 28 cm.
• ***Summary:*** WhiteWave Foods (p. 12-13) is Dean's subsidiary and portfolio of leading national brands. In 2006 WhiteWave Foods made up 11% of Dean's total company sales and contributed 21% of the total company operating profit. Silk soymilk is #1 in its category nationwide. A large color photo shows an African-American lady holding a grocery bag full of food, with Silk plain prominently on top.

"In 2006, we expanded Silk single-serve offerings, so today's on-the-go consumers can enjoy our rich and healthy Silk products whenever the craving hits" (p. 17). A color photo shows single-serve Silk in chocolate, vanilla, and chocolate flavors. Page 12 states: "Silk products are made from non-genetically modified organic and natural soy beans [sic]... Silk uses more than 700,000 bushels of organic soy beans [sic] each year, farmed on more than 3,000 acres of organic American farmland. Note: There is no way that 3,000 acres can produce 700,000 bushels of soybeans. "Silk has been the title sponsor of the annual Farm Aid concert since 2003." "In 2006, WhiteWave Foods again won the prestigious Green Power award from the U.S. Department of Energy and the Environmental Protection Agency for its use of renewable wind power."

"In 2007, we introduced two new delicious varieties of Silk soymilk: Silk Plus Omega-3 DHA and Silk Plus Fiber."

Selected financial data (p. 22). In 2006, net sales decreased by 0.8% to $10.098 billion. Net income decreased 27% to $225,414.

Accompanying the annual report is a "2007 proxy statement and notice of annual meeting" (56 p.). In 2006

Gregg L. Engles, age 49, Chairman of the Board and CEO had total compensation of $11.025 million, including salary of $1,200,000–even though the company did poorly last year (p. 31). Address: 2515 McKinney Ave., Suite 1200, Dallas, Texas 75201. Phone: 214-303-3400 www.deanfoods.com.

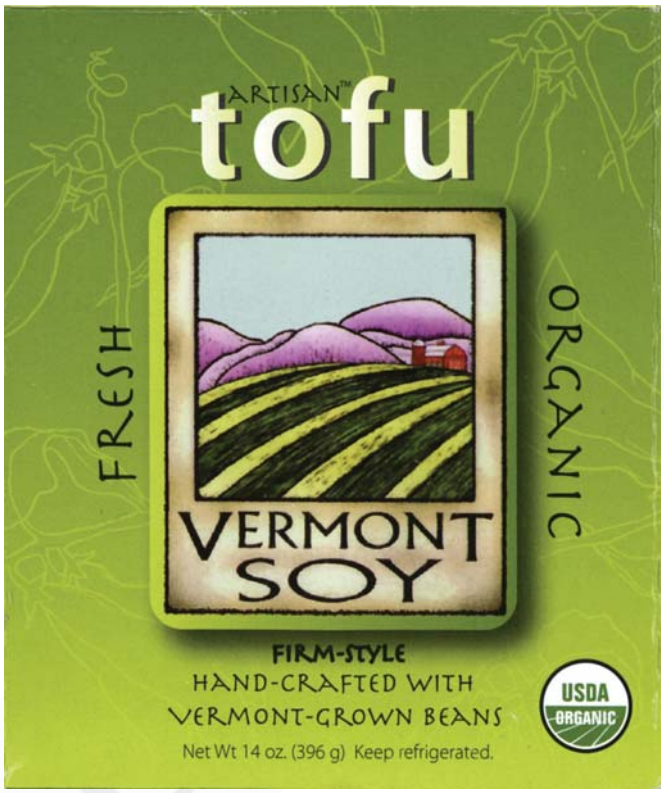
8459. Sullivan, Cheryl L.; Nash, Marilyn. 2007. Soy on the menu: Recipes for foodservice. Champaign-Urbana, Illinois: Illinois Center for Soy Foods. 52 p. Illust. No index. 26 cm. Series: Soy in the American Kitchen.
• ***Summary:*** This book has a creative format: (1) An outer color cover folds over the white spiral binding. (2) The pages are spiral bound across the top. (3) The bottom unfolds like a gusset so the book stands up by itself on a table with the pages angled slightly back on a table. (4) A CD-ROM comes with the book. Remarkably, the whole package sells for only $3.00!

Contents: Bringing soy foods to the American table: Soy in foodservice, why choose soy?, soy foods, vegetarian and vegan recipes [in this book], recipe information, nutrient information, acknowledgements. Recipes: Appetizers. Breakfast. Breads. Salads. Soups. Side dishes. Main dishes. Desserts.

The recipes in this book use: Soy flour, soymilk, tofu, textured vegetable protein / TVP [texture soy flour], edamame, black soybeans, soy analogs [meat and dairy analogs].

Sidebars include: Biodiesel (p. 10). Research shows kids like soy in school lunches (p. 11). Uncommon soy foods: Tempeh, miso, okara, natto. Are you soy savvy?: Why is soy flour added to baked goods? (p. 14). U.S. soybean production, yield, exports, and domestic usage (1979 vs. 2004) (p. 16). Industrial uses of soybeans: Soy candles, ink, biodiesel, soy cleaners, waterproofing sealants, soy silk (fabric). Are you soy savvy? Edamame (p. 19). INTSOY (p. 22). NSRL (p. 24). What is the soybean checkoff? (p. 27). WISHH initiative for soy in human health (p. 29, 30). Illinois Soybean Association (p. 34). What is okara? Why should you shake up a carton of soymilk? (p. 39). Make your own tofu (p. 47). Address: 1. M.A., R.D., Research Dietitian; 2. Ph.D., Project coordinator. Both: 170 National Soybean Research Center, 1101 W. Peabody Dr., Urbana, Illinois 61801. Phone: (217) 244-1706 or www.soyfoodsillinois.uiuc.edu.

8460. **Product Name:** Organic Soymilk (Unsweetened, Chocolate, Vanilla, Original), and Organic Nigari Firm Tofu (in Bulk, or Vacuum Packed).
Manufacturer's Name: Vermont Soy LLC.
Manufacturer's Address: 180 Junction Rd. (P.O. Box 401), Hardwick, VT 05843. Phone: (802) 472-8500.
Date of Introduction: 2007. April.
How Stored: Refrigerated.
New Product–Documentation: Talk with (call from) Todd Pinkham, founder and owner of Vermont Soy. 2007. Dec. 10.



In April he started to make and sell the four types of soymilk and two types of tofu show above. He uses a ProSoya VS-200 system. Todd used to make tempeh.

Leaflet (glossy color, single sided, 28 cm) sent by Patricia Smith from Natural Products Expo West. 2008. March. "Now available, Vermont Soy. It's fresh! It's organic! It's local! made in Hardwick, Vermont." A photo shows four flavors (Original, Chocolate, Vanilla, Unsweetened) in half gallon and quart plastic containers.

Outer package for Vermont Soy Artisan Tofu sent by Sjon Welters. 2008. Dec. 26. 4 by 4.75 by 2 inches. Paperboard box. Light green, dark green, black, white, purple, and red. 14 oz. retails for $3.99. Fresh. "Hand-crafted with Vermont-grown beans." "Sell by 11 31 08." The tofu is vacuum-packed in a plastic pouch inside the box. "Ingredients: Vermont-grown organic non-GMO soybeans, nigari (magnesium chloride), calcium sulphate, pure Vermont water." Phone: 802.472.8500. Note the USDA Organic seal at the lower right.

8461. Golbitz, Peter. 2007. Color photos of the soymilk processing short course held 22 May 2007 at the SoyCow Training Center in Bergville, KwaZulu-Natal, South Africa. Bar Harbor, Maine.
• ***Summary:*** Peter Golbitz took these color photos and wrote the captions. For background see interview with Peter Golbitz on 22 Jan. 2009. The short course workshop on 22 May 2007 took place at the training center located on property owned by Henry Davies adjacent to his Eden

Manufacturing plant. This workshop (including the travel and other expenses of the African participants) was paid for mostly by WISHH; other contributors were USAID, Solae, Silk, Soyatech, and others.

(1) Peter Golbitz leading a strategic planning discussion at a meeting of the Soy Southern Africa association, held in Bergville on May 22.

(2) Ratan Sharma from the American Soybean Association's office in New Delhi, explaining the equipment and processing steps for the SoyCow system. These SoyCows are made in India using the ProSoya process developed and patented by Raj Gupta (Ottawa, Canada).

(3) Henry Davies of Eden Manufacturing and the Eden Social Development Foundation demonstrating the VitaGoat soymilk processor. At this stage, the soymilk and pulp have been pressure cooked with steam and the mixture is being strained before manual pressing to separate the okara from the fresh soymilk.

(4) A participant grinding soaked soybeans on a pedal-powered VitaGoat grinder while a helper feeds fresh beans into the grinder hopper.

(5) Ratan Sharma explaining how to make soymilk yogurt from fresh soymilk produced with the VitaGoat or the SoyCow. (6) Ratan Sharma demonstrating how to make tofu using freshly produced soymilk curds from the VitaGoat. (7) Ratan Sharma cutting freshly pressed tofu for participants

at the short course. Onlookers include Henry Davies (right) and Mrs. Mchunu (center in blue), a member of the South African National Government, Inkatha Party, also known as "Mama Soya" for her long time and personal support of the expanded use of soy in Southern Africa.

(8) Participants at the short course taste and evaluate different soymilk and soymilk yogurt formulations using different flavors and levels of sweeteners. Address: Director of International Business Development, SunOpta Grains and Food Group.

8462. Gupta, Rajendra ("Raj") P. 2007. New developments at ProSoya worldwide (Interview). *SoyaScan Notes.* June 27. Conducted by William Shurtleff of Soyinfo Center.
• ***Summary:*** A very interesting and far-reaching discussion including: (1) Assoy in Russia, Firouz Zanjani and Alexander Podobedov. (2) Soymilk factory in Iran, Andre Ladoucer (he commissioned the plant but is no longer active in the soymilk business), and the ProSoya agent in Iran. (3) People in the Middle East have a palate very similar to that of people living in India; both like soy yogurt. (4) ProSoya's best small machine for making soymilk is the one that makes 2,000 liters/hour and has a vacuum deodorizer. The basic plant without packaging equipment costs $60,000. A chiller costs an additional $15-20,000. Yogurt incubation tanks are extra. (5) ProSoya's continuous curding machine which makes 1,000 kg/hour of tofu; it costs about $135,000. (6) ProSoya's plant in New York is still in operation. It makes 2 tankers a week of soymilk, all of which is sold in Canada. (6) Many taste tests show that ProSoya's SoNice is the best tasting soymilk in the world. The most important thing for soymilk to become a mainstream product is to improve its taste. (7) Raj Gupta has had discussions and negotiations with major companies that sell soymilk: Unilever (Ades, Adez), Coca Cola and Odwalla. All these companies agree that ProSoya's soymilk is the best tasting. It is very frustrating that marketing is of top importance to all, while product quality is much or relatively low importance. (8) The soymilk market in North America is now worth about S1,000 million, with 90% of the sales in the USA and 10% in Canada, where SoyaWorld is the leading player, with about 40% of the market. Address: President and CEO, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

8463. **Product Name:** [Vetara Organic Tofunaise].
Foreign Name: Vetara Bio Tofunaise.
Manufacturer's Name: Natudis B.V.
Manufacturer's Address: P.O. Box 376, 3840 AJ Harderwijk, Netherlands.
Date of Introduction: 2007. June.
Ingredients: Soymilk (45%) (water, soybeans*),

sunflowerseed* oil (39%), apple cider vinegar*, apple juice concentrate*, sea salt, mustard* (water, apple cider vinegar, mustard seeds*, sea salt, cucumber*), guar gum. * = organically grown.
Wt/Vol., Packaging, Price: 320 gm bottle.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Label sent by Sjon Welters from the Netherlands. 2007. June. 2.5 x 8.25 inches. Dark green, red, yellow, gold. Color photo shows the corner of a salad and french fried potatoes. Vegetarian logo.

8464. Rommelmann, Nancy. 2007. The food chain: The Ota family turns out 6,000 pounds of the Japanese staple a week, selling to the public and stores. *Oregonian* (*The*) (*Portland, Oregon*). July 3. p. FD1, FD5.
• ***Summary:*** A good snapshot of life at Ota Tofu Co. in Portland, Oregon. Koichi Ota is the 3rd generation tofu maker,–"a man short on words and long on skill." He makes soft, medium, and firm tofu (and agé) from a high-protein non-GE soybean variety named Vinton, which is trucked from the Midwest.

Eileen Ota says they no longer run ads, nor does she do deliveries. They sell fresh tofu over the counter like a traditional tofu shop in Japan. Although the retail area is small, she sells 1,000 pounds of tofu a day, six days a week. She says there are a lot of vegetarians in Portland. Non-Asian customers may use soft tofu for salad dressings or smoothies. "Fresh tofu is $1.50 per pound, or $1.25 per pound if you bring your own container. Agé is $1.30 per piece. Soy milk is $2.25 per half gallon."

A large color photo shows Koichi Ota in a steamy tofu shop, holding a nylon sack full of okara. Address: Freelance writer; Special to the Oregonian.

8465. Gupta, Rajendra ("Raj") P. 2007. The purchase of SoyaWorld by Sanitarium Foods (Interview). *SoyaScan Notes.* July 24. Conducted by William Shurtleff of Soyinfo Center.
• ***Summary:*** SoyaWorld is now completely owned by Sanitarium Foods of Australia. First Sanitarium bought the 47% of SoyaWorld owned by Sunrise Soya Foods. Later they bought the remaining 53% owned by Saputo. The person who knows the exact dates is Maheb Nathoo, who is still president of SoyaWorld.

SoyaWorld still makes two soymilk products: (1) Soy Good, made from soy protein isolates, is made using the formula developed by Sanitarium Foods. It is very heavily promoted in Canada, using both TV and print, and has about 60% of the Canadian market, but because it is so heavily promoted and costs more to make, Raj thinks that it is presently not as profitable as the other product, So Nice. (2) So Nice is made from whole soybeans, using the ProSoya process. It is never promoted or advertised by Sanitarium Foods. It has about 40% of the Canadian market.

The fact that So Nice is outsold by So Good no longer effects Raj's income, because the exclusive agreement between ProSoya and SoyaWorld (from which ProSoya earned royalties) has expired. SoyaWorld now has non-exclusive use of the process and ProSoya does not get any royalties.

It is difficult to do blind taste tests comparing these two products, in part because so many people already have developed. There are also issues about using another person's branded product in a taste test and publicizing the results. Address: President and CEO, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

8466. Joe, Peter. 2007. Sale of Sunrise's share of SoyaWorld Inc. and starting a new tofu plant in Toronto, Canada (Interview). *SoyaScan Notes.* July 24. Conducted by William Shurtleff of Soyinfo Center.
• ***Summary:*** In Dec. 2000 Peter Joe sold his 47% share of SoyaWorld to Sanitarium Foods of Australia.

He recently built a new tofu manufacturing plant in Toronto, Ontario. It began production in March 2002. All is well for Peter and Sunrise. The market for tofu in Canada is growing. Address: General Manager, Sunrise Soya Foods, 729 Powell St., Vancouver, BC, V6A 1H5 Canada.

8467. Vitasoy International Holdings Ltd. 2007. Annual report 2006/07. New Territories, Hong Kong. 148 p. July. 30 cm. [Eng; Chi]
• ***Summary:*** Inside front cover: "For over 65 years, Vitasoy has grown and multiplied its success from a little bean–and is still growing strong." A cartoon shows a team of "Beanies" (soybeans) pulling together on a rope in a tug-of-war.

For the fiscal year ended 31 March 2007, group turnover (sales) was HK$2,693 million, up 6.9% over the previous year. Of these sales, 62% came from Hong Kong, 16% from North America, 10% from Australia and New Zealand, 9% from Mainland China, and 3% from the rest of the world.

Gross profit was HK$1,563 million, up 5.5% from the previous year. Basic earnings per share were 17.3 HK cents, up 0.6%. Dividends per share were 15.5 HK cents, the same as the previous year.

At "Chairman's statement," a photo shows Winston Yau-lai LO, age 66. His resume is found on p. 40. He has two sisters, both married, Myrna and Yvonne. Total dividends for the year are 19.5 cents.

During the year the plant in Massachusetts [Nasoya] generated HK$379 million in revenue a decline of 1.8% from last year. "Operating loss increased to HK$49 million due mainly to the costs associated with the new product launches, declining tofu sales, and additional trade expenses to drive aseptic soymilk sales" (p. 24).

A five-year summary (2003 to 2007; p. 147) shows that, during this entire period, sales increased 20.9% and annual

profit increased by 45.7%. Address: No. 1, Kin Wong Street, Tuen Mun, New Territories, Hong Kong. Phone: 466 0333.

8468. Reuters. 2007. SunOpta Inc. acquires operating assets of ProSoya Corporation located in Heuvelton, New York (News release). Aug. 7.
• ***Summary:*** SunOpta (incl. Sunrich), headquartered in Canada, announces that it has acquired a soymilk manufacturing plant in Heuvelton, New York from ProSoya Corporation. The plant (incl. building, machinery, and equipment) was acquired for cash.

Allan Routh is president of the SunOpta Grains and Foods Group. Steve Bromley is president and CEO of SunOpta.

8469. Yu, Jonathan; Yu, Beth. 2007. Re: History of Cherry Food Industry / APY Food Processing in Quezon City, Philippines. Letter (e-mail) to William Shurtleff at Soyinfo Center, Aug. 24. 1 p.
• ***Summary:*** Cherry Food Industry operated as a soy processing company in 1976. In January 1985 the company was registered as APY Food Processing. APY signifies the initials of Mrs. Adelaida Pua Yu, the owner, who had the first factory running at # 74 Speaker Perez St., Barangay Lourdes, Quezon City with 10 employees. From its initial operations until January 1995, Mrs. Yu successfully maintained the factory. In 1993, Jonathan Yu and wife Beth participated in the family business operations. Since the other siblings of Jonathan were engaged in other concerns, the management and operations of the company was transferred to the youngest Jonathan Pua Yu in 1995.

The company now makes the following soy products: Nippon Tofu. Toho. Tokwa. Taohue. Soymilk. Address: Quezon City, Philippines. Phone: (632) 365-0835.

8470. United Soybean Board (USB). 2007. Consumer attitudes about nutrition: Insights into nutrition, health, and soyfoods. 14th annual national report. Seattle, Washington: USB. 12 p. Oct. 28 cm.
• ***Summary:*** Methodology: "This year represents the second year we have adopted an online self-administered survey as our methodology, a significant change from random telephone interviews. The survey, conducted by an independent research firm [in Seattle, Washington] in February and March 2007, includes 1,000 random surveys, providing a sample that is consistent with the total American population. The study's margin of error remains ± 1.9 to 3.1%, with a confidence interval of 95 percent."

Contents: Introduction. Methodology. About USB. Nutritional habits & obesity concerns. Healthy food decisions. Improving overall health. Cooking oil impressions. Consumer attitudes about fats. Awareness and usage of soy products. Occasion preferences for consuming soy. Restaurants and soy products. Soyfoods and health. Special health benefits of soy

Awareness and usage: 33% of Americans consume soyfoods or soy beverages once a month or more. "For the fourth year in a row, consumers reported the most familiarity with soymilk, soybean oil, soy veggie burgers and tofu."

A table shows the "Top 20 soy products by awareness." Soymilk 90%. Soybean oil 66%. Soy veggie burger 63%. Tofu (unspecified) 60%. Soy infant formula 51%. Soy nuts 47%. Soy latte / soymilk in espresso coffee drinks [as at Starbucks] 41%. Soy protein bars 34%. Dried or canned soybeans 34%. Soy yogurt 32%. Soy flour 31%. Soy ice cream / cheese 30%. Soy hot dogs 29%. Flavored / marinated tofu 28%. Miso 28%. Soy supplements 28%. Cereal bar / Energy bar 28%. Edamame 23%. Soy breakfast cereal 21%. Textured soy protein 21%. All others mentioned 14% or less.

Occasion preferences for consuming soy (in descending order of preference): dinner 41%, breakfast 28%, lunch 27%, mid-afternoon snacking 19%, late evening snacking 14%, mid-morning snacking 10%, desserts 6%.

Restaurants and soy products: "Over half of consumers have tried soyfoods in restaurants." Tofu 25%. Soymilk 24%. Veggie burgers 22%. "Over one-third would order soy products in restaurants... if they could find soy on their restaurant's menu."

"In 2007, 85% of consumers rate soy products as healthy, up three percentage points from 2006." A graph (p. 7) shows this increase in awareness (82% in 2006, 78% in 2005, 74% in 2004, 74% in 2003, 74% in 2002, 69% in 2001, 76% in 2000, 71% in 1999, 67% in 1998).

Why? Low-fat profile 18%. Protein content 17%. Heart health function 16%. Cholesterol-lowering properties 11%. "Being good for you" 11%. Potentially providing relief for menopause symptoms 10%.

Note: As of Aug. 2008 this full survey is available gratis in PDF format at www.soyconnection.com /health_nutrition / pdf/.

8471. Kikkoman International, Inc. 2007. Color your year: 12 months of hot, cool ideas (Calendar). 50 California St., Suite 3600, San Francisco, CA 94111.
• ***Summary:*** This calendar for the year 2008 (dated 2007), which is designed to promote Kikkoman Pearl soymilk, was sent by Patricia Smith from Natural Products Expo West. 2008. March. The cover is white on pink, with a large photo of a cocktail glass / martini glass the top half of which is filled with white soymilk and the bottom half with a pink liquid. Each glossy page is 30.5 x 20.2 cm. It is designed to hang on a wall with a nail hole through the upper page. On each upper page is a large color photo. On each lower page is one month of the year's calendar plus a color photo of a carton of one flavor of Pearl organic soymilk and a recipe for its use. Address: San Francisco, California.

8472. Kingsbury, Kathleen. 2007. The changing face of

breast cancer. *Time* (*Asia*). Oct. 4.
• ***Summary:*** As U.S. and European lifestyles spread, so do their unhealthy diets. Last July, scientists released a study that examined the eating habits of 3,000 Chinese women, ranging in age from 25 to 64. Half of the women ate a "meat sweet" Western diet, rich in red meat, shrimp, fish, candy, desserts, bread and milk. The others consumed "more traditional Asian fare of tofu, vegetables, sprouts, beans, fish and soy milk. Postmenopausal women in the meat-sweet group showed a 60% greater risk of developing the most common kind of breast cancer."

8473. Dorff, Erik. 2007. The soybean, agriculture's jack-of-all-trades, is gaining ground across Canada (Web article). http://www.statcan.gc.ca/ pub/ 96-325-x/ 2007000/ article/10369-eng.pdf. 14 p. Oct. 26. Printed 28 Jan. 2010. [7 ref]
• ***Summary:*** An outstanding overview and description of the current status of soybeans in Canada.

Contents: Introduction. Development of the soybean sector in Canada. Growth in soybean area across the country. The soybean–an international super-crop. Soybean dollars make sense to farmers. One crop, many uses. Food for human consumption. Animal feed. Industrial products. Soybean not a "has-bean" crop in Canada. The gift of the bean (a brief early history of the soybean in the USA and Canada).

Figures: (1) Gains in soybean area reflect crop development efforts (1951-2006; 000 hectares). (2) One crop many uses. Diagram showing uses as: Food for human consumption, animal feed, industrial products. (3) Bred in Canada: soybeans of prominence. AC Proteus, Toki (for tofu), Nattawa (for natto), Maple Arrow (expanded soybean range out of southern Ontario), Maple Presto (the fastest maturing soybean). (4) Traditional soy foods: a brief guide (with a description of each). Edamame, miso, natto, soy sauce, soy milk, tempeh, tofu.

Tables: (1) Census of agriculture tracks growth in soybean area. Gives the area planted in Canada, Prince Edward Island, Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, and Alberta in the census years of 1976, 1981, 1986, 1991, 1996, 2001, and 2006. Soybeans were planted in each of these provinces in the three most recent census years. (2) Top 10 soybean producing nations (Average 2000 to 2005): After the USA, Brazil, and Argentina, China is 4th, India 5th, Paraguay 6th, Canada 7th, Bolivia 8th, Indonesia 9th. and Italy 10th. (3) Average soybean composition. Columns: Characteristic, oil, feed and meal beans, soy milk / tofu soybeans. For the latter: 100 seeds should weigh more than 20 gm. Colour very light with clear hilum, oil content 17-19%, protein content 44-47%, soluble sugar content 11-13%, insoluble sugar content 21-25%, minerals 5%. (4) Nutritional comparisons: Tofu and soy milk with ground beef and cow's milk.

Maps: (1) Soybeans in Canada (3 maps on one page). Map A shows that quite a bit of Quebec's soybean acreage lies south of the Saint Lawrence River, in the region named "Southern Quebec" (which includes the Eastern Townships at its southernmost area–its south-western end).

"Until the mid-1970s, soybeans were restricted by climate primarily to southern Ontario. Intensive breeding programs have since opened up more widespread growing possibilities across Canada for this incredibly versatile crop: The 1.2 million hectares of soybeans reported on the Census of Agriculture in 2006 marked a near eightfold increase in area since 1976, the year the ground-breaking varieties that perform well in Canada's shorter growing season were introduced" (p. 1).

"For years, soybeans were being grown in Canada but it wasn't until the Second World War that Statistics Canada began to collect data showing the significance of the soybean crop, with 4,400 hectares being reported in 1941. In fact, one year later the area had jumped nearly fourfold, to 17,000 hectares. In 1943 a program aimed at actively breeding soybeans suitable for southern Ontario was initiated.

"During the Second World War, North American manufacturers used oil from soybeans not only as a food but also to produce a wide number of industrial products including glycerine for the manufacture of nitroglycerine used for explosives and ammunition.

"By 1951, 62,967 hectares had been planted with soybeans (Figure 1), but they were still mostly confined to southern Ontario, the region with the longest and warmest growing season in Canada" (p. 2).

"It wasn't until varieties with earlier maturity and improved tolerance of cooler climates were successfully developed–the 'Maple' series of soybean cultivars–that significant soybean production was pushed beyond southern Ontario. The 1976 release of the Maple Arrow variety in particular is credited with expanding the range of soybean production into eastern Ontario (Table 1)."

The "growth between 2001 and 2006 was particularly notable in the Prairie provinces, with Manitoba's soybean area increasing sevenfold to over 141,869 hectares and its more western neighbours, Saskatchewan and Alberta, beginning to actively pursue soybean production. These gains in area were the payoff from research aimed at finding and breeding soybean varieties suited to the Prairies as well as from crop promotion and market development" (p. 5).

"In the 2006 calendar year, farm cash receipts from soybeans amounted to $680 million in Canada, making it the fifth most valuable field crop, trailing canola ($2.5 billion), wheat ($1.8 billion excluding durum), potatoes ($899 million) and corn ($753 million). In Ontario, where it was also the most planted crop, it was the top crop in terms of farm cash receipts, at $547 million, eclipsing the receipts from corn ($449 million) and wheat ($275 million)" (p. 6).

"International trade contributed to the value of soybean

receipts. Preliminary figures place soybean exports at over 40% (1.5 million tonnes) of the soybeans grown in Canada in the 2006 crop year (3.5 million tonnes).

"Of the four top buyers in 2006, Japan led the list, importing $138 million in Canadian soybeans, followed by Malaysia ($52 million), the Netherlands ($49 million) and Iran ($43 million). At the same time, Canada imported about 302,000 tonnes of soybeans valued at approximately $81 million, 99% of which came from the United States" (p. 7). Address: Statistics Canada.

8474. **Product Name:** Purity Soja [Condensed Soy Milk, or Soy Cream, Fruit Juice Fortified with Soy in Various Flavors].
Foreign Name: Purity Soja (Condensado de Soja, Creme de Soja).
Manufacturer's Name: Brazsoy [Importer, Made in Brazil].
Manufacturer's Address: Rockville, Maryland. Phone: 1-877-257-0139.
Date of Introduction: 2007. October.
Wt/Vol., Packaging, Price: 1 quart (32 fl oz). Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Glossy color leaflet (2 panels each side. Each panel: 19.6 x 14.3 cm) sent by Patricia Smith from Natural Products Expo East. 2007. Sept. "Brazsoy: Unique and delicious soy products. Cruelty free food. What we do. We import products from Brazil that are suitable for niche markets, lactose-free, vegan, and kosher. Why us: We offer unique products like condensed soy milk and fruit juice with soy extract that cannot be found on the shelves of any retailer in the U.S." Color photos show cartons of the products. On the rear panel are three "Delicious recipes." A business card stapled to the front of this leaflet shows that Emile Ghandour is president of Brazsoy.

8475. **Product Name:** Silk Pumpkin Spice (Slightly Thick Soymilk in Gable Top Cartons).
Manufacturer's Name: Dean Foods / WhiteWave Foods (Product Developer-Distributor).
Manufacturer's Address: 2515 McKinney Ave., Suite 1200, Dallas, Texas 75201.
Date of Introduction: 2007. October.
Ingredients: Organic soymilk (filtered water, whole organic soybeans), organic evaporated cane juice, natural flavors, sea salt, carrageenan.
Wt/Vol., Packaging, Price: Quart Pure-Pak carton.
How Stored: Refrigerated.
New Product–Documentation: Leaflet (glossy color, front and back, 28 cm) sent by Patricia Smith from Natural Products Expo East. 2007. Oct. "Silk for the holidays. New." On the front panel photo show: (1) Three hands holding beige mugs of Silk in a toast, each much containing soymilk and a cinnamon stick. A fire burns in the background. (2) The front of two Silk soymilk gable top cartons, one of Pumpkin Spice flavor and the other of Nog. On the rear are given the nutrition facts, ingredients, UPC and bar codes, and case information for each product.

Product with Label purchased in the dairy case at Safeway supermarket in Lafayette, California. 2010. Dec. 18. One quart retails for $3.29–very expensive! By comparison, a half gallon of Safeway's (Lucerne brand) "Holiday Eggnog" retails for $2.99. So the Silk Pumpkin Spice is more than twice as expensive (2.2 times as much) per fluid ounce. White Wave is now a brand owned by Dean Foods. Front panel: "Lactose-free. Seasonal flavor." Back panel: "Every drop of Silk is made from non genetically modified soybeans, grown right here in North America." Note: The organic soybeans and evaporated cane juice used in 2007 have been replaced by so-called "all natural" soybeans and evaporated cane juice.

Soyinfo Center taste test. 2010. Dec. 18. Flavor: Mediocre. Consistency: Less thick and rich than expected.

8476. Sharma, Ratan. 2007. Traditional sweets (Powerpoint presentation). Haryana, India: American Soybean Association (ASA)–International Marketing. 5 p.
• ***Summary:*** (1) Traditional sweets: Excellent quality Rasogolla and Sandesh can be made. Fermented soymilk can be used to make delicious sweets popular in the north east, and to make paysam and puddings. A photo shows Soya Rossogolla (a commercial product).

(2) Large color photo of a 200 liters per hour soymilk plant (taken March 2004).

(3) Large photo of a "Soymilk and Tofu Booth" in Ludhiana, in the Indian state of Punjab. A sign out in front reads "SoFine Soy Foods" above the words "Silly Point" (taken April 2003).

(4) Another view of a "Soymilk and Tofu Booth" in Ludhiana. The sign over this boutique reads "Soya Fresh Point."

(5) A large color photo of a soymilk canteen / booth in a railroad station, with the title "Want to Buy Soymilk at a Railway Station?" A sign reads: "Soyfresh. Cold & refreshing soy milk. With a lip-smacking each flavour. Patented technology from ProSoya Inc., Canada. Brought to you by Fresh & Honest Cafe Ltd." A soymilk cooler and an Indian woman are visible inside the booth. Address: PhD, ASA International Marketing, Spanish Court, 3rd Floor (301A), Block C1, Palam Vihar, Gurgaon–122017, Haryana, India.

8477. Sharma, Ratan. 2007. Tofu promotion in India (Powerpoint presentation). Haryana, India: American Soybean Association (ASA)–International Marketing. 5 p.
• ***Summary:*** (1) Tofu promotion In India. Photos show a

Mickey Mouse balloon character and a Tofu / Milk delivery truck. (2) Women's Employment. (3) A woman entrepreneur in soymilk business. (4) Training. (5) Women's employment. Address: PhD, ASA International Marketing, Spanish Court, 3rd Floor (301A), Block C1, Palam Vihar, Gurgaon–122017, Haryana, India.

8478. Sharma, Ratan. 2007. Soy nuts [and soy flour] (Powerpoint presentation). Haryana, India: American Soybean Association (ASA)–International Marketing. 5 p.

• ***Summary:*** (1) Soy nuts–Soy nuts are whole soybeans that are soaked, then baked. Most conventional nuts are high in fat. Benefits: Soy nuts are similar in texture and flavor to peanuts. Far less expensive than peanuts. Relatively simple technology. Market potential: One of the fast moving products. Introduced in 2002, about 80 manufacturers. Equipment cost: Approx. Rs. 80,000 (30 kg/hour capacity). A color photo shows a collage of about 12 different packages of Indian soy nuts.

(2) Dal analogue–It is a nutritious, high protein processed food made from defatted soy flour, wheat and red gram. Contains about 50 percent soy. Highly economical. Cooking characteristics as any dals. Easy to cook. Developed by NDDB [National Dairy Development Board]. Equipment cost: Approximately 12 crores (1 MT/hr). Two color photos show two different soy dal analogues.

(3) Fortification of Atta with Soy Flour–Atta [whole-wheat flour made with hard wheat grown across the Indian subcontinent] can be substituted up to 10% with defatted soy flour. Benefits: Improved protein content. Increased freshness. Growth: More than 15 brands are available throughout country. Better growth in south India. Equipment Cost: Approx. 2 lack (200,000 rupees) including packaging machine (25 kg/hr capacity). A color photo shows a package of GenSoy Plus Protein Atta.

(4) Fortification of gram with soy flour–Besan [chickpea flour / garbanzo bean flour] can be substituted up to 20% with soy flour. Benefits: Cost effective–Soy flour is much cheaper when compared to besan. Improved protein content–DSF has more than double protein content than besan. Less frying cost–Soy absorbs less oil during frying. Market potential: Not many commercial products, but has potential because of reduction in raw material cost. Equipment cost. Approx. 2 lack (200,000 rupees) including packaging machine (25 kg/hr capacity).

Two color photos show packages of these products; the brands are Blended Besan, and Piyo Healthy Soyjoy (sterilized soya milk).

(5) Defatted soy flour–Economical way to add soy protein to any product. High protein and low fat content. Very long shelf life. Blends well with any traditional flours. A color photo collage shows the front panels of ten packages of soy products. The brand names from upper left to lower right are: Soy Protein Atta. GenSoy. Soya Power. Sassota Roti Mix. Soyaban. Allegro. Vigor. Ramnath's Soya Flour. Soy-Joy. Address: PhD, ASA International Marketing, Spanish Court, 3rd Floor (301A), Block C1, Palam Vihar, Gurgaon–122017, Haryana, India.

8479. Sharma, Ratan. 2007. Soymilk and tofu in India (Powerpoint presentation). Haryana, India: American Soybean Association (ASA)–International Marketing. 5 p.

• ***Summary:*** (1) Cover. (2) Soya Cow–A family business. A color photo shows a man and his son milking a SoyaCow.

(3) A large color photo titled Palak Tofu, showing the prepared dish on a colorful background. Cubes of paneer and tofu are in the foreground.

(4) Soy drink is sold in bulk, pouches, plastic & glass bottles and in Tetra Pak cartons. Four color photos show soymilk in different presentations.

(5) Soymilk and tofu. A large color photo shows Shakti soymilk in plastic pouches, glass bottles, plus rounds of tofu on a bed of yellow soybeans. Address: PhD, ASA International Marketing, Spanish Court, 3rd Floor (301A), Block C1, Palam Vihar, Gurgaon–122017, Haryana, India.

8480. Soyatech, Inc. 2007. Soya & Oilseed Bluebook 2008. Bar Harbor, Maine: Soyatech. 446 p. Nov. Comprehensive index. Brand name index. Advertiser index. Statistical conversions. 28 cm.

• ***Summary:*** This is the 2nd year in a row that the *Bluebook* (a $95 value) has been sent free of charge to qualified industry members. On the cover are color photos of seven different crops (mostly growing in fields) covered in this book. The oilseeds covered in this book are (alphabetically): Canola, coconut, corn, cottonseed, flaxseed, hempseed, jatropha, linseed, palm, peanut, rapeseed, safflower, soya, sunflowerseed. Note that hempseed, jatropha, linseed, and safflower have been added this year.

On the inside front cover is a color ad from Natural Products Inc. (Grinnell, Iowa) titled "Technology doesn't have to be complicated to be effective." Photos show

applications of some of the company's products: soymilk ingredients, tofu ingredients, bakery ingredients, and egg replacers. On the first page is a full page color ad from Bunge North America (St. Louis, Missouri). On the rear cover is a full page color ADM ad titled "Where does healthy begin?" showing a mother talking with her young daughter in the back of a pickup, on a farm. The tag line is "Meeting today's demands. Envisioning tomorrow's needs."

In the Foreword, Peter Golbitz writes: "We no longer determine the price of oilseeds and grains based solely upon their value as a food or feedstock–we now factor in what their value may be as an alternative source of energy. The rise in commodity prices that we have seen over the past year... has been primarily driven by the use of, or the anticipated use of, agricultural crops for energy. Whether or not we can ever grow enough crops to make a substantial contribution to our energy supply is now being debated..." "The continuing removal of trans-fats from food applications has created a boom market for oils, other than those that are hydrogenated,..."

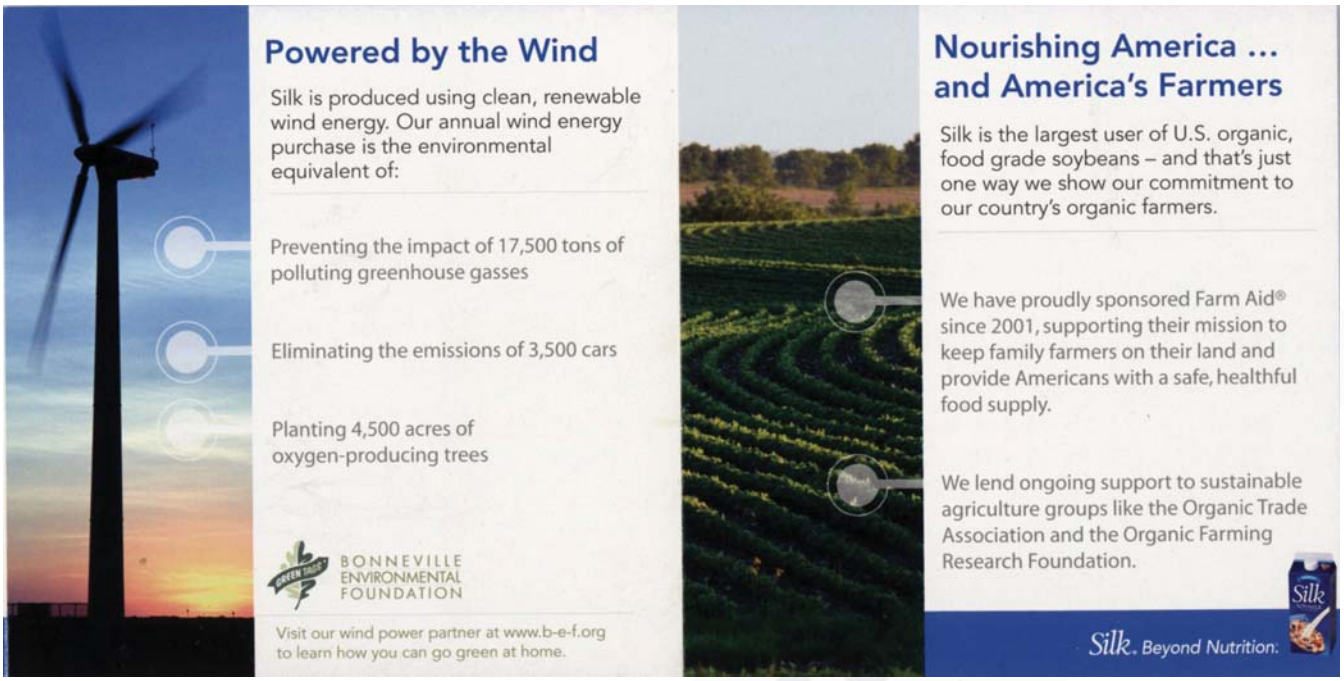
"Soyatech's role in all of this has been to provide as much information as possible to the players throughout the value chain... Soyatech's seminal reference, the *Soya & Oilseed Bluebook*, will continue to evolve... and provide the best information available on the industry." Address: 1369 State Hwy 102, P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207.288.4969.

8481. WhiteWave Foods Company. 2007. Responsible livelihood: Silk and our community (Leaflet). Boulder, Colorado. 3 panels each side. Each panel: 10 x 10 cm.
• ***Summary:*** Small leaflet (glossy color) sent by Patricia Smith from Natural Products Expo East. 2007. Oct. On the front: Photos show: (1) A carton of Silk. (2) Three wind power generators. The three inside panels are: Local action ("We have partnered with our local Community Food Share for 15 years"). Powered by the wind ("Silk is produced using clean, renewable, wind energy. Our annual wind energy purchase is the environmental equivalent of: Preventing the impact of 17,500 tons of polluting greenhouse gases. Eliminating the emissions of 3,500 cars. Planting 4,500 acres of oxygen-producing trees. Bonneville Environmental Foundation"). Nourishing America–and America's farmers ("Silk is the largest user of U.S. organic, food grade soybeans." "We have proudly sponsored Farm Aid since 2001, supporting their mission to keep family farmers on their land..." "We lend ongoing support to sustainable agricultural groups like the Organic Trade Association and the Organic Farming Research Foundation").

The last panel states: "Silk is America's number one soymilk brand." Address: Boulder, Colorado 80301.

8482. WhiteWave Foods Company. 2007. The Soy advantage: A message about health from the makers of Silk (Leaflet). Boulder, Colorado. 4 panels each side. Each panel: 21.6 x 9.6 cm.
• ***Summary:*** Leaflet (glossy color) sent by Patricia Smith from Natural Products Expo East. 2007. Oct. The next two inside panels are titled: Soy: A smart solution ("Americans spend nearly $800 million on soymilk every year"). Why soy?

The four final inside pages are titled: Heart health. Bone health ("Soyfoods also offer the added benefit of plant compounds called isoflavones"). Managing lactose



intolerance. Lowering cancer risk. The rear panel is titled: Try soy ("To learn more about soy, visit www.SILKisSOY.com"). Address: Boulder, Colorado 80301.

8483. *SoyaScan Notes.* 2007. Chronology of major soy-related events and trends during 2007 (Overview). Dec. 31. Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** Jan. 1–Soyfoods Center changes its name to Soyinfo Center.

Feb.–The Soy Connection for the Food Industry (Vol. 1, No. 1) starts to be published by United Soybean Board as a free e-newsletter. The subject of the first issue is Qualisoy soy oil.

March 6–8 International Soy Utilization conference in Bangkok, Thailand. It is organized by: The Institute of Nutrition, Mahidol University (INMU), ASA International Marketing (ASA IM), and the Soy Food Forum Southeast Asia (SFF).

April 4–Organizations listed in the Soya & Oilseed Bluebook are invited and enabled to update their own listings online. The update listing will appear as soon as the Bluebook editors review it and in the print edition in the fall. The Bluebook will continue to be printed as a bound book. Preferred customers will receive a free copy. Qualified people or organizations in the industry who request a copy pay shipping and handling. Those outside the industry must pay for shipping and handling plus a $95 fee.

June 11–The Hain Celestial Group completes its acquisition of the tofu and meat-alternatives business of WhiteWave Foods Co., a subsidiary of Dean Foods. The product line includes grilled and baked tofu, seitan, tempeh, etc. These products are expected to complement Hain Celestial's existing meat alternatives under the Yves brand in Canada and the United States. The White Wave tofu business generated sales of approximately $8 million in the last financial year.

July 11–Solae announces that it has completed its purchase of Cargill's Prolisse line of isolated soy proteins (ISP; soy protein isolates), including the patented membrane technology for processing ISP.

Aug. 7–SunOpta (incl. SunRich), headquartered in Canada, announces that it has acquired a soymilk plant in Heuvelton, New York, from ProSoya Corporation (Ottawa, Ontario). Allan Routh is president of the SunOpta Grains and Foods Group.

Aug. 16–CPM (Waterloo, Iowa) acquires Crown Iron Works (Minneapolis, Minnesota). CPM is owned by Golbert Global, a private equity group. The acquisition doubles the size of CPM.

Sept. 11–Hain Celestial Group announces it will delay filing its annual report with the U.S. Securities and Exchange Commission (SEC) pending a review of its practices in granting stock options. Thus, the annual report was received by shareholders in April 2008, rather than the typical Nov. 2007.

Nov 5–Symington's, a major U.K. food manufacturer, has acquired the dry-mix products from Hain Celestial (formerly known as Haldane Foods) for an undisclosed sum. In the purchase of Hain Celestial's dry mix operation, Symington will take over the Barrow based production centre from Hain Celestial and will enable the company to increase its stake in the growing health food and vegetarian sector. Main products in the acquisition are couscous, sport nutrition, snack pots and vegetarian meals. Brands

acquired include Granose, Realeat, Direct Foods, Organic and Amazing Grains. Granose was owned by Haldane Foods which also owned Direct Foods and Realeat. So you will also find Sosmix and Burgamix have disappeared as well–but they have returned under the Granose brand. We now have the Granose Sausage Mix, Burger Mix and others that have replaced the Realeat and Direct Foods Sosmix and Banger Mix as well as the Burgamix. Popular products like Nut Roast, Cashew Nut Roast and Chicken Style Bake were discontinued following the sale of the Realeat, Granose and Direct Foods brands.

8484. Mota, M.; Gargavu, S.; Popa, S.; Schiopu, S.; Panduru, N.M.; Mota, E. 2007. Soya–The medicine food product. *Romanian J. of Internal Medicine* 45(1):113-21. *
• ***Summary:*** Cultivated for more than 3,000 years, soya is both a drug and a food product, with numerous nutritional and health benefits. These are discussed one by one. Among the most popular soyfoods are soymilk, tofu (soy cheese), and soy meat (pie, salami, textured soy in granule form). Address: Clinic of Diabetes, Nutrition and Metabolic Diseases, Univ. of Medicine and Pharmacy, Craiova, Romania.

8485. **Product Name:** 8th Continent Soymilk Smoothie [Chocolate Strawberry Banana].
Manufacturer's Name: 8th Continent, L.L.C. [General Mills] (Distributor).
Manufacturer's Address: Minneapolis, Minnesota 55440. Phone: 1-800-247-6458.
Date of Introduction: 2007. January.
Ingredients: Soymilk (water, soy protein [isolate], soybean oil, calcium phosphate), sugar, fructose, modified corn starch, cocoa processed with alkali, strawberry puree, banana puree, potassium citrate, dipotassium phosphate, natural and artificial flavor, salt, carrageenan, tricalcium phosphate, soy lecithin, sucralose, xanthan gum, sodium benzoate (preservative), riboflavin (vitamin B-2), vitamin A (palmitate), vitamin D-2, vitamin B-12. Contains soy ingredients.
Wt/Vol., Packaging, Price: 1.5 qt (1.41 L) square plastic bottle with screw-on cap. Retails for $1.99 (on sale) (2007/02, Berkeley, California).
How Stored: Refrigerated.
Nutrition: Per 8 fl oz (236 ml): Calories 100, calories from fat 10, total fat 1 gm (2% daily value; saturated fat 0 gm, trans fat 0 gm), cholesterol 0 mg, sodium 180 mg (8%), total carbohydrate 18 gm (dietary fiber <1 gm [3%], sugars 10 gm), protein 6 gm. Vitamin A 10%, vitamin C 0%, calcium 30%, iron 8%, vitamin D 25%, riboflavin 25%, vitamin B-12 15%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Product with Label purchased by Martine Liguori in Berkeley, California. 2007. Feb. Private labeled as "Official soymilk of Bob Greene's Best Life Diet. Approved Bestlife the bestlife.com. Limited edition." 10 inches tall. Front panel: Chocolate brown, tan, blue, red, white yellow on light green. Illustration of a strawberry and a scoop of vanilla soymilk floating in a wavy sea of chocolate. Solae logo. Side panel: The Best Life Diet is a new book authored by Oprah's trainer Bob Greene. Forward by Oprah Winfrey. Martine's taste test: Nice thick shake. Good chocolate, banana, strawberry flavor. Low in calories.

8486. Bittman, Mark. 2007. How to cook everything vegetarian: simple meatless recipes for great food. Hoboken, New Jersey: John Wiley & Sons, Inc. xii + 996 p. Illust. Index. 24 cm.
• ***Summary:*** The chapter titled "Tofu, vegetable burgers, and other high-protein foods" (p. 637-78) has this contents: Introduction. The umami factor (savory-ness). The basics of tofu: The tofu lexicon (regular tofu, silken tofu, pressed or extra-firm tofu, smoked tofu, fried tofu, baked tofu, fermented or pickled tofu, tofu skins {dried bean stick, yuba, bean curd sheets or skins}). Buying and storing tofu. Preparing tofu (freezing, squeezing, puréeing,...); then come a wealth of recipes.

The index contains 129 entries for tofu, 32 for miso, 26 for tempeh, 25 for soy sauce, 24 for edamame, 23 for seitan, 11 for soybeans, 7 for black beans (fermented [fermented black soybeans]), 4 for teriyaki sauce, 6 for tofu skins (yuba and dried yuba sticks), 3 for milk substitutes, 2 each for meatballs (vegetarian), and 1 each for bean sprouts (soy), black soybeans, meatless meat sauce, soybean oil, soy flour, soy milk, soy nuts, soy pasta, soy protein isolate, textured vegetable protein, tofu noodles, and Worcestershire sauce (hold the anchovies).

There are also recipes for adzuki beans [sic], tahini, vegan cookery–and much more. Address: New York Times food writer.

8487. Blereau, Jude. 2007. Wholefood: heal–nourish–delight. Philadelphia, Pennsylvania: Running Press. 332 p. Illust. Index. 23 x 19 cm. [8 ref]
• ***Summary:*** This cookbook is not vegetarian. Vegan recipes are so labeled. One chapter, titled "Soy" (p. 92-110) is divided into two parts: Tofu and tempeh The index contains 18 entries for tofu, 14 for tempeh, 3 each for miso and tamari, 2 each for miso soup, soy beans, 2 and soy milk, and 1 each for soy flour, teriyaki marinade, and textured vegetable protein.

"Jude Blereau is a natural foods chef, food coach, and cooking teacher who has been involved with the organic and wholefoods industry for more than 15 years. She first became involved in the natural food industry while living in the U.S. in the late 1980s. In 1997, Jude co-founded The Earth Market, a much loved wholefood store and cafe; in Perth, Western Australia. Her focus is on helping people

learn about good food-what it truly is, where to get it, how to use it-and to give them the tools and information to make healthy eating a part of their everyday lives. Blereau lives in Australia." From publisher's description. Address: Natural Foods Chef, Australia.

8488. Esselstyn, Caldwell B., Jr. 2007. Prevent and reverse heart disease: the revolutionary, scientifically proven, nutrition-based cure. New York, NY: Avery. A member of the Penguin Group (USA) Inc. xii + 308 p. Plus 8 unnumbered pages of plates. Foreword by T. Colin Campbell, Ph.D. Illust. (some color). Index. 24 cm. [27 ref]

• ***Summary:*** A remarkable, milestone book! Every person with a heart should read this book. Advocates a plant-based diet with no oil or nuts. On the cover: "Based on the findings of a now 20-year study first published in the *American Journal of Cardiology* [in Dec. 1995]. With more than 150 great-tasting recipes."

Contents: Foreword, by T. Colin Campbell. Introduction. Part I: The heart of the matter. 1. Eating to live. 2. "Someday, well have to get smarter." 3. Seeking the cure. 4. A primer on heart disease. 5. Moderation kills. 6. Living, breathing proof. 7. Why didn't anyone tell me? 8. Simple steps. 9. Frequently asked questions. 10. Why can't I have "heart healthy" oils? 11. Kindred spirits. 12. Brave new world. 13. You are in control.

Part II: The joy of eating. 14. Simple strategies. 15. Advice from Ann Crile Esselstyn. 16. Breaking the fast. 17. Feasting on salads. 18. Sauces, dips, dressings and gravies. 19. Vegetables, plain and fancy. 20. Soups, thick and delicious. 21. Sandwiches for all occasions. 22. The main course. 23. Wonderful, easy desserts.

This book is based on a 20 plus year study of coronary artery disease using diet and lifestyle modifications; it reports the results of that study. President Bill Clinton has spoken (in public and on TV) very highly of this book and of Dr. Esselstyn (pronounced ES-sul-stun, not ES-sul-stine); the name is Dutch.

The dietary rules (p. 120-21): 1. Don't eat any meat, chicken or fish. 2. Do not eat *any* dairy products. 3. Do not eat eggs; that includes egg whites and even egg substitutes that include egg whites. 4. Do not consume any oil at all–Not even virgin olive oil or canola oil. 5. Use only whole grain products, including brown rice. That means no white flour products. 6. Do not drink fruit juice–but its fine to eat fruit. 7. Do not eat any nuts. 8. Do not eat avocadoes (or guacamole). 9. Do not eat coconut. 10. "Eat soy products cautiously. Many are highly processed and high in fat. Use 'light' tofu. Avoid soy cheese, which almost always contains oil and casein." 11. Read *The China Study,* by T. Colin Campbell.

After having cautioned the reader to "Eat soy products cautiously," the plant-based recipe section of the book (p. 119-286), by Ann Crile Esselstyn, calls for soyfoods in many recipes. Some of the breakfast cereals call for plantmilk using a standard format: "2 cups oat, multigrain, almond, or nonfat soymilk" (p. 129-32, 162, 231, 276, 283). A comparison of the caloric, fat, sodium, and sugar content of nine plantmilks (six of them containing soy) is given on pages 136-37. "Low-sodium tamari" and Bragg Liquid Aminos (which contain sodium by no salt) are widely used in small amounts for seasoning (p. 128, 158-59, 165-66, 168, 170-72, 177, 179, 184, 251, etc.). White miso is used occasionally as a combination seasoning and sweetener (p. 163, 191). Seitan (made from wheat gluten) is occasionally used as a meat substitute (p. 213, 250-51). Light silken tofu or light extra-firm tofu (often one 12.3-ounce package) is used as a dairy alternative in dessert recipes such as: Chocolate mousse (p. 272-73). Blueberry purple passion (p. 273). Pineapple paradise (p. 274). Lemon whipped topping (p. 275). Pineapple frosting (p. 278). Creamy fudge frosting (p. 279).

Sweeteners are used in moderation and the chapter on "Desserts" begins: "Its best not to eat dessert every night. Make it a rare treat, when there are lots of people around–and no temptation to eat too much." Many fruits are naturally sweet and make good desserts. One format is: "3 tablespoons maple syrup, honey, agar nectar, or sugar."

Acknowledgments (p. 287): "Kindred spirits in the transition to healthier living have my gratitude for their own inspiring work. Among them: Neal Barnard, Colin Campbell, Antonia Demas, Hans Diehl, Joel Fuhrman, Mladen Galubic, Alan Holdhamer, William Harris, Michael Jacobson, Michael Klaper, Robert Kradjian, Doug Lisle, Howard Lyman, John McDougall, Jeff Nelson, Dean Ornish, John Robbins."

"My late father, Caldwell B. Esseltyn, M.D... And long before it became fashionable, he argued that the only way out of the impossible health-care burden that confronts the United States is to teach people how to live healthier lives" (p. 288).

Publisher's summary: "Heart disease remains the leading cause of death in this country for men and women. And while we spend millions of dollars each year developing treatments, traditional procedures fail patients by focusing only on the symptoms of the disease, not the underlying causes. In *Prevent and Reverse Heart Disease,* Dr. Caldwell B. Esselstyn, Jr., a former surgeon, researcher, and clinician at the Cleveland Clinic, challenges conventional cardiology by posing a compelling, revolutionary idea–that we can, in fact, abolish the heart disease epidemic by changing our diets.

"The proof is in the incredible results of the patients who have followed Dr. Esselstyn's ground-breaking program. The men and women in his twenty-year nutritional study–the most comprehensive study of its kind–came to him with advanced coronary disease. Despite the aggressive traditional treatment they received-including bypasses and angioplasties–a number had been told by their cardiologists that they had less than a year to live. Within months of

following a plant based, oil free diet, their angina symptoms eased, their cholesterol levels dropped significantly and they experienced a marked improvement in blood flow to the heart. Twenty years later they remain free of symptoms. Drawing on the results of this revolutionary study and his ongoing work with patients all over the country, Dr. Esselstyn convincingly argues that plant based, oil free nutrition can not only prevent and stop the progression of heart disease, but also reverse its effects.

"Furthermore, it can eliminate the need for expensive and invasive surgical intervention except in acute emergencies, no matter how far the disease has progressed. Prevent and Reverse Heart Disease explains the science behind these dramatic results, and offers readers the same, simple plan that has changed the lives of Dr. Esselstyn's patients forever. In addition, the book offers more than 150 delicious recipes developed by Ann Crile Esselstyn, that the Esselstyns and their patients have enjoyed for years. Clearly written and backed by irrefutable scientific evidence, startling photos of angiograms and inspiring personal stories, this book will empower readers to take charge of their heart health. It is an important call for a paradigm shift in heart disease therapy."

About the author: Caldwell Blakeman Esselstyn Jr., M.D., (born December 12, 1933) is an American physician, author, and former Olympic rowing champion. His color portrait photo appears on the front dust jacket. Esselstyn graduated from Deerfield Academy and in 1956 graduated from Yale University, where he was a member of Skull and Bones. Caldwell Esselstyn competed at the 1956 Summer Olympics in Melbourne, where he won a gold medal in eights with the American team. On 1 May 1961 his engagement to Ann Crile was announced by the *New York Times;* they were married on 18 June 1961. 1961–He received his M.D. from Western Reserve University. 1985–He began his famous study at the Cleveland Clinic of 22 patients who had previously had heart attacks. 1988–He and his family began to move toward a plant-based diet. Dr. Esselstyn and his wife, Ann Crile Esselstyn, have mostly followed a vegan diet since the mid-1980s. He attributes the success of his 12 year trial with heart patients to low mean levels of both total cholesterol (145 mg/dl) and LDL cholesterol (82 mg/dl). In 2010 after cardiac surgery, former U.S. president Bill Clinton mostly adopted the plant-based diet recommended by Caldwell Esselstyn, Dean Ornish and T. Colin Campbell. Source: Wikipedia, at Caldwell Esselstyn. May 2011.

Dr. Esselstyne and Ann Krile were married on 18 June 1961 in Cleveland, Ohio. They have four grown children: Rip (born in 1963), Ted (1964), Jane (1965), and Zeb (1967). Three are married, and Dr. Esselstyn and Ann have six grandchildren (p. 288). In 1988 the Esselstyn family joined together in moving toward eliminating dairy products, meats, and oils from their diet. Their eldest son, Rip, became an all-American swimmer at the University of Texas at Austin; after graduating he was a professional triathlete for 11 years. Today (2011) he is a teacher and writer about diet and health–advocating a "plant-strong diet." Their second son, Ted, set a 200-yard backstroke record at Yale University, and their daughter, Jane, won the Big Ten 200-yard backstroke championship while attending the university of Michigan. Their youngest son, Zeb, as an Ohio high school junior, was the state butterfly swimming champion. And Ann, now in her early seventies, runs for 40 to 70 minutes almost every day. Clearly their plant-based diet provides them with plenty of strength and energy (p. 78-79). Address: M.D., former surgeon, researcher and clinician, Cleveland Clinic, Ohio–for 35+ years.

8489. Esselstyn, Caldwell B., Jr. 2007. Prevent and reverse heart disease: the revolutionary, scientifically proven, nutrition-based cure (Continued, Part II). New York, NY: Avery. A member of the Penguin Group (USA) Inc. xii + 308 p. Plus 8 unnumbered pages of plates. Foreword by T. Colin Campbell, Ph.D. Illust. (some color). Index. 24 cm. [27 ref] • ***Summary:*** Continued: Basic biography: Caldwell Esselstyn, M.D., received his B.A. from Yale University and his M.D. from Western Reserve University. In 1956 he received a gold medal as a member of the Olympic rowing team. He trained as a surgeon at the Cleveland Clinic and at St. George's Hospital in London. In 1968 as an army surgeon in Vietnam he was awarded the Bronze Star. Dr. Esselstyn has been associated with the Cleveland Clinic since 1968, having served as staff president and on its board of governors. He chaired the Clinic's Breast Cancer Task Force. In 1991 Dr. Esselstyn served as president of the American Association of Endocrine Surgeons, and in the fall of 1991 he organized "The First National Conference on the Elimination of Coronary Artery Disease" in Tucson, Arizona. He invited Dr. T. Colin Campbell to speak at this conference. In 2005 Dr. Esselstyn became the first recipient of the Benjamin Spock award for compassion in medicine. His website is heartattackproof.com.

Heart disease is the leading cause of death of men and women the United States, with more than 500,000 deaths each year. Three times that number suffer a known heart attack and 3 million more have a "silent heart attack." Dr. Esselstyn believes this is all unnecessary. There doesn't have to be any heart disease at all. He calls it a "toothless paper tiger that need never ever exist. And should it exist, it need never ever progress." His views are based on the global epidemiology of this disease and also on his research. When you look globally, there are still cultures on this planet where heart disease is virtually unknown–the rural Chinese, the Papua Highlanders in Papua New Guinea, the people in Central Africa, and the Tarahumara Indians of northern Mexico (known for their long-distance running). This is largely because, by culture, heritage, and tradition, they

consume a largely plant-based diet that does not contain any of the "atherosclerotic lynchpins," which are dairy products, meat, and processed oils. By contrast, in the USA, by age 12 our children begin to have thickening of those major carotid arteries which go to our brain. If they live until age 20 and they happen to die in combat, as was known in Korea and Vietnam 40-50 years ago, roughly 80% of these young G.I.s already have gross evidence of coronary artery disease–visible even without a microscope. A more recent study, done in 1999, of those who happened to die of accidents, homicides, and suicides, between the ages of 16 and 34, found that 100% of these people have coronary artery disease. This is the background of why Dr. Esselstyn wanted to do research in this area. His research started in about 1985 and he has concluded that the major cause of coronary artery disease is the standard American diet.

A sampling of the many priceless gems in this book: "Can I change?" It is difficult, but "The key is to remember that the rewards are greater than the frustration... after 12 weeks of eating no animal foods, dairy, or added oils, you lose your craving for fat" (p. 76).

The typical Western diet gets 37% of its calories from fat. This diet recommends about 10% of the calories from fat–which is ideal for good health (both heart disease and cancer). And this diet provides about 50-70 gm of protein a day (p. 77).

"Will I have enough strength and energy?" "The truth is that excessive consumption of animal protein badly weakens our bodies. Among other things, it accelerates the loss of calcium through the kidneys, leading to the brittle, porous bone condition called osteoporosis." "And look at the examples that nature offers." The elephant, the bull, etc. They eat a plant-based diet–as do many great athletes, such as Carl Lewis (1991) and many others.

"What if my cholesterol won't go below 150 mg/dL? A tiny minority of the population, no more than 5% of all Americans, has an inherited cholesterol disorder that makes it impossible for them to reduce total cholesterol below 400 to 500 mg/dL, even with careful nutrition. Such patients need to be monitored by highly qualified cholesterol specialists" (p. 79).

A plant-based diet should contain "large quantities of natural antioxidants, which prevent the body from oxidizing LDL cholesterol into its most dangerous, artery-clogging form."

"Don't my genes predetermine whether or not I'll get heart disease?" The "answer is an emphatic NO. If you maintain a cholesterol level under 150 mg/dL, or LDL under 80 mg/dL, you–and all other relatives who inherited these genes–will be free of heart disease" (p. 80).

"Why can't I have 'heart-healthy oils?" The idea of heart-healthy oils and the Mediterranean Diet was based on the Lyon Diet Heart Study, and was widely praised by the media and in books. But: "By the end of the study, nearly four years after its start, fully 25% of the subjects on the Mediterranean diet–one out of four–had either died or experienced a new cardiovascular event. I feel these are wretched results for a nonmalignant disease. We can do much better." "In fact the medical literature is filled with evidence of the harmful effects of monounsaturated oils" as is Dr. Esselstyn's personal experience (p. 84-86).

"T. Colin Campbell, the Cornell University professor who directed and cowrote *The China Study,* observes that there are 'two worlds' of medicine–two radically different visions of how to approach health. 'One consensus favors drugs as the cure, the other favors food,' he explains; Western medicine, for the most part, has chosen drugs. As I see it, we got it wrong.' I agree."

Chapter 11, "Kindred spirits," summarizes the pioneering work of some mentioned previously in the "Acknowledgments" section of this book: T. Colin Campbell, Nathan Pritikin, Hans Diehl, John McDougall, Dean Ornish (whose program is most similar to Esselstyn's. "Among the wide variety of programs promoting cardiovascular health, his and mine are the only ones I am aware of that are based on peer-reviewed research that demonstrates arrest and reversal of heart disease." Dr. Esselstyn's 12-year study started in 1985; Dr. Ornish's study started in 1986. Dr. Ornish "did not use cholesterol-lowering medication. Like mine, Dr. Ornish's patients had three-vessel coronary heart disease. And Dr. Ornish insisted that, in addition to adopting a plant-based diet, his patients must use relaxation and meditation techniques and participate in a structured exercise program. Finally Dr. Ornish had a control group of patients with similar disease severity, but who followed a traditional program of cardiac care"), Dr. Charles Atwood (a longtime pediatrician with an extremely busy practice, his focus on children was very important [not to be confused with Dr. Robert Atkins of low-carb diet fame]), and Antonia Demas.

"And yet with all the research that demonstrates the wisdom and benefits of plant-based nutrition, its growing ranks of opponents still face a formidable array of opponents from the titans of the animal food industry to the medical establishment itself. My colleague Dean Ornish succinctly sums up the dilemma faced by those of us who believe in this healthy way of eating. 'I don't understand why asking people to eat a well-balanced vegetarian diet is considered drastic, while it is medically conservative to cut people open.' Well said" (p. 93). Address: M.D. former surgeon, researcher and clinician, Cleveland Clinic, Ohio–for 35+ years.

• ***Summary:*** *Tahu,* the Indonesian word for bean-curd / tofu

(2 Chinese characters are given) comes from the Chinese Amoy dialect *tau hu* (See also *taofu;* variant *tauhu*).

Tahu pong, the Indonesian word for "soybean cake" [sic, okara], comes from the Chinese Amoy dialect *tau hu phong.*

Taoci, the Indonesian word for fermented black soybeans (two Chinese characters are given) comes from the Chinese Cantonese dialect *tau shi.*

Taoco, the Indonesian word for Indonesian-style miso (two Chinese characters are given) comes from the Chinese Chiangchiu, Changchow [Hokkien] dialect *tau chio* (variant *taucio, tauco*).

Taofu, the Indonesian word for bean-curd / tofu (2 Chinese characters are given) comes from the Chinese Cantonese dialect *tau foo.* (See also *tahu;* variant *tofu*).

Taogé, the Indonesian word for bean sprouts (of the *Phaseolus radiatus*) [mung bean] (2 Chinese characters are given) comes from the Chinese Chiangchiu, Changchow [Hokkien] dialect *tau ge* (var. *taugé, togé*).

Taohupoi, the Indonesian word for dried bean curd sheets [dried yuba] (three Chinese characters are given) comes from the Chinese Chiangchiu, Changchow [Hokkien] dialect *tau hu phoe.*

Taoki, the Indonesian word for deep fried bean curd strips [deep fried tofu strips] (two Chinese characters are given) comes from the Chinese Amoy dialect *tau ki* (var. *tauki*).

Taokua, the Indonesian word for dried bean curd [pressed tofu] (two Chinese characters are given) comes from the Chinese Amoy dialect *tau koa* (var. *takua, taukua*).

Taoni, the Indonesian word for soya bean milk [soymilk] (two Chinese characters are given) comes from the Chinese Amoy dialect *tau ni.*

Taosi, the Indonesian word for salted soya bean paste [fermented black soybeans] (two Chinese characters are given) comes from the Chinese Amoy dialect *tau si.*

Taoyu, the Indonesian word for soy sauce (two Chinese characters are given) comes from the Chinese Amoy dialect *tau iu* (var. *tauyu*).

8491. Reinfeld, Mark; Rinaldi, Bo. 2007. Vegan fusion world cuisine: extraordinary recipes & timeless wisdom from the celebrated Blossoming Lotus restaurants. New York, NY: Beaufort Books. 243 p. Foreword by Dr. Jane Goodall. Illust. (color photos). Index. 26 cm.
• ***Summary:*** A beautiful, inspirational book. Chapter 8 is titled "Tempeh, tofu & seitan" (p. 114-33). The index contains 28 entries for tofu, 13 for tempeh, 4 for seitan, 3 for soymilk, and 2 for miso.

Includes a resource guide, a good glossary with entries for miso, nama shoyu, seitan, shoyu, soy milk, tamari, tempeh, textured vegetable protein, and tofu.

Note: Unfortunately the quotation near the beginning, supposedly by Albert Einstein, is a mish-mash by various wise writers including Albert Schweitzer. Address: 1. Founding chef, Blossoming Lotus Restaurant (Kaua'i, Hawaii), and author; 2. Author and teacher. Both: Kaua'i, Hawaii.

8492. **Product Name:** Silk Soymilk (Aseptic Single Serve) [Vanilla].
Manufacturer's Name: WhiteWave Foods.
Manufacturer's Address: 12002 Airport Way, Broomfield, CO 80021. Phone: 1-800-488-9823.
Date of Introduction: 2007. January.
Ingredients: Organic soymilk (filtered water, whole organic soybeans), organic evaporated cane juice, calcium carbonate, natural vanilla flavor, sea salt, carrageenan, vitamin A palmitate, vitamin D2, riboflavin (B2), vitamin B-12.
Wt/Vol., Packaging, Price: 8.25 fl oz (244 ml) metallic Tetra Prisma Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Leaflet (glossy color, front and back, 28 cm) sent by Patricia Smith from Natural Products Expo East. 2007. "Introducing Silk Vanilla Aseptic single serve." On the front, a large photo shows a white man and a black woman with the product. Silk is now "in a handy grab-and-go package." On the rear: The product is sold in 3-packs and 18-packs. Nutrition facts, ingredients, UPC and barcodes, and case information are given.

8493. Yeager, Selene. 2007. The doctor's book of food remedies: the latest findings on the power of food to treat and prevent health problems–from aging and diabetes to ulcers and yeast infections. Fully revised and updated. [Emmaus, Pennsylvania]: Rodale Inc. Distributed to the trade by Macmillan. xii + 707 p. Index. 24 cm. 1st ed. 1998.
• ***Summary:*** The chapter titled "Soy foods: Help for weight loss" (p. 579-83) explains that in the late 1990s the media strongly promoted soy, made it into a sort of miracle food or cure, and rode the wave up, then after about 2005 when scientists found that soy was not a miracle food, the media decided that "The party's over," and they rode the wave down. In 2005 soy foods faced big setbacks, when a U.S. government panel said there wasn't clear evidence that soy could guard against heart disease, ease menopause, or protect bones from osteoporosis. "In response the National Institutes of Health (NIH) said it would stop paying for new soy studies." That fall, the soyfoods industry withdrew a petition that asked the FDA to permit food labels that claim that soy protein helps prevent cancer.

This chapter explains: "But flash forward to 2006, where one dour headline–'Soyonara–tells the sad tale. Has this promised [by the media] superfood become a has-bean?" Maybe not."

It proceeds to give a fair assessment of what current science says can and cannot be expected of soyfoods. Cannot (by itself): Significantly reduce cholesterol. Protect against breast or prostate cancer. Build bones or reduce osteoporosis.

Cool hot flashes or reduce menopause symptoms. This is followed by a long list of its many well-known health benefits. "That's good news because soy seems to be here to stay." It has gone mainstream, and sales of soy foods in the United States rose dramatically from $300 million in 1992 to $3.9 billion by 2004–a 13-fold increase in 13 years.

The section titled "The joy of soy" gives brief definitions of some of the most popular soyfoods: Edamame, soy nuts, meat substitutes [sic, alternatives], soy flour (made from roasted, ground soybeans), soy milk, tempeh, and texturized soy protein.

A sidebar titled "Doctor's top tip" recommends eating soy (such as edamame, tofu, soy nuts, and some soy burgers) in place of foods high in animal fats. The head of the American Heart Association's nutrition committee reminds us: "Heart disease is a major problem–using soy protein instead of animal protein is still a win."

Dr. Mark Messina, a prominent soy researcher, says there are many reasons to add soy to your diet from just a basic nutritional point of view: (1) Soyfoods such as tofu or tempeh are high quality, low-cost, versatile sources of protein. (2) A half cup of tofu, curded with calcium sulfate, can provide more than 25% of the Daily Value (DV), plus a significant amount of iron. (3) Soyfoods contain little of the artery clogging saturated fats found in meat and many dairy products.

Contains recipes for: Soy fruit smoothie (with vanilla-flavored soy beverage, p. 583). Mocha Tofu Pudding (with 2 packages {10½ ounces each} silken tofu and 2/3 cop packed light brown sugar).

The index contains 34 entries for soy, 13 for tofu, 4 for tempeh, 3 entries for miso, 2 entries each for edamame and for soy milk, 1 entry each for soy nuts, soy yogurt, and textured soy protein.

Note: This book is not vegetarian.

Translated from the English by Nathalie Tremblay]. Varennes, Quebec, Canada: Éditions AdA Inc. 430 p. Illust. by Akiko Aoyagi. Index. Feb. 28 cm. [53 ref. Fre]
• ***Summary:*** Contents: Preface. Acknowledgements. Part I. Tofu: Food for mankind. 1. Protein East and West. 2. Tofu as a food. 3. Getting started. Our favorite tofu recipes (lists about 80 recipe names for each of the different types of tofu, plus soymilk, yuba, whole soybeans, gô, okara, and curds; very favorites that are also quick and easy to prepare are preceded by an asterisk).

Part II. Cooking with tofu: Recipes from East and West (500 recipes). 4. Soybeans: History, cooking with whole dry soybeans, roasted soybeans (*iri-mame*), fresh green soybeans (*edamame*), kinako (roasted full-fat soy flour), soybean sprouts (*daizu no moyashi*), natto (sticky fermented whole soybeans, with "gossamer threads"), tempeh (fermented soybean cakes), Hamanatto and Daitokuji natto (raisin-like natto), modern western soybean foods (natural soy flour [full-fat], soy granules, defatted soy flour and grits, soy protein concentrates, soy protein isolates, spun protein fibers, textured vegetable protein (TVP), soy oil products). 5. Gô (*purée de fèves de soya fraîches;* a thick white puree of well-soaked uncooked soybeans). 6. Okara or Unohana. 7. Curds and whey (*Caillé et petit-lait*). 8. Tofu (includes history, and preparatory techniques: Parboiling, draining, pressing {towel and fridge method, slanting press method, sliced tofu method}, squeezing, scrambling, reshaping, crumbling, grinding).

9. Deep-fried tofu (*Tofu frit*)*:* Thick agé or nama agé (*Agé épais {côtelettes de tofu frit}*), ganmo or ganmodoki (*burgers de tofu frit;* incl. *hiryozu / hirosu*), agé or aburagé

(*pochettes de tofu frit;* incl. "Smoked tofu," p. 197). 10. Soymilk (*Lait de soya*). 11. Silken tofu (Kinugoshi ou tofu soyeux) ("*Kinu* means 'silk'; *kosu* means 'to strain'; well named, kinugoshi tofu has a texture so smooth that it seems to have been strained through silk"). 12. Grilled tofu (*Tofu grillé*). 13. Frozen and dried-frozen tofu (*Tofu surgelé et tofu surgelé séche*). 14. Yuba (incl. many meat alternatives such as Yuba mock broiled eels, Buddha's chicken, Buddha's ham, sausage). 15. Tofu and yuba in China, Taiwan, and Korea (incl. Savory tofu {*wu-hsiang kan*}; see p. 258 for illustrations of many meat alternatives, incl. Buddha's fish, chicken, drumsticks, and duck, plus vegetarian liver and tripe, molded pig's head, and molded ham). 16. Special tofu (*Tofu particuliers*).

Part III–Japanese farmhouse tofu: Making tofu for more and more people. 17. The quest. 18. Making community tofu. 19. The traditional craftsman. 20. Making tofu in the traditional way. Appendices: A. Tofu restaurants in Japan (many are vegetarian). B. Tofu shops in the West (Directory of 43 shops in the USA, 3 in Europe {Germany, Austria, Belgium, Denmark, Finland, France, Ireland, Italy, Netherlands, Portugal, Spain, Switzerland, UK, Wales}, and 3 in Latin America {Brazil, Colombia, El Salvador, Guatemala, Mexico}). C. People and institutions connected with tofu. D. Table of equivalents. Bibliography. Glossary. Index. About the authors (autobiographical sketches; a photo shows Shurtleff and Aoyagi, and gives their address as New-Age Foods Study Center, 278-28 Higashi Oizumi, Nerima-ku, Tokyo, Japan 177). Sending tofu in the four directions.

Pudding recipes include: Rice pudding with gô and apple (p. 76, incl. 2 cups soymilk). Tofu chawan-mushi (p. 147; Steamed egg-vegetable custard with tofu). Tofu fruit whips (p. 148). Tofu rice pudding (p. 150, incl. 1 cup soymilk). Tofu custard pudding (p. 152). Soymilk custard pudding (p. 208). Brown rice pudding (p. 208, with 2 cups soymilk). Soymilk chawan-mushi (p. 209). Chawan-mushi with yuba (p. 249).

Dessert recipes include: Tofu whipped cream or yogurt (p. 148; resembles a pudding or parfait). Tofu ice cream (p. 149, with chilled tofu, honey, vanilla extract and salt). Banana-tofu milkshake (p. 149). Tofu cream cheese dessert balls (p. 149). Tofu icing (for cake, p. 149). Tofu cheesecake (p. 150). Tofu-pineapple sherbet (p. 151). Also: Soymilk yogurt (cultured, p. 205). Healthy banana milkshake (p. 206). On p. 160 is a recipe for "Mock tuna salad with deep fried tofu." Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549 USA. Phone: 925-283-2991.

8496. *SoyaScan Notes.* 2008. Dates of earliest documents seen that mention non-fermented soyfoods used as human food (Overview). March 17. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** Whole dry soybeans, ground or mashed to a paste after boiling, or ground raw with water to a fresh puree or slurry (Including Japanese *gô*): 636 BCE–China.

Roasted soy flour: 1301 China.

Soymilk: 1866 France.

8497. Golbitz, Peter. 2008. Sale of Soyatech, major contributions, future plans. Part II (Interview). *SoyaScan Notes.* March 24. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** Continued: (1b) Soyatech's electronic newsletter is a way for the company to have a presence with its customers every day. The last printed, mailed issue of *Bluebook Update,* Soyatech's quarterly newsletter, appeared in Dec. 2003 (Vol. 10, No. 4). Thereafter the newsletter moved to an electronic online format and was renamed eNews Daily and Weekly.

(1c) Soyfoods conferences: Soyatech did a series of about ten of these jointly with IQPC and IBC. Peter was asked by the organizers to helped design the agenda, made sure the topics were relevant, and help promote the event (make mailing lists etc. available) to ensure satisfactory attendance. It was a contract for services agreement; Soyatech was paid a flat fee and/or a "piece of the gate" (percentage of income from attendance).

(1d) Market studies: These were a way for Soyatech to benchmark where the soy industry was in any particular year, and measure the value being added. For Soyatech it was a great way to promote the company's expertise in a particular area. Soyatech has done about 10 syndicated studies–7 soyfood reports, one on whole soybeans for food use and another on soy protein. They are currently in production with 2 more. (1e) Proprietary consulting: For one customer such as an equipment supplier, a technology provider, a seed supplier, a processor, a food company, etc. It crossed the whole value chain. People who wanted to understand what they had or what the size of the market was. Today Soyatech does 15-20 medium- to large-size projects a year. For example, in April 2006, the sixth report produced by a partnership of Soyatech and SPINS was released. Having a good staff is one key to doing all this.

Peter resigned as president of Soyatech on 17 Jan. 2008 and it became effective on March 7; his role is now "Founder and Senior Advisor." Peter is actively working with the company; he has three projects on which he is consulting with HighQuest Partners, helping to find and provide information. The Soyatech office in Bar Harbor, Maine, is fully staffed and more active than ever. Keri Hayes is now publisher of the Bluebook and Joe Jordan is general manager of content and events. So HighQuest has promoted the people at Soyatech rather than bringing HighQuest people into the Bar Harbor office. Peter believes that this is

the best arrangement for both Soyatech and HighQuest. He is extremely happy with the way things have worked out, and he has a tremendous amount of respect for the vision that they had and for their respect for what Soyatech was and is. "They've done a great job. More than anything else, I am grateful." People from Boston come up regularly, and are working very effectively with the Soyatech staff. Soyatech has more of a horizontal / egalitarian management chart than most companies. In short, the merger seems to be working out really well. Peter plans to meet Keri and Joe today to discuss upcoming events and Bluebook layout issues. Peter thinks that it is unlikely that HighQuest will shut down the Bar Harbor office and consolidate it into any of their other offices. The Boston office is also headquarters for a number of other businesses that HighQuest operates. HighQuest has five consultants in their Boston office.

(2) Peter's work with the Soyfoods Association of North America (SANA): When Peter left as president of Soyatech, he resigned his seat on the SANA board, because it is a company board seat. Although he could stay on because he is still an advisor to Soyatech, he decided to let Philippe de Lapérouse take the seat. Another reason for the decision to step down is that, during the past 4-5 months, Peter's work with the World Soy Foundation, has taken quite a bit of his time.

(3) Peter's work with WISHH (the World Initiative for Soy in Human Health). Peter became involved with WISHH in 2003 after Soyatech considering forming its own foundation; Peter realized that it made more sense to work with an established group. WISHH is now a committee of the American Soybean Association (ASA); it no longer has its own board. That is a recent change; for more information contact Jim Hershey, who is executive director of WISHH. Peter works with WISHH as a volunteer and ex officio member. He has been to Africa (South Africa, for 1 week each trip) 3 times so far, in 2005, 2006 and 2007. Soyatech helped to raise the $750,000 needed to establish the "Soy in Southern Africa Alliance"; Sarah Day from Soyatech's office just recently went to Ghana and Nigeria for WISHH as a researcher / consultant.

On the first several trips to South Africa, Peter met with companies to advise them on their soy sourcing, processing, marketing, and to generally help them solve their problems and improve their operations. On the most recent trip, when he visited the SoyaCow and SoyaGoat training center in KwaZulu-Natal, the easternmost province of South Africa, he helped them process soymilk using these two mechanical soymilk making machines, and gave several lectures on soymilk processing, flavorings, the types of technologies available, and to help develop that industry further. WISHH, whose objective is market development for foods and ingredients made from U.S. soybeans, is working to create fertile ground through education of the benefits of soy products in the human diet. The focus is on foods, but soy oil and meal are not excluded. WISHH is trying to get the SoyaGoats into communities such as orphanages, feeding kitchens, etc. and to train people to make soymilk using this technology. There are a number of large soymilk companies in South Africa; they generally sell soymilk in Tetra Pak cartons that is too expensive for most people. By using a SoyCow or VitaGoat the people drink fresh soymilk and omit the packaging, which is more than half of the cost. In 2007 Malnutrition Matters of Ottawa, Canada, (Frank Daller, president) got a grant from the World Bank to place about 16 VitaGoats in India; they hope to feed 4,000 to 5,000 children. Daller developed the VitaGoat using simple, inexpensive parts suited for Third World villages without electricity. "We're still just beginning in developing countries but there is a tremendous amount of interest." WISHH is also working with a Rotary group, and together they are sending SoyCows and soybeans, to Guatemala. In Peter's experience, the people in Africa loved the fresh soymilk made using relatively inexpensive technology. He found there was very little difference in the taste and appearance of the soymilk made by the low-tech bicycle-powered VitaGoat and the electric high-tech cold-water-grind SoyCow. "We just sent Sarah Day, research analyst in the Bar Harbor Office, to Nigeria and Ghana for a week in February." Two years ago Peter helped to raise $250,000 from industry for WISHH; WhiteWave and Solait were the two largest contributors. WISHH added $100,000, and that $350,000 was matched by USAID making a total of $700,000 for the South African project, which including establishing the center and running short courses in soymilk processing and teaching seminars.

A remarkable gentleman named Henry Davies (a white Afrikaner businessman) has set up this training center in Bergville, KwaZulu-Natal. It is dedicated to teaching and training people about soyfoods. There is a full SoyaCow in the tiled processing room, which is really a pilot plant. There is also a meeting and lecture room. There was an extrusion plant that made pet food and textured soy flour.

(4) Peter's work with the World Soy Foundation (WSF): In March 2007 Peter was elected to the board of directors of WSF; he is also chair of their fundraising committee. WISHH could not be a foundation or a nonprofit organization–such as 501(c)(3)–because part of its agenda was market development. So in late 2006 the Internal Revenue Service (IRS) gave ASA and USB permission to create the World Soy Foundation as a 501(c)(3) charitable foundation, which would disperse funds to various kinds of organizations related to U.S. soybeans. Presently WISHH is their primary beneficiary, but WSF can only give to certain types of WISHH projects. So WISHH is expected to get some of its funding through the American Soybean Association (ASA) and some through the World Soy Foundation. ASA, as well as the big state soybean boards such as Illinois, Iowa and Indiana, are all major contributors to WISHH. The board is comprised of soybean farmers, who

provide great leadership, and each of whom sits on their state soybean board. Ellen Feeney from White Wave Foods and Peter have provided some soyfoods industry perspective. White Wave has been a great supporter of both WISHH and the World Soy Foundation.

Future plans: Peter is putting the finishing touches on a home office. He is thinking about some travel ideas, book ideas, and writing projects. He's trying to keep his time open. He cannot consult for the next few years with companies outside of Soyatech and HighQuest Partners–being restricted by a non-compete clause in his contract with HighQuest. Looking at the big picture, Peter says: "If there's some way I can do more for promotion of soy in the world–bring it on!"

Peter recently took a trip to visit Nasoya, Lightlife, and South River Miso Co. "It was wonderful. It was really nice to be welcomed with open arms into all those companies." Their original vision is still alive. So is his.

Peter remarried in 2004 to Mary Cline Golbitz, a lawyer, who has also become a certified yoga teacher. They have three sons; two are Peter's stepsons. Peter has two kids in college (one at Middlebury College in Vermont and one at Northeastern in Boston) and a third about to start college, so he can't afford to retire. He needs a source of income to pay for the kids in college. Peter lives on Mount Desert Island, which is several hundred yards off shore and is connected by one road to the mainland. It is the largest island off the coast of Maine (with a permanent population of about 10,000) and the 2nd largest (after Long Island) on the Eastern Seaboard of the USA. Bar Harbor is on the island. Half the island is occupied by Acadia National Park. Address: Founder and Senior Advisor, Soyatech, Bar Harbor, Maine. Phone: (503) 386-7766.

8498. Welters, Sjon. 2008. Re: Soyfoods in western Europe. Letter to William Shurtleff at Soyinfo Center, March 24. 2 p. Handwritten.

• ***Summary:*** Sjon just returned from a trip to Europe (to visit parents and inlaws) where he collected some soyfoods labels. He "noticed a proliferation of soyfoods, especially of tofu products."

Rinatura is a brand he had not seen before. Also: Rinatura.de, and Rila. They sell tofu sterilized in a glass jar for 2.29 euros for 130 gm drained weight.

Some prices: Yakso Tempeh 1.95 euros for 350 gm. Viana Tempeh 3.49 euros for 200 gm. Viana tofu (nigari) 1.99 euros for 300 gm. Demeter tofu (nigari, calcium sulfate) 2.29 euros for 300 gm in Germany or 2.45 euros for 300 gm in the Netherlands. Provamel tofu (nigari, calcium sulfate) 1.99 euros for 400 gm in Germany or 2.20 euros for 400 gm in the Netherlands. These are both packaged 2 x 200 gm in one box. Taifun tofu (nigari) 1.49 euros for 225 gm in Germany. Taifun tofu (calcium sulfate) 1.99 euros for 400 gm in Germany. Taifun silken tofu (*seiden tofu,* nigari only) 2.59 euros for 400 gm in Germany.

Svadesha.de in Munich is another new name, yet apparently the oldest tofumaker in Germany.

Alpro and Provamel are all over with their soymilk.

8499. **Product Name:** Silk Soymilk Plus [Fiber, Omega-3 DHA].
Manufacturer's Name: Dean Foods / WhiteWave Foods (Product Developer-Distributor).
Manufacturer's Address: 2515 McKinney Ave., Suite 1200, Dallas, Texas 75201.
Date of Introduction: 2008. March.
Ingredients: Fiber: Organic soymilk (filtered water, whole organic soybeans), organic evaporated cane juice, dextrin (soluble dietary fiber), calcium carbonate, sea salt, natural vanilla flavor, carrageenan, vitamin A palmitate, vitamin D2, riboflavin (B2), vitamin B12.
Wt/Vol., Packaging, Price: Quart Pure-Pak carton.
How Stored: Refrigerated.
New Product–Documentation: Leaflet (glossy color, front and back, 28 cm) sent by Patricia Smith from Natural Products Expo West. 2008. March. "Introducing Silk Plus." "A re-launch of Silk Enhanced (same UPC) and an innovative new companion sku, Silk Fiber Plus."

8500. Johnson, Katherine Quimby. 2008. Fresh and full of beans: Vermont Soy. From the good earth. *Green Edible Mountains* No. 2. Winter. p. 18-21.

• ***Summary:*** About Vermont Soy, which makes four flavors of soy milk and a firm tofu in Hardwick, Vermont. Their products debuted in the summer of 2007 at the Hardwick and Waitsfield farmers markets. The company grew from the desire of co-owner Todd Pinkham to turn the tempeh he made at home into a commercial venture. Todd's partner is Andrew Meyer. With support and technical assistance from the Innovative Agricultural Initiative developed by the University of Vermont (UVM), about 6 farmers around the state (in Alburh, Highgate, Bridport, Orwell, Glover, and Hardwick) have begun growing food-grade soybeans organically. Extra-firm tofu, Vermont Soy's newest product, is curded with nigari. The soy plant in Hardwick is located next to Meyer's other venture, Vermont Natural Coatings; tofu is made there every Thursday. Tofu recipes are given for: Chinese noodle soup. Pumpkin pie.

Color photos show: (1) James Lewinsky, Sophia Smith, Andrew Meyer, and Todd Pinkham holding a Vermont Soy sign. For more: www.vermontsoy.com. (2) Bright yellow soaked soybeans in a large metal bowl. (3) A thermometer held above hot soymilk. (4) Yoshikawa Maruzen nigari, for curding tofu.

8501. **Product Name:** Kikkoman Pearl Organic Soymilk (In Tetra Prisma Aseptic 8.25 oz. Grab-N-Go Cartons) [Chocolate, Green Tea, Creamy Vanilla].
Manufacturer's Name: Kikkoman International, Inc.

(Importer-Distributor). Made in Japan.
Manufacturer's Address: P.O. Box 420784, San Francisco, CA 94142. Phone: 415-956-7750.
Date of Introduction: 2008. March.
Ingredients: Filtered water, whole organic soybeans, organic evaporated cane juice, organic green tea powder, tricalcium phosphate, organic natural flavors (lemon and vanilla), sea salt, carrageenan, vitamin A palmitate, vitamin D2. Certified organic by QAI.
Wt/Vol., Packaging, Price: 32 fl oz (1 quart) Tetra Brik Aseptic Carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Glossy color leaflet sent by Patricia Smith from NFM Natural Products Expo (Anaheim) 2008/03. "Kikkoman: Purely authentic." A color photo on the cover shows these three products.

8502. Kikkoman International Inc. 2008. Kikkoman: Purely authentic. San Francisco, California. 2 p. Front and back. 28 cm.
• ***Summary:*** On the cover is a color photo showing the following products: (1) Kikkoman Bread Crumbs (Panko). (2) Kikkoman Organic Soy Sauce and Tamari Soy Sauce. (3) Kikkoman Teriyaki (Original, or Spicy Miso; Takumi Collection). (4) Kikkoman Pearl Soymilk (Aseptic quarts; Organic Original, Organic Creamy Vanilla, Organic Green Tea, Organic Unsweetened, Organic Chocolate, and Nonorganic Tropical Delight–with 7 Juices). (5) Kikkoman Pearl Soymilk (Tetra Prisma Aseptic grab-n-go 8.25 oz packs; Organic Chocolate, Organic Green Tea, Organic Creamy Vanilla). (6) Kikkoman Black Bean Sauce, Hoisin Sauce, Thai Style Chili Sauce. Plum Sauce.

On the inside two pages are details about each of these products. On the rear panel is detailed information about the six flavors and two packages of Kikkoman Pearl Soymilk. Address: P.O. Box 420784, San Francisco, California 94142-0784. Phone: (415) 956-7750.

8503. Nutrition & Soja. 2008. Soy: Die pflanzliche Alternative. Tofu, seitan, getreide [Soy: The plant-based alternative. Tofu, seitan, cereal grains (Leaflet)]. Revel, France. 3 panels each side. Each panel: 21 x 10 cm. [Ger]
• ***Summary:*** This stylish German-language color leaflet is from an early French soyfoods company. Front panel: For almost 25 years we have offered a complete line of heat and serve or ready to eat products based on tofu and seitan. They use only organic soybeans grown in southwest France.

The three inner panels start with a vertical cartoon showing how soybeans are made into soymilk and then tofu. From the soymilk comes four lines of eleven products: (1) Biosoy soymilk (aseptically packed) in natural, vanilla, and calcium-enriched flavors. (2) Biosoy desserts (Hazelnut, Vanilla, and Chocolate). (3) Biosoy drinks in Chocolate (2 sizes), Tchai, and Moka. (4) Biosoy creme (like cream but with fewer calories).

From the tofu comes two lines of eight products: (1) Tofinelle meatless sausages in Sesame & Curry, and Mushroom flavors. (2) Six types of *Croque Tofu* (Tofu Croquettes / Burgers) in Provencale, Garlic & Fines Herbes, Mushrooms, Sea Vegetables, Chop Suey, Curry and Poppyseed.

Back left panel: Tofu: The highest form of nutrition. Unique plant protein, unsaturated fatty acids, essential fiber and minerals, virtues for good health. Back middle panel: The delicious art of eating vegetables. Croc' Seitan (Indian Style). Cereal Grains: Grinioc Patties in Quinoa-Tomato, Millet-Mushroom, or Rice, Delicate Vegetables & Saffron. www.soy.tm.fr. Address: Chemin de l'Horte, 31250 Revel (near Toulouse), France.

8504. Nutrition & Soja. 2008. 100 recettes au tofou [100 tofu recipes]. Revel, France. 72 p. Illust. 20 x 17 cm. [Ger]
• ***Summary:*** At top of color cover: Soy: The plant-based alternative (*L'alternative végétal*). Below the title is a photo

brochette with a cube of tofu, wedge of tomato, etc. Across the bottom: Delectable and easy to prepare throughout the four seasons.

Contents: The plant-based alternative: the soybeans is an ecological plant. Full-page cartoon showing how soymilk, tofu, and second-generation tofu products are made. Ideas for using tofu from day to day. Recipes for spring. For summer. For autumn. For winter. Soy: A complete line of products based on tofu and soymilk. The brand name of all these soy products is SOY (p. 70-71, with color photos of the front panel of 29 products). Soy: A new line based on seitan. With every confidence in soy. Address: Chemin de l'Horte, 31250 Revel (near Toulouse), France. Phone: Web: www.soy.tm.fr.

8505. Soyaworld Inc. 2008. So Nice organic soymilk: part of an organic, healthy lifestyle (Leaflet). 1685 H St., #1023, Blaine, WA 28930 USA. 1 p. Front and back. 28 cm.
• ***Summary:*** Glossy color leaflet (8½ by 11 inches, front and back) sent by Patricia Smith from Natural Products Expo West. 2008. March. On the front is a photo of a young man and woman, both standing and smiling, she carrying a bag filled with flowers, he some fruits and vegetables. In front of them are five different ESL gable-top cartons of So Nice Organic Soymilk (chocolate, original, vanilla, omega+ vanilla, and omega+ original). Across the bottom: "Come visit us at Booth 4342" "Towards a better organic world."

On the rear: The So Nice Advantage. So Nice Omega+. The same photo of 5 cartons. "So Nice brings incremental sales to your category: Total soymilk category is growing at +7% with over $438 million. Total chilled soymilk sales represent over $380 million nationally with +9% growth. 64 oz [half gallon] Size represents 82% of chilled soymilk sales. Source: ACNielsen 9/16/06 (conventional supermarket and natural foods). 1 in 7 Americans drink soymilk. Source: April 2006 www.ift.org.

Website: www.soniceorganic.com.

8506. Kong, F.; Chang, S.K.; Wilson. L.A. 2008. Changes of soybean quality during storage as related to soymilk and tofu making. *J. of Food Science* 73(3):S133-44. April. *
• ***Summary:*** Soybeans to be used for making tofu should be stored in a cool, dark place. Soybeans stored at high temperatures can produce a drastic loss in tofu yield. Address: Dep. of Biological and Agricultural Engineering, Univ. of California at Davis, Davis, CA 95616.

8507. Gode Cookery. 2008. Welcome to Gode Cookery [Medieval Cookery] (Website printout–part). www.godecookery.com/#allsites Printed May 8.
• ***Summary:*** This is a website of digitized medieval cookbooks and manuscripts. Most are not dated, except to the nearest century. A search box enables us to search all of the books for any word or term. One of the "books" is titled "Glossary of medieval cooking terms." If we click "A" and look for almond(s) we find the following: Allemandys (GO = Glossary only). Almand (incl. Almand melk, Botere of almand melk {Butter}). Almaundys (8 hits–not including glossary). Almaund (3, incl. Almaund mylke). Almaundys (9). Almandys (1). Almaun (GO). Almaund mylke (3). Almaunde (13, incl. Almaunde milke, Almaunde mylke). Almaundes (10). Almaundis (GO). Almaundys (8). Almond (133, incl. almond cheese {made from almond milk}, almond cream, almond dessert, almond milk, almond mylke, almond oil, almond paste, almond pudding, almond sauce, almond syrup). Almonde (4). Almondes (14). Almound (3, incl. almound melk, almound mylke). Almoundes (9, incl. creme of almoundes, almoundes mylk). Almoundis (GO).

Note: A majority of the recipes that call for almonds as an ingredient call for almond milk (spelled in various ways).

8508. Sojami (Le). 2008. Le Sojami: Balancing nutrition & flavor (Website printout–part). www.lesojami.com Printed May 13.
• ***Summary:*** This website has both French and English editions; the French one is more complete. Contents: The company. Product range. Nutrition. Points of view. Sojami was founded in 1997 by Jean-James Garreau, who has a PhD degree in biology and is an independent researcher in human ecology at the University of Science at Bordeaux, France. In 1996 Dr. Garreau won the Agropole prize for Innovation in the Food Processing Industry as a result of his development of a lactic fermentation process for soymilk. Soyami's products are made from soybeans grown in the southwest of France; they are 100% organic and of plant origin (vegan). They include: (1) Tartimi (cream cheese alternative) in Basil, Cumin & Tarragon, Chives & Shallot, Garlic & Mixed Herbs flavors. (2) Accompaniment (incl. Marinated Lactofermented Tofu, Provençale Sauce {with tofu}, Lactofermented Tofu). (3) Sauces (Plain Sojami, Mayomi). (4) Frozen Dessert (made from Lactofermented Soymilk, Rice Milk, or Almond Milk).

Soyami makes all its own soymilk. Address: Agropole–BP 109, Estillac, 47931 Agen (Cedex 9), France. Phone: +33 5 5377 2488.

8509. Dean Foods Co. 2008. Fortifying our future: 2007 annual report. Dallas, Texas. 4 + 50 + 51 + 5 p. 28 cm.
• ***Summary:*** Its been a hard year at Dean Foods. All but the first 4 pages of this annual report are Form 10-K. Basic financials are on page F-2.

Sales of Silk brand products increased by 8%.

Accompanying the annual report is a "Notice of stockholders' meeting" (49 p.). In 2007 Gregg L. Engles, age 50, Chairman of the Board and CEO had total compensation of $8.152 million, including salary of $1,275,000–even though the company did poorly last year. Address: 2515 McKinney Ave., Suite 1200, Dallas, Texas 75201. Phone: 214-303-3400 www.deanfoods.com.

8510. Liu, KeShun. 2008. Food use of whole soybeans. In: Lawrence A. Johnson et al. eds. 2008. Soybeans: Chemistry, Production, Processing, and Utilization. Urbana, Illinois: AOCS Press. viii + 842 p. See p. 441-481. Chap. 14. [85 ref]
• ***Summary:*** Contents: Introduction. Non-fermented soyfoods: Soymilk (traditional soymilk, modern soymilk {techniques to reduce beany flavors, formulation and fortification, homogenization, thermal processing, and packaging}), tofu (preparation methods, factors involved in tofu-making {soybean varieties, storage and pretreatment, solids concentration, heating, type of coagulants, coagulant concentration, coagulation temperature, coagulation time, process automation, packaging}, varieties of tofu {silken tofu, regular and firm tofus, varieties of tofu products}), green vegetable soybeans, soybean sprouts, yuba, okara, roasted or cooked (boiled whole) soybeans.

Fermented soyfoods: Terms (Koji {fermentation, koji starter, inoculum}), fermented soy paste (preparation method {preparing rice koji, treating soybeans, mixing and mashing, fermenting, pasteurizing and packaging}, processing principles), soy sauce (preparation method {treating raw materials, koji making, brine fermentation, pressing, refining}, processing principles, chemical soy sauce), Japanese natto (preparation method, processing principles), Indonesia tempeh (processing method, processing principles), fermented soymilk, fermented tofu (preparation method, processing principles), fermented black soybeans (Chinese douchi, Japanese hamanatto). Conclusion.

Figures show: (1) Flowchart of a traditional Chinese method for making soymilk and tofu. (2) Photo of savory tofu dices. (3) Photo of soy sprouts. (4) Photo of yuba (soymilk film). (5) Photo of Chinese jiang and Japanese white and red miso. (6) Flow chart of a common method for making Japanese rice miso. (7) Photo of Japanese natto. (8) Flow chart of a traditional Indonesian method for making tempeh. (9) Photo of Chinese douchi (fermented black soybeans or fermented whole soybeans). Address: Research Chemist, U.S. Dep. of Agriculture, Agricultural Research Service, Grain Chemistry and Utilization Lab., Aberdeen, Idaho 83210.

8511. Packaged Facts. 2008. Soy foods and beverages in the U.S. Rockville, Maryland. 210 p. May. 28 cm. *
• ***Summary:*** This market study, No. LA148-6839, retails for $3,300 as on online download or $3,700 as hard copy mail delivery. Contents: 1. Executive summary: Scope and methodology: Scope of report, two classifications–foods and beverages, exclusions, report methodology.

Market overview: Soy food / beverage sales top $2 billion mark, foods classification bigger–but beverages growth faster, snack bars and soymilk are the largest categories, soy "mainstreams" from natural channel, figure 1-1–share of U.S. soy food and beverage sales–by retail outlet type–2007 (percent), soy on a roll, consumer awareness of soy's health benefits on the ups, FDA approves heart healthy claims, looking ahead, the global picture.

Soy food marketing and competitive trends: Soy foods have staying power, company types, marketer and brand shares by category, health a big pitch across all categories, it's all about taste too, westernizing soy, "flexitarians" a growing market base, soy flour boosting baked foods, "natural" tops list of new product introductions, snack / nutritional bars lead new product introductions.

Soy beverage marketing and competitive trends: Riding the healthy beverage wave, company types, marketer and brand shares by category, drink to your health!, synching up with natural / organic, the greening of soy, natural leads new product introductions, most new soy beverages appear in non-dairy milk / yogurt drink category.

Consumer trends: IFIC data on attitudes toward health foods and soy, USB data on attitudes toward nutrition, health and soyfoods, meat alternatives and soymilk are top categories, figure 1-2–usage of selected soy foods and beverages–2007 (percent of U.S. households), soy consumers are eco- and gourmet-conscious.

2. Market overview. 3. Soy food marketing and competitive trends. 4. Soy beverage marketing and competitive trends. 5. Consumer trends. Address: 11200 Rockville Pike, Suite 504. Rockville, Maryland 20852. Phone: 1-800-298-5294.

8512. Stein, Hans H.; Berger, Larry L.; Drackley, James K.; Fahey, George C., Jr.; Hernot, David C.; Parsons, Carl M. 2008. Nutritional properties and feeding values of soybeans and their coproducts. In: Lawrence A. Johnson et al. eds. 2008. Soybeans: Chemistry, Production, Processing, and Utilization. Urbana, Illinois: AOCS Press. viii + 842 p. See p. 613-660. Chap. 18. [149 ref]
• ***Summary:*** Contents: Introduction. Soybean products in diets fed to poultry: soybean products as protein sources for poultry (protein quality of soybean products, soybean products as protein sources in feeds for broiler chickens and turkeys, soybean products as protein sources in feed for laying hens, assessment of protein quality of soybean products), soybean products as energy sources for poultry, genetically modified soybean products. Soybean products in diets fed to swine: Nutrients and energy in soybean products (nutrient and energy concentrations in soy products, amino acid digestibility of soybean proteins by pigs, phosphorus digestibility of soybean products by pigs, energy digestibility of soybean products by pigs), utilization of soybean products in diets fed to swine (soybean meal in swine diets, soy protein concentrates and soy protein isolates in swine diets, soybean oil in swine diets, full-fat soybeans in swine diets, new soybean protein sources in diets fed to pigs), conclusion on soy products in diets fed to swine. Soybean products in diets fed to companion animals: soybean products used in

pet foods, nutritional characteristics of soy products used in pet food, soybean products as protein sources in pet diets, soybean products as fiber sources in pet diets, antinutritional factors in soy products, physiological and gastrointestinal effects of soy products, conclusion on usage of soy products in pet-food diets. Soybean products in diets fed to beef cattle: Protein digestion in ruminant animals, increasing the bypass proteins in soybean products, factors affecting degradability of soybean protein in the rumen, economic implications of using soybean meal in diets fed to cattle, feeding soybean hulls to beef cattle. Soybean products in diets fed to dairy cattle: Protein utilization in dairy cattle, soybean meal in diets fed to dairy cattle, full-fat soybeans in diets fed to dairy cows, soybean hulls in diets fed to dairy cows, soy proteins in milk replacers for young calves. Conclusion.

Figures show: (1) Pie chart of use of soybean meal in the United States by livestock, poultry, and companion animals. (2) Flow diagram of the schematic of protein metabolism in the lactating cow. (3) Diagram illustrating the digestion in the rumen of the A, B, and C protein fractions in feedstuffs.

Tables: (1) Metabolizable energy and protein concentration and true digestibilities of amino acids in soybean meal and other oilseeds fed to poultry. (2) Concentration of energy, P [protein], and amino acids in soybean products fed to swine. (3) Standardized ileal digestibilities of amino acids (percentage) in soybean products fed to swine. Note: The ileum is the last division of the small intestine extending the jejunum and the large intestine. (4) Advantages and disadvantages of using soybean products in companion animal diets. (5) Chemical composition of soy protein sources used in pet foods. (6) Comparison of protein and amino acid profile of soybean meal and AAFCO standard for maintenance of adult dogs and cats. 8513. Sbranti, Joanne N. 2008. Gordon, SunOpta to bring 400 jobs. *Modesto Bee* (*California*). June 6. p. 1.
• ***Summary:*** SunOpta Inc. will open an organic soymilk production and processing plant in Modesto, California, starting in the spring of 2009. It will move into the old fruit cannery, inside the Tri Valley Growers' Plant 1 at 555 Mariposa Road. The company expects to employ about 50 people at the beginning, and then to expand to 100 jobs within the next 24-30 months. It will also make and package almond milk and brewed tea.

SunOpta, which is investing $25 million in the plant, has signed a long-term lease (which starts this month) for the 180,000-square-foot building. After looking at various other cities in California, SunOpta chose Modesto because the cost of utilities is very low. Modesto works to attract "wet processing" manufacturers; every month, SunOpta will require 6 million gallons of water and produce 3 million gallons of waste water.

Allan Routh, president of the SunOpta Grains and Foods Group, expects SunOpta's organic soymilk and other beverages to grow by 20% a year. SunOpta also has an aseptic packaging facility in Alexandria, Minnesota. The Modesto plant will produce soymilk for Costco, Starbucks, and food service companies. When the Modesto facility is fully operational, Routh expects that SunOpta will be making 250 to 300 million quarts per year of soymilk and other beverages.

A photo shows "The old Tri-Valley Plant 1" on Mariposa Road.

Note: In Modesto, SunOpta will do both soybean processing (to make soy base and soymilk) and beverage packaging. Address: Staff writer.

8514. Nordquist, Ted. 2008. Peter Golbitz now working for SunOpta. SunOpta is starting a soymilk manufacturing and aseptic packaging plant in Modesto, California (Interview). *SoyaScan Notes.* June 19. Conducted by William Shurtleff of Soyinfo Center.
• ***Summary:*** Last week Ted received an e-mail from Peter Golbitz saying that, starting the week of June 16-20, he will begin working for SunOpta as Director of International Business Development. He expects to be seeing more of Ted. Ted believes that Peter will continue working out of his home at 9 Eastern Way, Bar Harbor, Maine 04609.

Ted also received an e-mail from Allan Routh of SunOpta, offering to buy the soymilk manufacturing equipment in Ted's plant in Modesto. Ted, of course, did not reply. Address: WholeSoy & Co., 49 Stevenson St., Suite 1075, San Francisco, California 94105-2975; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-495-2870.

8515. SunOpta Inc. 2008. SunOpta (Website printout–part). www.sunopta.com Printed June 21.
• ***Summary:*** Contents: Home page. About us: Company history. Operating groups. Investor relations. News & events. Site map. Contact us [USA and Canada].

Company history: "SunOpta was founded in 1973 under the name 'Stake Technology' to commercialize its

proprietary steam explosion technology. These efforts continue today within SunOpta BioProcess Inc. "The acquisition of Barnes Environmental in 1995 led to the creation of Opta Minerals Inc., a vertically integrated player in the industrial mineral and environmental recycling markets. The company has grown steadily since that time, and in February 2005 completed an initial public offering, listing its common shares on the Toronto Stock Exchange. SunOpta currently owns 66.7% of the common shares of Opta Minerals Inc.

"The SunOpta Food Group was created in 1999 and through combination of internal growth and acquisitions has grown to become a North American leader in sourcing, organic, processing and distribution of natural and organic food products integrated from seed through packaged products.

"Through this evolution a strong and vibrant organization has emerged with a strong commitment to natural, organic and specialty foods and environmental responsibility.

"From less than $200,000 revenues in 1994, the Company has grown to expected revenues of $740–$760 million in 2007.

On this page is an excellent timeline of almost 30 key events in the SunOpta Food Group's history–starting on 3 Aug. 1999 with the acquisition of Sunrich, Inc., based in Hope, Minnesota.

Also at About us > Company policies, is a statement of SunOpta's "Environmental philosophy and principals." And at About us > Chairman's message is a statement from Jeremy N. Kendall.

SunOpta stock price: During most of 2007 until about Nov. 2007 the stock sold for $12-14 a share. From Nov. 2007 until about Aug. 2008 it averaged $6. In Oct. 2008 it reached an all-time low of about $1.15 with the world economy downturn. But by 29 Jan. 2009 it had climbed back to $2.42. Address: 3824 SW 93rd St., Hope, Minnesota 56046; Headquarters: 2838 Bovaird Drive West, Brampton, Ontario, Canada. Phone: 507-451-4724.

8516. Nordquist, Ted. 2008. (1) The increasing difficulty of sourcing organic, non-GE, clear hilum soybeans for making soymilk, etc. (2) SunOpta: Their role in the U.S. soymilk market. (3) Stremick's Heritage Foods (Interview). *SoyaScan Notes*. June 27. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** (1) Organic, non-GE, clear-hilum soybeans now constitute only 0.03% of total U.S. soybean acreage. 96% of that acreage is genetically engineered. For details see Rhonda Cole's 2008 Powerpoint presentation. She says (slide 10) that organic soybean production in the USA in 2005 (according to USDA ERS data) is 122,217 acres. At 40 bu/acre that is 4.9 million acres or 133,000 metric tons. A major problem is contamination of soybeans from genetically engineered crops. When that happens, farmers must sell their soybeans at a low price for use as feed. Then they switch to other soybean varieties that give higher yields than clear hilum; they sells these organic, non-GE soybeans for organic feed. The grower knows that Ted will check the soybeans to be sure they meet non-GE standards, whereas Ted believes that companies buying the soybeans for use as feed rarely check. These developments have not led to an increase of the organic, non-GE, clear hilum soybeans that Ted buys because he has a long-term special relationship with a farmer who supplies the soybeans. A year ago, from most suppliers (not including Ted's) the price for such soybeans was 39-42 cents/pound; now it is more like 62-70 cents a pound. This gives Ted a price advantage over his competitors, but it won't go on forever.

Ted is in the process of putting together a nationwide private label soymilk program with Heritage Foods, which recently bought the Jasper soymilk plant in Missouri. At this plant they formulate the soymilk and package it into plastic half-gallon bottles, UHT (=ESL) half-gallon cartons, and Tetra-Pak aseptic packaging machines. UHT (ultra-high temperature) is held at 185ºF for 1-2 seconds.

(2) By far the biggest soymilk manufacturer in the USA is Dean Foods / Suiza. They have about 8 soymilk plants and they used to have about 80-85% of the U.S. market, but Ted thinks they have lost market share to private label soymilk, so they may now be down to roughly 65-70%. SunOpta is also a major producer; they took away the Costco soymilk account from Dean / Suiza. To service this account, SunOpta could have reopened their Wyoming plant (Ted is not sure). Costco, the largest membership warehouse club chain in the world based on sales volume, is headquartered in Issaquah, Washington, with its largest warehouse in nearby Seattle. SunOpta has soymilk extraction plants in Alexandria, Minnesota; Huevelton, New York (the plant in upstate New York they bought from Raj Gupta), and Afton, Wyoming. They have plans to build a soymilk extraction plant in Modesto, California (near Ted's plant) but that plant will probably not start operating for 18-24 months. They have already started to pay rent on the building in order to start getting their permits, waiting for stainless steel machinery, etc.

SunOpta temporarily shut down its plant in Afton, Wyoming, Ted's company took the Bolthouse Farms account, for soybase, away from SunOpta. Bolthouse, headquartered in the San Joaquin Valley, California, makes a line of healthy beverages including "Perfectly Protein Vanilla Chai Tea with Soy Protein"–sold at Walgreens and Whole Foods. (3) Heritage Foods (recently renamed Stremick's Heritage Foods) is a big dairy milk, beverage, and juice company that has been around the dairy milk market for a long, long time. Note: The Heritage website states that they are Nestle's largest distributor in the Western United States. "The early stages of development were begun in 1988 when

our President and CEO, Lou Stremick, purchased Carnation dairy in Los Angeles and changed the name to Main St. In 1990, Lou and a group of investors purchased Adohr Farms and merged both Main St. and Adohr together. Adohr Farms was founded in 1916 by Merritt and Rhoda (backwards, that's Adohr) Adamson, and became the worlds largest milk producer. After a rich history including Spanish land grants, a battle to overcome the Great Depression, and more than two decades of ownership by Southland Corporation, Adohr Farms was ready for a new vision and new direction."

Lou's son is Sam Stremick (he does all the organic products) and Ted works with both men. They have many plants that process and fill fluid products, for other people and under their own brands.

Heritage owned half of the Adohr plant in Cedar City, Utah. When Steve Demos left Ted at Morningstar (in Gustine, California) and started having SunRich make his Silk soybase, it was co-packed [cooperatively packed] at this Adohr plant. So SunRich sent tankers of soybase to the Adohr plant, where it was processed, formulated, and packaged. SunRich was making more and more Silk soymilk for Steve Demos (White Wave), so they decided to save Steve money by building a new plant for making / extracting soybase in Wyoming, which was much nearer to the Adohr plant in Utah. Why SunRich built the plant in Wyoming and not in Utah, Ted does not know. The story is that, without telling SunRich, Steve Demos purchased a APV-Crepaco soybase plant and built it right next to the Adohr plant in Utah. When he started piping soybase into the Adohr plant next door, he just stopped ordering from SunRich–which must have upset them greatly. Steve also has created a lot of bad karma with Richard Rose (on soy cheese) and with Ted (on soybase; Steve didn't pay Ted $320,000 for 8 months, until Ted took him to court), but he may not have done anything illegal. "Steve is a very shrewd businessman."

Back to Heritage Foods. At Gustine, Ted was working with Neil Donavan, the man who invented Lactaid. Neil was making Lactaid at the Gustine plant and distributing it through Suiza. Neil and Ted designed cartons for WholeSoy Soymilk, which they planned to piggy-back with Lactaid through Suiza. All they needed was for Suiza to sign off on it, when Tony O'Brien from Suiza in Dallas, Texas, called Ted and said he was going to make his own soymilk (SunSoy) so he didn't need Ted. Apparently a man named Loren Wallace from Good Karma Foods went to Dallas and convinced Suiza that they didn't need Ted Nordquist and his soybase; they could by soy powder from him, and make their soymilk from the powder. That's what they did–and named it SunSoy. After several years Steve Demos (White Wave) had 84% of the soymilk market and SunSoy had 14%. When Ted and Neil got dumped by Suiza, Neil knew Sam Stremick, so they both went to him and asked him if he could package their soymilk at the Stremick packing plant in Santa Ana. He said he could not, and Ted thinks this was because Sam was half owner of the Adohr plant where they were packing Silk. Sam has since purchased the Adohr plant and renamed it Western Quality Foods. Today, Ted has a private label soymilk program with Heritage Foods which started about 5 years ago, as soon as Ted started operating his own soybase plant in Modesto. Ted ships soybase (12% solids) from his plant in Modesto to the Adohr plant in Utah. There it is processed, formulated, filled, and packaged. "Processing" means the soybase is blended (at a certain temperature) with the other ingredients (water, sugar, tricalcium phosphate, a flavor, and some carrageenan) according to a proprietary formula, then the soymilk (6% solids) it is pasteurized or ultra-heat treated, homogenized, and filled into packages. The same process is also used for dairy milk. Western Quality Foods (Heritage Foods) then sells the soymilk. Ted knows what all the private labels (presently four) look like and which companies buy the product, but he does not know how much soymilk is sold to what companies.

Today White Wave has roughly 7-8 extraction plants where soybase is extracted from soybeans. Address: WholeSoy & Co., 49 Stevenson St., Suite 1075, San Francisco, California 94105-2975; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-495-2870.

8517. Martinez, J.; Lewi, J.E. 2008. An unusual case of gynecomastia associated with soy product consumption. *Endocrine Practice* 14(4):409-11. May/June. *
• ***Summary:*** Gynecomastia is excessive breast adipose tissue plus benign enlargement of the male breast attributable to proliferation of the ductular elements. This man, age 60, was referred to the endocrinology clinic for evaluation of bilateral gynecomastia of 6 months' duration. He also reported erectile dysfunction and decreased libido. He described a daily intake of 3 quarts of soy milk. After he stopped drinking soy milk, his breasts returned to their normal size, the tenderness in them disappeared, and his estradiol concentration returned to normal. Address: Dep. of Medicine, Brooke Army Medical Center, Fort Sam Houston, Texas.

8518. Gold, Amanda. 2008. Organic Valley top chocolate soy milk: Taster's choice. *San Francisco Chronicle.* July 2. p. F2.
• ***Summary:*** For tasting they chose 9 SKUs (8 brands) of chocolate soy milk. The brand is followed by the cumulative score given by the tasters. The ranking was: Organic Valley 75. Vitasoy Rich Chocolate 71. Silk (shelf stable) 69. Silk (refrigerated) 65. Kikkoman Pearl 55. 365 Organic 49. Soy Dream 38. 365 Organic 31. O Organics (Safeway) 25. Address: Chronicle staff writer.

8519. Messina, Mark J. 2008. Update on research on the health benefits and risks of soy (Interview). *SoyaScan Notes.* July 26. Conducted by William Shurtleff of Soyinfo Center.
• ***Summary:*** Analysis of the strengths and weaknesses

of the Harvard study showing an association between isoflavone intake and sperm counts, by Cavarro et al., and of the Indonesian study showing an association between tofu consumption (but not tempeh consumption) and mental function. In the latter study formaldehyde used as a preservative in tofu may have caused the problem.

Different basic types of scientific studies involving humans: Epidemiologic studies, case control, cross sectional, prospective (Framingham), intervention, in vitro, in vivo, food frequency questionnaires. Pilot studies vs. full studies.

Second incarnation of the Harvard study. Biological basis for the Harvard study. Effect more pronounced on overweight people. Four biggest weaknesses in the Harvard study: (1) Only looked at 15 different soyfoods but not at other foods consumed, nor at exercise. (2) Four quartiles based on soy intake did not show a dose response. (3) In the 2nd group soy intake was too low to be significant. (4) Ejaculate volume increased.

Another very important study by J.H. Mitchell in 2001 was titled "Effect of a phytoestrogen food supplement on reproductive health in normal males" (Clinical Science (London)). Involved 12 men

Vittorio Unfer has done important research and a case study on use of soy isoflavones to increase sperm count and fertility. A five-year study on endometrial hyperplasia is of long-term concern.

Feminizing effect is a big unknown. What kind of study could be designed. Two cups of Silk soymilk contains 50 mg of phytoestrogens.

Mark is organizing a soy symposium in Japan in November. At least 12 of the papers are good enough to be the subject of news coverage.

The scientific health evidence in favor of a vegetarian diet over a prudent diet that contains meat is no longer impressive. The evidence in favor of fruits and vegetables has grown weaker.

The evidence that soy is good for health is stronger now than 5-10 years ago, but in a more modest way. But the industry has gotten so small: ADM, Solait, and Silk ($400 million retail sales). Revival Soy has reformulated many of its products so that they no longer contain soy. Address: PhD, 439 Calhoun St., Port Townsend, Washington 98368. Phone: 360-379-9544.

8520. Vitasoy International Holdings Ltd. 2008. Annual report 2007/08. New Territories, Hong Kong. 164 p. July. 30 cm. [Eng; Chi]
• ***Summary:*** This is a year of discontinuity of sales and gross profit figures, for complex reasons explained on page 7. We will use the new, adjusted numbers below. For the fiscal year ended 31 March 2008, adjusted group turnover (sales) was HK$2,416 million, up 15% over the previous year. Of these sales, 52% came from Hong Kong, 17% from North America, 15% from Mainland China, 12% from Australia and New Zealand, and 4% from the rest of the world.

Gross profit was HK$1,131 million, up 16% from the previous year. Basic earnings per share were 20.9 HK cents, up 21%. Dividends per share were 21.5 HK cents, up 10%.

At "Chairman's statement," a photo shows Winston Yau-lai LO, age 67. His resume is on p. 46. Total dividends for the year are 21.5 cents per share.

In North America, Vitasoy USA grew by 8%, reversing the negative growth trend since 2002/03. Although Vitasoy USA still lost money, this loss was 53% less than in the previous year.

A five-year summary (2004 to 2008; p. 163) shows that, during this entire period, sales increased 26.5% and annual profit more than doubled, increasing by 115%. Address: No. 1, Kin Wong Street, Tuen Mun, New Territories, Hong Kong. Phone: 466 0333.

8521. Kikkoman Corporation. 2008. Annual report 2008. Year ended March 31, 2008. 250 Noda, Noda-shi, Chiba 278-8601, Japan. 41 p. 28 cm. [Eng]
• ***Summary:*** Consolidated net sales rose 5.4% to $4.139 billion, operating income climbed 10.2% to $238.5 million, and net income rose 6.6% to $114.4 million. "Sales growth was hampered, however, by lackluster performance from Kibun Food Chemifa's soy milk drinks." Note: Dollar values may have changed at different percentage rates due to changing foreign exchange rates.

Page 1 is titled "Kikkoman Group global launch of new corporate brand logo and slogan. Written in orange, it is: "kikkoman: season your life." Above and to the right of the word "kikkoman" is the old hexagonal Kikkoman logo with the Japanese character meaning "man = 10,000" inside. "Kikkoman introduced its previous corporate logo in the Japanese market in 1987. In the two decades since then, Kikkoman has steadily globalized its operations and generates half of its operating profit in markets outside Japan." The new corporate brand logo represents the Group's "determination to harness both tradition and innovation in its business activities."

A photo (p. 7) shows Yuzaburo Mogi (Chairman of the Board and CEO) and Mitsuo Someya (President and COO).

Pages 8-9 show color photos of Japanese soy sauce products including *Tokusen Marudaizu Shoyu* (Premium shoyu made from whole soybeans–rather than the usual defatted soybean meal) and *Tokusen Yuki Shoyu* (Premium organic shoyu, certified by Japanese Agricultural Standards, JAS). Address: Noda, Japan.

8522. Yuan, Shaohong; Chang, Sam K.C.; Liu, Z.S.; Xu, B.J. 2008. Elimination of trypsin inhibitor activity and beany flavor in soy milk by consecutive blanching and ultrahigh-temperature (UHT) processing. *J. of Agricultural and Food Chemistry* 56(17):7957-63. Sept. 10. [36 ref]
Address: Dep. of Cereal and Food Sciences, IACC 322,

North Dakota State Univ., Fargo, ND 58105.

8523. Food and Nutrition Service, U.S. Department of Agriculture. 2008. Fluid milk substitutions in the school nutrition programs. *Federal Register* 73(178):52903-08. Sept. 12.
• ***Summary:*** USDA announces a change in regulations, which now allow schools to offer soymilk instead of cow's milk to children who bring a written statement from their parents or legal guardians identifying their special dietary need. This applied to both school lunch programs and school breakfast programs. While this change does make it easier for parents to request soymilk, schools are not required to offer soymilk; they are simply allowed to offer it. Soymilks are required to meet certain guideline for nutrient content to be allowed as alternatives. This rule may eliminate many soymilk.

Note: The soymilk made by Pacific Natural Foods is one that meets the USDA nutrient content guidelines. Address: Nancy Montanez Johner, Under Secretary, Food, Nutrition, and Consumer Services.

8524. Cwiertka, Katarzyna J.; Moriya, Akiko. 2008. Fermented soyfoods in South Korea: The industrialization of tradition. In: Christine M. Du Bois, C.-B. Tan, and S.W. Mintz, eds. 2008. Urbana, Illinois: University of Illinois Press. viii + 337 p. See p. 161-181. [47 ref]
• ***Summary:*** Contents: Introduction. The soul of Korean cuisine. The industrialization of *Chang* manufacture. Conclusion–*Chang* and Korean identity. Notes.

Photos show: (1) One of the Starbucks outlets in Korea's capital. (2) Industrially produced soybean paste and hot red pepper paste on shelves in a modern retail store. (3) A traditional home in the Hahoe Folk Village near Andong. Meju [soybean koji] is hanging under the eaves and sauce pots stand in the courtyard. Liquid soy sauce is *kanjang.* Korean miso is *toenjang* or *doen jang.* Hot red pepper miso is *koch'ujang,* which was first mentioned in the 2nd half of the 17th century.

Although foreign foods are widely consumed in Korea today, soybeans and soyfoods remain a fundamental part of the Korean diet, and appear in a wide range for forms. Whole soybeans are boiled with other beans, rice, and other cereals to make *k'ongbap* [*kongbap*]. Whole soybeans are also mashed or ground into a creamy soup called *k'ongguksu* [*kongguksu*] which is served in the summer with noodles, soymilk, and julienned cucumber. Soybean sprouts (*k'ongnamul*), long a favorite in Korea, are used as an ingredient in a variety of soups, stews, and stir-fried. Seasoned soy sprouts (*k'ongnamul much'im* [*kongnamul muchim*]), a popular dish at many Korean meals, is made with blanched soybean sprouts seasoned with green onions, garlic, salt (or sometimes soy sauce), sesame oil, and crushed sesame seeds. Several kinds of tofu (*tubu*) are used in Korean cooking; they can be fried, braised, or simmered. To make Tofu kimchi (*tubu kimch'i*), cut fresh tofu into squares and arrange with pieces of kimchi; it serves as a popular snack with alcoholic beverages. Minced or mashed tofu mixed with minced meat can be used as a filling for dumplings called *mandu* [like Japanese manju], which are then fried or steamed. Roasted soybeans (*pokkun k'ong*) and roasted soybean flour (*k'ongaru*) are indispensable ingredients in many traditional desserts such as *kwaja* and *ttok.* During the last two decades, soymilk has become a popular product in Korea.

Footnote 16 describes the four basic types of Korean soy sauce: *ch'ong kanjan, chung kanjan, chin kanjang,* and *chin kanjang* (written with a different ideogram than no. 3). There is also *honhap kanjang* (a mixture of Japanese soy sauce and its chemical counterpart) and *choson kanjang* (a product manufactured on the basis of traditional Korean methods) (p. 172-73). Address: 1. Leiden Univ., Netherlands, lecturer at the Centre for Japanese and Korean Studies.

8525. *Organic and Non-GMO Report* (*The*) (*Fairfield, Iowa*). 2008. Monsanto sale of rBGH called a major milestone. 8(8):4-5. Sept.
• ***Summary:*** Monsanto announced that it has agreed to sell Posilac, its bovine growth hormone, to Eli Lilly and Co. for $300 million. The drug has failed to be approved in Canada, the European Union, Japan, Australia, and New Zealand. Milk "from cows injected with rBGH contains high levels of insulin growth factor-1 (IGF-1), a hormone that is linked to prostate and colon cancer."

8526. Tan, Chee-beng. 2008. Tofu and related products in Chinese foodways. In: Christine M. Du Bois, C.-B. Tan, and S.W. Mintz, eds. 2008. Urbana, Illinois: University of Illinois Press. viii + 337 p. See p. 99-120. [39 ref]
• ***Summary:*** Contents: Introduction. Historical background. Production and marketing of tofu. Consumption–tofu and Chinese foodways. Tofu's symbolic associations. Conclusion.

Tofu and related foods consumed in China include: (1) Tofu. It is called *doufu* in Standard Chinese or Mandarin (*Putonghua*), *dauh-fu* in Cantonese, and *tauhu* in Minnahua or Hokkien (2) *Doufujiang,* more commonly known as *doujiang,* which is soymilk. (3) *Doufu hua* (soybean custard), or more commonly *douhua.* (3) *Doufu pi* (tofu skin [yuba]). (4) *Zhizhu* [*fuzhu;* dried yuba sticks].

(5) *Doufu pao* (small blocks of deep-fried tofu puff). (6) *Dong doufu* (frozen tofu). (7) *Doufugan* or *dougan*–fresh tofu that has been firmly pressed to partly dehydrate it, and then is air dried. Chinese-style pressed tofu can be further processed to make... (8) *Xun doufu* (smoked tofu).

(9) *Wuxiang doufu* [also called *wuxiang doufugan*] (five-spiced tofu). (10) Pressed tofu can be soaked in brine and fermented to make *chou doufu,* which is usually referred

to as "smelly tofu" but which Hsu and Hsu (1977, p. 301) translate as "molded beancurd." (11) Tofu can also be fermented to make *doufuru,* or simply *furu.* (12) Okara is described (p. 106) as "leavings" or "soybean dregs," or "tofu lees."

Note: This is the earliest English-language document seen (April 2013) that contains the term "smelly tofu" or the term *Doufu pao.*

Photos show: (1) Person making tofu in a Yongchun village, Fujian–filtering. (2) Grinding unripe soybeans (*maodou*) for sale at a morning market in Kunming, Yunnan. (3) Soybean plants in between rice plots in a village in Ganluo Country, Sichuan. (4) Selling bean curd custard in Chengdu, Sichuan. Address: Chinese Univ. of Hong Kong, chair of the Dep. of Anthropology.

8527. Nestle, Marion. 2008. Melamine taint–old problem has new urgency: Food matters. *San Francisco Chronicle.* Oct. 22. p. F1, F5.
• ***Summary:*** Note: Melamine is a chemical, an organic base and a trimer of cyanide. It can be combined with formaldehyde to produce melamine resin, a very durable thermosetting plastic, and melamine foam, a polymeric cleaning product. Melamine, which is sometimes illegally added to food products in order to increase the apparent protein content, is 67% nitrogen (the rest is carbon and hydrogen). Standard tests such as the Kjeldahl and Dumas tests estimate protein levels by measuring the nitrogen content, so they can be misled by adding nitrogen-rich compounds such as melamine.

Nestle is appalled that the melamine waste from Chinese plastic dinnerware is now being found in so many foods, especially infant formula–in which case it can lead to kidney stones in the infants fed the formula laced with melanine. There is only one reason a manufacturer would put melamine in milk powder: greed. Last year 60 million cans of pet food imported from China were recalled because they contained wheat flour laced with melamine.

Congress must give the U.S. Food and Drug Administration adequate funding to inspect these imports. Some forward-thinking members of Congress have even suggested the creation of a "new food safety agency with the authority and resources to oversee the food supply..."

In the meantime, "its best to say no to imported foods and ingredients supposedly made with milk or soy powder, unless they are certified free of melamine and other toxic contaminants." In order to do this, you should "know where foods and ingredients come from." Congress presently requires country-of-origin labeling (COOL), but it contains big loopholes. So its buyer beware. Address: Paulette Goddard professor, Dep. of Nutrition, Food Studies and Public Health, New York Univ. [New York City].

8528. *Restaurant Hospitality.* 2008. Serving up soy. 92(10):62. Oct.
• ***Summary:*** Describes a survey conducted by the United Soybean Board in which veggie burgers, tofu, soymilk, and edamame were the top soyfoods preferred by consumers and one in five consumers said they would order soyfoods from restaurant menus. To "demonstrate the versatility of soy," contains recipes for Edamame-tofu croquettes and Tofu gratin.

8529. NEI–Nutrition & Education International (Website printout–part). 2008. www.nei-intl.org Printed Nov. 19.
• ***Summary:*** A very inspiring and interesting website about an organization created by Dr. Steven Kwon that is introducing soybeans and soyfoods to Afghanistan as a way of combating that country's seriious malnutrition problems. Dr. Kwon has taken early retirement after 22 years working for Nestlé. Please watch the 10-minute video at the bottom of the homepage first. Then read several of the most recent newsletters. The January/March 2008 newsletter notes that farmers working cooperatively with NEI expect to harvest 2,000 tons of edible soybeans in Oct. 2008. NEI is working closely with the Ministry of Women's Affairs (MoWA). A map shows that NEI has four soymilk feeding facilities in various parts of Afghanistan, a soy flour factory in Kabul, and soybean fields in most of the provinces (*weleyats*) in the northern half of the country.

"Afghanistan has one of the world's highest maternal mortality rates. One out of fifty women die during childbirth. Because expectant mothers are malnourished, they are unable to pass on vital nutrients to their babies during pregnancy or breast-feeding. Not surprisingly, one in four Afghan babies die before the age of five, and 54% of these under-five children are chronically malnourished. (UNICEF Humanitarian Action Report Update for Afghanistan. 17, Jan. 2008)."

8530. *SoyaScan Notes.* 2008. Soymilk and cow's milk prices at Safeway supermarket in Lafayette, California (Overview). Nov. 25. Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** Since Dec. 1983, approximately every other year, Soyfoods Center has conducted a survey of the prices of soymilk and cow's milk in California.

Soymilk: Silk organic vanilla or plain: $2.49/quart. Silk organic chocolate, plain, vanilla, very vanilla fortified for kids, or unsweetened: $3.99/half gallon. Silk non-organic lite chocolate, lite plain, lite vanilla (lite means diluted with water): $3.99/half gallon. Silk non-organic Plus omega-3 DHA, or Plus for bone health: $4.19. Silk organic nog: $3.29/quart.

Safeway O Organics soymilk: Chocolate, vanilla, plain, lite vanilla, lite plain: $3.49/half gallon.

Cow's milk (fortified with vitamins A and D) sells for the following prices at the Safeway supermarket in Lafayette, California: (1) Fat free: $1.79/quart or $2.49/half gallon or $3.19/gallon; (2) Low fat (1% fat, protein fortified): $1.79/quart or $2.49/half gallon or $3.19/gallon; (3) Reduced fat (2% fat, protein fortified): $1.79/quart or $1.49/half gallon or $3.19/gallon; (4) Whole (homogenized, fortified with vitamin D only): $1.79/quart or $2.49/half gallon or $3.19/gallon. (5) Acidophilus Plus Bifidus–Low Fat (1% fat): $2.79/half gallon. (6) Horizon Organic $3.99/half gallon. (7) Lactaid: $3.99/half gallon. Lucerne 100% lactose free, fat free $3.69/gallon. (9) Safeway O Organics Fat free, low fat or reduced fat: $4.19/half gallon or $5.99 per gallon. The best-seller among these is Fat free in gallons.

8531. 8th international soy symposium on the role of soy in health promotion and chronic disease prevention and treatment: Program. 2008. Champaign, Illinois: American Oil Chemists' Society. 36 p. Held 9-12 Nov. 2008 at Hilton Tokyo Hotel, Tokyo, Japan. No index. 28 cm. [Eng; jap]
• ***Summary:*** This program was given (free of charge) to attendees when they registered.

Contents: Welcome! Chairpersons. General information. Award winners. Oral presentation abstracts. Poster presentation abstracts. Poster presentations. Program schedule. Sponsor showcase schedule. Symposium sponsors: Diamond level–Otsuka Pharmaceutical Co., Ltd. (own SoyJoy brand). Platinum level: ASA International Marketing, Japan office, Fuji Oil Co. Gold level: Silk (soymilk), Solae, Soy Nutrition Institute Japan (SNIJ). Soy Nutrition Institute, Inc. (c/o SmithBucklin, St. Louis, Missouri). Silver level sponsors: Fujicco Co. Ltd. (Kobe, Japan), Nichimo Biotics Co. Ltd. (Tokyo, Japan), Solbar Industries, Ltd. (Ashdod, Israel). Note: All sponsors also have a ½-page ad in the program.

Program schedule: Sunday, Nov. 9: Opening remarks. Hormones, menopause, and mood. Obesity / satiety. Mon. Nov. 10: Equol session. Tues. Nov. 11. Cancer session. Bone / cardiovascular disease. Wed. Nov. 12. Emerging areas research. General topics.

Letter (e-mail) from Mark Messina. 2008. Nov. 18. "Total attendance: 250, about 210 paid. Fewer Japanese attended than we hoped but still a success in terms of attendance and information presented. Lots of enthusiasm for holding another meeting. People were thinking of Italy because it is such a nice venue and so much soy work is underway there. But if we have it there it would be 7 years between symposia in the US so I suspect we will have it in the US in 2010."

8532. Golbitz, Peter. 2008. Color photos of the soymilk processing short course held Nov. 2008 at the SoyCow Training Center in Bergville, KwaZulu-Natal, South Africa. Bar Harbor, Maine.

• ***Summary:*** Peter Golbitz took these color photos and wrote the captions. For background see interview with Peter Golbitz on 22 Jan. 2009. This short course workshop in Nov. 2008 took place at the SoyCow Training Center which was now located a short distance from the site of the May 2007 workshop on the personal property of Henry Davies on the edge of the town of Bergville.

(1) William "Rocky" Fenske, VP of R&D for the SunOpta Grains & Foods Group and Peter Golbitz, SunOpta's Director of International Business Development, at the Sandford Park Country Hotel in Bergville, KwaZulu-Natal, near the Drakensburg mountain range, on a visit to the SoyCow Training Center in November, 2008.

(2) Henry Davies with some fresh tofu made using the VitaGoat processor along with Rocky Fenske from SunOpta, at the SoyCow Training Center in Bergville, November, 2008.

(3) The Soy Shake line produced by Good Hope International Beverages in Cape Town, South Africa.

(4) A display of soymilk products (see next page) on the shelf at a supermarket in Johannesburg, South Africa in November, 2008. Products include Simply Soy, So Good and Nutri-Bev, made with isolated soy proteins, as well as Good Hope's Soymilk and Shakes processed from whole soybeans. In addition, there are some imported products from Alpro and a line of powdered soymilk drinks, So Fresh. At this time, over 95% of the soymilk sold in South Africa is aseptically packaged. Address: Director of International Business Development, SunOpta Grains and Food Group.

8533. Vitasoy International Holdings Ltd. 2008. Interim report 2008. Where healthy life begins. New Territories, Hong Kong. 48 p. Nov. 30 cm. [Eng; Chi]
• ***Summary:*** For the six months ended 30 Sept. 2008, group turnover (sales) was HK$1,425 million, up 20% over the same period last year. Gross profit was HK$637 million, up 12% over the same period last year. "In view of the Group's strong financial position and satisfactory operating

performance, the Board of Directors has declared an interim dividend of HK$2.8 cents per ordinary share." Sales performance was very encouraging in Mainland China (60%) and in Australia and New Zealand (23%); it was healthy in Hong Kong (5%) and in North America (5%).

North America production efficiency: During the 1st half of fiscal 2008/09 the Group's production plant in Ayers, Massachusetts [Nasoya] had sales of HK$175 million, an increase of 11% over the same period last year. "Operating loss narrowed to HK$9 million, versus HK$10 million for the corresponding period in fiscal 2007/08" (p. 12).

North America market performance: In 2007, retail sales of soyfoods grew by only 1%. Tofu sales decreased by 2% whereas soymilk sales grew by 3%, of which refrigerated soymilk was up 6% and ambient [Aseptic] soymilk was down 8%. "Total tofu sales grew by a healthy 12% while pasta sales were up by an even more impressive 34%. However soymilk and imported products were down by 16% and 33% respectively" (p. 12-13).

In April 2008 the Vitasoy Group acquired the entire equity of Unicurd Food Co., (Private) Ltd. ("Unicurd"), which is a leading manufacturer and marketer of soyfoods in Singapore. "This acquisition is aimed at expanding the Group's market presence in the Asia Pacific Region." The Unicurd production plant "at Senoko South Road, Singapore, supports the Singaporean market and exports to Europe, New Zealand, South Africa, Dubai and other parts of Asia. In the six months to 30 Sept. 2008 Unicurd recorded total sales revenue of HK$31 million..." (p. 13).

In Hong Kong, Vitasoy has a new logo and package design (p. 15). Address: No. 1, Kin Wong Street, Tuen Mun, New Territories, Hong Kong. Phone: 466 0333.

8534. *WISHH Soy News.* 2008. Silk donation to World Soy Foundation will support Adventist Development and Relief Agency (ADRA) school feeding in Ghana. Nov. www.wishh.org/media/newsletters.

• ***Summary:*** "The World Soy Foundation announced October 16, World Food Day, that Silk (R) soy milk, a WhiteWave Foods brand, is expanding its commitment to a project that provides nutritious meals to school children in Ghana as well as supports sustainable economic development in the West African country. Silk is donating $75,000 over three years for the World Soy Foundation to increase its partnership with Adventist Development and Relief Agency (ADRA)."

"Silk first contributed to the World Soy Foundation when the foundation was created in late 2006. That initial support of $20,000 aided ADRA's school feeding in Ghana, which the World Soy Foundation leveraged through contributions from U.S. soybean farmers. The new funding will allow World Soy Foundation to purchase, transport and install a "VitaGoat" soymilk processing machine as well as train operators and provide a year's worth of soybeans. As a result, the VitaGoat will produce enough soymilk to feed a school of 280 children for at least one school year and have sufficient product to sell to the community as a sustainable small enterprise. The machine will be placed in a rural community in Western Ghana where local farmers grow soybeans."

Later in this same issue is an interview with Ellen Feeney, Vice President for Responsible Livelihood for WhiteWave Foods. Portrait photos show: (1) Jim Hershey. (2) School children eating in a classroom in Ghana. 3. Ellen Feeney.

8535. *SoyaScan Notes.* 2008. Chronology of major soy-related events and trends during 2008 (Overview). Dec. 31. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** April 2–United Soybean Board announces that livestock and poultry consume about 98% of domestically used soybean meal (SBM). The top 10 SBM-consuming states in ranking order are Iowa, North Carolina, Arkansas, Georgia, Texas, Minnesota, Alabama, Mississippi, California and Oklahoma. Of these, only Iowa and Minnesota produce enough soybeans to meet the demands of their livestock and poultry producers.

April 3–*The Soy Daily* (an online weekly newsletter founded by Paul and Gail King; the first issue appeared on 13 Nov. 2000. Now published by Norman and Szasz Benedict) announces in Vol. 8, No. 13, that it will change its title to *The Healthy Newsletter.*

Sept. 12–USDA announces a change in regulations, which now allow schools to offer soymilk instead of cow's milk to children who bring a written statement from their parents or legal guardians identifying their special dietary need. This applied to both school lunch programs and school breakfast programs. While this change does make it easier for parents to request soymilk, schools are not required to offer soymilk; they are simply allowed to offer it. Soymilks are required to meet certain guideline for nutrient content to be allowed as alternatives. This rule may eliminate a significant amount of the soymilk in public schools.

Dec. 10–The American Soybean Association files a complaint with the U.S. Department of Agriculture (USDA) and requests an audit of the soybean checkoff program to ensure that money paid by farmers is being used properly.

8536. Hardy, Les. 2008. Socialising accountability for the sacred: A study of the Sanitarium Health Food Company. PhD thesis, School of Commerce, University of Adelaide, South Australia. xiii + 404 p. [490* ref]

• ***Summary:*** This well researched and well written PhD thesis has a long and very useful bibliography (p. 369-404).

Note: "B.Ed. St" apparently stands for "Bachelor of Educational Studies." Address: M.Ec (UNE [University of New England, New South Wales]), Grad Dip Acc (Monash), B.Ed St (QU [Queensland Univ., Queensland]).

8537. Hurd, Frank J.; Hurd, Rosalie. 2008. A good cook–Ten talents. New updated, expanded pictorial ed. Grants Pass, Oregon: Published by the authors. Printed by The College Press, Collegedale, Tennessee 37315. 668 p. Illust. Color plates. No index. 22 x 15 cm. Spiral bound. [1 ref]
• ***Summary:*** A feast for the eyes, the mind, and the palate. Filled with more than 1,300 beautiful color photos; many of them accompany over 1,000 healthful, natural recipes, but others show the great variety of natural foods, from colorful fruits to basic whole grains. Brimming with sound advice on diet, lifestyle, and health.

This is the new edition of a very important, pioneering, indeed classic American vegan cookbook. On the front and back covers is an idyllic painting of the Garden of Eden. Author Rosalie Hurd is seated under The Tree, reading the Bible–Genesis 1:29, which describes God's original diet for men and women. The book uses no animal products (except in one chapter at the end titled "Recipes Using Milk and Eggs," "for those who are in the transitional period. However, we encourage all those who still cling to milk and eggs to become acquainted with the facts concerning their use, and become weaned through this process"). Some recipes also use honey.

Contains even more innovative soy recipes than the original 1968 edition. A minor point: some of the soy terminology is inconsistent and/or outdated. Address: 1. D.C. [Doctor of Chiropractic], M.D.; 2. B.S. Both: P.O. Box 5209, Grants Pass, Oregon 97527. Phone: 541-472-1113.

8538. Soyatech, LLC. 2008. Soya & Oilseed Bluebook 2009: The annual directory of the world oilseed industry. Bar Harbor, Maine: Soyatech. 426 p. Dec. Comprehensive index. Advertiser index. Statistical conversions. 28 cm.
• ***Summary:*** This is the 3rd year in a row that the *Bluebook* (a $95 value) has been sent free of charge to qualified industry members. On the cover is a farmer, wearing blue jeans, a red short and red cap, standing in a field of soybeans, with a cloudy blue sky overhead. The oilseeds covered in this book are (alphabetically): Canola, coconut, corn, cottonseed, flaxseed, hempseed, jatropha, linseed, palm, peanut, rapeseed, safflower, soya, sunflowerseed–the same as last year.

On the inside front cover is a color ad from Tramco–"the world's most complete line of chain and enclosed belt conveyors." On the first page is a full page color ad from Bunge North America (St. Louis, Missouri); on the next page a full page color ad from desmet ballestra–which supplies healthy technologies for oils containing zero trans fat. SunOpta has a full-page ad on page 4.

On the rear cover is a full page color ad from ADM titled "Breathtaking" showing a man leaping off a cliff high above a green valley. The text: "ADM breaths new life into functional foods with its all-natural NutriSoy soy isolates. Water washed to leave many nutrients intact."

In the Foreword, Joe Jordan (General manager and Bluebook content director) writes about feeding the world's population of 6 billion 700 million. Peter Golbitz is no longer with the company he founded (see 2008 interview). Address: 1369 State Hwy 102, P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207.288.4969.

8539. **Product Name:** Trader Joe's Soy Milk Creamer (Organic Non-Dairy, Liquid).
Manufacturer's Name: Trader Joe's (Marketer-Distributor).
Manufacturer's Address: Monrovia, CA 91016.
Date of Introduction: 2008. December.
Ingredients: Organic soy milk (filtered water, whole organic whole soybeans), expeller pressed organic canola oil, organic evaporated cane juice (natural milled organic cane sugar), contains less than 2% of the following: organic maltodextrin (corn), soy lecithin, potassium phosphate, sodium citrate, natural flavors, carrageenan, organic tapioca starch.
Wt/Vol., Packaging, Price: Pint (16 fl oz; 473 ml) gable-top carton. Retails for $1.49 (2009/01, Lafayette, California).
How Stored: Refrigerated.
Nutrition: Per 1 tablespoon (15 ml): Calories 15, calories from fat 10, total fat 1.5 gm (2% daily value; saturated fat 0 gm, trans fat 0 gm), cholesterol 0 mg, sodium 0 mg, total carbohydrate 1 gm (dietary fiber 0 gm, sugars 1 gm), protein 0 gm. Vitamin A 0%, vitamin C 0%, calcium 0%, iron 0%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Product with Label purchased at Trader Joe's in Lafayette, California. 2009. Jan. 11. $1.49. Front and back panels: Light blue, white, brown and green. "Made with organic soy milk. Non-dairy. Lactose & dairy free. Ultra-pasteurized." Left panel: "Perishable, Keep refrigerated. Gluten free. Lactose & dairy free. Vegan." QAI logo. Right panel: Nutrition facts. Ingredients. "Made on equipment shared with milk. Distributed and sold exclusively by Trader Joe's, Needham, Massachusetts 02494. Certified organic by Quality Assurance International (QAI). Use within 7-10 days after opening, no later than stamped date. Shake well before serving." Soyinfo Center evaluation: Very nice and white. Quite sweet.

8540. Basan, Ghillie. 2008. The food & cooking of Cambodia. London: Southwater. 96 p. Illust. (300+ color photos by Martin Brigdale). Index. 29 cm.
• ***Summary:*** Contains over 60 authentic Cambodian recipes. Soy related recipes: Soya beansprout salad (with "450 gm / 1 lb fresh soya beansprouts," p. 76). The headnote says: "High in protein and fat, soya beansprouts are particularly favoured in Cambodia."

Sweet soya milk with pandanus (with "225 gm / 8 oz / 1¼ cups soya beans, soaked overnight and drained," p. 93). The headnote says: "In the streets and markets of Cambodia,

freshly made soya milk is sold daily. Often infused with pandanus leaves, or ginger, and served hot or chilled,..."

Soy sauce is used in quite a few recipes (for example p. 36, 41, 43, etc.).

8541. Bennett, Beverly Lynn; Sammartano, Ray. 2008. The complete idiot's guide to vegan cooking. New York, NY: Alpha Books. Published by the Penguin Group. xix + 328 p. Illust. Index. 23 x 19 cm.

• ***Summary:*** Dedicated: "To those who are guided by the open heart and open mind of compassion."

Being vegan is "not about being on some trendy new diet; it is a lifestyle" (p. 85).

The index contains 48 entries for tofu, 37 for tamari, 30 for soymilk, 8 for tempeh, 6 for TVP, 4 each for miso, soy yogurt, tofu cream cheese, and seitan, 2 for silken tofu and Soyrizo, and 1 each for edamame, soynut butter, and Soyatoo (natural nondairy whipped topping).

"There are so many reasons to go vegan-health and nutrition, weight loss, green and sustainable living, and prevention of cruelty to animals. With over 200 mouth-watering recipes and tips for converting meat- and dairybased dishes into vegan ones, The Complete Idiot's Guide to Vegan Cooking will help readers enjoy a healthy vegan diet without sacrificing taste" (publisher's description). Address: 1. Vegan chef, author, and host of veganchef.com since 1999; 2. Long-time vegan cook and "foodie".

8542. Fiore, Toni. 2008. Totally vegetarian: easy, fast, comforting food for every kind of vegetarian. Philadelphia, Pennsylvania: Da Capo / Life Long. xi + 273 p. + 16 pages of unnumbered plates. Illust. (some color). Index. 24 cm.

• ***Summary:*** A mostly vegan cookbook; each recipe that calls for milk as an ingredient gives soy milk as an alternative. Rarely, if ever, have we seen such a dazzling and delicious variety of vegetarian soy recipes and information in one book. One purpose of this book is to demystify the world of vegetarian cookery and vegetarianism–especially for non-vegetarians.

The Introduction tells the story of the author's gradual transition from typical meat eater (living in Europe), to animal rights activist in Maine, to vegetarian. She advises: Buy locally, eat seasonally, buy organic, use your intuition (and imagination).

The chapter "Stocking the pantry" contains basic information (p. 39-42, 45-46) about sea vegetables, seitan, and soy products, including edamame, miso, tempeh, textured vegetable protein (TVP), tofu, and soy sauce (Light Chinese soy sauce, shoyu, and tamari), and Worcestershire sauce (vegetarian; without anchovies)

Soy related: Golden tofu bites (with one 14-ounce package firm tofu, frozen, then thawed... p. 50). Red pepper tofu dip (p. 67). Vegetarian Caesar salad (with "silken soft tofu, p. 76). Edamame and apple salad (p. 81; kids love edamame). Boiled edamame pods. Curried lima bean and rice salad with tempeh (p. 92). Tofu lime dressing (with silken tofu, p. 102). Spinach and tofu soup (p. 108). Miso soup. Hot and sour soup (with firm tofu, p. 109). Roasted pumpkin bisque (with soy milk, p. 114). Corn bread (with soy milk, p. 130).

One chapter is titled "Tofu" (p. 145-53): Seared tofu. Tofu sour cream. Baked tofu meatballs. Tofu with parsley sauce. Tofu kebabs with tamari-ginger sauce. Tofu pot pie.

The next chapter is "Tempeh and seitan" (p. 155-69): Best braised tempeh (with sweet and spicy marinade, p. 197). Tamari tempeh. Barbequed tempeh. Jamaican jerk tempeh. Malaysian curried tempeh. Greek stuffed cabbage (with lemon cream sauce and tempeh). Tempeh and cabbage. Moroccan stew. Tempeh cacciatore. Tempeh fajitas. Tempeh marsala. Homemade seitan (from bulk vital wheat gluten). Penne with onions and vegetarian bacon (p. 175). Spaghetti tofunese (p. 176). Tofu ravioli with butter and sage (p. 181-82). Bechamel (with soy milk, p. 184). Tofu lasagna (p. 185-86). Vegetable lasagna (with tofu filling, p. 187). No-egg salad sandwiches (with tofu). Mock fish salad sandwiches (with tempeh). Mock Maryland crab cakes (with tofu, p. 196). Tempeh club sandwiches (p. 197). Cornhusker's reubens (with tempeh, p. 198). New York hot dogs and onions (with vegetarian hot dogs, p. 199). Soysage-pepper sandwiches (with Italian-style vegetarian sausage links, p. 200). Eggplant meatballs (with tofu, p. 214). Stuffed sugar pumpkins (with tempeh, p. 215). Fluffy mashed potatoes (with soy milk, p. 219). Spinach tortillas with potatoes (and seitan, p. 228). Pfannkuchen (with soy milk, p. 239). Rye bread French toast (with soy milk, p. 240). Loaded bagel (with tofu cream cheese, p. 243). Tofu cannoli (p. 250). Tofu coconut cream pie (p. 251). Basmati rice pudding (with soy milk, p. 252). Banana chocolate chip cake (with soy milk, p. 256).

About the author: "A vegetarian for over 20 years, Fiore is a self-taught chef who first embraced Mediterranean culinary techniques and philosophy while growing up in Italy." But she spent the first six years of her life in Germany. Address: Portland, Maine. Host of the national public television show Delicious TV's Totally Vegetarian.

8543. Newman, Jacqueline M. 2008. Cooking from China's Fujian province: One of China's eight great cuisines. New York, NY: Hippocrene Books. 258 p. Illust. (color). Index. 24 cm. [16 ref]

• ***Summary:*** Fujian province, in southeastern China, enjoys a distinct culinary tradition with a thousand year old recorded history–yet it is barely known in the Western world. In addition to carefully researched cultural and historical notes, this book features a collection of 200 authentic recipes.

Dr. Newman was born in 1932. She lives on Long Island, New York.

Bean curd [tofu] appears in the index 24 times, bean curd sheets / skins [yuba and dried yuba sticks] 6 times, fuyu (Fermented bean curd [fermented tofu]) 5 times, black bean sauce / fermented black beans [fermented black soybeans] 3 times.

\ In the Glossary, the section titled "Milk and nondairy milk products" (p. 229-30) states: "Soy milk is the most common nondairy milk used;" it is made into many doufu / tofu products. Nut milks are also popular. Bean curd and pastes are also known in English as Doufu or Tofu. Some of the varieties are: Brown bean curd. Bean curd cheese–correctly called fuyu. Doufu–Called tofu in Japanese. Fermented bean curd–see Fuyu below. Fuyu–the common Chinese name for "fermented bean curd squares." They are mostly widely used as a seasoning. Some fuyu is seasoned with leeks or chili peppers or both. Bean curd skin. Also called bean curd sheet. It is dried. Doufu: See Bean curd and pastes. Tofu: See Bean curd and pastes. Soymilk is called "Bean curd milk" (p. 230). Address: Food historian and scholar, Former prof., Dep. of Home Economics, Queens College of the City Univ. of New York, 65-30 Kissena Blvd., Flushing, NY 11367.

8544. Packaged Facts. 2008. Soy foods and beverages in the U.S. Rockville, Maryland: Packaged Facts. ix + 210 p. Digital PDF file. *

• ***Summary:*** Contents: Market overview. Two classifications: foods and beverages. Market size and composition. Snack bars and soymilk post solid gains in 2007. Soy mainstreams from natural channel. Market outlook. Consumer awareness of soy's health benefits on the ups. Soy / meat combination maximizes potential. Soy allergies a growing U.S. concern. Supermarketing soy. Teaming up with other functional foods. Kids and soy. Soy prices on the rise? The global picture. Competitive overview. Marketer and brand shares. Clif Bar takes the lead in nutrition bars. Kellogg the clear frontrunner in frozen meat substitutes. Turtle Mountain is tops in frozen treats. Silk leads in yogurt category. GeniSoy dominates faltering salted snacks category. Loma Linda leads shelf-stable meat substitutes. Marketing and advertising trends. New product trends. Natural / organic introductions abound. Also coming on the strong: Omega-3 fatty acids. snack bars cover all bases. Meat substitutes going over for real meat flavor. All-in-one meals a convenient choice. Cereals start the day with soy. Baked goods add soy goodness. Soy chips / crackers make for familiar snacking. Edamame becoming more mainstream. Frozen treats: new kid-tested flavors spell success. Soy and chocolate: a healthy combination. Competitor profile: Amy's Kitchen. Competitor profile: Kellogg's Company. Competitor profile: Kraft Foods. Competitor profile: Physicians Laboratories / Revival Soy. Soy beverage marketing and competitive trends. Soymilk types. Competitive overview. Competition from traditional dairy. Marketer and brand shares. Marketing and advertising trends. New product trends. Soymilk: making healthy even healthier with other functional ingredients. Soy smoothies mix fruit and soy. Nutritional and weight-control beverages. Soy chai tea and coffee. Competitor profile: Dean Foods. Competitor profile: The Hain Celestial Group. Consumer trends. IFIC data on attitudes toward health foods and soy. Meat alternatives and soymilk are top categories. Alternative America style vs. classic tofu. Minority and regional patterns. Socio-economic diverse demographics.

8545. Vandemoortele Group 2009. Vandemoortele decides to focus on bakery and lipids and prepares the selling process of its Soy Foods division Alpro (News release). Ghent, Belgium. 2 p. Jan. 17.

• ***Summary:*** "The financial and macro-economic environment has fundamentally changed during the last months. In this context Group Vandemoortele has decided to focus on the activities Bakery (frozen bakery products) and Lipids (margarines and fats), representing together 80% of the Group's turnover and essentially oriented towards professional and industrial customers. Group Vandemoortele is traditionally strong in those segments and wants to further expand in Europe in these activities. Within the framework of this change of strategy the group prepares the selling process of its soy business Alpro, which is oriented towards the end consumer.

"This strategic decision offers the best opportunities for future growth to each of the three activities, which are all three market leaders and generate all three solid operational cashflows. The sale of Alpro and the ongoing capital increase of Group Vandemoortele will bring in the necessary resources to pursue the expansion in Bakery and Lipids. Thanks to the recent takeover of Panavi, French market leader in frozen bakery products, Vandemoortele is amongst the European leaders in this market segment, which grows at an annual rate of more than 5%. Vandemoortele is also strengthening its leading position in margarines and fats.

"Alpro is European market leader in soy food products and has realised a strong and profitable growth during the past seven years with its brands Alpro Soya and Provamel. Alpro meets two fundamental food trends, i.e. health and sustainable development. By splitting off its soy foods activities Vandemoortele wants to ensure the further successful growth of Alpro with a strong new partner.

Group Vandemoortele realised in 2008 a turnover of ca 1.2 billion euro with 5,600 employees in 12 European countries. The Bakery and Lipids activities generate together a turnover of ca 950 million euro with 4.800 employees. Alpro has a turnover of ca 260 million euro and employs 840 people.

8546. Golbitz, Peter. 2009. Update on work with soyfoods in Africa (Interview). *SoyaScan Notes.* Jan. 28. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** Peter finds his new work with SunOpta to be very interesting and exciting. He has long had a great deal of respect for Allan Routh, who is a superb entrepreneur. This work has enabled him to travel worldwide–South Africa, Bangkok [Thailand], Paris, etc. SunOpta sales continue to grow–one billion dollars last year–despite the economic downturn. New developments related to soymilk expansion (in the USA and worldwide) will be announced in a few months.

Henry Davies, an white Afrikaner, is with the SoyCow Center in Bergville, KwaZulu-Natal, South Africa. Henry is a wonderful, amazing man, who has a passion for this work that is rare. He is married to Stella. He has stories of people who work on his farm who have reversed their low metric count for HIV by consuming soyfoods. He is a strong believer of the importance of soy in the diet, particularly in South Africa. He is sometimes hard to reach by e-mail, so he might be easier to reach on his mobile phone. He has been working with soy for about 4-7 years. He was part of the Soy in Southern Africa Alliance. He was with a company named Eden Manufacturing Pty. He had an extrusion plant that made pet food and feed. He now manufactures a high-protein, flavored porridge drink named Redi that is a combination of ground maize and soybeans. For details see his website www.edenman.co.za. Now he is importing and rebuilding VitaGoats from India and installing them with the WISHH program and some other programs around southern Africa. The VitaGoats produce soymilk (and a little tofu) using a bicycle-powered grinder and a simple cooker. The soymilk and tofu are being enjoyed by hundreds of kids every day. Henry also runs the Eden Manufacturing Pty Ltd. Training Centre for VitaGoat and SoyCow Food Processing Systems, with Malnutrition Matters (Frank Daller) and WISHH as sponsors. The first training centre was established by WISHH in Pretoria at the Council for Science and Industrial Research (CSIR) in Pretoria. After a few months the CSIR realized they didn't have the resources to do this. So Henry took it over and established the center on his farm; at that time Peter thinks he was director of the Soyfoods Association of South Africa. The first pictures in Peter's color photo album show the old SoyCow training center, which was adjacent to his old manufacturing facility. The more recent photos at the end of the slide show are in his new (still under construction) training center on his property. WISHH helped to fund the costs of constructing the new center. Henry started running short courses on making soymilk and tofu, which WISHH funded. Peter taught several classes at these short courses–as did other people from Europe, India, Solait, Ted Nordquist, etc. Short courses typically last 2-5 days, and 50-60 people attend each course. There have been Zulu chiefs, people from Parliament–its really happening!

Henry has been traveling on behalf of WISHH, installing SoyCows and VitaGoats in various countries in southern Africa, including Mozambique and South Africa.

Recently Paul Lang cleaned, donated and sent Henry two oil expellers–which can be seen in Peter's photo album. Henry also has a solar dryer, a prototype set up by Malnutrition Matters (Frank Daller's group).

Much of this story can be found on the WISHH website. WISHH has more than one mission. The basic one is market development worldwide for U.S. edible soy protein products such as textured soy flour, soy protein isolates and concentrates to improve human health. WISHH does not promote specific products or particular companies; its work is more generic. However WISHH can ask a U.S. company such as ADM or Bunge or Cargill to donate a certain amount of a particular product to a specific WISHH project–such as a school feeding program in Guatemala that needs a container of TVP. ADM typically makes the donation to create goodwill and perhaps in hopes of a long-term business relationship, but it is ADM's responsibility to follow up. Peter has come to realize that he (Peter) has his agenda (to teach people about soy) and Jim Hershey (the executive director of WISHH) has his agenda. Jim's agenda is to take U.S. soy protein ingredients and soyfoods to the Third World. Even though SoyCows and VitaGoats do not lead to the sale of any U.S. soy protein products, this is no problem for Jim Hershey. Jim and his wife are great people. ASA is so lucky to have someone like Jim, because he is so deeply committed to his work and he works so hard, long hours, traveling a lot, and he has put so many great relationships together. He has done an incredible job. He deserves a Medal of Honor. He is a hard to reach but once he's on the phone he is very generous with his time.

Peter is now working with the World Soy Foundation (WSF), whose work is not limited to U.S. soy protein products. This enables him to help develop soybean production in South Africa–which could become self sufficient in soybeans because there is so much wonderful land and water resources, plus a First World agricultural infrastructure and food processing plants. South Africa is pretty much self-sufficient on corn, and they could be growing corn and soybeans in rotation. The country is in transition. Many white farmers are leaving for a variety of reasons that are more covert than in Zimbabwe. When black farmers move onto the vacated land, the productivity of the land often drops–due to lack of experience. People suffer and the land is not used to its full capacity. But Peter thinks the country will recover. An opposition party is finally forming to counter and balance the ANC's policies. Democracy is coming alive; the parties will have competing agendas. For white Afrikaners it may look like shambles, and there is presently a high degree of unemployment, but for Peter (who has been there 6-8 times) the long term view looks very promising.

Peter has a color photo album and slide show (of digital photos he took) that shows some of the workshops and the

whole process for making soymilk and tofu using VitaGoats and Soy Cows, with Henry Davies shown (in a red shirt) in many of the slides; he will send Soyinfo Center (SC) the whole show by e-mail, and SC is free to use a few of the slides if proper credit is given to Peter. If SC lets Peter know which ones we want, he will provide the captions. It is a wonderful story. Peter is also considering putting this slide show on the Web (on an appropriate website such as WISHH or Malnutrition Matters), so anyone can see it.

Peter recommends that Shurtleff talk with Jim Hershey; Peter feels that he and Jim share a common view. Peter often talks with Jim, who has just left Guatemala and is on his way to Haiti. Jim is working on getting SoyCows (the small ProSoya systems made in India that produce several hundred liters per hour of soymilk) installed in Guatemala, sponsored by the Rotary. WISHH would not provide money to have SoyCows installed, but they would supply the beans. Before Jim went to work for ASA, he had spent a lot of time in Africa, in Cote d'Ivoire, working for the Rice Board, so he had experience in international commodity market development work. Then he went to work for ASA International Marketing, before WISHH was created.

Peter has found his work with the World Soy Foundation to be extremely gratifying. Jim and Peter put together the Soy in Southern Africa Alliance (SISA) 2-3 years ago and they raised $275,000 in about a month. From that they got matching funds from USAID and ended up with a $750,000 project. That is how a lot of the activity in South Africa got elevated to a much more productive level. Address: Director of International Business Development, SunOpta Grains and Food Group. Phone: (507) 573-5276.

8547. WISHH. 2009. WISHH–World Initiative for Soy in Human Health (Website printout–part). www.wishh.org Printed Jan. 29.

• ***Summary:*** Contents: Home. About WISHH: Mission and vision, WISHH Committee, Our supporters / partners, Staff. Global outreach: WISHH has activities in the following countries, listed alphabetically and highlighted in green: Afghanistan, Bangladesh, Botswana, Burkina Faso, Cambodia, Ivory Coast, Ghana, Guatemala, Haiti, Honduras, India, Indonesia, Kenya, Mozambique, Pakistan, Senegal, South Africa, Uganda, Vietnam, Zimbabwe. These countries are shown on a map of the world and each program is described in considerable detail if you click on the name of that country below the map. Another group of countries in the same list, whose names are written in black, are those where WISHH presently has projects but (being very busy and active) has not yet had time to describe that project and add a color photo. They are: Angola, Democratic Republic of the Congo (DRC), Ethiopia, Malawi, Nicaragua, Nigeria, Tajikistan, Tanzania.

Media communications: Press releases, Newsletters, Annual reports, Photo gallery (very interesting). Workshops / Training: International workshops, Washington, DC, workshops, Midwest workshops, Other training. Nutrition library: Nutrition HIV/AIDS overview, WISHH presentations, WISHH papers / publications, WISHH HIV/AIDS activities, HIV/AIDS resources, SoyCow & VitaGoat, Economics of soy. Resources / Links: Soybean organizations and agencies (33), U.S. government and international organizations (13). About soy: Soy products, composition of soy, US soy production, Supplier list. Contact us: The WISHH office is co-located with the American Soybean Association office near St. Louis, Missouri.

"Global outreach: WISHH works with multiple private voluntary organizations and commercial companies in more than 28 different developing countries in Africa, Asia and Central America. Many of these groups are using U.S. high-protein soy to improve diets and health as well as encourage growth of food industries in developing countries."

Supplier list–Suppliers of soy and soy products: ADM, Bunge Milling, Cargill, Inc., CHS (Cenex Harvest States), Soya Kenya (agent for CHS in Kenya), Louis Dreyfus Corp., Nedan Oil Mills (Pty) Ltd. (Afgri Products) (Republic of South Africa), North American Millers' Association, Rab Processors Ltd. (Malawi). Seba Foods (Malawi), The Solae Co., Soy Afric (Kenya), SunOpta Food Group LLC (USA), Zeeland Farm Soya (USA).

SoyCow & VitaGoat: Both are manufactured and supplied by Malnutrition Matters (Frank Daller), 498 Rivershore Crescent, Ottawa, ON, Canada K1J 7Y7. www.malnutrition.org. Details about each low-tech machine are given.

Color photos show: (1) Jim Hershey, executive director of WISHH, with Africans interested in soyfoods in Cote d'Ivoire. (2) Ditto. (3) Handsome boy with soy in Mozambique. (4) Jim Hershey drinking soymilk in Malawi. Address: 12125 Woodcrest Executive Dr., Suite 100, St. Louis, Missouri 63141. Phone: (314) 576-1770.

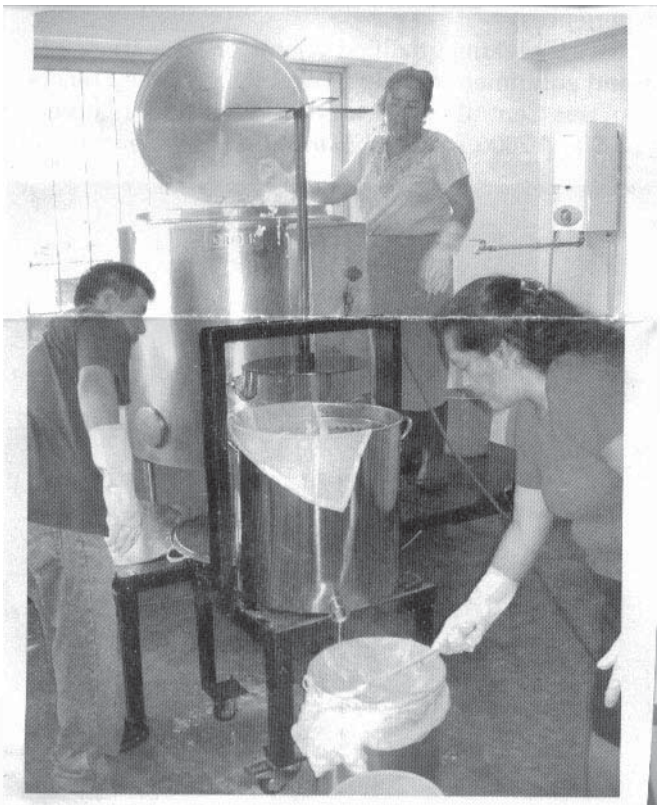
• ***Summary:*** Contents: Editor's introduction (by Ken Roseboro, publisher and editor). Suppliers of non-GMO products: United States, Canada, Europe, Africa / Middle East, Asia / Australia, Latin / South America. The Non-GMO Project special section (Non-GMO verification of organic foods begins, Non-GMO Project facts, Non-GMO corn chips create a niche for healthy snack foods, Grain suppliers express concern about the Non-GMO Project, First inspector training for non-GMO verification held). Related products, services, and organizations. Indexes: Index of non-GMO suppliers by product category: Seeds, grains and oilseeds, specialty grains and crops, canola / rapeseed products and ingredients, corn / maize products and ingredients, soy products and ingredients (phytosterols, soy flakes, soy flour, soy germ concentrate, soy grits, soy lecithin {including organic}, soy meal {including organic}, soy nuts, soy oil {including organic}, soy oil–low linolenic, soy protein, isolates and concentrates, soy protein–textured, soymilk, soymilk powder, soy sauce, vitamin E / tocopherols), other ingredients and processing aids (citric acid, dairy ingredients...), sweeteners, food products, animal feed. Index of related products, services and organizations. Complete index of listings. Order form for *The Organic & Non-GMO Report.*

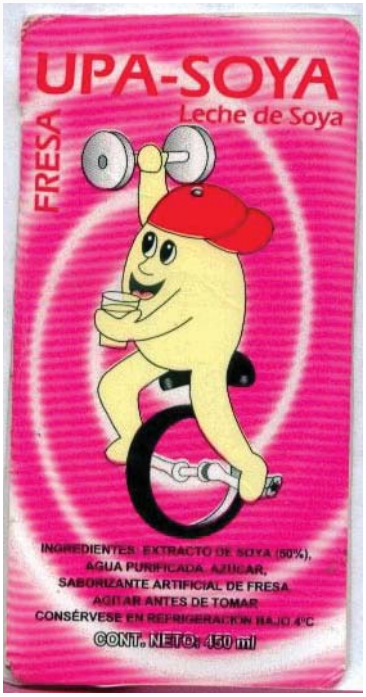
This comprehensive book gives the single best picture of the growing industry, worldwide, opposed to genetic engineering of foods and feeds. Address: Editor / Publisher, P.O. Box 51137, Eugene, Oregon 97405. Phone: 1-541-343-2272.

8550. UPAVIM. 2009. UPA-SOYA–UPAVIM soy food marketing program, processing and nutrition education program (2006) (Website printout–part). www.upavim.pursuantgroup.net/english/upasoya.htm Printed Feb. 5.
• ***Summary:*** The work of UPAVIM, a woman's cooperative in Guatemala City, Guatemala, is available at various places on the Web. UPAVIM's homepage begins: "We are a group of approximately 66 women who live in the marginalized communities of La Esperanza, El Mezquital and Villa Lobos I and II, in Zone 12 of Guatemala City. We are all mothers and homemakers. Some of us are widows, abandoned by our husbands or we confront alcoholism in our families. Many of us are the sole providers of economic support for our families." The group started in 1988 with the Healthy Baby Program in the parish of La Esperanza.

The idea for a soy program began in 1999, when "the women of UPAVIM began talking with longtime friend and advisor Barbara Lorraine about how they could expand UPAVIM in order to create more job opportunities and build long term sustainability for their community service programs." "Barbara and UPAVIM established a partnership with Plenty International, an international NGO specializing



UPAVIM, Guatemala City, Guatemala.



in soy foods for assistance in designing the space and acquiring the necessary equipment." "In April 2005, UPAVIM initiated production and chose the name UPA-SOYA for their young business enterprise."

As of 2006: "Five women at UPAVIM have completed 40 hours of soy food processing and quality control education activities during 2005. These women are now making soy milk and cheese [tofu] twice each week, and including the remaining soy masa [soy pulp, okara] in bread that is made at their bakery."

Talk with Lisa Wartinger of Plenty International. 2009. Feb. 5. Among the many Plenty volunteers who contributed to the soy project, Louise Hagler helped with technical support and Chuck Haren helped to provide the equipment. Much (if not all) of the soymilk produced has been used to feed kids in daycare. The tofu they make is quite soft; some of it may have been sold.

Letter (e-mail) from Jorge Gonzales. 209. Feb. 13. He worked in the soy dairy for two years making soymilk and tofu. His salary was paid by Plenty International. The soymilk came in strawberry, chocolate, and vanilla flavors. Jorge has not worked for Upa-Soya for 2½ years, since Aug. 2006, when he had surgery on his leg. He writes that Upa-soya stopped making soymilk at the end of November, 2008, mainly because the children got out of school; the soy dairy sells their soymilk to the school twice a week. Another reason that Upa-Soya closed is because sales of soyfoods had been low in the area. Besides soymilk, the ladies at the soy dairy have been making different flavors of soy yogurt, granola, and soft tofu. Their main task now is to focus on finishing three buildings that are being constructed now.

Photos (undated) show:

(1) UPA-SOYA's soy dairy, with modern stainless steel equipment, including a steam jacketed cooker, making soymilk or tofu.

(2) A well designed pouch of UPA-SOYA strawberry soymilk. The front panel text reads: "Fresa UPA-SOYA Leche de Soya. Ingredientes: Extracto de soya (50%), agua purificada, azucar, saborizante artificial de fresa. Agitar antes de tomar. Consérvese en refrigeración bajo 4ºC. Cont. Neto 450 ml." [UPA-SOYA Strawberry Soymilk. Ingredients: Extract of soya (50%), purified water, sugar, artificial strawberry flavoring. Shake before using. Keep refrigerated below 4ºC. 450 ml net]. Address: Calle Principal, Sector D-1, Colonia La Esperanza, Zona 12, 01012, Guatemala.

8551. Viavant, Suzi Jenkins. 2009. Re: Introducing soyfoods to the highlands of Guatemala. I. Letter to William Shurtleff at Soyinfo Center, Feb. 5. 6 p. 28 cm.

• ***Summary:*** A cry for help on the ham radio: On February 4, 1976, a devastating earthquake hit Guatemala at 3:01 a.m. local time, while most people were asleep, taking at least 23,000 lives. Approximately 76,000 were injured, and many thousands left homeless. Some areas went without electricity and communication for days, but a desperate cry for help on the ham radio managed to reach "The Farm," a self-sufficient spiritual community in Summertown, Tennessee, founded by Stephen Gaskin. In response, Plenty, The Farm's community outreach program, chose three carpenters to help with the reconstruction efforts. Dennis Martin, Pedro Grey and Melvyn Stiriss were soon flying to Guatemala armed with only their skills, a backpack full of tools and a desire to help rebuild.

Reconstruction Project: Dennis Martin, a natural at networking, was quick to forge strong connections with members of the Canadian Embassy, Clive Carruthers, acting as the Canadian Chargé d'Affaires, and Rick Bronson, administrator of funds for the Canadian International Development Agencies (CIDA). Martin soon discovered that CIDA had a shipment of prefab housing materials and funds on the way for the reconstruction of Guatemalan towns that had been destroyed in the earthquake. Martin pledged to CIDA that if they were to grant him funds and these materials, Plenty would aid in the reconstruction of the town of San Andres Itzapa, in the municipality of Chimaltenango, and build thirteen schools. CIDA agreed, and thus began Plenty's Guatemalan Project.

The Clinic Program: With a few months, many carpenters from The Farm had volunteered for the reconstruction effort, and the Project was quickly underway. However, as they began clearing debris and rubble, a new crisis emerged. They were horrified to find infants, many orphaned, in dire need of medical attention. The Project urgently requested volunteers with medical knowledge to come and provide assistance. Mary Louise Perkins and her medical and public health crew from The Farm answered that call and soon set up a medical clinic in the Plenty camp, which at that time was no more than one kitchen structure, a few platformed tents surrounded by a coffee plantation and corn field. The clinic was later joined by Thomas Wartinger acting as site physician.

The Orphanage: The number of infants and children orphaned by the earthquake had reached a critical point. The Farm sent out request to its members for single female volunteers to help establish an orphanage. In June 10, 1977, I volunteered along with five other women to go to Guatemala and help set up the orphanage. We became known as the Angel Crew. Our responsibilities involved one-on-one parenting of a single infant, collectively caring for 37 children, and preparing three meals a day for around 90 people consisting of orphans, patients at the clinic, and volunteers involved in the Project. Along with the orphans, many locals joined our team, including several teenagers who had been living on the streets of Guatemala, who we helped recover from drug addictions. My baby was Maria Cruz who was severely malnourished. After several months of nursing her back to health using primarily diluted soy formula she regained her health and was later adopted by

Alan and Jane Graf, one of the Plenty couples.

At that time the infant mortality rate was around 50%. Some of the infants came to us extremely malnourished and underweight–at an age of eight months some weighed a mere eight pounds (the weight of most infants at birth!). We fed these babies diluted soy formula through an eyedropper, but in some cases it was simply too late. The only thing that made the heart-breaking experience of losing a child bearable was that we were able to save others. Some returned home if they had one, and others were adopted. However, many of the children we treated went home only to return to us again in a short time, again malnourished. Most of the children in Guatemala were given only tortillas to eat, and it became increasingly clear to me that many Guatemalan mothers needed to be educated about how to provide for their children's basic nutritional needs.

Soy Agriculture & Demonstration Program: Aware of the undernourishment of the people of Itzapa and the high nutritional benefits of soybeans and soy products, we forged a plan to introduce soybeans as a new crop to the local farmers. Our goal was to supplement the diet of the local villagers with high-quality protein while also providing a source of income to the farmers. Soybeans seemed like a viable solution since the farmers had only small plots of land and soybeans can yield high amounts of protein per acre.

In October of 1978, Darryl Jordan, a member of the Plenty team who specialized in agriculture, initiated the soy program. He contacted INTSOY at the University of Illinois and asked if he could conduct one of their international soybean variety trials; he was sent 20 soybean varieties, written procedures to follow, and forms showing results to fill out and return to INTSOY. Itzapa sits at an elevation of 5,860 feet, which at that time, was the highest growing elevation ever tested. Darryl was joined later by Craig Bialick, another team member, who planted and tested the different varieties of which Cobb, Bosier & Davis proved to yield well. As the interest in the new crop increased among the passing farmers, they wanted to know about the new bean and how could they grow it. Since I had a background in producing tempeh for The Farm, Darryl approached me with the idea of teaching the locals about soy products and how to prepare them.

I began by writing a proposal which I submitted to UNICEF Guatemala requesting $6,000.00 to fund in-home soy cooking classes in the area of Itzapa. They gave me the funds I requested along with a two-gallon stainless steel pot and The Soy Demo Project was born. The first classes were held with the wives of the farmers that were involved in growing the soybeans which had proven to grow well at the 5,860 ft. elevation. I taught them using the same utensils that they used themselves, such as a rock grinding stone and cooking on a wood fire; this way every woman who took the class would be able to use the same methods in her own home.

The class size averaged 6-8 neighborhood women along with about 15 children. I would teach the class in Spanish (which I learned informally after arriving in Guatemala), and Maria Sal, a local Indian mother of five who joined our team, would translate in Cakchiquel (a Mayan dialect). The children loved eating the soyfoods and news traveled fast; at the end of each class I would find myself surrounded by 20-30 children, all waiting eagerly for a sample. Interest among the women grew quickly as well. Word spread throughout the area and the requests for classes became overwhelming. I was soon teaching soy demo classes not only in Itzapa, but in many of the neighboring villages as well. By June 1979 approximately 200 women were taught.

The Soy Promoters Program: In one of Itzapa's neighboring villages, San Jose Poaquil, a Guatemalan agency named World Neighbors had set-up a cooperative that held classes in agriculture. While performing a class there, I met a Latino Guatemalan named Amado del Valle, who was the director of the program. (Note: In this context, "Latino," refers to one whose ancestry is largely Spanish rather than indigenous Mayan; for centuries there has been both conflict and intermarriage between these two groups). With his background in agriculture he was very interested in what the soybean had to offer for Guatemala's protein crisis. I realized I needed help spreading the word, so he offered 8 women from his cooperative to become teachers.

In August 1979, we wrote a proposal requesting funding from CIDA to provide the equipment, supplies and training for the cooperative promoters, who would in turn train others in the preparation of soyfoods. I donated my salary as a volunteer and UNICEF donated several thousand dollars towards the project, the total amount of which would then be matched by CIDA. Previously CIDA was able to contribute matching funds through Plenty USA. However at this time, to continue their funding, Plenty needed to obtain a Canadian NGO nonprofit status; we did this through our sister Farm in Canada and we received $11,000.00 for the program. There was good acceptance in Poaquil, especially in the low parts of the municipality. Each promoter had about five groups, some of them walked 15 miles and approximately four hours to get to their groups. We trained them at their cooperative and later went with them to their villages to observe one class. We left them with soybeans, supplies, and funding to continue teaching on their own, visiting them occasionally checking in on their books, and charts, which they kept on all classes. Continued. Address: Salt Lake City, Utah.

8552. Viavant, Suzi Jenkins. 2009. Re: Introducing soyfoods to the highlands of Guatemala. II. Continued. Letter to William Shurtleff at Soyinfo Center, Feb. 5. 6 p. 28 cm.
• ***Summary:*** Continued: In September 1979 the immediate food and housing crisis in the area had been solved, so we began to focus on long-term developments in agriculture and nutrition. As we moved from that area of Guatemala

we began to realize the town had grown accustomed to our medical assistance and were growing dependent upon our charity. It became apparent that we needed to develop a means to allow the indigenous community to help themselves. We moved our camp from Itzapa to Solola, where we had built a Mayan municipality building and several schools. Darryl and his wife Leslie returned to the Farm with their adopted baby named Irma, one of the recovered babies that had been abandoned. Since our project focus changed, as we moved to Solola most of the medical crew returned to the USA after adopting (and taking with them) most of the rest of the 7-10 children in our orphanage; most of these children grew up in the USA and never returned to Guatemala to stay.

The Soy Dairy Project: Although the soyfoods were very popular and classes were available, many women in Guatemala did not consistently have time to make their own soy products at home. To address this need, Plenty wrote another proposal to CIDA for $31,000.00 to build a soy dairy that would operate as a cottage industry. Building the dairy would enable us to produce soyfoods on a large scale, create job opportunities, and make soy products available for purchase to the people of Guatemala. Soy ice cream seemed to be a good product choice to focus on. Its production required less education and ice cream was very popular throughout Guatemala.

We decided to build the dairy in the community of San Bartolo, Solola, where we had moved our camp. We had established a good rapport with the community's reconstruction committee. We had already built a school and installed a water system for them which featured a water spigot in every home. The water system had improved the quality of life immensely in San Bartolo, as before they had to carry water for several miles to their homes. My knowledge of large scale soymilk production was limited so Plenty approached Laurie Praskin, the soyfoods expert who for years was in charge of producing soy milk and tofu on a large scale for The Farm community in Tennessee. Laurie accepted and I returned to the United States to help her purchase the equipment needed. We traveled across the country educating people about our cause. We were able to get some of the equipment donated and purchased the rest with the funding we had received–including two 50 gallon stainless steel pots that Laurie acquired from the Boy Scouts of America.

In the summer of 1979 we shipped the equipment to Guatemala along with seven tons of soybeans, and I returned to Guatemala with Laurie as my partner. Laurie's husband, Alan Praskin, was also an agriculture specialist who joined with Craig Bialick to continue doing more soybean variety trials at different altitudes. They did one trial with 16 different varieties in San Martin Jilotepecque, where they partnered with Amado del Valle, the director of the World Neighbors Cooperative where we trained the eight soy promoters. They also did a trial in the Solola area which at 7,200 ft. was the highest elevation ever tested at that time using INTSOY varieties.

On February 19, 1980 the facility was finished, and the Soy Dairy was inaugurated. Our long-term plan was to turn over full operation of the dairy to the people of San Bartolo so our first task was to choose and train a local to oversee the project. We chose Agustin Xoquic. He had been head of the reconstruction committee in San Bartolo at the time we had installed the water system, and we had developed a very strong bond with him and his family. We lived in the Mayan community, training Agustin and his wife Elena to oversee the dairy. The Soy Demo Promoter's project continued while also operating the soy factory project.

As of August 31, 1980, there had been 117 promoter classes and 1,013 men and women were taught how to make soymilk and tofu in their homes through the Soy Promoter program. Small women's groups had collectively grown their own plot of soybeans. This program was similarly implemented in San Martin Jilotepecque, Chimaltenango, with another World Neighbors Cooperative. Eight women were approved as soy promoters and taught 307 men and women. Over 100 people in San Martin planted soybeans that year. Between all the cooperatives, they harvested approximately 8,000 pounds of soybeans for their own needs and the remaining amount was sold to the *Fabrica de Soya* (Soy Dairy) in Solola.

In Solola, Laurie and I held cooking classes in the town, teaching Latino women, how to prepare fancier dishes such as lasagna, blended tofu dishes, fried and scrambled tofu. These ladies had electric blenders, ovens, and tofu, which was now available in the local market produced by the Fabrica de Soya in Solola. We also continued our classes with the Indigenous people in the surrounding villages of Solola.

We also began working with Berhorst Hospital in Chimaltenango, where we had often taken some of our patients. They were very enthusiastic about soy technology and asked us if we could get them enough soybeans to supply soymilk and tofu for their patient's daily consumption. They also asked us if we could get them an ice cream machine for making soy ice cream for sales to their patients. The current practice is for the patients to go to the local store and get junk food without much nutritional value. They wanted a high quality protein product such as soy ice cream, to be available for their patients. We began holding demonstrations at the hospital with 35 volunteer promoters from the surrounding villages of Chimaltenango.

After eight months of training the employees at the soy factory, the political climate in Guatemala became violent. People we worked with on our water projects were put on "hit lists," and since we did not want to jeopardize anyone's safety we were forced to prematurely leave the soy factory project in the hands of people in San Bartolo.

On September 22, 1980 we returned to the U.S. Since Darryl Jordan returned earlier he had published an article about the soy project in a development newsletter titled *League for Food Education* (*L.I.F.E.*). We received responses from fifty different countries requesting advice on how to set up similar projects. We then published the *Plenty Agricultural Program: Guatemala* booklet (1980, 46 p.) and the *Plenty Integrated Soy Program, Guatemala* (1982, 48 p.) booklet to help educate the many people from whom we had received inquiries, along with those from other interested organizations.

After we left Guatemala, Amado Del Valle worked with Food for the Hungry in efforts to set up two more soy dairies in Zacapa, but the political violence from Guatemala's civil war made it too dangerous to complete. It had also become too dangerous for the Soy Factory in Solola to operate, so it closed as well.

On May 27, 1981, Amado left Guatemala and arrived at The Farm in Tennessee, to study large scale production of soyfoods; he later went on to the Canada Farm. In September of 1985, he returned to Guatemala with funding from Plenty Canada at which time he helped Agustin reopen the soy factory and become the Director for three years. It was reborn as Alimentos San Bartolo, community owned and managed, although Agustin and Elena were still in charge of production, and remain so to this day.

On March 7, 1991 the soy project land was officially turned over to the committee of San Bartolo. Chuck Haren and other members of Plenty periodically traveled to Guatemala to help with funding and equipment upgrades.

In June of 1995 with help from Plenty USA and funding from Food for the Hungry, I returned to Guatemala to do a marketing upgrade which I completed in three months. I wrote a Spanish-language booklet with local recipes titled *Recetas de Soya* (*Soyfoods Recipes*), had 1,000 copies printed, and used it at soyfoods classes, some of which were held at local restaurants.

In August of 2006, each household in San Bartolo was bought out for an amount of money equal to their share of the project. The project was restructured from a community owned business to an association named *Asociacion de Desarrollo Integral Belen* (*ADIBE*), but it is still directed by the committee of San Bartolo, which is elected every 4 years by the community. Address: Salt Lake City, Utah.

8553. Viavant, Suzi Jenkins. 2009. Re: Introducing soyfoods to the highlands of Guatemala. III. Continued. Letter to William Shurtleff at Soyinfo Center, Feb. 5. 6 p. 28 cm.
• ***Summary:*** Continued: In July of 2008 the members of ADIBE traveled to Guatemala City to compete and present all of their products at a National Rural Development contest; they were recognized as one of ten winners and were awarded 46,000 quetzals.

The project has become a model project worldwide. The soy dairy has operated as a self-sufficient business for twenty-nine years. It employs seven members of the Mayan community full-time and perhaps most importantly, continues to supplement the protein intake of the Mayan children.

As of August 21, 2008: The current items produced and sold weekly are: 40 gallons of soymilk, 110 pounds of tofu, 15 gallons of soy ice cream, 20 pounds of tempeh, and 20 pounds of soy flour.

In October of 2007, Amado del Valle developed several new products which the soy factory now produces; shampoo, face cream and hand soap (all made from tofu whey, which was previously discarded).

As it is becoming increasingly more popular to be "green," we, the people of this planet, should harness this global consciousness and set up more projects of this kind, which has proven to make the most of our world's resources and provide quality nutrition and education to people who would otherwise not have them. With more funding, education and organization of the planet's resources, there would be plenty of protein to go around, and malnutrition could be a thing of the past–this is my dream. My experience has taught me that small donations, desire, grass roots commitment and organization can change and save lives.

Note: This article is written from the memory of my experience setting up the Soy Demonstration Programs in Guatemala. However I would like to acknowledge that the success of the soy program involved many Plenty volunteers and Farm members, who have contributed or supported the project directly or indirectly over many years. I apologize if I missed mentioning anybody.

Even though I am no longer a member of Plenty, I have still consistently returned to Guatemala to check-up on the project and bring them supplies.

For more information please contact: Suzi at soysolutions@gmail.com or Plenty International, P.O. Box 394, Summertown, Tennessee 38483. Phone: (931) 964-4323. www.plenty.org. plenty@plenty.org. Address: Salt Lake City, Utah.

8554. Hershey, Jim. 2009. Work with the WISHH (World Initiative for Soy in Human Health) program (Interview). *SoyaScan Notes.* Feb. 13. Conducted by William Shurtleff of Soyinfo Center.
• ***Summary:*** Jim was born in 1957 in St. Louis, Missouri. He grew up in St. Louis, then graduated in 1979 from Northwestern University (Evanston near Chicago, Illinois) with an BA degree in an interdisciplinary program called "American Culture" and a certificate in "African Studies." He earned a teacher's certificate at the same time. He joined the Peace Corps, and during 1979-1981 in Abidjan, Cote d'Ivoire, he taught English as a foreign language–thus using his teacher's training. Returning to the USA, he got some sales jobs then attended the American Graduate School of

International Management ("Thunderbird," in Glendale, near Phoenix, Arizona), graduating in 1984 with a Master's in International Management (similar to an MBA but internationally focused).

Fresh out of graduate school he was hired as regional director for Africa for the Rice Council, a U.S. commodity trade association that does market development overseas for rice. He worked in Abidjan, Cote d'Ivoire, from 1985-89. That was a peaceful period during the later years of the original president, Felix Houphouët-Boigny, who built his country well.

Almost all Americans are not aware of overseas market development programs or their importance to American agriculture or our economy. The principle on which these programs were formed was a public-private partnerships; they have worked very successfully for the last 50 years. The American Soybean Association (ASA), for example, built good, solid, long-term markets, using checkoff dollars from all soybean producing states–except Ohio and Indiana.

After Jim Left Abidjan, he worked for 2 years (1990-91) at the Rice Council's headquarters in Houston, Texas. In 1992 Jim (a St. Louis boy), who was married to Nancy (a Chicago gal), with two kids (ages 2 and 4), said: "Houston is not where we want to raise our family." Rice Council was a much smaller organization at the time than ASA, and he did not foresee a lot of upward mobility within the organization. So Jim started to look for a way to get back to St. Louis. He liked the field of market development very much. The American Soybean Association, which was expanding and opening new offices overseas, offered Jim a wonderful opportunity to stay in the field in which in had built expertise, and to return to his home town. So in Match 1992 Jim moved his family to St. Louis and went to work for the ASA; Ken Bader was CEO at the time. Jim arrived about 3 months before Bader left. Working in St. Louis, he became the Division Director in charge of three offices: the Middle East, Central Europe, and the former Soviet Union. Reporting to Dennis Blankenship, who was Executive Director, International Marketing, Jim presided over and coordinated opening of a new office for the Middle East and Africa in Nicosia, Cyprus, and in Moscow, Russia, in the new CIS (Commonwealth of Independent States). A Hungarian was the regional director in Vienna, a Russian-speaking Serb in CIS, and an American in Nicosia.

In 1996 USB, the organization that funded ASA, said that administrative and overhead costs were too high so let's reduce the number of management staff, so Jim was given responsibility for western Europe along with his 3 other offices.

In 1996 Roundup Ready soybeans were introduced by Monsanto. Jim's job as division director for western Europe became extremely complicated and contentious. ASA's long-time overseas market development and technical assistance work had to take a back seat to ASA as a policy and promotional organization. It seemed to Jim like ASA, in defending genetically engineered soybeans, as fighting a losing battle in Europe. "I was fighting the biotech wars. I felt the injuries and the scars. By 1999 I was getting burned out and was ready for something else." Jim is not personally opposed to biotech soybeans; he thinks that, used appropriately, it could benefit a number of people and even the environment.

Fortunately, at about that time, the WISHH program was starting to be born. It was first conceived and articulated by the Illinois Soybean Program Operating Board (ISPOB, the Illinois checkoff board) as a way to increase the amount of U.S. soy protein consumed by people in the Third World. It usually takes at least one funding year from the time a soybean program is conceived until it begins operation. Illinois soybean farmers joined with soybean economists and leaders at the University of Illinois at Urbana to form the International Soy Protein Program (ISPP).

Lyle Roberts, the visionary leader behind the new idea, had two more important ideas: (1) ASA would be the best organization to manage the program; they were already well established and had expertise in international market development. (2) The head of the new program should be dedicated to that program alone–with no other ASA responsibilities. At the ISPOB meeting in the summer of 2000, the board approved a guaranteed three-year start-up period and a budget of $1 million per year.

In July 2000, at a joint meeting of ASA, USB, and ISPOB, the International Soy Protein Program was born, based on Lyle Robert's concepts. The money was allocated and the management structure was agreed upon. Jim Guinn, ASA's Executive Director of International Marketing, was charged with the responsibility of finding a well qualified person to run the new program. On 1 Nov. 2000 he selected Jim Hershey, who had the right experience, to be the first director of the International Soy Protein Program.

In December 2000, at the National Soybean Research Lab (NSRL), at the University of Illinois at Urbana, the first working group met with a long agenda, including developing a strategic plan for the group and trying to create a better name for ISPP. Seated around the table were 12-14 people, including Lyle Roberts of ISPOB, people from NSRL including Steve Sonka, several consultants who had done some early work with Lyle, a nutritionist who was a specialist in HIV nutrition, etc. When working on a new name, Jim went to the blackboard and wrote down suggestions, in various columns, for words that should be in the new name–words like "World" or "International" and (of course) "Soy" and "Nutrition." In less than an hour they had arrived at a name and acronym that they liked; the name formed a unique acronym–very valuable in the age of Internet searching and URLs. That name was World Initiative for Soy in Human Health (WISHH).

Within the first year, various other state soybean

checkoff boards recognized the potential power of the new idea and decided to share the expenses of the WISHH program with the Illinois board. These states were: Indiana, Iowa, Michigan, Minnesota, Missouri, Nebraska, Ohio, South Dakota, and Wisconsin.

But what exactly would the new group do? What would be their tactics? What types of projects and programs would they start? In what countries would they work and with what partners? These were basic, important questions, and having a strong team of creative people helped WISHH to get started–people like Lyle Roberts and ISPOB, people at the University of Illinois in food technology and nutrition (like Barbara Klein, Karl Weingartner). Getting started was very creative and very interesting. As an example of how things worked, in 2001 Jim went to one of the Soy Summits in Phoenix, Arizona. There he met Brian Harrigan and Frank Daller, who already knew about WISHH. They introduced Jim to the SoyCow technology, and said they were interested in working in developing countries and promoting their technology. At that point Jim didn't have many partners or alliances, he did know that he wanted to work in some of the poorer countries, that were not traditional soy countries, where soy was not well known but where it was needed most–which was where there was the best potential for market development and growth. There's an old story: One shoe salesman goes to Africa and says, "This is a terrible market; nobody wears shoes." But the visionary shoe salesman goes to Africa and says, "This is the best market you can imagine; nobody wears shoes." Address: Director, WISHH, c/o ASA, St. Louis, Missouri. Phone: 734-764-2347.

8555. Alpro. 2009. History of Alpro (Website printout–part). corporate.alpro.com/en/organic-food-production-belgium/history.html Printed March 3. [Eng]

• ***Summary:*** "Back in 1934, the founder of the Vandemoortele Group, Constant Vandemoortele, was already aware of the benefits of soya. 40 years later, his grandson Philippe Vandemoortele was so convinced of the soya bean's nutritious power that he perfected a unique and natural process for making soya milk.

"Philippe had a vision to tackle the nutrition problem in the Third World. An early project saw the construction of a soya plant on the island of Madagascar in 1980. Unfortunately, for logistical reasons, the project had to be discontinued.

"But increased awareness of food issues and concerns meant that creating a soya-based business in Europe was a very real possibility.

"To this end, the Vandemoortele Group set up a separate division specialising in natural soya-based food and in 1980 Alpro was born.

"In 1989 Alpro built Europe's largest and most modern production unit for soya food based on the UHT process, situated in Wevelgem, Belgium.

"In 1996, Alpro took over Sojinal and thereby acquired an extra soya milk production unit in Issenheim, France.

"In 2000 Alpro built a brand new soya milk factory in Kettering, UK.

In 2006, to complete Alpro's range of soya products, we took over the Tofu producer SoFine Foods (Landgraaf, The Netherlands).

"To this day Alpro continues to grow as a European market leader and as a fair food partner." Address: Wevelgem, Belgium.

8556. Sunrise Soya Foods (Website printout–part). 2009. www.sunrise-soya.com/ Printed March 7.

• ***Summary:*** "Sunrise Soya Foods humbly began in 1956 when founder Leslie Joe and his wife Susan, newly immigrated from China, realized that there was a demand for tofu in the Chinese community of Vancouver. Leslie began by making small batches of creamy tofu at the back of his grocery store, Sunrise Market, now a well-known Vancouver landmark with its masses of fresh produce and bustling market enticing shoppers from around the city.

"The tofu making operation continued to grow in size throughout the 1960s and the 1970s, as demand increased and consumer awareness of the importance of a healthy diet grew. Sunrise tofu quickly developed a loyal following in the community. 1983–The current Sunrise Soya manufacturing plant is purchased.

"1985–Sunrise ships their first packaged tofu out of British Columbia to outlets in Alberta, Ontario and Washington."

1994–Sunrise acquires Mandarin Soya Foods. Mandarin offers a complementary line of soy products.

By 1995 Sunrise tofu is available in more than 1,000 stores across Canada.

Sunrise produces its first organic tofu with the introduction of the Soyganic brand.

In 1999, Sunrise responds to consumer demand by restating its commitment to the use of non-GMO soy beans in all its products.

That same year, the Union of Orthodox Jewish Congregations of America grants Sunrise kosher certification, including permission to use the Circle-U symbol on all packaging.

In April 2002, expanding markets in Eastern Canada prompt Sunrise to open a 65,000 square foot manufacturing and warehousing facility in Toronto, from which the company will service the Ontario, Quebec, and eastern United States markets.

May 2002 sees Sunrise's newest brand, Pete's Tofu, launched. Pete's Tofu is aimed at tofu novices and experts alike. 'Taking the guesswork out of tofu,' Pete's line-up includes convenient, ready-to-eat products such as savory tofu triangles and tofu desserts.

Sunrise launches Coconut and Banana flavours in twin packs.

Presenting sponsor of the 2006 season of CityCooks, a popular TV show. sunrise Soya Foods will be featured through on set product displays, 30 second promos and a special tofu week.

Feb. 2006 Sunrise releases its Vancouver Chefs Take on Tofu Cookbook, featuring 21 different Vancouver restaurants and 42 wonderful tofu recipes. Half of all sales go to the Canadian Diabetes Association.

"Sunrise Soya Foods celebrates its 50th Anniversary in May 2006!" Address: 729 Powell St., Vancouver, BC V6A 1H5, Canada.

8557. Davies, Henry. 2009. Re: Chronology of work with soy in Southern Africa, 1987 to present. Letter (e-mail) to William Shurtleff at Soyinfo Center, March 17. 2 p.
• ***Summary:*** 1987 Nov. 1–First got involved with soy and the feed industry.

1987 Nov. 1–Started work on the first extruders to be imported to South Africa used mainly for the manufacturing of full fat soy. Henry initiated the establishment of the Committee for the Evaluation and Standardization of Analytical Methods for Determining the Effects of Full Fat Soya Processing. This committee aims to provide a nationally accepted standard of quality control for processed soy under supervision of the Agricultural Research Council (ARC) and the National Protein Council.

1998 March–During 1998, he visited a TVP plant in Egypt together with the American Soybean Association (ASA). It was then that he recognized the similarity between the processing systems used for TVP and that of full-fat soy.

1998 May 21–On his return to South Africa, ASA invited him to attend the International Conference on Processing and Utilization of Soybeans (20-21 May 1999) in Pretoria. He was requested to deliver a paper on the subject of soybean for local human consumption. The title thereof: "Current Food Products and Potential in SA".

1999 July–Invited by Cochrane Fellowship Program to attend a soy training course at the Illinois University on the processing of soy for Human Foods (Small Scale Processing).

1999 Nov.–Elected as executive member of South African Soyfood Association (SASFA).

2000–Attended an intensive international training course on TVP and related issues at Texas A&M University, College Station, Texas, visiting Insta-Pro International offices in Des Moines, as well as a texturized vegetable protein production plant in Vinton, Iowa.

2004 Jan. 1–Started manufacturing of Recharge Instant High Protein Porridge drink after observing the effects of HIV/Aids within the local community and especially co-workers.

2006 July 15–Eden Manufacturing PTY (Ltd) starts a working relationship with WISHH initiating the first VitaGoat and SoyCow units to be installed at the Bergville Training facility.

2006 Aug. 4–Completed the first training centre at the original Eden Manufacturing building situated in Bergville town.

2006 Sept. 19-22–The first Soy Short Course is held at the new training centre in association with SASFA (South African Soyfood Association). 54 people attended the 4-day course. They were taught how to make soymilk and various other soy beverages using the SoyCow (which requires electricity) and VitaGoat (which is bicycle powered). The course was paid for by WISHH.

2006 to 2009 and current–Chairperson of Soy Southern Africa (SSA), previously known as SASFA.

2008 July 21–Install VitaGoat Food Processing System in Shamva, Zimbabwe. The installation was hosted and paid for by HUMANA People to People (www.humana.org). At this location, Henry also lectured on soy nutrition. Humana operates a huge farm where they have managed to plant some soybeans for their own use with the VitaGoat, which produces enough soymilk that Humana can provide (free of charge) 500 ml of soymilk daily to each of 400 school children, as well as enough soymilk to use in their own kitchen for food.

2008 Aug. 8–Install VitaGoat Food Processing system in Tugela Ferry, Northern KwaZulu-Natal, South Africa.

2008 Aug. 21–Install SoyCow Food Processing system in Orange Farm, Johannesburg, South Africa.

2008 Oct. 15–Install a VitaGoat Food Processing system in Nahamatanda, Beira, Mozambique.

2008 Nov. 12–Relocate to new premises outside Bergville town.

2009 Jan. 4–Eden Manufacturing engages in the services of a professional social project manager as well as a educationalist / production manager to add further specialised services to their network.

2009 March–Constitute the establishment of the Eden Social Development Foundation to assist with funding of designated projects. Address: P.O. Box 206, Bergville 3350, KwaZulu-Natal, South Africa. Phone: +27 36 448-1605.

8558. Davies, Henry. 2009. Re: Forthcoming trip to Democratic Republic of the Congo (DRC, formerly Zaire). Letter (e-mail) to William Shurtleff at Soyinfo Center, March 23. 1 p.
• ***Summary:*** "I will be travelling to the DRC [Congo] in 3 weeks time to install and train a group of UMCOR [United Methodist Committee on Relief] on VitaGoat food processing equipment. They have attended a previous workshop and has by far proven to be the best and most attentive group ever. I look forward to meeting up with them again."

Concerning commercial soy products in South Africa:

Soy Mince has been around for at least 30-40 years. Most of the products available contain soy protein isolate as their protein source. Eden Manufacturing has been the first company in South Africa to use the whole soybean to manufacture soy products (i.e., soymilk, yoghurt, tofu etc).

Concerning the Humana VitaGoat project in Zimbabwe: "The constant availability of soybeans at this project is the core of its success. We are looking into the establishment of a NGO [non-governmental organization] that will assist with funding of new VitaGoat and SoyCow projects incorporating both equipment, training and sufficient raw material to keep the project going until such time that they have generated an income to either plant their own soybeans or purchase proper soybeans." Address: P.O. Box 206, Bergville 3350, KwaZulu-Natal, South Africa. Phone: +27 36 448-1605.

8559. Soyatech.com. 2009. Soyfoods sales reach all-time high, says new report. But what is the next growth strategy? http: //www.soyatech.com /sponsor.php?id=283. 1 p. [6 ref]
• ***Summary:*** *"Soyfoods: The U.S. Market 2009,* a newly released report by Soyatech, LLC and SPINS, Inc., retail sales of soyfoods products have surpassed $4 billion for the first time in history. The report, which examines soyfoods sales and industry trends during 2008, points out that the market for soyfoods in the U.S. has continued to develop despite the overall economic downturn. The study's authors note that consumer awareness of the health benefits associated with soy and its expanded presence in multiple distribution channels are leading factors in soyfoods' continued success.

"Interestingly, the sales growth of soy is highest in a channel other than conventional supermarkets or natural retailers, according to the report. Sales growth of 1.8% in supermarkets and natural food stores was outpaced by the 'other channels' category of retail outlets for soyfoods including Wal-Mart, club stores and foodservice operations where sales grew by 3%.

"Leading categories driving this growth include soymilk, meat alternatives, tofu and snack bars. Refrigerated soy-based entrees and sushi, tracked for the first time this year, also fared well and debuted in the top 25 largest soyfoods categories, with $11.5 million in sales.

"Soyfoods: The U.S. Market 2009 is the eighth report produced by Soyatech and SPINS, and it provides detailed information on the U.S. market by category, sub-category, brand and distribution channel.

"The report covers such topics as:

"Opportunities for further growth in this healthful food sector. Major players impacting the marketplace and driving growth. Future developments in soyfoods.

"'With soyfoods now a $4 billion industry, Soyatech and SPINS anticipate that opportunities for innovation will enable the industry to continue to grow,' said Philippe de Lapérouse, director of Soyatech's Global Food and Agribusiness Practice.

"For more information or to order the report, please contact Laiza Martinez at lmartinez@spins.com or 847.902.1200 ext. 1254." Address: Bar Harbor, Maine.

8560. Dean Foods Co. 2009. We're in the growth business: 2008 annual report. Dallas, Texas. 4 + 46 + 50 + 13 p. 28 cm.
• ***Summary:*** All but the first 4 pages of this annual report are Form 10-K. A "Brief history" (chronology) of the company is on page 11. Basic financials are on page F-2. Both net sales and net income were up from last year.

Net sales of Silk brand products increased by about 10% (p. 30).

Accompanying the annual report is a "Notice of stockholders' meeting" (84 p.). In 2007 Gregg L. Engles, age 51, Chairman of the Board and CEO had total compensation of $9.618 million, including salary of $1,300,000 (p. 43). Address: 2515 McKinney Ave., Suite 1200, Dallas, Texas 75201. Phone: 214-303-3400 www.deanfoods.com.

8561. Yan, Lin; Spitznagel, Edward L. 2009. Soy consumption and prostate cancer risk in men: a revisit of a meta-analysis. *American J. of Clinical Nutrition* 89(4):1155-63. April. [53 ref]
• ***Summary:*** The researchers found a 26% reduction in risk of prostate cancer for men with the highest soy food intake, compared to those with the lowest soy food intake. This was increased to a 30% reduction when the reported intake was of non fermented soy products (e.g. tofu, soymilk). However, intake of fermented soy products (e.g., natto) were not associated with reduced risk. The authors concluded that consumption of soy foods is associated with a reduction in prostate cancer risk in men. This protection may be associated with the type and quantity of soy foods consumed. Address: 1. Grand Forks Human Nutrition Research Center, Agricultural Research Service, USDA, Grand Forks, North Dakota; 2. Dep. of Mathematics, Washington Univ., St Louis, Missouri.

8562. Andrews, Roger. 2009. Re: History of Spinning Kitchen (early tofu shop in Boulder, Colorado). Letter (e-mail) to William Shurtleff at Soyinfo Center, May 9. 3 p.
• ***Summary:*** "This is the account of my Spinning Kitchen enterprise, with the erstwhile partner, Beverly Migliori, from 1977-79. In preparing the outline and draft, I began to pass through memories that, though vivid, I would rather leave unvisited. I have one good instance from that time and I keep it dearly. My recollection of that time (Corn Mother, Spinning Kitchen) is not unlike the story of The Frog and the Scorpion. Lesson taken, no desire to repeat.

"I had eaten tofu in Japanese restaurants before coming to the Carnival Café. I was intrigued by the ways that tofu was used there in a vegetarian conversion style- tofu 'egg salad', etc. As the interest in tofu for an important vegetarian

nutrient source was peaking, it seemed that deliveries of tofu to the restaurant might have been becoming more sporadic. We needed to know more about this wonderful substance.

"Three of us took an early spring ('75?) field trip to 'Denver Tofu' in hopes of cultivating greater interest with our supplier. The cursory tour lasted about 20 minutes. We were shown some of the equipment but none of the processes.

"Some months later, myself, Gene Casternovia & Ann Ford left the 'Carnival Café' to start the 'Corn Mother Restaurant' in an older house where Boulder People's Food Co-op was also located. We each gave time and effort to the planning, development and acquisition for that venture. Service was the buzzword and I was 'in for a pound' on that theme. I did not feel like a third wheel in the business though time proved that was indeed the case. A sad condition became ever more apparent when I asked for some measure as they were taking and none came forth.

"I had met my partner, Beverly, while I was working at the Carnival Café, in Boulder. After my time at the Corn Mother, we were both suddenly unemployed and sought to begin a joint venture. We had The Book of Tofu and a related commercial production manual. With these and the 'mother of invention', we formulated a business outline and set to work. In my mind, I could again hear the admonition that "anything worth doing is worth doing well".

"We took three small loans with Beverly's delightful landlady, once for the beginning expenses, once to import a Japanese tofu grinder and two stainless steel tofu forms, and again for a used telephone company truck as the delivery van. These loans had a great effect on Beverly, as each time that we would borrow money, she would disappear for a few days. All monies were gratefully paid back.

"We used some of the crocks from my childhood, one smaller for the 1st stage of the nigari solution and another larger to soak the two to three daily batches of soy beans. The various stainless steel vessels were found at local restaurant supply stores.

"The Cumberland General Store carried an impressive inventory of cast-iron ware as might have been found in common use in a 19th century farmstead. I asked about larger vessels and they said that the foundry would occasionally cast larger kettles for rendering and so forth. It was a few long months until a 17½ gallon kettle was ready. It was delivered by truck. It took some time to prepare it for our use, chasing the roughcast, cleaning it and seasoning with several runs of beans that were then respectfully disposed. A corn/feed grinder was crudely adapted to make the *go* [fresh soybean puree]. It was later replaced with a proper machine.

"I fashioned a stock-pot heater from some steel channel and the burner from a large water heater. Such heaters were not so easily found then as now and there was more ingenuity than cash. Tested outdoors first, it was then placed in a fireboard installation beneath a vent in the ceiling. I still have the fire extinguisher that was purchased for the room.

"The Honduran man, Albert, who had been the juice maker for the restaurant had upgraded to a more modern press for his operation and we bought the heavy wood and iron screw press. I fashioned a stainless steel sieve and collar that fit it to the purpose.

"The chemistry and oceanography classes at university came in handy to make good sense of the specific gravity of the saline solutions and ratios for the sizes and optimal temperature of the batches. A woodworker from Arvada, Colorado made the cedar barrels and redwood forms to my specifications. A sheer voile fabric was used for the liners in the tofu forms.

"A local farmer heard of our enterprise and offered to plow virgin soil to plant a few acres of soybeans. He stored the beans there and we would fly them out a ton at a time. He generously tried several varieties until we found one that was best in flavor, texture and tofu yield. Our research had shown us the variables for fine and soft tofu or the more firm varieties. We fixed the process to produce a tofu that was just slightly on the softer side of firm, to include the smooth texture with the firmness to withstand transport. Within a year, the ratio was of a consistent quality at about a 4.25:1 yield, tofu to soaked beans, with the Westbrae nigari. Pushing the chemistry or methods beyond that and the tofu would not stand properly.

"For a short time, we had the good help of very modestly paid assistants. Properly cleaning the equipment was nearly half the day's work. Upon instruction from the local health department, we used boiling water to clean the wooden vessels, a practice that would not likely pass these many years later.

"Beverly and I paid ourselves after business costs to cover our personal expenses. Hopes were to one day expand into something more viable. We sold our products locally in Boulder and Denver and by air to Aspen and Rapid City.

"We also made soymilk in the quart size, vanilla and carob flavors. Beverly printed a brochure with some of her tested recipes using our soymilk and tofu. A graphic artist, somewhat in the style of R. Crumb, nicely drew up our labels and signs.

"After almost two years, Beverly suddenly abandoned our project and I continued for a couple of months solo. The already early, long and hard work became too much and I was forced to close up shop. (This put our dear farmer at a great disadvantage. Hoping to help recoup his losses, I steered him to the new venture in town, White Wave.) She then absconded with the truck, all of the equipment and one other item. I have not seen or heard of her since.

"Steve Demos and White Wave had no influence on the Spinning Kitchen; he was doing good factory production and we did traditional hand-made style. No conflict. (I have read that White Wave was sold for some millions. I miss the tofu.)

"Gene Casternovia seemed to enjoy having a tofu shop above his restaurant as if it were part in parcel. Annie seemed increasingly annoyed with our activity upstairs.

"About a year after the demise of The Spinning Kitchen, I received a call from a couple in Safford, Arizona who were putting together a lovely vegetarian restaurant called Desert Gardens. I gave a shopping list over the phone. When I arrived, in fact not a thing had been done. We drove around southern Arizona and northern Mexico for a few days looking for a masa grinder or something that might be made to work and other kitchen implements. I left after a week or so with little having been accomplished. They had my production notes and later I heard that they had indeed gotten something going.

"Further levels of detail and I might have a book of my own. I am very recently aware that there are other varying accounts of this time and activity." Address: P.O. Box 21128, Cheyenne, Wyoming 82003. Phone: 307-214-9510.

8563. Kastel, Mark. 2009. Cornucopia Institute provides further clarification on Silk importation of soybeans from China. http://www.organicconsumers.org/articles/article_18064.cfm#. 2 p.

• ***Summary:*** "1. Silk, a pioneering brand [of soymilk] in the organic marketplace, used 100% organic soybeans in their products prior to their acquisition by Dean Foods.

"2. Dean Foods is an $11 billion agribusiness giant and the largest milk processor in the United States. They own over 50 milk labels around the country, including Horizon Organic, a brand that heavily depends on factory farms each milking thousands of cows.

"3. According to reports by farmers and farmer-owned cooperatives, after Dean Foods purchased the company, they discontinued buying some or all of their organic soybeans from domestic organic producers and told the farmers that their decision was based on price–a price that American farmers could not match.

"4. Dean Foods gradually started introducing additional varieties and flavors [of Silk], many made with 'natural' soybeans. These are conventional soybeans. The percentage of their products manufactured with organic soybeans declined steadily over the years, and recently plummeted.

"5. Dean Foods' statement about buying all North American soybeans was recently put up, presumably, since we had announced the imminent release of our report. We have no way of verifying whether the information is accurate. Unlike their two competitors in the refrigerated dairy case (Organic Valley and Wildwood), Dean Foods refused to transparently participate in Cornucopia's study–depriving their customers of an independently verified review of their practices.

"6. In terms of Dean Foods buying a 'small portion' of their soybeans from China in the past, that seems to contradict the reports from organic growers in the United States, and the company has never released any hard data on their purchases.

"7. Recently, Dean Foods reformulated their Silk product line changing almost all their products over to 'natural' (conventional) soybeans. They did this, quietly, without telling retailers or changing the UPC code numbers on the products. Many retailers reported that they didn't find out until their customers noticed and complained.

"8. To add insult to injury, not only did the price of Silk products not go down when they converted to cheaper conventional soybeans, but they now reintroduced three products with organic soybeans and raised the price on those. Greedy profiteering plain and simple.

"On a recent visit to Whole Foods in Milwaukee (May, 2009) the store was offering 25 different Silk soy milk products, in different sizes and flavors, including creamers, of which only one (1) was organic. So much for Dean Foods and their WhiteWave division's commitment to the environment, consumer health and the hard-working family farmers that produce certified organic soybeans in this country." Address: The Cornucopia Institute, P.O. Box 126, Cornucopia, Wisconsin 54827.

8564. Boismenue, Clyde. 2009. Re: U.S. makers of dry whole-bean soymilk. Letter (e-mail) to William Shurtleff at Soyinfo Center, May 28. 1 p.

• ***Summary:*** This soymilk does not have the okara removed; rather, it is very finely ground or homogenized under high pressure.

(1) ADM. The organic soymilk market would ordinarily be too large for ADM. But they were issued a patent on product that was re-functionalized after cooking. The equipment for this was installed in a plant ADM was building in Enderlin, North Dakota to process other edible beans and from the start they targeted the organic market with this soybean operation. However, users of the ADM Organic Whole Soybean Powder apparently found it was not as functional as expected and the project was not successful. ADM is shutting down as I write. This then put Clyde in the position of having to find some alternate source to keep his customer running. There are actually four: All of them deal only in Non-GMO and Organic soybeans.

(1) Soylink, Ottumwa, Iowa–is the most interesting. They have the ability to dry de-flavor milled whole raw soybean and then pulverize it to US 1000 mesh without heat damage. This project has so far also not been successful and the company is in the process of being sold (today actually). Dr. Noel Rudie is a very knowledgeable and friendly guy if you want to contact them.

There are also 3 companies who have developed the means to mascerate soybeans completely enough (high-pressure homogenizers I believe) to make an acceptable soymilk and spray-dried soymilk powder from whole (de-hulled I am sure) soybeans. You will recognize the huge cost

saving this represents.

(2) SunOpta (formerly SunRich) is the longest established.

(3) Devansoy has long been into soymilk and I am not sure it is publicly known that Cresco Food Technologies manufactures the soymilk products for them.

(4) Jeneil Biotechnologies–their website shows only cheese and dairy flavors but they tell me they were under a non-compete agreement for some years and spent this time developing everything they make also from soybeans Among other things, this apparently means a couple of different kinds of soymilk, including enzyme active and whole bean. Jeneil does not advertise nor publicize their soy based line of products and I found them kind of unhelpful. Address: LookAlive / Basic Foods Co., P.O. Box 240070, Los Angeles, California 90024. Phone: 310-473-0719.

8565. *Iowa Soybean Review* (*Iowa Soybean Association, Urbandale, Iowa*). 2009. Farmer vision credited for soyfoods industry growth. 20(7):10-11. Spring.

• ***Summary:*** "The soyfoods industry experienced considerable growth in the past two decades. It started with just a few small companies selling tofu or soymilk to a small, niche market. Today, soy protein is included in thousands of food products, and soyfoods can be found in nearly every grocery store.

"Soybean farmers in Iowa and Illinois can be credited for the advancement of the soyfoods industry. It was their vision to use checkoff dollars to fund soyfoods research, education and promotions, which resulted in much of the industry success we see today.

"Started in the 1990s: In the mid-1990s, the former Iowa Soybean Promotion Board (ISPB) funded an industry study that showed the market potential for soyfoods. From there, the board allocated funds to help promote and grow the market.

"One of their first programs included educating women on the West Coast about soyfoods by using Iowa soybean farmer Yvonne Wente, of Waverly, as a spokesperson.

"'To support the rollout a new soyfoods beverage in southern California, we created a supporting ad and public relations program for ISPB using Wente as the spokesperson,' says Dee Munson, a nationally recognized food expert and veteran food marketer who worked on several of the early projects for ISPB.

"'A print ad promoting soyfoods ran in *Sunset, San Diego Magazine, Los Angeles Time,* along with radio commercials in L.A. and San Diego,' says Munson, who currently owns The Food Professionals based in Seattle, Washington. 'We also conducted numerous media interviews with Yvonne Wente as the spokesperson in the area.

"'The ads and interviews offered a booklet of information about the benefits of soyfoods for women,' Munson continues. 'More than 10,000 were requested, and the promotion board had to open an additional 800-number to handle the requests. A very special extension of the program was sponsorship of Dr. Andrew Weil as a speaker for a fundraiser of the Wellness Group, a cancer service organization.

"'It was ISPB's vision to fund this program and raise awareness about soyfoods, and it really got the Iowa soyfoods program jump-started,' Munson says."

"The Soyfoods Council: To show its commitment to this industry, ISPB created The Soyfoods Council in 2000 and hired food industry expert Linda Funk to head the organization as executive director."

"Under Funk's direction, The Soyfoods Council has published a cookbook called *Simply Soy,* implemented promotional programs, educated chefs throughout the United States about using soyfoods, increased the use of soyfoods in the food service industry, worked with editors from national food publications and created soy recipe contests with adults and kids.

"'We continue to educate food service personnel, chefs and consumers about ways to increase soyfoods in their diets and dishes,' Funk says. 'It's been great to see such huge advancements in the use of soy on restaurant menus.'"

For more, go to www.thesoyfoodscouncil.com.

Note: This might be generously described as an "alternative" view of what caused the growth and development of the soyfoods industry.

8566. *Plenty Bulletin* (*Summertown, Tennessee*). 2009. Guatemala. 25(1):3. Spring.

• ***Summary:*** "About 75 children and adults who live or work in one of Guatemala City's largest trash collection dumps participated in a soy foods cooking demonstration on April 4. The event was organized by Plenty volunteer, Humberto Jorge Gonzales, and women from UPAVIM, one of Plenty's Central America Food Security (CAFSI) partners. Everyone got to sample and enjoy high protein foods such as soymilk (strawberry, vanilla, plain, and chocolate) as well as pineapple and strawberry soy yogurt and soy burgers."

A photo shows a woman handing out samples to children in a room.

8567. *Soyfoods Canada Newsletter.* 2009. Canadian soybeans–a sustainable crop. Spring. p. 4.

• ***Summary:*** "Canada accounts for almost 2% of the world's soybean production. In 2007, approximately 2,700,000 tonnes [metric tons] were produced in Canada, on 2,870,657 acres (1,161,755 hectares). Soybeans are grown in three provinces: 215,006 acres in Manitoba, 434,715 acres in Quebec, and 2,224,936 acres in Ontario.

"Canadian soybean producers are known for innovative and sustainable production practices... Canada's soybean industry is known for its superior ability to segregate and trace soybean crops from seed through to end user, referred

to as Identity Preservation (IP).

"Over 40%, or about 1.7 million tonnes of Canadian-grown soybeans are exported to markets such as Japan, Malaysia, Singapore, Hong Kong and Taiwan. They are used to make Asian food staples such as tofu, miso, natto, and soymilk. Japan only produces about 12% of its own country's food grade soybean requirements, and their consumers demand non-genetically modified product. Japanese buyers value Canadian soybeans because of our industry's IP ability.

"Growing soybeans leaves a relatively small carbon footprint. As a legume, the soybean plant's ability to 'fix' its own nitrogen virtually eliminates the need for petroleum-based nitrogen fertilizer. The wide canopy of leaves formed by soybean plants helps to minimize the need for herbicide sprays."

8568. Xu, Baojun; Chang, Sam K.C. 2009. Isoflavones, flavan-3-ols, total phenolic profiles, and antioxidant capacities of soy milk as affected by ultrahigh-temperature and traditional processing methods. *J. of Agricultural and Food Chemistry* 57(11):4706-17. June 10. [32 ref]
• ***Summary:*** A very important and complex paper. Soy milk, the water extract of soybean, provides high quality proteins and essential fatty acids, while containing no cholesterol, gluten, or lactose. It is an excellent beverage for typical consumers, vegetarians, and those with lactose intolerance or milk allergy. However it also contains undesirable components such as beany flavor, flatulence factors, and trypsin inhibitors. It is generally believed that the beany flavor and flatulence factors are the major obstacles to its wider acceptance in the Western world. Therefore optimizing its desirable components and removing or reducing its undesirable components will improve the quality and utilization of soy milk.

Three soybean varieties (one Proto and one black) were processed to make raw soy milk, which was "then cooked by indirect and direct UHT methods (both at 143ºC for 60 seconds) and traditional cooking (stove cooking and steam injection) methods (both at 100ºC for 20 minutes [Note the relatively long cooking time]). Total phenolic content (TPC), total flavonoid content (TFC), phenolic acids, isoflavones, flavan-3-ols, and anthocyanins were quantified. DPPH free radical scavenging activity, ferric reducing antioxidant power (FRAP), and oxygen radical absorbance capacity (ORAC) were analyzed.

None of the heating methods affected total phenolic acids. All heating methods significantly ($p < 0.05$) affected total isoflavones and individual isoflavones. Address: 1. Dep. of Veterinary Clinical Sciences, Purdue Univ., West Lafayette, Indiana 47907; 2. Dep. of Cereal and Food Sciences, North Dakota State Univ., Fargo, ND 58105.

8569. *SoyaScan Notes.* 2009. Commercial soymilk makers (also called soy milk machine or automatic soy milk maker) (Overview). June 14. Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** Reviews of the following brands (listed here alphabetically) can be found on the Web. Those with a filter cup: QT400, SoyaJoy, SoyaPower, SoyQuick, SoyWonder, Vegan Star.

Filterless: Premium SoyQuick.

8570. Vandemoortele, N.V. 2009. Vandemoortele N.V. and Dean Foods announce an agreement for Dean Foods to acquire Alpro (News release). Ghent, Belgium. 2 p. June 15.
• ***Summary:*** "Gent, Belgium, June 15, 2009, Vandemoortele, N.V., Belgium's largest privately-held food company, and Dean Foods Company (NYSE: DF) today announced an agreement for Dean Foods Company to acquire Vandemoortele's Alpro Division. The transaction's price is approximately 325 million euros. It is expected to be completed in the third quarter.

"Jean Vandemoortele, President of the Group Executive Committee of Vandemoortele, said, 'Earlier this year, we decided to change our strategy by focusing on our Frozen Bakery and Margarine & Fats activities, which represent together 80 percent of the Group's turnover and are essentially oriented towards professional and industrial customers. Selling Alpro to Dean Foods offers the best opportunities for future growth, both for our Frozen Bakery and Margarine & Fats activities, which will have the necessary resources to pursue their expansion in Europe, and for Alpro and its staff, which provides a strong European platform for Dean Foods.'

"'We think this is a great deal and establishes Dean Foods as a clear global leader with over $1 billion in annual retail sales in the attractive soy beverages and related products category,' said Gregg Engles, Dean Foods Chairman and CEO. 'This is one of the most strategic assets we could have acquired. We see significant opportunities to leverage the collective strengths of both businesses across a global soy platform to accelerate growth.'"

"With its Alpro (R) soya and Provamel (R) brands, Alpro is the European leader in branded soybased beverage and food products and had net sales of approximately 260 million euros in 2008. Alpro has five manufacturing sites in Belgium, the United Kingdom, France and the Netherlands, and employs approximately 750 people.

"Alpro CEO Bernard Deryckere will report to Joe Scalzo, CEO and President of Dean Foods WhiteWave-Morningstar division. Alpro will be run as a separate European business."

Note: Those who know say that Dean Foods paid about $400 million for Alpro–which may equate at the time to 325 million euros.

for meat, dairy and baking applications. May 31–June 5. http://intsoy.nsrl.uiuc.edu/courses/processing_marketing/bios/sharma.html. 1 p. Printed 29 Aug. 2010.
• ***Summary:*** "Speakers: R.K. Sharma, American Soybean Association International Marketing.

Dr. Ratan Sharma has a Ph.D. in soymilk and tofu technology from Banaras Hindu University, Varanasi, India. He is an international expert in soymilk and tofu production technology. He is credited with transferring the soymilk machine (SoyaCow) technology from Canada to India on behalf of the Child Haven International and ProSoya Inc. Dr. Sharma has been duly trained in Canada and USA on the soymilk production and utilization. He has the privilege to train the soymilk and the tofu course trainees from all over the world at the University of Illinois, USA. Dr. Sharma has been to Canada, USA, Egypt, Singapore, Uganda, Tanzania, Sri Lanka, South Africa, Nepal and Bangladesh to help the soymilk programs in these countries. Dr. Sharma has more than 15 years experience into the soymilk and tofu commercialization. The efforts of Dr. Sharma for transferring this SoyaCow technology are really remarkable as it has created lots of employment opportunities and low cost nutrition in India and in many other countries. Dr. Sharma has established more than 375 soy food manufacturers in India and many other countries and is helping them on a regular basis in product development, marketing etc.

"The overall objective of ASA-International Marketing's (ASA-IM) activities is to increase soybean consumption in the SAARC countries and, thereby, to create larger markets for U.S. soybeans and soybean products." Address: NSRL, Univ. of Illinois at Urbana-Champaign, Room 170 NSRC, 1101 W. Peabody Dr., Urbana, Illinois.

• ***Summary:*** Published as both a printed, bound book and as an e-book. The index contains 31 entries for tofu, 19 for tempeh, 15 for soy milk, 5 for miso, 4 for seitan, 3 for edamame, and 1 for meat substitutes.

Includes recipes for: Tempeh bacon (p. 57). Tofu scramble (p. 62). Seitan curry bowl (p. 119). BBQ tempeh sandwich (p. 123). Sea vegetable salad with edamame and wasabi (p. 142). Tofu garden vegetable salad (p. 148). Tuna-free tempeh salad (p. 149). Tofu satay (p. 193). Tofu saag (p. 209). Asian shiitake tofu (p. 223). Macadamia nut-crusted tofu (p. 224). Chipotle chile-rubbed southwest tempeh (p. 226). Tempeh vegetable enchiladas (p. 237).

Facing page 3 is a photo of Mark and Jennifer. Address: 1. Founding Chef, Blossoming Lotus Restaurant; 2. Co-author (with Reinfeld) of *The Complete Idiot's Guide to Eating Raw.* Both: Kaua'i, Hawaii.

8573. Vitasoy International Holdings Ltd. 2009. Annual report 2008/09: Where healthy life begins. New Territories, Hong Kong. 184 p. July. 30 cm. [Eng; Chi]
• ***Summary:*** For the fiscal year ended 31 March 2009, adjusted group turnover (sales) was HK$2,783 million, up 14.3% over the previous year. Of these sales, 53% came from Hong Kong and Macau, 20% from Mainland China, 15% from North America, 10% from Australia and New Zealand, and 2% from Singapore.

Gross profit was HK$1,279 million, up 13.1% from the previous year. Sales analysis by product categories: Soymilk 44%, tea 20%, tofu 10%, lunch boxes and snacks 8%, dairy milk 5%, etc.

At "Chairman's statement," a large color photo shows Winston Yau-lai LO, age 68. His resume is on p. 49. The resume of Ms. Yvonne Mo-ling LO, aged 61 (who is on the board of directors), is on page 51. Total dividends for the year are 21.5 cents per share.

In North America, Vitasoy USA lost money but, "in terms of profit from operation, it continued to achieve improvement by narrowing its operating loss further to HK$6 million, versus HK$11 million for the fiscal year 2007/2008. Tofu sales in North America grew by 11% "and pasta / wrap sales by an even stronger 29%. However, the sales of soymilk and imported products were down by 18% and 20% respectively." "In the last quarter of 2008, it was decided that Vitasoy USA should exit the loss-making aseptic soymilk business and concentrate on the tofu and Asian market businesses which were making positive contributions to the Group" (p. 33-34).

Singapore: "In early April 2008 we acquired the entire equity of Unicurd–a leading soyfood manufacturer and marketer in Singapore." Details on Unicurd's sales are given as are color photos of 8 of its products.

A five-year summary (2005 to 2009; p. 4) shows that, during this entire period, sales (turnover) increased 50.5% and annual profit increased 52.8%. Address: No. 1, Kin Wong Street, Tuen Mun, New Territories, Hong Kong. Phone: (852) 2466 0333.

8574. Malnutrition Matters. 2009. Food technology solutions (Website printout–part). www.malnutrition.org 1 p. Printed Aug. 30.
• ***Summary:*** This is one of the most interesting and innovative organizations working with soyfoods in the world today. Low-tech and appropriate technology systems, that operate with or without electricity, make soymilk, tofu, soy yogurt, soy coffee, peanut butter, and related foods at very low cost and high efficiency. Congratulations to Frank Daller, his team, and his overseas partners.

Contents: Home. Partners and sponsors. Background: Foods and malnutrition. Technology / expertise. Personnel / Associates. VitaGoat. SoyCow. SolarFlex Dryer. Projects:

VitaGoat projects in Africa: KwaZula Natal, South Africa, Uganda, Zambia, Kenya, Tanzania, Namibia, Guinea, Chad, Mozambique; Also India, North Korea. Contact us. Address: 48 Rivershore Crescent, Ottawa, ON K1J 7Y7, Canada. Phone: 1-613-742-6888.

8575. Daller, Frank. 2009. Chronology of work with soy and Malnutrition Matters worldwide, especially soymilk and development of the VitaGoat (Interview). *SoyaScan Notes.* Aug. 31. Conducted by William Shurtleff of Soyinfo Center.
• ***Summary:*** 1951–Born in Bavaria, Germany.

1956–Emigrated to Toronto, Canada.

1989–Began occasional volunteer work with Child Haven International, a Canadian charity active in India.

1991–Introduced to Raj Gupta by Child Haven, which was considering doing a trial with SoyaCows at their children's homes in India.

1991–Saw first prototype of SoyaCow at Raj Gupta's house. He was then working as a research scientist with the Canadian government and moonlighting on soymilk processing with Grant Wood, a technologist also with the Canadian government.

1992–Moved to Ottawa, invested some money in ProSoya Inc., and began working as vice-president to complete technology development and begin commercial phase of operations.

1993–First beta models of SoyaCow–made in Canada sent for field trials at Child Haven homes in India.

1993-94–Began to develop technology transfers with Indian company SSP and Russian company ASSOY. Gives equipment design and know-how to foreign partner to make equipment for ProSoya and for the partner to sell (in their own country) after paying a royalty to a local NGO (Child Haven in India).

1993–ProSoya continued development of larger systems including continuous process soymilk plants.

1994–Became President of ProSoya Inc.

1997–Resigned and sold my shares in ProSoya Inc.

2000–Founded non-profit organization Malnutrition Matters (MM) with partner Brian Harrigan. Objective was to develop small-scale food processing systems including soy, for developing countries. By this time, ProSoya had almost stopped promoting the small SoyaCows, since the business was too small compared to larger commercial systems.

2001-03–MM developed VitaGoat system for non-electric production of soymilk and other foods.

2003–First three "beta" models of VitaGoat, built in Canada, were delivered to Africare projects in Guinea, Chad, and Mozambique.

2005–Transferred VitaGoat technology to G.D. Machines in India.

2007–Brian Harrigan left MM to work with Africare in Zambia for two years.

2007–MM won a Laureate Award from the Tech Museum of Innovation in San Jose [Silicon Valley], California. It was an honor without money.

2007–Alpro, N.V. of Belgium began sponsoring the VitaGoat. [Philippe Vandemoortele introduced Frank to Alpro after Philippe had ceased to be active in Alpro].

2008–MM Won World Bank Development Marketplace competition [project design with local partner] for VitaGoat school feeding project in Orisssa, India. With the funds from winning, MM developed the project in India.

2008–Developed new lower-cost version of SoyaCow (named SoyCow) with separate electric grinder and pressure cooker and lower-cost press, and with option of multi-fuel boiler used by all VitaGoat systems. [Note: Raj Gupta had not used the name SoyaCow for years].

2009 Aug.–Currently there are over 90 VitaGoats in operation worldwide. The greatest number [about 40] are in Africa, followed by South Asia and North Korea. Others in Thailand and Brazil, plus demo systems in–Europe, U.S. and Canada.

With each system that is installed, the cost of the equipment, shipping, installation and training fees are provided (as a commercial transaction) by a partner organization–typically a non-governmental organization (NGO) or a government sponsored organization–but rarely an individual businessperson.

For more details see the very interesting Malnutrition Matters website at www.malnutrition.org. Address: Founder, Malnutrition Matters, 498 Rivershore Crescent, Ottawa, ON K1J 7Y7, Canada. Phone: 613-742-6888.

8576. Pfoutz, Arianne. 2009. Vermont soy focuses on local, organic soyfood production. *Organic and Non-GMO Report* (*The*) (*Fairfield, Iowa*) 9(7):8-10. July/Aug.
• ***Summary:*** "The buzz phrase 'fresh, organic, local' has found its perfect expression at Vermont Soy, a manufacturer of fresh soymilk and artisanal tofu at Hardwick, Vermont. Recently rated one of the top five most trustworthy soy companies in the US by the Cornucopia Institute, Vermont Soy is a key player in the transformation of this small, former granite mining town of 3,000 into an impressive model for sustainable agriculture and community economy."

8577. Richards, Michael. 2009. Vippy Industries Ltd. in India (Interview). *SoyaScan Notes.* Sept. 20. Conducted by William Shurtleff of Soyinfo Center.
• ***Summary:*** Vippy Industries Ltd. is located at 28, Industrial Area, A.B. Road, Dewas (northeast of Indore), Madhya Pradesh 455 001, India. Website: www.vippysoya.com. The company does $100 million in sales a year. They are an old soybean crushing company and claim to have played an important role in bringing commercial soybean production and manufacture of soybean products to India. Michael has visited the company 3-4 times. He says they sell soymilk and other soy products. Address: Founder and owner, SoyaWax

International, 1029 Third St. S.E., Cedar Rapids, Iowa 52401. Phone: 319-213-2051.

• ***Summary:*** "The NSRL serves as the National Training Center for educational instruction and technical support for Soy dairy processing and equipment, including SoyCows and VitaGoats."

A color photo shows Danny Erickson, training coordinator, NSRL, as he works to help grind soybeans using a VitaGoat.

8579. Sharma, Ratan. 2009. Bio-Data [Resumé]. India. 2 p. Oct.

• ***Summary:*** Note: Ratan Sharma, PhD, is a humble man, dedicated to helping others. He prepared this in Oct. 2009 at the request of one of the Members of Parliament in India, who used it in recommending Dr. Sharma for a high level award. Soyinfo Center had to make a special request to include it here.

"Name: Ratan Sharma. Date of birth: 1 March 1961. Place of birth: Ram Nagar, Allahabad [in the north Indian state of Uttar Pradesh (UP)]. Native address: V&PO [Village and Post Office]: Ram Nagar (Sirsa), Distt. Allahabad (UP). Present address: KH-177, Kavi Nagar, Ghaziabad–201 002 (UP).

"Qualification: Ph.D. from Banaras Hindu University in Soya Technology.

"Additional qualification: Short term courses on Soya food processing and Nutrition from the University of Illinois, and Texas A&M University, USA.

"Special achievements: Transferred a patented soymilk processing technology from Canada to India and helped the entrepreneurs to start the soy food business very successfully. Initiated and developed approx. 364 such entrepreneurs in India. This created a substantial employment opportunity and low cost affordable quality nutrition in general.

"Countries visited: Upon the success of this technology in India I was invited by many other countries to implement such technology in those countries for the better nutrition and employment generation especially in the African countries. With the help of this technology I worked to improve the nutritional status of the people who are suffering from HIV and AIDS. In this connection I visited Canada, Egypt, Singapore, Uganda, Tanzania, South Africa, Thailand, Nepal, Bangladesh, Sri Lanka and USA for training, demonstration and delivering lectures.

"Special Features: Since my childhood I had the compassion of doing some thing for the people of my country. I realized that a large number of our population is suffering from the malnutrition problem, and the regular protein sources are almost unaffordable for most of the people. This situation forced me to develop some low cost protein source which any one can afford. After completing my masters from the Banaras Hindu University I decided to do my Ph.D. for developing low cost nutrition through soybean. Also, I was influenced by Mahatma Gandhi who realized soybeans as a low cost nutritional source for this country. He tried a lot to introduce soy in the Indian diet in the year 1935 but because the processing technologies and systems were not very good during those days so Soya products could not get acceptance in the Indian diet at that time. I completed my Ph.D. on developing the low cost Soya products and started working to find some suitable processing system to process the soybeans into the soymilk and its derivatives on a cottage industry level at a very low cost. In the mean time I came to know about such technology developed by a Canadian company in Canada. I contacted them and with the help of another Canadian NGO (Child Haven International) I started working on the process of the technology transfer. I coordinated between all three organizations and finally transferred this Patented Canadian Technology successfully to an Indian company (SSP Pvt. Ltd) in the year 1995. I helped SSP Pvt. Ltd. to develop the Indian soymilk processing system based on that Canadian technology and helped hundreds of the unemployed people to use these machines as a cottage scale business for their employment and to produce a better quality low cost nutrition for the people of India. I worked very closely with the entrepreneurs using this technology and helped them to develop as a very successful entrepreneur. This technology was so successful that many govt. organizations and universities installed this processing system to promote this technology with the same objective. ICAR [Indian Council of Agricultural Research], CSIR, Indian army, Army Rehabilitation Centers, National Research Development Corporation (NRDC), Khadi and Village Industry Commission (KVIC), Ministry of Small and Medium Entrepreneurs (MSME), marketing corporations of a few state, industry departments of the Government of India (GOI) promoted and supported this processing technology for the same purpose of employment generation and promoting the low cost nutrition as well. Government of India included this machine under the Prime Minister's Employment Scheme and providing subsidized loan to the unemployed people interested to buy this system. I transferred this technology when there were no such low cost soymilk producing technology available in India and rarely in the world.

"This technology got its way to many developing countries under human feeding programs all over the world. In this connection I visited many countries and implemented this technology in those countries also for promoting the low cost high quality protein through this technology. Also, I got chances to train the group of people from all over the world on this technology under such training programs in USA and Canada.

"While working with US and Canadian organizations in India I got enough opportunity to migrate to USA or Canada but I decided to live and work in India only to work for my fellow Indians who need me and my expertise most.

"Although I did not publish any research papers in the scientific journals but established more than three hundred and fifty such soymilk processing units based on this technology. All of these machines are running successfully and employed a large number of people in their business and selling low cost nutritional soy products to the Indian population.

"India is facing a high incidence of protein calorie malnutrition problem. Through this successful development I am trying to improve the nutritional status of the country by providing low cost affordable and quality nutrition to all my fellow Indians. My overall goal is to eliminate the malnutrition problem from India by developing low cost nutritious products which every one can afford. I am continuously and diligently working on this.

"Ratan Sharma, Ph.D."

Note: The number 350 soymilk processing machines is a conservative number; it is the number of machines that Dr. Sharma introduced to India that were in operation at the time this document as written. This number includes about 325 SoyaCows (SC20 model), four SoyaCow plants with 200 liters per hour capacity, some non-SoyaCow plants made in India, and the rest VitaGoat plants from Malnutrition Matters (MM) in Canada. Ratan says that MM has not had significant commercial success in India. VitaGoat is used mostly by NGOs with very little production.

The total number of soymilk and tofu machines that Dr. Sharma has sold up to Oct. 2010 is actually close to 500. In the beginning, many small soy businesses failed, and sold their machines to someone else.

Quite often ProSoya orders larger capacity soymilk plants from SSP but not the complete plant. They source the other parts elsewhere, either in India or near the place where they are going to supply the plant.

SSP still manufactures the 100 liter/hour and 200 liter/hour capacity soymilk plant. They decided it almost a year back. After they transferred the SoyaCow business to Pristine Plants (PPI) on 9 Sept. 2006, they didn't manufacture any SoyaCows. SSP is a very big and technically sound company. They improved the SoyaCow somewhat from its original model. Address: PhD, Manager, the SoyaCow Centre, KH-177 Kavi Nagar, Ghaziabad 201 002 UP, India.

8580. Shu, Xiao Ou; Zheng, Ying; Cai, Hui; et al. 2009. Soy food intake and breast cancer survival. *J. of the American Medical Association* 302(22):2437-43. Dec. 9. [37 ref]

• ***Summary:*** Soyfoods improve breast cancer survival rates, in part because they are rich in phytoestrogens which resemble the human hormone, estrogen. Since estrogen appears to play a role in breast cancer development and progression, is it safe for women with breast cancer to consume soy? A recent large study examined soy food intake in women in China with breast cancer and evaluated the association of soyfoods with cancer recurrence and with death. More than 5,000 women who had been diagnosed with breast cancer were studied for an average of four years after diagnosis. Women who ate the most soy foods had almost a 30 percent lower risk of death during the period studied and were significantly less likely to have a recurrence of breast cancer compared to women eating the lowest amount (5 grams of soy protein or less per day) of soyfoods. These results were similar for both estrogen-receptor positive and estrogen-receptor negative cancer. The use of a common breast cancer drug, Tamoxifen, did not change results. Intakes of more than 11 grams of soy protein, or more than 40 milligrams of soy isoflavones, did not appear to offer additional protection. Women in this study mainly ate traditional soyfoods, such as tofu, miso, soybeans, and soymilk, rather than using soy supplements, fake meats, or isoflavone supplements. In other words, it looks as if a moderate intake of traditional soyfoods is both safe and beneficial for women with breast cancer. "Conclusion: Among women with breast cancer, soy food consumption was significantly associated with decreased risk of death and recurrence."

"Soy food intake, as measured by either soy protein or soy isoflavone intake, was inversely associated with mortality and recurrence."

From a review by Reed Mangels in *Vegetarian Journal,* 2010, Vol. 29, No. 3, p. 12. Address: 1. M.D., PhD, Div. of Epidemiology, Dep. of Medicine, Vanderbilt Epidemiology Center and Vanderbilt Cancer Center, Vanderbilt Univ. Medical Center, Nashville, Tennessee 37203.

8581. National Toxicology Program (NTP), Center for the Evaluation of Risks to Human Reproduction (CERHR). 2009. Expert panel evaluation of soy infant formula. Alexandria, Virginia. 3 p.

• ***Summary:*** "The National Toxicology Program (NTP) Center for the Evaluation of Risks to Human Reproduction (CERHR) convened an expert panel on December 16-18, 2009, in Alexandria, Virginia to evaluate soy infant formula.

"The 14-member, independent, scientific panel reviewed and evaluated the available scientific data on soy infant formula. In their deliberations, the expert panel considered the quality and strength of the scientific evidence that soy formula or its isoflavone constituents might cause adverse effects on human development. The expert panel also identified gaps in the available scientific data on the possible effects of soy formula and suggested areas where additional research is needed. Soy formula is an infant food made using soy protein and other components. It is fed to infants as a supplement or replacement for human milk or cow milk formula. Soy formula contains isoflavones, naturally

occurring compounds found primarily in beans and other legumes including soybeans, peanuts, and chickpeas. The three main isoflavones in soy formula are genistein, daidzein, and to a smaller extent, glycitein.

"All members of the panel served as individual experts and not as representatives of their employers or other organizations.

"The NTP and expert panel use a five-level scale to express their conclusions to characterize the likelihood of an adverse human health effect resulting from exposure to a substance or chemical, in this case soy infant formula. The concern levels range from highest to lowest: "Serious Concern, Concern, Some Concern, Minimal Concern, Negligible Concern.

"Expert Panel Conclusions: The Expert Panel expressed minimal concern for adverse developmental effects in infants fed soy infant formula.

"The panel voted 10 yes, 2 no in favor of the conclusion. The two panel members voting no included one member who expressed negligible concern and one member who expressed some concern. This conclusion is based on:

"Lack of clarity on whether studies in experimental animals treated with genistein only can be extrapolated to infants fed soy infant formula, i.e., exposure to a single isoflavone versus soy infant formula.

"Interpretation of findings from experimental animals as demonstrating adverse effects, i.e., advanced vaginal opening, effects on the mammary gland in the context of interspecies comparisons.

"Although there are a large number of experimental animal studies published on genistein or soy, there are only a limited number of studies where experimental animals were treated only during the relevant life stage of birth to weaning. Multigenerational studies do not permit discerning effects attributed to gestational or lactational exposure.

"However, a number of studies in experimental animals and one study in humans reported effects related to the reproductive system and this elevates the concern from 'negligible' to 'minimal.'

"Studies of sufficient quality in humans have not been conducted to address the concerns raised from the experimental animal findings or to identify previously unrecognized endpoints.

"Background: The NTP convened a panel in 2006 to evaluate soy formula and genistein. The NTP did not complete the evaluation or issue a final opinion on this topic. Since 2006, a substantial number of new publications have been published for these substances; therefore, CERHR determined that an updated evaluation of soy formula was needed before NTP could develop its opinion on this topic. The panel considered all of the data and not just information published since 2006.

"The expert panel, with assistance from CERHR staff, prepared an updated expert panel report that was released for public comment on October 19, 2009, and finalized at the December expert panel meeting.

"Information about the CERHR evaluation of soy infant formula is available at: http://cerhr.niehs.nih.gov/chemicals/genistein-soy/SoyFormulaUpdt/SoyForm ula-mtg.html.

"Next Steps: Following the December 2009 meeting of the expert panel, the NTP will solicit public comment on the expert panel report. The NTP will use the expert panel report, public comments, and any new scientific literature deemed relevant to the evaluation to prepare the NTP Brief that expresses the NTP's level of concern conclusions for soy infant formula.

"The draft NTP Brief is tentatively scheduled for release for public comment in March 2010 and peer reviewed by the NTP Board of Scientific Counselors at a meeting on May 10, 2010, at the National Institute of Environmental Health Sciences in Research Triangle Park, North Carolina. Following the peer review, the NTP will finalize its conclusions on soy infant formula and release the NTP Monograph containing the NTP Brief, expert panel report and public comments. The NTP Monograph on Soy Infant Formula will be available to the public, appropriate regulatory authorities, and health professionals for use to make personal or public health decisions.

"The NIEHS supports research to understand the effects of the environment on human health and is part of the NIH. For more information on environmental health topics, visit our Web site at http://www.niehs.nih.gov."

8582. *SoyaScan Notes.* 2009. Chronology of major soy-related events and trends during 2009 (Overview). Dec. 31. Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** Jan. 7–The USDA calls for an audit of the soybean checkoff program. The American Soybean Association had filed a complaint on 10 Dec. 2008.

May–Monsanto files a lawsuit against DuPont for patent infringement; DuPont countersues, accusing Monsanto of being anti-competitive.

June 15–Vandemoortele N.V. (Belgium) and Dean Foods (Texas) announce an agreement whereby Dean Foods will acquire Vandemoortele's Alpro Division. The transaction's price is approximately 325 million euros [$400 million]. It is expected to be completed in the third quarter of 2009. With its Alpro (R) soya and Provamel (R) brands, Alpro is the European leader in branded soy-based beverage and food products and had net sales of approximately 260 million euros in 2008. Alpro has five manufacturing sites in Belgium, the United Kingdom, France and the Netherlands, and employs approximately 750 people.

June–SunOpta opens a soymilk / soybase plant in Modesto, California, about 5 minutes drive from the plant owned by the WholeSoy Co.

July 13–Monsanto acquires WestBred, LLC, a Montana-based company that specializes in wheat germplasm.

Worldwide, over the past 5 years, there is growing interest among farmers and farm organizations in genetic engineering of wheat.

Aug. 17–Monsanto and DuPont (via Pioneer Hi-Bred), the world's two biggest sellers of genetically engineered seeds, turn up the volume in their latest skirmish. DuPont accuses Monsanto of monopolistic practices. The two giants are battling for control of the seed business.

8583. Moncrieff, Scott. 2009. What the Sam's Chicken? The true story of the man behind the meat. *Focus* (*The Andrews University Magazine*) 45(4):20-23. Fall.

• ***Summary:*** "You go through the serving line at Dining Services, picking up mashed potatoes and gravy, salad, and a drink. Oh, and you add a portion of Sam's Chicken, along with two tablespoons of tartar sauce. It's pricey, at $3.79 a serving–and 25 cents for the tartar sauce–but it has been an irresistible favorite at Andrews University for 40 years. As you work through your five ounces of wheat gluten, soybean oil, soy flour, yeast extract, sea salt and top secret spices, you have no idea of the history of Sam's Chicken, or who Sam is, if indeed there is such a person. But as those 400 calories hurtle past your taste buds and into your bloodstream, sit back and maintain consciousness. I'm going to tell you.

"Our story starts about 6,000 miles away from Berrien Springs, Michigan, near the city of Obihiro, on the island of Hokkaido, in Japan. That is where Michihisa Yoshimura was born on March 4, 1915. His father, a well-to-do businessman, owned a coal mine and raced horses for fun. In some ways, Michihisa was a lot like your average American kid of the Post World War I era. He liked to snow ski, ice skate and play baseball (catcher and left field). As Michihisa got into his teens his mother, a Christian (his father was an atheist), wanted her son to attend a Christian school, so she sent him way down south to Saniku Gakuin, the Adventist college about 50 miles east of Tokyo on the other side of Tokyo Bay.

"There Michihisa providentially–for purposes of our story and title product–worked in the food department, helping manufacture peanut butter, grape juice and bakery products. During summer vacations he worked with his grandfather's flax company, further extending his knowledge of food production. When Michihisa turned 18, in 1933, he was required by law to apply to join the federal army. However, he was rejected because of flat feet–Japan was not yet in a large-scale war and its military was selective. This rejection prepared the way for him to gain permission to leave Japan to attend Madison College, just outside Nashville, Tenn., where he began further studies in 1937. He had been encouraged to go to Madison by Perry Webber (Emmanuel Missionary College class of 1911), a PhD in chemistry who had a special interest in soyfoods, and had spent much time at Madison College as well as in Japan. As Michihisa set off for Madison, Webber suggested he adopt the name 'Sam,' after the biblical Samuel. Thus Webber unwittingly saved us from 40 years of 'Michihisa's Chicken.' Incidentally, Sam's younger brother Zenzaburo, who remained in Japan, trained as a kamikaze pilot, and had given away his clothes preparatory to his final mission–and then, mercifully, the war ended.

"In entering Madison College, Sam had come to the school most suited to enhance his work as a food technologist with soy products. In 1904, E.A. Sutherland, having resigned as president of Emmanuel Missionary College, embarked with his colaborer Percy Magan to open a new school in the South. This institution, originally the Nashville Agricultural and Normal Institute, became Madison College (in 1937), and Sutherland served as president there for over 50 years. This school, like Andrews and Saniku Gakuin, focused on the harmonious development of body, mind and spirit. As part of the plan, students were to work off half or more of their expenses each year. Among the industries which developed on campus was a food factory which, in 1918, became Madison Foods. By the time Sam arrived in 1937, Madison Foods was a leading–probably the leading–developer of soy-based products in the United States, including soymilk, soy meat substitutes and tofu products.

However, times were hard and wages were pennies per hour. Sam's classmate Shirou Kunihira worked in the soymilk production plant, while Sam worked at the bakery, where his duties included running the bread loaves through the slicer. Shirou would get an allotment of soymilk at the end of his shift and Sam would collect the crumbs from the pan under the slicer. With these ingredients the friends would share a humble evening meal. For Japanese and Japanese-American students, there was the added challenge of the United States being at war with Japan. Despite these challenges, Sam graduated from Madison College in 1941 and worked an additional two years for Madison Foods, but now his passion for soy was balanced with a new passion for she.

Sumiko Yano, a.k.a. Sumi, was born in Japan, but grew up in Southern California. At the time the U.S. declared war on Japan, in December of 1941, her family was living in El Centro, California. Her father made his livelihood by arranging for cantaloupes and other valley produce to be shipped to market. In 1942, her family was given a one-month notice that they would be placed in a 'War Relocation Camp' in Poston, Arizona. (After relocation started, Sam and the other Japanese or Japanese-Americans at Madison would hide in the cornfields whenever immigration officials came looking for Japanese persons.) For approximately one year Sumi lived with her parents in an army barracks at the camp, eating in the communal dining area, using a latrine, and working every day in the agriculture department as a secretary, for $19 per month. One day, Sumi received a box of home-baked peanut-butter cookies from someone named Sam. Sam had sent the cookies as part of a thank you to

Sumi's family, who had helped Sam's family with a financial transaction at a time when Japanese bank assets were frozen. Sumi wrote back asking for more cookies. Sam, in turn, helped arrange for Sumi to get early release from camp, in order to attend Emmanuel Missionary College, through the auspices of A.N. Nelson, then dean at EMC, but formerly president of Saniku Gakuin when Sam was a student there. Sumi, in turn, decided to pass through Madison on her train trip to EMC, to meet Sam. They met and got acquainted in the home of Perry Webber, and that fall of 1943 found Sam as well as Sumi enrolled for classes at EMC. Sumi worked as a reader in the home economics area for Mrs. Holquist, while Sam worked at the farm and the greenhouse.

The young couple was married on June 12, 1944, at a friend's house in Chicago, and lived in an apartment until Sam's graduation on August 1, 1945, with a BS in agriculture. Their first child, Steve, was born in June of that year. Sumi remembers that a friend drove her to Watervliet, Michigan, where the doctor, sympathizing with her state as a poor student, delivered her baby for free. Sam returned to Japan in 1947 (Sumi and infant Steve followed six months later), and spent ten years helping build up the food factory at Saniku Gakuin. The Yoshimuras returned to Tennessee in 1957, where Sam became production manager at Madison Foods. Continued. Address: M.A., Prof. of English, Andrews Univ., Berrien Springs, Michigan 49104.

8584. Soyatech, LLC. 2009. Soya & Oilseed Bluebook 2010: The annual directory of the world oilseed industry. Bar Harbor, Maine: Soyatech. 356 p. Dec. Comprehensive index. Advertiser index. Statistical conversions. 28 cm.
• ***Summary:*** This is the 4th year in a row that the *Bluebook* (a $95 value) has been sent free of charge to qualified industry members. On the cover are six color photos, including a heavily loaded tanker moving through a blue sea, and a farmer standing in a field of soybeans, bending over to examine one of the plants.

Soyatech has moved to a new part of Maine during the past year. This edition of the *Bluebook* contains 74 fewer pages than it did last year. The oilseeds covered in this book are (alphabetically): Canola, coconut, corn, cottonseed, flaxseed, hempseed, jatropha, linseed, palm, peanut, rapeseed, safflower, soya, sunflowerseed–the same as last year.

On the inside front cover is a color ad from Natural Products Inc. (Grinnell, Iowa), makers of innovative ingredients for bakery, soymilk and tofu. On the first page is a full page color ad from Louis Dreyfus Commodities; on the next page a full page color ad from desmet ballestra–which supplies healthy technologies for oils containing zero trans fat. SunOpta has a full-page color ad on page 4.

On the rear cover is a full page color ad from ADM titled "Trailblazing" showing a man on a mountain bike riding through muddy water. The text: "ADM constantly finds new paths for functional foods with NutriSoy soy isolates."

Chris Erickson is CEO. Keri Hayes is publisher and events director. In the Foreword, Joe Jordan (General manager and *Bluebook* content director) writes about the now popular word "sustainability" and its various definitions. He asks many questions about sustainability. Address: P.O. Box 1307, 19 Clark Point Rd., Suite 112, Southwest Harbor, Maine 04679. Phone: 207.244.9544.

8585. Wiley, Mary. 2009. Soy for life: The soy food industry is poised for growth. *Ontario Grain Farmer* 1(3):10-11. Dec.
• ***Summary:*** "Soy for Life" is the name of a new communications campaign launched by Soyfoods Canada (a trade association composed of Canada's leading soy food and beverage manufacturers) to help boost sales. "Their products represent a $340 million business in Canada," making soy foods and beverages part of Canada's grocery mainstream.

"This mainstream presence came as a result of... a 1999 US government labeling claim for soy, but sales have slowed somewhat in the past couple of years."

Peter Joe, President of Sunrise Soya Foods and head of Soyfoods Canada's board of directors says that his association has been "focusing on encouraging a labeling health claim for Canadian soy food and beverage products similar to the one that exists in the US." But recently the association "has shifted its attention back to marketing and communications activities targeted to consumers and consumer influencers." The campaign is designed to re-introduce Canadians of all ages to the benefits of soy.

"Dr. Brian Wansink of Cornell University's Food and Brand Lab was the keynote speaker at Soyfoods Canada's Soy Symposium, held recently [Oct. 5] in Toronto. He advised the gathering of marketers, retailers, distributors, and other soy industry stakeholders to target young women in the 18 to 35 age group, using an incremental usage approach." Dr. Wansink sees a bright future for soyfoods in Canada.

"Results of an Angus Reid September 2009 online survey of 1,000 Canadians about soy foods... showed that consumption of soy food products is highest among young Canadians, higher income households and women. It also showed that women in the 18 to 34 age group, who tend to be more frequent soy consumers, are particularly attuned to messaging about soy, both positively and negatively.

"Nutritional benefits: Dr. Allison Duncan, Canada's leading soy nutrition researcher, provided a thorough update at the symposium. Duncan and her human nutrition team at the University of Guelph recently released results of a study showing soy protein helps lower cholesterol and reduces the risk of heart disease in adults with type 2 diabetes."

"Market leaders in the tofu and soy beverage categories are using identity preserved [IP] non-GMO and organic soybeans in response to consumer demand."

A photo shows the Soyfoods Canada booth at The

Journey to Your Good Health area of the Royal Agricultural Winter Fair. Some 150,000 visitors attended the fair.

8586. **Product Name:** Soymilk [Sweetened, or Condensed].
Foreign Name: Soymilke (Doce de Soja, Condensado de Soja).
Manufacturer's Name: Olvebra.
Manufacturer's Address: Brazil.
Date of Introduction: 2009.
Wt/Vol., Packaging, Price: 330 gm and 320 gm.
How Stored: Refrigerated.
New Product–Documentation: Label sent to Soyinfo Center by Chico Leroux of Lyon, France. 2012. Feb. 8. Blue, red and yellow on white. Chico says: "Tastes very very good, probably like the real thing. It's full of fat and sugar! Probably GMO. Supermarkets in Portugal now are selling it under their own brands. Year: 2009."

8587. Esselstyn, Rip. 2009. The Engine 2 diet: the Texas firefighter's 28-day save-your-life plan that lowers cholesterol and burns away the pounds. New York, NY: Wellness Central. xiii + 273 p. Foreword by T. Colin Campbell, PhD. Illust. Index. 24 cm.
• ***Summary:*** A very interesting, readable, and innovative book that advocates a sound, healthy diet that can last a lifetime. "Rip managed to convert a firehouse full of committed firefighters to a plant-based diet. Rip (born in 1963) is the eldest son of Caldwell B. Esselstyn, Jr., M.D., who has become famous for his ground-breaking book *How to Prevent and Reverse Heart Disease.* This book is both similar and different. It is similar in that the basic whole foods, plant-based diets advocated by father and son are 98% the same (and please focus on practicing that 98% and not squabbling about the 2%). It is different in that Rip is from a younger generation, is not a physician but an athlete and firefighter, and is trying to help people who want help in lowering their high cholesterol levels and their weight. He is not primarily trying to help people who have had at least one heart attack, are a death's door, and are (generally) willing to do almost anything to save their lives.

In Chapter 2, "My story," we read that while in school, Rip was an outstanding athlete. He set many high school swimming records (he still holds a national record in the 200 meter medley relay); he was a top player in his high school tennis team and co-captain of the water polo team.

At the University of Texas at Austin, he was a three-time All American swimmer and an Olympic trials qualifier in the 100- and 200-meter backstroke and freestyle events. In 1986 he graduated from the University of Texas and within six months he was competing as a professional triathlete–which required a 1-mile swim, a 24.9 mile bike ride, and a 6.2 mile run. In the Hawaii Ironman Triathlon he competed against six-time Ironman Champion Dave Scott, who was powered by a plant-based diet–Rip lost. So in 1987, because of the influence of his father and of Dave Scott, Rip changed to a healthy, whole foods, plant-based diet. In 1997 he decided to become a fire fighter in Austin, Texas. He continued to compete and won many events and set many records. For example, in May 2008 he set the National Record at the U.S. Masters Swimming Championship in the 200 yard

backstroke (1:56:55). Rip is married to Jill Kolasinski, and they have a son, Kole.

Rip's commitment to a healthy plant-based diet has resulted in many people asking him to help them with their diets. So in 2007, he devised the six-week Engine 2 Pilot Study in which 62 people agreed to eat a plant-strong diet; he put them through a gauntlet of tests before and after study to quantify the results–which were spectacular. Then in May 2008 he initiated a similar 4-week (28 day) study in which 15 people participated, 13 Engine 2 firefighters and two civilians. Again careful before and after records were kept. The average participant saw his total cholesterol drop 62 points (from 197 to 135), his average LDL (bad) cholesterol fall 50 points (from 125 to 74), and his weight drop 14 pounds (from 203 to 189). And all this in only 4 weeks! This book is based on the latter plan.

Rip makes much more use of soyfoods in his plant-based diet than does his father. The index contains 16 entries for tofu, 4 for tempeh, 4 for seitan, 2 for milk substitutes ("soy, rice, almond, and oat milk, for example"), 1 each tofu sour cream (p. 239), soy milk, soy yogurt (Silk or WholeSoy).

Soy related recipes include: Migas especiales (with 1 lb firm tofu, p. 154). Breakfast tacos (with "½ tube vegetarian breakfast sausage {we like Gimme Lean})," or use scrambled tofu (p. 155). E2 omelet (with "12 ounces Silken Lite Firm Tofu," p. 156). Lemon cornmeal pancakes (with "2 cups soy milk" and "½ cup soy yogurt, p. 157). Tofu steaks and mushrooms with mashed potatoes and green peas (with "1 pound extra-firm tofu," p. 180).

Linguine and creamy alfredo sauce (with "1 package Silken Lite firm tofu" and "2 cups unsweetened soy milk," p. 195). Lynn's meatloaf (with "10 ounces firm tofu," p. 204). Vegetable stir-fry with brown rice (with "1 pound seitan" and "two tablespoons low-sodium tamari," p. 208). Tempeh-mushroom stir-fry and soba noodles (with "1 package tempeh," and "3 tablespoons low-sodium tamari," p. 209). Red vegetable curry and brown rice (with "1 pound extra-firm tofu," p. 210).

Pad Thai (with "1 pound broiled tofu cubes {see p. 210}," p. 211). The great wooden bowl salad (with "1 pound extra-firm tofu," p. 214-15). Tofu vegetable spread (with "½ pound extra-firm tofu," p. 238). E2 sour cream (with "1 package Silken Lite firm tofu," p. 239). Asian marinade (with "3 tablespoons soy sauce, p. 241). Island marinade (with "4 tablespoons soy sauce," p. 241). Add tofu and allow to marinate refrigerated for 30 minutes to 4 hours (p. 241). Rip's favorite snacks include "4. Soy yogurt: I'm particularly fond of the Westsoy... cherry" (p. 243). E2 Basics chocolate pudding (with "1 package Silken Lite tofu," p. 245). Fruit bowl with soy drizzle (with "4-6 ounce container of soy yogurt," p. 249). Fruit mousse (with "1 package extra-firm Silken Lite tofu," p. 255). Maple sour cream dream (with "1 vanilla soy yogurt," p. 256).

Many recipes call for "Bragg Liquid Aminos" which are simply HVP (hydrolyzed vegetable protein) made by a quick and unnatural / artificial process; soybeans, wheat, and/or corn are immersed in hydrochloric acid until, after 1-3 days, the acid has broken down the protein into its constituent amino acids. Fermentation (as of soy sauce) can do the same thing naturally in 4-6 months. HVP is a source of flavor without salt, but that flavor is generally considered to not nearly as good as the flavor of soy sauce.

Rip has an exercise component to his "Engine 2" 28 day plan.

And Rip gives people a choice as they start the 28 day plan; one can be a Fire Cadet or a Firefighter (p. 22). The "Fire Cadet option is for those who prefer a more gradual approach." In week 1 Cadets must stop eating dairy products and processed / refined foods (such as refined sugar, white flour, etc.). In week 2 Cadets must stop eating meat, poultry, fish and eggs. In week 3 Cadets must do without added or extracted oils–even vegetable oils such as olive oil. In week 4 Cadets and Firefighters eat the total E2 diet, a healthy, whole-foods, plant-based diet. A Firefighter (the plan Rip recommends) requires that a give up all of these unhealthy foods from the start of the program. "Americans consume a staggering 50 percent of their calories from refined and processed foods."

Cholesterol-lowering drugs (such as statins: Rip, who is not a physician, does not use them).

Salt and sodium: Rip advocates a low-sodium diet.

Support groups after the 4-week program: Optional. People who wish to can create or find one themselves (p. 92).

Meditation and relaxation to reduce stress: Not part of the program.

Sugar and sweets. Avoid refined sugars, high fructose corn syrups, and things such as sodas, candy to which they are added. Instead choose natural sugars such as those in whole naturally-sweet fruits (p. 114-15, 134). In desserts, Rip often calls for up to 3-4 tablespoons maple syrup or agave nectar, yet a recipe for Brownies (p. 247) calls for "½ cup light brown sugar, packed" and "½ cup raw sugar." And a recipe for "Oatmeal raisin cookies" (p. 253) calls for even more refined sugar. Rip admits he has a sweet tooth. Some of his desserts violate the basic principles of the Engine 2 diet; they contain large amounts of refined sugars–unlike the recipes (developed by his mother) in his father's book. Moreover, his mother strongly suggests that desserts be saved for special occasions.

This is a sound, healthy diet and anyone who stays on it for 28 days will see dramatic improvements in their overall health and weight.

The Engine 2 diet is a good, practical diet for the rest of your life. But go easy on the desserts and try to avoid the ones with refined sugar. Address: Austin, Texas.

8588. Ronnen, Tal. 2009. The conscious cook: delicious

meatless recipes that will change the way you eat. New York, NY: William Morrow, an imprint of HarperCollins Publishers. 239 p. Illust. (Color). Index. 26 x 20 cm.
• ***Summary:*** A full-color vegan cookbook. The index contains 21 entries for tofu (including tofu ricotta, p. 82-83), 15 for Gardein, 11 for tempeh, 5 for soy milk, 3 for seitan, 2 each for miso and for soy cheese, and 1 each for soy creamer and soy yogurt. Includes interviews with: Yves Potvin, maker of Gardein (p. 157-59). Seth Tibbott, founder and president of Turtle Island Foods (p. 192-93). Address: Vegan chef, lives in Los Angeles and Vancouver, BC.

8589. Silverstone, Alicia. 2009. The kind diet: a simple guide to feeling great, losing weight, and saving the planet. Emmaus, Pennsylvania: Rodale Press. Distributed to the trade by Macmillan. xi + 308 p. Foreword by Neal Barnard. Illust. (color photos by Victoria Pearson). Index. 24 cm. [17 + 71 endnotes*]
• ***Summary:*** On the cover: "New York Times Bestseller." A powerful, very popular book about a plant-based (vegan) lifestyle and diet, which calls for only "real food," with some nice macrobiotic flavor–A whole grain dish should be at the center of every meal, use of seasonal foods organically grown, azuki beans, daikon, kuzu, kabocha, miso, mochi, nori, sea vegetables, seitan, shoyu, no white or cane sugar (a "crazy making" food), tamari, umeboshi, etc.

By a well known actress who first became widely known for the film *Clueless,* a 1995 American comedy film loosely based on Jane Austen's 1815 novel, Emma.

She dedicates the book to Sampson, a stray dog she picked up on the streets of Los Angeles, to all animals who suffer needlessly, and to all "who do their best to tread lightly on the earth."

The index contains 16 entries for tofu, 14 for miso, 11 for seitan, 4 for soybeans (whole dry), 3 for soy milk, 2 each for edamame and tempeh, 1 each for butter substitute (soy-based margarine, p. 142-43), cheesecake–tofu, cheese–vegan (p. 143), shoyu (p. 142), sour cream–soy (p. 143), soy candles (p. 134), and tamari (p. 142).

Some good quotations from a fine writer: "And what about your health?... What if I told you that, by eating a plant-based diet, you will strengthen your immune system, beautify your skin, increase your energy, and reduce your risk (significantly) of cancer, heart disease, diabetes, arthritis, osteoporosis, allergies, asthma, and almost every other disease? What if I said that I feel myself getting younger, more powerful, and more beautiful as I age simply because of *what I eat*?... If you want to lose weight, you've come to the right place (p. 1).

"Eating a plant-based diet is the most ecologically friendly thing you can do... Every time you purchase organic plant-based food, you are protecting the quality of the soil and participating in a more equitable distribution of resources. Conversely, every time you buy a mass-produced steak–packaged in Styrofoam and plastic–you are feeding a huge, unsustainable, toxic death machine. This may sound harsh, but its the truth! There's a whole world of consequences behind every decision we make" (p. 131).

A large color photo on the cover shows lovely Alicia Silverstone, seated, with a bowl of food in one hand. The book contains many fine color photos on glossy paper. Address: Actress, activist, and committed conservationist, Los Angeles, California.

8590. Vallaeys, Charlote; Kastel, Mark; Fantle, Will; Christianson, Lynn; Hannah, Margaret. 2009. Behind the bean: The heroes and charlatans of the natural and organic soy foods industry. The social, environmental, and health impacts of soy. Cornucopia, Wisconsin: The Cornucopia Institute. 54 p. Illust. Index. 28 cm. Available free of charge at www.cornucopia.org/ soysurvey/ OrganicSoyReport/ behindthebean_color_final.pdf. [109 ref]
• ***Summary:*** Contents: Executive summary. Introduction. Part I: The organic soy scorecard. Commitment to organics. Commitment to transparency and openness. Commitment to stakeholders, in addition to shareholders. Commitment to avoiding genetically engineered organism contamination. Commitment to supporting North American organic family farmers. Company ratings in the organic soy scorecard. Private labels.

Part II: Unmasking the natural" soy industry. Isolating nutrients: Soy protein. Hexane: The processing of "natural" soy with a neurotoxic pollutant.

Conclusion. Appendix A: Scorecard ratings. Endnotes.

Pacific Foods [Oregon]: "On their packages, they have a "Certified to the Source" (TM) seal, and their web site explains that this program is "an ambitious endeavor to want to trace the origin of every single ingredient we use in our foods..." On the web page for its organic soymilk, Pacific Natural Foods writes that "We are very picky about our soybeans." "Cornucopia's research indicates that Pacific Natural Foods purchased close to half a million kilograms of organic soybeans from China in the past year. When asked simply to name the organic certifier of the farms where their Chinese organic soybeans are grown, Pacific Natural Foods did not respond. When asked if Pacific Natural Foods would share with us the name of the third-party certifier for their 'Certified to the Source' program, they were silent. This raises the question of whether this program is in fact third-party certified, or simply a marketing gimmick" (p. 26-27).

Vitasoy, USA: "Our research indicates that they purchase organic soybeans directly from American organic farmers in the Midwest, but they also purchased approximately 200,000 kilograms of organic soybeans and 100,000 kilograms of organic tofu from China" (p. 27).

"Another brand of soymilk that chose not to participate in our scorecard project was the industry's largest producer of soymilk, in addition to other soy products, Silk.

WhiteWave, which markets Silk soymilk, is a subsidiary of Dean Foods. Dean Foods is the largest processor and distributor of dairy products in the United States, with $11 billion in sales in 2007."

"Since Dean Foods acquired WhiteWave, its founder, Steve Demos, has left the company [he was fired], along with almost all of the pioneering management–those who believed in 'green' values. According to Demos, the company is now all about 'green, with the dead presidents on it.'

"In January 2009, the familiar Silk soymilk cartons lost the green 'USDA Organic' seal and now state 'natural' where they once said 'organic.' The carton's design is the same, and many loyal Silk customers who associate the brand with organics may not be aware that they are now buying a nonorganic product. Silk's organic soymilk is now in a newly designed carton. Most Silk products are no longer certified organic or 'made with organic soybeans.' It also appears that Dean Foods / White Wave raised the price of their few new organic soymilk offerings, a very small percentage of their product line. They kept the same pricing for the majority of their product line, even though they switched to cheaper conventional soybeans and introduced their new organic offerings at a higher price point–a radical departure from the origins of the company. Before Dean Foods acquired White Wave and Silk, they were considered one of the true pioneers in the organic foods industry" (p. 27-28).

Hexane residues in food: "The FDA does not set a maximum residue level in soy foods for hexane, and does not require that food manufacturers test for hexane residues. Very little research has been conducted concerning the potential effects of consuming hexane residues in edible oils and other processed foods that contain soy protein, such as infant formula, energy bars, protein powders, and meat analogs. Food processors that use hexane tend to assume that nearly all hexane residues evaporate before reaching the consumer, but this may not be the case."

"Moreover, residue testing has tended to focus on the oil, but the protein and fiber that are left after extraction have also come in contact with hexane. To test for the possibility of hexane residues on these other soy components and products, The Cornucopia Institute sent a sample of hexane-extracted soy oil, soy meal, and soy grits to an independent analytical laboratory (registered with the FDA and USDA). While there was less than 10 ppm hexane residue in the oil, both the soy meal and soy grits contained higher levels of hexane residues. The soy meal contained 21 ppm hexane and the grits contained 14 ppm. These tests raise important questions regarding the presence of hexane residues in everyday foods."

"The Cornucopia Institute is petitioning the FDA to examine the effects of hexane in foods. First, Cornucopia is asking the FDA to test commonly consumed soy derivatives, such as soy protein isolate, for hexane residues. Second, if residues are indeed found to be common in foods, the FDA should provide information to consumers regarding the effects of these chemical residues on consumers, including infants and children.

"We believe that this research is especially important given the fact that most soy-based infant formulas contain ingredients that have been hexane extracted. In fact, nearly every major ingredient in conventional soy-based infant formula is hexane extracted. Infants consume much greater quantities of food compared to their body weight than adults, and formula-fed infants consume the same foods day after day, for many months. If hexane residues are present in conventional soy-based infant formula, their effects on infants should be investigated" (p. 36). Address: 1. Farm and Food Policy Analyst, principal author; 2. Senior Farm and Food Policy Analyst; 3. Research Director; 4. Research Assistant; 5. Board President, Scientific Editor. All: The Cornucopia Institute, P.O. Box 126, Cornucopia, Wisconsin 54827.

8591. Association Misola. 2010. Misola (Website printout–part). www.misola.fr Printed Jan. 9.

• ***Summary:*** Misola is the name of decentralized a organization (*l'association Misola*) of health professionals who work to alleviate malnutrition in francophone (French-speaking) countries of subsaharan West Africa, especially Burkina Faso, Mali, Senegal, and Niger.

History: Misola was born in Oct. 1982 in Upper Volta (renamed Burkina Faso in Aug. 1984) from a collaboration between the Department of Public Health of the East (*Direction Départementale de la Santé Publique de l'Est*) and the Association of the Brothers of Man (*l'association Frères des Hommes*), under the initiative of Dr. Jean-Marie Sawadogo and of Drs. Claire et François Laurent. It gradually extended its activities to the three other countries. In 1983 Dr. François Lebas rejoined the project. In Feb. 1995 Dr. Lebas created, at Calais, France, the French Association of Misola l'association française Misola. In November 1995, the Misola trademark was registered with the associations INPI and OAPI. En 2008, le Dr. François Laurent, who was excluded from the association Misola, created the Bamisa Project. The two projects are now totally separate and independent.

To alleviate hunger, Misola uses the food resources of the countries in which they work to make MISOLA, a flour, made from 60% toasted millet, 20% toasted soy, 10% toasted peanuts, and 10% other ingredients including 9% sugar, 1% iodized salt, a mixture of vitamins and other minerals, and the enzyme amylase which digests the solids to yield a fluid when water is added. Thus, the name MISOLA is derived from the first letters of the names of the three main ingredients in French (MIllet, SOya, L'Arachide). This flour is produced from local ingredients that meets basic bodily needs for energy, protein, and micronutrients.

Misola focuses its work on infants of ages 6 to 60

months (5 years) and on the women most closely connected with these children by using the flour to help satisfy their specific nutrition needs. Address: B.P. 286, 62105–Calais Cedex, France.

8592. Roseboro, Ken. 2010. The 2010 non-GMO sourcebook: A buyers guide to global suppliers of non-GMO and organic seeds, grains, ingredients, and foods. Fairfield, Iowa: Evergreen Publishing, Inc. 106 p. Illust. (both color, and blue and white photos). Index. 28 cm.
• ***Summary:*** Contents: Editor's introduction (by Ken Roseboro, publisher and editor). Suppliers of non-GMO products: United States, Canada, Europe, Africa / Middle East, Asia / Australia, Latin / South America. The Non-GMO Project special section (includes comments by Michael Potter and Nature's Path {in Canada}). Related products, services, and organizations. rBGH-free dairy processors in the US. Index of non-GMO suppliers by product category: Seeds (corn, soybeans), canola / rapeseed, processed canola / rapeseed products, corn / maize, processed corn / maize products, soybeans (identity preserved, specialty, organic), processed soy products (flakes, flour, germ concentrate, grits, lecithin, meal, nuts, oil, low linolenic oil, phytosterols, protein, textured protein, soymilk, soymilk powder, soy sauce, tofu, vitamin E / tocopherols), other grains / oilseeds and processed products (alfalfa / hay, barley, cotton,...), other ingredients and processing aids (citric acid, dairy ingredients...), sweeteners, food products, food supplements, animal feed. Index of related products, services and organizations. Complete index of listings. Index of advertisers.

Note 1. In the Suppliers section, many company entries have the Non-GMO Project logo (with an orange and black butterfly on a green leaf) next to their company name (e.g., Eden Foods, p. 17; WholeSoy & Company, p. 42).

This comprehensive book gives the single best picture of the growing industry, worldwide, opposed to genetic engineering. Address: Editor / Publisher, P.O. Box 436, Fairfield, Iowa 52556. Phone: 1-800-854-0586.

8593. Malnutrition Matters. 2010. Improved, sustainable nutrition and community development: With the VitaGoat & SoyCow systems and other technologies. Ottawa, Ontario, Canada. 18 p. Printed 27 Oct. 2010.
• ***Summary:*** The company's tagline is "Food Technology Solutions." This PowerPoint presentation, consisting of 18 graphics / frames, was presented in about Jan. or Feb. 2010. Contents: 1. Title page. 2. MM: Sustainable nutrition & community development. 3. Why are soyfoods ideal for development? 4. Today (number of units installed in different nations worldwide). 5. Site status–December 2009 (map of Africa and Asia shows number of installations {142} + committed {40} in specific nations worldwide. Includes 17 in India). 6. The VitaGoat system (shows the six different pieces of equipment: Hydraulic pump, boiler with chimney, cooker, above filter press, cycle grinder, tofu box). 7. Why the VitaGoat? Manual (non-electric) operation to enable rural micro-enterprise [small business]. Wood, coal, gas or other fuel options. Lower cost and more versatile. 8. The VitaGoat–Food production chart (soymilk, tofu, okara). 9. Why a SoyCow? Electric processing of soy foods. Two models (hybrid and fully electric). 10. Comparison of systems: SoyCow E, SoyCow M, VitaGoat. 11. The VitaGoat / SoyCow: Applications & economics. 12. Orissa project: Achieve a positive health outcome for over 5,000 students. 13. Strategy and priorities. 14-15. Innovations: VitaGoat canning module, SolarFlex fruit and vegetable dryer. 16. SolarFlex Dryer–Small farm model. 17. PedalPro–cycle innovation. 18. Thanks to our sponsors: Africare, Alpro, Child Haven, First Steps, Rotary, WISHH, World Bank.

There is a color photo or illustration on most pages. Address: 48 Rivershore Crescent, Ottawa, ON K1J 7Y7, Canada. Phone: 1-613-742-6888.

8594. Maruyama, Kazumi; Oshima, Tomoe; Ohyama, Kenji. 2010. Exposure to exogenous estrogen through intake of commercial milk produced from pregnant cows. *Pediatrics International* (*Japan*) 52(1):33-38. Feb. [26 ref. Eng]
• ***Summary:*** Modern genetically improved dairy cows (such as the Holstein) continue to lactate throughout almost the entire pregnancy. Therefore, recent commercial cow's milk contains large amounts of estrogens and progesterone.

"Conclusions: The present data on milk and children indicate that estrogens in milk were absorbed, and gonadotropin secretion was suppressed, followed by a decrease in testosterone secretion. Sexual maturation of prepubertal children could be affected by the ordinary intake of cow milk." Address: Interdisciplinary Graduate School of Medicine and Engineering, Dep. of Clinical Nursing and Pediatrics, Univ. of Yamanashi, Yamanashi, Japan.

8595. Wartinger, Lisa; Haren, Chuck. 2010. Plenty in Guatemala. *Plenty Bulletin* (*Summertown, Tennessee*) 25(4):1-2. Winter.
• ***Summary:*** "In early November several Plenty representatives visited our long time CAFSI (Central American Food Security Initiative) project partners in the rural Mayan community of Molino Belen, Guatemala, and the women's association Unidas Para Vivir Mejor (UPAVIM) in Guatemala City.

"Out first destination was Barrio San Bartolo and the Mayan community of Molinio Belen, home to about 1200 people. This community overlooks world-renowned Lake Atitlan, a timeless source of food, water, and spiritual significance for the Mayan people.

"How good it was...to visit the Asociacion de Desarollo Integral Belen (ADIBE), to see how they are addressing these issues.

"ADIBE is a non-profit association dedicated to improving the lives of people living in Molino Belen. ADIBE manages the soy dairy (Soy Center) that was established by the community and Plenty in 1979. The community elects their board of directors every two years. meeting with the current "directiva," we were impressed by their earnest efforts to benefit the residents of Molino Belen. Edyn (Eddy) Chalcu, at the age of 21, is ADIBE's current administrator. The Soy Center produces plain and flavored soymilk, tofu, soy ice cream, and flour and sells these products in Guatemala City and several large towns, as it has done for 30 years. In July 2008 ADIBE participated in a national competition for small rural producers. Out of 180 groups, they were one of the final 12 selected, and received an award of 45,000 quetzales or about $6,000. Using the award as an impetus, in November 2008, they made a formal request to the Agricultural Technical Mission of China (Taiwan) in Guatemala for help to expand their production, sales, and markets. In January 2009 the Taiwanese agreed to provide two years of consistent technical support, which has been a real boost to ADIBE. It has enabled them to expand their product line to include toasted soy flour, soy coffee, and even shampoo and moisturizing cream made from the whey remaining from the tofu making process (very nice products, as we tested while in the field!).

"The UPA-SOYA project: After our visit to ADIBE, we spent a few days with members of the Unidas Para Vivir Mejor (UPAVIM), an association of eighty-four women in urban Zona 12, La Esperanza, Guatemala City. In late 2003 UPAVIM requested help from Plenty to design a floor plan and set up a small-scale soy food-processing kitchen next to their small bakery. With Plenty's assistance, the equipment was installed and, by the end of 2008, more than twenty women had received instruction in commercial food preparation and handling, sanitation procedures, and adapting soy foods to traditional meals. Soymilk and other foods were sold in the neighborhood, as well as distributed to children attending UPAVIM's pre and primary school.

"The years 2008 and 2009 have been very difficult for UPAVIM. Sales of their artisan items, income that sustains their social service activities, have fallen with the downturn of the world economy, and UPAVIM was not able to keep up with the costs of operating the soy processing room. The women decided to stop soy production, and then restart UPA-SOYA when they could secure the resources needed to make a sustainable venture."

Photos show: (1) ADIBE staff and Board representatives with Plenty representatives. (2) Inside view of the soy processing room showing its equipment and visitors. (3) Amado del Valle demonstrates how to use the new soymilk press donated by Plenty. (4) UPAVIM staff and volunteers pose with Plenty representatives. Address: Plenty representatives.

8596. Malnutrition Matters. 2010. Improved food security with local processing of soy: Using VitaGoat & SoyCow systems. Ottawa, Ontario, Canada. 20 p. Printed 27 Oct. 2010.

• ***Summary:*** The company's tagline is "Food Technology Solutions." This PowerPoint presentation, consisting of 20 graphics / frames, was presented at the WISHH workshop on Africa in March 2010. Contents: 1. Title page. 2. MM: Improved security with local processing of soy. 3. Why are soyfoods ideal for development? 4. Energy efficiency in production. It takes 20 times as much energy to produce 100 calories in the form of soybeans as in the form of milk, which is the most efficient of all animal food sources. 5. Water efficiency in production: "Soy uses far less water than other forms of 'quality' or 'complete' proteins. 6. Environmental sustainability & increased income: Local cultivation of soybeans. 7. Site status–February 2010 (map of Africa and Asia shows number of installations {144} + committed {42} in specific nations worldwide). 8. The VitaGoat system (shows the six different pieces of equipment: Hydraulic pump, boiler with chimney, cooker, above filter press, cycle grinder, tofu box). 9. The VitaGoat vs. rural dairy in Africa (11 dairy cows vs. 1 VitaGoat; VitaGoat gives twice the profit per month). 10. Real VitaGoat–Eldoret, Kenya. 11. Today (number of units installed in different nations worldwide). 12. The VitaGoat–Food production chart (soymilk, tofu, okara). 13. Why a SoyCow? Electric processing of soy foods. Two models (hybrid and fully electric). 14. Comparison of systems: SoyCow E, SoyCow M, VitaGoat. 15. The VitaGoat / SoyCow: Applications & economics. 16. PedalPro–cycle innovation. 17-18. Innovations: VitaGoat canning module, SolarFlex fruit and vegetable dryer. 19. SolarFlex Dryer–Small farm model. 20. Thanks to our sponsors: Africare, Alpro, Child Haven / Donner Canadian Foundation, First Steps, Rotary, WISHH, World Bank.

There is a color photo or illustration on most pages. Address: 48 Rivershore Crescent, Ottawa, ON K1J 7Y7, Canada. Phone: 1-613-742-6888.

8597. Food Standards Australia New Zealand, 2010. Reformulated Bonsoy soy milk without kombu seaweed to return to shelves (Web article). http://www.foodstandards.gov.au/ scienceandeducation/ factsheets/ factsheets2010/ reformulatedbonsoyso4785.cfm 1 p. Posted April 28.

• ***Summary:*** "Food and Health authorities today confirmed that Bonsoy soy milk, reformulated without kombu seaweed extract, could return to sale.

"On the 24 December 2009, Food Standards Australia New Zealand (FSANZ) coordinated a national food recall and issued a media release advising people not to consume Bonsoy soy milk with all best before dates. This followed a cluster of nine adults aged from 29 to 47, and one child, who presented in NSW with thyroid problems.

"A national medical reporting system has been established in Australia. Between 23 December 2009 and 15 March 2010, there were 50 cases of thyroid dysfunction reported to public health units in Australia that are suspected to be associated with the consumption of Bonsoy soy milk.

"Bonsoy soy milk was enriched with kombu which is a seaweed product. Upon testing, the Bonsoy milk with added kombu was found to be the only product with excessively high levels of iodine. This product was also recalled in the UK, Ireland, Singapore and Hong Kong.

"The levels of iodine in the Bonsoy soy milk were at a level that is likely to exceed the safe limit for iodine when as little as 30ml (one eighth of a cup) is consumed per day by an adult. The only soy milk product identified through testing to have high levels of iodine was Bonsoy soy milk.

"FSANZ is also coordinating further testing of a range of beverages enriched with seaweed and other seaweed containing products. Any found to have unsafe levels of iodine will be recalled.

"Food and Health Authorities remind anyone with 1 litre tetra packs of the original Bonsoy soy milk with kombu, with all best before dates, that they should not consume them and should safely dispose of them or return same to place of purchase. Anyone who has consumed the earlier batches of Bonsoy with kombu over a prolonged time who feels generally unwell should consult their doctor." Address: Australia.

8598. National Milk Producers Federation. 2010. FDA should stop imitation products from milking dairy terms, says NMPF (News release). 2101 Wilson Blvd., Suite 400, Arlington, VA 22201. 2 p. April 29.

• ***Summary:*** "Arlington, VA–A decade after it first asked the federal Food and Drug Administration to crack down on the misappropriation of dairy terminology on imitation milk products, the National Milk Producers Federation today sent another petition to the FDA, asserting that the practice has gotten worse in the past 10 years.

"In its petition submitted April 29th, the NMPF contends that not only have the terms 'soy milk' and 'soymilk' continued to proliferate, but also other dairy-specific terms like 'yogurt,' 'cheese,' and 'ice cream' are now being used by products made out of a wide variety of non-dairy ingredients.

"'The FDA has allowed the meaning of 'milk' to be watered down to the point where many products that use the term have never seen the inside of a barn,' said Jerry Kozak, President and CEO of NMPF..." Address: Arlington, Virginia. Phone: 703-243-6111.

8599. Dean Foods Co. 2010. Positioned to win: 2009 annual report. Dallas, Texas. 4 + 49 + 53 + 9 p. 28 cm.

• ***Summary:*** All but the first 4 pages of this annual report are Form 10-K. A "Brief history (chronology) of the company is on page 11. In July 2009 Dean Foods "Acquired Alpro, a leading provider of soy-based food and beverage products in Europe, providing us with the opportunity to leverage the collective strengths of our combined businesses across a global soy beverages and related products category."

Basic financials are on page F-2. Net sales were down 10.5% but net income attributable to Dean Foods (and not to Dean Holding Co.) was up 30.8% from last year.

Net sales of the White Wave-Morningstar division was up 1.9% and total operating income was up 9% from last year (p. 32-33). We are unable to find specific information about Silk any longer.

Accompanying the annual report is a "Notice of stockholders' meeting" (63 p.). In 2009 Gregg L. Engles, Chairman of the Board and CEO, had a salary of $1.1 million and made additional millions (p. 35-43).

From the first 4 pages: Soy brands now make up 6% of Dean Foods' product mix; 49% is dairy milk. "The $1.7 billion branded business at WhiteWave and Alpro increased sales 9%. Our mid-year Alpro acquisition was the key driver to strong sales growth in this business category."

"We also leveraged our Silk brand to launch Silk PureAlmond (TM), and extend the Silk brand equity beyond soy into other plant-based beverages."

"With the strategic acquisition of Alpro, Dean Foods is now a global leader in soy, with over $1 billion in annual retail sales in soy beverages and related products. The combination of Alpro and Silk expands our geographic reach to Europe..." Address: 2515 McKinney Ave., Suite 1200, Dallas, Texas 75201. Phone: 214-303-3400 www.deanfoods.com.

8600. Heikkala, Tomas. 2010. Proyecto Nutricional de Soya Karen. *Plenty Bulletin* (*Summertown, Tennessee*) 26(1):1-2. Spring.

• ***Summary:*** Plenty plans to do a nutrition project for families who live off the Guatemala City Dump, the largest urban dump in Central America. Specifically they plan to help people (410 families and 1,500 children) who live in shacks in the community named *Asentamiento Astrilla.* They have chosen to work with partners, "the women of the local church, *Grupo Soya Santa Maria,* who are getting organized to make soy nutrition available for these communities... They want to get the equipment to produce soymilk and fresh baked products from the okara (soy pulp left over from making soymilk) for 300 children 3 days a week. The woman making the soy foods will be using the same equipment to make soy products for sale, to help fund the project, and to produce a little income for their families." Plenty has received 12% of the $38,000 they estimate will be needed for the first year, mostly from friends of Karen (Tomas's wife who died recently) and individual Plenty donors.

Shurtleff e-mailed Peter Schweitzer (April 19) to ask if there was any relationship between this new project and UPAVIM. "Do you plan to have two sets of soymilk

equipment helping people trying to survive on the same dump in Guatemala City? Or has UPAVIM been renamed? Or have the two projects merged into one with a new name?"

Schweitzer replied: "There is an informal relationship between the two. Last year women from UPAVIM helped put on a soy demo at the church next to the dump. But the programs are independent of each other and each will have its own production equipment and staff."

8601. Nguyen, Hoang Quoc. 2010. Re: Soyfoods and soybeans in Vietnam. Letters (e-mails) to William Shurtleff at Soyinfo Center, May 4-12. 1 p. each.

• ***Summary:*** Mr. Nguyen is the father of Andrea Nguyen, author of *Into the Vietnamese Kitchen* (2006, Ten Speed Press) and was kindly introduced to Soyinfo Center by Andrea, who is now writing a book about tofu in Asia.

Mr. Nguyen was born and raised in Vietnam, and lived there with his wife and family until April 1975 when he fled to the USA just before the fall of Saigon and the American defeat in what Vietnamese call the "American War."

He was governor and military sector commander of two provinces in the Mekong Delta of Vietnam (Vinh Binh {now called Tra Vinh} from 1956, and Kien Phong {now called Dong Thap Muoi} from 1956-1960), and of Binh Thuan, in the south of central Vietnam, from 1960-1963. While he is not a specialist in Vietnamese food, he knows as much about it (or more) as the typical person born and raised in that country.

Question: Do Vietnamese eat soybeans as a green vegetable (green vegetable soybeans, edamamé)? Ans: No, and there is no specific name for them.

Question: Please tell me about soymilk in Vietnam. Ans: Its name in Vietnamese is *sua dau nanh* (with diacritical marks). It was very popular, but mostly in the cities (as we were in Viet Nam before 1975). Don't know exactly at the present time. Use it at breakfast or at any time during the day as a beverage. It is sold in a plastic container, at tofu shops or at marketplaces. Nobody made it at home at our time in Viet Nam (before 1975). But soybean milk machines are now on the market at non-expensive prices. Probably some people are making it at home for freshness. It is typically served sweetened or plain; not salty. It has a fairly long history. Its popularity is increasing with the propagation of the soybean's benefits.

Question: Please tell me about yuba (the film that forms atop soymilk when it is heated) in Vietnam. It is often called beancurd skin or (when dried) beancurd sticks in Vietnamese cookbooks. Ans: It is called *phu chuc* (dried rolled yuba; dried yuba sticks) in north Viet Nam, and *tau hu ky* in south Viet Nam. [Called Fuchu or fuzhu in Chinese]. Fresh dry yuba is *tau hu ky tuoi* (it needs to be frozen or refrigerated and thawed before using) and regular dry yuba is *tau hu ky kho.*

All Vietnamese (north, center, and south) use only one language but there are differences in tone and accent in pronunciation, and also in the naming of some things and objects. The phonetic adaptation from Chinese or French words are also different, it may be the reason of Tau Hu Ky for Fu Pi and Phu Chuc for Fu Zu.

Yuba is very popular, used in households, market stalls, and restaurants–especially in place of meat in vegetarian dishes and diets (influenced by Buddhism). It is sold in dry form, either unfried or fried, in a package at any market place. It is made only by special factories of Chinese origin. It is served as a wrapper for shrimp or meat, then fried. Also in soup–fried and served with broken steamed rice, and many other dishes at home and restaurants from selected to street corners. It is especially useful in the preparation of vegetarian dishes as a substitute for real meat. In one popular dish (called *Chan Thien Ky*), *tau hu ky* [yuba] is wrapped around minced shrimp to make a little packet, which is deep-fried; it is somewhat like the Cantonese dim sum item of shrimp in "tofu skin" but Viet people commonly serve it as a side dish on rice plates. Another popular yuba recipe in Vietnam is *Com Tam Tau Hu Ky Suon Bi* (Broken rice with yuba wrapped around shrimp, pork chop, and pork skin). Note: A Google search for "tau hu ky" will bring up many other recipes, images, and videos in Vietnamese and English. Yuba has a long history in Viet Nam, being introduced along with Chinese cuisine. Today its use is increasing along with the demand for new recipes and awareness of the benefits of consuming foods made from soybeans. Yet it is still not an item in everyday meals, but is reserved for special occasions, whether at home, in a restaurant, or at parties.

Question: When the French divided today's Vietnam into Tonkin (north), Annam (middle) and Cochinchina (south), were there any cultural or language differences between the three? Were the divisions based on these cultural and language differences or not? Ans: No major difference in culture or language existed between the three regions at that time. The French made the division just for more efficiency and convenience in their colonization of Viet Nam. The French split Viet Nam up into many areas with different administrative systems so as to maintain the division, in order to make their occupation more efficient [and to try to prevent or limit the growth of nationalist or resistance movements].

Question: Please tell me about soybean cultivation in Vietnam. Ans: At this present time, because of the huge demand of soybean for edible oil and meal or cake for animal feeds, milk for human consumption, large areas in the South (east and west parts) are being used for cultivation of soybean. Production in the North and Central regions, due to limitation of available lands, may be sufficient only for regional production of Tuong and Tofu. Five different kinds of seeds are being introduced and tested and yield/ha are much better. Areas in the south-west (Mekong delta) will produce 3 crops per year.

For centuries soybeans have been cultivated in Viet Nam. Before the vegetable oil from soybean was introduced, each region produced what people need for daily consumption. This has been changed completely because of the demand for soybean oil, milk, sub-products for animal feeds.

Soybeans are cultivated along the hillsides or high level areas not submerged by water, or in between the rice crops seasons. In the south western region (Mekong delta) where the field is submerged under the water every year for 4 months, farmers can now plant soybean after the rice crop harvest. They burn the hay, make holes and put the seeds down, cover with hay, let it grow, fertilize (chemical), use pesticides and herbicides. After 75-82 days they can harvest (still by hand), or use a machine to pull out the beans, then dry them. Viet Nam is presently divided into 62 provinces and towns; soybean is planted in 43 of them. At the present time, no information is available about large size farms using complete machinery like in the USA, but an area like the Mekong Delta may open up and introduce this kind of large farming process. The highlands in Viet Nam offer tremendous opportunities for development of modern farming (mechanized) but require enormous investments in knowledge, experience, and quick flexibility of action and funds. A state economy system cannot afford to let that happen, I would say.

Viet Nam still has to import 400,000 to 500,000 tons of soybean every year from China, Kampuchea [Cambodia], Thailand, Canada and the USA.

Today, soybeans are most widely used as a food in the south of Vietnam. My estimate of the amount of soybeans used in traditional foods (in descending order of popularity) is: Tofu, soy milk, tuong (a thick fermented soy sauce), chao (fermented tofu), soy sauce (liquid), tau hu ky (yuba).

Additional remarks: Tuong should be considered in this study, as tuong is a sauce made and used only in Viet Nam. It is made from rice and soybean, plus salt, in a very delicate way, serving as sauce for eating and cooking. Long ago the northern Viet term for soybeans was "dou," as in Chinese. But soybeans were also called "dou tuong" because they were so widely used in Vietnam to produce the popular fermented sauce "tuong." That's why today the Vietnamese term for soy sauce is either "nuoc tuong" [sauce + tuong; a lingering reference] or "xi dau," from the Cantonese phonetic.

All the Vietnamese (old generation, of north and center origin) living in the US, miss "tuong" very much as the Tuong Cu Da being sold in the market places here is not the real thing–in terms of composition, taste and flavor. The three best kinds of Tuong are: (1) Tuong Cu Da. (2) Tuong Ban, in north Viet Nam, and (3) Tuong Nam Dan, in Nghe An (central Viet Nam).

Note: Andrea adds: "These are really cool tuong sauces!" Address: San Clemente, California.

8602. Messina, Mark J. 2010. The war has been lost: Update on research on the health benefits and risks of soy (Interview). *SoyaScan Notes.* May 31. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** The image of the safety or healthfulness of soyfoods, primarily on the Web, in large part due to the Weston A. Price Foundation, is getting worse and worse. Mark fears that the future of soy as a human food looks bleak, and that sales of soyfoods and ingredients will decline over the next 20 years–even though the nutritional science is making soy look better and better.

For example, the research on the safety of soy for people with thyroid problems is now solid. Soy does not cause thyroid problems in humans. Soy does cause thyroid problems in rats but rats are a bad model to use for studying this problem. Even for people living in a goiter belt–a place with iodine depleted soil–consuming soy is not a problem.

The research on the safety of soy for women with breast cancer is becoming more solid. The paper by Shu et al. is the most important development although the Guha paper is also basically supportive of safety. The paper by Messina and Wood discusses the clinical work. Add to this the fact that there is another paper albeit smaller in size that will be published soon that supports the paper by Shu and that it is now known that the animal studies aren't very relevant to humans because the amount of biologically active genistein in circulation is much higher in mice than in humans makes a pretty strong case. The editorial by Messina, Abrams and Hardy that makes the case succinctly.

It is quite clear that if a young girl has one serving of soymilk a day for life, that will reduce her risk of breast cancer. Likewise for women with breast cancer. However, nothing is clear when it comes to chronic disease and diet. The hypothesis is quite intriguing and has epidemiologic and animal data in support of it. However, without clinical data it will remain speculative. Nevertheless, because the potential benefit is so great, the amount of soy need for protection so small (one serving) and that in my view there is no disadvantage to consuming soy, it seems like a no brainer to make a recommendation for girls to consume one serving per day.

The area where we have the fewest good studies and the biggest knowledge gap is in safety of soy for young children. Seventh-day Adventist children have been consuming soymilk for more than 60 years with no reported problems, yet this needs to be studied scientifically. A good two-year study has been designed but has yet to be funded.

There has been a big decrease is sales of soy infant formulae over the past ten years due to uncertainty in this area.

The main are of concern today is with isoflavones / phytoestrogens (such as genistein), which are classified as endocrine disruptors. The anti-soy faction likes to talk about

"estrogens in soy" as being risky and about feminization.

The Weston A. Price Foundation (WAPF) recently had their 10th annual conference / meeting in Chicago; 1,000 people attended. Their focus was not anti-soy, although a few such comments were made.

Note: According to Wikipedia, the organization was founded in 1999 by Sally Fallon and Mary G. Enig, PhD. Headquartered in Washington, DC, it is a "501(c)(3) non-profit organization dedicated to 'restoring nutrient-dense foods to the American diet through education, research and activism.' Its goals include disseminating the research and dietary advice of dentist and nutritional researcher Weston A. Price, who studied the foods and health of isolated non-industrialized peoples around the world, and supporting the scientific validation of traditional diets." Their anti-soy program is named "Soy Alert!" and they repeatedly refer to soy as "toxic." "In 2010 its membership numbered 13,000 and was growing at an annual rate of 10%, according to The Washington Post (6 Aug. 2008). It has more than 450 community-driven chapters across the United States, and international chapters in Australia, Canada, Finland, Germany, Pakistan, New Zealand, the United Kingdom and various other countries."

Mark regrets that he agreed to debate Sally Fallon. She made a number of false claims, such as Illinois prison inmates were being fed 100 gm of soy protein a day.

Alpro Soya recently released an excellent cartoon video commercial titled "Great Ideas Often Take a Long Time to Sink in" as part of its "Join the movement now" campaign. It encourages people to change their diet by replacing meat and dairy by an alternative just once a week.

White Wave [Dean Foods] is no longer funding scientific studies on soy–as they were a year ago. They have turned all their soy activities over to a PR firm. Mark finds this very disappointing. However the Silk Soy Nutrition Center has a good website (soynutrition.com) which focuses on the health benefits of soy.

The next soy conference will be in October. Kaayla Daniel is writing a new book of anecdotes about how she has helped people who had nutritional problems with soy.

What evidence does Mark have that people are concerned about the safety of soyfoods? (1) The United Soybean Board (USB) has sponsored a booth at the annual meeting of the American Dietetic Association each year for at least the last 15 years. The booth is organized by Publicis, the USB's PR agency. The purpose is to provide information about soy oil and soyfoods. Materials are provided and usually a soy-related product served or handed out. It could be edamame or soynuts or chap stick made with soy oil. The ADA show attracts about 10,000 dietitians. Mark has staffed the booth every year (except one when he was unavailable) to answer questions about soy nutrition. He answers about 50 questions during the 3-day meeting. Most of the questions are about soyfoods (rather than soy oil). He has watched the nature of these questions change over the years. Initially they were about ways to incorporate more soy into the diet. Now they are about the safety of soyfoods and soy formula, and about isoflavones.

(2) He is often contacted by non-scientific journalists who want to interview him for radio, TV, or the Web / blogs. Here again he is now hearing the same safety concerns. (3) Mark gives many talks about soy nutrition each year. After a typical talk, he opens it up for questions. Here, also, he gets mostly questions about the safety of soy. (4) Mark's wife, Ginny, does a great deal of work promoting vegetarian and vegan diets. She says that support for soy is weakening among vegetarians. (5) On the Web, the number of negative stories about soy nutrition is growing. Almost all are based on hearsay rather than on science. (6) Mark increasingly hears negative comments about soy at random. In short, the climate has changed dramatically since 1990, when the trend was "straight up," to today when things are looking down. Mark has no reason to believe that this downward trend will not continue.

Twenty years ago they soy industry should have developed a long-term strategy, with adequate funding, to respond to the anti-soy faction disinformation campaign with science-based facts. But the industry was unwilling to do this. They thought it would go away, that it was just a passing fad, or that it was not important and would not have any significant effect on the market, which was growing rapidly at the time. Mark did everything he could to try to convince the soy industry that this was a real concern and that they should take action. There is still no interest in a long-term strategy, but now it is probably too late. Address: PhD, 429 Calhoun St., Port Townsend, Washington 98368. Phone: 360-379-9544.

8603. Demetriou, Danielle. 2010. Grain of wisdom: Madonna's former personal chef (Web article). *http://www.thenational.ae/lifestyle/house-home/grain-of-wisdom-madonnas-former-personal-chef.* June 16.

• ***Summary:*** Mayumi Nishimura of Tokyo (age 53), a world-famous practitioner of macrobiotic cookery, was Madonna's personal chef for 7 years, cooking for the singer and her family, as well as providing most meals during four of Madonna's world tours. Madonna (who is not a vegetarian) also avoids dairy products, enjoys tofu, miso and soymilk, is adept at using chopsticks, and speaks pretty good Japanese.

While in high school, Mayumi began to see clearly the connection between her diet and her health and spiritual wellbeing. She changed her diet and became a vegetarian and began to eat brown rice. At age 21 Mayumi was introduced to the writings of George Ohsawa. So she packed her bags and went to study at the Kushi Institute in Boston, Massachusetts. It worked very well for her and she ended up running a branch of the Kushi Institute in Beckett, Massachusetts.

Then 9 years ago she was asked if she wanted to try out as Madonna's personal chef. She got the job and became part of Madonna's extended family. Madonna later wrote her in the book *Mayumi's Kitchen:* "Not only are you the best chef in the world, you are part of our family... In the seven years you lived with us and cooked for us, your amazing food helped me to be a happier, healthier person, balanced in body and mind. I feel better than I did 20 years ago. I am very grateful to you for this."

Note: As of April 2011, Madonna lives in New York City, in the fashionable Upper East Side at 152 East 81st St. She lives in a gated community, said to be worth $32 million.

8604. Vitasoy International Holdings Ltd. 2010. Annual report 2009/10. Seventieth anniversary. New Territories, Hong Kong. 216 p. July. 30 cm. [Eng; Chi]

• ***Summary:*** This year the annual report celebrates the 70th anniversary of Vitasoy, which was founded in 1940. A list of milestones (p. 6-7) goes from 1940 to 2008. For example: 1940–Incorporation of Vitasoy International Holdings Ltd. [Hong Kong Soya Bean Products Co. Ltd.] in Hong Kong. Launch of healthy Vitasoy soymilk in Hong Kong (a color photo shows the original glass bottle).

All values are in million Hong Kong dollars. The fiscal year ends on 31 March 2010. A graph (hard to read, p. 8) shows that turnover (sales) has risen steadily each year from 1,985 in 2006 to 3,012 in 2010 (up 7% from 2009).

Gross profit has risen steadily each year from 945 in 2006 to 1,498 in 2010 (up 15% from 2009).

EBITDA (Earnings before minority interest, interest expense, income taxes, depreciation, and amortization) has also risen steadily each year from 333 in 2006 to 483 in 2010 (up 19% from 2009). Address: No. 1, Kin Wong Street, Tuen Mun, New Territories, Hong Kong. Phone: 466 0333.

8605. Pristine Plants India Pvt. Limited (Website printout–part). 2010. www.ppi.co.in Printed Aug. 29.

• ***Summary:*** Contents: Home page. About ourself. Connect us @. Soymilk system -> Contact us. Moving words at top of each page: "It's a matter of taste." Moving words below company name near top of each page: "Perfection–Performance–Innovation."

Address of works: 16, Gurukul Industrial Area, 12/6, Mathura Road, Faridabad, Haryana (India)–121 003. Tel. / Fax +91 129 413 6901-05 (Five numbers). Email: info@ppi.co.in.

The section titled "Soymilk system" states: "This is a tabletop plant for producing soy milk / soy paneer. 'Soya Cow' SC-20 is a Table-top machine that makes high quality soy milk at the cottage industry level using a break-through Canadian technology.

"An SC-20 produces 14 liters of soymilk every half an hour (using 2 kg of soybeans). This milk could be converted into 2.5-3 Kg of tofu (Soy Paneer). The machine includes accessories for making Tofu also.

"The machine requires 5-10 sq.m [square metres] area with domestic power supply for its installation (1 HP single phase 220 V).

"This machine is equipped with the deodorizer which removes the off flavour from the soymilk."

Note: Letter (e-mail) from Raj Gupta of ProSoya Inc., Ottawa, Ontario, Canada. 2010. Aug. 29. SSP started building small soymilk machines in 1994-95 under license from us. In about 2006 this manufacturing was then transferred by SSP to Pristine Plants (<http://www.ppi.co.in/>). SSP's Managing Director transferred the technology to his brother-in-law, who created Pristine just to focus on the SoyaCow and nothing else. Ask Dr. Ratan Sharma for details. They have sold several hundred SC20 machines in India and abroad. An SC20 is a Soya Cow made in a 20 litre vessel; the soymilk capacity is 15 litres per batch, 2 to 3 batches per hour depending on the boiler capacity. This soymilk and tofu equipment is based on the designs of Raj Gupta and ProSoya Inc. of Canada. Address: Registered office: 124-B, Pocket-A, Mayur Vihar Ph-II, Delhi, India 110 091. Phone: +91 22 77 5335.

8606. ProSoya Inc. (Website printout–all). 2010. www.prosoya.ca Printed Aug. 29.

• ***Summary:*** A very stylish website. Contents: Home page. About us: Welcome to ProSoya, what we offer, our technology, soymilk systems, products know-how, our customers.

Solutions: Solutions at your fingertips, the ProSoya advantage, soymilk systems (ASC 50, VS 200, VS 1000-4000. AVS 1000 / 2000 / 4000 / 8000 / 10000 / 20000). Other solutions: Tofu production (tofu boxes, pressing tables, cooling tanks, ConTofu–a patented continuous curding system), soy yogurt production, existing system upgrading, UHT sterilizers & HTST pasteurizers, homogenizers, aseptic and ESL form-fill-seal fillers, formulation systems, mixing tanks, chilled soymilk storage tanks, CIP systems, aseptic puffer tanks.

Products: Soy beverage know-how, soymilk extract and powder, private labels, product development (we can develop products for you). What's new. Contacts. Updates: Four printed pages of updates (former news releases, most recent first; from 11 Nov. 2009 back to 1 July 1998). FAQs: Frequently asked questions are grouped into these categories: Related to soybeans, related to soymilk, related to soy beverage, related to soymilk & beverage packaging, related to tofu production, related to soy yogurt production, related to okara (fibrous residue), miscellaneous (What books are available to learn production of soymilk, etc.?). Contacts, map, and driving directions. Main website (Home).

8607. Drosihn, Bernd. 2010. Tofutown.com: Network of activities. To do list for a sustainable world. Portrait [Tofutown.com: Network of activities. To do list for a sustainable world. Portrait]. Tofutown Wiesbaum, Germany: Tofutown.com. 12 p. Illust. (all color). 30 cm. [Ger]

• ***Summary:*** Contents: Tofu is coming: In 1980 tofu was sold in about 100 Reform Houses, Bioläden, and vegetarian restaurants in Germany. In 2010 it is sold at more than 40,000 locations in a great variety of forms. Tofutown is there: Making it easy for people to eat and drink without going through the detour of animals.

After 30 years of making tofu in Germany, all is well. Photos show and earlier and present view of the company's plant.

Brands: Viana: Listen to your heart. Veggie life. Demeter (First soya sprout drink). Soyatoo whipped soy cream. Private labels. Tofu Musick.

Marketing. To youth. Quality. Customer relations.

Protecting animals and the environment, health. We believe in food democracy. Tofuismus No. 6. "In a Tofu Body lives a Tofu Spirit."

Tofu Fact No. 4. Four photos inside and outside the company's headquarters.

Nine website URLs and four photos. Very big numbers. Awards and prizes.

Milestones in the company's history / chronology: 1981/82–Founding of the tofu collective Soyastern, at the time the 3rd so-called "Tofurei" in Germany. In the 1970s and 1980s many small tofu projects were based on vegetarianism.

1988–Founding of Viana Naturkost GmbH on Cologne.

1990–Move to a larger building in Cologne.

1992.–Move to a former dairy in Euskirchen Kuchenheim.

1995. Expansion. 1997 Expansion.

1999–Move into a new building in Wiesbaum / Vulkaneifel.

2001. Detour to Wiesbaum.

2002–Develop the "Veggie Life" brand.

2003–Rename the company Tofutown GmbH.

2004–Development of the "Soyatoo!" brand.

2005–Major expansion of the cold storage area and the final packing area.

2007–Expansion of production.

2008–Start-up a Spaceshuttle Tofu- and Soymilk plant.

2009–Establish Tofutown North America LLC in San Francisco, California, for marketing the company's products in North America and Canada.

Note: During the years 2008 (*Inbetriebname*) and 2010 (Take over a modern production facility formerly owned by De-Vau-Ge Gesundkostwerk in Lueneberg) the story gets very complex, so Shurtleff writes Drosihn to please explain what it means. He kindly explains the 2010 entry in an e-mail dated 1 Nov. 2010: "I'll try to answer your questions. It is a little Gordian [knot] and complex: De-Vau-Ge in Lüneburg is a 'big city' and we did take over a 'small garage' (a small but separate building including about 60 employees) where the home of the 'vegetarian production' has been situated for years. The present owners of the 'De-Vau-Ge Dailycer Group' (50% is owned by 'One Private Equity' a Chase Manhattan Bank PE Company and 50% is owned by the Seventh-day Adventist Foundation 'MSP') focused the company strictly to the core business 'breakfast cereals' and carved out everything else to spin off. (Vegetarian Products) to Tofutown, Baby Food (to Sunval Company) and so on.

Already in 2007 all the health food businesses (brands for so called 'Reform Häuser' and natural food stores and supermarkets) owned by De-Vau-Ge has been carved out to a daughter company named 'Prima Vita' and moved to 'Heimertingen' in the South of Germany. So they did concentrate on the health food brands (most important one is 'Granovita,' the other ones are 'Eden,' 'Linusit,' 'Granovital' and also the smaller ones 'Martin Evers' and 'Bruno Fischer,' in total maybe 10 to 15 health food brands). Nowadays also the other European businesses are consolidated into the newly developed 'Bio Herba Group' which is beside the 'Prima Vita' in Heimertingen also Granovita UK and Granovita Spain. This health food business in total is, compared to the De-Vau-Ge Dailycer Group, of almost no economic importance and is still owned by Seventh-day Adventist money. The De-Vau-Ge Dailycer Group is a competitor of the Kellogg Co. and Nestlé in breakfast cereals and makes about 500 billion Euro turnover [sales] per year. They have several locations in Europe (France, Netherlands, UK, Switzerland).

"Tofutown is still very small compared to this big business; it has two production locations in Germany (Wiesbaum and Lüneburg) and a small bureau in San Francisco.

"A complex story and this is only the short version. Good to hear that you are well and still interested in companies and soy foods and the developments on the market.

Follow-up e-mail (Nov. 2): "There is a SoyaCow (made by ProSoya) grazing and giving milk in Tofutown. Frank Daller and Raj Gupta are both very credible people in the soy market.

"Yes, you are right with the mad accountants and also with mad consultants.

"I do use Google Books and Wikipedia as you do. In my Tofugraphy there is a scene where I tried to register a 'Tofu company' at the city hall somewhere in the beginning of the nineties and the two guys in the line before me tried to register a 'search engine.' Both were completely unknown and therefore nearly impossible to register. Now we have Tofu in every supermarket and we have Google on every computer." Address: Founder and president, Tofutown.com

GmbH, Industrie und Gewerbe Park, D 54578 Tofutown Wiesbaum, Germany. Phone: 06593 9967-0.

8608. United Soybean Board (USB). 2010. Consumer attitudes about nutrition: Insights into nutrition, health, and soyfoods. 17th annual national report. Seattle, Washington: USB. 12 p. Oct. 28 cm.

• ***Summary:*** Methodology: "This year represents the fifth year we have adopted an online self-administered survey as our methodology, a significant change from random telephone interviews. The survey, conducted by an independent research firm [in Seattle, Washington] in February 2010, includes 1,000 random surveys, providing a sample that is consistent with the total U.S. population. The study's margin of error remains ± 1.9 to 3.1%, with a confidence interval of 95 percent."

Contents: Introduction. Methodology. About USB. General nutritional attitudes and concerns. Examining the nutritional facts panel. Obesity concerns. Strategies for improving overall health. Soyfoods and health perceptions. Health reasons for seeking soy. Cooking and salad oil impressions. Soy in the media. FDA-approved health claim. Opinions on biotechnology. Spotlight on biotechnology. Trans fat awareness and opinion. Awareness and usage of soy products. Restaurants and soy products. Occasion preferences for consuming soy.

Awareness and usage: "37% percent of Americans consume soyfoods or soy beverages once a month or more, approximately five percentage points higher than during the period between 2006 and 2008. Conversely, 35% indicate that they never consume soy, which has decreased steadily since 2006 (then at 43%). For the seventh year in a row, consumers reported the most familiarity with soymilk, soybean oil, tofu and soy veggie burgers.

"Soymilk continues to be the most regularly consumed soy product, with nearly one-quarter of Americans reporting that they drink it regularly. For comparison, in 1999, 18% of consumers reported that they had tried soymilk. By 2010, the number of consumers who have tried soymilk has more than doubled to 45% of all consumers.

Edamame holds the number two spot and has surpassed veggie burgers among the top three most consumed soyfoods for the past two years. In fact, it has more than tripled in popularity since 2005 (then at 4% and now at 13%). Plain white tofu follows in third place, on par with 2009 at 9%."

A table shows the "Top 20 soy products by awareness." Soymilk 90%. Soybean oil 56%. Plain white tofu 56%. Soy veggie burger 54%. Soynuts 40%. Soy protein bars 37%. Soy infant formula 36%. Soy latte / soymilk in espresso coffee drinks [as at Starbucks] 36%. Edamame 34%. Dried or canned soybeans 33%. Cereal bar / energy bar 32%. Miso 29%. Soy ice cream / cheese 28%. Soy yogurt 27%. Soy hot dogs 26%. Flavored / marinated tofu 24%. Soy supplements 21%. Soy flour 21%. Soy breakfast cereal 18%. Textured soy protein 16%. All others mentioned 14% or less.

Occasion preferences for consuming soy (in descending order of preference): dinner 39%, breakfast 30%, lunch 22%, mid-afternoon snacking 19%, late evening snacking 13%, mid-morning snacking 9%, desserts 5%.

"In 2010, 84% of consumers rate soy products as healthy, down one percentage points from 2009." A graph (p. 6) shows this increase in awareness (82% in 2006, 78% in 2005, 74% in 2004, 74% in 2003, 74% in 2002, 69% in 2001, 76% in 2000, 71% in 1999, 67% in 1998).

Note: As of Oct. 2010 this full survey is available gratis in PDF format at www.soyconnection.com /health_nutrition / pdf/.

8609. President Bill Clinton talks to CNN's Wolf Blitzer about his new plant-based vegan diet. 2010. Television broadcast. CNN. Sept. 21.

• ***Summary:*** Blitzer: What kind of diet are you on? How did you lose so much weight?

Clinton: The short answer is, I went on essentially a plant-based diet. I live on beans, legumes, vegetables, fruit, whole grains... I drink a protein supplement every morning. No dairy. I drink almond milk mixed in with fruit and a protein powder, so I get the protein for the day when I start the day. It changed my whole metabolism; I lost 24 pounds, and basically got back to what I weighed in high school. But I did it for a different reason. I wanted to lose a little weight, but I never dreamed this would happen.

I did it because, after I had this stent put in, I realized that even though it happens quite often that after bypass, you lose the veins, which are thinner and weaker than arteries; the truth is that they clogged up, which means that the cholesterol is still causing build-ups in my veins, which were part of my by-pass. Thank God I could take the stents. I don't want it to happen again. So I did all this research, and I saw that 82% of the people since 1986, who have gone on a plant-based diet, no dairy, no meat of any kind (no chicken, turkey)–but I eat very little fish, but not often. If you can do it, 82% of the people who've done that have begun to heal themselves. Their arterial blockage cleans up, the calcium deposits around their heart break up.

This movement has been led by a doctor named Caldwell Esselstyn, Jr. (M.D.) at the Cleveland Clinic [Ohio], Dean Ornish in California, the doctors Campbell father and son, who wrote the China study, and a handful [sic, thousands] of others. We now have 25 years of evidence. And so I thought, since I need to lose a little weight for Chelsea's wedding, I'll become part of this experiment. I'll see if I can become one of those that can have a self-clearing mechanism. We'll see.

Seeing grandchildren is really the big deal. Hillary and I love and admire our son-in-law and our daughter, Chelsea. If they have grandchildren, we'd like to be around to do our part.

8610. Sharma, Ratan. 2010. Re: Work with soymilk and tofu in India and worldwide. Letter (e-mail) to William Shurtleff at Soyinfo Center, Sept. 21. 2 p.

• ***Summary:*** "After completing my Ph.D. on soymilk and tofu in 1993 at Banares Hindu University in India, I started working for a Canadian non-governmental organization (NGO) named Child Haven International (CHI). Please see www.childhaven.ca. I was introduced to them by Dr. Raj Gupta of ProSoya. ProSoya had developed the SoyaCow technology and through CHI they wanted to introduce this technology to benefit the people of India and other developing countries. I started working for CHI in India after receiving intensive training in Canada on the SoyaCow technology (which was in the developing stage at that time), project formulation and other related subjects. CHI was supported by some funding from the Canadian International Development Agency (CIDA) for this project. The main objective of this project was to create employment opportunities and to provide low cost nutrition to the Indian masses. In 1994, on behalf of CHI and ProSoya, I transferred this technology to SSP Private Ltd., Faridabad, India. SSP is based near Delhi.

"It is important to mention here that in the latter part of the 1980s a few companies had tried introducing soymilk in the Indian market through large scale production (Tetra Pak, poly pack, etc.) but failed for many different reasons, so they stopped their operations. I worked hard to establish this technology in India, helping SSP in manufacturing quality machines and helping the users of this machine in product development, packaging, shelf life, marketing etc. I helped them in developing the products suited Indian tastes. Because of the previous failure of soymilk in the Indian market, I had to work very hard to introduce this product again in the Indian market and I tried to do it successfully.

"All the organisations involved in the promotion and establishment of this technology, considering its usefulness and the need for it in India and other developing countries, had no intention of making money. This was just for a noble cause and was done very successfully. We approached the Indian government and this machine was included under the Prime Minister's Employment Scheme where one can apply for a subsidised bank loan. In the meantime this machine was upgraded by ProSoya and SSP. I was involved from both the ends, coordinating between CHI, SSP and ProSoya. In the meantime SSP sold many machines to Russia and later Russians developed their own machine similar to this.

"It took time but this technology grew in many folds and Indian entrepreneurs started earning handsome money. Through this technology I promoted the small-scale soy food business in India and now close to four hundred such small factories are operating in India, producing soymilk, tofu, soy nuts, re-packaging defatted soy flour, making soy based noodles and other products. I am helping all of them. Based on the success of these small entrepreneurs a few companies started producing and selling the soymilk in Tetra Pack in India. From India these machines were sold to Nepal, Bangladesh, Pakistan, Sri Lanka and many other neighbouring countries.

"Besides this I promoted this small scale soymilk and tofu business in Uganda, Tanzania, Kenya, South Africa, Egypt and in some other African countries with the help of Malnutrition Matters, CHI, WISHH etc. Also, I helped Dr. Steven Kwon in getting the soymilk machines from India and using them in Afghanistan. Now there are many such machines working in Afghanistan successfully.

"On average, Indian entrepreneurs are making tofu in a range of 100 to 500 kg per day. Some are making 50-100 kg per day. Large scale soymilk business is also growing in India."

Ratan visited Spicer Memorial College in Pune in about 1999 to learn about and perhaps help with their soymilk production. He recalls that they were making very sweet bottled soymilk in various flavors, as well as tofu (which was certainly not canned in a tin). They sold these products at a canteen inside the college and they had two outlets in the city of Pune; he visited one of these which was on a narrow street and was not fancy.

Ratan remembers a company that started making tofu and soymilk in Ghaziabad using a large new plant from Takai (of Japan); he does not remember the company name, but it was not Amrit Protein Foods. When he arrived in Ghaziabad, he lived with the owners of this company for a month. They had recently closed the plant and did not take him there. Later all of their equipment was sold at auction by the bank as they were not able to repay their loan. They had a very nice tofu tray packing system and were selling the tofu in water-filled tray packing only. The owner of the company was a chartered accountant by qualification.

Ratan also remembers a company in Allahabad (both he and Rajendra Gupta of ProSoya are natives of Allahabad) that purchased a large plant from Takai through an agent based in Hyderabad. This plant was purchased by a cigarette manufacturing company named Shyam Bidi. The owner of the company was a politician, who had earned lot of money from his tobacco business. They had just launched the product, which they continued for less than a month, then closed down the business before the product had a chance to become known. This company may possibly have been related to Mishra Soya Food Products, which definitely had a Takai system and which either introduced or was about to introduce "soyabean based paneer" [tofu] in the Bombay market. Address: PhD, Manager, the SoyaCow Centre, KH-177 Kavi Nagar, Ghaziabad 201 002 UP, India.

8611. Sharma, Ratan. 2010. Re: Work with the American Soybean Association (International Marketing), soymilk and tofu in India and worldwide. Letter (e-mail) to William

Shurtleff at Soyinfo Center, Sept. 22. 2 p.
• ***Summary:*** "I joined the American Soybean Association (ASA) in 1997 as a soymilk and tofu expert and since then I have been in touch with the ASA's International Marketing (ASA-IM) activities worldwide. Soybean and soy meal utilization in the animal sector is the first priority of ASA-IM as it consumes most of the soybean and soybean meal (utilised in poultry, animals, aquaculture, etc). But they also have a full-fledged food program in almost all their international offices and they have a substantial budget for this. I know these soy food promotion and utilization programs in India, Japan, China, Mexico, Middle East, etc. And we have these programs in Sri Lanka, Pakistan and Bangladesh through our India office.

"ASA-IM sends teams of potential and prospective entrepreneurs to the US and other countries for advance training on the soy food production and utilization. I have lead such teams to attend the advance courses on the soymilk, tofu, TVP and other products at INTSOY, Texas A&M and Kansas State University courses separately. These courses were attended by Pakistan, Bangladesh and Sri Lanka based soy entrepreneurs also. ASA-IM paid all their hefty course fee, hotel stay, as well as meals and other incidental expenses. The participants paid only for their international air fare. I also visited Bangladesh, Sri Lanka, Nepal and Pakistan so many times to help the soymilk and other soy food manufacturers in these countries.

"ASA-IM spends lot of money on the promotion of soy for the food uses all over the world. I may try to send you some pictures of these activities. These help in creating the market for the small, medium and large scale soy food producers. We do it for the soymilk, tofu, soy nuts, soy flour, TVP and all other soy food products manufactured and sold by the Indian soy food manufacturers.

"ASA-IM promotes the soy food business through the trade fairs, industry visits, helping them in attending government training programs etc. The Indian Government also helps in promoting the soy food business and products. Once they provided huge funds for the generic campaign of the soy food products in India and the advertisement program ran on the popular TV channels, radio, print media etc. for a few months. We coordinate the entrepreneur development programs through the government departments and they have run exclusive training programs on the soy food business in which hundreds of prospective and existing soy entrepreneurs participated.

"Soy fortified products are also popular in India. One of the Indian states, Gujarat, recently introduced wheat flour fortified with soy flour for public distribution system (a subsidised ration for the poor people). All this is run by government programs. The Government of India (GOI) feeds approximately 250 million children, women and men under various feeding programs and soy is the main protein source in most of these. They use other protein options also based on the price and the availability but soy is preferred by the government in these programs. We help them in the product formulation, recipe development etc.

"I introduced the soymilk, tofu and other small scale soy food production business to the Indian army, also for their soldiers who retire at an early age and go for low profile business. I gave them the option of the soy food business on a small scale after their retirement from the army. At one of the army rehabilitation centres they have installed soymilk, tofu and other soy food processing units to train their retiring soldiers. I go there from time to time and impart training to them also when the new lot of soldiers come for this program.

India has made an excellent progress in the soy food business on small, medium and large sale production and there continues to be tremendous growth in this field, especially the soymilk, tofu, soy flour, TVP, soy protein based products etc.; you can see a lot of these products in the super stores. One thing that is remarkable here is that besides selling there products in the rural and urban areas, the soymilk and other soy product manufacturers sell a substantial quantity of their product through the super stores and other organised marketing channels. I help them in making the good quality packaging with the proper shelf life, giving all the nutritional and commercial information on labels, following the rules and regulatory norms framed by the GOI, getting a bar code, taxation, industry licensing, etc.

More later, Ratan. Address: PhD, Manager, the SoyaCow Centre, KH-177 Kavi Nagar, Ghaziabad 201 002 UP, India.

8612. Sharma, Ratan. 2010. Re: Work with soymilk and tofu in India and worldwide. Letter (e-mail) to William Shurtleff at Soyinfo Center, Sept. 26. 2 p.
• ***Summary:*** "There are close to 400 soymilk machines that I established in India after transferring the SoyaCow technology to SSP Ltd. in Faridabad.

"The first SoyaCow machine was sold in 1995 to a rural entrepreneur who ran this machine in an engineering college's canteen in Karnal (Haryana state). I kept track on his business for some time but then I lost touch when he moved to a new location. His son contacted me for some help after four years but since then I have no record of them. I don't think they are still in this business. Anyway, that was the first machine and I could recall that person sitting in front of the machine at SSP's floor and observing the trial of the machine before this was dispatched to him. He was amazed to see a machine producing milk.

"A few points for your information:

"In 1996 SSP Pvt. Ltd. (India) started to make SoyaCow machines.

"Punjab state has the highest number of soymilk machines and are number one in the soymilk and tofu production India.

"About 65% of the total soymilk produced in India is converted into tofu.

"Some of the soymilk producers prepare soy ice-cream, yogurt, mayonnaise, shrikhand (a local yogurt based sweet), rasogolla (a heat desiccation based Bengali sweet).

"On the small scale about 70% of the entrepreneurs make tofu and 30% sell their soymilk as flavoured soymilk.

"Flavoured soymilk is sold in Poly packs [sealed plastic bags], sterilised in the glass bottles, and also in cans which are distributed to schools for consumption at lunch.

"What kind of people and organizations use SoyaCows to make soymilk and tofu: Commercial entrepreneurs approximately 85%. Non-governmental organizations (NGOs) 5%. Homes for destitute children and women 4%. Schools 5%. Cafeterias and business foodservice where they serve the soymilk on a subsidised price to their factory employees, hospitals 2%. These commercial entrepreneurs serve all the above sectors separately.

"Please let me know if you have any questions about the above. I am attaching the list of some successful entrepreneurs. The actual list is long, so I have sent just a few."

Ratan attaches a 4-page table, titled "A few successful soymilk and tofu entrepreneurs," showing: (1) Company name. (2) Contact person, address, and phone number. (3) Products and quantity made per day. For example, for Rubal Soya in Punjab (which owns 3 SoyaCows)–the largest soymilk manufacturer shown: Flavoured soymilk 1,200 L (liters) per day. Tofu 200 kg. Soy nuts 25 kg.

Auroville Soya is run by Mr. Frederic Cordonnier and his wife, Catia. Samara Soy Products in Ludhiana, Punjab, makes 1,400 L of flavoured soymilk. Address: PhD, Manager, the SoyaCow Centre, KH-177 Kavi Nagar, Ghaziabad 201 002 UP, India.

8613. Sharma, Ratan. 2010. Re: Work with soymilk and tofu in India and worldwide. Letter (e-mail) to William Shurtleff at Soyinfo Center, Sept. 26. 2 p.

• ***Summary:*** "The present price of the SoyaCow in India is as follows (Indian Rupees):

"SC20 without deodoriser–Rs. 175,000 (you really don't need a deodoriser if just planning to produce tofu only) but deodoriser is really effective for the flavoured soymilk business.

"SC20 with deodoriser–275,000.

"Tax: 4% on the total value.

"I have worked with the government and have had very good success in introducing soymilk, tofu and other soy products in the government-run residential / boarding schools (600 schools all over India). Although not all of them are using the soy products (for many different reasons), they all have the advice from their headquarters to use soy in their school menus.

"The Government of India (GOI) feeds approximately 120 million school going children by providing them lunch and at most of the schools they include soy products depending on its availability, price suitability, product quality etc. This program is called Mid Day Meal (MDM).

"Simultaneously GOI feeds approx. 130 million women and children by proving them the nutritious diet which is mostly soy based. This is called Integrated Child Development Services (ICDS). In both these programs they have certain norms of protein and calorific requirements.

"SSP manufactured and promoted the soymilk machine (SoyaCow). They did it for so many years without any monetary interest. After everything was established they transferred this business [on 9 Sept. 2006] to one of their fellow associates, Pristine Plants (PPI). SSP is a big Indian Food and pharmaceutical equipment manufacturing company. This was a very small business for them and at later stage they realised that because they were not earning anything from this machine through their Indian business so the interest of the company in after sales service was not up to the mark and they thought that this was not justified, so they transferred this business to Pristine Plants (PPI), which is a full-fledged company involved only this business including manufacturing, marketing, after sales service etc. SSP supplied so many machines to Russia and all over the world through ProSoya. SSP is still into this business and they manufacture and sell soymilk processing plants above 100 litres per hour capacity. Also, they manufacture and sell evaporators and driers for making the soymilk powder. They have good collaboration with the ProSoya. Evaporators and driers are their core competence." Address: PhD, Manager, the SoyaCow Centre, KH-177 Kavi Nagar, Ghaziabad 201 002 UP, India.

8614. Child Haven International (Website printout–part). 2010. www.childhaven.ca Printed Sept. 28.

• ***Summary:*** Contents: Who we are (Our story, Gandhian ideals, directors, Fred & Bonnie, Patrons, Financial. The first ten years. The Cappuccinos. View video about Child Haven). What we do (Our Child Haven homes–India: Delhi, Gandhinagar, Hyderabad, Kaliyampoondi, Savarsai. Bangladesh: Chittagong. Nepal: Kathmandu. Tibet: Lhasa. A map of the Indian Subcontinent shows the location of each home. SoyaCow project. Literacy. Women's program). How you can help (Donating. Volunteering. Sponsorship. Support groups. Corporate support. Supplies. Wall of honour). Intern (Since 1985 about 1,000 interns have volunteered for 3+ months in India or Nepal).

"Inspired by the ideals and philosophy of Mahatma Gandhi, Child Haven International is a registered charity founded in 1985. We assist children and women in developing countries, who are in need of food, education, health care, shelter and clothing, emotional and moral support."

Gandhian ideals: 1. No recognition of caste. 2. Equality

of the sexes. 3. Non-violence (toward both humans and animals). 4. Vegetarian meals (The meals are rice and lentils and vegetables, with some soya milk and yoghurt from our SoyaCow machines, which were invented by Raj and Rashmi Gupta of Ottawa, Canada). 5. Respect for religious background. 6. Simple living (Each child has a little metal suitcase. All their worldly goods have to fit inside, and they do–very nicely).

Child Haven's SoyaCow project: "The SoyaCow machine is capable of making three gallons of soya milk in 30 minutes from 1.7 kg. of raw soybeans. The technology was developed by ProSoya Foods Ltd., a group of Ottawa scientists and entrepreneurs. The SoyaCow machine is used in Child Haven homes to produce Soya milk and Soya products for the children. It's also sold to economically disadvantaged women for their use as a cottage industry.

"In 1988 a SoyaCow Support Group was formed and by 1992 Child Haven International had purchased six SoyaCow machines. Child Haven received funding for this environmentally friendly project from The Canadian International Development Agency (CIDA). There are now 400 SoyaCow machines in India and it is being promoted in Africa. Charitable donations and fundraising events provided Child Haven's contribution to the promotion of the SoyaCow.

"SoyaCow technology produces a palatable, highly nutritious, cereal or almond flavoured milk without cholesterol. The milk and okara mash can then be used to produce other soya products such as yogurt, tofu and vada. One machine can produce sixteen-three gallon batches in an eight hour day–equivalent of a herd of 16 cows in India.

"SoyaCow machines are used in Child Haven homes in Kathmandu, Bangladesh, Hyderabad and Kaliyampoondi because soy milk is a low cost, high protein product which is cheaper to produce than cow's milk. From a given acreage, ten times as much soy milk can be produced at one third to one half the price of cow's milk. Soy milk made on the premises of schools and homes is safe from contamination by dilution with water. It is also free from the danger of transmitting tuberculosis or other diseases from infected cows.

"In addition to the health benefits of soya milk, Child Haven's SoyaCow Project has generated employment for women. These women are trained to operate the SoyaCow machines and sell the soya milk products, thereby achieving some economic self sufficiency and generating revenue which can be used for the benefit of their children." Address: Farmhouse, Maxwell, Ontario, Canada.

8615. Sharma, Ratan. 2010. Re: Work with soymilk and tofu in India and worldwide. Letter (e-mail) to William Shurtleff at Soyinfo Center, Sept. 28. 2 p.
• ***Summary:*** Under what name is tofu sold in India? About 35% is sold under the name of "tofu," 40% is "Tofu (soya paneer)" and 25% is sold as "Soya paneer." Because of regulatory issues in India, people are switching over to the name "Tofu" only.

How is tofu packaged when it is sold? About 50% is sold fresh and loose, 20% is sold in poly packs, and 30% is sold vacuum packed through the super stores. Poly packed tofu is also available in the super stores. Tofu is available in water filled pouches also but the percentage is very small. Fresh tofu is sold in local markets, vegetable markets and in stores that sell house hold supplies.

After the success of SoyaCow in India a few local companies also started producing these machines. This is quite unorganised in comparison to the PPI or SSP who have technically sound teams and are very professional for such business, are professionally marketing the machine and providing excellent after sales service. PPI sells approx. 60 machines in a year, twenty machines are sold by other companies and approximately 10-12 machines are imported from China and Taiwan. There are dealers of imported machines also. On an average 100 machines are sold every year in the Indian market. Not all users of these machine make it to a successful business and 30-35% of them close down their business within a year.

"The most popular soymilk flavours are vanilla, mango, rose flavour, pineapple, almond, and banana. In south India rose flavoured soymilk is very popular. Choice of flavours varies from place to place but the above flavours are standard and popular. Keshar-pista (blend) is also popular. At some parts of the country like Tami Nadu, Punjab, Haryana, etc., people like very sweet soymilk.

"Tofu is cooked in various ways like Indian Paneer, i.e., Matar Paneer, Palak Paneer, Kofta, Oofu Tikka Masala, etc. Tofu Bhurji (scrambled tofu) is also prepared and popular. In the Punjab area many people use spicy tofu as a salad with their alcoholic drinks. Tofu is used as filler material in the Indian snacks like Samosa, patties etc.

Work in Africa: I have visited South Africa five times and tried to establish cottage scale soy food businesses in that country as well. I have worked with Eden Manufacturing and many other companies in South Africa and imparted training also to interested people at Eden Manufacturing at Berg Village and Pretoria with CSIR (Council of Scientific and Industrial Research). Address: PhD, Manager, the SoyaCow Centre, KH-177 Kavi Nagar, Ghaziabad 201 002 UP, India.

8616. Drosihn, Bernd. 2010. Tofu–Vom skurrilen Kampf um ein unscheinbares Weltnahrungsmittel [Tofu–From a ludicrous struggle to an unpretentious world-class food]. Mainz, Germany: Ventil Verlag, KG. 158 p. Illust. (many black and white photos). No index. 20 cm. [Ger]
• ***Summary:*** A very nice, informative book written in a very creative, humorous, light and playful tone. But lightly serious throughout about the importance of vegetarianism

and of not eating animals.

One example of this creative playfulness is the numbered "Tufuismus" ("Tofuisms" = tofu sayings) which appear, in random numerical order, throughout the book. Here is a sampling–from the many that are in English: "On the 8th day God created Tofu." "Earth to Mankind: Take global warming seriously–stop eating animals." "Tofu is a doorway to the sunny side of life." "Tofu is a love letter to your body." "Tofu gives you choices you never thought you had before." "Tofu loves you." "Take tofu–because how we eat is how we manage planet Earth." "Tofu talks to your body and mind." "Your Body is a Cathedral–don't litter it." "Tofu is easy on the only world we have." "Tofu helps you stay young and hot." "Tofu simplifies your life." "Tofu is Al Gore's best friend." "Share Tofu's vision of friendliness toward the environment and the animals on our planet." "Legalize Tofu!" "Tofu hurts NoBody." "Less meat–More Plants–More Planet." "Tofu gives rhythm to the sound of your life." "Tofu is meat 2.0."

The book also contains many numbered "tofu fact" boxes, a few with titles such "Fidel Castro Tofu Fact"

Happily, the book contains only a few pages of recipes using tofu, smoked tofu, and soymilk (p. 142-157)–as many as anyone needs.

The section titled "Addresses" (p. 158-59) contains names, addresses, and websites of "beloved tofumakers from the first generation" in Germany and the USA. A photo shows Bernd Drosihn, founder and president of Tofutown.com GmbH. Address: Founder and president, Tofutown.com GmbH, Industrie und Gewerbe Park, D 54578 Tofutown Wiesbaum, Germany. Phone: 06593 9967-0.

8617. Sharma, Ratan. 2010. Re: Color photos of soymilk, tofu, and SoyaCows in India. Letter (e-mail) to William Shurtleff at Soyinfo Center, Oct. 1. 4 p.

• ***Summary:*** Photos taken by Ratan Sharma 2003-2007 show: (1) (6) A SoyaCow SC20 with each of the 7 main pieces of equipment labeled. The first SoyaCow was developed for Child Haven International (CHI) in India and shipped in 1992. Although, the Canadian International Development Agency (CIDA) helped with funding in the beginning, they later stopped funding and CHI carried it forward through its own funding. Today SoyaCows are installed at all Child Haven homes in India, Bangladesh, Nepal and Tibet.

(2) This 200 liter per hour plant was made by SSP in India and supplied to a company in Chennai (formerly known as Madras, in southeast India) through ProSoya. Dr. Ratan Sharma standing in blue shirt.

(3) This soy restaurant named AIWO (meaning unknown) was started in 2003 by the Fresh and Honest Café (a coffee company selling the coffee beans, powder and leasing the coffee vending machines). They were using a big SoyaCow by in India by SSP (model VS200; capacity 200

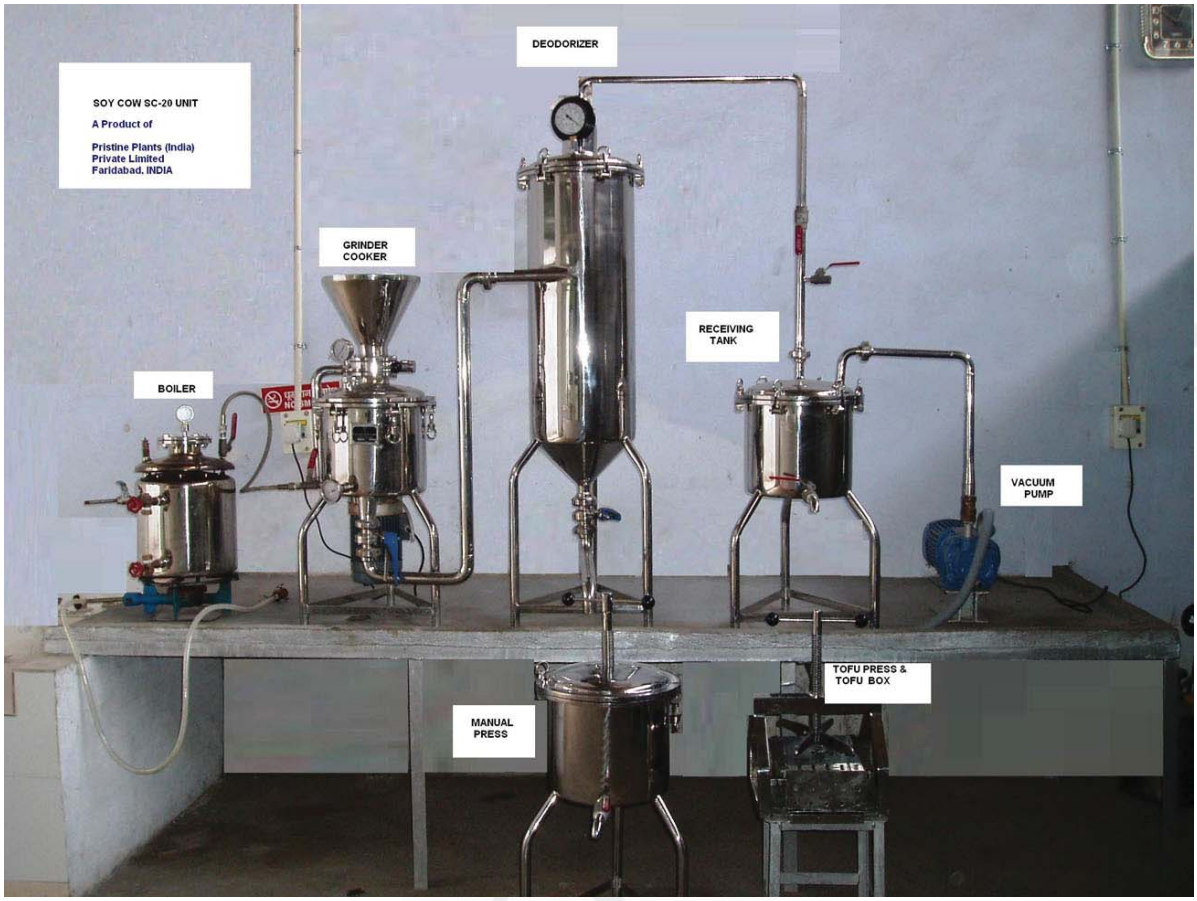
liters per hour). The restaurant served more than 20 kinds of soy food dishes, each at a fixed price. The dishes were served on a conveyer belt that ran around to each of the tables. It was developed by a big group called Sterling Group. They offered some discount to their employees. Some Singapore based company prepared this restaurant and developed the modalities.

(4) Bottled soymilk (in crates ready to be loaded in the truck) was produced by Fresh and Honest Café. Their brand name was Soyfresh. They sold the soymilk and tofu through super stores (supermarkets). Soymilk was sold in glass bottles (sterilised) and poly bags. Tofu was sold only vacuum packed. I helped all these companies from the procurement of the soymilk machines, product development, packaging, shelf life, marketing, etc.

(5) Uncut tofu in India. These SoyaCow users, after making the tofu, put it in water for cooling before cutting it into pieces and packing. Each block of tofu weighs about 3 kg (6.6 lb).

(6) A herd of six SoyaCows, each with a tall stainless-steel deodoriser to improve the taste of soymilk, is ready for dispatch at the SSP factory. Ratan Sharma inspected each machine before it was shipped.

(7) Vakratund Pharmaceuticals (VF) which, despite its name, made only soymilk and tofu at Udaipur, in the state of Rajasthan in western India. (8) They purchased a 200 soymilk plant with a capacity of 200 liters per hour made by



SSP. Because of the huge initial investment this company wasn't able to survive. Their product quality was excellent and they were supplying it to many states. They eventually sold their machinery to other company.

(9) A mobile soy kitchen selling soymilk and tofu.

(10) The advertisement used by the mobile soy kitchen.

(11-13) Various soy products on the shelves of Dorab Ji, a very famous super store (supermarket) in Pune (formerly Poona). The same products are in other area super stores: Food World in Pune, Spencer's in Bombay, etc. Chetran Foods in Pune is well known. Note Silk brand soymilk from the USA along with the Indian Sofit and Staeta in Tetra Pak cartons, made in India by ProSoya, headquartered in Ottawa, Canada. At the bottom of the shelf is sterilised soymilk in 200ml, 500 and 1,000 ml glass bottles. These soy products are in the soft drink cooler, so soy products have been accepted in the leading super stores and are as visible as Coca-Cola. Pepsi, etc. (14) Two brands of tofu in the dairy section (refrigerated) of a super store: Soyace Soya Paneer and Soyfit Soya Paneer (Tofu). The Sofit tofu is made by Wega Industries in Bombay; they have their own large-capacity tofu factory. Fifty percent of tofu and soymilk manufacturers sell their products on their own; the rest sell them through super stores or malls or exclusive restaurants. In the Punjab soyfood makers have developed some special soy retail outlets. A few manufacturers use bicycle rickshaws–somewhat like traditional tofu makers in Japan who carry their wares on a bicycle and sell directly to people in their homes.

(15) Women's employment: Making tofu at a soymilk site in a remote area of Hyderabad.

(16) A SoyaCow SC20 with tall stainless steel deodoriser (for better soymilk flavor) in the center.

(17-18) Training entrepreneurs to make soymilk on a SoyaCow SC20.

(19) Ratan Sharma cutting tofu at a soymilk and tofu training program in the tribal areas of Orissa state.

(20) School children waiting for or drinking soymilk at the same training program.

(21-22) The VitaGoat from Malnutrition Matters (MM) of Canada requires no electricity. The soaked soybeans are ground with a bicycle powered grinder. The soymilk is heated using a very efficient wood-fired boiler. Here is a VitaGoat training program in the tribal areas of Orissa. Malnutrition Matters is associated with Child Haven International (CHI). "Frank Daller is a volunteer of CHI and is one who was involved in the SoyaCow technology transfer from Canada to India in coordination with me. He was working for ProSoya at that time. We have very good relations. I helped MM also in transferring their VitaGoat (VG) technology to GD Machines (a subsidiary of SSP which later merged with SSP) almost two years ago. I help MM also. Their machines are manufactured by GD and sold in India and other countries. These machines are marketed by MM only. Off course, I help their clients in the way I help the SoyaCow users."

(23) Fresh soymilk is prepared by an NGO and served fresh to children at a school in Orissa, which has no electricity or refrigeration.

(24-25) At some of the army rehabilitation centers soymilk and tofu processing systems (SoyaCow) have been installed to impart training to retiring solders (who retire before age 30) so that they could choose soy foods business as a career option after retirement rather than entering low-profile jobs such as guards, drivers, electricians, etc. Address: PhD, Manager, the SoyaCow Centre, KH-177 Kavi Nagar, Ghaziabad 201 002 UP, India.

8618. Sharma, Ratan. 2010. Re: Color photos of soya flour, soya nuts, and soya oil made in India. Letter (e-mail) to William Shurtleff at Soyinfo Center, Oct. 1. 2 p.

• ***Summary:*** Photos taken by Ratan Sharma 2003-2007 show: (1) Soya Shakti soya flour in a super store (supermarket). (2) On the top shelf is Chetran's Soya Aata. Two other brands of soya flour are in the photo.

(3) Salt roasting of soynuts for a commercial scale production; the soybeans and salt are roasted together in the hot metal pan. This product is excellent in taste. This company Bansal Nuts based in Punjab feels that their products are better than the mechanically roasted soynuts.

In English, we say "roasted peanuts" or "roasted soybeans," but in Hindi all roasted legumes and/or grains are simply called "roasteds" (*bhuna*).

In stores, roasted soybeans are usually sold labeled (in English or Hindi or both) in plastic bags–unmixed with other roasted grains or legumes. However a small percentage of products sold in stores or markets contain a roasted mixture of soybeans, wheat, rice, and/or chickpeas (garbanzo beans).

In India, roasted soynuts are usually sold through the direct outlets of the manufacturer and through super stores. Roasted soynuts are sold all over India. At some places they are also included in the school lunch program, which is paid for by the Indian Government.

In India, soyabean is mostly dry roasted. Many small scale soymilk and tofu manufacturers make soy nuts by roasting whole dry soybeans in sand. In India ground nuts (peanuts) and chick peas (garbanzo beans), rice and other grains are roasted in the sand. This job has been done by some communities from centuries. They charge some money, or a little portion of the material to be roasted, and do it for any one. These roasted legumes and grains used for the snacks in the rural and urban areas from centuries. Street vendors in the cities near the courts, hospitals, schools, bus stops, etc. roast and sell these grains or a multigrain mixture. It is not common to roast soybeans (except indigenous black soybeans called *bhatt*) for home consumption. Roasted soybeans are usually sold in super stores in plastic bags. The Hindi name for soybeans dry roasted in sand is *bhuna,* but

most people just call it "roasted" (in English). The name for dry roasted soybeans sold in plastic bags in stores is "Packet" or *thaila* (in Hindi).

Some small soymilk and tofu makers sell fried soy nuts as well but percentage of these is very low compared to the dry roasted soy nuts. The soybeans are first soaked in water about 2 hours; then they are roasted in salt. After the sand is removed (by a sieve), a small amount of oil, salt, and some spices are applied to the soybeans. Very little oil is used so that salt and spices could stick on the roasted beans. Soybeans prepared with oil, salt, and spices are called *masaledar.* But in general in India, whole soybeans are not fried.

In Jammu and Kashmir (J&K, the northernmost state of India) and some other places soy nuts are sold by the street vendors also in the way they sell other roasted grains. In hilly areas also they grow black soybean called *Bhat / Bhatt* (in Hindi) and roast it for their consumption especially in the winter. This indigenous black soybean is grown mostly in the Himalayan range, especially in the Kumau and Garwal regions.

In the villages they use dry leaves to fire their hearths for roasting. They store these dry leaves during the fall / autumn and use them year round for the roasting of the legumes and grains brought by the farmers and other villagers.

(4) Soy-fortified pasta, which is made by small entrepreneurs.

(5) Roasted soybeans coated with jaggery–traditional unrefined sugar. It is a concentrated product of cane juice without separation of the molasses and crystals, brown in color.

(6) A few companies in India use expellers (a mechanical process) to crush soybeans, yielding soy oil and low-fat soy meal. The meal is ground finely to make soy flour. Both are sold at premium prices compared to the oil and flour from solvent extraction (a chemical process, using hexane solvent, a volatile petroleum fraction). Here are bags of the flour.

(7) And the oil. Note the word "Natural" on the label. Note: Even though the manufacturer of this oil and flour is named "S.P. Solvent (Pvt.) Ltd." (which sounds big and modern) they use only expellers and mechanical processing.

(8) A small, single serving packet of soya nuts (soynuts), nicely packaged. Anjali Mukherjee is a diet therapist and well known food and health writer for *Times of India.*

(9) Allegro Soya Nuts from Taj Majal.

(10) Coca-Cola and soyfoods get equal billing in India.

(11) Soya Nuts packaged in plastic bags. Address: PhD, Manager, the SoyaCow Centre, KH-177 Kavi Nagar, Ghaziabad 201 002 UP, India.

8619. Sharma, Ratan. 2010. Re: Color photos of soymilk, tofu, and SoyaCows in India. Letter (e-mail) to William Shurtleff at Soyinfo Center, Oct. 1. 4 p.

• ***Summary:*** Photos taken by Ratan Sharma 2003-2007 show: (1) Training of the prospective soymilk and tofu entrepreneurs (men's group).

(2) In the training program: By using a curding agent / coagulant, soymilk is curded to make soft white curds floating in yellow whey. In India, the most widely used curding agent is citric acid, followed by calcium sulphate, then magnesium chloride. (3) The curds are now ready for pressing to make tofu. This group is part of the Soy Entrepreneur Development Program (EDP). This program was conducted in coordination with the American Soybean Association–International Marketing (ASA-IM) and the Government of India (GOI).

(4) A collage showing the labels of well-known soyfood products made in India. Note Ruchi's Nutrela (chunks of textured soy flour) along the top. Soya Sakthi in the lower right, Sofit soy milk in the lower left. Soyfoods now have a good, healthy image in India–as they do throughout Asia.

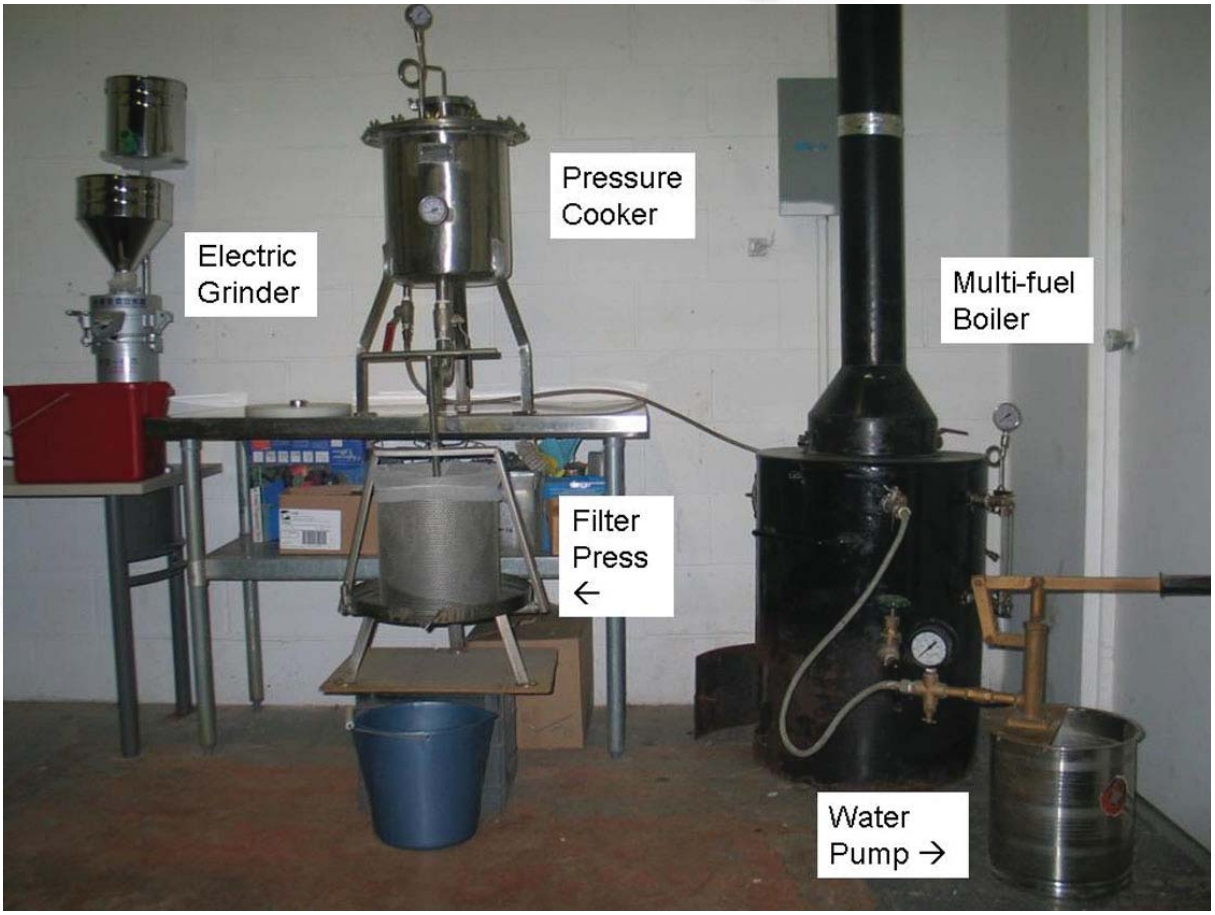
(5) SoyCow 'M' developed by Malnutrition Matters in Canada; the five main pieces of equipment are labeled: Electric grinder, water pump, multi-fuel boiler, pressure cooker, and filter press. A simpler unit, called the VitaGoat, comes with a bicycle powered grinder (which requires no electricity). Address: PhD, Manager, the SoyaCow Centre, KH-177 Kavi Nagar, Ghaziabad 201 002 UP, India.

8620. Sharma, Ratan; Shurtleff, William. 2010. How soymilk came to India after 1970; fragments of a long and interesting story. Part I (Overview). *SoyaScan Notes.* Oct. 7.

• ***Summary:*** 1971–Pantnagar Soymilk Products Pvt. Ltd. launches Sipso Soymilk, made at G.B. Pant University of Agriculture and Technology, Pantnagar, Uttar Pradesh, India. This is the earliest known commercial soymilk produced in India. The equipment is imported from the USA and funded in large part by USAID. The patented "Illinois method" is used to make the soymilk, from which the okara (dietary fiber) is not removed, but is finely pulverized by a high-pressure homogenizer. The selling price (which allows some profit) is about one-third that of cow's milk. By 1978 this plant had produced nearly one million bottles of soymilk, which had been sold to the students and test marketed. A New Delhi Plant was established in 1979. In 1987 this product is still on the market, being sold in Prepac aseptic 200 ml plastic bags. By Oct. 1978 M/S Pantnagar Soy Products (the new name) in New Delhi was producing about 100,000 packets of soymilk per day. Each packet contained about 200 milliliters of soymilk.

1974–Soyghurt Food Products & Co. launches Soyamilk, made at Wardha Rd., Sitabuldi, Nagpur 440012, Maharashtra (MS), India. This company was started in about 1974 by Dr. S.L. Kothari, formerly of the Dep. of Food Science & Technology, G.B. Pant Univ. of Agriculture and Technology, Pantnagar (Nainital), UP, India.

1979–Spicer's Food Specialties of Pune / Poona



launches Soyalac (canned soymilk) and Soya Soft Drink (in bottles), with a full page ad in the *Times of India.* The products are made by Spicer Health Foods, at Spicer Memorial College (a Seventh-day Adventist Organization), which started making Soyalac in 1973 for the students and for delivery to customers over a small radius, and Soya Soft Drink in 1979. The plant was started by Dr. Harry W. Miller, a great man and soyfoods pioneer, worldwide.

1979–The Institute of Buddhist Dialectics introduces Soymilk. It is made on a small scale by the Tibetan Buddhist community in exile at Dharmasala, Dist. Kangra, Himachal Pradesh, India. It is consumed mostly the monks and other members of the community, but small amounts are sold to local residents who bring their own container.

1981 May–Anuradha Industries (of Bombay, India) launches Amisoy (Spray dried soyabean milk powder) with a large ad in the *Times of India.* The product is still on the market in Jan. 1982.

1987 early–Noble Soya House (with partners Godrej, a powerful distributor, and Great Eastern Shipping) launches India's first major soymilk product (named Noble House Great Shake) and first soymilk product sold in aseptic Tetra Pak cartons. The soymilk processing plant, made by Kibun of Japan, had a capacity of 4,000 liters per hour. At this time, there were four Tetra Pak lines in the plant for this product only Targeted to youth, the product was not successful; it was more than a decade ahead of its time.

1988–Premier Industries (India) on Indore, launches Tuffy Hi-Protein Soymilk (in Malt, Orange, Banana, Mango, Strawberry, and Chocolate flavors). The soymilk equipment was from Mitsubishi in Japan. The product was discontinued in 1989.

1989 May 29–Amrit Protein Foods Ltd. (Ghaziabad, Uttar Pradesh) launches Big Sipp Soyamilk [Mango Shake, Banana Shake, Rose, or Pinakool (Pineapple)]. The soymilk processing plant was made by Mitsubishi of Japan. It is packaged in 200 ml aseptic, multi-layered, metalized Prepac Standi-Pak pouches. The product was discontinued in 1991.

1990 Nov.–A SoyaCow, invented by Raj Gupta (a machine that makes palatable, low-cost, high-protein soymilk) is now making soymilk in Hyderabad, India, at one of the Child Haven homes for poor children. The machine was made in Bombay, India (*Child Haven International* newsletter, fall 1990; *Toronto Star,* 19 June 1991. p. D2).

1991 May–The first SoyaCow made in Canada (Ottawa, Ontario) is sent to Child Haven in India (*Child Haven International* newsletter, spring 1991 and summer 1991).

Note: Dates and quotations from 1992 to 1996 are from the *SoyaCow Newsletter,* published by ProSoya, Ottawa, Ontario, Canada.

1992 March–"Child Haven International of Maxville, Ontario, has purchased six SoyaCow systems for their Soya Milk Cottage Industry Project in India. The project is supported by the Canadian International Development Agency [CIDA] and charitable donations from the public.

1992 June–CIDA funds Child Haven to buy seven more SoyaCows. They were shipped to India by air on 30 Nov. 1992.

1993 Sept.–Child Haven has hired Ratan Sharma, PhD, for their SoyaCow project in India.

1994 March–Child Haven has established a SoyaCow Centre in Ghaziabad, India, about 30 miles drive from Delhi to serve the growing population of SoyaCows in India. The Centre's main objective is to help women in self-employment by producing and selling soymilk and its products at affordable prices.

1995 June–SSP to manufacture SoyaCows in India. "In a recent visit to India, Frank Daller, President of ProSoya Inc., made arrangements with SSP of Faridabad, India, to develop an SC20 prototype in stainless steel. SSP is a reputable stainless steel fabricator for the dairy, food, and chemical process industries." "Earlier attempts of technology transfer to India to manufacture SoyaCows were not successful..."

1995 Dec.–Vocational training in soymilk production and use started in India at Manav Vikas Parishad of Ghaziabad in collaboration with the Government Polytechnic College and the SoyaCow Centre; they have developed a short course.

1995 Dec.–SSP gets approval from ProSoya Inc. to manufacture the first 10 SoyaCow SC20s in India.

1997–The first SoyaCow is sold commercially in India, by Dr. Ratan Sharma; it is a model SC20. This is the start of a new era for soymilk in India, as small entrepreneurs start to buy soymilk equipment.

1998–After the early success of SoyaCow in India three local companies also started producing these machines, direct imitations or "rip-offs" of the patented ProSoya technology. Their equipment is very inferior in quality and their service is poor so their sales are poor even though their price is lower than the SC20.

2000–Godrej restarts soymilk production using the brand name Staeta (pronounced STET-uh) and packaging in Tetra Pak cartons as part of a co-packing agreement initiated by ProSoya Foods India (a subsidiary of ProSoya Inc. of Ottawa, Canada, founded by Rajendra Gupta). The soymilk is made at the original Godrej soymilk plant at Mandideep, after some modification of their equipment made by Kibun of Japan. Godrej observed that ProSoya's Staeta soymilk was successful in aseptic Tetra Pak cartons–requiring no refrigeration.

2003–ProSoya Foods, India Pvt. Ltd. installs its own 2,000 liter per hour plant at the Godrej's plant in Mandideep in order to make use of their Tetra Pak facility on a co-pack basis using the brand name Staeta. ProSoya plans to launch this product in December 2003. Godrej (using a 2,000 liter per hour soymilk processing plant) launched its own Tetra Pak (Sofit) soymilk about 15-30 days after ProSoya launched its product. Godrej now has several Tetra Pak packaging

lines. Staeta was actually launched in Jan. 2004 and Sofit was launched a month later.

2006 Sept. 9–SSP transfers their SoyaCow business to Pristine Plants India (PPI) Pvt. Limited. Pristine Plants is a new and independent company started by one of the relatives of SSP's managing director solely to manufacture small SoyaCows (SC20s). All these machines are based mainly on the ProSoya Technology. As of Oct. 2010 Pristine Plants is doing well financially.

2008 Oct.–ProSoya Inc. sells ProSoya Foods India to SoyaWorld of BC, Canada.

2009 Oct.–SSP starts again to make large and medium scale soymilk equipment. This is the first soymilk manufacturing equipment they have made since Sept. 2006. As of Oct. 2010 they have made one 200 liter per hour plant sold in India and one 100 liter per hour plant exported to some other country. Their designs are based on ProSoya designs but with major modifications to suit the needs of their clients. They make each these plants only after they receive an order and down payment for it. They are not marketing their soymilk machinery aggressively. Ratan Sharma works with SSP occasionally on these plants, not on the engineering but to give them ideas about the final product, product specifications, processing techniques and other details so that they can engineer each plant accordingly. Continued. Address: 1. PhD, Manager, the SoyaCow Centre, KH-177 Kavi Nagar, Ghaziabad 201 002 UP, India; 2. Soyinfo Center, P.O. Box 234, Lafayette, California 94549.

8621. Sharma, Ratan; Shurtleff, William. 2010. How soymilk came to India after 1970; fragments of a long and interesting story. Part II (Overview). *SoyaScan Notes.* Oct. 7.

• ***Summary:*** Ratan notes: These larger plants do not compete with similar plants that ProSoya Inc. of Canada would like to sell to some larger customers in India. SSP and ProSoya Inc. have a very good understanding. Some times there is a conflict of interest but they sort it out. Occasionally SSP makes a plant for ProSoya on their demand. They have very good business and personal relations and I try to equilibrate between them to avoid any such problems which could create any hurdle in this business. Fortunately SSP and ProSoya are run by the people with very high ethical and moral values.

As the demand for soymilk and tofu has increased in India, people thought of going for the bigger capacity plants and PPI made slightly larger plants. The earlier plants were 30 L (litres) per hour capacity but they recently made 50 L per hour capacity also. The most popular model is SC20 which produces 30 L of soymilk in an hour. The larger versions of the SoyaCow are not sold much.

Approximately how many SoyaCows has Ratan sold each year in India? Here is a sampling of statistics he has kept: 1995–approximately 12 units. 1996–approx. 20. 1997-1999–approx. 27 each year. 2000–approx. 35. 2001-2003–Approx. 18 per year. 2004–approx. 40. 2005–approx. 43. 2006–approx. 45. 2007–approx. 38. 2008–approx. 45. 2009–approx. 65. 2010–approx. 65 as of Oct. 1. If you plot these numbers on a graph, the result is, on average, fairly rapid, linear growth, with the curve rising rapidly starting in 2009.

As of Oct. 2010, there are two brands of soymilk are made in India and sold in Tetra Pak cartons: Staeta and Sofit. Both are made in the same plant, owned by Godrej, at Mandideep, near Bhopal, Madhya Pradesh, in central India. Godrej (now named Godrej Hershey) is the biggest food and consumer goods company in India.

Total UHT (Tetra Pak) soymilk production (for Godrej and ProSoya) is about 4 to 4.5 million liters annually. Godrej has about 60% of the market and ProSoya about 40%. The product quality is almost the same but Godrej sells more because of its well-established network of retail stores to which they distribute a wide variety of consumer products.

"The SC20 comes with the electrical grinder only whereas the VitaGoat developed by Malnutrition Matters (MM), Canada runs without electricity. They have the option of the electrical and gas fired boiler also. This machine was being manufactured by GD Machines in India. GD is a subsidiary unit of SSP and two years back they merged with SSP so now these machines are being made through SSP. Here I would like to mention that these VitaGoats are mainly sold through the MM in India and other countries. I am helping MM also in their VitaGoat business development and helping the users of their machines in product development, marketing etc. These machines have been sold to big NGOS also who run these machines through the shelf help groups (SHGs) and supply the soymilk in schools. One such big project was supported by World Bank in a tribal area of Orissa. I was also involved in that program.

"SSP manufactured and sold VS-200 plants also in India. These could produce 200 L of soymilk in a hour. They just sold 5-6 such machines in India. Also, SSP manufactured and sold so many such systems for ProSoya in other countries; they even produced 500 L and 1,000 L per hour soymilk processing plants for ProSoya along with the evaporators and driers. Some of these were installed in Russia also.

The three companies that make low-quality 'rip-off' soymilk equipment have, on average, sold a total of about 15-20 machines a year during each of the past two years. They are quite unorganised in comparison to PPI or SSP who have technically sound teams and are very professional in this business of making and marketing the machines and providing excellent after sales service. PPI sells approximately 60 machines per year, twenty machines are sold by other companies and approximately 10-12 machines are imported from China and Taiwan. There are dealers of imported machines also. On an average 100 machines are sold every year in the Indian market. Not all users of these machine make it to a successful business and 30-35% of them close down their business within a year.

"The most popular soymilk flavours are vanilla, mango, rose flavour, pineapple, almond, and banana. In south India rose flavoured soymilk is very popular. Choice of flavours varies from place to place but the above flavours are standard and popular. Keshar-pista (blend) is also popular. At some parts of the country like Tami Nadu, Punjab, Haryana, etc., people like very sweet soymilk." Address: 1. PhD, Manager, the SoyaCow Centre, KH-177 Kavi Nagar, Ghaziabad 201 002 UP, India; 2. Soyinfo Center, P.O. Box 234, Lafayette, California 94549.

8622. Sharma, Ratan. 2010. Re: Development of soy foods in India. Letter (e-mail) to William Shurtleff at Soyinfo Center, Oct. 10. 2 p.

• ***Summary:*** "We worked to develop specific soy food recipes to make these products popular across the country.

"Sometime in the 1980s there was a semi-larger capacity of soymilk plant was installed at G.B. Pant University of Agriculture and Technology, Pant Nagar, Nainital in India. This was a donation from USAID and was based on the old Illinois technology. The okara was not separated from the soymilk. This university use to sell the flavoured soymilk during the farmer fairs and to their teaching staff. There was no commercial development through this machine in India.

"There are few government organisations promoting the soy products and the soy food based entrepreneurship in India: 1. Indian Council of Agricultural Research: They run all the agricultural universities and institutes where they run some soybean farming and soy food promotion kind of work in addition to varietal development of the soybeans and their work on the other agricultural products. It's a huge establishment of the Government of India under the Ministry of Agriculture.

"2. Central Institute of Agricultural Engineering, Bhopal (MP): They have a Soybean Processing and Utilisation Centre where they have an old version of the SoyaCow and train the prospective entrepreneurs on this. Also, they provide training in the preparation of other soy food products. This institute runs week-long courses on the soy food products.

"3. National Soybean Research Centre, Indore: This is mainly to develop the soybean varieties. They also do some training and extension work on soy food promotion.

"4. The Government of India (GOI) did a generic campaign for the soy food promotion in India about 4-5 years ago. Many government organisations in India are involved in promoting soy foods and businesses.

"5. The Ministry of Women and Child Development, Food and Nutrition Board recommends using soy food products in various feeding programs. GOI feeds more than 240 million of women and children in various feeing programs under Integrated Child Development Services (ICDS) and Mid-Day Meal programs.

"6. Many non-governmental organisations (NGOs) and religious organisations use tofu to feed the people of their targeted area, their devotees, employees, etc." Address: PhD, Manager, the SoyaCow Centre, KH-177 Kavi Nagar, Ghaziabad 201 002 UP, India.

8623. Sharma, Ratan. 2010. Re: Work with soy foods in India and Africa. Letter (e-mail) to William Shurtleff at Soyinfo Center, Oct. 12. 2 p.

• ***Summary:*** "I really feel blessed and fortunate having the opportunity to be associated with Soy which is a wonderful food for the people of my country and all over the world. After my masters [degree] I thought to go for a Ph.D. in soymilk and tofu technology. Soy was not a lucrative topic for a Ph.D. those days. My friends asked me to choose some other topic but I had finally decided and determined for this. When doing a Ph.D., the students want to choose some topic on which they can get enough reference and information on the subject they have chosen. We had a very little information on soy products in our library (everything was on its animal utilization side) but I was determined to go for Soy only.

"What inspired me to go for Soy: I am basically from a village. We have had one retired and old school principal (named Shri Janardan Prasad Sharma) in our neighbouring village. He used to be the school principal of my father and his elder brother and quite often use to visit my family. He was a very simple and great person. During his youth he was associated with Mahatma Gandhi, Vinoba Bhave and others. After his retirement he started educating people on the inner development, simplicity and Karma, and choosing a suitable Guru who could help you develop your inside. All the people in my area had high regards for him.

"He was very vigilant on my studies. Those days very few people go for the higher studies. Once he told me that Mahatma Gandhi tried to introduce soymilk and some soy based products but couldn't make it acceptable to the people. Somehow he was also associated in Mahatma Gandhi's soy program. He was always curious to know if something is happening or some technological advancement to make this product acceptable for the Indians. I thought I should try to work on soymilk and tofu and to develop the techniques to make a better and more acceptable product. That's what brought me into the soy and later my association with Child Haven International and ProSoya was a predetermined thing by God to help me into this noble venture.

"After my Ph.D. and commercial association with soy I became very busy in its promotion and helping the soy food entrepreneurs in many ways. Many things developed in the soy food industry and soymilk, tofu and other soy food product's business. I was excitedly and carelessly so busy that I couldn't show the packaged soy food products, bottled soymilk, vacuum packed tofu to our well respected old school principal who had been lying on bed after breaking his back. Although I kept on talking about these

developments which made him very pleased especially the wide acceptability of the soymilk and other soy food products and the technological developments to make the soy food products acceptable in the general masses. I couldn't show him the products and he passed away after a long illness at a very old age.

"Also, my grandfather (named Shri Harihar Prasad Singh) who was a farmer and very brilliant horticulturist was a real fan of soy. He had a book which was published by the G.B. Pant University of Agriculture and Technology, Pant Nagar more than 32 years ago. In that book, lots of soy recipes were given. My grandfather use to try those. That's how I was exposed to soy; otherwise soy was not a common word known to many people.

"My grandfather and that school principal were not in favour of me pursuing a job in the U.S. or Canada but to live in India and to develop some soy based low cost nutrition and to serve the country. This really influenced me and I determined to work on soy and stay in India. When I see many families growing through this soy food business I feel a little satisfaction of my work which is helping the people in many ways.

"When one of these people working with soy calls on the phone to ask for help, I usually know who it is just by the sound of their voice.

"I really feel blessed that I got this opportunity to serve mankind this way. During my travels to Africa I trained many of the groups/NGOs etc. in the soymilk and tofu production and utilization and delivered lecture on the soy nutrition. These were the programs to help people suffering from HIV/AIDS to get better nutrition through soy. I could still recall those large gatherings of the people suffering with HIV/AIDS at the community centres in Uganda, Tanzania, Kenya, etc. God helped me to develop some products of their interest with the soymilk which they liked." Address: PhD, Manager, the SoyaCow Centre, KH-177 Kavi Nagar, Ghaziabad 201 002 UP, India.

8624. Gupta, Rajendra ("Raj") P. 2010. Overview and current status of soymilk in India. Part I (Interview). *SoyaScan Notes.* Oct. 13. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** Soymilk in India: ProSoya never received any royalties from the sale of SoyaCows in India because ProSoya donated all those royalties to Child Haven International (CHI, a charity), that purchased many of ProSoya's earliest machines with significant funding from the Canadian International Development Agency (CIDA).

Some of ProSoya's potential customers for small equipment didn't want to buy that equipment from India because of quality issues. So, for a while, ProSoya in Canada imported small SoyaCows made in India to Ontario, upgraded certain parts (such as motors), then exported them to countries worldwide. ProSoya paid a royalty to Child Haven on those machines. Later ProSoya found that this business in small SoyaCows was taking too much of the company's time and energy, and it was actually unprofitable. So they discontinued that service. But later, because of continued demand (especially from Europe), they built a slightly larger SoyaCow, SC50, which has many new features, such as a cooking vessel with insulation on the outside. All SoyaCows, even those made in India and Russia, are now 100% stainless steel. The only machines that contained aluminum were made by ProSoya at the very beginning, before SSP started making SoyaCows.

One problem is that these small SoyaCows in India do not make very good tasting soymilk–compared to the flavor of soymilk sold in Tetra Pak. The latter "is a very outstanding product; everybody loves it. We developed that taste especially for India, because in India they sometimes drink it hot, sometimes drink it cold. We developed a soymilk that is good whether it is hot or cold. We sell plain soymilk (made from soybeans and water, widely sold to diabetic people), original soymilk (with just a hint of cooked dairy milk flavor purchased from a flavor house), and flavored soymilks (made by using the original soymilk as the base). The best-seller of types three is saffron & pistachio, followed by plain. One key point is that freshly made tasty soymilk does not taste as good as soymilk that has been aged for 2-4 days in the package. The flavors "marry"–as they say in French. However beany flavored soymilk tastes worse and worse, the longer it is aged. In India, law requires Tetra Pak products to be quarantined in the plant for 7 days before they can go to market. The consumer buys it about 15 days after it was made, but it has a shelf life of 6-12 months.

There are only two companies in India that make and sell soymilk in Tetra Pak cartons. They both make their soymilk in the same plant at Mandideep, near Bhopal, Madhya Pradesh. They are Godrej (Sofit brand) and ProSoya India (owned by SoyaWorld, brand name Staeta, pronounced STET-uh). This market is growing by about 8-10% a year, but it would grow much faster if the product were less expensive. The retail price in an aseptic pouch would be about 50-60% as much but the shelf life would be the same.

There are many manufacturers of aseptic pouches. ProSoya owns one in Canada for demonstration and experimental purposes. In about 18 months, when his non-compete agreement with SoyaWorld expires, Raj hopes to start making soymilk using his large SoyaCows in a location unrelated to Godrej, packaging it in aseptic pouches. Rather than competing with Godrej and ProSoya India (who make soymilk for the elite), he will complement them, and may simply expand the market without taking any market from them–by reaching out to the sub-elite.

There may be a potential in India for extending dairy milk with soymilk as long as it is done with full, open disclosure–with no sense that the milk has been adulterated. It would bring down the price and expand the supply. Most

of the milk in India is buffalo milk, which is also much whiter than cow's milk due to its higher fat content.

ProSoya has developed new technology for a new generation of better tasting soymilk; it is incorporated into all ProSoya except the smallest machine.

Although there are 350-400 small soymilk companies in India and two large companies selling soymilk in Tetra Pak cartons, the volume of soymilk produced is very small. "I think Indians still do not like any of the soya products." Raj has been working intimately with his nephew (his sister's son) in one of the smaller cities in India who owns and operates a company making tofu and soymilk. He knows, day to day, what problems he faces. Raj believes that soya paneer would be perfect for India, but the problem is that people are still "soyaphobic." The most promising project in Raj's mind is to sell good-tasting soymilk in inexpensive aseptic pouches–the kind that are very popular in Latin America. The retail products are priced at about half or just over half of Tetra Pak. You cannot see the soymilk in an aseptic pouch; it is an opaque film with an oxygen barrier liner. Such a pouch would greatly increases soymilk sales in India because many more people could afford the product. Total sales of aseptic Tetra Pak soymilk is about $3-5 million and maybe 10 million liters, with only two brands competing: Staeta (ProSoya of India, Inc.) and Sofit (Godrej). America Soybean Association says soymilk sales are much larger, but Raj does not know where they get their numbers from. Both companies make their Tetra Pak soymilk in the same plant at Mandideep, an industrial area just south of Bhopal, in Madhya Pradesh. Raj is still bound by a 5-year non-compete agreement with SoyaWorld at that scale.

Concerning Godrej and the factory at Mandideep: ProSoya India asked Godrej to distribute their Staeta soymilk. "We thought they were not interested in soymilk any more [after the failure of Great Shake, launched in 1987]. When our man asked them to distribute the product, they started thinking 'Why not make our own, instead of distributing Staeta?' So ProSoya ended up distributing its own product; SoyaWorld has continued that–because in India they don't have good distribution channels. We did try partnering with H.J. Heinz Co. for about 1½ years and they spoiled our market completely–not that they wanted to but the corporate culture didn't exist. The top management was very interested in working with ProSoya, but the middle and lower management thought of it as an external product and made no effort to promote it. By contrast, Godrej has the best distribution system in India for foods and basic consumer goods; and they distribute to stores they own. That's the reason their sales are so much more than ours. They distribute even to smaller cities. But in the cities or shops where ProSoya's Staeta is present, Sofit (which is always on discount) hardly sells at all–even though Staeta's price is slightly higher. Consumers strongly prefer Staeta's flavor. Godrej makes ProSoya's soymilk, you might say, so how can we compete with their Sofit on price? We compete on quality. It is very unusual for two competitors to make the same product in the same plant." Continued. Address: President and CEO, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

8625. Gupta, Rajendra ("Raj") P. 2010. Overview and current status of soyfoods in India (Interview). *SoyaScan Notes.* Oct. 13. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** Raj's nephew (his sister's son) earned a degree in physics in India, then a master's degree from a university in Boston in semiconductors, but never finished his PhD degree from Boston University. Then he worked in the semiconductor industry in Scottsdale, Arizona, for many years. Then he moved to Ottawa, Canada, for 10 years. Finally (in 2004, at about age 35) he decided to return to his native India, to do something to help the people of India. When Raj started his original tofu plant in Kanpur in 1985, his nephew had worked at the plant for one summer as a student. He wanted to start a similar plant in Allahabad, a city in the north Indian state of Uttar Pradesh. In about 2007 he bought the smallest SoyaCow system, the SC20, and started a business making soymilk and tofu. He learned how to make these products from a book, *Tofu and Soymilk Production.* He did a lot of innovative research. His business is doing well, but he has not yet reached the break-even point. The volume is pretty low and local people do not really like either soymilk or tofu (soya paneer). He is making only about 5-6 batches per day, which is 200 to 400 liters of soymilk per day. But he located his business in a more challenging part of India. If you go to the western part of India, people are more affluent and more inclined to eat foods which improve their health. The same is true in south India. But in Allahabad and points east, it is somewhat more challenging to try to introduce soyfoods. So his location is part of his problem, but he wants to work where there are challenges rather than where things are easier.

Indians are still not very excited about tofu as a high-quality, low cost alternative to paneer (fresh dairy cheese). Part of the problem is that tofu makers in India try to sell tofu as imitation paneer, rather than as a healthier alternative. So he calls his product "tofu." In Kanpur, where Raj started his work with tofu, he never called it "soya paneer." But the problem is that even if you call it tofu, Indian consumers still think of it generically as "soya paneer"–probably because paneer is so popular and it looks so much like paneer.

In Kanpur, way back in 1985-86, we realized that India requires very small machines (smaller than a small Takai system) that will make soyafoods where needed when needed, decentralized to avoid distribution. Machines that can be used in institutions or very small shops. In many places, this is the way it is done today and they have been successful. "We demonstrated in various schools that this is a

concept which will work."

But today per capita consumption of soyfoods is still extremely small. "We expected that it would double every year or more, but its growing at the rate of 8-10% and from a very small base."

Of the various soyafoods in India, by far the most popular is textured soy flour / flakes (such as Ruchi's Nutrela in chunks, nuggets and granules). Ruchi is the market leader, but many local companies use extruders to make similar products from very inexpensive defatted soybean meal or flakes. Number 2 is probably soymilk, with tofu a distant third.

India is a very milk oriented country; it is the largest producer of dairy milk in the world–especially since the cooperative "white revolution." Indians have always loved milk. Despite the fact that 70% of Indians are lactose intolerant, they consume it anyway in one form or another–such as paneer, yogurt, lassi (a popular and traditional Punjabi yogurt-based drink). In the northwestern states of India (such as Punjab), there is no lactose intolerance, so they can drink dairy milk without problems. This may be because of a long history of dairying and / or because they are descended from Aryans who name from further northwest. Many of them drink it hot. In the south of India there is a high incidence of lactose intolerance. This is the main cause of their "soyaphobia."

If Raj had to make a prediction 25 years into the future, he would definitely predict that soyfoods in India will definitely be more important and a bigger part of the diet than they are today. One reason for this is the declining per capita consumption of pulses, a major source of protein, especially for the poor. This is due to rising prices and static production over the past several decades. Soy is replacing pulses in one form or another–and will continue to do so. In terms of the soy beverage market, they key is to find a good tasting product sold in inexpensive packaging and retailing at the right price point. Do get the price low, you need large volume, fast turnover, good distribution, and lower retail margins. Today soymilk margins in India are 30-35% compared with about 5% for dairy milk–because the volumes are huge.

The traditional Chinese and Japanese model of the consumer buying directly from the tofu or soymilk maker (to ensure freshness, no packaging, lower price to the consumer, higher price to the manufacturer, no middleman) is starting to happen in India among SoyaCow owners. Raj has seen this working nicely in Russia. To support such a model, you need a high density of consumers. Some SoyaCow owners have tried successfully to sell their products using bicycles.

Raj estimates that the market for soymilk in Tetra Pak is $2-3 million ex-factory. Multiply by 2.5 to get the retail value = $5 to $7.5 million retail. The retail price of Tetra Pak soymilk is about $1.50 per liter. That works out to about 3-5 million liters per year. Looking at the whole soymilk market in India, what percentage is sold by the small soymilk makers using SoyaCow SC20 machines (which have a capacity of 60 litres per hour)? This estimate is very hard to make. If we estimate 400 machines in India and each is selling on average 500 liters a day of soymilk, that is 200,000 liters a day times 300 days per year = 60 million liters per year. This is 12 to 20 times as much as is sold in Tetra Pak. Therefore the small makers control 92-95% of the market–a very interesting conclusion–even if the small makers have an output of only 10 to 30 million liters a year. Raj thinks the growth potential for small soymilk machines is bigger than for large Tetra Pak machines.

There are many reasons to believe that food prices will rise faster in the coming decades than during the past few decades, and the price of most animal products will rise faster than soybean prices, so people will consume what they can afford, which means increasing consumption of soy in many developing countries. Address: President and CEO, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

8626. Gupta, Rajendra ("Raj") P. 2010. Overview and current status of soymilk in India. Part II (Interview). *SoyaScan Notes.* Oct. 13. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** Continued: ProSoya authorized SSP to make soymilk machines with a capacity of up to 200 liters per hour of batch-type technology; ProSoya no longer uses batch-type technology for 200 systems. SSP pays ProSoya a royalty on each piece of equipment sold. SSP refers many of the larger system enquiries to ProSoya. The two companies still have a good relationship; there are no conflicts. SSP has not made any significant improvements on ProSoya's basic equipment design. Each machine was essentially handmade, all stainless steel, and their were quality issues (such as interchangeability of parts) right from the beginning. Also, their prices rose quite a bit rather quickly.

ASC50, ProSoya's smallest SoyaCow at present, has a capacity of 50 liters per hour; but with a larger boiler it can produce 100 liters per hour. Raj is happy to get an order from anywhere. "It is not really a money-maker, but many people want to enter at that level, and some big companies want to use it as a laboratory machine. We ASC50s with Unilever, Kraft, DuPont who use it for research. When they want a larger system, they will buy it from ProSoya because they cannot build it themselves for less. SoyaWorld started with our SC20 machine, so you never know who will grow. It was originally bought by a restaurant person in Saskatchewan [George Conquergood] and he then started the ball rolling.

Concerning Pantnagar's Sipso soymilk, Raj tasted that product in 1971 or 1972. He liked the flavor but it was a little gritty. He later bought it in bottles in Delhi in a retail store.

Concerning Noble Soya / Godrej's Great Shake launched in 1987, Raj thinks the main problem was the taste. "It was

awful. Noble Soya was not allowed to import soybeans, so they were forced to use soybeans grown in India. Their sorter was unable to remove dark-colored soybeans. Their process was not tolerant to bad soybeans, whereas ProSoya's process is very tolerant to any soybeans. Because of the bad taste of the soya base, they had to add extra heavy flavoring; as a result the finished soymilk tasted like medicine rather than like food. Raj tasted it himself in India. Yet even if it had been made with the best Canadian soybeans and the best technology, I doubt that it would have succeeded–although sales might have been better and it might have stayed on the market longer. It was a product ahead of its time, did not taste good, and its retail price was too high–in part because of the expensive Tetra Pak carton. Indian consumers are very price conscious; why should they pay so much for soymilk when they can buy dairy milk for less.

"The same problem with price exists today, which is why soymilk sales are still so small in India. For example, the system ProSoya has installed at the Godrej plant in Mandideep has a capacity of 20 million liters, but it is only making 4-5 million liters a year, so it is operating at roughly 20-25% of capacity–which is ridiculously low!" Address: President and CEO, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

8627. Gupta, Rajendra ("Raj") P. 2010. Overview and current status of soymilk worldwide (Interview). *SoyaScan Notes.* Oct. 13. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** Raj finds it very difficult to say which part of the world has the brightest future for soymilk. All over the world, there is a slow but steady growth of interest in soymilk and in ProSoya's technology for making it. ProSoya's main large system is 2,000 liters per hour capacity, but the biggest system it has sold is 6,000 liters per hour. This capacity refers to a concentrated product (soya base), which approximately doubles in volume when reconstituted to regular strength. The protein level of the concentrate is about 5%. The solids content is 10-11%. Also, the okara is rewashed to extract more nutrients from the soybeans. It is these big machines that keep ProSoya afloat financially.

ProSoya sells large-scale equipment to countries all over the world. One year Korea looks promising, the next year Germany, or Ghana or Latin America. Those machines almost always become the center of a successful business that continues to do well. They are purchased by people who know how to run a food business. Some machines are creating new markets while others are adding capacity to existing companies or enabling co-packing.

In Russia more than 1,000 SoyaCows (called Soyushkas) have been sold. Initially, many were in government ministries but now the majority are owned by small entrepreneurs. People line up in the morning to buy fresh, hot soymilk directly from the manufacturers.

As for ProSoya's license to Russia, nothing has changed. The company that ProSoya licensed to make SoyaCows in Russia has never paid ProSoya the royalties that it agreed in the licensing agreement to pay. So Raj has accepted that situation as it is. "It is not worth it to chase people in countries like that. Our company works on the honor system. But we did profit a lot from Russia because they bought some of our very large machines. As a result we gained some credibility in Russia, which resulted in more sales." ProSoya continued to sell SoyaCows in both Russia and Eastern Europe.

"It is very difficult to make predictions. SoNice was launched in the United States at about the same time as Silk. It as selling much better than Silk at one point. But the company that was making SoNice at that point [Pacific ProSoya Foods] ran into financial difficulties, because they were expanding too rapidly, so Silk pulled way ahead.

Raj has known Ratan Sharma, PhD, for a long time and they still keep in touch on a regular basis, but Ratan has not received any money from ProSoya Inc. in Canada for many years. Years ago, ProSoya used to pay Child Haven royalties, and that money was used to pay Ratan's salary. Ratan has done a lot of good work, and he continues to devote a lot of time to it–even though he doesn't make a lot of money from it. He also works as a consultant for the American Soybean Association (ASA-IM) and that is probably his main source of income. He also gets paid by ASA to nurture these SoyaCows and to write brochures and give presentations. Address: President and CEO, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

8628. Gupta, Rajendra ("Raj") P. 2010. Biography and early work with soymilk and tofu in India and Canada Part I (1942-May 1985) (Interview). *SoyaScan Notes.* Oct. 14. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** Raj was born on 8 Oct. 1942 in Saharanpur, a city in the northwest corner of the state of Uttar Pradesh, India, the son of Meena Gupta [her maiden name] and Shiva Prasad Gupta. His father was in government service in the food department. He was the 1st son and 2nd child of four children. He had two brothers and one sister. Raj received all of his education in India. He graduated from high school at Government Inter College (Allahabad, Uttar Pradesh). He graduated from college at the University of Allahabad, with a major in physics, then went on to earn his PhD degree in physics in 1966 from this same university, focusing on lattice dynamics of solids / solid-state physics.

He first traveled to Canada in 1967 to do post-doctoral work. First he was a research associate, then he worked at the National Research Council of Canada in Ottawa, earning a permanent position in 1978. During these years he went back and forth between Canada and India. He was not sure whether he wanted to live in Canada, USA, or India. This

happens to a lot of people. He initially spent two years in Canada, then went back to India for three years, then began coming to Canada every summer for 2-3 years. He finally decided to live in Canada.

Raj met his wife, Rashmi, in 1975 in India, on a trip back to India from Canada. She was working toward her PhD degree in physics from Banaras Hindu University (BHU) in Varanasi, India; they were married in 1975. Back in Canada, Raj did research and taught some classes at the University of Winnipeg (Manitoba) and the University of Western Ontario (London, Ontario). He and his wife lived near the university in both places.

Raj's early interest in soy was more like a hobby. He and his wife knew that there was widespread malnutrition in India and in many developing countries. And they realized that soyabean is the best source of high-quality low-cost nutrition. In about 1977-78 they met some Chinese friends (at the University of Western Ontario, in London, Ontario) who introduced the Guptas to soymilk. They had heard about soymilk but never had tasted it. They did not like the taste. They said: "Perhaps we can get used to the taste by drinking it every day, for several weeks. But after drinking it religiously for some time, we still did not get used to the taste." The soymilk, which had a beany flavor, was made at a local Chinese shop in Canada. "We realized we couldn't hack it, even though we knew it was nutritious. So we gave it up."

In 1978 they arrived in Ottawa, Canada, where Raj had earned a position as an associate research officer at the National Research Council (NRC)–the top government laboratory / campus in Canada. NRC, where both basic and applied research is conducted, is similar to the U.S. laboratories (such as the Lawrence Livermore National Laboratory) that are part of the Federally Funded Research and Development Center (FFRDC) network. His wife also leveraged her PhD degree into a job at the National Research Council, but in the information technology (IT) sector.

From 1983-1995 Raj was adjunct professor at McGill University in electrical engineering, and a visiting professor there during 1986-1987.

In about 1981-82 Raj and Rashmi came across some soymilk products in Tetra Pak made by Vitasoy; it was sold in Chinese grocery stores. They liked the taste and knew it was a good source of protein, so they began drinking it every day. Raj and his wife do not have any lactose intolerance, so they did not drink it for that reason.

In about 1983, when they went to India, they took a case of Vitasoy Tetra Pak soymilk with them; it was nice to be able to have something to drink while traveling. Then (in December 1983) they met Mr. T.N. Agarwal in Kanpur. He was professor at an engineering college there. He and Raj had been friends before Raj got married. He tasted the Vitasoy, liked it, and asked why it could not be made in India. He was in business, doing some electronic and semiconductor business. Agarwal is also a more generic name, describing a group of related people who have a long history of being outstanding entrepreneurs. The Guptas, to which Raj's family belongs, is in the same group or class in India. So after the interesting question from Prof. Agarwal, in early 1984 Raj began to explore and do research to find out what could be done. In Jan/Feb. 1984 he first phoned William Shurtleff at Soyfoods Center in California to discuss the problem. Shurtleff recommended that Raj order the book *Tofu & Soymilk Production,* which he did–and he read it from cover to cover. This book discussed the principles of soymilk production and various methods that had been used to eliminate the beany flavor. This book's bibliography introduced Raj to the large body of literature on the subject. As he studied the basic principles of the subject, he realized that one approach to eliminating the beany flavor had not been tried–eliminating oxygen. He and his wife discussed the problem repeatedly and she also read some of the literature–but not to the extent that Raj did. Before long, they began doing experiments at home and she became very involved. Their work with soymilk was still a hobby; their main work continued to be at the National Research Council. But behind their hobby was a long-term vision. "It originated from the fact that, if we could produce the kind of milk we tasted, at very low cost, we might be able to take it to the masses of India. This would be very helpful. So it was mainly a philanthropic and humanitarian interest to begin with. As a hobby, that's what we wanted to do. But later, when the invention was issued, we realised our discovery was very significant and could be the basis of a business."

In 1984 Raj and Rashmi coined the name for their new business: ProSoya. The word "SoyaCow" was coined in 1985 or 1986, before they met Child Haven (see below).

In March 1985 Raj and his wife, the co-inventors, applied for a Canadian patent on a "Process for making soymilk with no beany flavor." It was soon issued. In 1986 they submitted a PCT International Patent Application for "Food processing in oxygen-free environment" [Soymilk]. This too was issued, and was followed by similar patents in the USA.

They were now ready to use their discovery as the basis for a business. It would be in Kanpur, India, run by T.N. Agarwal, making tofu for the poor. Initially, they hoped to raise start-up capital by taking the company public to set up a Tetra Pak type line there. They were ready to start a fairly large operation, but then they learned (from Tetra Pak) that Godrej was about to launch a soymilk product in Tetra Pak. Raj said: "If Godrej is already going to do this, then we don't have to do it. Let them do it at their level, since they have more resources. Why should we try to do the same thing. So we backed off. By the way, Godrej's intention was also similar to ours–to make a nutritional product for the masses. Of course, they knew that to do that it also had to succeed as a business."

On 23 May 1985 Soy Food Centre. A Unit of Networks

Pvt. Ltd., started making Boon Tofu using a system imported from Takai in Japan. T.N. Agarwal did the bulk of the work. Raj provided most of the financing for the project, but Raj never moved to India. He and his wife would go to Kanpur for 15-30 days at a time, then return to their jobs in Ottawa, Ontario, Canada. The company lasted for less than two years, and Raj learned many hard lessons about introducing a new food to India, and especially a new food intended to help the poor. Continued. Address: President and CEO, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

8629. Gupta, Rajendra ("Raj") P. 2010. Biography and early work with soymilk and tofu in India and Canada Part II (Interview). *SoyaScan Notes.* Oct. 14. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** Continued: "We learned the key lesson the hard way: If you try to promote any product as being good for the poor, the poor don't want to buy it. In Kanpur, we wanted to sell it very very cheap. We did that and it failed in less than 18 months. We couldn't make any money since our margins were so small. The people who bought the product were from the health-conscious middle class." There were also problems with packaging, distribution, and spoilage. "We realized that India requires very small machines (smaller than a small Takai system) that will make soyafoods where needed, when needed, decentralized to avoid distribution. So we began to think about how to make very inexpensive, very small machines, that could be used to make soymilk where needed, when needed, so that packaging and distribution would not be required." Raj and his wife both kept thinking about how to solve this problem and actually design and build the first machines. They contacted a lot of fabricators in India and some initial machines were even fabricated in Mumbai (formerly Bombay) India, but they were too cumbersome and not really very good. But at NRC I met Grant Wood, one of my colleagues who worked as a mechanical technician and draftsman. We were working on the same NRC project and I found that he was very good at designing. So I started discussing this concept and problem with him. I told him it was still just a hobby, so Grant Wood decided to get involved. He designed some small soymilk manufacturing machines according to my directions. He had a small machine shop in the basement of his home, and he and I built the very first machines there. Initially, a lot of prototypes were made but they were not good enough to sell."

The first big breakthrough came when Raj learned about a new organization named Child Haven International (CHI) of Maxville, Ontario, Canada. "They didn't come to us, we went to them." In about Oct. 1986 Raj met them in Ottawa when they were talking about their activities in India and elsewhere on the Indian Subcontinent. He explained that he and his co-workers had been doing something which might be useful to them. They were looking for something like what Raj was doing. They knew that the Canadian International Development Agency (CIDA) usually helps NGOs with funding for this type of venture. CHI thought that this could be a good project for them to get funding from CIDA as well as financial support from their own donors. CHI got the money from CIDA, then in about 1990 asked ProSoya to produce one trial machine for them to make soymilk in India.

On 19 June 1991 an article by Marion Kane appeared in the *Toronto Star* (p. D2) titled "Nifty Canadian invention a boon to the Third World." It explained that the Soya Cow [SoyaCow], invented by Raj Gupta, is a machine that makes palatable, low-cost, high-protein soymilk. One was in operation in Hyderabad, India, at one of the homes for poor children run by Child Haven International.

Another similar article appeared on 24 Nov. 1991 in the *Ottawa Citizen.*

ProSoya contracted with various local machine shops to fabricate the various parts, then these parts were assembled into a working SoyaCow in Raj's basement at 9 Veery Lane. Initially they operated their new business out of their home. The next 6-10 SoyaCows were also assembled in Raj's basement. By March 1992 Child Haven had sent six SoyaCows, made by ProSoya in Ontario, to India–with financial aid from CIDA.

Question: "Is there any religious dimension to this work for you? Is this part of your religious life as well? Ans: "No. Nothing to do with religion. Of course it is spiritually very satisfying to do something like this. But it is more selfish, too. You don't really do it for others; you do it for yourself. You think you are helping others, but really you are helping yourself. It is also an intellectual challenge with many very interesting problems to be solved–almost every day."

Raj has had an interest in being a businessman and running his own business since his earliest days. "I came from that kind of family. A lot of my relatives on both sides of the family were in business." Raj comes from a culture that has a long history of entrepreneurship. "But, I'm not totally for business. If something doesn't have an intellectual component, I'm not interested. It has to be something novel, something new. Even now I spend a lot of time with physics; that's my first passion."

In April 1992 ProSoya published the first issue of *The SoyaCow Newsletter,* which appeared quarterly, from 9 Veery Lane, Ottawa, Canada. Even though it was initially only 2 pages long (filling the front and back of one sheet) it contains excellent, detailed information about the early history of the new company, plus some good photographs in each issue. The first article in the first issue is titled "Child Haven Sends Six SoyaCows to India with CIDA's Help." A photo shows Child Haven's directors, Fred and Bonnie Cappuccino, as they take delivery of six SoyaCows from ProSoya's president, Rashmi Gupta [Raj Gupta's wife]. We also

learn that a SoyaCow system has been operating for over six months [i.e., since about mid-1991] at the Candlestick restaurant in Alexandria, Ontario.

In Aug. 1995 Raj stopped working for the National Research Council, so he could devote more of his time to his former hobby, that was rapidly becoming a full-time business. However he was allowed to keep his original office at NRC and he did research there, when he had time, in an honorary capacity, for the next five years. At the time he left NRC, has wife had already left to work as a consultant in private industry, for Anderson Consulting.

Raj and his wife have one child, a son, who is now about age 32. He graduated from college, earned an MBA degree in France, and was recently married. He lives in Chicago and works as a business consultant.

In 2002 Raj (the Renaissance man) entered a feature film (90 minutes) titled *A Passage to Ottawa* in the famous Cannes Film Festival. Directed by Guarav Seth and written by Jameel Khaja, it was produced by Raj and his wife, Rashmi.

Rashmi is Director of Marketing at ProSoya. Her involvement lately has been on product development and marketing rather than on technology. For her work, Indo Canada Chamber of Commerce gave her the "Business Woman of the Year" award in 2006 which she got from the hands of the prime minister of Canada, Steven Harper. Address: President and CEO, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

8630. Sharma, Ratan. 2010. Re: Statistics on production of soymilk in India in 2008. Letter (e-mail) to William Shurtleff at Soyinfo Center, Oct. 15. 2 p.

• ***Summary:*** As an attachment to an e-mail, Ratan sends an Excel spreadsheet titled "Soya milk production in India," which he developed in Sept. 2008. The purpose was to estimate the amount of soymilk produced in India at that time. Most of the companies are small, independent commercial producers, however at least 6 Child Haven International (CHI) centers and several university and governmental research centers have been included. Moreover, 4 of the producers are in Nepal (an independent country just north of India), and the last entry under "Companies" is "Other soymilk producers." This figure for soymilk includes soymilk that is transformed into tofu or soy yogurt.

The spreadsheet has the following columns: (1) Company name and city. (2-4) Number of batches per day, month and year. (5-7) Soya milk production (in liters) per day, month, and year. (8-10) Soyabean utilization per day and month (in kg) and per year (in 1,000 metric tons).

A total of 167 specific companies are listed, including two large companies (ProSoya Foods, and Godrej Foods) that sell their soymilk in aseptic Terabrik cartons.

The estimated total soymilk production in India (and Nepal) is 63,767 liters per day, 1.91 million liters per month, and 22.95 million liters per year.

Of this total, ProSoya Foods makes 4.789 million liters per year, and Godrej Foods makes 5.086 million liters per year. Together, these two large Tetra Pak companies make 9.875 million liters or 42.6% of the total.

The "Other soymilk producers" make a total of 810,000 liters per year, which is 3.5% of the grand total.

The total estimated soybean utilization is 255,060 kg (255 metric tons) per month, and 3.060 million metric tons per year. The single largest non-Tetra Pak soymilk maker on this table is Dr. Pathak (in Meerut, Uttar Pradesh, in northern India). His company uses 5 SoyaCows to make 255 batches of soymilk per day. That works out to 3,825 liters per day, and 1.377 million liters per year.

The #2 largest non-Tetra Pak soymilk maker on this table is Rubal Soya (in Distt. Sangroor, Ludhiana, Punjab); contact person Kuldeep Singh Cheema. They use 3 SoyaCows to make 125 batches per day. That works out to 1,875 liters per day (of flavored soymilk), and 675,000 liters per year. Plus 200 kg of tofu, and 25 kg of soy nuts.

Letter (e-mail) from Ratan Sharma. 2010. Oct. 27. He didn't mention many of the machines whose production he was not very sure about at that time. Also, at the end, under "Other soymilk producers," he estimated and summarised their production of most of the rest, but this gives lower number for the total number of soymilk producers. Also: soymilk that is made into tofu is included in this chart as only as soymilk. Ratan would estimate that about 50% of the total soymilk manufactured is immediately transformed into tofu. The volume used to make soy yogurt, soy ice cream ice, and soy sweets is minimal and insignificant. Address: PhD, Manager, the SoyaCow Centre, KH-177 Kavi Nagar, Ghaziabad 201 002 UP, India.

8631. Cappuccino, Bonnie; Cappuccino, Fred. 2010. Child Haven International, a herd of SoyaCows, and soymilk on the Indian Subcontinent (Interview). *SoyaScan Notes.* Oct. 25. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** "Our story: Inspired by the ideals and philosophy of Mahatma Gandhi, Child Haven International is a registered charity founded in 1985. We assist children and women in four countries, who are in need of food, education, health care, shelter and clothing, emotional and moral support.

"Child Haven has five homes in India, one in Nepal, one in Tibet and one in Bangladesh. Our homes accept children who are disabled, parentless, or from socially disadvantaged situations–and who are destitute, i.e. do not receive even one good meal a day" (from the Child Haven website).

One evening [in about Oct. 1986], as Fred was giving a talk about Gandhi to a small group at a Hindu temple in Ottawa, he mentioned that Child Haven was totally

vegetarian. Fred also explained that he had been in Selma, Alabama, in March 1965, for five days with Martin Luther King and with a minister colleague who was killed there. That day converted President Johnson. He knew he would lose the South if he went ahead with the voting rights bill; but he did it anyway. The march for the right to vote by black people in Selma was a purely Gandhian demonstration; the marchers were completely nonviolent in the spirit of Gandhian nonviolence.

After his talk at the temple, Raj Gupta and his wife, Rashmi, from ProSoya came up and told Fred and Bonnie about a small machine for making soymilk that they had developed and that was now in use in their home kitchen. Raj said he hoped to use something like that in India, but hadn't had any luck so far. He asked if Child Haven might like to collaborate with him. Fred and Bonnie had always been interested in soya–primarily because Fred spent 3 years in Japan (1948-1951) as a Methodist missionary before he met Bonnie (so he was very familiar with tofu), and because of books about soyfoods by Shurtleff and Aoyagi they had read. And they had both become vegetarians in 1985. Raj said his machine made soymilk with no rancid flavor but with some beany flavor. There was sincere interest from both sides. Bonnie thinks that Raj had the idea before CHI did of applying to CIDA. Raj could not get money from CIDA unless he went through a charity–such as CHI. Bonnie and Fred had heard about CIDA but Raj knew in a more specific way what the possibilities were. So CHI decided to go to CIDA as an NGO to apply for funds. First they put together a committee of Child Haven people and people recommended by Raj who had some technical experience and interest. The committee wrote a grant funding proposal. The main person was Hart Jansson, who was one of CHI's supporters. The initial proposal was submitted in about 1989.

One early document shows that the soymilk project was originally proposed to CIDA in 1988 as a 2-year endeavour with a total budgetary requirement of under $20,000 Canadian.

It was a complicated process and the money didn't come right away. The CHI committee had to tweak their proposal, adding some things and removing others. Eventually they got about $100,000 for the SoyaCow program (CIDA does not fund orphanages) but only as a matching grant; CHI had to raise about 37.5% of CIDA's amount (in cash or kind) before they could get the money from CIDA. This was very difficult because CHI, a very small organization, is always struggling to raise enough money. Fred recalls that there were subsequently at least three more phases to the grant application process, and for each one they had do a great deal of committee work and planning to make the submission. Raj and his technical people had to come up with a prototype machine, which was a big challenge for Raj and a big opportunity–to make the first real SoyaCow for Child Haven. The first prototype he made was too labor intensive, so he had to change parts of his design.

In about Nov. 1990 the first SoyaCow, made in Bombay, India, arrived at the Child Haven home in Hyderabad. Fred describes it as a "big monster." Child Haven had thought the project was so important that they ordered the first machine from India (with Raj Gupta's approval and designs) before they had secured funding from CIDA. Raj made many trips to India, before and after the first SoyaCow was built, to be sure that all the work would be and had been well done. He met with the proposed manufacturer, examined their fabrication facilities, discussed technical details of the design, etc. Also in Nov. 1990, CIDA approved in principle the first matching grant.

After the first SoyaCow arrived, Raj Gupta traveled to India to see it in action. He spent a lot of time studying how it was being used and how it worked. Some of the older kids at Child Haven were helping out to make soymilk with the SoyaCow. Fred and Bonnie got the feeling that was not appropriate; it was too dangerous, since it utilized steam. "You need mature people, not kids, to run such a machine. However now the machine is much safer and in some of the homes the older children are helping."

Raj made many design changes and improvements on the first few SoyaCow machines that were made in India, and decided that the first few Indian manufacturers were not adequately equipped to do the very fine tuning that the SoyaCow required. This eventually led him to SSP, which was a very experienced and competent equipment manufacturer. Pristine (PPI), the present manufacturer of the SoyaCows, is doing very good work.

Child Haven has never used any of the non-electrical machines made by Frank Daller and Hart Jansson of Malnutrition Matters; he and Frank run the company together, and they are both still strong supporters of Child Haven.

From the outset, there was one basic problem between CHI and CIDA. CIDA was interested helping to develop cottage industries that women could take advantage of. CHI was very interested in teaching women how to use the SoyaCow as well, but in reality it was hard for a woman to make soymilk using that SoyaCow, with the steam, all those pipes and the complexity. That became a problem for CIDA. The number of kids in any Child Haven home has always been about half boys and half girls. But it was the staff that was the problem. There are a lot more women on the staff because CHI needed caregivers, but it was difficult to try to get a woman who was a caregiver to try to get into the mode of making soymilk with an unfamiliar machine; it was a big jump for them.

It is not clear where the 2nd SoyaCow to be used in India was made; it may well have been made by ProSoya in Canada.

One organization in Ghaziabad clamored for a SoyaCow until they finally got one. They then stated in their publicity

that they had gotten a SoyaCow from CIDA (which looked good) but they never actually used it. So Child Haven eventually went to them and repossessed the machine.

It took a while before SoyaCows were accepted in the two Child Haven homes. Making soymilk using a SoyaCow was hard work, so sometimes Fred and Bonnie found that the machine wasn't being used for 2-3 days. Perhaps the gasket broke and nobody took the time to find another gasket. It was an uphill struggle with some of the staff people who worked with the machines. It is less that way now; Bonnie thinks the staff women now have much more appreciation for the value of the nutrition from the soymilk. The children generally liked the soymilk, especially the small ones. "The staff, basically, didn't like the soymilk and we have had trouble getting them to use the okara. I think they're doing the best job using the okara in Bangladesh, where they are working hard to develop new recipes to use the okara, as well as the tofu and soymilk."

At the two CHI homes that had SoyaCows, not much tofu was made in the early days and years because they had trouble getting the coagulant–so they made mostly soymilk. They liked tofu (soya paneer); certainly they are using it much, much more now. Its a good source of protein for the children, so new the staff is required to make tofu three times a week. At some of the homes the staff makes soymilk twice a day and at others they make it once a day. There is a problem because of the erratic supply of electricity required to run the SoyaCows; its a big problem in Nepal. When serving soymilk, they all add some sweetener–sugar. In some of the homes they always use some flavoring. They usually serve each child 1 cup (8-oz. tumbler) of hot soymilk, early in the morning, often before breakfast. In the homes where they make soymilk twice a day, one cup each is usually served in the mid-afternoon, after they get home from school. If there is any extra, some of the children will come back for a second and third cup. It's an uphill battle to get the staff to drink soymilk; they are kind of set in their ways. At the Kaliyampoondi home, near Madras, are about six "senior orphans"–elderly people who have no children to care for them in their old age. They wanted to have a few dairy cows to make milk for their tea. Bonnie and Fred have a commitment to the soymilk. Continued. Address: Founders, Child Haven International.

8632. Cappuccino, Bonnie; Cappuccino, Fred. 2010. Child Haven International, a herd of SoyaCows, and soymilk on the Indian Subcontinent. Part II (Interview). *SoyaScan Notes.* Oct. 25. Conducted by William Shurtleff of Soyinfo Center. • ***Summary:*** Continued: Child Haven has a number of volunteers, Westerners who go for 6-12 months to help at one of the homes in Asia. Before going, they are given a 1-2 day orientation in Ontario. Fred notes: "One of things we tell them is that anything they can do to encourage the use of the SoyaCow machines would be beneficial–such as praising and encouraging the staff who are making the soymilk. Most of the Westerners really do like the SoyaCow program and most of them enjoy that hot cup of soymilk early in the morning." Bonnie adds: "I really enjoy and appreciate that hot morning soymilk. For me, it has a better flavor than cold soymilk. I guess its just what you get used to." Because of the dark-skinned children Bonnie adopted, Fred was kicked out of one Methodist church and invited to another, where he served for four years. "During the time we were there the congregation changed from almost totally white to almost totally black." Then they moved out to the country where Fred served as minister to three churches; 9:00, 10:00, and 11:00–Fred made the circuit every Sunday. "It was fun. After that we were able to make the transfer to a Unitarian congregation." Fred has always been a Unitarian at heart.

Frank Daller was living in Toronto, in what he called "the rat race," when he heard about Child Haven and about Bonnie and Fred. He learned that Bonnie had adopted a lot of kids and that Fred was an anxious spectator. Frank was in the music business, but he was not a musician. He might have been a promoter or a manager. On the wall of his office in Toronto he had a "Juno Award." These are presented annually to Canadian musical artists and bands to acknowledge their artistic and technical achievements. Frank wanted to get out of that "rat race" life, so he and his wife moved from Toronto to be near where Fred and Bonnie lived in Maxville. Frank had skills as a carpenter, so he earned his living doing carpentry and he also worked at ProSoya. Frank and his wife had one child born to them; they then adopted a kid from Mexico.

In early 1993 CHI ordered six more SoyaCows. One of these went to their largest home, in Kaliyampoondi (near Madras, in Tamil Nadu state of southwestern India). The others went elsewhere in India–perhaps to early SoyaCow entrepreneurs.

Importing anything into India at this time was a huge hassle and extremely difficult. Getting those six SoyaCows through customs was fraught with problems–mostly bureaucratic. They didn't assume Child Haven was a charity; they took it to be a money making venture. How would they monitor how much money was made from these six machines, and are the taxes properly paid, etc.

In 1993 CIDA sent a man [Dan Thakur, PhD] to India to evaluate the SoyaCow project. This was the first program he had evaluated a program for CIDA. CIDA does not give funding for children's homes, so CIDA had no interest and no involvement in the main program of Child Haven–the children's homes. His evaluation of the SoyaCow program was totally negative. For example, CHI had hired a woman named Sandiya Rani to be in charge of the SoyaCow program. She was never a caregiver. They hired a woman because CIDA wanted to help women gain employment. She didn't work out very well. She did not know how to fix equipment that was not working properly

and she was prohibited (as an unmarried woman, probably by her family) from traveling unless accompanied by a male relative or chaperone–as to other SoyaCow sites. This lack over supervision was an example of a criticism. The main criticism was that Child Haven was not able, at that time, to get the SoyaCow out into the Indian community with people who wanted to use it to make a living. The 53-page report was submitted on 24 Sept. 1993, after CHI owned at least six SoyaCows. After this evaluation, Child Haven received no more funding from CIDA (except for on-site funding for a school building in Nepal). Child Haven had to raise all future funds for the soya program–almost entirely from donors in Canada.

At about the same time as the negative CIDA report was issued Child Haven hired Dr. Ratan Sharma (his PhD is in soy and dairy paneer) full time to be in charge of the SoyaCow program (replacing the woman) and to monitor the roughly six SoyaCows. He was paid a fixed annual salary, to promote soyfoods and SoyaCows, teach new potential entrepreneurs how to use the SoyaCow and start a business with it, and to maintain existing SoyaCows if they develop problems. Child Haven found Ratan through Raj Gupta and they think Ratan is an outstanding person who is doing a very good job.

Shortly after hiring Dr. Sharma, Child Haven opened the SoyaCow Centre. Here Child Haven also pays the rent on his home and office. At Centre there is no SoyaCow and no space for training people. Ratan has to go to an existing site to train people.

Dr. Sharma is still employed full time by Child Haven, which is not able to pay him as much as he could earn elsewhere with his PhD degree. But he also is paid for part-time consulting with the American Soybean Association, with ProSoya, with Malnutrition Matters, and with some Indian government programs.

At least once or twice, Frank Daller traveled to India with Bonnie. On a trip in early 1995, Daller went to India to see if the herd of SoyaCows were being used properly. When he found that many were not, basic changes in the program were made.

"Part of our reason for developing the SoyaCow was not just for our children's homes but the idea of getting across the whole possibility of low-cost, high-protein food for a society that is basically vegetarian and is gradually losing one important traditional source of protein–dal. But it takes a long time to introduce a new food to a traditional culture, unless you start with the children. The SoyaCow is going out to new places in India and I think Ratan is largely responsible for that. He is still an employee of Child Haven, paid from money that is donated to Child Haven.

After Child Haven got paid staff at the office of its headquarters in Maxville, they became much better about keeping and organizing all important documents so they could be quickly and easily located. Two people presently work at the office in Maxville.

"For Child Haven, over the years, The SoyaCow program has meant much better health for the children and better teeth. Occasionally doctors from other countries offer to come in and do a dental clinic or health check. They usually say that our children have much better health and much better teeth than other children in that area or than children at other children's homes that don't have a SoyaCow. Also the whole idea of trying to spread the concept of this basically very good food for a society that needs a good source of protein because they are largely vegetarian. The SoyaCow provides a good-tasting soymilk. Using soybeans in the form of soymilk or tofu is much better than trying to use them as dal. Ratan has done good work in India, Bangladesh and Nepal to help small entrepreneurs start a new business based on soymilk and tofu made by the SoyaCow. Child Haven has a SoyaCow at its home in Nepal (where electricity is a problem) and at Chittagong, the 2nd largest city in Bangladesh.

"Raj Gupta has been a good supporter over the years of the basic program at Child Haven. Certainly the whole idea of this Soya Cow would never have started without him. Its a mutual admiration society between Raj and Rashmi and the two of us. We admire him and his wife so much for what they have been doing. We saw them often during the early years of the SoyaCow program and the committee that worked to get funding from CIDA. We still see them 2-4 times a year and they have helped us with the Indian High Commissioner to Canada (like an ambassador who lives in Canada) to get visas for our volunteers going to India from Canada. They come to our annual fundraising dinners in Ottawa. We have annual fundraising dinners across Canada at about 18 different places. Child Haven's annual budget from donors in Canada (plus a little from the U.S.) is about $1.5 million.

Question: How would you describe what you have done since you started Child Haven? Ans: "I don't know. I don't try to analyse it. We just do what seems to make sense and hope it works. I calculated one time that 75% of what Bonnie and I have tried to do in terms of new projects, etc. was a total flop. And then something clicks. Child Haven is one thing that clicked. I don't know that it means that we have any special talents or skills."

Fred adds: "When I was in Japan I had the Methodist missionary mindset. But instead of converting people, I accidentally got converted, and came to feel that the Japanese are all right the way they are. That's pretty much my story. I'm a Unitarian minister now. We don't convert people. I tell the congregation that I was 36% Buddhist, until I heard the Dalai Lama. Then I became 48% Buddhist. I'm 81% Unitarian. There's overlapping there" [Laughter]. Address: Founders, Child Haven International.

8633. Cappuccino, Bonnie; Cappuccino, Fred. 2010. Child

Haven International, a herd of SoyaCows, and soymilk on the Indian Subcontinent. Part III (Interview). *SoyaScan Notes.* Oct. 25. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** Continued: Fred has had an idea about a new way of using and marketing soymilk in India. He has talked about this with Ratan Sharma, but (so far as Fred knows) nothing has been done to implement it. "I was suggesting to Ratan that he look into utilizing the small clay pots to sell fresh curds made from soymilk." Buffalo milk curd (called *dahi* in Hindi) is sold mostly in small clay pots in India; it is a popular fermented food resembling yogurt. "In India they make small clay pots which are disposable. After each use, they crush them and they may re-use them. It seemed to me that this would be a new way to promote the use of soymilk. Such curds (made from dairy milk) are already part of Indian food culture and the sales could be a dependable, growing product for entrepreneurs who own a SoyaCow. The small clay pots are readily available and very, very inexpensive. We also haven't been very successful in promoting the idea of making curds. For some reason that has not caught on or been popularized–not even at the Child Haven homes, with the exception of Bangladesh. Indians generally prefer curds from Buffalo or cow's milk–but of course many people cannot afford them.

Fred adds with a chuckle: "Ratan has not yet caught this fantastic vision of mine."

Another problem is to get more of the okara used in Child Haven homes. They are now using it in some of the curries at Child Haven in Bangladesh. There are so many ways to use it, the quality of the protein is higher than that in tofu or soymilk, and it is a valuable source of bulk and dietary fiber.

Hart Jansson is a person Shurtleff should talk with (Fred gives contact information). He lives in Oakville, near Toronto. "He is retired. He and his wife also adopted a child, in addition to one born to them. We were and are very close to that family. His wife, Daniella, is the main person who organizes the annual Oakville Child Haven fundraising dinner. He now works with Frank Daller at Malnutrition Matters. Their VitaGoat has the big advantage that it doesn't need electricity." Hart was the main person who wrote the CIDA grant application.

One of the eight Child Haven homes is the Maitreya Foundation in Delhi. All of the 21 refugee children are Tibetan and they have a SoyaCow. The founder and person in charge is a Dakpa Rinpoche, but he is busy and travels a lot. Bonnie goes to visit them. Child Haven provides all the funding. He is also the hereditary head of some 17 monasteries in Tibet, but has never been there having been born in India. He is trying to obtain a visa to visit Tibet. A photo of Rinpoche and the Tibetan children is on the Child Haven website. Address: Founders, Child Haven International.

8634. Jansson, Hart. 2010. Work with Child Haven International on their SoyaCow project (Interview). *SoyaScan Notes.* Oct. 28. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** Hart first came in contact and got involved with Child Haven in 1986. Before that time he had worked in the telecommunications (telecom) software industry, where he continued until about the year 2000. He and his wife were members of a Unitarian church in Ottawa, Ontario, Canada, and Fred Cappuccino was a Unitarian minister; he occasionally gave a sermon at Hart's church. Fred's farm in Maxville, Ontario, is about one hour's drive from Ottawa. Since that first introduction the Janssons have been steady supporters of and volunteers for Child Haven.

Hart first met Raj Gupta through Child Haven, where Hart was already working as a volunteer. They introduced Raj to him as "someone who had this marvelous idea about cottage industry and soymilk." Hart first met Grant Wood at about the same time; Grant was intimately involved with the engineering on the SoyaCow. He met both before the project committee began to meet.

Hart knows that the Child Haven committee submitted its first application to CIDA in 1989. He is not sure whether they got started on the project in 1988 or 1989, but he suspects it was probably late 1988. Hart believes that CIDA approved the first grant proposal in 1989 or 1990. Child Haven (with Hart as the principal author) did annual submissions (in part because Child Haven was a small organization with a new idea) and got three consecutive years of funding from CIDA.

In early 1989 Hart first saw a SoyaCow in Raj Gupta's basement. It was a working prototype that made soymilk, and Raj used it to make soymilk for Hart. Hart is quite sure that the first SoyaCow made in Canada was shipped to India in about 1991 and no later than early 1992.

Hart recalls that he first met Frank Daller in 1987 in India; Frank was in India related to this first SoyaCow fabrication. Hart was there on a contract to train software engineers in Delhi. He visited the Child Haven Home in Hyderabad, where about 50-100 kids lived in a rented house. Frank was with there with Bonnie.

Whose idea was it to ask CIDA for money for a SoyaCow program? Hart is not sure, but he thinks it was either Raj's idea or his idea. It was definitely not Child Haven's idea. The grant writing committee consisted of Raj and his wife, Rashmi, Fred and Bonnie Cappuccino, grant writing committee and Hart recalls working very closely with Raj on estimating the cost to build each SoyaCow in Canada. The committee met 4-5 times before the first proposal was submitted. As principal author, Hart did all the writing; he had never written a grant proposal before he did this one. After the first submission, the proposal had to be "tweaked" (changed) several times to make it fit what

CIDA was looking for. Tom Schatzky of CIDA suggested ways in which the proposal could be improved. That back and forth was done once to twice before the final application was submitted. CIDA, for example, hoped to use this project to employ and train women, and they wanted Canadian technology to be used. There may have been an element of children's nutrition too. Moreover, CIDA insisted on a matching grant, where Child Haven had to raise a certain percentage of the amount that CIDA gave for Phase I.

Hart does not recall the amount of CIDA's Phase I grant. It was less than $100,000; it may have been about $50,000.

After the first grant was received, the same committee met once a year to submit a proposal for a new phase each year; these were pretty straight follow-ons.

Frank Daller was involved with Child Haven somewhat before 1987 when Hart met him in India, but he was not involved with Child Haven before Hart.

Note: On 20 April 1991 the first SoyaCow made in Canada for Child Haven was unveiled at a Child Haven dinner in Ottawa. Speakers included Tom Schatzky of CIDA (who had by now visited the Hyderabad project) and Rashmi Gupta.

After the first grant, Hart did 1-2 monitoring visits to India, probably in 1991 and 1992; he travelled alone each time. His goal was to evaluate the SoyaCow and soymilk project implementation. All expenses were paid by CIDA, as part of the project monitoring. Hart found that "things worked pretty much exactly as expected. The machines worked reliably, the kids were accepting the soymilk, the women operators were able to operate the SoyaCow system without any problems. Looking back on it, it went surprisingly well." It's not easy to transfer a new food and new technology to a traditional culture. Upon returning from each trip Hart wrote a report to CIDA; each was positive.

Hart cannot find any early documents from this period, but he did find three old, low-resolution, black and white photos from 1990-91. One shows the St. Thomas Hospital in Madras (Tamil Nadu state in southeastern India). In the photo is a sign that reads: "Thanks to Child Haven and Tom Schatzky of CIDA." In 1988 Child Haven established a home in Kaliyampoondi; that is now (Oct. 2010) their biggest home, caring for 270 children ranging in age from newborn to 21 years. Hart recalls: "I remember being at St. Thomas Hospital; it was the most wonderful reception I've ever received. They were just amazingly friendly. Dr. Sister Mary Rexline was running the hospital and raising funds. They had a SoyaCow in the hospital and they were giving the soymilk to all their patients. They loved it." We could be doing the same thing at hospitals all over the third world.

Follow-up e-mail from Grant several hours after we talked on Oct. 28. "The fact that we did receive 3-years of funding (a total of about $220,000), and the funded project completed in Sept. 1993, confirms my recollection of the timing (i.e., first proposal submitted in 1989, with project start in 1990)." Address: Oakville, Ontario, Canada.

8635. Jansson, Hart. 2010. The work of Malnutrition Matters in India (Interview). *SoyaScan Notes.* Oct. 28. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** Hart first got involved with Malnutrition Matters (MM) in 2002; he started working for them part-time. Early in the year 2000 he finished his career as a full-time salaried person in the telecom (telecommunications) software industry in. Then he did some consulting stints and several other things for a couple of years before he started with Malnutrition Matters, while he was still living in Ottawa. He left the telecom job in part because he had enough money that he had the leisure to not be so concerned about money. Hart is paid for his work at Malnutrition Matters. It's much less than he could earn in the private sector, but no complaints. He now lives Oakville, a suburb of Toronto, Ontario.

Malnutrition Matters was founded in the year 2000. When Hart started working at Malnutrition Matters, Brian Harrigan was still there. Their office was in Ottawa, very close to the National Research Council offices where Raj Gupta worked and lived nearby. The office was in a small rented house near where Frank Daller lived. Frank and Brian worked full time and Hart worked part time on partnership development and writing grant proposals. Hart and Frank had kept in close contact since they first met in 1987. They had gone to Nepal together (in about 1998-99) on a trip unrelated to work with soy. Frank invited Hart to work with Malnutrition Matters and Hart was quite eager to give it a try.

Malnutrition Matters is presently very active with soy in India. They have 20 VitaGoats in India. Ten are in the state of Orissa, and almost all of those are part of a school feeding project that for which Malnutrition Matters got funding from the Word Bank. The machines are located in small buildings in various villages, run by women's cooperatives supervised by a local NGO named Biswa. It's working OK, and there is no problem with the children accepting soymilk, but there is some resistance from women to using the pedal-powered grinder (they should call it a spinning class). Most important, it could have been a bigger project. The big hurdle was government approvals. They know about rice, wheat, lentils, but soy is a new thing so it is a years-long process in India to get approval for soymilk in a school lunch program. So its a very limited pilot project. Its an inevitable and rather painful part of introducing soyfoods to a traditional culture. Multiple levels of government have to be convinced, and there is some corruption. "Everybody knows how to say 'no.'"

Hart had noticed a huge change in India's government and economic policies, especially since about 1996. "It's like night and day. Really amazing in terms of modernization– even going through customs is much easier. Even though the buzzword today in India is 'entrepreneur,' if you look in the rural areas, there are more malnourished people than in all

of Africa–according to the World Health Organization. India made progress reducing malnutrition through the 1990s, but basically during the past decade that progress has stalled, and even begun to slide back. Its really inexcusable given their overall economic progress. Even India's prime minister, in an address to parliament, has admitted that people in the rural areas are suffering from malnutrition and have been left behind. He has stressed the need to solve these huge problems but it is not happening. In a good number of African countries you see really substantial progress. In some of the Indian states, such as Karnataka and Kerala (which has a Communist government) the rural population is doing well.

The other ten VitaGoats are scattered all over India from Deli to rural Maharashtra, Rajasthan, Punjab, Bihar, etc.

How does Malnutrition Matters monitor that each of these 20 machines is being used as intended? "We basically do that indirectly through the NGO partners we work with, such as Biswa, and some really small grass-roots organizations. We don't have staff in India, and only three of us at the headquarters in Ottawa. Malnutrition Matters now has 170 VitaGoats and SoyCows operating around the world. Burma and Belize are our latest countries.

"Malnutrition Matters has had three projects funded largely by the Donner Canadian Foundation–in amounts under $100,000. They have provided funds to Child Haven, which has enabled us to do projects under the auspices of Child Haven in India, which is the implementing organization. The machines do not go into Child Haven homes.

"Ratan Sharma presently works only as a subcontractor for Malnutrition Matters, as when we have training or other such work for him to do. We pay him on a per diem basis." The VitaGoats are made by an affiliate of SSP in India, but not by Pristine (PPI). "We have found that it is less expensive and more reliable (with less maintenance and repair) to have the grinder 'off board'–as a separate component. Pristine does good work, but the machines they make are more expensive and more complex than ours. If you're a small guy in a village just trying to make tofu for same-day sales, you would look at a less expensive VitaGoat or SoyCow from us."

Any VitaGoat system has the option of using either a multifuel boiler (which operates with firewood, coal, or other types of biomass, and has an all stainless steel core) or an electric steam boiler (which has a soft steel core–not stainless). The electric boilers are purchased from Reimers Electra Steam, Inc. in Clear Brook, Virginia, USA.

As far a Hart knows, Pristine makes only SoyaCows–of the next to latest generation. Pristine also buys its electric boilers from Reimers in the USA. Address: Oakville, Ontario, Canada.

8636. Jansson, Hart. 2010. The work of the Gates Foundation with soy in the third world (Interview). *SoyaScan Notes.* Oct. 28. Conducted by William Shurtleff of Soyinfo Center.
• ***Summary:*** The Gates Foundation ("Gates") just gave TechnoServe $8 million for promoting soy cultivation in Mozambique and Zambia as part of the "soy value chain" project in Africa. But there isn't a dime in this $8 million budget for human consumption; its all going into soybean production and animal feed.

Note: "TechnoServe (founded in 1968) is a non-governmental organisation (NGO) based in Washington, DC which helps entrepreneurial men and women in poor areas of the developing world to build businesses that create income, opportunity and economic growth for their families, their communities and their countries. It has about 800 employees worldwide (Source: Wikipedia, Oct. 2010).

Hart recently talked with someone at Gates to try to convince them to have at least a token amount for human consumption. The answer was a pretty flat "No." They want to promote soybean production in Africa to help the small landholder to increase his income.

Hart thinks that Gates does understand the soyfoods movement in the third world, and they do understand that consuming soyfoods directly is much more energy efficient, and land efficient, and water efficient. But they seem to be stuck on a big-business model and cooperation with Monsanto. That model is to grow lots of soybeans, crush them to make soy oil and soybean meal, feed the oil to animals (mostly pigs and chickens), then slaughter and eat the animals. Hart thinks that is the wrong, unsustainable model. It makes very inefficient use of basic resources. It will provide more animal protein [and vegetable oil] for the small middle class in the cities, but it is not going to help feed the malnourished and starving poor in the Africa's rural areas and city slums. "I'm passionate about this concept of getting protein, calories, and other nutrients to people who are really starving."

Note: "The Bill & Melinda Gates Foundation recently purchased 500,000 shares of Monsanto Company, worth an estimated $27.6 million."

The Gates Foundation has given the Monsanto and their affiliates about $100 million in funding for biotech research. But the Foundation doesn't really understand the great significance of (for example) St. Thomas Hospital in Madras, or perhaps the fact that children do not have a problem with acceptance of soyfoods that taste moderately good–especially children who are malnourished or hungry or starving.

WISHH hosts a nutrition conference in Washington, DC, once a year, and they have a Midwest workshop once a year, and Gates is usually there. So Gates is well aware of what WISHH is doing and what MM is doing. Gates is probably not aware of Child Haven. There is one project where Gates is providing some funding to an organization named Tropical Soil Biology and Fertility (TSBF, in Nairobi), an Institute

of CIAT. TSBF ordered a number of VitaGoats from MM for Kenya. So Gates is aware of those results via their TSBF project.

Note: A TSBF Web page starts: "Many scientists consider declining soil fertility the biggest obstacle to food security in Africa." The CIAT homepage states: "The International Center for Tropical Agriculture (known as CIAT from its Spanish language name *Centro Internacional de Agricultura Tropical*) is a nonprofit organization that conducts advanced research in social and environmental fields to mitigate hunger and poverty and preserve natural resources in developing countries." Founded in 1967, CIAT's headquarters are near Palmira, Colombia. "Over half of its scientists are located in regional offices around the world." "CIAT is one of 15 research centers that together form the Alliance of the Consultative Group on International Agricultural Research (CGIAR). The Center is funded through contributions from many countries, private foundations, and international organizations." CIAT's mission is "to reduce hunger and poverty and improve human health in the tropics through research aimed at increasing the eco-efficiency of agriculture." "Eco-efficiency" (a term coined in 1992) means "creating more goods and services while using fewer resources and creating less waste and pollution." Address: Oakville, Ontario, Canada.

• ***Summary:*** This photo of Fred and Bonnie was taken at their home and farm in Maxville, Ontario, Canada, on 27 Oct. 2010. It was sent to Soyinfo Center by Fred, Bonnie, and Steve Bayne.

8638. *Malnutrition Matters Newsletter* (*Ottawa, Ontario, Canada*)**.** 2010. Serial/periodical. Ottawa, Ontario, Canada: Malnutrition Matters. No. 1. Nov. 2010.
• ***Summary:*** Based on No. 4: Each newsletter, which is sent only electronically, consists of 1 page only, with roughly three articles and 3-4 color photos on that page. Address: Ottawa, Ontario, Canada.

8639. *SoyaScan Notes.* 2010. Did the Chinese or Japanese or Koreans traditionally feed soymilk to infants or to recently-weaned children? No! (Overview). Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** A personal view by William Shurtleff:

I have lived in Japan with a Japanese family for 6½ years, spoke fluent Japanese, traveled all over China, and read huge amounts of literature about soy in China and Japan.

I would say that the Japanese and Chinese do NOT feed soymilk to infants or even to weaned infants. Rather they DO feed tofu as one of the earliest weaning foods. They mash it with rice gruel, so both are very soft. Remember that traditional Asian soymilk causes infants intestinal gas which tofu generally does not, or at least much, much less.

Of course it depends partly on what age you mean by "infants." At what age does an infant cease to be an infant? Wikipedia says of "infant": "It is typically applied to children between the ages of 1 month and 12 months; however, definitions vary between birth and 3 years of age."

I have never seen or heard of soymilk used as an infant food or a weaning food, except in a few early French-language articles such as: Labbé 1911, and Beltzer 1911–and maybe a few other articles.

The statements in these two articles that soymilk is fed to infants are rare exceptions. I imagine that Beltzer learned it from Labbé and that Labbe did not know much about the subject.

Read the writings of Dr. Harry Miller (M.D., on our website, www. soyinfocenter.com) who established the first soy dairy in China in 1936, who lived in China as a missionary in China for many decades, and who introduced soymilk for infants (Soyalac) to the United States. He wrote a great deal and a biography has been written about him, yet I do not recall that he ever said that Chinese feed soymilk to infants. Address: Soyinfo Center.

8640. Nordquist, Ted. 2010. Making concentrated soymilk or soybase–with a high solids content (Interview). *SoyaScan Notes.* Dec. 6. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** It is not difficult or expensive to make soymilk with a high solids content; that is exactly what traditional Japanese tofu makers did when they made the soymilk to be used for making silken tofu (*kinugoshi*). To make soybase, you simply add less water than when making a more dilute product. There are no special tricks.

Note: Concentrated soymilk was also used traditionally to make yuba in China and Japan.

Ever since he was in Sweden in the 1980s, Ted has used the word "soybase" to refer to this concentrated soymilk. He first developed soybase in Sweden for use in making soy ice cream–which is typically made from cream and thus requires a high solids content (11½% solids). Later he continued to make it as the base for other products because it cost less to ship (as in a milk tanker) or store. Today his typical soybase contains 12½% solids–which is the concentration that has the highest yield of solids from the soybean in the soybase. From one gallon of soybase one can get about 2½ gallons of soymilk (containing 5½% solids). For soy yogurt it is diluted down to about 8½% solids.

SunOpta makes a soybase that contains 13½ to 14% solids. But if one wanted to make a soybase with an even higher protein content (16-18% solids), there are only two ways: Using ultrafiltration (UF) or reverse osmosis (RO). Both of these ways are very expensive (they require a large initial investment) and the process can only be run for about a short period of time (6-8 hours) before the equipment must be cleaned–at great expense for chemicals and time (10-12 hours of cleaning time). Ted will produce soybase for 50-60 hours before he stops to clean the equipment. Ted has never heard of using a vacuum to reduce the water content of soymilk. And there is another problem–called "the curve." As you reduce the water, and your soybase solids get higher and higher, the protein and oil in your okara also get higher and higher, so you are losing / wasting a lot of nutrients. You soon begin losing money because your water-soluble protein and oil, at a certain point, start going down, even though you are adding more soybeans and less water. Address: WholeSoy & Co., 49 Stevenson St., Suite 1075, San Francisco, California 94105-2975; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-495-2870.

8641. Shurtleff, William. 2010. Re: Work of the American Soybean Association to support or promote soyfoods or soy protein ingredients. Letter (e-mail) to Hervé Berbille, Paris, France, Dec. 6. 1 p.

• ***Summary:*** "In the early days, certain high-up people in the ASA told me that they strongly disliked what I was writing, and doing, and saying. They even did a few things to try to hinder my work. That was in the mid-1970s. But over the years that has changed quite a bit, largely because of women who hold high positions in ASA's state soybean boards, who are interested in food, cooking, soyfoods and the potential of soy to do more to relieve hunger and malnutrition.

"The big change came in 1999 when the U.S. Food and Drug Administration issued a health claim for soy protein. This created huge interest in soyfoods in the USA and many new products, by both very large and very small companies. ASA proudly joined the crowd and really began to support soyfoods as one of its 'new' products.

"Another major change came in early 2001 when ASA created WISHH–the World Initiative for Soy in Human Health. This organization, and its outstanding, deeply-devoted head, Jim Hershey, are now taking soyfoods to the four corners of the world, promoting soymilk, tofu, cottage industries–as well as TVP, isolates and concentrates. I applaud their work.

"I could give you many examples of the things that ASA is now doing that are very favorable and helpful for soyfoods. They sponsor conferences, publish newsletters, conduct market surveys on attitudes towards soy, sponsor fairs and cooking contests, etc.

"Today, I cannot think of a single person in ASA with whom I have a bad or negative or uncomfortable relationship. They either respect my work and my position and simply disagree with it, or they positively like what I am doing and have been doing without stop since Oct. 1972 when I began devoting all my working time to teaching people worldwide about soyfoods.

"ASA is basically in the business of selling vegetable oil and meat. Developing countries (such as India and China) desire more of these two commodities, but in the developed countries they are steadily becoming less popular. Increasingly people want to reduce their consumption of all fats and of meat. So ASA finds itself with a somewhat unclear mission. Nevertheless, in both India and China, ASA is very actively promoting soyfoods and domestic utilization of soy protein.

"This is my analysis of the situation as it now stands. I think ASA is doing a great deal to help the cause of soyfoods. They must flow with the great tides of history–or be left behind. Fortunately they are the keepers of a truly remarkably crop with an ancient, illustrious history–the soybean!" Address: Founder and Director, Soyinfo Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

8642. *SoyaScan Notes.* 2010. Chronology of major soy-related events and trends during 2010 (Overview). Dec. 31. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** Jan. 21–Alpro releases an excellent cartoon video commercial titled "Great Ideas Often Take a Long Time to Sink in" as part of its "Join the movement now" campaign. It encourages people to change their diet by replacing meat and dairy by an alternative just once a week. If everyone in Europe did this, it would reduce global carbon emissions by 40 million tonnes (metric tons). That is more than the carbon emissions produced by a line of cars going

around the world. Soy is not mentioned in the voiceover, but on the last panel we read that this video (lasting less than 2 minutes) was sponsored by the World Wildlife Fund and Alpro Soya. Note: Alpro Soya is now owned by Dean Foods.

Sept. 22–Quong Hop & Co. files voluntarily for Chapter 7 bankruptcy. The last U.S. maker of wine-fermented tofu no longer exists–opening up a business opportunity. Quong Hop's president at the time of bankruptcy is James Stephens.

Oct. 24–South River Miso Co. stops sending their 4-page quarterly printed newsletter; invites people to sign up for e-newsletter.

8643. Andoh, Elizabeth. 2010. Kansha: Celebrating Japan's vegan and vegetarian traditions. Berkeley, California: Ten Speed Press. vii + 296 p. Illust. (color photos by Leigh Beisch). Index. 25 x 25 cm.

• ***Summary:*** A beautiful book, and a major contribution toward understanding Japanese cuisine, culture, and the pervasive spirit of gratitude / appreciation. In Japanese, *kansha* means appreciation or gratitude. Contents: Acknowledgments. Introduction: A historical perspective on kansha (*shojin ryori* is vegan), recent developments, putting theory into practice, practicing kansha, meal planning, some final thoughts, a note about language. Rice. Noodles. Stocks and soups. Fresh from the market. The well-stocked pantry. Mostly soy. Tuskémono [pickles]. Desserts. A guide to the kansha kitchen. A catalog of tools and techniques. A catalog of ingredients [glossary]–with entries that include the following: daikon, edamame, flours (kinako), kudzu, herbs, spices and seasonings (ao nori, sansho, shiso, togarashi, wasabi), kabocha, dried beans (adzuki [sic], daizu {dried soybeans–the most important legumes in the Japanese pantry}), dried soy foods [sic] (hoshi yuba {dried yuba}, koya-dofu / kori-dofu). Dried vegetables from the land (dried shiitake mushrooms). Dried vegetables from the sea (arame, hijiki, kanten, kombu [konbu]). Dried wheat gluten. Kasu (sake dregs). Konnyaku and shirataki. Matcha. Miso (red miso, white miso, genmai miso). Mushrooms. Natto. Nigari. Nuka. Okara. Pickles. Rice. Roots and tubers. Saké. Salt. Sesame (seeds, sesame paste, sesame oil). Soy milk. Soy sauce. Sweeteners (ama-zaké, kuro-zato, mirin, mizu amé). Tofu (firm tofu, silken tofu, grilled tofu, thin fried tofu {abura agé}, thick fried tofu {atsu agé}).

Tsukemono (pickles). Umeboshi (pickled plums). Vinegar. Yuzu. Yuba.

Note: This is the earliest English-language document seen (April 2013) that uses the term "thick fried tofu" to refer to atsu agé / deep-fried tofu cutlets.

Contains many recipes that use tofu, miso, soy sauce, edamame, natto, etc. Address: Japan.

8644. *Iowa Soybean Review* (*Iowa Soybean Association, Urbandale, Iowa*). 2010. Outstanding contributions in promoting soyfoods. 22(5):18. Dec.

• ***Summary:*** In the section about investing soybean checkoff dollars we read: "Food enthusiasts who enjoy edamame, tofu or soymilk may have Linda Funk to thank. As executive director of the Soyfoods Council, Funk has been successfully promoting the flavor, nutrition benefits and healthful aspects of soyfoods for over 10 years." The Soyfoods Council is headquartered in the office of the Iowa Soybean Association.

A large color photo shows Linda Funk accepting an award "For Outstanding Contributions in Promoting Awareness of the Nutritional and Health Aspects of Soyfoods" from Mark Messina, PhD at the 9th International Symposium on the Role of Soy in Health Promotion and Chronic Disease Prevention and Treatment, held Oct. 16-19 in Washington, DC.

8645. Soyatech, LLC. 2010. Soya & Oilseed Bluebook 2011: The annual directory of the world oilseed industry. Bar Harbor, Maine: Soyatech. 348 p. Dec. Comprehensive index. Advertiser index. Statistical conversions. 28 cm.

• ***Summary:*** This is the 5th year in a row that the *Bluebook* (a $95 value) has been sent free of charge to qualified industry members. On the cover are six color photos, and a black and white photo of a farmer leaning against a huge rubber tire that is almost as tall as he is.

This edition of the *Bluebook* contains 4 fewer pages than it did last year. The oilseeds covered in this book are (alphabetically): Canola, coconut, corn, cottonseed, flaxseed, hempseed, jatropha, linseed, palm, peanut, rapeseed, safflower, soya, sunflowerseed–the same as last year.

On the inside front cover is a color ad from Natural Products Inc. (Grinnell, Iowa), makers of innovative ingredients for bakery, soymilk and tofu. On the first page is a full page color ad from SunOpta, processors of identity preserved, natural and organic soy products, including whole soybeans, soymilk, soy flours, edamame, oils and more.

On the rear cover is a full page color ad from ADM titled "We see potential" which shows a growing soybean plant with pods and leaves. A table shows the many products that can be made from soybeans.

Chris Erickson is CEO. Mark Dineen is president. Keri Hayes is publisher and operations director. In the Foreword, Joe Jordan (General manager and content director) leads with a question: "What could possibly have increased sales by 1274% between 2008 and 2010? The e-Book." He appears to be talking about the entire e-book industry in the USA or perhaps even worldwide. He then writes about Amazon's Kindle and hints that the printed and bound *Bluebook* may soon be available in digital form only. "Sure the Bluebook is changing. It always has." Address: P.O. Box 1307, 19 Clark Point Rd., Suite 112, Southwest Harbor, Maine 04679. Phone: 207.244.9544.

8646. **Product Name:** Trader Joe's Soy Essential: Soy Beverage (Organic Non-Dairy).

Manufacturer's Name: Trader Joe's (Marketer-Distributor).
Manufacturer's Address: Monrovia, CA 91016.
Date of Introduction: 2010. December.
Ingredients: Organic soymilk (filtered water, whole organic soybeans), filtered water, inulin, calcium carbonate, organic flaxseed oil, natural flavor, sea salt, carrageenan, vitamin A palmitate, vitamin D2, riboflavin (B2), vitamin B6, folic acid, vitamin B 12).
Wt/Vol., Packaging, Price: Quart (32 fl oz; 946 ml) Aseptic carton. Retails for $1.69 (2013/01, Lafayette, California).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 1 cup (240 ml): 7 gm protein.
New Product–Documentation: Product with Label purchased at Trader Joe's in Lafayette, California. 2103. Jan. 9. $1.69. Front and back panels: Light blue, dark blue, white, light and dark green. "Made with organic soybeans. Unsweetened. Contains 500 mg Omega-3 ALA (alpha-linoleic acid). Heart healthy. Good source of fiber. Enriched with 7 nutrients. free. Ultra-pasteurized." Left panel: "Excellent source of calcium and vitamins D B6, B12, riboflavin and folic acid. Refrigerate after opening and use within 7-10 days after opening."

8647. **Product Name:** Trader Joe's Soy Milk (Organic Unsweetened Nondairy).
Manufacturer's Name: Trader Joe's (Marketer-Distributor).
Manufacturer's Address: Monrovia, CA 91016.
Date of Introduction: 2010. December.
Ingredients: Filtered water, organic whole soybeans. Made on shared equipment with wheat, milk, eggs & tree nuts.
Wt/Vol., Packaging, Price: Quart (32 fl oz; 946 ml) Aseptic carton. Retails for $1.69 (2013/01, Lafayette, California).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 1 cup (240 ml): 7 gm protein.
New Product–Documentation: Product with Label purchased at Trader Joe's in Lafayette, California. 2103. Jan. 9. $1.69. Front and back panels: Light green, black, pink-beige, dark green. Rear panel: "Trader Joe's organic unsweetened soy milk as several health benefits. An added plus to the great flavor! 70 mg of isoflavones per serving. Lactose free. Gluten free. 9 grams of soy protein per serving. * Diets low in saturated fats and cholesterol that include 25 grams of soy protein a day may reduce the risk of heart disease. One serving of Trader Joe's Organic Unsweetened Soy Milk provides 9 gm of soy protein." Right panel: Certified organic by Quality Assurance International.

8648. Chappell, Mary Margaret. ed. 2010. Vegetarian Times everything vegan. Hoboken, New Jersey: John Wiley & Sons. 352 p. Foreword by Neal Bernard, M.D. Illust. (full-page color photos). Index. 24 cm.
• ***Summary:*** Recipes from *Vegetarian Times* magazine.

Chapter 7 (p. 131-64) is titled "Tofu, tempeh, and seitan." The index to the book contains 36 entries for tofu (divided into different types such as extra firm, firm, flavored and processed, silken; plus lots of basic information), 17 for seitan, 15 for tempeh, 7 for miso, 5 for soy crumbles and textured soy protein, 4 for meat alternatives, 4 for edamame, 2 for smoothies, and 1 for soymilk–although many recipes call for soymilk.

This book frequently includes alcoholic beverages with recipes and in photos.

8649. Hackett, Jolinda; Bull, Lorena Novak. 2010. The everything vegan cookbook: 300 recipes for any occasion! Avon, Massachusetts: Adams Media. x + 294 p. Index. 24 x 21 cm.
• ***Summary:*** The book begins: "Dear Reader: When I decided to give up eggs and dairy, I asked every vegan I knew for their advice. One sentiment always stood out: 'Learn to cook.'"

Chapter 11, titled "Tofu" (p. 219-42) contains 26 tofu recipes of great variety and creativity. Chapter 12, "Seitan, TVP, and tempeh" (p. 243-65) contains 23 recipes, including homemade seitan.

Other soy related recipes: Vegan mayonnaise (with "1 12-ounce block silken tofu," p. 23). Vegan "pigs" in a blanket (with vegan hot dogs, p. 24). Vegan tzatziki (with soy yogurt, p. 30). Chili masala tofu scramble (p. 38). Quick tofu breakfast burrito (p. 42). Strawberry protein smoothie (with silken tofu, p. 43). Granola breakfast parfait (with soy yogurt, p. 46). Baked "sausage" and mushroom frittata (with vegetarian sausage or "beef" crumbles, p. 53). Creamy miso sesame dressing (p. 61). Tempeh dill "chicken" salad (p. 64). Edamame salad (p. 73). Winter seitan stew (p. 88). Saucy Chinese vegetables with seitan or tempeh (p. 105). Barley pilaf with edamame and roasted red peppers (p. 185). Cheesy macaroni and "hamburger" casserole (with veggie burgers, p. 210). TVP taco "meat" (taco filling, p. 250). Homemade baked seitan (p. 251).

Many other recipes call for soy milk or soy cream. Jolinda Hackett has been a vegetarian for nearly 20 years and a "plant-based vegan" for nearly ten. Address: 1. Santa Barbara, California; 2. RD [Registered Dietitian], Riverside, California.

8650. Nishimura, Mayumi. 2010. Mayumi's kitchen: Macrobiotic cooking for body and soul. Tokyo, New York: Kodansha International. 157 p. Illust. (mainly color). Index. 26 cm. [15 ref]
• ***Summary:*** This is Mayumi's first English-language book. Madonna (of worldwide musical fame) wrote her a letter that appears in this book (p. 7): "Dear Mayumi, Congratulations on your fabulous book!... Not only are you the best chef in the world, you are part of our family, and we thank you for your love and warmth.

"In the seven years you lived with us and cooked for us, your amazing food helped me to be a happier, healthier person, balanced in body and mind. I feel better than I did 20 years ago. I am very grateful to you for this."

The index of this stylish book contains 24 entries for tofu (some in the chapter titled "Protein dishes"–p. 97-104), 20 for miso, 14 for seitan, and 11 for tempeh. How nice to find a Japanese cookbook that calls for the use of brown rice (basic recipe, p. 67).

The centerpiece of Mayumi's book is her 10-day detox diet.

Also contains specific recipes for: Nabe (with "2 pieces abura-age {deep-fried tofu skins}, halved or cut open on one side to form pouches," p. 67). Soybean and millet croquettes with beet sauce (with "15 oz {425 gm} canned soybeans, drained," p. 84). Seitan pot stickers (with seitan and tofu, p. 113). Smoked tofu salad (with "7 oz {200 gm} firm tofu," p. 104). Black soybean tea (p. 113).

The Glossary (p. 140-49) includes entries for: abura-age, adzuki beans, brown rice, brown rice mochi, edamame, hijiki, kombu, koyadofu, kuzu, mirin, miso, nori, rice milk, rice syrup, seitan, sesame oil, shiso, shoyu (incl. soy sauce and tamari), soba, soy meat nuggets (TVP), soymilk, tahini, tempeh, tofu, umeboshi plum, umeboshi plum paste, wakame, wasabi, whole-wheat flour.

About the author (inside rear dust jacket): "Mayumi Nishimura was born on the small island of Shinojima in Aichi Prefecture [in Mikawa Bay Quasi-National Park]. In 1982 she moved to the U.S. and began studying macrobiotics under Michio Kushi–the leading authority in the field–at the Kushi Institute. Later she worked at the school as head cooking instructor. In 2001 Mayumi became Madonna's private macrobiotic chef, joining her on her Drowned World Tour. Between 2001 and 2008 she cooked for the superstar full-time. Currently Mayumi travels between Japan, where she writes and lectures on macrobiotics, and the U.S." She has written four books published in Japanese. A large color photo of Mayumi appears on the front dust jacket.

The book is dedicated to Mayumi's children, Lisa and Norihiko, to her parents, and to Michio Kushi and his wife, Midori.

8651. Qiu, Xiaolong. 2010. Years of red dust: stories of Shanghai. New York, NY: St. Martin's Press. 227 p. No index. 22 cm. [Eng]

• ***Summary:*** "These stories trace the changes in modern China over fifty years–from the early days of the Communist revolution in 1949 to the modernization movement of the late nineties [1990s]–all from the perspective of one small street in Shanghai, Red Dust Lane. From the early optimism of the end of the Chinese Civil War, through the brutality and upheaval of the Cultural Revolution, to the death of Mao, the pro-democracy movement and the riots in Tiananmen Square–through the bulletins posted and the lives lived in this one lane, this one corner of Shanghai" (from the publisher).

One short chapter "(Tofu) Worker Poet Bao I (1958)" tells how, in the mid-1950s, Bao Hong moved into Red Dust Lane from Ningbo, where he had apprenticed to a tofu maker. He intended to pursue his craft in Shanghai. However in 1958, after Chairman Mao called for major development in the steel industry as part of "the Great Leap Forward," Bao end up working in Shanghai No. 3 Steel Plant instead.

That same year there was a call for peasants and workers to come to the forefront as writers and artists. A chance encounter while he complained about the tofu he had bought led Bao to be proclaimed a great writer. A poem, only partially his was printed with his name on the front page of the *Liberation Daily.* He was selected to be a worker poet and given a special room and nice pay.

The second half of this story, titled "(Tofu) Worker Poet Bao II (1996)" tells how he built a little tofu shop near Red Dust Lane. At his shop, Bao made and displayed a colorful array of soybean products–"white tofu, soft and hard tofu, frozen tofu for hot pot, golden tofu skin [yuba], gray tofu dredges [okara?], milky soybean drink [soymilk?], brown vegetable chicken, yellow fried gluten–all of which were far more delicious than those sold at the state-run market. In the afternoon Bao also started selling stinking tofu, which was fried in a wok over a tiny stove." Most who came to his shop did so to buy his delicious products. But some came out of curiosity to see how a famous worker poet had become a tofu maker. "It was a metamorphosis beyond their imagining." Address: Raised in Shanghai, he is now a poet, professor and author who lives with his family in St. Louis, Missouri.

8652. Reinfeld, Mark; Murray, Jennifer. 2010. The 30 minute vegan's taste of the East: 150 Asian-inspired recipes–from soba noodles to summer rolls. Cambridge, Massachusetts: Da Capo Press. xix + 266 p. Plus 16 unnumbered pages of color plates. Illust. (color photos). Index. 24 x 18 cm. [28 ref]

• ***Summary:*** The index contains 22 entries for tofu, 8 each for tempeh and for seitan, 3 for miso, 2 for edamame, and 1 each for tamari and for soy sauce (Noodles with sweet soybean sauce, pad siew).

Includes a good glossary with entries for miso, nama shoyu, seitan, shoyu, soy milk, soy sauce, tamari, tempeh, tofu. Address: 1. Founding chef, Blossoming Lotus Restaurant, and author; 2. Author and teacher. Both: Kaua'i, Hawaii.

8653. Singh, Guriqbal. ed. 2010. The soybean: Botany, production and uses. Wallingford, Oxfordshire, UK, and Cambridge, Massachusetts: CAB International (CABI). xii + 494 p. See p. 2. Illust. Map. Index. 26 cm.

• ***Summary:*** Chapter 1 is "The origin and history of soybean," by Li-Juan Qiu and Ru-Zhen Chang. In the Introduction we read (p. 2): "The Chinese people are

accustomed to eating soybean. Traditional soybean products such as bean curd (tofu), soybean milk, dried rolls of bean cream [dried yuba sticks]. soy sauce and so on are favoured foods to Chinese people." Address: Senior Agronomist (Pulses), Dep. of Plant Breeding and Genetics, Punjab Agricultural Univ., Ludhiana, India.

8654. Vegetarian and Vegan Foundation. 2010. The soya story: Everything you wanted to know about soya. The truth about how it impacts our health and the environment. Bristol, England. 60 p. Illust. 21.5 x 28 cm. [50+ ref]
• ***Summary:*** An very nice online digital book. Contents: Introduction. History. Soya: the superbean! The nutritional power of soya (by Juliet Gellatley) (7 refs).

Soya: the health protector (by Dr. Justine Butler): The health effects of soya, phytoestrogens, heart health, blood pressure, diabetes and CVD, diabetes, menopausal symptoms, bone health, breast cancer, prostate cancer, endometrial cancer, colon cancer, brain power, soya-based infant formula, thyroid function, allergies, soya production, summary, references (35 refs).

Soya: a global threat? How soya impacts the environment. Bean cuisine! An introduction to cooking with soya (by Jane Easton): Ingredients, stocklists (which soyfood products are available at the following British supermarkets: Asda, Sainsbury, Tesco, Waitrose, Independent health food shops and Oriental food markets. A good online source of soyfoods is Goodness Direct {www.goodnessdirect.co.uk}).

Soya recipes (p. 35-60).

The section on ingredients includes: Soya beans, edamame (fresh soya beans), tofu (silken tofu, firm tofu, flavored tofu {marinated, smoked, deep-fried, Tofu Rosso, Tofu Basil}), miso, soya sauce, soya dairy alternatives (soya milk, soy yoghurt).

Tofu manufacturers: Cauldron Foods (www.cauldronfoods.co.uk). Dragonfly (www.tofu.co.uk). Clear Spot [R & R Tofu] (www.clearspottofu.co.uk; Clearspot is the brand). Mori-Nu (www.morinu.com). Blue Dragon (www.bluedragon.com). Taifun (www.taifun-tofu.de/en).

Soyatoo [Tofutown.com] (www.soyatoo.de/us). Address: 8 York Court, Wilder Street, Bristol BS2 8QH, UK.

8655. Chaker, Anne Marie. 2011. Move over, cow: Almond milk sparks fight in dairy case. The cookie dunk-off. *Wall Street Journal.* Jan. 12. p. D1-D2.
• ***Summary:*** "Milk alternatives–creamy liquids derived from non-dairy sources-are on the rise, especially in households where people are lactose-intolerant or dairy-allergic." The rise of dairy alternatives follows decades of slow, steady decline in consumption of cow's milk in the U.S. The leading milk alternative by far is soymilk, and the leading soymilk brand is Silk.

Two brands of almond milk–Silk Pure Almond Milk (from Dean Foods Co., Dallas, Texas) and Almond Breeze (from Blue Diamond Growers, of Sacramento, California)–are waging a Coke-and-Pepsi style market-share battle in the supermarket. Almond milk first appeared in refrigerated dairy cases in 2010.

8656. Fu, Jia-Chen. 2011. Re: In China or Japan or Korea was soymilk traditionally fed to infants or to recently-weaned children? Letter (e-mail) to William Shurtleff at Soyinfo Center, Jan. 18. 1 p. [2 ref]
• ***Summary:*** "I know of one medical study by Dr. Ruth Guy (citation below), a physician at the First Health Station of the Beiping Municipality, who found little evidence that Beiping women used soybean milk to feed their children. Dr. Guy notes that though the drink was available through street vendors, it was generally drunk by 'old people in place of tea.' Home preparation was difficult and laborious, and therefore avoided. (Ruth A. Guy, 'The Diets of Nursing Mothers and Young Children in Peiping,' *Chinese Medical Journal* 50 {April 1936}:440).

"This assessment seems in keeping with the broader Chinese medical and materia media literature of pediatrics. I've not seen soybean milk recommended in classical medical texts for infant feeding. In cases in which the mother cannot breastfeed her child, medical texts generally recommend that (1) a midwife be found, (2) animal milk (e.g., sow's milk) be used as supplement, or (3) a thin gruel made with ground cereal in water (often rice) be prepared.

"For a more extensive treatment of breastfeeding and infant feeding practices in late imperial China, please see Ping-chen Hsiung, 'To Nurse the Young: Breastfeeding and Infant Feeding in Late Imperial China,' *Journal of Family History,* 20:3 (1995): 217-238." Address: Case Western Reserve Univ., Dep. of History, Mather House, 11201 Euclid Ave., Cleveland, Ohio 44106.

8657. Goldstein, Richard. 2011. Jack LaLanne, founder of modern fitness movement, dies at 96. *New York Times.* Jan. 23. *
• ***Summary:*** "He ate two meals a day and shunned snacks. Breakfast, following his morning workout, usually included several hard-boiled egg whites, a cup of broth, oatmeal with soy milk and seasonal fruit." He never drank coffee.

Note: Jack LaLanne probably can be correctly called the "founder of the modern fitness movement." His teacher and inspiration, Paul Bragg, might well also claim that title. Bragg started teaching fitness and exercise in the 1920s. He had a gym in Los Angeles where he taught exercise classes long before Jack LaLanne opened his gym, and Bragg taught exercise throughout his life in a very visible way–for years, free of charge, on the beach at Waikiki, Honolulu, Hawaii–

and this garnered him lots of free publicity which reached a wide audience. Paul Bragg and Patricia Bragg also had a health TV show in Hollywood where they taught exercise. However by 1951 Jack LaLanne had a television program in the San Francisco Bay Area, and by 1959 nationwide. LaLanne's TV program had a much larger audience than Bragg's and it ran for much longer (more than 3,000 episodes).

8658. *SoyaScan Notes.* 2011. Chronology of Vitasoy, worldwide (Overview). April 13. Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** 1940–Establishment of Hong Kong Soya Bean Products Co. Ltd. in Hong Kong. Launch of healthy Vitasoy soymilk in Hong Kong (a color photo in the 2009/10 annual report shows the original glass bottle).

1975 The Group introduces the first Tetra Brik Aseptic packaging for beverage products in Hong Kong.

1976–Launch of new VITA line of juice drinks in Hong Kong.

1979–Launch of VITA Lemon Tea. It was the world's first ready-to-drink lemon tea.

1984–Launch of the world's first 375 ml paper-pack drink.

1987–Official opening of the new HK$100 million headquarters and plant building in Tuen Mun, Hong Kong.

1990–Acquisition of a tofu plant on the East Coast of the US.

1994–The Group is listed on the Stock Exchange of Hong Kong. Official opening of Shenzhen plant in Mainland China.

1998–Official opening of a wholly-owned plant in Shanghai, Mainland China. Official opening of the new Nasoya Foods plant in Ayer, Massachusetts in the USA.

2001–Official opening of the Company's first plant in Australia–at Wodonga. 2002–Vitasoy International Holdings Ltd. receives the Caring Company logo from the Hong Kong Council of Social Services for the first time, which demonstrated the Company's efforts in giving to the community.

2006–Selected VITA tea and juice products are launched in Mainland China–imported from Hong Kong under the Closer Economic Partnership Arrangement (CEPA).

2007–San Sui [literally "mountain water"] tofu series is launched in Hong Kong.

2008–Acquisition of Unicurd Food in Singapore.

8659. *SoyaScan Notes.* 2011. Updated USDA database on the isoflavone levels in foods, commercial ingredients, soybeans and soyfoods (Overview). April 23. Compiled by William Shurtleff of Soyinfo Center. [1 ref]
• ***Summary:*** The link is now http://www.ars. usda.gov/SP2UserFiles/ Place/12354500/ Data/isoflav/ Isoflav_R2.pdf. "Legumes and legume products" starts on p. 16. Start by going to page 24, which is where the soy section begins. Then you can do a PDF search for fermented soyfoods such as: Tempeh, miso, soy sauce, natto, or Sufu (fermented tofu)–and you will see that they are NOT lower in total (or specific isoflavones) than nonfermented soyfoods such as: Tofu, soymilk, soybeans (immature), soybeans (mature), etc.

8660. Lo, Francis. 2011. Re: History of Flamaglo and Yoso in Canada. Letter to William Shurtleff at Soyinfo Center, April 27. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "My brother Erik and I have been managing Yoso for almost ten years now. We started out our first day of business with three customers in the Kitchener-Waterloo area. Today we have over one thousand retail outlets that support Yoso across Canada. Most important, I believe we have managed to offer great tasting soy products which appealed to customers.

"After ten years of establishing the Canadian market, I believe we are ready to explore the biggest soyfood market in the world–the United States."

"Our production facility is already registered with the FDA, and I have already recruited an agent as a primary broker."

Note: The company's website is www.yoso.ca. The company apparently sells yogurts, sour cream, spreads, and beverages, but this may be only one product–a "gourmet soy spread."

Update: 12 Sept. 2012. On the company's homepage are color photos of four soy products: (1) Yoso Soy Yogurt. (2) Yoso Spreadables (soy spreads). (3) Yoso Sour Creme / Crème sure, (4) Yoso Wave (soy beverage).

The company's name and address is: Flamaglo Foods Limited, 1070 Fountain St. N., Units 1 & 2, Cambridge, Ontario. N3E 1A3 Canada. Tel: (519) 650-0914. Fax: (519) 650 0896. Toll Free: 1 (866) 887-YOSO (9676). Email: francislo@bellnet.ca. Address: Flamaglo Foods Limited, 1070 Fountain St. North, Units 1 and 2, Cambridge, ON N3E 1A3. Phone: 519-650-0914.

8661. Dean Foods Co. 2011. Annual report 2010. Dallas, Texas. 4 + 59 + 59 + 9 p. 28 cm.
• ***Summary:*** All but the first 4 pages of this annual report are Form 10-K. On page 34 is the segment on White-Wave Alpro. Net sales were $1,938 million, up 18.7% over 2009 driven by the Alpro acquisition. Net operating income was $166.2 million, up 8.6% over 2009.

An accompanying "Notice of stockholders meeting" is 95 pages. Address: 2515 McKinney Ave., Suite 1200, Dallas, Texas 75201. Phone: 214-303-3400 www.deanfoods.com.

8662. *Malnutrition Matters Newsletter* (*Ottawa, Canada*). 2011. PedalPro / Thailand. May 5. p. 1.
• ***Summary:*** "The PedalPro is a multi-function work station that is pedal powered. The original concept and the

Canadian prototype were developed as a way to provide the food grinding [when making soymilk] for the non-electric VitaGoat system, while expanding the utility into other applications. Now it is possible to switch over to charging a battery with the on-board generator, pumping water with the water pump or sharpening tools, when not using the system for food grinding. This versatility also allows the PedalPro to be used as a stand-alone system for micro-enterprise and development in areas without reliable electricity. The successful technology transfer to Thailand will now allow the PedalPro to be produced at a reasonable price. Other tech transfers are also in the planning stages." Address: 48 Rivershore Crescent, Ottawa, ON K1J 7Y7, Canada.

8663. *Malnutrition Matters Newsletter* (*Ottawa, Canada*). 2011. Liberia. May 5. p. 1.
• ***Summary:*** "The first two VitaGoats have arrived and will be installed in May, when intensive operational and small business training will also be conducted. MM is working with OIC International on a 5-year project funded by USAID. These VitaGoats, the first of 8, will be operated by multiple groups of entrepreneurial women and youth, thereby creating sustainable new jobs and improving nutrition for the local community. The first five 'Small Farm' SolarFlex food dryers will be installed in November, with 15 more to follow later." Address: 48 Rivershore Crescent, Ottawa, ON K1J 7Y7, Canada.

8664. Davis, John. 2011. Veganism from 1808 [chronology]. *Vegsource.com.* May 25. http://www. vegsource.com/ john-davis/veganism-from-1806.html.
• ***Summary:*** "This is a brief summary of a talk I will be giving at the International Vegan Festival in Malaga, Spain, June 4-12, 2011.

"1806–Dr. William Lambe FRCP, in London, England, changed his diet at the age of 40–and gave us the first known unambiguous statement: 'My reason for objecting to every species of matter to be used as food, except the direct produce of the earth, is founded on the broad ground that no other matter is suited to the organs of man. This applies then with the same force to eggs, milk, cheese, and fish, as to flesh meat.'

"1811–John Frank Newton, a patient of Dr. Lambe, in his book 'Return to Nature' expanded Lambe's medical ideas to include ethical values towards all animals.

"1813–Percy Bysshe Shelley, poet, joined a 'vegan commune' which alternated between Newton family homes in London and Bracknell.

"1830s–Sylvester Graham, in Boston, USA, had been promoting the 'vegetable diet'–generally 'with or without' eggs/dairy. In 1837 he exchanged letters with Dr. Lambe, and his 1839 book clearly claimed that 'without' was more effective for health.

"1830s–Dr John Snow, 'vegan' since reading Newton's book when he was 17. Moved to London in 1838 and eventually achieved fame for discovering the way in which cholera was spread. In 2003 British doctors voted him the greatest physician of all time.

"1838–James Pierrepont Greaves opened 'Alcott House Academy', a school near London run entirely consistent with the ideas proposed by Lambe and Newton. It ran for the next ten years.

"1842, April–the first confirmed use of the word 'vegetarian' in the Alcott House journal. All other early uses were by people close to Alcott House, and all using it for what we now call 'vegan'.

"1842 June–Bronson Alcott, from Boston USA, already veg*n thanks to Sylvester Graham, visited Alcott House, named in honor of him and his earlier school in Boston. In 1843, with new English friends, he ran the short-lived 'Fruitlands' near Harvard, MA–again run on totally ethical 'vegan' principles. "1845-46–Henry David Thoreau lived by Walden Pond, near Concord MA, living solely on plant foods plus some fishing–but wrote about how much he regretted the fish.

"1846–William Horsell moved the hydrotherapy institute from Alcott House to Northwood Villa, in Ramsgate, Kent, England. This again followed Dr. Lambe's principles of plant food plus purified water.

"1847–The Vegetarian Society was founded at a meeting in Ramsgate, launched jointly by Alcott House and the (ovo-lacto) Bible Christian Church from Salford near Manchester. The compromise was to set the objective as merely 'abstaining from the flesh of animals'–and the confusion over everything else has continued ever since

"1874–Dr. Russell Trall had been running a hydrotherapy institute in New York City since 1850. This changed to exclusively plant food plus water in 1862–and in 1874 produced the first known 'vegan' cookbook.

"1887–John Harvey Kellogg privately removed eggs and dairy from his diet, though his books and sanitarium, in Battle Creek, Michigan, continued to use them. 40 years later he returned to using yogurt–but then discovered soy milk.

"1910–Rupert Wheldon in England, published 'No Animal Food', the first British 'vegan' cookbook. This was reprinted by Dr. Elmer Lee in New York. A 1910 article about Lee in the New York Times included the first known use of the phrase 'plant foods'. "1909-14–The *Vegetarian Messenger,* journal of The Vegetarian Society, carried much discussion about the use of eggs/dairy. There seemed to be a possibility of significant change, but all momentum was destroyed by the First World War.

"1931–Mahatma Gandhi spoke at a meeting of the London Vegetarian Society, making it clear that he objected to the use of milk and milk products. Such high profile support must have emboldened the minority who called themselves 'non-dairy vegetarians'.

"1944–Donald Watson and friends coined the word

'vegan' and founded The Vegan Society–the first issue of their journal [*Vegan News,* Nov.] was subtitled 'the journal of the non-dairy vegetarians'–and made it clear that they had not wanted to separate from The Vegetarian Society, they just wanted a distinct section within it. Most retained their memberships of both societies, as many do today.

"1947–Watson was a speaker at the IVU World Veg Congress–The Vegan Society had joined IVU soon after being founded, and has been a member ever since.

"1960–The American Vegan Society was founded, joining IVU from the outset. This included a smaller group started in California as far back as 1948.

"1957–The first Indian Vegan Society joined IVU. We don't know how long it lasted, but the new society is also prominent member.

"1960-1990s–Many new vegan organizations were formed, and the word gradually spread.

"1995–Records of printed media show a significant increase in the use of the word 'vegan'–this appears to have come from the rapid expansion of vegan websites, leading to a market for vegan books, especially recipes.

"1997–The IVU website started a recipe collection–agreed to be entirely vegan from the outset. We now have over 3,000 in English with more in other languages.

"1998–IVU agreed that all food at IVU Congresses would in future be completely vegan.

21st Century–Most veg organizations around the world now promote veganism as the ideal, regardless of whether they are called 'vegetarian' or 'vegan'.

"By 2009 more books had 'vegan' in the title than 'vegetarian.'

"2009/2010 surveys in the USA showed that 66% of vegetarians exclude eggs and dairy.

"By 2011 there were as many Google searches for 'vegan' as for 'vegetarian.'

"22 organizations with 'vegan' in their title are now members of IVU

"Will all vegetarians eventually be vegan? We have no way of knowing, but the continuing trend seems inevitable.

"For more details of everything above see: www.ivu.org/history/ vegan.html." Address: IVU webmaster.

8665. Re: Names of soyfoods around the world: Korean. 2011. Form filled out and returned to William Shurtleff at Soyfoods Center, May. 1 p. Handwritten. [Eng; kor]
• ***Summary:*** Soybean: me ju kong. Soymilk: duyu, du-u, or du yu. Tofu: dubu or du bu. Soymilk curds (uncurded / uncurdled tofu): sundubu.

8666. *Nichi Bei Weekly.* 2011. Northern California Soy & Tofu Festival: Come discover the joy of soy. June 2-8. p. 5-7. Cover story.
• ***Summary:*** This issue announces the first Northern California Soy & Tofu Festival to be held on June 11, in San Francisco Japantown, Peace Plaza, 11 am–4 pm. It is sponsored by the Nichi Bei Foundation and many large corporate sponsors. Gold sponsor: Pacific Gas and Electric Company. Silver sponsors: Kikkoman, Union Bank.

The main article on page 6 is titled "Soy to the world: Small businesses explore varied tastes, textures," by Akiko Minaga (Nichi Bei Weekly Contributor). It discusses Megumi Natto, Hodo Soy Beanery, San Jose Tofu, and Sacramento Tofu.

A second article by her (on the same page) titled "Soy, the magic bean: The many benefits of soy" discusses tofu, soymilk, beauty treatments, soy clothing, soy ink, etc.

A sidebar is titled "Tofu: A brief 2,000 year history," by William Shurtleff of Soyinfo Center.

Photos show: (1) Chester Nozaki and his wife, Amy, owners of San Jose Tofu. (2) Alvin and Dorothy Kunishi, owners of Sacramento Tofu. (3) Minh Tsai, owner of Hodo Soy Beanery. Address: P.O. Box 15693, San Francisco, California 94115. Phone: (415) 673-1009.

8667. *SoyaScan Notes.* 2011. Chronology of early U.S. commercial soymilk products with the word "soy milk" or "soymilk" in the product name. June 10. Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** As of today, our SoyaScan database contains 434 records for commercial soymilk products launched in the USA from 1917 to the present. Most have fanciful brand names such as VitaSoy, Soy Lac, Soya-Lac, Kreme-O-Soy, etc.

Here are the early commercial products with soymilk or soy milk in the product name as it appears on the label. Most were sold in interstate commerce. Date, product name, company name, location, number of clear documents describing product.

1929–La Sierra Soy Milk, La Sierra Industries, Arlington, California, 3 documents.

1931–Madison Soy Milk, Madison Foods, Madison, Tennessee, 5 documents.

1934–Loma Linda Soy Milk (canned), Loma Linda, California, 3 documents.

1936–Soy Milk (Canned), Battle Creek Food Co., Battle Creek, Michigan, 4 documents.

1936–Soy Milk, Soybean Health Products Co., Oakland, California, 1 document.

1937–Radcliffe's Soya Milk, Radcliffe Soya Products, San Francisco, Calif., 3 documents,... etc.

1975–Soymilk, Welcome Home Bakery and Tofu Shop, Corvallis, Oregon, 2 documents.

1975–Soymilk, American Food Co., Alhambra, California, 2 documents. incl. label.

1976–Carob Soymilk, Farm Food Co., San Rafael, Calif., 1 document (label).

1977–Laughing Grasshopper Soymilk, Laughing Grasshopper Tofu Shop, Millers Falls, Mass., 2 documents

including poster.

1977–Soymilk [Honey & Vanilla, or Plain], The Soy Plant, Ann Arbor, Michigan, 4 documents including label.

1977–Fresh Joy o' Soy Soymilk, The Tofu Shop, Telluride, Colorado, 2 documents including label.

1978–Island Spring Plain Soymilk, Island Spring, Inc., Vashon, Washington, 3 documents incl. label, etc.

8668. *Nichi Bei Weekly.* 2011. For the joy of soy: Highlights from the festival. June 23-29. p. 6-7. Cover story.
• ***Summary:*** The title above appears on the cover. The title on page 6 is "Northern California Soy & Tofu Festival." It contains: (1) Twenty color photos from the festival–with a caption for each. (2) "A culinary tour of the Soy and Tofu Festival," by Pauline Fujita. (3) Winning recipes. (4) List of all sponsors with thanks. (5) Organizing committee of the festival. (5) Special thanks to raffle prize donors. Address: P.O. Box 15693, San Francisco, California 94115. Phone: (415) 673-1009.

8669. Shurtleff, William. 2011. The word "vegetal / vegetale" (Editorial). *SoyaScan Notes.* July 2.
• ***Summary:*** How would you translate the French: "Produit 100% végétal."

Or this from a Spanish cup of soy yogurt: "100% vegetal."

This excellent word, "vegetal," is used frequently nowadays in French, Spanish, Italian, and Portuguese, plus "pflanzliches" in German.

Yet we have no corresponding word in use today in English. We might say: "100% vegan product." or "100% plant-based product."

However the word "vegetal" used to be used in English!

1896 Sept.–Dr. John Harvey Kellogg wrote in the journal *Modern Medicine and Bacteriological Review:* "In the experiments which we have made with nut milk we find it has a delicate, delightful flavor, with a suggestion of its nutty origin, but resembles cow's milk very closely indeed... Added to cow's milk in proper proportion, lac vegetal, or nut cream, prevents the formation of hard curds in the stomach, as when the cow's milk is used alone. This renders it an exceedingly valuable food for infants–vastly superior to any infant's food which has been devised."

"Nuts are unquestionably the vegetable analogue of meat and other animal foods.

1896–In a cookbook by Dr. Kellogg's wife: Sanitas Food Co. in Battle Creek, Michigan, has an ad for "Lac Vegetal, or Nut Cream: Prepared from the choicest nuts."

1927–*The Future Food Supply of the United States,* by Alonzo E. Taylor. "Vegetal oils may be expected to continue a prominent component of the diet... Americans taste seems to favor bland vegetal cooking oils over animal fats, as illustrated in the preference for vegetal lard substitutes over lard."

And many more...

Merriam-Webster's Collegiate Dictionary (1998) defines vegetal (derived from the Middle Latin *vegetare,* meaning to grow), a word first used in English in the 15th century, to mean: "1: vegetable. 2. Vegetative..."

Do you think we need to reintroduce this word into English?

Or do we presently have equally good alternatives? Address: Founder and director, Soyinfo Center, Lafayette, California. Phone: 925-283-2991.

8670. Weng, Jun. 2011. Re: Brief history of Shanghai Wangxin Bean Products Equipment Co., Ltd. Letter (e-mail) to William Shurtleff at Soyinfo Center, Aug. 5. 1 p.
• ***Summary:*** Our company was first founded in 1994 in Pudong New Area, a district of Shanghai and a New Open Economic Development Zone, which has emerged as China's financial and commercial hub. Our company's original name was Shanghai Wangde Food Packing Machine Factory; it specialized in manufacturing food packing machine. However in the year 2000 our company changed its name to Shanghai Wangxin Bean Products Equipment Co., Ltd.; now it mainly produces a series of mechanical and electrical equipment for making [soy] bean products. It is a starting unit of all-China federation of industry and commerce, an executive member of China Bean Products Council of China food industry council, a permanent member of Shanghai Bean Products Council and passed ISO9001: 2008 in 2009, meanwhile we got the honors of "Shanghai High Technology Company," "National Bean Action Plan model unit."

In total, we have gotten "76 patented equipments until 2011. Our company has more than 200 employees, including 12 engineers, 5 senior engineers and 42 machinists. We mainly produce series of bean products equipments, assembly lines to produce lactone bean curd, soft bean curd, firm tofu, soybean milk, bean curd sheets (thousand sheets), dried bean curd, soft bean curd and so on. On the basis of the management strategy of "Quality, Service, Management, Credibility," and along with the expert devise, high quality products and perfect service after sale, we have enjoyed a high reputation at home and abroad. Our equipments have been sold well all over the China and exported to America, Canada, Japan, Vietnam and other countries.

Mr. Weng sends digital color photos of the following machines stainless steel made by his company: (1) Machine for vacuuming beans (to move 1,000 to 2,000 dried beans from one place to another). (2) Soybean fixed amount distributor (rolls on wheels on a track, for example, over grinder hoppers or cookers). (3) Grinder, 5.5 kw, output: 300 kg soybean per hour. (4) Grinder, 1.5 kw, output: 400 kg soybean per hour. (5) Grinder, 15 kw, output: 600 kg soybean per hour. (6) Centrifugal machine. Power: 5.5 kw. Output: 600 kg soybean/hour. (7) Automatic continuous soymilk cooking machine with 8 pots. Weight: 1,000 kg. Output: 7

tons of boiled soymilk per hour. (8) Automatic intelligent continuous soymilk cooking machine. Weight: 670 kg. Output: 5 to 6 tons boiled soymilk/hour. (9) Boiled soybean milk griddle. Output: 500 kg soymilk per hour. Address: Foreign Trade Manager, No. 4633 Sansan Road, Shuyuan Town, PuDong New District, Shanghai, China.

8671. Chen, Yong. 2011. Re: Was soymilk ever fed to infants or recently-weaned children in China? Letter (e-mail) to William Shurtleff at Soyinfo Center, Aug. 29. 1 p.
• ***Summary:*** Shurtleff wrote him this question: "So far as you know, in any part of China and at any period in Chinese history: Was soymilk ever fed to infants or to recently-weaned children?"

He replied: "I do not have the precise answer to your question. But it is probably safe to assume the poor families have fed it to the infants when mothers do not produce enough milk or have to feed the kids of rich families.

"There is no absolute taboo regarding feeding it to infants. But there is an increasingly popular view in China now that it is not best to use it for children under the age of 2." Address: Univ. of California at Irvine, California.

8672. Kikkoman Corporation. 2011. Annual report 2011. Year ended March 31, 2011. 250 Noda, Noda-shi, Chiba 278-8601, Japan. 47 p. 28 cm. [Eng]
• ***Summary:*** Net sales in yen decreased by 0.78% to ¥283,463 million. Net income in yen decreased by 9.68% to ¥7,770 million.

Under "Major group companies–Kikkoman Corporation, Japan" (p. 44) is listed: Kikkoman Soyfoods Company, 2-1-1 Irifune, Chuo-ku, Tokyo 104-8553, Japan. Phone: +81 (3) 3206-0778. This company was formerly Kibun Foods.

A photo (p. 2) shows Yuzaburo Mogi (Honorary Chief Executive Officer and Chairman of the Board of Directors) and Mitsuo Someya (President and CEO).

The Great East Japan Earthquake struck Japan on 11 March 2011. Kikkoman was affected, and "booked an extraordinary loss of ¥2,352 million due mainly to the impact of the Nippon Del Monte Fukushima plant, which will be closed in September 2011, as was previously scheduled." Address: Noda, Japan.

8673. Vitasoy International Holdings Ltd. 2011. Annual report 2010/11. Investing for growth. New Territories, Hong Kong. 208 p. July. 30 cm. [Eng; Chi]
• ***Summary:*** All values are in million Hong Kong dollars. The fiscal year ends on 31 March 2010. A graph (p. 4) shows that turnover (sales) has risen steadily each year from 2,133 in 2007 to 3,329 in 2011 (up 11% from 2010).

Gross profit has risen steadily each year from 1,003 in 2007 to 1,651 in 2011 (up 10% from 2010).

EBITDA (Earnings before minority interest, interest expense, income taxes, depreciation, and amortization) has also risen steadily each year from 334 in 2007 to 537 in 2011 (up 11% from 2010). Address: No. 1, Kin Wong Street, Tuen Mun, New Territories, Hong Kong. Phone: 466 0333.

8674. Haren, Chuck. 2011. Soy nutrition in El Salvador. *Plenty Bulletin* (*Summertown, Tennessee*) 27(2):4. Fall.
• ***Summary:*** About Plenty's *Proyecto de Soya Nacional* (PSN) in El Salvador. "PSN provides nutritious mid-day meals for about 125 people a day in San Salvador and sells soymilk along with other fresh soy food products to the public."

"In May of this year three Plenty representatives met with representatives in the Schools of Nutrition and Agronomy at the University of El Salvador, and the women at PSN... With the help of Amado Del Valle Montufar [of Guatemala], we were able to give the university and community representatives three varieties of non-GMO soybeans for trial plantings."

8675. Matthews, V.L.; Knutse, S.F.; Beeson, W.L.; Fraser, G.E. 2011. Soy milk and dairy consumption is independently associated with ultrasound attenuation of the heel bone among postmenopausal women: the Adventist Health Study-2. *Nutrition Research* 31(10):766-75. Oct. [28 ref]*
• ***Summary:*** Many people (such as vegans) who do not consume dairy products, use soy milk instead. Fortified soymilk provides calcium protein, and vitamin D–nutrients needed for healthy bones. Moreover, the isoflavones found in soy may offer some protection from osteoporosis. The researchers studied 377 post-menopausal women, who were asked about their diet; ultrasound measurements of bone health were made at an interval of two years. Compared with women who did not drink soy milk, women drinking soy milk once a day or more (1.3 cups of soymilk) had 56% lower odds of osteoporosis. (We do not know if the soy milk was fortified). Likewise, women who used dairy products at least once a day had an almost identical reduction of risk of osteoporosis. The results of this small study suggest that regular use of soymilk can reduce risk of osteoporosis in women. Address: Dep. of Epidemiology and Biostatistics, School of Public Health, Loma Linda Univ., Loma Linda, California.

8676. Bramblett, Billy. 2011. Re: Work with Seth Tibbott of Turtle Island. Wildwood tofu and soymilk. Letter (e-mail) to William Shurtleff at Soyinfo Center, Nov. 22. 1 p.
• ***Summary:*** Shurtleff suggests that Billy create a version of his song "Tofunction" for "Tofurky." He asks if Billy knows Seth Tibbott, founder and owner of Turtle Island Foods, Inc.

Reply: "Seth is one of my best friends. I first met him back in the early 1990's when we shared a booth at Natural Products Expo West the 1st time Wildwood exhibited there.

"After I departed Wildwood, I worked as a consultant for Seth and helped conceptualize and develop a few

products (marinated tempeh strips). I worked at the Turtle Island booth at both Expo West and Expo East for several years, where we won Best New Product of Show three of five years at the West show.

"And, I have also been 'grillmeister' at the Oregon Country Fair's Soyworld Booth (which Seth started 25 years ago) for the past five years.

"Anyway, I will consider a Tofurky song, by the way, do you know why the Tofurky crossed the road? "To prove he wasn't Chicken!! ha ha."

"Yes, brother Seth is an amazing dude, and I visit him in Trout Lake every year or so. We also make sure to play golf, along with his brother, Bob, on the Monday after Expo West each year.

"On the old label issue... You are probably talking about the one that says, "UFO TOFU," yes? Boy, I would love to have a mint condition copy of that as well. As you may remember I am a palindrome freak and named our tofu "UFO TOFU." (and our soymilk was called "YO SOY").

"I still have a Michael Pierce designed t-shirt somewhere that has a whole depiction of our original tofu set up, including the grinder, cauldron, paddle, press and curding tank along with cubes of tofu floating about, and says "UFOTOFU" with the old Wildwood logo at the bottom. I will make a copy and send it to you unless you already have one."

"Its great trading soy stories with you.–B-Love." Address: Marin County, California.

8677. *SoyaScan Notes.* 2011. What is ENSA–European Natural Soyfood Association? (Overview). Nov. 25. www.ensa-eu.org. Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** ENSA, established in Jan. 2003, consists of companies of all sizes involved in the production of natural soyfoods. This means they make soyfoods from whole soybeans that have not been genetically engineered. As of Nov. 2011 the members (listed alphabetically) are: Alpro, Belgium. Sojasun, France. Nutrition et Soja, France. Valsoia, Italy. Liquats Vegetals, Spain. Hain Europe, Belgium. Tofutown, Germany. Mona Naturprodukte, Austria. Raisio, Finland. Grupo Leche Pascual, Spain. Life Food GmbH, Germany.

8678. *Malnutrition Matters Newsletter* (*Ottawa, Canada*). 2011. Five SoyCows for Myanmar (Burma). Nov. p. 1.
• ***Summary:*** "Thanks to initiatives by the Canadian NGO, 'Hands of Compassion,' three SoyCows are already in Myanmar and two more are arriving in December. One is already providing 500 school children with a daily cup of soymilk, a second is feeding 200 children at a school for the blind, and a third one being installed is sponsored by the Australian NGO 'Graceworks.' This expands on the past five SoyCows and VitaGoats, which Hands of Compassion has installed at Karen refugee camps in Thailand and at humanitarian projects in India. They have also developed in-house installation and training capability.

"A photo shows a blind child receiving the daily soymilk serving in Yangon." Address: 48 Rivershore Crescent, Ottawa, ON K1J 7Y7, Canada.

8679. *Malnutrition Matters Newsletter* (*Ottawa, Canada*). 2011. PedalPro ready for fabrication. Nov. p. 1.
• ***Summary:*** "This workstation allows multiple pedal-driven functions: Food grinding; electrical generation (for batteries, electric lights, charging cell phones etc.), water pumping (for roof top tanks and garden irrigation etc.) plus knife and tool sharpening. It serves as a stand-alone unit for micro-enterprise or social programs, but also is now the new standard food grinder for all VitaGoat systems. This expands the capability of a VitaGoat beyond soymilk and other food production and allows multiple uses with additional revenue and job creation, especially where there is no reliable electricity. Prices will range from $700 to $1,100–depending on options and quantities.

"A color photo shows the PedalPro system with food grinder, pump and generator on top. Flywheel at bottom includes the sharpener." Address: 48 Rivershore Crescent, Ottawa, ON K1J 7Y7, Canada.

8680. Nordquist, Ted. 2011. Re: Trip to Mchinji, Malawi, to learn and teach about making tofu and soymilk. Letter (e-mail) to William Shurtleff at Soyinfo Center, Dec. 7. 1 p.
• ***Summary:*** "From November 12-26 Anne-Marie [Ted's wife] and I volunteered to visit a 'soy plant' in Mchinji, Malawi that used a soy cow to produce soymilk. We instructed them in the proper way of cleaning and soaking the soybeans, the time to cook, sterilizing the bottles and hot filling to extend the shelf life of the soymilk (which was going bad the day after production). We also showed them how to make tofu, mix the tofu with the okara, vegetables and spices and then deep fry 'tofu balls' in cooking oil for sale the same day.

"Unfortunately I had only 500 grams of calcium sulfate with me from California and this was used in the demonstrations. Now we are looking for a good source of calcium sulfate and or magnesium chloride in Africa, hopefully South Africa that they can buy. Even if they make one batch of tofu per day they will only need about 12 to 15 kg of coagulant per year. So one 25 kg bag will last them a long time.

If you have a contact for buying calcium sulfate or magnesium chloride in Africa, please send this information to:

Lauren Day, Southern Africa Program Coordinator, Farmer to Farmer Program.

8681. Nutrition & Nature. 2011. Faire le choix du végétal. Pour chacun, pour demain [Choose plant-based nutrition. For each one, for tomorrow]. Revel, France. 16 p. Illust. 18 x 18 cm. [Fre]

• ***Summary:*** One the cover is a lovely young lady, looking upwards, with her eyes closed. Behind here are rows of trees growing in green grass. In 2008 Soy acquired Céréalpes [Cerealpes]. In 2011 they both became Nutrition & Nature. Websites: www.soy.fr. www.cerealpes.fr. Contents: More of plant-based, more of life. Eat better and live better. Good for people, good for the planet. A table shows: To produce 1 kg of protein. (1) Tofu compared to beef. 5 times less water. 15 times less agricultural surface. 10 times less carbon dioxide emissions. (2) Soymilk compared with cow's milk: 3 times less water, 7 times less agricultural surface, 5 times less carbon dioxide emissions. Source: ENSA [European Natural Soyfoods Association].

To grow soybeans in southwest France is not the end of the world. Our "Tofu in Africa" project. With Céréalpes, organic takes the accent of Provence (accent provençal). A path without a trace toward quality. To be engaged for the environment on all levels. Address: Chemin de l'Horte, 31250 Revel (near Toulouse), France. Phone: 05 62 18 72 78. E-mail: info@soy.fr.

8682. Giblin, Karen; Seibel, Mache. 2011. Eat to defeat menopause: The essential nutrition guide for a healthy midlife–with more than 130 recipes. Cambridge, Massachusetts: Da Capo Press. xviii + 237 p. Foreword by Dean Ornish, M.D. Illust. Index. 23 cm. [26 ref]

• ***Summary:*** An excellent book for the lay reader by a woman and a man with top credentials in the field. Includes 130 recipes. On page 3 is an "Ode to Soy and Hot Flashes," by Mache Seibel, M.D.; it says that soyfoods reduce hot flashes and allow women to sleep at night.

Chapter 4 (p. 23-28) is "Understanding soy foods: The perfect food for menopause." Its contents: Introduction. Soybeans and foods made directly from them (gives a basic description of each): Soybeans (incl. edamame, dry soybeans, canned soybeans), soy flour, soy powder (very similar to soy flour except the soybeans are cooked before they are ground), soy protein isolates, textured vegetable protein (TVP), soy grits, soy sprouts. Soy milk and products made from it: Soy milk, okara, yuba, soy cheese. soy yogurt, tofu. Fermented forms of soy: Tempeh, natto, miso, soy sauce.

Most of these soyfoods are used in the recipes in this book. Tofu is used the most frequently.

Dr. Ornish's remarkable Foreword begins: "Many people tend to think of breakthroughs in medicine as a new drug, laser, or high-tech surgical procedure. They often have a hard time believing that the simple choices we make in our lifestyle–what we eat, how we respond to stress, whether or not we smoke, how much exercise we get, and the quality of our relationships and social support–can be as powerful as drugs and surgery, but they often are. Often, even better.

"For more than thirty years, I have directed a series of studies showing what a powerful difference changes in diet and lifestyle can make. My colleagues and I at the nonprofit Preventive Medicine Research Institute showed, for the first time, that many diseases, including heart disease, prostate cancer, diabetes, and hypertension, are often reversible, and thus largely preventable.

"We used high-tech, state-of-the-art measures to prove the power of simple, low-tech, and low-cost interventions. We showed that integrative medicine approaches may stop or even reverse the progression of coronary heart disease, diabetes, hypertension, obesity, hypercholesterolemia, and other chronic conditions. We also published the first randomized controlled trial showing that these lifestyle changes may slow, stop, or even reverse the progression of prostate cancer, and may affect breast cancer as well.

"Our latest research shows that changing lifestyle changes our genes in only three months–turning on hundreds of genes that prevent disease and turning off genes and oncogenes associated with breast cancer and prostate cancer, as well as genes that cause heart disease, oxidative stress, and inflammation. We also found that these lifestyle changes increase telomerase, the enzyme that lengthens telomeres, the ends of our chromosomes that control how long we live. Even drugs have not been shown to do this." Address: 1. President and founder of the Red Hot Mamas, Bridgewater, New Jersey; 2. M.D., Prof. of Obstetrics and Gynecology and Director of the Complicated Menopause Program, Univ. of Massachusetts Medical School. He lives in Boston, MA.

8683. Hever, Julieanna. 2011. The complete idiot's guide to plant-based nutrition. New York, NY: Alpha. A member of Penguin Group (USA) Inc. xiv + 338 p. Index. 24 cm. [35 ref]

• ***Summary:*** This is a book about "eating a whole-food, plant-based diet." This diet is described and compared with a vegan diet, vegetarian diet, and plant-based diet (p. 4-5). The author concludes this section with this interesting observation: "When you think about it, although veganism and vegetarianism are plant-based diets for the most part, they're defined on what they *exclude* from your diet. Part of what makes the plant-based diet unique is that it defines the composition of what *is* included instead of what *isn't.*"

The author discusses soy in Chapter 7, "Controversy clarified" in several sections (p. 93-95): "Soy confusing," "Is soy safe?" and "Are genetically modified organisms okay?" She lists the various soyfoods and then gives the following advice: "Soy can be part of a plant-based diet. For safe soy consumption:

"1. Consume soy from whole-food or minimally processed sources–soybeans, tofu, tempeh, miso, soybean sprouts, and soy milk.

"2. Use soy in moderation–less than 3 servings per day, where a serving is 1 cup soy milk or ½ cup soybeans, tofu, or tempeh.

"3. Avoid processed soy products, like soy protein isolates (found in protein drinks and bars, meat analogues, cereals, meat replacement products, and other processed items).

"Consume only organic" soy products or those that have not been genetically engineered.

We agree.

Plenty of basic information about soyfoods is given in Chapter 18, "The plant-based kitchen"–especially in the section "Plant-based substitutions" (p. 226-32) which includes subsections about: "Egg replacements," "plant milks," "Mock meats" (many are highly processed), "Tofu, tempeh, seitan" (good, nutritionally rich, alternatives), "Un-cheeses" (most are highly processed), miso (a versatile source of meaty flavors, but use in moderation since it has a high salt content).

The word "tofu" appears on 33 pages in this book, "miso" on 20 pages, "soybeans" on 19 pages, "tempeh" on 18 pages, "soy milk" on 11 pages, "edamame" on 5 pages. "soybean sprouts" on 1 page.

Examples of tofu recipes: Plant-based sour cream (with "14 oz. silken tofu." p. 241). Veggie tofu scramble (with "1 {12-oz} pkg. firm or extra-firm tofu, drained and crumbled," p. 248). Marinara corn cakes (with "3 oz. extra-firm tofu, thinly sliced," p. 275). Sweet cream dip (p. 280).

The book contains a good Glossary (p. 291-301) which includes definitions of miso, phytoestrogens, plant-based milks, prebiotics, protein combining, tamari, tempeh, tofu, umami, vegan, vegetarians, whole grains, whole-food, plant-based diet. Address: M.S., R.D., C.P.T. [Certified Personal Trainer], Los Angeles, California.

8684. Jamieson, Alexandra. 2011. Vegan cooking for dummies. Hoboken, New Jersey: Wiley Publishing, Inc. xx + 364 p. Illust. (some color). Index. 24 cm.
• ***Summary:*** A fun, well written, and very informative book. Contains more than 160 healthy vegan recipes. The index contains 22 entries for tofu, 14 for tempeh, 11 for soy foods, 5 for seitan, 3 for edamame, 2 each for milk replacements (soy milk), miso, soy sauce, soy yogurt, and 1 for TVP (textured vegetable protein).

Also mentions macrobiotics, mochi, raw foods diet, sea vegetables, sesame oil, sesame seeds, etc. Address: Professionally trained vegan chef and board certified holistic health counselor (CHHC), and member American Assoc. of Drugless Practitioners (AADP), New York City.

8685. Mangels, Reed; Messina, Virginia; Messina, Mark. 2011. The dietitian's guide to vegetarian diets: Issues and applications. 3rd ed. Sudbury, Massachusetts: Jones & Bartlett Learning. xi + 596 p. Illust. Index. 23 cm. 1st ed. 1996. 2nd ed. 2004. [342 soy ref]
• ***Summary:*** Chapter 9, "Soyfoods" (p. 249-89) is excellent. Its contents: Introduction. Isoflavones: Isoflavone content of soyfoods, isoflavone absorption and metabolism. physiologic properties of isoflavones. Asian soy intake. Nutritional composition of soybeans and soyfoods: Protein, fat, carbohydrate, vitamins, minerals (iron, zinc, calcium). Chronic disease prevention and treatment: Coronary heart disease (cholesterol reduction, lipid-independent effects), cancer (breast cancer, prostate cancer), osteoporosis, alleviation of menopausal symptoms, renal function. Controversies: Soy infant formula, cognitive function, thyroid function, fertility and feminization, breast cancer patients, allergy. Intake recommendations.

Table 9-1 (p. 251-52), "Chemical and common names and molecular weights (MW) of the 12 isoflavone isomers found in soybeans" includes the following foods and USDA IDN [identification number]: Tofu: Firm, firm #2, regular, silken firm, extra firm, extra firm #2. Natto. Soymilk, Miso, Tempeh. Soybeans, raw, US food grade. Soybeans, cooked. Soybeans, raw, Japan. Soybeans, raw, Korea. Soybeans, raw, Taiwan. Soybeans, green, cooked. Soybean curd, fermented. Soymilk skin (foo jook / yuba, cooked). Soymilk skin (foo jook / yuba, raw). Isolated soy protein. Soy protein concentrate: Water washed, alcohol washed. Soyflour: Full fat, defatted.

The Glossary of vegetarian foods (p. 447+) includes: Soyfoods: Edamame, soybeans, soy flour, soymilk, soy nuts, tempeh, textured vegetable protein (TVP, a brand name), tofu. Meat analogs: Commercial meat substitutes, seitan. Milks and dairy analogs: Nondairy cheese, nondairy frozen desserts, nondairy milks, sour cream substitute, yogurt. Address: 1. PhD, RD, LDN, The Vegetarian Resource Group, Maryland; Univ. of Massachusetts, Amherst, Mass.; 2-3. Nutrition Matters, Port Townsend, Washington; Loma Linda University, Loma Linda, California.

8686. Norris, Jack; Messina, Virginia. 2011. Vegan for life: everything you need to know to be healthy and fit on a plant-based diet. Cambridge, Massachusetts: Da Capo Press. xix + 283 p. 23 cm. Index. [219 ref]

• ***Summary:*** Perhaps the single best book on the subject. Very well written by two experts in the field, concise, and carefully documented.

"The practical companion to Eating Animals: a definitive nutrition guide for vegans, including everything from guidelines for making a healthy transition to a vegan diet to kickstart plans, nutrient-dense menus and essential information hot-button issues like soy, protein, and B vitamins"- Provided by publisher.

Contents: Introduction: Going vegan for life. 1. Understanding vegan nutrient needs. 2. Protein from plants. 3. Vitamin B-12: The gorilla in the room. 4. Calcium, vitamin D, and bone health. 5. Fats: Making the best choices. 6. Iron, zinc, iodine, and vitamin A: Maximizing vegan sources. 7. The vegan food guide. 8. Making the transition to a vegan diet. 9. A healthy start: Vegan diets in pregnancy and breast-feeding. 10. Raising vegan children and teens. 11. Vegan diets for people over fifty. 12. Plant food advantages: Health benefits of a vegan diet. 13. Managing weight, heart disease, and diabetes. 14. Sports nutrition. 15. Is it safe to eat soy?: Introduction, soy nutrition, soy isoflavones, soy and health (heart disease, soy and bone health, hot flashes, breast cancer, prostate cancer, cognitive function, thyroid function, reproductive health and feminization), how much and what kind of soy to eat. Table: Isoflavone, protein, and calorie content of soyfoods. 26. Why vegan? Vegan resources. A quick guide to cooking grains, beans, and vegetables. Metric conversion chart. Acknowledgments.

In Chapter 8, "Making the transition to a vegan diet," a section titled "Soyfoods primer" has the following contents: Introduction, soybeans, edamame, soynuts, soymilk, tofu, okara. Fermented soyfoods: Tempeh, miso, natto. Western soyfoods: Textured vegetable protein (TVP (R), made from defatted soy flour), isolated soy protein.

Concerning soyfoods throughout the book: The word tofu is mentioned on 52 pages in this book, soymilk on 47 pages, soyfoods on 45 pages, tempeh on 33 pages, soybeans on 25 pages, isoflavones on 11 pages, miso, soynuts, and soy sauce on 10 pages each, soy flour and textured vegetable protein on 7 pages each, isolated soy protein on 4 pages, edamame, natto and TVP on 3 pages each, okara on 2 pages, and soy protein concentrate on 1 page. Address: 1. RD, cofounder and president, Vegan Outreach, San Francisco Bay Area, California; 2. MPH, RD, Port Townsend, Washington.

8687. Vos, Heidemarie. 2011. Passions of a foodie: An international kitchen companion, A to Z. Durham, Connecticut: Eloquent Books. An imprint of Strategic Book Group. 598 p. 26 cm.

• ***Summary:*** Best-selling author Heidemarie Vos recounts a fascinating story and her journey of putting together the world's first cross-referenced book regarding food-using more than five languages. This cookbook [which contains no recipes] will become an invaluable resource for your kitchen (from the publisher).

The Introduction states: "There are 7922 entries, 300,017 words... based on my own travels to 6 continents and over 40 countries." Note: This is somewhere between a dictionary (in 5+ languages) or brief encyclopedia of food names. It immediately sets the language and cultural context for each word, and ends with broader or narrower terms. For example: "Aburage: Japanese cooking = A fried bean curd... Also see Bean Curd." It contains more than its share of errors and outdated terminology and spellings. It is a "print on demand" book.

It includes: Aburage. Adzuki beans [sic], Agé. Aji Nomoto [sic], see monosodium glutamate. Aka miso–red bean paste. See Miso. Almond milk. Almond oil. Arachide / Arachis. See Peanut. Arachide oil. See Peanut oil. Bean cake, fermented: Chinese cooking, "fu yu" [fermented tofu]. Bean curd, pickled: Chinese cooking. [What is it?]. Bean curd cheese, red: Chinese cooking, "nam yu" or "nan yu" [red fermented tofu]. Bean curd: Oriental cooking. Known as "tofu" in Japanese or "dow fu" in Chinese. Pressed bean curd is "dow fu kon" [doufu-gan, pressed tofu].

"Bean curd, dried [yuba]: Chinese cooking = Known as 'tiem jook' [sweet yuba] / 'fu jook pei', other dialects are 't'ien ch'u' and 'fu pi chi'. It is soybean milk residue, which comes in a thin rectangular sheet or is curled into round sticks. They are usually tan- or cream-coloured with a shiny, glossy smooth texture."

Bean paste, red: Chinese cooking. "Made from soybeans and sugar mashed together then fried and dried out until it resembles sand." Used to fill Chinese moon cakes. Bean sauce, Chinese: Chinese and Asian cookery. Many types including "min see jiong" or "do bahn jiang." Incl. "Black bean sauce." Beans, black: Chinese cooking. "A pulse [sic] known as 'wu dow' / 'wu do' [Black soybeans].

"Beans, black salted fermented: Chinese cooking = Known as 'dow si / dou shih,' used as a vegetable or spice. Known as 'wu dow' dried and salted. They are dull, wrinkled, moist and tender and have an appetising fragrance, yet are pungent with a tangy salty flavor. Used as a flavor enhancer in dark sauces." Keep covered so they do not dry out... "Must be rinsed prior to use to avoid over-salting. Store in a closed jar in the refrigerator after opening."

Bean sprouts: Asian cooking [small green are mung bean sprouts, large yellow soybean sprouts]. Benne seeds: Sesame seeds are used to make sesame oil and tahini (sesame paste). Black beans, Chinese. Also known as 'salted black beans' or 'fermented black beans' and as 'dow si' (Chinese). China beans: See Soya / soy bean. Earth nut: See Peanut. Edamame: Japanese cooking. "Fresh soybean in or out of the

pod." Firm tofu. Fried tofu puffs. Ground nut: See peanut. Hard tofu. Hydrogenated fats. See fats. Miso. Naahm yu: Chinese term. "A cheesy-looking bright red bean curd sauce" [Red fermented tofu]. Nam yu / Nan yu: See Bean curd cheese, red. Shoyu: Japanese cooking. Japanese soy sauce. Soy bean / Soya bean. *Glycine soja,* also known as "'China beans,' 'Butter Beans' and 'Haricot de Java' (French)." Soy bean jam / condiment. See Main see. Silken tofu. Silken firm tofu. Soya oil. Soya sauce. Soy sauce. Tamari soy sauce. Tofu. Tofu tempeh [sic].

Not listed: Amazake. Lecithin. Daitokuji natto. Fermented black beans. Hamanatto. Kudzu. Kuzu. Meat alternatives. Meat substitutes. Milk alternatives or substitutes. Milk, nondairy. Milk, soy. Natto. Seitan. Soy milk. Soy protein concentrate. Soy protein isolate. Soy protein, textured. Tempeh. Teriyaki sauce. Yuba.

Errors: Arame is not also known as "Hijiki." Address: Port Elizabeth, South Africa.

8688. Shapira, Hillel. 2012. Re: Update on work with soyfoods. Letter to William Shurtleff at Soyinfo Center, Jan. 5. 1 p. Typed, with signature.

• ***Summary:*** "Greetings from the Beautiful Mantiqueira mountains, S.E. Brazil. It's been maybe 12 years since I wrote you from Pune.

"We are now busy setting up our new company, Sabias Comidas Comércio e Industria Ltda. We are planning to soon start production of Tempeh, Tofu and rice cakes."

In 2009-2010 we experienced our own private tsunami of sorts. Our flourishing, fast-growing business in Pune, India is now abandoned, run over by an utterly head to toe corrupt government and administration, I have been thrown out of India, 'black-listed' and am unable to return (detrimental to national security!) and Kairava had to leave soon afterward as well while trying to sell our property–now grabbed by some real estate goon with political support.

"We managed to sell (at a "fire sale") most of our equipment and gifted some of our smaller production systems to Wahid, our loyal production supervisor who dared to take on the challenge and now proudly produces on a smaller scale Tofu and Tempeh and salted vegetable pickles sold under the name of Rainbow-Foods (the Dakini brand has been stolen by some north India based business group).

"It seems arrogance is the rule in India these days– and despite being officially invited in the 1990s to start our business in India. It seems the Indian government is now hoping to attract bigger businesses, and are busying brushing out (by denying visas) by the back door the smaller investors. My own government, whose ambassador to India had promised to help, refused eventually... There was a billion dollar weapons deal about to be signed.

"So we ended up penniless refugees. After two months in Bangkok's Chinatown [Thailand], I managed to walk across the India-Nepal border, to get secretly to Pune to sell some equipment, find new homes for the cats and dogs, and ship out 500 kg of books and personal stuff. We were hoping to ship out a container of equipment but under the circumstances that was not possible! I have been told we could write a book about it all, but we prefer to practice our food production arts. So here we are starting from near scratch again, waiting (for 8 months) for the Brazilian customs to release some small scale equipment we imported from China and Korea. We've already got our Brazilian visa's in order!

"We made a down-payment on a long-abandoned property on the edge of Itamonte town, right on the federal road BR-354. We fixed up a semi-ruined house, and renovated the 110 square meter structure (it was a bar before) at one corner of our compound to be ready as a production hall. It now has a well insulated incubation room (1.80 meters tall x 280 meters square) and tiles all around.

"30 minutes ago we received a 500 kg consignment of very good looking, vegetable type organic soybeans from the south of Brazil. We still have a long way to go to furnish our new place–prices for equipment here are stupidly expensive and we are out of funds by now. But the views are fantastic, the air clean and peoples friendly. And we've got a good organic garden coming up in our large back yard.

"We observed the incredible meat / dairy / sugar diet in Brazil and we are sensing that many people are looking for alternative. Good Tofu is available in the Japanese centers in Sao Paulo but nowhere else. We are located 3 hours from both Rio and Sao Paulo and are hoping to send there Tempeh and Rice cakes while Tofu, being perishable, we will market only in the towns nearby.

Update: Feb. 21. "We are having hard time finding magnesium chloride in Brazil–with its 7000+ km coast line and numerous salt producers. Most of them just pump the bittern back to sea. There is one producer in the State of Bahia who supplies in 40% concentration tanker loads for industrial purpose. We are not sure about the grade of his product and are not set to store large tanks. Based on our research to date and to our surprise, we have not been able to locate any solid / flaked producers in Brazil and I suspect all of the (very expensive) magnesium chloride that is available here is imported from China. The cheapest magnesium chloride we managed to find to date from a supplier to the veterinary and dairy industries (they sell good soaps and disinfectants too); it is selling at (wholesale) about r$14 (US$8.00) for half a kg pack. We now have a good stock of clean food-grade calcium chloride to get us started until we sort out the magnesium chloride supply. We may one day need to import it.

"Here in Brazil we are waiting for our equipment still laying in customs–mills and small customized steam injected 50 litters cookers system, stainless steel and pressurized! from China and rice waffle machines from Korea. Maybe after carnival, they say. Also our industrial electric

connection is still due.

"We still paint and paint and clean and fix, at the very end of our bank balance we just do it mostly our selves. We are a bit cut of from the world so to speak–learning Portuguese slowly.

"We make two batches a week of nice magnesium chloride coagulated Tofu, 1.1 kg Soya, small blender two 5 liter pots for cooking and one 10 liter pot for collecting the milk and coagulating, cold filtration of the pulp [okara]–some of which goes into our gluten-free breads and cakes and the rest for garden fertilizing. 2 to 2.3 kg Tofu and two large cups soya milk for our two workers (us) all in 2-3 hours–cleaning included. Good and down-to-earth experience for us who got accustomed to 100 kg an hour production by a well trained crew. And these two pots are Zen masters in disguise–just waiting for the mind to drift... and then (ZEN) they boil over! Only full attention works here."

"Yours always, Seemo ++ Greetings from Kairava."

A photo shows the front of the Dakini Foods compound in Pune, India. On this spot, in April 1997, commercial tempeh production was first introduced to India. Address: RD BR-354, Coqueiros (CX Postal 13), Itamonte, MG C.E.P. 37466000 Brazil.

8689. Scott-Thomas, Caroline. 2012. Almond milk catching up with soy as favorite non-dairy milk alternative (Web article). *www.foodnavigator-usa.com/Market/Almond-milk-catching-up-with-soy-as-favorite-non-dairy-milk-alternative.* Jan. 20. [1 ref]

• ***Summary:*** This article is based on a new report from Packaged Facts titled *Dairy Alternative Beverages in the U.S.,* which found that total retail sales of soy milk, almond milk, rice milk and other plant-based milks increased to $1.33 bn (blillion) in 2011. Although soy milk is still the most popular non-dairy milk alternative, almond milk has become a close second.

Thus in 2011 soy milk had 68.7% of the dairy alternative beverage market, followed by almond milk at 21.1%, rice milk at 7.2%, and coconut milk at 2.6%.

Last year 11% of adult Americans consumed soy milk, followed by 9% who consumed almond milk (almond milk sales skyrocketed by 79% last year). Rice milk came in third.

However soy milk sales are declining, with the total soy food and beverage market decreasing about 15% from 2008 to 2010.

"In the beverage sector, soy-free milk alternatives have altered the category and affected soymilk sales," said the new report. "In recent years almond milk varieties have seen the greatest increase in sales."

Specifically, sales of Silk Pure Almond increased more than 500% in 2010 and 69% in 2011. Sales of Blue Diamond Almond Breeze increased 240% in 2010 and 59% in 2011.

In recent years, according to USDA statistics, sales of cow's milk have steadily fallen. Average per person consumption of cow's milk fell from 24.3 gallons in 1994 to 20.8 gallons in 2008.

Why do people consume alternatives to dairy milk? Some are vegans or vegetarians. Others are concerned about the antibiotics and/or growth hormones often found in cow's milk. Moreover, people generally enjoy the flavor of almond milk.

Note: On 19 Jan. 2012 Packaged Facts also issued a digital new release ("Marketwire") about the new report titled "With almonds as the new white milk, dairy alternatives make further inroads."

8690. INTSOY. 2012. 2012 INTSOY Processing and marketing soybeans for meat, dairy, baking and snack applications, June 3-8: A unique opportunity to gain hands-on experience & practical knowledge about soybeans (Leaflet). Urbana, Illinois. 9 panels. Each panel: 28. Single sided. Black and white.

• ***Summary:*** This printout of an e-mail announces a 5-day course ($1,500 for 1 attendee). The program now has 26 corporate sponsors (listed alphabetically with the logo of each): ADM, Clarkson Grain, Clextral Group, Crown, Devansoy, French, General Mills, Harvest Innovations, House Foods America Corporation, Illinois Soybean Association, Insta-Pro, NEI–Natural Enrichment Industries, NPI–Natural Products, Inc. ProSoya. SavInd (formerly Bar N.A.). Silk, The Solae Co., Soyatech, Soyfoods Association of North America. Soyjoy. SunOpta. USB. USSEC. Wenger. WISHH. World Soy Foundation.

Course highlights. Who should attend? Course schedule (preliminary agenda). Sponsors. Address: National Soybean Research Lab. (NSRL), 1101 W. Peabody Dr., Urbana, Illinois 61801. Phone: (217) 244-1706.

8691. Soyatech, LLC. 2012. Soya & Oilseed Bluebook 2012: The annual directory of the world oilseed industry, online at www.soyatech.com. Bar Harbor, Maine: Soyatech. 332 p. Jan. Comprehensive index. Advertiser index. Statistical conversions. 28 cm.

• ***Summary:*** This is the 6th year in a row that the *Bluebook* (a $95 value) has been sent free of charge to qualified industry members. On the cover is a large color photo of two cupped Caucasian hands holding yellow soybeans against background of rows of green soybean plants. Above this main large photo are six small color photos related to various other oilseeds such as sunflowers and palm oil kernels.

This edition of the *Bluebook* contains 16 fewer pages than it did last year. The oilseeds covered in this book are (alphabetically): Canola, coconut, corn, cottonseed, flaxseed, hemp seed, jatropha, linseed, palm, peanut, rapeseed, safflower, soya, sunflowerseed–the same as last year.

On the inside front cover is a color ad from Omega-9 Oils. On the first page is a full page color ad from SunOpta

with this title: "Can you tell the difference between a bean that's best for soymilk versus a bean that's best for miso? We can." Other full-page color ads in the front are from Intertek, Loders Croklaan North America, Anderson Internal Corp. (expeller press), AOCS, French Oil Mill Machinery Co. and Insta-Pro International.

On the rear cover is a full page color ad from Natural Products Inc. (NPI, Grinnell, Iowa), makers of innovative ingredients for soymilk and tofu to cakes and cookies. They are the makers of Scotsman's Mill ingredients.

Chris Erickson is CEO. Mark Dineen is president. Keri Hayes is publisher and events director. In the Foreword, Joe Jordan (General manager and *Bluebook* content director) writes about how work began this year to expand the Panama Canal–"the most critical 48 miles in international trade." Its freight-carrying capacity is scheduled to be doubled by the year 2014. Address: P.O. Box 1307, 19 Clark Point Rd., Suite 112, Southwest Harbor, Maine 04679. Phone: 207.244.9544.

8692. Vitasoy International Holdings Ltd. 2012. Interim Annual report 2011/12 (unaudited). Focusing on growth. New Territories, Hong Kong. 56 p. Jan. 30 cm. [Eng; Chi]
• ***Summary:*** All values are in million Hong Kong dollars. The fiscal year ends on 31 March 2011. Page 4, financial highlights, states that (for the 6 months ended Sept. 30) turnover increased by 14% from 1,710 to 1,946. Gross profits grew by 12% from 849 to 948.

A management report (p. 5) with business highlights (incl. revenue from external operations and profit from operation) is given for: Hong Kong and Macau, Mainland China, Australia and New Zealand, North America, and Singapore. Address: No. 1, Kin Wong Street, Tuen Mun, New Territories, Hong Kong. Phone: 2466 0333.

8693. Messina, Mark J. 2012. The steadily declining image of soymilk and other soyfoods (Interview). *SoyaScan Notes.* Feb. 5. Conducted by William Shurtleff of Soyinfo Center.
• ***Summary:*** Shurtleff notes the similarity between the "anti-evolution crusade" in the 1920s in the United States (and its culmination in the 1925 Scopes trial in Tennessee) and the anti-soy crusade (led by the Weston A. Price Foundation) now. Address: PhD, 429 Calhoun St., Port Townsend, Washington 98368.

8694. Berbille, Hervé. 2012. Re: Use of the word "soymilk" ("lait de soja") in France. Letter (e-mail) to William Shurtleff at Soyinfo Center, Feb. 19. 1 p.
• ***Summary:*** The dairy industry has managed to ban the term "soy milk" ("lait de soja") from any commercial use on the pretext that this is not a liquid from a mammal. Its use is strictly forbidden, But in this case, it would be logical to also prohibit the name "coconut milk" ("lait de coco"), but the dairy industry has not charged for the coconut milk: curious forgetfulness isn't it?

Instead, only three terms are allowed as descriptors in its place on commercial products: *boisson au soja* ("soy drink"), *jus de soja* (soy juice), or *tonyu* (the Japanese word for "soymilk").

Thus, if a soymilk manufacturer (e.g., Nutrition & Santé, brand name SOY) writes "lait de soja" on its packaging, the president would not be put in jail, but h would have big troubles, and surely a very heavy fine!

Likewise, use of "lait de soja" in France is strictly forbidden in any advertisements, brochures, leaflets, sell sheets, or other commercial documents.

However, the term "lait de soja" can be used freely by anyone in any French-language article, cookbook, or any other book–with no limitations or problems. Address: Bordeaux, France.

8695. Hepler, J. Sandy. 2012. Re: Work with soyfoods. Letter (e-mail) to William Shurtleff at Soyinfo Center, Feb. 19. 1 p.
• ***Summary:*** "My specialty has been leaf nutrition. Check out www.LeafForLife.org–And children's feeding in general. Note: A remarkable edible leafy plant is *Moringa oleifera.*

"My experience with soy has been limited, mainly to watching the SoyNica/PLENTY project roll out and unravel over the years. I designed a cookie for them made of 30% okara (2008). It could have been increased to 40%. All samples we made were called delicious to some extent or other. Presently my co-designer, Emelina Oviedo is making and selling these cookies. All of this in Managua, Nicaragua. The SoyNica soy 'factory' is presently not in operation.

"Currently, I'm funding a proof-of-concept project which might be of interest to you. The following figures either come from Chuck Haren (chief soy technician for PLENTY for 20 years or so) or our combined calculations.

"One 7-gm serving of protein via soymilk (8 fl oz.), retail, made by UPAVIM, Guatemala City–retail cost US$0.33.

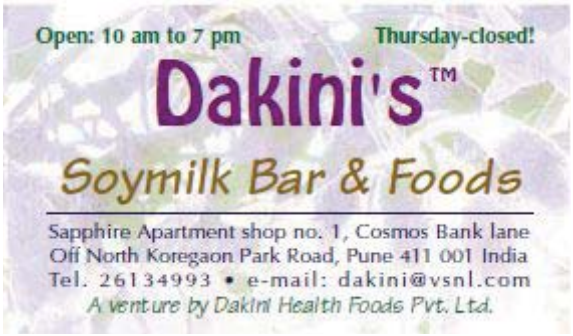
"One and one-half eggs, 7-gm serving of protein–retail cost US$.13-.15.

"One 7-gm serving of protein via baked tempeh chips (1 oz, containing 66% soy tempeh, 30% flour)–retail cost estimated US$.13-.14.

"I believe tasty soy products can and must be made cheaper. Should be able to compete with eggs, the gold standard.

"Chuck Haren will be testing this in Guatemala in the next couple of months. He'll write a report." Address: Whitleyville, Tennessee.

8696. Shapira, Hillel. 2012. Re: Dakini Health Foods' retail outlet in Pune, in operation from March 2004 to April 2005. Letter to William Shurtleff at Soyinfo Center, Feb. 21. 1 p. Typed, with signature.
• ***Summary:*** A business card from the time shows: The retail outlet was named Dakini's Soymilk Bar & Foods



(Sapphire Apartment shop no. 1, Cosmos Bank Lane, Off North Koregaon Park Road, Pune 411 001 India). A venture by Dakini Health Foods Pvt. Ltd. Open from 10 am to 7 pm. Thursday–closed!

"We rented the space near Koregaon Park (Pune) in 2003 and after 8 month preparations we opened around March 2004. We closed for a month holiday in April 2005 (we literally physically collapsed). Not finding the right management for it and electrical and water supply problems getting worse, we decided not to continue, sold the furniture and focused our full attention on the factory. Sales were growing rapidly by then and it was a good decision. But we did miss feeding so many people directly. We felt we gained so much insight from our year in operation that, afterward, business was never the same again–in the best sense!

"The place had a table and 4 chairs inside and 24 seats in the front open space. The place was totally vegan except for one type of very good organic cheese made by a friend in the Himalayas. All milk drinks were soy milk and all yogurt preparations (lassi) were made from soy yogurt. We were producing soya-milk on our pressure cooker system in the factory, but not having a plate heat exchanger, we were cooling it to room temperature in a special jacketed stainless steel tank, then packed it in polyethylene bags which then were put on ice for fast chilling. This worked well and we managed to get a long shelf life. For yogurt production we were inoculating soymilk at room temperature and then incubating it at 45C. The year we were running the shop we were producing 60-80 kg soy yogurt a week, 200-300 liters of soymilk a week, and about 50 kg tempeh. Tofu production at the time was about 600-800 kg a week and these figures include the supply to all the regular clients except soya milk and soyogurt which were for produced for our retail shop use only.

I attach the regular menu. Beside this menu we had a good changing daily menu on the board. The retail shop had about 300-350 square feet inside and 400 square feet of outside area.

"Opening the place (with bank loans) and running it was very challenging yet we got to meet so many people that we got many very good insights. Indians love soyfoods and the place become kind of a cult meeting place with families driving from Bombay and other cities for lunch at Dakini. The place was run as self-service and takeout.

"The most popular drink was the banana date milkshake and second was the papaya lassi; most popular sandwich was the Tofu Sandwich followed by Tempeh Sandwich. Most popular plate was the Falafel Plate followed by the Humus Plate and Tofu Plate. Soya milk Chai was selling real well at all times and the soy-milk ice coffee was a big favorite on hot afternoons. There was no refined sugar on the premises and sweetening was done with tasty organic liquid cane molasses.

A photo (taken 15 Feb. 2005) shows a waitress in red dress carrying a plate of food. Address: RD BR-354, Coqueiros (CX Postal 13), Itamonte, MG C.E.P. 37466000 Brazil.

8697. Boismenue, Clyde. 2012. Re: Required labeling of soy lecithin as a potentially allergenic food since it contains traces of soy protein. Letter (e-mail) to William Shurtleff at Soyinfo Center, Feb. 24. 1 p.

• ***Summary:*** Clyde, who has been selling ADM soy products (including soy lecithin) for 36 years (it is his main life's work), attached to this e-mail 3 documents related to soy lecithin: (1) ADM [Archer-Daniels-Midland Co.] protein content of soy lecithin. (2) Online article concerning NOAEL level for soy protein–a review of a published article by Ballmer-Weber et al. 2007. (3) Copy of an unpublished 2005 report by Steve L. Taylor titled "Soy lecithin: An expert opinion on its potential allergenicity."

His letter reads: "I am sure you will find these interesting. The motivation for these studies was that soy lecithin got caught up in allergen labeling by the way our politicians wrote the regulation, even though lecithin contains only trace amounts of protein (circa 100 ppm) and most of that is not allergenic. My ADM lecithin tech told me he thinks the latter is about 5 ppm in food application lecithins with maximum phosphatide content–e.g. the Yelkin Gold reference. But pan coatings and grill release agents and food extrusion die lubricants were, and are, still technically required to label their products to indicate soy allergen content, even where the use is an obvious processing aid (processing aids are broadly exempt from being required on labels).

"This regulatory hit on the industry triggered these studies. However, if I am reading them right, the fact that we now have a NOAEL value for soy protein established at a relatively high level means we can restore sanity to the entire soy industry. Very exciting.

"FYI–even though the regs have for about 10 years required allergen on the labels of all these minor use products, the FDA has fairly openly NOT enforced them in cases where they recognize there is insignificant risk to consumers. For example, in 10 years there are no recorded instances of allergic reaction to soy in lecithin of pan release coatings (bakery use).

"Thanks for your help.–Clyde"

"P.S. Besides ADM soy protein products, I have developed with a Chinese partner the World's Most Perfect Isolated Soy Protein for dry powder protein beverage mixes and neutral pH ready-to-drink protein beverages.

"And, just yesterday I began the introduction of a de-estrogenated soy protein concentrate to try to win back the bodybuilding trade who left us on a dead run in favor of whey proteins when the phytoestrogen issue first blew up. But now there is so much demand for whey proteins that they are assuming their correct place in the economic matrix, to wit, at very high prices–about double our highest priced purified soy proteins. So the time is right for this..." Address: LookAlive / Basic Foods Co., P.O. Box 240070, Los Angeles, California 90024. Phone: 310-473-0719.

8698. Nguyen, Andrea Quynhgiao. 2012. Asian tofu: Discover the best, make your own, and cook it at home. Berkeley, California: Ten Speed Press. [viii] + 232 p. Illust. (color photos by Maren Caruso). Index. 24 x 24 cm. [21 ref]
• ***Summary:*** Another very attractive book and well-written book by Andrea Nguyen. In researching this book, Andrea traveled to many countries in East- and Southeast Asia. The color photos and the book design are both superb.

Contents: Introduction: East Asian stronghold (China, Japan, Korea), wavering Southeast Asia (Vietnam, Thailand, Cambodia, Laos, Singapore, Malaysia, Indonesia, Philippines, Myanmar / Burma), South Asian newcomer (India), tofu in America (Samuel Bowen, Benjamin Franklin, Commodore Matthew Perry, Civil War soldiers, Piper & Morse, George Washington Carver, Mildred Lager, World War II), alternative to mainstream (Boys Market in Los Angeles, *Diet for a Small Planet, The Book of Tofu,* Jeremiah Ridenour, Los Angeles Tofu Festival), tofu today (United Soybean Board Survey, Hodo Soy, Dong Phuong Tofu [Westminster, Orange County, California]).

Tofu buying guide: Tofu types (tofu blocks {silken, medium, medium firm, firm, extra firm, super firm}, pressed tofu, tofu noodles, tofu skin [yuba; an unfortunate term since yuba has nothing to do with tofu] {fresh tofu skin packets = dou fu bao, tofu skin rounds = dou fu pi or fu pi, dried tofu sticks [dried yuba sticks] = fu zhu or "tofu bamboo"}, fried tofu {fried tofu slices}, tofu pudding (like silken tofu but made by pouring rich soymilk into a tallish pot with a little calcium sulfate and tapioca starch dissolved in water in the bottom), fermented tofu {red or white}, soy milk).

Note: This is the earliest English-language document seen (Oct. 2012) that uses the term "fresh tofu skin packets" or the term *dou fu bao* in connection with yuba.

Tofu cooking tips: Cutting, draining, frying.

Homemade tofu tutorial (incl. homemade soy milk, soy milk lees, homemade silken tofu, homemade tofu pudding, block tofu, confetti tofu, oboro tofu, zaru tofu, seasoned pressed tofu, tea-smoked pressed tofu, white fermented tofu, frozen tofu, fresh tofu skin, soy-simmered fried tofu).

Recipes–Fresh and satisfying: Snacks and starters. Soothing and soft: Soups and hot pots. Homey and wholesome: Main dishes. Versatile and delicious: Salads and sides. Religion and artistry: Mock meats. Building on traditions: Buns, dumplings, crepes, noodles and rice. Amazing transformations: Sweets and desserts. Basics. Ingredients (glossary). Acknowledgments. Measurement conversion charts.

Note 1. This book contains many recipes that use meat, poultry, or fish as ingredients.

Note 2. The Vietnamese term for tofu is *dau phu.* Address: Food writer, Santa Cruz, California.

8699. United Soybean Board (USB). 2012. Consumer attitudes about nutrition: Insights into nutrition, health, and soyfoods. 18th annual. 2011 edition. Seattle, Washington: USB. [12] p. March. 28 cm.
• ***Summary:*** Methodology: "This year represents the sixth year we have adopted an online self-administered survey as our methodology, a significant change from random telephone interviews. The survey, conducted by an independent research firm [in Seattle, Washington] in January 2011, includes 1,000 random surveys, providing a sample that is consistent with the total U.S. population. The study's margin of error remains ± 1.9 to 3.1%, with a confidence interval of 95 percent."

Note about the methodology of this survey from Mark Messina, PhD, who asked one of the survey's designers. 2012. May 29. "The participants in the consumer survey represent US demographics. The only difference with this survey compared to previous ones is that rather than interviewing the consumers by phone, once contacted, the consumers are directed to a web site where they fill out the survey."

Contents: Introduction. Methodology. About USB. Consumers aim to choose healthier foods. Consumers examine the good and bad of nutrition facts. Effective strategies in improving overall health [about choice of amounts and types of fats; does not mention exercise]. Who is to blame for obesity? (Individuals 28%, the fast-food industry 18%). Soyfoods receive healthy rating (In 2011 81% of consumers rated soy products as healthy, with only 5% rating them as unhealthy. A graph shows "Awareness of soy as healthy" from 1998 (67%), to a peek of 85% in 2007 and 2008, falling to 81% in 2011). General nutritional attitudes and concerns. Examining the nutritional facts panel. Obesity concerns. Strategies for improving overall health. Soyfoods and health perceptions. Health reasons for seeking soy. Cooking and salad oil impressions. Soy in the media. FDA-approved health claim. Opinions on biotechnology. Spotlight on biotechnology. Trans fat awareness and opinion. Awareness and usage of soy products. Restaurants and soy products. Occasion preferences for consuming soy.

Awareness and usage: "37% percent of Americans consume soyfoods or soy beverages once a month or more, approximately five percentage points higher than during the period between 2006 and 2008. Conversely, 35% indicate that they never consume soy, which has decreased steadily since 2006 (then at 43%). For the seventh year in a row, consumers reported the most familiarity with soymilk, soybean oil, tofu and soy veggie burgers.

"Soymilk continues to be the most regularly consumed soy product, with nearly one-quarter of Americans reporting that they drink it regularly. For comparison, in 1999, 18% of consumers reported that they had tried soymilk. By 2010, the number of consumers who have tried soymilk has more than doubled to 45% of all consumers.

Edamame holds the number two spot and has surpassed veggie burgers among the top three most consumed soyfoods for the past two years. In fact, it has more than tripled in popularity since 2005 (then at 4% and now at 13%). "Plain white tofu" follows in third place, on par with 2009 at 9%."

A table shows the "Top 20 soy products by awareness." Soymilk 90%. Soybean oil 56%. Plain white tofu 56%. Soy veggie burger 54%. Soynuts 40%. Soy protein bars 37%. Soy infant formula 36%. Soy latte / soymilk in espresso coffee drinks [as at Starbucks] 36%. Edamame 34%. Dried or canned soybeans 33%. Cereal bar / energy bar 32%. Miso 29%. Soy ice cream / cheese 28%. Soy yogurt 27%. Soy hot dogs 26%. Flavored / marinated tofu 24%. Soy supplements 21%. Soy flour 21%. Soy breakfast cereal 18%. Textured soy protein 16%. All others mentioned 14% or less.

Occasion preferences for consuming soy (in descending order of preference): dinner 39%, breakfast 30%, lunch 22%, mid-afternoon snacking 19%, late evening snacking 13%, mid-morning snacking 9%, desserts 5%.

"In 2010, 84% of consumers rate soy products as healthy, down one percentage points from 2009." A graph (p. 6) shows this increase in awareness (82% in 2006, 78% in 2005, 74% in 2004, 74% in 2003, 74% in 2002, 69% in 2001, 76% in 2000, 71% in 1999, 67% in 1998).

Note 1. As of March 2012 this full survey is available gratis in PDF format at www.soyconnection.com /health_ nutrition /pdf/.

Note 2. This survey is hard to cite and to use because it has no page numbers. It is hard to read when printed since much of the type is too light / pale. We appreciate the correct spelling (as one word) of the words soyfoods and soymilk.

8700. Dean Foods Co. 2012. Annual report 2011. Dallas, Texas. 4 + 61 + 64 + [12] p. 28 cm.
• ***Summary:*** All but the first 4 pages of this annual report are Form 10-K. On page 35 is the segment on White-Wave Alpro. Net sales were $2,109.9 million, up 8.9% over 2010. Total operating income was $199.7, up 20.2% over 2010. The last page of the basic report shows that Dean Foods' stock has performed relatively poorly since 2006 compared to the Standard & Poor's 500 Composite Index and to a peer group of 18 manufacturers of food, beverages, and other consumer packaged goods.

An accompanying "Notice of stockholders meeting" is 106 pages. Address: 2515 McKinney Ave., Suite 1200, Dallas, Texas 75201. Phone: 214-303-3400 www.deanfoods.com.

8701. Katz, Ellix Sandor. 2012. The art of fermentation: An in-depth exploration of essential concepts and process from around the world. White River Junction, Vermont: Chelsea-Green Publishing Co. xxiii + 498 p. April. Illust. (photos and illustrations). Index. 25 cm. [109 (Chap. 10 + 11) ref]
• ***Summary:*** A marvelous book by self-described "fermentation revivalist" Sandor Katz, whose books and lectures have inspired thousands to rediscover the ancient art of fermentation.

In this book Katz redefines an old noun "ferment" (no longer used to mean enzyme) to mean fermented food(s). It works quite nicely. For example: "The Japanese soy ferment *natto* contains an enzyme called *nattokinase."* Although information on fermented soyfoods is found throughout the book (see the excellent index), most of it is found in two chapters, 10 and 11 (p. 274-335). The contents of these two: 10. Growing mold cultures: Introduction. Incubation chambers for growing molds (oven method, aquarium method, temperature controller, dedicated incubator designs). Making tempeh. Cooking with tempeh. Propagating tempeh spores. Making koji. Amazake. Plant sources of mold cultures. Troubleshooting. Sidebars: Microorganisms in my bed, a poem by qilo. Sculpting with tempeh. Ode to tempeh, by Spiky. Tempeh variations (chickpea tempeh, etc.).

Note: Koji is mentioned on 41 pages in this book, and especially on pages 296-300.

11. Fermenting beans, seeds, and nuts: Introduction... Spontaneous fermentation of beans. Idli / Dhokla / Khaman... Soybeans. Miso. Using miso. Soy sauce. Fermented soy "nuggets" [fermented black soybeans]: Hamanatto and douchi. Natto. Dawadawa and related West African fermented seed condiments. Fermenting tofu. Troubleshooting.

The section titled "Non-dairy milks, yogurts and cheeses" (p. 207-08) begins: *"Milk* has come to refer to any creamy liquid of substance, such as coconut milk. In our time soymilk has become a ubiquitous alternative to cow milk, but any nut or seed can be extracted as milk (or turned into cheese)." We have hemp seed milk and almond milk. "The seed milk ferment that most closely resembles its dairy analogue is soymilk fermented with yogurt cultures. You can ferment soymilk using the same procedure as dairy milk, and you can even buy commercial cultured soy 'yogurt' to use as a starter."

Sidebars: Dosa variations. Miso generic proportions. Miso soup with William Shurtleff. In the middle of this

chapter are 15 pages of very helpful color photos. Address: Short Mountain Sanctuary, in the hills of Tennessee.

8702. *Plenty Bulletin* (*Summertown, Tennessee*). 2012. Plenty International's program report. 28(1):1-2. Spring.
• ***Summary:*** "Guatemala: In 2011, with funding provided by the Atkinson Foundation, Plenty collaborated with... Escuela Formation Agricultura (EFA) and Amado Del Valle to help more than 40 farming families from 5 villages to grow black beans, soybeans, corn, and vegetables, while learning methods of mitigating soil erosion."

"Students and teachers at Escuela Formation Agricultura (EFA), the Solola Agricultural College, tested 8 non-GMO soybean seed varieties during 2011." A photo shows Amado Del Valle, explaining to villagers in La Nueva Providencia, Guatemala, how to make soymilk.

"Karen's Soy Nutrition Project: At the Guatemala City Dump Site Plenty continues to support the efforts of Grupo de Soya Santa Maria (GSSM) as they provide bakery foods fortified with toasted soy flour and soymilk to more than 300 undernourished children, as well as a few disabled and elderly adults, two days a week. GSSM has not missed a week of distributing foods to the children since starting in early October of 2010."

8703. Zaineddin, Aida Karina; Buck, Katharina; Vrieling, Alina; et al. 2012. The association between dietary lignans, phytoestrogen-rich foods, and fiber intake and postmenopausal breast cancer risk: A German case-control study. *Nutrition and Cancer* DOI:10.1080/01635581.2012.683227. 14 p. Available online 16 May 2012. [46 ref]
• ***Summary:*** "Phytoestrogens are structurally similar to estrogens and may affect breast cancer risk by mimicking estrogenic / antiestrogenic properties." Phytoestrogens, which are found only in plants, are able to bind to mammalian estrogen receptors. There are several mechanisms that have been proposed to explain how phytoestrogens reduce breast cancer risk: (1) Their weak inhibitory effect on aromatase may lower the amount of circulating estrogen; as a result, breast tumor proliferation may be decreased. (2) Inhibition of tumor growth. (3) Angiogenesis. (4) Stimulation of apoptosis.

In Western societies, whole grains, soybeans, and traditional soy foods are rich sources of phytoestrogens.

The three main classes of phytoestrogens are isoflavones, lignans, and coumestans. Isoflavones, which are found in high levels in soybeans and many soyfoods, have received the most scientific attention because of their possible effects on human health, including the prevention of cancers.

"Meta-analyses have shown that isoflavones may slightly reduce the risk of breast cancer, and that this inverse association was somewhat stronger among premenopausal women than among postmenopausal women. However, associations were only significant in high soy-consuming Asian populations, and no significant associations were found in low soy-consuming Western populations."

The results of this study provide evidence for a reduced menopausal breast cancer risk associated with increased consumption of soybeans and soyfoods, sunflower and pumpkin seeds.

Table 6, titled "Adjusted odds ratios and 95% confidence intervals for the association of phytoestrogen-rich foods with postmenopausal breast cancer risk by estrogen receptor (ER) status," contains data concerning soy milk, soybeans, tofu, soy spread, sunflower / pumpkin seeds, sesame / flax seeds, etc. Address: 1-2. Unit of Genetic Epidemiology, Div. of Cancer Epidemiology, German Cancer Research Center, Heidelberg, Germany.

8704. *Malnutrition Matters Newsletter* (*Ottawa, Canada*). 2012. Ten new SoyCow 'E' systems for North Korea. May. p. 1.
• ***Summary:*** "A container full of SoyCows has been shipped from the fabricator in Thailand to North Korea for the Canadian NGO, First Steps. The SoyCow and VitaGoat form the backbone of First Steps' nutritional aid program for the past nine years. With the addition of these new systems, First Steps will have over 80 systems operating at about 30 sites, providing a daily cup of protein-rich soymilk to more than 80,000 needy children in orphanages, daycares and kindergartens." A color photo shows the SoyCow 'E' system, with the blue electric boiler at center. Address: 48 Rivershore Crescent, Ottawa, ON K1J 7Y7, Canada. Phone: 1-613-742-6888.

8705. *Malnutrition Matters Newsletter* (*Ottawa, Canada*). 2012. Second VitaGoat system for "A Better World" in Kenya. May. p. 1.
• ***Summary:*** "The Swiss-based foundation, A Better World, has a new system installed with Sustainable Organic Farming and Development Initiatives (SOF-DI) Community Resource Center at Kwisero District, Bungoma, Kenya. This further helps SOF-DI in the fight against hunger which is its prime goal together with access to clean water. Their first system has been running for more than a year at Arutani."

8706. *Malnutrition Matters Newsletter* (*Ottawa, Canada*). 2012. Three more VitaGoats for Liberia program. May. p. 1.
• ***Summary:*** "The USAID-funded HANDS project in Liberia, where Malnutrition Matters is a partner, is now completing its second year. Five VitaGoats and three SolarFlex dryers have been installed. Over 80 women have been trained to operate the VitaGoats and currently over 40

women are self-employed operators. Each VitaGoat is shared between three or more operator groups which produce and sell soymilk and other soy-based products. Soymilk sales have been successful, especially in the smaller villages, and self- sufficiency is projected to be achieved by most groups within a year of initial operation."

A color photo shows a "Women's micro-enterprise group selling soymilk at roadside in Zwedru, Grand Geddeh, Liberia." Address: 48 Rivershore Crescent, Ottawa, ON K1J 7Y7, Canada. Phone: 1-613-742-6888.

8707. Shurtleff, William. 2012. The global value chain for soybeans (Editorial). *SoyaScan Notes.* June 12.
• ***Summary:*** "The value chain is a concept from business management that was first described and popularized by Michael Porter in his 1985 best-seller, *Competitive Advantage: Creating and Sustaining Superior Performance"* The value chain concept can be applied at various levels of activity, such as a worldwide level, an industry-wide level in a particular country, or at the level of a particular company operating in a specific industry. The key links in a value chain are those points at which value is added to products. Quantitative data are necessary to analyze the amount of value added (Source: Wikipedia at value chain, June 2012).

In the global soybean chain we have identified four major links or points: (1) Soybean production: This is highly fragmented, with hundreds of thousands of farmers, both large and small, growing soybeans. However some of those farmers are organized into groups, often cooperatives (such as AGP in the United States).

(2) Crushing and other soybean processing. Crushing soybeans to make crude soy oil and defatted soybean meal is main way that soybeans are processed. However in East Asia, whole soybeans are also processed into human foods, such as tofu, miso, soymilk, tempeh, etc. Large soybean crushers which operate worldwide include Cargill, ADM, Bunge, AGP, Sanbra (Brazil) etc. Defatted soybean meal is further processed to make animal feeds, soy sauce, etc. Crude soy oil is further refined to make edible vegetable oil biodiesel, etc.

(3) Transportation / distribution of soybeans and/ or soybean products. Major firms (which are vertically integrated) include Cargill, ADM, Bunge, Dreyfus, the Noble Group of Hong Kong, etc.

(4) End use / retail: The main end uses for soybeans are: From whole soybeans–human foods, often divided into four types: (a) Traditional East Asian fermented soyfoods, such as miso, tempeh, natto and its relatives. The largest makers are miso makers and natto makers in Japan. (b) Traditional East Asian non-fermented soyfoods, such as tofu, soymilk, edamame, roasted soy flour, yuba. The largest makers are tofu makers and soymilk makers in Japan, Hong Kong, and USA. From defatted soybean meal: animal feeds, soy sauce, modern Western soy protein ingredients: textured soy flour / textured vegetable protein (TVP in ad ADM trademark), soy protein concentrates, textured soy protein concentrates, soy protein isolates, and textured soy protein isolates. The largest makers of animal feeds are the same as the major soybean crushers: Cargill, ADM, Bunge, etc. From crude soybean oil: Refined soybean oil and biodiesel. The largest refiners of soybean oil are the major soybean crushers. From refined soybean oil: Edible vegetable oil, salad dressings, margarine, etc. Address: Founder and owner, Soyfoods Center, Lafayette, California. Phone: 925-283-2991.

8708. Palmer, Sharon. 2012. The plant-powered diet: The lifelong eating plan for achieving optimal health, beginning today. New York, NY: The Experiment. xx + 412 p. Foreword by David L. Katz, MD, MPH. [228 ref]
• ***Summary:*** A positive attitude toward traditional soyfoods is found throughout this excellent book. The traditional Japanese diet (p. 19-20)–one of the healthiest–leads to an average life expectancy of 80 years for men and 85 years for women. The Japanese diet is characterized by a "Focus on soy foods. Whole soyfoods such as edamame, tofu, and miso are regular features of the diet.

The section titled "Soy, the superfood" (p. 58-59) describes the basic types of soyfoods and their benefits. The next section is "A word about soy meat alternatives" (p. 60-61) including veggie burgers, soy meat crumbles, and vegetarian hot dogs.

The "Plant-based dairy alternatives guide" (p. 72-76) includes various types of soy milk, soy milk yogurt, and soy ice cream.

The word "soy" appears on 55 pages of this book, the word "tofu" on 54 pages, "tempeh" on 18 pages, "soy foods" on 17 pages, "seitan" on 15 pages, "edamame" on 10 pages, "soybeans" on 10 pages, "soy milk" on 8 pages, "soy sauce" on 6 pages, "miso" on 6 pages "soy milk yogurt," "soy ice cream" and "soybean oil" on 2 pages each, and "soy cheese" and "soy cream cheese" on 1 page each.

Includes "75 original plant-based recipes for every meal–all with nutritional data." "A 14-day meal plan with action alerts to get you started." "Essential information on the healthiest plant food–whole grains, vegetables, fruits, nuts, legumes, and even herbs, spices, dark chocolate (rich in polyphenol antioxidants), coffee (contains many beneficial antioxidants), tea (rich in polyphenol antioxidants, and takes the place of high-calorie, high-sugar drinks), and wine.

Virginia Messina, in her blog The Vegan RD, says this: "It's a book that makes the scientific case for eating fewer animal products and more plant foods while admitting that there is no precise definition for 'plant-based diet.' The information in the book is balanced, honest, and practical, and the recipes–which appear to all be vegan–look really nice. In the forward to the book, Dr. David Katz, of the Yale University Prevention Research Center says this about Sharon's book: 'So much of modern health advice is about

marketing a particular perspective that such a balanced and moderate approach is a truly surprising and welcome departure.'

"I agree, and it's the thing that made this book stand out for me. Admittedly, I wish the book had included more perspective on making compassionate food choices. When animals are part of the discussion (and I think they should always be part of the discussion) a vegan diet is the one and only best way to eat. When the focus moves away from animals, then diet-related issues become somewhat less clear. So far, no one has proven that a vegan diet is healthier than other plant-based ways of eating, and it's unlikely that they ever will. So, this isn't a book I would use to promote veganism–it presents a vegan option, but not a vegan imperative–but, it is one I would use to promote healthy plant-based eating for those who are looking for that type of information."

About the author: "Sharon received her Bachelor of Sciences Degree with Honors from Loma Linda University, California. She enjoyed a diverse 16-year dietetics career with experiences as a clinical dietitian, wellness dietitian, chief clinical dietitian, food and nutrition services director, and consultant dietitian." Address: RD (Registered Dietitian), P.O. Box 1052, Duarte, California 91009.

8709. Baertlein, Lisa; Dorfman, Brad. 2012. Dean Foods shares soar on WhiteWave IPO, profit beat. *www.reuters.com.* Aug. 7.

• ***Summary:*** Dean Foods Co., top U.S. dairy company, announced plans on Tuesday to spin off 20% of a unit that sells Silk soy milk, Horizon Organic dairy products, Alpro products, and International Delight coffee creamer products. The price of Dean's shares soared 27% based on a quarterly profit that was stronger than expected and cost controls.

Last year Dean suggested that it was looking at a possible spinoff as a way of paying down debt, but the move comes earlier than expected.

Using proceeds from the IPO, Dean plans to pay down its own debt as well as $800 to $925 million borrowed under a new credit facility at WhiteWave Foods.

When the IPO takes place, Gregg Engles, presently chairman and CEO of Dean Foods, will take on the roles of chairman and CEO of WhiteWave. Gregg Tanner, now president of Dean's fresh dairy business, will be promoted to CEO of Dean Foods. Address: Reuters.

8710. Kikkoman Corporation. 2012. Annual report 2012. Year ended March 31, 2012. 250 Noda, Noda-shi, Chiba 278-8601, Japan. 47 p. 28 cm. [Eng]

• ***Summary:*** Net sales in yen decreased by 0.01% to ¥283,239 million. Net income in yen increased by 15.6% to ¥8,963 million.

Under "Major group companies–Kikkoman Corporation, Japan (p. 44) is listed: Kikkoman Soyfoods Company, 2-1-1 Irifune, Chuo-ku, Tokyo 104-8553, Japan. Phone: +81 (3) 3206-0778. This company was formerly Kibun Foods.

Under "Corporate History" we read (for the first time): "2008 Aug.–Kibun Food Chemfa Co., Ltd. (now Kikkoman Soyfoods Company) becomes a wholly owned subsidiary of Kikkoman."

A photo (p. 2) shows Yuzaburo Mogi (Honorary Chief Executive Officer and Chairman of the Board of Directors) and Mitsuo Someya (President and CEO). On this page we read that Kikkoman's sales decreased because of "lower demand for soy sauce and the termination of sales of some beverages and casual wines." Address: Noda, Japan.

8711. Vitasoy International Holdings Ltd. 2012. Annual report 2011/12. Focusing on growth. New Territories, Hong Kong. 182 p. Aug. 30 cm. [Eng; Chi]

• ***Summary:*** All values are in million Hong Kong dollars. The fiscal year ends on 31 March 2010. A graph (p. 4) shows that turnover (sales) has risen steadily each year from 2,441 in 2008 to 3,727 in 2012 (up 12% from 2011).

Gross profit has risen steadily each year from 1,156 in 2008 to 1,651 in 1,760 in 2012 (up 10% from 2012).

EBITDA (Earnings before minority interest, interest expense, income taxes, depreciation, and amortization) has also risen steadily each year from 391 in 2008 to 553 in 2012 (up 3.17% from 2011).

A chart (p. 5) shows that 51% of Vitasoy's sales come from soymilk, followed by 19% from tea and 9% from tofu. By location, 45% of the sales are from Hong Kong and Macao, 27% from Mainland China, and 12% from north America.

A full-page color photo (p. 9) shows Winston Lo, laughing. Address: No. 1, Kin Wong Street, Tuen Mun, New Territories, Hong Kong. Phone: 466 0333.

8712. Nordquist, Ted. 2012. Talking about soy yogurt in the USA (Interview). *SoyaScan Notes.* Sept. 17. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** Market shares of the U.S. soy yogurt market: WholeSoy (75%), White Wave Silk (12-17%), Wildwood, then Stonyfield O-Soy, then Nancy's Yogurt.

Market shares in the U.S. non-dairy yogurt market: WholeSoy, Almond yogurt, and So Delicious coconut yogurt. The So Delicious plant is located in Junction City, Oregon, headed by Mark Brawerman, whose office is in Los Angeles; since they got Nestle as a distributor their sales have increased dramatically. He kind of abandoned soy when his coconut milk products (beverages, ice creams, yogurts, and creamers) went so well. Formerly named Turtle Mountain, they have long made So Delicious and Purely Decadent soymilk Ice Creams. So Delicious Coconut Yogurt (6 oz cup) retails for $1.99 compared with $1.19 for WholeSoy; a lot less money for a lot less nutrition, plus saturated fat.

Up until about 3 years ago, Silk Soy Yogurt was the

main competitor to WholeSoy Soy Yogurt; they never sold more units than WholeSoy. The about 3 years ago Silk started losing enormous market share. Ted thinks it was part of the scheme whereby Silk tried to change from certified organic ingredients to so-called "natural" ingredients without changing the UPC codes; it gave them such a bad name that they lost a lot of market share, both in their soymilk and in their yogurts.

Today WholeSoy has about 75% of the soy yogurt market (in cups, not liquid in bottles).

In about 2007 when Ted moved his manufacturing plant from SSI in Turlock, northern California, to the Safeway / Lucerne plant at City of Commerce, southern California, he had to abandon his smoothies because the plant did not have the necessary filling or bottling equipment. First Ted dropped the smoothies, then he had to drop his frozen yogurt–and focused on just the soy yogurt, which is where he is now.

Over the past year or so, WholeSoy has invested a lot in social media by updating their website (www.wholesoyco.com), hiring a woman, Yessica, who does nothing but social media (blogging, Facebook, Twitter, etc.). WholeSoy has gotten a large number of hits on that site. They give people information (such as where they can buy WholeSoy), they can fill out a form so if their store doesn't have it they can request it, they have free coupons, etc.

It is absolutely NOT true (and is never true) that the organisms used to culture yogurt get killed by the acidity of the yogurt. For example, Ted puts 20 billion CFUs (colony forming units, equal to 6-7 quarts of culture) into a 10,000 gallon tank of soymilk. In 9-10 hours those will multiply in the soymilk (they like it so much) to where they are 140 billion CFUs in an 8 oz cup. Even at the end of code, after 30 days, there are still about 70 billion per 8 oz cup.

What is the acidity (pH) of yogurt? In most countries outside the United States, the pH ranges from 3.5 to 5, where low is more acidic and where plain milk or soymilk is about 6.8. In the USA the yogurt is less acidic because it is so sweet. The way to sell yogurt (and) food is to add sugar.

Do the organisms that culture yogurt survive in the gastrointestinal tract? Yes. That is what "probiotics" means. A probiotic food benefits the host. Thus the Japanese have eaten little containers of Yakult since the 1935. In the early 1970s doctors at the Karolinska Institute in Stockholm found that *Lactobacillus acidophilus* and *Bifidobacterium bifidus* were essential to good digestion of food, especially after people went off intravenous feeding. In Sweden one can buy A Yogurt (acidophilus) and B Yogurt (bifidus). One is most important in the large intestine and the other is most important in the small intestine. Yet they stop short of saying that one of these bacteria consumed as food survive and live in the intestinal tract.

One should be a skeptic about the benefits of probiotics, says Ted. He has been a member of and on the board of the International Probiotic Association (IPA) since the day it started. The members are mostly big companies such as Danone / Dannon, Chr. Hansen (Milwaukee), Yakult, etc. They have held three world congresses (once every other year), where they invite people to speak. "The science around probiotics is *very* nebulous." In Canada and Europe no health claims are allowed for probiotics. WholeSoy makes no health claims. Address: WholeSoy & Co., 49 Stevenson St., Suite 1075, San Francisco, California 94105-2975; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-495-2870.

8713. Nordquist, Ted; 2012. Re: Bio of Jonathan Gordon. Letter (e-mail) sent to Henry L. Glasser; Robin Webster; Bill Shurtleff; Jeremiah Ridenour; Laura Tewnion, Sept. 28. 1 p. • ***Summary:*** Dr. Jonathan Gordon posted a bio / resumé for the IFT symposium. Nancy Chapman (director of SANA) sent a copy of it to Ted Nordquist, with a note ("Reading through the Bios, I have a problem with this Bio") and with the following part of Jonathan's bio highlighted in yellow: "After travelling the globe for two years working with every multinational food manufacturer and many major national brands, he moved to White Wave Inc., where he was in charge of all production and R&D (and invented 'Silk' soymilk)."

Ted replied to Nancy as follows:

"Jonathan was hired by Steve Demos after we started manufacturing the Silk soymilk for Steve in Gustine, California in the Morningstar plant, beginning in January, 1996. In 1994-95 I developed the Silk soymilk using formulations I brought from Sweden, using the Morningstar pilot plant and the help of Laura Tewnion and Ann Shaw. We produced the Silk soymilk for White Wave from January 1996 to March 1998. Then Steve began producing Silk in the then Ador plant in Cedar City, Utah. Jonathan was the QC [quality control] manager [at White Wave] during the last phase of our making Silk and was then involved in the product from that time on. For him to publish in his Bio that he "invented Silk soymilk" is very far from the truth. To get confirmation of this you can contact Laura Tewnion who still works now for Dean Foods" (her e-dress of Laura Tewnion and Jeremiah Ridenour are given).

"Bill Shurtleff and Henry Glasser can also testify to these facts.

"Jeremiah Ridenour, then President of Wildwood Natural Foods can also testify to these facts. Jeremiah took me to Gary Veuve, then Manager of the Morningstar, Gustine plant and we agreed that I would develop the first ESL gable-top soymilk for Wildwood Natural Foods. For the record, it is important to note that the 'first ESL gable-top soymilk' idea was that of Jeremiah Ridenour! I developed soymilk formulations in Sweden, but with Tetra Pak cartons. ESL is exactly the same pasteurization techniques as aseptic Tetra Pak, but in a less stable carton. It requires refrigeration, but with up to 80 days shelf life, making it a 'refrigerated product' and sold in the dairy case. This introduced 'soymilk'

in ESL cartons into the dairy case in the US. I believe the good flavor and being in the dairy case is what made soymilk successful in the USA. I would also give Steve Demos credit for his devotion to marketing this product and Jonathan for keeping the flavor good and developing additional variations. The original Silk soymilk had 5 grams of protein per serving, but when the FDA 'Heart Healthy' seal came along, all the soymilks were increased to 6.25g or 7g of protein per serving (just a little less water in the formulation). It is still sold almost exclusively in aseptic Tetra Pak in Europe. Once the product was developed (Morningstar was manufacturing Lactaid in ESL gable top), Jeremiah could not take it to market because of the minimum volumes required. I was running out of money so I took the ESL soymilk to Myron Cooper of Westbrae and Steve Demos. Steve signed onto the ESL soymilk and then developed the 'Silk' brand name. We made the product in the Silk ESL cartons for Steve for two years, selling it to him FOB Gustine, California, before he left us (abruptly)."

"Thanks, Ted.

"P.S. If you would like to forward this email to Jonathan, please do. I would like to see his response!" Address: Boulder, Colorado.

8714. Brawerman, Mark. 2012. Big changes in dairy free products at Turtle Mountain LLC (Interview). *SoyaScan Notes.* Oct. 4. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** Question: When did you realize that you had to make products from other than soy? Ans: "It's not that we had to make something other than soy. On 15 April 2005 we signed a national distribution agreement with Dryer's Ice Cream. This was done with Tom Delaplane, who had run Dryer's for 20 years. Shortly thereafter Nestlé went from having 20% ownership of Dryer's to having 100% ownership. Tom said that he had tested all the non-dairy ice creams worldwide and found that Turtle Mountain's were by far the best. Tom said that he would put Turtle Mountain products in Walmart and in major supermarkets nationwide. He said that our sales would increase to $40-50 million in 2-3 years, but Dryer's is definitely not going to make any of these products, so you will have to expand production rapidly. Everything he said has actually happened. That created a new problem and a new opportunity for us. At that time, Dryer's carried Mocha Mix, which they stopped distributing once they started distributing our products.

Now up until 2005 Mark had made non-dairy soy products–except for a little frozen dairy yogurt in 1989. In 2005 Turtle Mountain was strictly a soy company. But Mark was watching this little company named Coconut Bliss in Eugene, Oregon. They started making their product on a Gelato machine in a clean room–it was very icy and kind of gritty and funky. Yet it started to sell, then sales and distribution increased steadily. In about 2006-08 at a strategic planning session, Mark's people were talking about new products, including a soy cup yogurt since they thought "the products on the market at that time were all terrible tasting." Mark starting talking to his people about making a coconut product. But they had no interest in it. Mark's products had been in Whole Foods for 15 years. He and his people would meet with Whole Foods in December and show them the new products they planned to be shipping in March/May. Four weeks before the meeting Mark decided that he wanted to take 3-5 flavors of coconut ice cream to that meeting. He normally would never give such a command to his guys; its not a dictatorship. In the northwest, data showed that Coconut Bliss was now outselling Mark's products. The coconut flavors got developed and Mark took them to the meeting with Whole Foods in Austin; they liked them and they started appearing in stores the following April. "Within 5 weeks of putting the product into Whole Foods, each of the 5 'So Delicious' coconut flavors in pints was selling more units and more dollars and at a 20% price premium to his Ben & Jerry's-type Purely Decadent soy products, than any single soy ice cream. Each one was selling better than any other product we manufactured. Why? People preferred the taste of the coconut to the soy–that's all I can tell you."

Mark thinks his company got into coconut just before the anti-soy publicity on the Web became significant. His sales of soy products had not yet started to decrease. "Coincidence, act of God, whatever it was." His timing was incredibly fortunate–almost perfect.

In about 2008 they first released their coconut products to national distribution via UNFI; (United Natural Foods) it went to their 12-13 national distribution centers. Once they brought out the first coconut ice creams in Whole Foods, from that year on their soy business started to go down by double digits each year; the sales of all their ice cream competitors were going down even faster. "We went from about $27-28 million of net soy sales down to $16-$17 million in 3 years." The coconut went up much, much faster than the soy went down. Mark's total sales in 2005 were $10-11 million; this year (2012) they will be $85-90 million. "We have been very blessed with consistently growing the business double-digit for the past 6-years straight. We certainly try hard." The coconut products (especially coconut ice cream and coconut beverage) have been responsible for most of the growth. Today Mark's has more than 70% of the dairy free frozen dessert market in the USA. Tofutti is steadily decreasing in size. Rice Dream (developed by Imagine Foods, now owned by Hain) is almost nonexistent.

Over the years, the dairy industry has gotten a bad image for its products, with things such as bovine growth hormone–but of course Mark never mentions that.

Mark buys his coconut in the form of dried meat–by the container. He uses it all–even the fiber which makes his coconut products a good source of fiber. The fact that the coconut has been dried (is not fresh) has no influence on the

flavor–in Mark's opinion.

Does Mark get many questions about the saturated fats in coconut products. Yes, but he explains that medium-length triglycerides are easier for the body to digest. All of the polyunsaturated oils (such soy, corn, safflower, etc.), which are the predominant edible oils in the United States are scavengers, looking for electrons, disrupting cells so that they can become more stable. They have long chains, are hard to digest, and they make people fat. Moreover, coconut meat is an old food; Polynesians have eaten it for thousands of years.

By the time Mark brought out the coconut ice cream, he had also introduced a soy yogurt. Within 6-9 months thereafter the other soy yogurts (such as WholeSoy and Silk) had a dramatic improvement in flavor.

After the coconut ice cream hit the market, they launched a "So Delicious" coconut yogurt and then a coconut milk. Then in March/April 2011 they were showing a Greek-style dairy free coconut yogurt very quietly at the Natural Products Expo. They were also showing similar Greek-style almond yogurt. They brought out the coconut yogurt first and then the almond yogurt in June 2012. In late 2011 they decided to make an Almond Plus dairy free beverage with 5 gram of protein per serving. They thought–mistakenly–that consumers would pay a little more for the large increase in protein at a 10% premium price; the supermarket store and Walmart buyers loved the product but the consumers refused to pay more. The magic price for selling any dairy free beverage is $2.99 a half gallon. The almond product is still selling, but Walmart cut it down to 400 to 500 stores from 3,200. It was not the magical home-run product we thought it would be.

Why have sales of dairylike soy products decreased? Mark thinks a key reason is competition from other non-soy products such as coconut and almond. Noise about soy not being healthy on the Web is clearly also a reason, even if it is false.

Before Mark got involved with soyfoods, he had been in the garment business for many years, including 1½ years with Levi-Strauss. Address: Los Angeles, California. Phone: 213-469-2255.

8715. Glasser, Henry L. 2012. Re: Compilation of documents created by the U.S. FDA and USDA proving that they are now regularly using the terms "soymilk," "soy milk" and "soy yogurt" as common names for these products. Letter (e-mail) to William Shurtleff at Soyinfo Center, Oct. 23. 151 p.

• ***Summary:*** This compilation contains 151 pages of FDA and USDA documents. Exhibit B, "FDA Soymilk Documents," shows 7 documents dated from 21 Jan. 2003 to 17 Nov. 2010.

Exhibit C is "FDA: Office of Regulations, Policy and Social Sciences. Center for Food Safety and Applied Nutrition. Experimental Study of Health Claims on Food Packages: Preliminary Topline Frequency Report: May 2007.

Exhibit D, "Studies referring to soy milk." shows two studies from 16 Feb. 2000 and 29 Jan. 2007.

Exhibit E, "Response letters to the National Milk Producers Federation objection to the use of the term 'soymilk.'" shows 5 letters written from March 8 to May 24, 2000. One of these is from SANA (9 March 2000) and one from White Wave (24 May 2000).

Exhibit F, "Other government agencies references to "soymilk," shows 6 documents dated from 2010 to 2012.

Exhibit G, "Other government agencies references to "soy yogurt" shows 3 documents dated from 22 Feb. 2012 to 2010.

Exhibit H, "References to 'soy yogurt' shows 14 documents from the Internet to soyfoods manufacturers and published documents.

Note: Soy yogurt is mentioned on pages 89, 91, 100 and 105+. Address: Attorney at Law, San Francisco, California.

8716. Heang, Rany. 2012. Soyfoods in Cambodia (Table).

• ***Summary:*** This table (see next page), created by Rany free of charge at the request of Soyinfo Center, has three columns: (1) The English name. (2) The Cambodian name in Khmer script. (3) Romanization of the Cambodian name.

8717. Haren, Chuck. 2012. Guatemala soy nutrition project. *Plenty Bulletin* (*Summertown, Tennessee*) 28(2):2-3. Fall.

• ***Summary:*** "In mid-August I returned to Guatemala to work with local partners Grupo de Soya Santa Maria (GSSM) in Karen's Soy Nutrition Project."

"With a little funding help over the next year from friends and supporters of Plenty, GSSM members expect to begin making and selling soymilk products, sustain their own employment, and continue providing nutritional support for vulnerable children."

Photos show: (1) Two children at Karen's Soy Nutrition Project. (2) GSSM member Jorge Gonzales at 'El Local,' the site of GSSM's new food and nutrition center which serves residents of the neighborhoods surrounding Guatemala City's 'sanitary landfill.'

8718. Nespoto, Massimo. 2012. Le soja au Japon: mythe ou réalité? [Soy in Japan: myth or reality?] *Alternatives Végétariennes* No. 109. Sept/Nov. p. 20-22. [Fre]
• ***Summary:*** The Japanese consume soy in many forms: The main fermented soyfoods are miso, shoyu, and natto. The main nonfermented soyfoods are tofu, soymilk, yuba, okara, Koyadofu, edamame, daizu [whole soybeans], and moyashi [soy sprouts]. A brief description of each is given.

There follows and interview with a traditional tofu maker, Shuji Uemura, owner of Uemura Tofu, who arises each morning at 3:30 a.m. Color photos show: (1) The outside front of Uemura Tofu shop with blue and white norens hanging. (2) Mr. Uemura standing inside his shop. (3-4) Freshly made tofu in a cooling tank and in individual tubs. (5) Many packaged soyfoods in Japan. Address: Prof., Univ. of Lorraine.

8719. WhiteWave Foods Co. 2012. Saputo to buy Dean Foods Morningstar unit for $1.45 billion (News release). Broomfield, CO 80021 1 p. May 23. 28 cm.
• ***Summary:*** Saputo is the largest dairy processor in Canada. They started out as a cheese company, then got into dairy milk. Saputo acquired Dairyworld Foods in about 2001. Dairyworld owned a company named Soyaworld, which made the So-Nice brand of soymilk. Saputo spun off Soyaworld and sold it to Sanitarium Foods in Australia. After a while, Sanitarium sold it back to Agrifoods International in Calgary. It is now named Earth's Own.

Wikipedia (July 2013) says the following about Earth's Own Food Company: "Earth's Own Food Company (previously Soyaworld Inc.) is a health food manufacturing company in Canada. They are producers and distributors of the So Good, So Nice, Almond Fresh and Ryza brands within Canada.

"History: Earth's Own was founded under the name Soyaworld Inc. in 1995 by Maheb Nathoo, and soon grew with an investment from Dairyworld Foods where Mr. Nathoo held the position of Vice President of Finance.

"In 2003 Sanitarium So Good Limited purchased 100% control of Soyaworld. From 2003 onward the company was wholly owned by the Seventh Day Adventist Church, through Sanitarium So Good Limited and Canadian Nutrition Association.

"In early 2011, Soyaworld Inc. was renamed Earth's Own Food Company Inc.

"In 2012 Earth's Own ownership group was renamed to Life Health Foods, Inc. The group remained 100% owned by the Seventh Day Adventist Church. In 2012 Agrifoods International Cooperative Ltd. purchased shares of Earth's Own." Address: 12002 Airport Blvd., Broomfield, Colorado 80021. Phone: (313) 635-4000.

8720. *SoyaScan Notes.* 2012. Soymilk and cow's milk prices at Safeway supermarket in Lafayette, California (Overview). Dec. 13. Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** Since Dec. 1983, approximately every other year, Soyfoods Center has conducted a survey of the prices of soymilk and cow's milk in California. Soymilk: Silk Fruit & Protein (Mixed Berry or Peach and Mango flavors), quart, non-organic $2.99 or $1.49 per chug. Silk organic vanilla or plain: $2.49/quart. Silk organic chocolate, plain, vanilla, very vanilla fortified for kids, or unsweetened: $3.99/half gallon. Silk non-organic lite chocolate, lite plain, lite vanilla (lite means diluted with water): $3.99/half gallon. Silk non-organic Plus omega-3 DHA, or Plus for bone health: $4.19. Silk organic nog: $3.29/quart.

Safeway O Organics soymilk: Chocolate, vanilla, plain, lite vanilla, lite plain: $3.49/half gallon.

Cow's milk (fortified with vitamins A and D) sells for the following prices at the Safeway supermarket in Lafayette, California: (1) Fat free: quart NA (not available). or $2.39/half gallon or gallon NA; (2) Low fat (1% fat, protein fortified): $1.59/quart or $2.39/half gallon or $4.29/gallon; (3) Reduced fat (2% fat, protein fortified): $1.59/quart or $2.39/half gallon or $4.29/gallon; (4) Whole (homogenized, fortified with vitamin D only): $1.59/quart or $2.39/half gallon or $4.39/gallon. (5) Acidophilus Plus Bifidus–Low Fat (1% fat): NA. (6) Horizon Organic $4.49/half gallon regular or 4.49/half gallon 2% fat. (7) Lactaid: $3.99/half gallon. Lucerne 100% lactose free, fat free $3.69/gallon. (9) Safeway O Organics Fat free, low fat or reduced fat: $3.59/half gallon. The best-seller among these is Fat free in gallons.

8721. Robbins, John. 2012. The truth about soy. *http://www.foodrevolution.org/blog/the-truth-about-soy*
• ***Summary:*** This is the best rebuttal we have seen to Sally Fallon, the Weston A. Price Foundation (WAPF) and their anti-soy brigade. It begins:

"In recent years, I've received quite a number of requests from people asking for my views on soy products. Many of these inquiries have mentioned a stridently anti-soy article written by Sally Fallon and Mary G. Enig, titled 'Tragedy and Hype,' that has been widely circulated. This article presents a systematic series of accusations against soy consumption, and has formed the basis for many similar articles. Large numbers of people, as a result, are now seriously questioning the safety of soy.

The litany of dangers with soy products, according to the article by Fallon and Enig, is nearly endless. Tofu, they say, shrinks brains and causes Alzheimer's. Soy products promote rather than prevent cancer. Soy contains 'antinutrients' and is full of toxins. The pro-soy publicity of the past few years is nothing but 'propaganda.' Soy formula, they say, amounts to 'birth control pills for babies.' 'Soy is not hemlock,' they conclude, 'soy is more insidious than hemlock.'

"Fallon and Enig say the soy industry knows soy is poisonous, and 'lie(s) to the public to sell more soy.' They

say that soy is 'the next asbestos.' They predict that there will be huge lawsuits with 'thousands and thousands of legal briefs.' They warn that those who will be held legally responsible for deliberately manipulating the public to make money 'include merchants, manufacturers, scientists, publicists, bureaucrats, former bond financiers, food writers, vitamin companies, and retail stores.'

"Given the rapidly expanding role that soy in its many forms has come to play in the Western diet, these accusations are extremely serious. If they are to be believed, the widespread trust that many people have come to have in soy is not only misplaced, but disastrous.

"Soy foods have come to play such a significant role in the diets of many health conscious people, and the allegations that have been made against soy are so many and so grave, that I think the topic warrants a careful, detailed and meticulous look. What follows is my attempt to provide an objective appraisal of both the benefits and the dangers of soy.

"Are Soy Foods a Blessing or a Curse?

"It's not that long ago that soybeans were considered by most Americans to be 'hippie food.' But then medical research began accumulating, affirming that soy consumption reduced heart disease and cancer risk, that it lengthened lives and enhanced their quality, and that it provided an almost ideal protein to substitute for animal proteins that almost inevitably come packaged with cholesterol and unhealthy forms of saturated fat. The mainstream culture began taking note. In a 1999 article titled 'The Joy of Soy,' *Time Magazine* announced that consuming a mere 1.5 ounces of soy a day can significantly lower both total and LDL ('bad') cholesterol levels. The evidence was becoming so convincing that even the ardently pro-pharmaceutical FDA wound up affirming that soybeans are a food that can prevent and even cure disease.

"As the evidence of soy's health benefits kept accumulating, sales and consumption skyrocketed. Books like *The Simple Soybean and Your Health, Tofu Cookery,* and *The Book of Tofu* helped spread the word. Annual soymilk sales, which amounted to only a few million dollars in the early 1980s, have now soared to more than a billion dollars. And it's not just soy milk, it's all soy foods. From 1996 to 2011, annual soy food sales in the U.S. literally quintupled–increasing from $1 billion to $5 billion.

"But, according to the article by Sally Fallon and Mary Enig, this is all a tragic mistake, because soy is far indeed from living up to the many health claims that its proponents have made for it..." Address: California.

8722. Shurtleff, William; Aoyagi, Akiko. 2012. The book of tofu: Protein source of the future–Now! 2nd ed. Revised. Lafayette, California: Soyinfo Center / www.createspace.com. 344 p. Dec. 22. Illust. by Akiko Aoyagi Shurtleff. Index. 28 cm. [321 ref]

• ***Summary:*** This edition, published as a print-on-demand book by www.createspace.com, is 8 pages longer than any previous edition. The entire Glossary (with all illustrations) from the original 1975 edition is included, as is the updated Preface, the complete "Directory of Tofu Manufacturers" in the Western world (as of Feb. 2001), and the complete bibliography of 321 entries. After the Index is an updated full page of information about Soyinfo Center, then the original photo of Shurtleff and Aoyagi in 1975 from the original edition, and updated page "About the Authors," with new photos of Bill and his son Joey at Yosemite in 1994 and Akiko Aoyagi Shurtleff at the Lafayette Reservoir in 1999.

Then comes the section "Sending Tofu in the Four Directions," with a new photo of William Shurtleff with his tofu master's family at Sangen-ya Tofu Shop during his apprenticeship period, Tokyo, circa 1974. On the last page is (1) Information about the book *Tofu & Soymilk Production* and (2) about the SoyaScan database, which now contains more than 90,000 records from 1100 B.C. to the present. To order a customized search of this remarkable database, contact Soyinfo Center at 925-283-2991 or www.soyinfocenter.com.

Thanks to Akiko for redesigning the front and rear covers, and for skillfully and artistically integrating all the pieces into this newly revised edition. Address: P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

8723. Sharma, Ratan. 2012. Re: Soymilk and tofu in India. Letter (e-mail) to William Shurtleff at Soyinfo Center, Dec. 26. 1 p.

• ***Summary:*** "Soymilk and tofu business has been growing in India like anything [rapidly]. Soy is really picking up." Address: PhD, Manager, the SoyaCow Centre, KH-177 Kavi Nagar, Ghaziabad 201 002 UP, India.

8724. *SoyaScan Notes.* 2012. Soymilk and cow's milk prices in the refrigerated dairy case at Trader Joe's in Lafayette, California (Overview). Dec. 27. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** Since Dec. 1983, approximately every other year, Soyinfo Center has conducted a survey of the prices of soymilk and cow's milk in California.

Trader Joe's is an all-purpose grocery store which emphasizes low prices and natural foods. Both soy milk and cow's milk are sold in the dairy case under the Trader Joe's brand.

All soymilk is sold in ½-gallon gable-top paper milk cartons. Low-fat vanilla or original (5 gm of protein per cup): $3.29. Organic unsweetened $3.49 (7 gm of protein per 8 oz cup). Organic low-fat unsweetened $2.99 (7 gm of protein per cup).

Trader Joe's organic soy yogurt in the dairy case: Organic 24 ounces: $2.49. Strawberry or peach (6 oz. cups): $0.99 each.

Trader Joe's has two sets of soy milk (each set is of about equal size) in its dairy case: Non-organic and organic.

Trader Joe's has two sets of cow's milk (each set is of about equal size) in its dairy case: Non-organic and organic. Most dairy milk is sold in plastic bottles or jugs. In the prices that follow the Non-organic price will be listed immediately before the organic price, separated by a "/".

Cow's milk (fortified with vitamins A and D) sells for the following prices at the Trader Joe's in Lafayette, California: (1) Fat free: quart $1.29/NA (not available) or half gallon $2.19/$3.49 or gallon $3.39/$5.99

(2) Low fat (1% fat): quart $1.29/NA or half gallon $2.19/$3.49 or gallon $3.39/$5.99.

(3) Reduced fat (2% fat): quart $1.29/ NA or half gallon $2.19/$3.49 or gallon $3.39/$5.99

(4) Whole (homogenized, fortified with vitamin D only): quart $1.29/ NA or half gallon $2.19/NA or gallon $3.39/$5.99. (5) Reduced fat (2% fat) with the cream on top, half gallon NA/$3.49. (6) Whole (nonhomogenized) with the cream on top, half gallon NA/$3.49.

The best-seller among these is the fat-free gallons, $3.39 per gallon, with 4 facings.

Trader Joe's has no acidophilus plus bifidus milk.

8725. *SoyaScan Notes.* 2012. Soymilk and other nondairy milk prices in nonrefrigerated shelf-stable (aseptic) cartons at Trader Joe's in Lafayette, California (Overview). Dec. 27. Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** Since Dec. 1983, approximately every other year, Soyinfo Center has conducted a survey of the prices of soymilk, other nondairy milk, and cow's milk in California.

Trader Joe's is an all-purpose grocery store which emphasizes low prices and natural foods. Various nondairy milks are sold under the Trader Joe's brand and several other brands.

Varieties of soymilk: Trader Joe's Soy Essential: Soy Beverage. 1 quart, organic, unsweetened, with 500 mg omega-3 ALA [alpha-linolenic acid] plus a good source of fiber and enriched with 7 nutrients: $1.69.

Trader Joe's Organic. 1 quart: $1.69. 2 quarts (half-gallon), original, or vanilla or chocolate (all 3 sweetened with sugar): $2.99.

Trader Joe's nonorganic. 1 quart, original, or vanilla or chocolate (all 3 sweetened with sugar): $1.69.

WestSoy Nonfat Organic Soymilk (made by Hain-Celestial). 1 quart. Plain (sweetened), vanilla, or vanilla unsweetened: $1.99.

Soy Dream Organic Enriched (made by Hain-Celestial). 2 quarts (half gallon). Original or vanilla: $3.19. Enriched with: Soy isoflavones 47 mg per serving. Vitamins A, B-12, D & E. Calcium equivalent to milk. Sweetened with evaporated cane juice [sugar].

Nonsoy, nondairy beverages: Trader Joe's rice milk in 2-quart (half gallon) cartons: Original (unsweetened) organic and vanilla (unsweetened) not organic: $2.99 each. The same two products in quarts: $1.69 each.

Blue Diamond Almond Breeze. 1 quart, nonorganic. Unsweetened vanilla, unsweetened original, and sweetened original: $1.99.

Trader Joe's Almond Smooth. 1 quart, nonorganic, fortified with calcium plus vitamins A, D, and E. Original, chocolate, or vanilla: $1.69.

Pacific Organic Almond (from Pacific Foods, Oregon). 1 quart. Vanilla or original: $1.99.

Trader Joe's coconut milk, 1 quart, with calcium, vitamins A and B-12 plus medium-chain fatty acids. 1 quart, nonorganic: $1.99.

8726. Kelly, Carla. 2012. Quick and easy vegan slow cooking: more than 150 tasty, nourishing recipes that practically make themselves. New York, NY: The Experiment. xii + 275 p. Illust. (color photos). Index. 24 cm.
• ***Summary:*** Tofu is mentioned on 29 pages in this book, seitan on 29 pages, soy sauce on 28 pages, soymilk on 23 pages, miso on 18 pages, tempeh on 17 pages, fermented black soybeans on 1 page (p. 114), and cooked black soybeans on 1 page (p. 141).

The section on "Soy foods" (p. 26-29) has subsections on: Regular (water-packed, Chinese-style) tofu. Silken (vacuum packed, Japanese-style) tofu, smoked tofu, tempeh, soy curls (or TVP chunks), soy sauce, miso paste, soy creamer. Also: Seitan and vital wheat gluten, Marmite.

What are soy curls? Defatted soy flour extruded in the shape of curls. "I know not everyone has access to soy curls, but they are available online so try to get them if you can. They cook so wonderfully tender and absorb flavor so well. They do not need to be reconstituted prior to use because of the long cooking time. My first preference for a substitute is TVP chunks, then extra-firm tofu or seitan cut into ½-inch cubes."

Special soy recipes: Black bean beans ("I have a container of black bean sauce, a pungent paste made from fermented black soybeans, in my fridge that I often use for sautéing tofu or green beans," p. 114). Soy curl and soybean chili (with "1 cup soy curls" and "Two 15-ounce cans cooked black soybeans, drained and rinsed," p. 141). Address: British Columbia, Canada (born in New Zealand).

8727. Roseboro, Ken. 2013. The 2013 non-GMO sourcebook: A buyers guide to global suppliers of non-GMO and organic seeds, grains, ingredients, feed and foods. Fairfield, Iowa: Evergreen Publishing, Inc. 106 p. Illust. (both color, and blue and white photos). Index. 28 cm.
• ***Summary:*** Contents: Editor's introduction (by Ken Roseboro, publisher and editor). Suppliers of non-GMO products: United States, Canada, Europe, Africa / Middle East, Asia / Australia, Latin / South America. The Non-GMO Project special section (p. 51+). Non-GMO shopping guide.

Related products, services, and organizations. rBGH-free dairy processors in the US. Index of non-GMO suppliers by product category: Seeds (corn, soybean, edamame), canola / rapeseed, processed canola / rapeseed products, corn / maize, processed corn / maize products, soybeans (identity preserved, specialty, organic), processed soy products (flakes, flour, germ concentrate, grits, lecithin, meal, nuts, oil, low linolenic oil, phytosterols, protein, textured protein, soymilk, soymilk powder, soy sauce, tofu, vitamin E / tocopherols), other grains / oilseeds and processed products (alfalfa / hay, barley, cotton,...), other ingredients and processing aids (citric acid, dairy ingredients...), sweeteners, food products, food supplements, animal feed. Index of related products, services and organizations. Complete index of listings. Index of advertisers.

Note 1. In the Suppliers section, many company entries have the Non-GMO Project logo (with an orange and black butterfly on a green leaf) next to their company name

This comprehensive book gives the single best picture of the growing industry, worldwide, opposed to genetic engineering. Address: Editor / Publisher, P.O. Box 436, Fairfield, Iowa 52556. Phone: 1-800-854-0586.

8728. Soyatech, LLC. 2013. Soya & Oilseed Bluebook 2013: The annual directory of the world oilseed industry, online at www.soyatech.com. Bar Harbor, Maine: Soyatech. 336 p. Jan. Comprehensive index. Advertiser index. Statistical conversions. 28 cm.

• ***Summary:*** This is the 7th year in a row that the *Bluebook* (a $95 value) has been sent free of charge to qualified industry members. On the front cover is a large round color photo collage of four of the major oilseeds, plus harvesting with a combine and shipping in containers.

The 14 oilseeds covered in this book are (alphabetically): Canola, coconut, corn, cottonseed, flaxseed, hemp seed, jatropha, linseed, palm, peanut, rapeseed, safflower, soya, sunflowerseed–the same as last year.

On the inside front cover is a color ad for Omega-9 Oils (from Dow Agrosciences). Other full-page ads related to soyfoods are: ADM, AOCS, French Oil Mill Machinery Co. and Insta-Pro International.

On the rear cover is a full page color ad from Natural Products Inc. (NPI, Grinnell, Iowa), makers of innovative ingredients for soymilk and tofu to cakes and cookies. They are the makers of Scotsman's Mill ingredients.

Chris Erickson is CEO. Mark Dineen is president. Keri Hayes is publisher and operations director. Address: P.O. Box 1307, 19 Clark Point Rd., Suite 112, Southwest Harbor, Maine 04679. Phone: 207.244.9544.

8729. Vitasoy International Holdings Ltd. 2013. Interim Annual report 2012/13 (unaudited). Weaving success through commitment. New Territories, Hong Kong. 56 p. Jan. 30 cm. [Eng; Chi]

• ***Summary:*** All values are in million Hong Kong dollars. The fiscal year ends on 31 March 2012. Page 4, financial highlights, states that (for the 6 months ended Sept. 30) turnover increased by 10% from 1,946 to 2,135. Gross profits grew by 11% from 913 to 1,010.

A management report (p. 5) with business highlights (incl. revenue from external operations and profit from operation) is given for: Hong Kong and Macau, Mainland China, Australia and New Zealand, North America, and Singapore. Address: No. 1, Kin Wong Street, Tuen Mun, New Territories, Hong Kong. Phone: 2466 0333.

8730. He, Gene. 2013. Re: Nature Soy, Inc.: Its history and products 713 North 10th St., Philadelphia, PA 19123. 10 p. + 3 inserts. 28 cm.

• ***Summary:*** In 1990 Sunkee Tofu Food Company (*Xinji Doufu Shipin Gongsi* in pinyin) started in Pennsylvania, located at 448 North 12th St., Philadelphia, a few blocks from their present location. The founder was Wen Yatsun, who was born and raised in China but had been educated in the USA; he previously been an electrician and had owned and operated a restaurant in Philadelphia. Being in the restaurant business, he saw that there was a demand for tofu but no local manufacturers. His business thrived and grew very nicely. Sunkee mostly served customers in Philadelphia, especially restaurant customers.

The company's original products, sold under the Sunkee brand, were basic tofu products–the types popular in the Asian-American market: Soft tofu, firm tofu, silken tofu, extra firm tofu, and five-spice extra firm. Also: Soymilk (plain or sweetened, ½ gallon), soymilk (sweetened, 16 oz = 1 pint). In about 1992 the company introduced soy puffs (deep fried tofu puffs).

In 1998 Mr. Wen decided to establish a new company, Nature Soy, Inc. (*Datian Doupin Chang,* in pinyin) and two new brands: "Nature's Soy" and "Datian" (two Chinese characters meaning "Nature Soy"). Production of tofu was moved into the current location (713 North 10th Street in Philadelphia), with about ten times as much square footage and with a very modern, advanced tofu production line. A space in the new building was constructed for an R&D laboratory; it began operation in late 1998. That laboratory improved the sanitation of the entire production facility.

In 2002 the following specialty flavored products were introduced to the market: (1) Hot & spicy flavored tofu, 8 oz. (2) Curry flavored tofu, 10 oz. (3) Oriental sauce tofu, 10 oz.).

In 2003 Gene joined the company as a partner with Mr. Wen. They both own the company and work there every day. Gene developed the company philosophy: "We take soy products seriously!" and "Healthier living, healthier life." At this time the company began to do a little bit of marketing to reach outside the Asian-American community. It was also for this reason that the company began to develop various

pre-marinated types of tofu, sliced tofu, 5-minute tofu (a cake of tofu with a packet of seasoning that takes about 5 minutes to cook), etc. Gene joined the company in large part to make sure the company meets all sanitation and modern food processing regulations. Born and raised in China, his educational background is in dairy products in the USA. He was one of the few Chinese cheese makers. He earned his PhD degree from Utah State University, and was especially interested in fermented dairy products. After that, he went into the fermentation industry.

In about 2004 the R&D lab developed tofu that could be sliced as thin as 1/16 of an inch, and from this they developed a new product: organic deli-style pre-sliced tofu (see photo from 2005 company brochure). The product was pre-seasoned like a lunch meat. As far as we know, this was the world's first product of this type. They supplied it to Giant (a supermarket chain) and also to Walmart. Gene's original intention was to replace those lunch slices which contain a lot of low-grade materials–as well as cholesterol, saturated fat, etc. One big problem at the time was that the company did not have enough marketing money. Unfortunately, the demand for this product was not very great and it had to be discontinued

Maybe the product was ahead of its time. Gene has developed a related product that is even more interesting than the original thinly sliced tofu. It is like a block of cheese, where a deli or restaurant can put it on their own cheese slicer to make fresh tofu slices to any thinness they desire. The company did a focus group on that product with a group of vegetarians and the loved it, but it is not yet on the market.

Competitors: The biggest are House Tofu (which has a new plant in New Jersey), Vitasoy / Nasoya, and Pulmuone [which has a relatively new plant in Tappan, New York]. Nature Soy's product line is much bigger than that of House, which is various forms of water-packed tofu.

Nature Soy has been growing every year, without one year in which sales decreased, even during the Great Recession that started in 2008 and even during the anti-soy campaign on the Web. Of the latter Gene says simply, "They are crazy."

In about 2004 the wheat gluten based vegetarian meat substitutes were produced for commercial sales. Also in 2004 fried tofu (8 oz was introduced).

Mr. He knows and likes fermented tofu. He says that if you blend it with other ingredients (such as garlic) to make a fermented tofu spread, where it serves as the source of flavor, it makes a great spread–as for crackers. A lot of fermented tofu is sold in the USA at Asian food stores, but essentially all of it is imported. It is almost impossible for a domestic manufacturer to compete with the low imported prices.

Gene believes that Nature Soy has a bright future. Address: 713 North 10th St., Philadelphia, Pennsylvania. Phone: 215-.

8731. Guardino, Lorraine. 2013. How Soy City Foods (in Toronto, Ontario, Canada) was transformed into Sol Cuisine by Dror Balshine (Interview). *SoyaScan Notes.* Feb. 28. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** During the 1970s Lorraine was part of a meditation group–and doing other "weird" things; she was not on the scene until 1983, but she is familiar with the early history of Soy City Foods and Sol Cuisine.

In 1980 Soy City Foods started as a tofu company (at 2847 Dundas Street West), in order to supply their very successful restaurant, named The Vegetarian Restaurant, which had opened in 1976 at 542 Yonge Street by Wellesly; that was their first little company. It was one of the first vegetarian restaurants in Toronto; Annapurna was the other. However, the restaurant simply couldn't find a source of good tofu.

The Vegetarian Restaurant was established by Golden Age, Inc., a group of 28-30 like-minded young friends. Each person invested about $1,000 to get it started. Being young, everyone had a lot of energy. The Vegetarian Restaurant was very profitable–initially–and that money enabled it to start Soy City Foods. It was worker owned–a cooperative. The only original restaurant manager Lorraine knows of and can confirm was Paul Dunlop.

Pat Guardino was hired to build the tofu shop because he was a welder. Pat went down to New Hampshire and apprenticed / studied with Jay and Pat Gibbons, owners and operators of Crystal Springs Tofu Shop (renamed North Country Soyfoods by summer 1980) in Bethlehem, New Hampshire; during the week he was there, he learned the basics of making tofu and tofu equipment.

The goal of Soy City Foods shop was to bring Toronto a "clean protein." The main owners of the shop ended up being Pat Guardino & Paul Whitehead. However everyone who worked at the Soy City Foods owned it, and all the capital came from these workers.

Also in 1980 a second The Vegetarian Restaurant was opened on Dundonald Street (which is just off of Wellesly Street) along side of Soy City Foods. The owners / workers called the new restaurant the "West End" and the original one the "Downtown." Both restaurants operated together for about 15 years–from 1980 until about 1995 or 1996, when the Downtown closed, because of dwindling profits and aging staff. When this restaurant had opened at its original downtown location in the mid-1970s there were lots of profits, because the restaurant was very unique. But as the years went on, almost every restaurant in Toronto began to offer good vegetarian food. So the uniqueness dwindled quite a bit as vegetarian food became more widely available. Moreover, leasing and renting rates skyrocketed in the downtown Toronto area. Soy City developed an excellent distribution network and several of their veggie burgers had gone into the larger grocery store chain in Ontario.

They were also selling across Canada in foodservice, which ended up being Soy City's largest market. In Canada, in the university market, it was a requirement that each university provide two vegetarian options for breakfast, lunch, and dinner. That became the driver for Soy City's growth at the time. They ended up selling their tofu in bulk to the university market, and one of the contract catering companies sent their chefs to the west end Vegetarian Restaurant for a week and learned how to cook vegetarian cuisine. Soy City developed two veggie burgers for them and they chose which one they preferred–which was called the Soy City Veggie Burger and which contained both soybeans and okara. That is still sold by Sol Cuisine, but it is now called the Almond Grain Burger. Soy City made an ongoing effort to use okara in foods. "It was very difficult for all of us who worked there to see such a beautiful protein and fiber be thrown away. So our Soysage used a lot of okara, as did a falafel and the veggie burger."

Why did Soy City Foods want to sell? The worker population was aging and they were outgrowing the very small facility as the demand for tofu and veggie burgers steadily grew. Basically the worker-owners made the decision to sell rather than to invest more money and continue on at low wages and personal sacrifice. By 2002 two-thirds of the company's sales were via foodservice. Yet total sales were just under $1 million (Canadian).

In 2002 Dror Balshine bought Soy City Foods, He was a young entrepreneur, in his early '30s. He already had a business in Toronto named Second Nature that sold veggie burgers and dry veggie burger mix. He did not have a manufacturing facility; his products were co-packed for him. He was already dedicated to vegetarianism and he used textured soy protein concentrate in his burgers. Lorraine, who was the sales manager of Soy City Foods, already knew Dror who she often met at food shows. She called him and discussed the possibility of his buying the company. He was interested and before long he decided to buy it.

One of the first things Dror did was to change the name to Sol Cuisine. The tofu continued to be sold under the brand / banner of Soy City Foods, and it is only now that the Soy City Foods name is being phased out. This tofu began to be made with organic soybeans in about 1985 and that tradition continued under Sol Cuisine. Shortly after buying Soy City Foods, Dror moved it to Mississauga (5715 Coopers Ave., Unit 1), just west of Toronto. Shortly after this move was completed, Soy City Foods' food manufacturing plant at 2847 Dundas Street West in Toronto, was closed. They made tofu, tempeh, veggie burgers, falafel, etc. at the new, lower-rent and lower-tax location. Later, the company needed a larger facility, so in Feb. 2008 they moved to their present address at 3249 Lenworth Drive, Mississauga (about 10 minutes drive south of 5715 Coopers Ave.). All foods that Sol Cuisine now sells (except the Sol-Dog, a veggie hot dog) are made at the plant on Lenworth Drive. The Sol-Dog is sold only to foodservice. When they moved to Lenworth Drive, they became a HACCP facility and also stopped making tempeh; the cross contamination of the tempeh spores was too strong. Dror is committed to making only vegan foods and to verification by the non-GMO Project (they are very thorough) and to organic when possible. And, all but one of their products are now gluten-free.

Foods shown on a 2005 leaflet include T-Ribz (now called Organic Barbecued Ribz; made from their own tofu, sliced put in a package with their own sauce on top; sold fresh in Canada and frozen in the USA for about 18 months). Organic T-Nuggets (cubed tofu that was marinated, breaded and baked; never sold as a retail product, no longer made). Organic Sol-Ground (now the Veggie Crumble), 3 vegetarian burgers (they now make a total of 5 soy burgers in the retail market; the main ingredient is verified non-GMO TVP, made by ADM).

What was the Soyateria? It was Soy City's soy deli in Toronto that opened in April 1981. The public could come in and have a pita bread sandwich, or buy bulk tofu. There was a little menu. One popular dish was tofu, coated in Engivita nutritional yeast, then sauteed on the grill with sauteed onions and mushrooms and a sauce. The Soyateria did a lot of experimentation to learn what recipes and products people liked. They made tofu cheesecakes, tofu pumpkin pie, bulk soymilk, soft soy ice cream, etc. Lorraine began working there part time in 1983 (it was a short walk from her home) while raising a family. She left her good-paying job at the Royal Bank to work at the Soyateria! It was a lot of fun. But after 5-6 years it went out of business.

John Escavel, who is still production manager at Sol Cuisine, started working at Soy City Foods in about 1980 or 1981. He has an excellent memory, so he is a good person to talk with about the company's history. Address: Sales Manager, Sol Cuisine, 3249 Lenworth Drive, Mississauga, ONT L4X 2G6 Canada. Phone: 905-502-8500 x 221.

8732. *Malnutrition Matters Newsletter* (*Ottawa, Canada*). 2013. Over 200 VitaGoats and SoyCows now installed internationally: EU project in Myanmar to add 13 more in 2013. Feb. p. 1.

• ***Summary:*** "In 2012 Malnutrition Matters (MM) reached the milestone of implementing 200 systems and 2013 looks to be greatly expanding on that with additional multi-system projects in the wings. The EU-funded project in Myanmar with the NGO's World Concern and ZOA involves 15 VitaGoats to be installed in microenterprises in both Yangon [formerly Rangoon, the former capital of Burma] and rural areas. MM personnel are working closely with World Concern Myanmar to oversee the installation and training in stages over nine months. This is in addition to the existing 4 VitaGoats and SoyCows already in the country previously under other projects."

A color photo shows children seated at wooden tables at

the Yangon Orphanage where they are served soymilk and biscuits daily. Address: 48 Rivershore Crescent, Ottawa, ON K1J 7Y7, Canada. Phone: 1-613-742-6888.

8733. *Malnutrition Matters Newsletter* (*Ottawa, Canada*). 2013. 12 more VitaGoats / SoyCows for Malawi in 2013. Feb. p. 1.
• ***Summary:*** "Since 2010 four systems have been operated by the 'Farmers' Clubs' sponsored by DAPP near Blantyre. This was in addition to four systems running in the north of Malawi near Embangweni, sponsored by a US-based Methodist Church project with Robert Holloway.

"The success of the existing 8 systems in Malawi has resulted in a major expansion of the DAPP program there and 12 more systems will be shipped in March. Ten will be going to the DAPP Farmers' Club program and two will be going to hospitals which are sponsored by the Canadian NGO 'Christian Baobab Outreach.'

• ***Summary:*** This would seem to indicate that these products are becoming less important and selling less.

8736. *SoyaScan Notes.* 2013. Three early students of soyfoods in Japan after World War II: A.K. Smith, William Brandemuhl, and William Shurtleff (Overview). April 15. Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** Dr. A.K. Smith, had a strong academic background, having earned MA and PhD degrees from Columbia University. His interest in East Asian soyfoods began in about April 1948 when he began to write questions about fermented soyfoods to Lewis B. Lockwood, PhD and microbiologist. By June 1948 he had departed from the United States on a 3-month study tour that would take him to China, Japan and Korea. He collected samples of 100 microorganisms used in fermenting soyfoods. His articles on "Oriental use of soybeans as food" began appearing in *Soybean Digest* in Feb. 1949. He was mainly interested in fermented soyfoods; his articles about each food were accurate but relatively short.

William Brandemuhl studied soyfoods only in Japan. He arrived in Kyoto, Japan in Jan. 1963 and became a research fellow at the Department of Agricultural Economics, Kyoto University, Kyoto, Japan. Between Feb. 1963 and May 1964 (15 months) he conducted field research on soybean utilization in Japan. In June 1963 (after William had been in Japan for 4 months), Tomoko completed her graduate studies, graduated from the University of Wisconsin, and (since her scholarship was finished), returned to Japan–to be with William and to help him with his research in Japanese, which he spoke only moderately well. She traveled with him throughout Japan and translated for him during the many interviews he conducted. William's monthly check from Honeymead paid for his room and board–but not for his travel and research, so he had to work part time doing English translation for a Japanese company. On trips, he took many photos using his expensive Nikon camera. Tomoko's family lived near Kobe, where she and William were married on 8 Aug. 1964–three months after he finished his field research.

William's primary interests were: (1) To describe in detail, with photos, how each of different Japanese soyfoods were made. He was extremely thorough. (2) The place of each food in Japanese culture. (3) The industry of which each food was a part and its trade associations (if any). (4) The future of that food in Japan. He was not particularly interested in transmitting these foods and their technology to the United States, and he took almost no interest in carefully selecting names for these foods (or the equipment used to make them) which would give them the best chance of catching on in the best chance of catching on in the United States.

William Shurtleff first visited Japan for 3 months in the summer of 1967 while a student at Stanford University; he lived in a Zen temple in Kyoto, practiced meditation each evening, and studied Japanese language and culture. After graduating from Stanford and living for 2½ years at Tassajara Zen Mountain Center, he arrived in Japan on 16 Jan. 1971 with the intent of becoming fluent in Japanese so he could translate the writings of Dogen Zenji, an early Soto Zen master. For the first year he lived with a Japanese family in Kyoto and became a full-time student at the *Nihongo Gakko,* a Japanese language school in Kyoto. At the end of that year he moved to Kyoto, where he entered a university to continue his Japanese language studies. While in Tokyo, he became close friends with Akiko Aoyagi, a Japanese artist

and cook. In Oct. 1972 he first visited and met Mr. Toshio Arai, a Japanese tofu master under whose guidance Shurtleff would later become an apprentice. In Dec. 1972 he started to write a booklet for Americans about tofu; he believed that tofu could be a very positive addition to the American diet and that young Americans would enjoy making tofu as a new occupation. On 13 Jan. 1973 he signed a contract with Autumn Press, a small publishing company in Japan owned by Americans Nahum and Beverly Stiskin. For the next 2½ Shurtleff and Aoyagi researched and wrote *The Book of Tofu,* which was published in Dec. 1975. Shurtleff made enough money to live in Japan by working as an interpreter, translator and researcher for his father's tool company. The story of this adventure is told in the Preface to *The Book of Tofu* (see 2001 or subsequent editions). Shurtleff's interests and work were different from those of William Brandemuhl in several important ways: (1) He spoke very good Japanese. (2) His initial focus was almost entirely on tofu, although he later wrote a book about miso. (3) He was just as interested as Brandemuhl in describing accurately how tofu (and other soyfoods) were made in Japan, but primarily with the intent of transferring this technology to the United States and other parts of the world. To this end he was deeply interested in choosing names for soyfoods and equipment that would help them take root in their hew homes. On 13 June 1978 Shurtleff and Aoyagi, after being married, moved from Japan to live in the United States. For the rest of his life Shurtleff did research on and wrote books about soyfoods, and simultaneously worked to introduce them to the United States. By late 1999 soyfoods had become important foods in the USA; soy sauce, soymilk and tofu had become mainstream foods.

8737. WhiteWave Foods Co. 2013. WhiteWave spin-off from Dean Foods completed: Reduction in the voting rights of Class B common stock effective; Stock repurchase program authorized. (News release). Broomfield, CO 80021 2 p. May 23. 28 cm.

• ***Summary:*** "Broomfield, Colo.–(Business Wire)–May 23, 2013–The WhiteWave Foods Company ("WhiteWave") (NYSE: WWAV) today announced that Dean Foods Company has completed the distribution to Dean Foods stockholders of a portion of its remaining equity interest in WhiteWave. After the close of business today, Dean Foods distributed an aggregate of 47,686,000 shares of WhiteWave Class A common stock and 67,914,000 shares of WhiteWave Class B common stock as a pro rata dividend on shares of Dean Foods common stock outstanding at the close of business on the record date of May 17, 2013.

Based on the shares of Dean Foods common stock outstanding as of May 17, 2013, the record date for the distribution, each share of Dean Foods common stock received 0.25544448 shares of WhiteWave Class A common stock and 0.36380189 shares of WhiteWave Class B common stock in the distribution.

"Fractional shares of WhiteWave Class A common stock and WhiteWave Class B common stock were not distributed to Dean Foods stockholders. Instead, the fractional shares of WhiteWave Class A common stock and WhiteWave Class B common stock will be aggregated and sold in the open market, with the net proceeds distributed pro rata in the form of cash payments to Dean Foods stockholders who would otherwise receive WhiteWave fractional shares. The spin-off was structured to qualify as a tax-free distribution to Dean Foods stockholders for U.S. federal tax purposes. Cash received in lieu of fractional shares will, however, be taxable. Dean Foods stockholders should consult their tax advisors with respect to U.S. federal, state, local and foreign tax consequences of the distribution.

"Effective upon the distribution, the previously announced reduction in the voting rights of WhiteWave Class B common stock became effective. Each share of WhiteWave Class B common stock now is entitled to ten votes with respect to the election and removal of WhiteWave directors and one vote with respect to all other matters submitted to a vote of WhiteWave's stockholders.

"'As an independent company, The WhiteWave Foods Company is well positioned to grow and create shareholder value as a result of strong brand equity in on-trend categories,' said Gregg Engles, WhiteWave Chairman and CEO. 'The spin-off will provide WhiteWave with greater flexibility to build its portfolio of great-tasting, nutritious and responsibly-produced products. We look forward to our future as an independent company with a clear strategy, a leading portfolio of trusted brands and a culture of continuous innovation.'

"WhiteWave Class A common stock currently trades on the NYSE under the symbol 'WWAV' and, beginning on May 24, 2013, WhiteWave Class B common stock will trade on the NYSE under the symbol 'WWAV.B'.

"Following the distribution, Dean Foods continues to own an approximate 19.9% economic interest in WhiteWave, which Dean Foods has stated that it expects to dispose of within 18 months after the distribution in one or more debt-for-equity exchanges or other tax-free dispositions.

"Stock Repurchase Program Authorized: WhiteWave also announced today that its Board of Directors has authorized a share repurchase program, under which the company may repurchase up to $150 million of its common stock. The primary purpose of the program will be to offset dilution from WhiteWave's equity compensation plans, but the company also may make discretionary, opportunistic purchases. Shares may be repurchased under the program from time to time in one or more open market or other transactions, at the discretion of the company, subject to market conditions and other factors. The authorization to repurchase shares will end when the company has repurchased the maximum amount of shares authorized,

or the company's Board of Directors has determined to discontinue such repurchases."

"About The WhiteWave Foods Company: The WhiteWave Foods Company is a leading consumer packaged food and beverage company that manufactures, markets, distributes, and sells branded plant-based foods and beverages, coffee creamers and beverages, and premium dairy products throughout North America and Europe. WhiteWave is focused on providing consumers with innovative, great-tasting food and beverage choices that meet their increasing desires for nutritious, flavorful, convenient, and responsibly produced products. WhiteWave's widely-recognized, leading brands distributed in North America include Silk (R) plant-based foods and beverages, International Delight (R) and Land O Lakes (R) coffee creamers and beverages, and Horizon Organic (R) premium dairy products. Its popular European brands of plant-based foods and beverages include Alpro (R) and Provamel (R).

"To learn more about WhiteWave, visit http://www.whitewave.com."

Talk with Dave Oldani, Investor Relations, WhiteWave Foods Co. 2013. May 28. In Oct. 2012 Dean Foods IPOd basically 13% of the company; that 13% was sold publicly at the end of October. Dean Foods then retained about 87%. They then spun off the other 67% at the end of the day on Thursday, May 23, after the market closed. This means they distributed those shares of WhiteWave Foods, both class A and class B common stock, to Dean Foods shareholders of record on that date. It was done on a tax-free basis. So on May 24 you would have owned both Dean Foods and WhiteWave shares. So if you look at your broker's account now you should see WhiteWave shares of both Class A and Class B–and it should show up on your next statement.

WhiteWave no longer makes tofu. They do make Silk soy, almond, and coconut beverages. WhiteWave today is composed of two segments and three different platforms. The segments are North America, Europe, International. In Europe you have Alpro plant-based beverages–which is basically Silk. In North America the three platforms are Silk, Horizon Organic (Premium Dairy, organic, established in 1991), and Coffee Creamers and Beverages (International Delight and Land O'Lakes (Mini Moo's creamer singles and Land O'Lakes Half & Half)). Address: 12002 Airport Blvd., Broomfield, Colorado 80021. Phone: (313) 635-4000.

8738. Berbille, Hervé. 2013. Re: Sojinal is now owned by Alpro / Provamel, which is owned by Dean Foods. Letter (e-mail) to William Shurtleff at Soyinfo Center, June 19. 1 p.
• ***Summary:*** So Sojinal is now a U.S. company. Address: Bordeaux, France.

8739. INTSOY. 2013. 2013 INTSOY Short Course: Processing and marketing soybeans for meat, dairy, baking and snack applications, June 2-7: A unique opportunity to gain hands-on experience & practical knowledge about soybeans (Leaflet). Urbana, Illinois. 8 panels + 1 panel insert Each panel: 23 x 15.1 cm. Front and back. Glossy color.
• ***Summary:*** Announces a 5-day course ($1,500 for 1 attendee). The program now has 24 corporate sponsors (listed alphabetically with the logo of each): ADM, Clarkson Grain, Clextral Group, Crown, Devansoy, French, Harvest Innovations, House Foods America Corporation, Illinois Soybean Association, Insta-Pro, Kays Naturals, NEI–Natural Enrichment Industries, NPI–Natural Products, Inc. ProSoya. SavInd (formerly Bar N.A.). The Solae Co., Soyatech, Soyfoods Association of North America. SunOpta. USB. USSEC. Wenger. WISHH. World Soy Foundation.

Course highlights. Who should attend? Course schedule (preliminary agenda). Sponsors. Address: National Soybean Research Lab. (NSRL), 1101 W. Peabody Dr., Urbana, Illinois 61801. Phone: (217) 244-1706.

8740. Nakamura, M. 2013. Kibun's interest in and involvement with soymilk (Interview). *SoyaScan Notes.* July 11.
• ***Summary:*** Kibun Food Chemifa is now 100% owned by Kikkoman. Address: Home Economist for Kibun, Japan. Phone: 544-2781.

8741. Nakamura, Mitsunoba. 2013. Re: When did Kikkoman acquire Kibun Food Chemifa Co., Ltd? Letter (e-mail) to William Shurtleff at Soyinfo Center, July 12–in reply to inquiry. 1 p.
• ***Summary:*** In Kikkoman's 2012 Annual Report, the "Corporate History" section states: "2008 August–Kibun Food Chemifa Co., Ltd. (now Kikkoman Soyfoods Company) becomes a wholly owned subsidiary of Kikkoman."

Mr. Nakamura found in other news that Kibun had been acquired via a share swap.

In 2004 Kikkoman first invested in Kibun Food Chemifa.

In June in 2006 Kibun Food Chemifa became a consolidated subsidiary of Kikkoman in June 2006 Address: Kikkoman International Inc., P.O. Box 420784, San Francisco, California 94142-0784.

8742. Gupta, Rajendra ("Raj") P. 2013. Update on ProSoya's work making soymilk equipment (Interview). *SoyaScan Notes.* July 19. Conducted by William Shurtleff of Soyinfo Center.
• ***Summary:*** Raj Gupta makes equipment for making great-tasting soymilk using the airless-grind system, which he invented and patented. ProSoya Inc.'s main business is still manufacturing equipment for soymilk processing, in different capacities, from very small to very large. They sell this equipment globally.

They also have a small side business (spinoff) named

Yeliv Inc. that makes and sells soymilk and almond milk products. These are two separate companies at the same location.

They make plants ranging in capacity from 50 liters/hour to 20,000 liters per hour of "soymilk base," including 250 liters/hour, 1,000 liters/hour, etc.

Each plant (except for the smaller plants) is basically a custom order, since each customer wants a specific capacity that will make soymilk containing a certain percentage of protein. Raj thinks in terms of "soymilk base"–which contains about 5% protein–which he then converts into finished soymilk with the desired protein content.

Of the various systems, the one that is most in demand is the VS200 system (which make 200 liters/hour of soymilk base), followed by the ASC50 system (ASC = Advanced Soya Cow; 50 liters/hour), and then by VS2000 or AVS2000.

Upon request, Raj sends color photos of ProSoya's ASC50, VS200, and AVS6000.

ProSoya does not presently have a backlog of orders; they are always looking for more orders. However some years they do have a backlog and some years not. Raj does not see a clear long-term trend, except that today most of the new orders are coming from Asia; previously it was from the Western world (North America and Europe). There is a new demand in Asia for soymilk without the traditional "beany" taste–even in China! Raj has just returned (two weeks ago) from a trip to China; he was lecturing and had taken samples of his soymilk. They were very excited to discover his flavor. The younger generation seems to prefer the "non-beany" taste–unlike previous generations. In the new generation there are also entrepreneurs with plenty of money. But they always ask Raj, "Can you give us a machine with a 'beany' option"–perhaps to sell to older Chinese. Raj can do that quite easily.

Raj finds that the interest in soy is decreasing in the Western world (men think–erroneously–they might develop "boobs" [large breasts] if they consume too much soy) but not elsewhere in the world. So in the West, no matter how great tasting, women are still tasting, but men don't want to drink–at least not too much. Bad news–even if it is completely wrong–spreads faster than good.

In terms of capacity sold, about 95% of Raj's soymilk equipment is used to make commercial soymilk–which is packaged and sold. However many of the smallest systems, such ASC50, are used at universities, private companies, or research labs to do soymilk research. However many little machines are also used commercially by companies, worldwide. In addition, many small machines are bought by the Rotary Club and put in institutions in poorer areas to make soymilk. For example, there are many such machines in Peru. Raj estimates that ProSoya equipment is in more than 50 countries worldwide.

"But the smaller machines don't reveal any of the tricks of the smaller machines. Even the VS200 system is not going to tell people the tricks of the larger machines. Even when we tell people the proper way to use the equipment, they always try to take shortcuts; they think they can improve on it. And when companies try to make copies of ProSoya equipment in order to sell it illegally, they also try to take shortcuts in order to make it less expensive and simpler. One example is SSP in India; they make ProSoya equipment under license but they have never paid Raj any royalties. Over many years, Raj has had almost no income in the form of royalties from licenses–but he is still happy that his technology is out there.

Concerning the anti-soy publicity from the anti-soy faction on the Web, Raj definitely thinks that this is hurting the image and sales of soyfoods in the Western world. "That is the biggest problem. That is what has caused the growth of soyfoods to stop; previously they were growing by leaps and bounds." Outside of the West: India has never had a lot of soyfoods and they still do not. Most people in India don't like the taste of soyfoods or they good-tasting products are too expensive. Even the small soymilk shops in India have found that they have to package their soymilk; nobody brings their own container to get soymilk in India. Raj has submitted bids for turnkey soymilk plants with Aseptic plastic pouches to India and Ghana.

Concerning the man in Russia who made poor-quality copies of ProSoya equipment then paid Raj no royalties: Raj thinks the company is out of business and he is not sure whether or not Mr. Podobedov is still alive. Raj says he wanted to do things properly, and to pay royalties, but it is very hard to get things done in Russia. He had very high ambitions, but for various reasons he was unable to accomplish what he wanted. Most of ProSoya's machines, made in about 1993-94, are still in operation in Russia–mostly in small shops or operated by NGOs.

Rag originally had about 10 patents, with separate patents for process and for equipment. But long ago he decided not to apply for any more patents because he does not want to give away secrets. The original patents have expired.

Raj, who was born in 1942, is still deeply involved in the activities of ProSoya. At the moment there are too many things that require his attention. "I haven't found anybody who can take some of my burden. So I am still 9-6, not 9-5, plus a few more hours beyond that at home where, because we do some business in Asia, I must deal with e-mails etc." ProSoya is too much of a one-man operation, so it will be hard for Raj to sell the company. His nephew is not a candidate and there is nobody who works for ProSoya in Ontario that could handle the complex job. Raj's highest level expertise is in technical areas of making soymilk and soymilk equipment. Yet today much of his time is used in putting together quotations for soymilk systems, and other basic mundane things–that do not require much creative input. Raj found a person (older than Raj) who could do the

job, but he recently retired.

Over the years Raj has sought out qualified people: "The capable people are hard to find and when you do find them they are always looking for better opportunity with a large company. I have taken this approach repeatedly only to lose them after few years when they have enough experience to be of interest to other companies." "Potential buyers see this as a one-man business." How are they going to run it without him? He would be willing to stay on as technical advisor. This concerns him a lot. Address: President and CEO, ProSoya Inc., 550 Lacolle Way, Orleans, ON K4A 0N9, Canada. Phone: 613-745-9115.

8743. Nakamura, Mitsunoba. 2013. Re: The soymilk industry and market in Japan today. Letter (e-mail) to William Shurtleff at Soyinfo Center, July 23–in reply to inquiry. 1 p.
• ***Summary:*** Mr. Nakamure got these statistics by e-mail from Kikkoman's headquarters in Japan. The leading manufacturers of soymilk in Japan today are:

1. Kibun (Kikkoman) 53%
2. Marusan 20%
3. Meiraku 10%
4. Sugoi Daizu (Otsuka) 5%
5. Toraku 4%

Others 8%

In 2012 the total shipment of soymilk in Japan was 256 million kiloliters. In 1984 it was 110 million kiloliters. Therefore Japanese are consuming a little more than twice as much soymilk today as they were in 1984.

The value of the soymilk market in Japan is approximately 45,000 to 50,000 million yen (about US$450 million to $500 million). Address: Kikkoman International Inc., P.O. Box 420784, San Francisco, California 94142-0784.

8744. Wong, Vanessa. 2013. Companies and industries: Soy milk fades as Americans opt for drinkable almonds. *Bloomberg Businessweek.* Aug. 21. http://www.businessweek.com/articles/2013-08-21/soy-milk-fades-as-americans-opt-for-drinkable-almonds.
• ***Summary:*** Non-dairy alternatives to milk are going mainstream in the USA; they were previously consumed mostly by vegans and those with lactose intolerance. WhiteWave Foods (WWAV) says that sales of Silk increased 12% last quarter, however the majority of its sales of non-dairy milks now comes from almond milk, which grew by more than 50% last quarter. Soy now represents only 35% of the company's non-dairy milk sales.

During the first 6 months of 2013, WhiteWave sold $305.9 million worth of plant based drinks and foods such as yogurt in North America. The company says it now has 75% of the soy milk market and 52% of sales of almond milk. One major competitor is Blue Diamond's Almond Breeze.

Retail sales of non-dairy alternatives to milk made from almonds, rice, and coconuts (not including soy) are now almost $1.4 billion, estimates Marketresearch.com; they are predicted to reach $1.7 billion by 2016.

U.S. retail sales of soymilk are expected to fall another 11% this year, according Euromonitor International, a research firm.

Clearly consumers are now into "drinkable plants."

But why is soymilk fading? Some say almond milk has fewer calories than soy, contains no saturated fat, and is rich in vitamin E. But Larry Finkel, director of food and beverage research at Marketresearch.com believes nuts are now trendy and that soymilk sounds more like an old-fashioned health food, like tofu. Perhaps the product needs to be reinvigorated.

8745. Johnson, Juliette. 2013. Re: All existing issues of the *Madison Survey* (1919-1963, Madison, Tennessee) have been scanned and are available online free of charge. Letter (e-mail) to William Shurtleff at Soyinfo Center, Aug. 22. 1 p.
• ***Summary:*** "Hello Bill, Thank you for contacting the Center for Adventist Research. I have some good news for you! We recently completed the full digitization of the Madison Survey and they are available free of charge on our website. You can reach them at this link: http://jewel.andrews.edu/record=b1671061 (email me if this link doesn't work). Click on the link that says 'Full Text, Complete Holdings.' You will see a directory of all issues by volume and number. If you need information on the year, you can see this on the main view before clicking into the full text. The PDFs are searchable as well.

"We also have these scanned in a higher resolution if you have trouble reading any of the text. Just let me know.

"The Madison College Alumni group has been in negotiation with us to be the repository of their archives. We have received a large amount of materials from them, and are in negotiations to get the remainder of the collection. I am confident in saying that the Center will be the future home of the Madison College materials.

"Let me know if you need more information!" Address: Digitization Manager, Center for Adventist Research, Andrews University, Berrien Springs, Michigan 49104.

8746. Spots: Soymilk. 2013.
• ***Summary:*** (a) View using the "Google Ngram Viewer" of the relative frequency of appearance in books digitized by Google, from 1800 to 2000 of the three case-sensitive terms "soy milk" (the most frequent), "soymilk," and "soybean milk" (decreasing in use since about 1980). Note that "soymilk" (the term preferred for many reasons by the soyfoods industry) was ahead of "soy milk" until the Microsoft spell-checker, apparently without consulting any experts on the subject, chose "soy milk" as its preferred spelling. (b) Asahi Seibu (Seiyu Line). 1982. 500 ml soymilk carton (in Japanese). (c) Swan Foods 1977 quart soymilk

carton. (d) Kibun soymilk–Japanese advertisement. (e) Japanese characters for soymilk.

8747. *SoyaScan Notes.* 2013. Commercial soyfoods products wish list (Overview). Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** 1. Organic, non-GE soy protein isolates (2002/03). 2. A very low calorie soy beverage for weight loss in hospitals. Must be able to be used as a sole source of nutrition. 3. More smoked tofu in America.

4. Meatless pepperoni, sausage shaped, for use atop a meatless pizza. 5. Natural shoyu brewed in America, ideally as part of a joint venture with a Japanese shoyu company. 6. A vegetarian Worcestershire sauce, with no anchovies (John Troy developed "The Wizard's Worcestershire Sauce" for Joel Dee's Premier Japan line in about 1995; it was vegetarian).

7. A low-calorie, low-fat tofu. Fat and calorie content should be at least 30% lower than that made from whole soybeans. The easiest way to make this product would be to run soymilk made from whole soybeans through a decanting centrifuge (like a cream separator) to remove the desired amount of fat, just like the dairy industry does to make low-fat or non-fat milk. There is a big potential market for such a product since 1% fat milk has now passed low-fat milk (2%) as the best-seller in American supermarkets (11 Sept. 1991). 8. Bland soymilk base (11 July 1997). Presently no company (including International ProSoya Corp. of Canada, Pacific Foods of Oregon, and Ted Nordquist dba TAN Industries, Inc. etc.) offers this product.

9. A soy-based kefir made from authentic kefir grains/cultures plus FOS (fructooligosaccharides), a dietary fiber derived from chicory roots. FOS feeds and increases the level of "good guy bifidobacteria by up to five times in the gastrointestinal tract, and boosts the body's absorption of calcium and other minerals by up to 50 percent." See article in *Ag Innovation News* (April 1999, p. 3, 14).

8748. *SoyaScan Notes.* 2013. Soyfoods big ventures wish list (Overview). Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** The Soyfoods Association should team up with other interested parties (such as Protein Technologies International) and petition the FDA to outlaw the use of the term "non-dairy" on the label of (or otherwise in connection with) products which contain sodium caseinate or any other product derived from cow's milk. This would open the way to many new soy-based dairylike products.

A joint venture with a Japanese company such as Sendai Miso Shoyu to brew Japanese-style shoyu in America in the traditional way. Large amounts are now imported from Japan.

8749. *SoyaScan Notes.* 2013. Soyfoods success stories in developing countries (Overview). Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** Public sector with outside funding: 1. Sri Lanka, Thriposha program (Cereal-soy blends, started 1976. Thriposha itself started in 1973). 2. Mexico (Chihuahua) program selling PADSA, Soyaven / Soyavena, Albachisa, and Almesa (Cereal-soy blends, 1978-80). 3. Thailand, ASEAN full-fat soy flour project (1978). 4. Guatemala, Plenty Soy Dairy (Tofu, soymilk, soy ice cream, 1980)

Private sector, largely self sufficient: 1. Uganda, Africa Basic Foods (Dr. D.W. Harrison. Roasted whole soy flour, cereal soy blends, 1966-69). 2. India. Ruchi's Products (TVP, 1980).

8750. *SoyaScan Notes.* 2013. The kosher dietary laws, kashruth, and pareve/parve (Overview). Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** Historically there has been a strong interest in soyfoods (especially soy ice creams, yogurts, cheeses, soymilk, and tofu) from Jews who follow the laws of kosher. *Webster's Dictionary* defines kosher (a Yiddish word derived from the Hebrew *kasher* meaning fit or proper, and first used in 1851) as "1: sanctioned by Jewish law; esp. ritually fit for use (kosher meat). b: selling or serving food ritually fit according to Jewish law (a kosher restaurant). The verb "to kosher" (first used in 1871) means "to make kosher."

"The kosher laws are derived from the 'Book of Leviticus' in the *Torah,* and are expounded upon in the volume of the Talmud (Oral Law) titled *Chulin.* Yet the teaching of kosher is touched upon in all 60 volumes of the Talmud.

"Kashruth, the Hebrew term meaning 'fitness,' itself derives from the term 'kosher.' Kashruth refers to the Jewish dietary laws; most Orthodox Jews observe kashruth.

"The kosher dietary laws divide all foods into three types: from the flesh (fleshig), from milk (milchig), and neither flesh/meat nor milk (parev). From this latter Yiddish term 'parev' derive the terms pareve and parve, both pronounced 'parv,' and used interchangeably. They are Jewish cookery or dietary terms meaning (1) 'neutral' or (2) made without milk or meat or their derivatives. Eggs and seafood are both pareve. A pareve food can be eaten with either milk or meat. Many soy ice creams are labeled 'kosher and parve' or 'kosher parve.'

"The laws of kosher state, among other things, that one cannot consume meat and milk products at the same meal. Hence, orthodox Jews do not consume ice cream after a meal that contains meat." Perhaps the most widely observed kosher law is not to eat pig/pork. After eating meat, according to Jewish dietary laws, one should wait for 6 hours before consuming dairy (milchig) products. But one can consume dairy products and then have meat products after 30 minutes. The difference is based on the fact that meat takes longer to digest. For this reason, at least in Israel, more

emphasis is placed on developing meatlike products than on dairylike, to bypass the 6-hour restriction. Meat substitutes are much more popular in Israel than dairylike products. The government has encouraged development of meatlike products. Yet there seem to be many opportunities for production of dairylike products on kibbutzim or moshavim.

In the USA, major kosher certifiers include: (1) Union of Orthodox Jewish Congregations of America, Kashruth Div., 45 West 36th St., New York, NY 10018. Tel. 212-564-8330. Rabbi Reese and Rabbi Menach. Members: 3100. Publications: Keeping Posted: Bimonthly, Kosher Directory of Products and Services. Highly respected. O-U mark. (2) Kosher Supervision Services, 354 Fifth St., Hackensack, New Jersey 07601. Tel. 201-342-7400. Chuff K mark. (3) OK Laboratories, P.O. Box 218, Brooklyn, NY 11204. Tel. 718-851-6428. Rabbi Bernard Levy. Circle K mark.

Several important Hebrew or Yiddish words related to kosher: A "heksher" (pronounced HEK-shur) is the kosher mark. "OU is the most highly respected kosher heksher." A "mashghiach" (pronounced mush-JEE-ak) is the person who inspects a food facility before giving approval.

8751. *SoyaScan Notes.* 2013. Europe's biggest international food fairs / shows and expositions: ANUGA, SIAL, Helfex, and CIBUS (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** ANUGA and SIAL are held in Cologne (Germany) and Paris (France) respectively on alternating years in October. Each fair lasts for about 6 days, and tickets cost about $20. Food people and companies come from all over the world to exhibit and see the latest in all kinds of foods and food equipment. ANUGA is held on odd numbered years (1987, 1989, 1991, etc.) and SIAL on even numbered years (1986, 1988, 1990).

ANUGA (pronounced uh-NEW-guh) stands for *Allgemeine Nahrungs und Genussmittel Ausstellung* ("General exhibition of food and food adjuncts {stimulants / enjoyables"}). Billed as the "World Food Market–Consuma–Gastroma–Tecnica," it is held at the Cologne Messe (Exhibition Center) and is sponsored / produced by Messe und Ausstellungs Ges. mbH, P.O. Box 210760, D-5000 Cologne, West Germany. Phone: 221-8210. The first ANUGA fair was held in 1929. Statistics at ANUGA in 1986 were mind-boggling: 200,000 visitors; 5,201 companies exhibiting, from 86 different countries; and what seemed like 50 miles of exhibit space (actually 227,000 square meters).

SIAL (pronounced see-AL) stands for "Salon International de l'Alimentation," and is also called the 'International Food and Dairy Exhibition'. The first SIAL was held in Nov. 1964. The permanent address of SIAL is 39 rue de la Bienfaisance, 75008 Paris.

The 'SIAL d'Or' (also called 'Golden SIAL' or Food Oscar') gold medal awards, first presented in Oct. 1986, are given for the best new food products in each food category at the AIDA-SIAL International competition judged in Paris in June. The Oscars are a bi-annual competition between 16 nations, including Canada, Great Britain, Italy and the USA. Each country presents products in 7 food and beverage categories: Grocery, alcoholic drinks, non-alcoholic drinks, dairy, deep-frozen, meat / poultry and delicatessen. The retail trade in each country nominates the representative products. At least one soy product, So Good, a soymilk produced by Sanitarium Foods in Australia, has been awarded the Golden SIAL.

Helfex, the International Health Food Trade Exhibition and Convention, is much smaller than the two fairs mentioned above and its scope is much more limited. Held biannually in the spring in the United Kingdom on even numbered years, it is sponsored by the British Health Food Manufacturers Association and the British Health Food Trade Association. The Foreign Agricultural Service (FAS) of the USDA typically has a large pavilion featuring booths representing U.S. health / natural food manufacturers. In 1988 at least 8,000 visitors came to Helfex from 25 countries. About 600 exhibitors were there and the U.S. Pavilion was the biggest booth at the entire show. About 88% of the natural foods products at Helfex '88 came from the U.K. The first Helfex was held on 17-19 March 1974 at the Bloomsbury Centre Hotel in London. The tenth Helfex was held on 8-9 April 1990 in Birmingham, England; over 200 companies exhibited in Birmingham. For more information contact the British Health Food Trade Assoc., Angel Court, High Street, Godalming, Surrey, GU7 1DT, England. Phone: 0483-426450. Fax: 0483-426921.

CIBUS (pronounced CHI-bus), the biggest food fair in Italy, is held in Parma in about May each year.

8752. *SoyaScan Notes.* 2013. Chronology of Soyfoods Center: The work of William Shurtleff and Akiko Aoyagi. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** 1. Introducing soyfoods to the West: Popular books (1972 Oct.–1979 July).

The Book of Tofu:

1972 Oct. 22–First visit to San-gen-ya tofu shop in Tokyo. Mr. Toshio Arai begins to teach William Shurtleff the traditional art of making tofu.

1972 Dec. 22–Meet Nahum Stiskin of Autumn Press. Start to write tofu booklet.

1973 Jan. 13–Sign contract for *Book of Tofu* with Autumn Press.

1973 March 2–Visit Sasa-no-yuki tofu restaurant in Tokyo.

1975 Dec. 12–*The Book of Tofu** published by Autumn Press.

* = Book illustrated by Akiko Aoyagi.

1978 Dec. 22–*The Book of Tofu** published by Ballantine Books in a mass-market pocketbook edition that retails for $2.95.

The Book of Miso

1974 Feb/March–Study miso and shoyu in Japan on trip with Bob Gerner, head of Westbrae Natural Foods.

1974 May 7–Start to write *The Book of Miso,* table of contents.

1975 April–Autumn Press accepts idea of publishing *The Book of Miso.* Contract signed Aug. 18.

1976 Sept. 23–*The Book of Miso** published by Autumn Press.

1976 Sept. 29–1977 Feb. 3–Tofu & Miso America Tour. We do 70 public programs, many TV and radio interviews, drive our van 15,000 miles in 17 weeks.

The Book of Tempeh

1977 May–To Indonesia for one month of tempeh research.

1978 Feb. 27–Sign contract with Harper & Row.

1979 July 14–*The Book of Tempeh** published by Harper & Row.

2. Working to build a soyfoods industry in the Western world (1977 April–present)

1977 April 5–Establish Takai Tofu and Soymilk Equipment Co.

1977 Aug. 16–First Takai catalog of tofu and soymilk equipment published.

1977 Aug. 16–*Miso Production** published by Soyfoods Center–the first book we self-published.

1978 July 28-30–The Soycrafters' Association of North America is founded in Ann Arbor, Michigan. William Shurtleff helps to organize the inaugural meeting, is a founding member, and a member of the first board of directors.

1978–Soyfoods Center starts to develop a mailing list (typed so as to fit on pressure sensitive labels) of all people who have purchased books or contacted us.

1979 July 15–*Tofu and Soymilk Production** published by Soyfoods Center.

1979 July–The first issue of *Soycraft* magazine is published by Richard Leviton, director of Soycrafters' Association in Massachusetts. Each mailing is based on the use of Soyfood Center's mailing list–free of charge.

1980 March 10–*Tempeh Production** published by Soyfoods Center.

1980 Sept.-Dec.–Our mailing list of about 5,000 names and addresses, divided into 70 coded categories, is computerized by Parallel Procedures in San Francisco. This was done primarily to help Richard Leviton of *Soycraft* magazine.

1981 Dec.–There are now 10,900 names on our computerized Soyfoods mailing list, rising to 13,800 names by May 1982.

3. Documenting the history of soybeans and soyfoods (1980 Oct.–present)

1980 Sept. 10–Start to build what we hope will become a large library at Soyfoods Center with regular trips to the University of California at Berkeley library system.

1980 Oct. 22–Start writing *History of Soybeans and Soyfoods.*

1984 June 1–History book manuscript is now completely in our word processor: 2,500+ pages, 70+ chapters.

1984 June 21–Soyfood Center's annual summer intern program begins. Irene Yen, a Stanford student starting her senior year, is our first summer intern.

1984 July 17–*History of Tempeh published*–our first history book.

4. Studying the burgeoning soyfoods industry and market (1982 Sept.–1985 Feb.)

1982 May 16–*Soyfoods Directory and Databook* (1st edition) published. Renamed *Soyfoods Industry and Market: Directory and Databook* on 26 Feb. 1983. 3rd edition.

1982 Sept. 10–*Soyfoods Labels, Posters, and Other Graphics* published.

1984 Feb. 25–*Soymilk Industry and Market* published.

1985 Feb. 22–*Tofutti and Other Soy Ice Creams* published.

1990 May 8–*Tofu Industry and Market in Europe* published.

1990 July 17–*Soymilk Industry and Market in Europe* published.

1994 Jan.–*Soyfoods Industry and Market: Bibliography and Sourcebook* published.

5. Foreign language editions of our books are published (1980 -)

1980 July–*Das Miso Buch** (hardcover and paperback) published by Ahorn Verlag (Wolfgang and Gabriella Furth-Kuby) in Germany.

1981 Aug.–*Das Tofu Buch** (hardcover) published by Ahorn Verlag in Germany.

1988 Nov.–*Das Tempeh Buch** (hardcover) published by Ahorn Verlag in Germany–6 years after the project started.

1988 Nov.–New German pocketbook editions of *Das Tofu Buch* and *Das Miso Buch* (paperback) published by Goldmann Verlag.

6. Developing a computerized information center (1980 Dec.–present).

1980 Dec. 12–Mailing lists of Soyfoods Center and Soyfoods magazine merged and computerized by Parallel Procedures in San Francisco. 5,500 names in 50 categories.

1983 Sept. 28–Install first computer at Soyfoods Center, IBM-PC with 20 MB hard disk and word processing software to use for writing our book on *History of Soybeans and Soyfoods.*

1985 May 9–Install Revelation database manager software for developing a computerized bibliographic database on soya.

1985 July 31–Finish keying all 6,677 file cards (3x5 inch) into our computerized database. Our library is now computerized.

1985 Aug. 30–Our computerized database, containing 9,500 bibliographic records, is now available for use by the public.

1986 Sept. 1-16–The first of many trips to do library research at the USDA National Agricultural Library, Library of Congress, and National Library of Medicine–America's three national libraries, all located in and about Washington, DC.

1987 July 6–Start entering Commercial Soy Products into our database.

1987 Oct. 11–*Bibliography of Soymilk, from 1578 to 1987: With 1,584 References* published–our first bibliography.

1987 Oct. 19–Coin the name SoyaScan, start using it to refer to our computerized database, and apply for a registered trademark, which we are issued on 19 July 1988.

1993 Feb.–Install a Novell 5-user network to link our various computers.

1995 Feb. 11–We enter the 50,000th record into our SoyaScan database.

1997 Nov. 24–We enter the 55,000th record into our SoyaScan database.

7. Current status of computerized information–2000 January 1

SoyaScan database now contains 59,440 records from 1100 B.C. to the present, including 48,318 published documents, 12,683 commercial soy products, 4,628 original interviews and overviews, and 41,584 unpublished archival documents.

More than 75% of all SoyaScan records have a summary/abstract averaging 143 words in length.

More than 26,000 records (44% of the total) are for documents published before 1970.

Thirty five major books in the series Bibliographies and Sourcebooks on Soya, produced from the SoyaScan database, are now available, published by Soyfoods Center.

Soyfoods Center Library owns about 54,000 documents, almost all of which have a record in the SoyaScan database.

SoyaScan Directory now contains the name, address, and phone number of 17,300 people and organizations worldwide actively involved with soyfoods and soybeans. Each entry is coded to show the type of activity, e.g. 2A = Tofu manufacturers.

8. Collecting and Publishing Information on Vegetarianism and Other Non-Soy Food Products that can Replace Animal Products.

1984 Oct. 31–Create our first vegetarian keyword (subject heading) VegeAnim = Vegetarian Diets and Animal Rights.

1988 Feb. 21–*Amazake and Amazake Frozen Desserts: Industry and Market in North America* published. Updated bibliographic supplement published in March 1995.

1992 Oct.–Start actively collecting information specifically on vegetarianism and veganism, and entering it into our new VegeScan database.

1992 March 4–*Bibliography of Vegetarianism: 1,755 References from A.D. 1170 to 1992, Extensively Annotated* published (360 p. large format, preliminary edition).

1992 June 12–*Sourcebook on Wheat Gluten Foods and Seitan* published. Expanded edition published in Jan. 1994.

2000 Jan. 1–VegeScan database now contains 5,500 bibliographic records on vegetarianism and veganism from 238 B.C. to the present.

Best selling books from Soyfoods Center (English-language editions only, as of Jan. 2000).

The Book of Tofu–557,000 copies sold.

The Book of Miso–115,900 copies sold.

The Book of Tempeh–47,950 copies sold.

Tofu & Soymilk Production–5,020 copies sold.

Other–9,200 copies sold.

Total–775,070 copies sold. Address: Lafayette, California. Phone: 925-283-2991.

8753. *SoyaScan Notes.* 2013. The visionary work of Henry Ford and his researchers with soyfoods–then and now: Popularized the use of soybeans as foods in America (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** Before Henry Ford began his pioneering work with soybeans in the early 1930s, most American consumers and farmers thought their only use was as feed for animals. Ford and his researchers and chefs played a major role in developing a remarkable variety of tasty and nutritious American-style foods from soybeans, and in publicizing these foods and their health benefits nationwide.

Prior to 1934 (according to records in the SoyaScan database) only about 188 commercial soyfood products had been introduced in America. Of these, 78 had been launched in the Hawaiian Islands, so only 110 had been introduced on the American mainland. Of these 110, at least 46 were made by Asian-American companies primarily for Asian-Americans (such as Chinese-Americans, Japanese-Americans, etc.). Thus only 70 products were made by Caucasian-American companies, and, of these, 27 products were made by Seventh-day Adventist companies and sold mostly to other Seventh-day Adventists. In short, between 1766-1767 (When Samuel Bowen launched America's first two commercial soy products–Soy-based Vermicelli Noodles and Bowen's Patent Soy [Sauce]) and 1934, only 43 commercial soy products had been introduced by Caucasian-American companies, not including Seventh-day Adventists.

Henry Ford's ideas about introducing American-style soyfoods took their first clear form on August 13, 1934, when he presented an all-soy gala dinner banquet for the American media at the immensely popular Ford Exhibit in the Century of Progress World's Fair in Chicago, Illinois. Note first that he chose a world-class event to introduce the little-known Cinderella crop. Now listen to the names

of dishes on the menu: "Tomato juice seasoned with soy bean sauce. Salted soy beans. Celery stuffed with soy bean cheese [tofu]. Puree of soy bean. Soy bean cracker. Soy bean croquettes with tomato sauce. Buttered green soy beans. Pineapple ring with soy bean cheese [tofu] and soy bean dressing. Soy bean bread with soy bean relish. Soy bean biscuit with soy bean butter. Apple pie (soy bean crust). Cocoa with soy bean milk. Soy bean coffee. Assorted soy bean cookies. Soy bean cakes. Assorted soy bean candy."

This menu represented a fresh, new vision of soyfoods in America! Note the creative use of tofu in a pineapple ring and as a celery stuffing, and of soymilk with cocoa.

But this was just the beginning. By Aug. 1935 Ford was serving soy ice cream for dessert at VIP and press luncheons held at the Ford Engineering Laboratory. In about 1936 Ford's Edison Institute published a 19-page booklet titled "Recipes for Soy Bean Foods," which contained 58 innovative American-style preparations including: Soy bran bread. Cinnamon buns. Muffins (for diabetic patients). Waffles (with soy flour). Scalloped green soy beans. Omelette (with tofu). Salad soy bean sprouts. Gingerbread. Honey soy bean ice box cookies. Macaroons. Coconut balls (with chopped soynuts). Lady fingers. Soy bean chocolate bars. Apple sauce cake. Doughnuts. Soy bean custard (with soymilk).

In 1938, when Ford researcher Bob Smith invented a new and greatly improved type of soymilk (based on soy protein isolates), Ford and his researchers focused on developing new dairylike products based on this soymilk, including a non-dairy whipped cream, and an improved soy ice cream. The soymilk itself was widely served at Ford institutions in and around Dearborn, Michigan.

Indeed a strong case can be made that Henry Ford and his coworkers played the leading pioneer role in developing American-style soyfoods and introducing them in a big way to America. In so doing, they set the stage for the rapid rise of soyfoods consumption among typical Americans that began in a small way during World War II, and in a big way starting in the 1970s and continuing into the 1990s.

8754. *SoyaScan Notes.* 2013. The visionary work of Henry Ford and his researchers with soyfoods–then and now: Pioneered soy protein isolates (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** Robert Boyer and Bob Smith did extensive, pioneering work on developing soy protein isolates at the Ford Motor Co. Both started research in 1938. Boyer used his isolates to make industrial products, such as spun soy protein fibers and water-based paints. The soy fibers were produced in a pilot-plant with a capacity of 1,000 pounds per day of soybean "wool" and soon a fabric containing 25% soybean wool and 75% sheep's wool was used in the sidewall upholstery of many Ford cars. Bob Smith used his isolates to make a good-tasting soymilk, that was served in Ford cafeterias and schools, and at the Henry Ford Hospital, and was also used as the base for most of the early commercial soy-based whipped toppings–starting with Delsoy. In Nov. 1943 The Drackett Co. bought Ford's soybean fiber spinning operations; Boyer, Francis (Frank) Calvert, and William Atkinson went to Drackett from Ford as part of the deal. Drackett made and sold their fibers, Soybean Azlon, spun from soy protein isolates, from 2 Dec. 1943 to 1949. They were used mainly in felt hats by the American Hat Corporation. Drackett also commercialized other industrial soy proteins, such as Protein 110, 112, and 220, Ortho Protein, and plastic molding compounds. Boyer left Drackett in 1949 when they shut down their Azlon fiber spinning plant; he focused all his energy on developing food uses of edible products made from spun soy isolates. In mid-1957 ADM (Archer Daniels Midland Co.) purchased Drackett's soy protein business. Bob Boyer began to work as a full-time consultant for Ralston Purina in the field of soy proteins starting in early 1960. Since 13 June 1959 Ralston Purina had been manufacturing industrial soy protein isolates (for use in paper coatings) at a plant in Louisville, Kentucky, which they purchased from Procter & Gamble in December 1958. In 1960, after starting consultation with Boyer, Ralston Purina began its first work with edible soy proteins by establishing a research and pilot plant at company headquarters in St. Louis, Missouri. In about September 1962 Boyer was named technical director of protein products sales in the soybean division of the Ralston Purina Co.; he worked for Ralston until his retirement in 1971. Frank Calvert, Boyer's coworker from the Ford Motor Co. was hired in November 1962 to head up Ralston Purina's R&D work on food-grade isolated soy protein in St. Louis. In 1965 Calvert was named director of soybean research, and in 1967 director of research of the Protein Division. In 1969 Calvert was promoted to director of research, New Venture Management, and finally in 1971 vice president and research director, New Venture Management. During these years, Calvert developed new soy protein isolation processes, 70 percent soy protein concentrate products, and modified soy protein coating compositions for industrial use. Calvert is considered a visionary in soy protein research and the accomplishments of his career were honored in 1973 when the Ralston Purina plant at Memphis, Tennessee, was dedicated to him in recognition of his years of service and dedication to protein technology.

In Oct. 1962 Ralston Purina began to introduce a line of edible soy protein isolate products made at their plant in Louisville: The first three were Edi-Pro A and Edi-Pro N (spray-dried isoelectric and neutral isolated soy proteins respectively) and Textured Edi Pro (an edible spun soy protein fiber). Supro 610 was launched in October 1966. As sales of these products increased, Ralston Purina soon found itself a leader in this new field–along with the pioneer, Central Soya, which had launched Promine in Oct. 1959.

Ralston Purina expanded food grade isolate capacity with new facilities at Memphis, Tennessee, beginning production on April 10, 1973; Pryor, Oklahoma, beginning production on December 1, 1976. By late 1975 the company was making about 75 million pounds per year of isolates from its three plants, and was starting to advertise its isolates in a big way, with full-page color ads. This expansion easily vaulted Ralston Purina into the position of world leader in food-grade isolated soy proteins by 1976. On 21 August 1979 the company began producing soy protein isolates at its first plant located outside the Unites States, in Ieper, Belgium. On 1 July 1987 Ralston Purina established Protein Technologies International (PTI) as a wholly owned subsidiary focused on manufacturing soy protein and fiber products. In 1993 PTI was by far the world's leading producer of soy protein isolates, controlling about 60% of the U.S. market. PTI's sales of consumer soy protein products rose from $221.6 million in 1989 to a record $288.1 million in 1992.

8755. *SoyaScan Notes.* 2013. The visionary work of Henry Ford and his researchers with soyfoods–then and now: Pioneered soymilk in America (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** Henry Ford and his researchers pioneered soymilk in America. As early as Feb. 1921, in an interview with *The New York Tribune,* Ford predicted that "The milk and meat from cows will be replaced by man-made products." He explained that his laboratories had already made an experimental "milk which is superior to the natural article and much cleaner... not subject to tuberculosis."

Starting in about 1928 Dr. Edsel Ruddiman, working for Henry Ford at Dearborn, Michigan, did research and development work on soymilk made from whole soybeans.

At the 1934 Chicago World's Fair, Henry Ford served soymilk in various dishes, such as Cocoa with Soy Bean Milk, at his gala banquet for the media, and exhibited soymilk and other soyfoods in the Ford Barn. Millions of people saw this exhibit and read the media coverage. In about 1936 Ford's Edison Institute published a 19-page booklet titled "Recipes for Soy Bean Foods," which contained a recipe for making soymilk at home plus various recipes for using this soymilk, such as Soy Bean Custard.

In 1938 Bob Smith developed a completely new type of soymilk based on isolated soy protein. Henry Ford liked the taste very much and said he preferred it to cow's milk. He often kept a supply in his soymilk, which he enjoyed drinking, in his home refrigerator. In about September 1942, this new type of soymilk started to be made at the rate of 150 gallons a day from isolated soy protein, hydrogenated soy oil, and corn sugar at Ford's George Washington Carver Laboratory in Dearborn; the goal–to replace cow's milk. Tests conducted by the Henry Ford Hospital showed that rats could live and reproduce for five generations on nothing but this soymilk. It was served at the Henry Ford Hospital in Detroit, and at Ford cafeterias and schools. During World War II, in about 1943 the Ford News Bureau wrote a 3-page background paper on "Ford soy milk" stating that it could play a major role worldwide in supplementing the diets of millions of people who faced a shortage of cow's milk due to wartime conditions. Ford's soymilk was first used commercially to make Delsoy, a non-dairy whipped topping introduced in the mid-1940s.

Since the early 1980s there has been a boom in soymilk consumption worldwide–as well as in the USA. Since the mid-1980s, soymilk has been the fastest growing basic soyfood product in America. In 1992 an estimated 995,750 gallons (3,768,910 liters) of soymilk (not including infant formulas), worth about $75,000,000 at the retail level, were sold in the USA. The market is estimated to be growing at the rate of about 12% a year. Soymilk, packaged in aseptic cartons that do not require refrigeration, is one of the most popular products in natural- and health food stores nationwide. By 1993 at least 234 brands of soymilk / soy beverages had been introduced in the USA and another 152 had been introduced in Europe. By a remarkable coincidence, America's leading soymilk manufacturer (American Soy Products, Inc., maker of Edensoy) is located in Saline, Michigan, the same small, rural town where Henry Ford established one of his "village industries" that processed soybeans from August 1938 until the start of World War II.

8756. *SoyaScan Notes.* 2013. Chronology of soymilk worldwide–1500 A.D. to 1949. Part I. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** 1500 A.D.–The earliest known written reference to soymilk appears in China in a poem titled "Ode to Tofu," written by Su Ping

1665–Soymilk is first mentioned by a Westerner, Domingo Fernández de Navarrete, in his book *A Collection of Voyages and Travels.* Navarrete served as a Dominican missionary in China.

1790–Soymilk is mentioned by Juan de Loureiro in his book *The Flora of Cochin China.* Loureiro was a Portuguese Jesuit missionary who lived in what is now Vietnam. Note that each of these and many other early references mentioned soymilk as part of the process for making tofu.

1866–Soymilk is first discussed as a drink in its own right by the Frenchman Paul Champion, who traveled in China. In a French-language article he stated that the Chinese had taken their cups to tofu shops to get hot soymilk, which they drank for breakfast.

1896 June–Soymilk is first referred to in the United States by Henry Trimble in the *American Journal of Pharmacy.*

1909–The first soy-based infant formulas and soymilk made from full-fat soy flour are developed in the United States by John Ruhräh, a pediatrician. He reports his results

in the *Archives of Pediatrics* (July 1909).

1910–The world's first soy dairy, named *Caséo-Sojaïne,* is founded by Li Yu-ying, a Chinese citizen, biologist and engineer, at 46-48 Rue Denis Papin, Les Vallées, Colombes (near Asnières), a few miles northwest of Paris. In December 1910 he applies for the world's first soymilk patents (British Patents No. 30,275 and 30,351). The first patent is titled "Vegetable milk and its derivatives." He is issued both patents in Feb. 1912.

1913 June 13–Li Yu-ying is issued the first U.S. soymilk patent (No. 1,064,841), titled "Method of manufacturing products from soja." He filed the application on 10 Oct. 1911.

1917–Soymilk is being produced commercially in the U.S. by J.A. Chard Soy Products in New York City.

1929 Nov.–T.A. Van Gundy, founder of La Sierra Industries in Arlington, California, launches La Sierra Soy Milk, and becomes the first Seventh-day Adventist worldwide to make soymilk commercially. The product was canned and the beany flavor removed by live steam processing.

1931–Madison Foods of Madison, Tennessee, introduces Madison Soy Milk–the world's earliest known soymilk to be fortified with calcium and the second commercial soymilk product made by Seventh-day Adventists in the USA. Madison Foods is a company run by students and faculty within Madison College, a pioneering work/study school.

1936 Jan.–Dr. Harry W. Miller and his son, Willis, start making Vetose Soya Milk, sold in natural or chocolate flavors in sterilized half pint or quart bottles at their Vetose Nutritional Laboratories in Shanghai, China. Dr. Miller is a Seventh-day Adventist physician, a student of Dr. John Harvey Kellogg, and a medical missionary living in China. The world's first "soy dairy," this company also made soy ice cream and Acidophilus Vetose (a cultured soya milk)–both launched in Jan. 1936. But Japan was invading China. Within months after the soy-milk business began booming, a Japanese bomb blew up the soy dairy.

1936 June–Sobee, the world's earliest known branded soy-based infant formula, is launched by the American Soya Products Corp. of Evansville, Indiana.

1939 autumn–Dr. Harry W. Miller, forced by the war in China to return to the USA, starts making soymilk at Mt. Vernon, Ohio, in a large brick plant which he and coworkers built from the ground up. The first two products were canned liquid soymilk (made in a pressure cooker and fortified with vitamins and minerals) and malted soymilk (Soy-A-Malt). Pressure from the powerful U.S. dairy industry and the USDA convinced Miller not to call his product 'soymilk,' so he latinized the name to Soya Lac. This term was first used in late 1939 for Miller's first American soymilk.

1940 March–K.S. Lo, founder and managing director of the Hong Kong Soya Bean Products Co. Ltd. starts to make soymilk in Hong Kong. His product, originally named Vita Milk (*Wai-ta-nai* in Chinese) was fortified with calcium, cod-liver oil, and vitamins, and sold in milk bottles, primarily as a nutritious, affordable beverage for refugees. In June 1940 the product was renamed Sunspot, and in 1953 it was renamed Vitasoy. Continued.

8757. *SoyaScan Notes.* 2013. Definition of whip toppings (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** Most American shoppers are familiar with non-dairy whip toppings–alternatives to whipped cream or whipping cream. The top retail brands are CoolWhip (launched in April 1966 by the Birds Eye Division of General Foods, Inc.), RichWhip (Rich Products Corp), Presto Whip, and La Creme; they generate retail sales of about $222 million per year.

But few realize that this food category was a child of World War II (in November 1942 the government's War Food Administration issued an order outlawing the sale of whipping cream in America during the war) and that all of the earliest non-dairy whip toppings were based on soy protein and had their roots in the work of Henry Ford and his researchers.

The first commercial soy-based whip topping was Delsoy, launched in about August 1944 in Dearborn, Michigan. By 1949 four similar products were on the market; all contained soy protein (derived from soymilk) and none of them contained dairy products.

However an unusual government law, which is now more than 50 years old, allows food manufacturers to use casein (the major protein in cow's milk) or a casein derivative (such as sodium caseinate) in a food product and still label this product "non-dairy." Because of this outdated and misleading law, all of the major brands of so-called "non-dairy whip toppings" contain casein. If the law were changed, many new opportunities would arise for true non-dairy products that based on soy protein and containing no casein or other animal products. Address: Soyfoods Center.

8758. *SoyaScan Notes.* 2013. Chronology of soymilk worldwide–1950 to present. Part II. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** 1950's–Soymilk enters the modern era as it begins to be marketed in bottles like soft drinks, largely due to work by K.S. Lo of Vitasoy in Hong Kong and Yeo Hiap Seng in Singapore.

1957–Japan's first commercial soymilk, sold in bottles, named *Tônyû,* is introduced by the Ueda Tofu Shop in Hachioji, Tokyo. Dr. Harry Miller was the inspiration for and helped to establish the shop.

1960s–In Japan, soymilk slowly increases in popularity. New manufacturers are: Nihon Tanpaku Kogyo (1962). College Health Foods (later renamed San-iku Foods) in Chiba prefecture with its Soyalac (1969, also inspired

and aided by Dr. Harry Miller). Luppy Tanpaku (House Shokuhin) in Saitama prefecture with its Luppy soymilk (1969).

1965–ProSobee, the world's earliest known non-dairy infant formula based on soy protein isolates, is launched by Mead Johnson & Co. of Evansville, Indiana.

1966–The enzyme lipoxygenase is discovered by scientists at Cornell University [Ithaca, New York] to be responsible for the "beany" flavor in soymilk. A process is developed which could be used to help eliminate this flavor.

1967–Soymilk begins to be packaged aseptically in Tetra Pak cartons. This allows it to be sold without refrigeration for six months or more. The first such product was Beanvit, made by Yeo Hiap Seng Ltd. in Singapore and packaged in a disposable tetrahedron-shaped container.

1970's and 1980's–Soymilk becomes a popular beverage throughout Asia, spreading to Europe, Australia and the United States.

1979–Hong Kong Soya Bean Products Co. Ltd. starts to export Vitasoy, packed in Tetra Brik cartons, to selected countries throughout the world. By the early 1980s exports were going to over 20 countries, both developed and developing. Exports to the USA began in 1980. 1980 Jan.–DE-VAU-GE Gesundkostwerk, a Seventh-day Adventist food company near Hamburg, Germany, launches GranoVita Soja Drink in 500 ml Tetra Brik cartons; this soymilk product is made by N.V. Vandemoortele (one of Europe's largest oilseed crushers, founded in 1934) in Izegem, Belgium.

1980 June–N.V. Alpro is founded by Vandemoortele to take over production of this soymilk. Inspired and headed by Philippe Vandemoortele, Alpro purchased the land on which it was located from Vandemoortele, and became an independent manufacturer. Alpro quickly became Europe's leading producer of soymilk, making private-label brands for scores of companies.

1983 July–Edensoy brand soymilk is launched by Eden Foods of Clinton, Michigan. Imported from Japan (where it is made by Marusan-Ai Co.), it is sold in plain and carob flavors in stand-up foil retort pouches.

1984 Feb.–The first comprehensive study of the soymilk market in the U.S. is published by Soyfoods Center of Lafayette, California. It estimates that total soymilk consumption in the U.S. in 1983 (not including soy-based infant formulas) was 2.68 million gallons (26% of this was imported), and total production of soy-based infant formulas was 32 million gallons.

1984 Aug.–Westsoy Natural brand soymilk is launched by Westbrae Natural Foods of Emeryville, California. Imported from Japan (where it is made by San-Iku Foods), it is sold in one flavor in standup foil retort pouches.

1984 Oct.–Westbrae Natural Malted's, a thick soymilk resembling a milk shake, are launched in many flavors by Westbrae Natural Foods, imported from Japan.

1986 Nov.–Edensoy starts to be made in America by American Soy Products (ASP) at a large, modern plant in Saline, Michigan, and sold in Tetra Brik aseptic cartons. ASP is a joint venture of 4 Japanese companies and Eden Foods.

1988 Nov.–Pacific Foods of Oregon, launches its first soymilk product, Naturally Northwest Soy Beverage [Plain], in a 1-quart Tetra Brik Aseptic carton. The company's new factory is in Tualatin, Oregon.

1990 April–WestSoy Lite, America's first "lite" soymilk, with a low fat content, is introduced in plain, vanilla, and cocoa flavors by Westbrae Natural Foods. Made by adding water to regular soymilk, the product is less expensive to make, but also contains less nutrients.

1990 June–Alpro opens a new soymilk plant at Wevelgem, Belgium. Costing about US$15 million and having a capacity of 45 million liters a year, it is reputed to be the largest in the world. Alpro now makes about 70% of the soymilk in Europe.

1990 Sept. 24–The company name is changed to Vitasoy International Holdings Ltd. from Hong Kong Soya Bean Products Co. Ltd.

1991–There are at least 35 processors or marketers of soymilk in the U.S., increasing production to approximately 9.8 million gallons. Consumption is estimated to be growing at between 15 and 20% per year since 1984.

1993–More than 200 scientific journal articles about soymilk have been published in English, and at least 80 English-language patents on soymilk have been issued between 1912 and 1993.

1994 Jan.–Soy-Um, a low-priced and attractively packaged soymilk, is launched by J&G Inc., a product developer and distributor in Chicago, Illinois. The product is made in Oregon by Pacific Foods.

1995–A market study is published, estimating that $108 million of soymilk was sold in the U.S. in 1994. This equates to approximately 13.5 gallons of soymilk. By 1995 sales are projected to have risen to over $130 million, or approximately 16.3 million gallons.

8759. *SoyaScan Notes.* 2013. Chronology of Kikkoman Corporation. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** This chronology is based largely on the excellent chronologies near the back of Kikkoman annual reports, dates in "Kikkoman Today & Tomorrow" (1972, p. 1), and dates in Fruin (1983). "Ideally situated close to soybean-growing regions as well as the Edo River, which provided a convenient transportation route for consumers in or near Edo, or present-day Tokyo, Noda has been well-known for its soy sauce (shoyu) production since the Edo period. Noda is located about 30 miles northeast of Tokyo in Chiba prefecture.

"1661–Kikkoman Soy Sauce first went on the market in 1661 when the Takanashi and Mogi families constructed breweries and started the brewing of soy sauce."

1914–When World War I started, excessive competition arose between Japan's many shoyu producers because of the wartime economy, causing a very confused market situation.

1917 Dec.–With these conditions as a background, eight Mogi and Takanashi family companies, the leading shoyu producers in the Noda area, merged to form Noda Shoyu Co., Ltd., a company with capital of ¥7 million and the predecessor of Kikkoman Corporation.

1925 April–Noda Shoyu Co., Ltd. absorbs Noda Shoyu Jozo Co., Ltd., Manjo Mirin Co., Ltd., and Nippon Shoyu Co., Ltd., through a merger. 1926–Kikkoman No. 7 shoyu brewing plant constructed.

1930 August–The Takasago soy sauce production plant (formerly the Kansai Plant) is constructed near Osaka and completed in 1931.

1936–Kikkoman Worcestershire Sauce plant completed.

1939–With the start of World War II, government controls on the price of soy sauce are established.

1946–Kikkoman stock first becomes available to the public.

1949–Export of Kikkoman soy sauce is reestablished after the war.

1950–Wartime soy sauce controls end and free competition resumes.

1957 June–Kikkoman International Inc. (KII) is established in San Francisco, California, in the United States.

1958–The first KII branch is established in Los Angeles.

1960–The second KII branch is established in New York.

1961 July–Kikko Food Corporation is established (later renamed Kikko Food Industries Co., Ltd.). In July 1991, the company becomes Nippon Del Monte Corporation.

1961–Seishin Pharmaceutical Co., Ltd. established.

1962 February–Tone Beverage Co., Ltd., is established. In February 1963, the company becomes Tone Coca-Cola Bottling Co., Ltd.

1962 October–Katsunuma Yoshu Co., Ltd., is established in Japan. In March 1964, the company becomes Mann's Wine Co., Ltd. 1963–Japan Calpak Co., Ltd. established.

1964 October–Noda Shoyu Co., Ltd., is renamed Kikkoman Shoyu Co., Ltd.

1965–The third KII branch is established in Chicago, Illinois.

1966–Sales of Higeta brand products assumed by Kikkoman.

1968–Bottling of Kikkoman Soy Sauce for the American market begins at the Leslie Foods plant in Oakland, California.

1969 June–Kikkoman invests in and merges with Japan Food corporation, the biggest distributor of Oriental food in the United States. In June 1978 the company becomes JFC International Inc.

1970 March–Kikkoman invests in and merges with Pacific Trading Co., Ltd., a sister company of Japan Food Corporation.

1972 March–Kikkoman Foods, Inc. (KFI), is established in Walworth, Wisconsin (USA) for the purpose of manufacturing soy sauce and teriyaki sauce. Shipping is scheduled to start in early 1973.

1972 August–Kikkoman + Daitokai (Europe) GmbH is established in Düsseldorf, in Germany.

1974 February–Kikkoman Restaurant, Inc. is established.

1979 March–Kikkoman Trading Europe GmbH is established in Neuss, in Germany.

1980 October–Kikkoman Shoyu Co., Ltd. is renamed Kikkoman Corporation–the company's present name.

1983 January–Kikkoman Ajinomingei Co., Ltd., is established.

1983 June–Kikkoman (S) Pte. Ltd., a production facility, is established in Singapore.

1983 October–Kikkoman Business Development Inc. is established.

1986 August–New shoyu production facilities come on stream at Kikkoman's Chitose Plant, in Hokkaido.

1990 January–Kikkoman buys perpetual marketing rights for the Del Monte brand in the Asian-Pacific region, excluding the Philippines.

1990 February–A joint venture company, President Kikkoman Inc. is established to produce soy sauce in Tainan, in Taiwan.

1996 April–Kikkoman establishes Kikkoman Foods Europe B.V., Europe's first soy sauce manufacturer, located in Hoogezand-Sappemeer, in the Netherlands.

1996 May–Production of *Shochu* a clear Japanese spirit, commences at a new facility of the Ojima Plant.

1997 March–Kikkoman holds a ground-breaking ceremony for its second U.S. soy sauce production plant, in Folsom, California, in the United States.

1997 October–Kikkoman Foods Europe B.V. begins operations at its plant [in Hoogezand-Sappemeer, the Netherlands].

1998 October–The second shoyu manufacturing plant of Kikkoman Foods, Inc., in Folsom, California, begins shipments.

1999 July–Kikkoman opens its new headquarters in Noda, Chiba prefecture, to commemorate the Company's 80th anniversary.

1999 October–Kikkoman Institute for International Food Culture is opened at the Company's new headquarters.

1999 November–Kikkoman announces a joint venture with its partner in Taiwan [Uni-President Enterprises, Taiwan's largest food manufacturer] to build a soy sauce plant in China [In Kunshan, near Shanghai].

2000 May–Kunshan President Kikkoman Biotechnology Co., Ltd. (a joint-venture company) is established.

2000 Aug.–Construction starts on a soy sauce plant in

China. The first shipments are slated for spring 2002.

2002 May–The China plant Kunshan President Kikkoman Biotechnology Co., Ltd., holds its grand opening.

2003 May–Kikkoman Foods, Inc. (with its plant at Walworth, Wisconsin) holds its 30th anniversary ceremony.

2004 March–Kikkoman invests in Higeta Shoyu Co., Ltd. and Kibun Food Chemifa Co., Ltd. (The latter makes soymilk).

2006 June–Kibun Food Chemifa Co., Ltd. becomes a consolidated subsidiary of Kikkoman.

2007–Kikkoman celebrates its 50th anniversary in the U.S.

2008–Kikkoman rolls out its new corporate brand logo and slogan globally.

2008 Aug.–Kibun Food Chemfa Co., Ltd. (now Kikkoman Soyfoods Company) becomes a wholly owned subsidiary of Kikkoman.

2009 Oct.–Kikkoman shifts to a holding company structure.

2011 April–Kikkoman Biochemifa Company is established [to produce clinical diagnostic devices and reagents, processing enzymes, etc.].

8760. *SoyaScan Notes.* 2013. What's wrong with drinking cow's milk (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** These problems are listed in descending order of importance. The first three problems are health problems, widely recognized by health professionals:

(1) Allergies: Cow's milk is one of the three most prevalent allergens, along with eggs and wheat. Pediatricians have reported that up to 70% of their patients have allergies. In most cases these children improve when taken off dairy for approximately 3 weeks. are well aware that infants are especially prone to suffer from allergies to milk, and many who are taken off milk experience almost immediate relief from discomfort.

(2) Lactose intolerance: An estimated two-thirds of the world's population has trouble digesting milk because of intolerance to lactose, the main sugar in milk. Caucasians whose ancestors come from northern Europe have the least problems with lactose. Blacks, Arabs, Asians typically suffer various degrees of discomfort.

(3) Infant formulas in Third World countries: All pediatricians agree that the best food for infant's is mother's milk, supplied by breast feeding. It is free, nourishing, and sanitary. Some multinationals (such as Nestlé) have used various (often insidious) means to try to persuade mothers in Third World countries that infant formula is healthier and more "modern" than mother's milk. But buying such infant formulas (which are relatively expensive) often impoverishes the consumers, during preparation it is often contaminated, and the composition is not as well suited to the infant's nutritional needs as mother's milk–it lacks natural antibodies and contains much more calcium and other minerals than mother's milk.

(4) Chronic constipation in children can indicate intolerance of cow's milk.

The next group of problems also relate to health, but are not a source of concern to most Americans:

(4) Saturated fat: Milk can be a major source of saturated fat, one of the primary contributors to heart disease.

(5) Casein as a possible carcinogen: Casein is the primary dairy protein found in all dairy products. There is new evidence that casein is a carcinogen; studies by T. Colin Campbell of Cornell University [Ithaca, New York] show that it can cause liver cancer in laboratory mice. Read *The China Study*, by Campbell and Campbell (2005).

The rest of the problems are not primarily health problems: (6) rBGH (Recombinant Bovine Growth Hormone): This genetically engineered hormone, made by Monsanto, is injected into cows to make them produce more milk. It also causes their udders to become huge, and sometimes causes udder infection.

(7) Antibiotics: Many cows are regularly fed low-level doses of antibiotics for two reasons: To reduce infections and to stimulate growth. A major problem worldwide is that bacteria which cause human health problems develop resistance to the antibiotics in cows; when they infect humans, antibiotics are ineffective.

(8) Cow's are fed ground up dead cows: This could eventually contribute to the spread of Mad Cow Disease.

(9) Cows and production of their forage and feeds consume huge amounts of water, especially in California, and are perhaps the leading cause of water shortages in this state.

(10) By drinking milk you directly cause suffering to cows (mothers) who are forced to continually reproduce and then immediately give up their newborn calves. Who wants to knowingly cause suffering to another aware, sensitive, caring, conscious being.

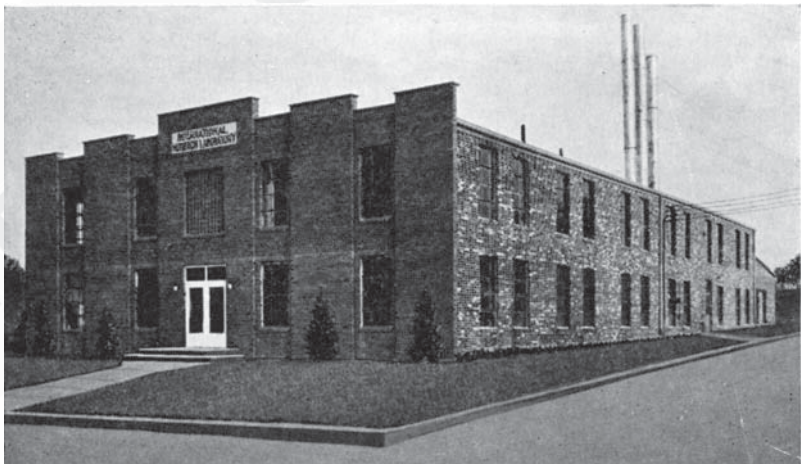
8761. *SoyaScan Questions.* 2013. Questions about the life and work of Theodore A. Van Gundy and his children. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** What year did La Sierra Industries start making foods (about 1927 or 1928)? What was the company's address in Arlington, California? Try to get some land or tax records concerning the business. What Seventh-day Adventist church did the Van Gundy family attend?–Probably La Sierra University Church. Does that church have any records concerning the family? What is the true story about Ransom Brown and Loma Linda's soymilk? When (between April 1934 and Sept. 1935) did La Sierra Industries move to Ontario, California? What was their physical address in Ontario?

Do any of the following have information: La Sierra University? Riverside Public Library? Riverside Chamber of

Commerce–Small Business Section? Riverside County tax office? Riverside Historical Society?

An asterisk (*) at the end of the record means that SOYFOODS CENTER does not own that document.
A plus after eng (eng+) means that SOYFOODS CENTER has done a partial or complete translation into English of that document.
An asterisk in a listing of number of references [23* ref] means that most of these references are not about soybeans or soyfoods.



SUBJECT/GEOGRAPHICAL INDEX BY RECORD NUMBERS

1073, 1074, 1075, 1076, 1077, 1078, 1079, 1080, 1081, 1082, 1083, 1084, 1085, 1086, 1087, 1088, 1089, 1090, 1091, 1092, 1093, 1094, 1095, 1096, 1097, 1098, 1099, 1100, 1101, 1102, 1104, 1105, 1106, 1107, 1108, 1109, 1110, 1111, 1112, 1113, 1114, 1115, 1116, 1118, 1119, 1120, 1121, 1122, 1123, 1124, 1125, 1127, 1128, 1129, 1130, 1131, 1132, 1133, 1134, 1135, 1136, 1137, 1138, 1139, 1140, 1141,
